- Two Player Cline Games: Two player games, especially the traditional historical battle or tactical games, are probably the most difficult to ‘cline,’ but I believe the first rule in adapting most two player games is that an odd number of players must play in the ‘cline’ game so that the same player on their turn will not play the same position twice; that is, an odd number of players forces players to play alternate positions on each of their turns.
  - ✓ Another way to think of ‘cline gaming’ is perhaps ‘multi-player solitaire’: It is what you’d be doing if you played the game solitaire, except that you don’t exercise exclusive control over both sides and don’t have to pretend to forget the location and strength of the other side’s pieces in a fog-of-war type game, like a block game.
- Multiplayer Cline Games: Multiplayer games are naturally easier to ‘cline’ (notice how easily the noun becomes a verb in English?). Many multiplayer games feature cards that players keep hidden; when adapted to the cline game format, either the cards must be face up, or any player must be able to look at the hidden cards when they play the position on their turn.
  - ✓ The easiest way is to make sure there are either more or less players than positions in the game, so that, if the game requires that the positions play in a particular order, the same player will not play the same position each time their turn to play comes around.
  - ✓ Another possible way to ‘cline’ a multiplayer game is to randomize the order in which the positions (or players) play their turns (some games already have mechanisms that change the order in which positions take turns, such as bidding, drawing, and so forth). However, no player should take two turns in a row or play the same position twice in a row, so for example, names could be drawn from a cup for each turn, and then set aside until the cup is empty, then replaced to start over again.
- The Cline Environment: Cline games are not about winning or losing. The ‘cline’ game concept separates players from positions. In most games, players ‘win’ the game by exclusively playing their position to victory. *Positions win victories*, i.e. many rules contain phrases such as, “the first position to reach X victory points, wins the game,” “when the cards are exhausted, count the chits, and the position (or player) with the least number of chits wins,” “the Germans win if ...,” “if at the end of X turns, the British have not captured X, the Americans win...”

The cline game is about group discussion, experimentation, objective neutrality, creating a story, intellectual honesty, and intellectual adventure, achieved by divorcing players from positions so that players do not have a direct stake (or emotional attachment) to any particular position. It’s about being a player in a game rather than a player position or a position. Players in a cline game may still compete, and have competing theories as to what one side or an-

other must do, however, such competition is less direct, than if they were playing the positions in the game. To the extent that groups feel that there must be a player who wins a cline game, such ways can be devised.

- ✓ For example, certain convention formats may require that an event have a winner; thus if a convention ever allowed a cline game to be run as an event, there may be such a requirement. Additionally, many players at conventions won't play in an event unless they can 'win' plaques, points, whatever, or gain toward an overall game rating in their favorite game or toward an overall win at the convention. Cline games will not be suitable for those formats or players.

**The Cosmic Cline:** Gestalt Genesis-Day Million, a multiplayer game which emphasizes control of realities and expanded perspectives, is easily suited to 'cline' play with only a couple of minor changes.

- **Public Position Pages:** All position information must be public so that all players can see them. Thanks to tabbed browsing, it will now be easier for players to view multiple position pages at once.
- **Turn Periods:** In the cline version of the game, individual players rather than positions will have periods of three days in which to submit their Actions. Because the cline game focuses on players rather than positions, potentially less players may play in a cline version of Gestalt Genesis-Day Million because the idea of team-play positions will be eliminated in this format. During each player's turn period, the player may submit Actions for any position (doing all of the things the player would be able to do if they were playing the position), with the necessary restriction that a position may not have more than one turn per week and all positions must have a turn at least once in a two week or month time period. This may force some players to submit Actions for positions that have not had a turn for awhile. Additionally, players should avoid submitting Actions for the same position two turns in a row.
- **Victory Resolution:** The GGDM cline game, like the normal game, ends when players want the game to end, when the game has run its course, when players are tired of the game, or when they quit participating. Victory Resolution may still occur at the end of the game for positions, however, as positions are now divorced from players, final victory for positions is academic in this format, and players will not receive Laurels or Victory Points (or alternatively, it could be agreed that all players receive one of each for playing in the game). Players may still vote for and receive Player Honors and have Honors recorded on the scores page for the players in a cline game. Conceivably, like the honors and awards handed out annually by the media and entertainment industries, additional categories of honors could be added, *ad infinitum*, and awarded by the players of the cline game, such that everyone gets a pat on the back at the end of the game.

---

*"I climb atop a spiral stair  
An Oracle confronts me there  
He leads me on light years away  
Through astral nights, galactic days..."*

*“Where have you taken us, Kara?”*

– Roslin after the final jump of the Battlestar Galactica

**Morella:** *One more thing. You will be Emperor. That part of your destiny cannot be avoided.*

**Londo:** *I see.*

**Morella:** [to Vir] *You will also be Emperor.*

[Vir starts laughing]

**Morella:** *Why are you laughing?*

**Vir:** *I...I thought you were joking!*

**Morella:** *We do not joke in the face of prophecy, Vir.*

**Londo:** *Lady Morella, please! We cannot both be Emperor!*

**Morella:** *Correct. One of you will become Emperor after the other is dead. That is all we see and all we wish to see.*

– Babylon 5, “Point of No Return” (1996)

**What Did Not Come to Pass:** Back around probably 2005 or thereabouts, I had an idea for a game mechanic where a position would issue a prophecy and then the position players, Concierge and other positions would work the game toward fulfilling the prophecy. It was a vague idea that was originally to be the main mechanic related to either or both Reformations or Kairotic Moments in GGDM. It’s still not a bad idea, and I allowed at the time that there might even be competing prophecies by different positions pulling the game this way and that, and basically, fulfillment of the prophecy would lend itself toward winning the game or doing well anyway...

... or at least a damned good story. Though Reformations and Kairotic Moments became more mechanical and colorless in the rewrite, the following section was written around the summer of 2007 (and modified in bits over the years) in support of the in-game prophecy idea (the Praxeology, Movie Making and Cattle Killing Movement sections were added in 2019).

- ✓ “...the glacial tempo at which ideas must sometimes develop.” – Benjamin Aldes Wurgraft, Los Angeles Review of Books, July 15, 2016.
  - See full quote in Anti-Intellectualism & Public Intellectuals excerpts, Kairotic Moments, *supra*.
- ✓ The original prophecy idea for GGDM would be an interesting mechanic for a card game.

**Prophecy Ark:** I missed the Pittsburgh Pirates 2007 home opener because it was played at 1:35 p.m. on a Monday, but I did record it. Unfortunately, I learned the score before watching the game; Pittsburgh lost 3-0. I watched the game anyway, knowing the final score. Why?

One might think that if you know the final score, watching the game is a waste of time, right? Halfway through the game, I thought, “Even if you know the final score, it’s still interesting to see how they got there.” And that’s why we watch.

There remains something eternally fascinating and attractive about prophecy. The far-future sci-fi epic *Dune* (1965) used prophecy for the ignorant masses, Conan frequently is about prophecy and people,<sup>1</sup> and by far, the most interesting comments regarding prophecy were made in *Babylon 5* (Season 4 opening narration: “It was the end of history”).<sup>2</sup> *Battlestar Galactica* began with a suggestion of prophecy as well.

A prophecy suggests to us a personal connection with the cosmos, with larger events. It suggests that we are not entirely responsible for our actions (‘pre-destiny’ is the ultimate alibi<sup>3</sup>). It suggests a higher intelligence is at work in our daily lives and in the momentous events of our generations. And it remains a useful literary device because the author knows how the story will go, and can change it to suit the end of the story while writing it (that is, the writer substitutes for the ‘higher intelligence’). And the audience loves it, loves the big looming mystery and the resolution.

Like the baseball game, if a prophecy were introduced into the game, there would still be the matter of how to play the game to the point where the prophecy comes true.<sup>4</sup> That might be a fun and interesting challenge. *Gestalt-Genesis Day-Million* could also be interpreted as an epic storytelling game. The game is designed so as to encourage players, in the course of competing to control the reality of the game, to develop a great story.

The Concierge will introduce all prophecies, and will probably have to bend events here and there to arrive at a reasonable fulfillment of the prophecy. In a real world sense, if prophecy provided a detailed road map to events, the actions of a few people at key places (assuming we have free will), could easily derail the prophecy, making it false. The paradox of prophecy is the best prophecies are those that don’t tell you anything useful, and that are so vague as to be capable of many diverse, competing interpretations. In a sense, prophecy might become the seventh Interpretation of the game, except that it won’t be an Interpretation in the game-mechanical sense.

Note that a prophecy should not be confused with a long-term prediction that is based on known factors and the operation of known laws and forces. For example, that our sun will eventually burn out is not a prophecy. Therefore, prophecy must necessarily involve a prediction which cannot reasonably be made from the forces, actors, or laws operating at the time the prophecy is made; that is, a prophecy must imply supernatural knowledge.

A prophecy would have two or three functions/effects on the game. First, a good prophecy would provide the players with something to work toward, something to latch onto, especially if they are just kind of milling around in the game. Second, prophecy would provide an object to measure individual play against in terms of who did the most or played the game the best from a storytelling perspective. And finally, a prophecy would provide the Concierge with more opportunity to intervene in the game and to enhance the enjoyable story arc of the game for the players as a group.

- ✓ The concept of “prophecy” addressed in these final notes is not related to single game events, but more toward an entire story arc for the game.
  - ✓ Fuzzy Groups and Prophecies share this trait, that they are most useful when less defined, lacking very specific details. Some might add to this category ‘election year promises’...
- Dents, Dings, and Scratches: Praxeology dents, dings and scratches the cosmic pre-destiny argument:

- ✓ “Mises used the term praxeology to name the deductive science that begins with the premise *that human beings act intentionally*. ... An intentional action identifies an end, or purpose, to the action, as well as certain means selected to achieve that end.” – Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” alertandoriented.com (blog), April 13, 2016 (emphasis in original).
- ✓ “Since human beings are finite and temporal, praxeology pays attention to the time dimension of human action. From that attention to time, praxeology quickly hones in on the idea of *future uncertainty*. Uncertainty means that the future is ‘somewhat predictable,’ i.e., it is neither completely determined nor completely random. Future uncertainty is conclusively deduced from the axiom of intentional human action. If future outcomes were completely known with certainty, no *ends* would be chosen, as we would simply wait for those outcomes to occur. Conversely, if we thought the future were completely random, no means would be selected, since we would not think that means could help achieve ends.” *Id.*

Thus, if the entire universe is determined, in a clockwork universe Newtonian physics way, and the gods or God is omniscient, then God needs to do nothing as all acts have already occurred, and all end results already determined. It also implies that God is powerless rather than omnipotent. Curiouser and curiouser.

- ✓ “One may remark here that uncertainty may simply be a mind phenomenon and not a feature of reality, that reality is in fact completely determined, or that science may eventually allow us to understand the determination of all events. [Ludwig von] Mises had no problem with that possibility and, in fact, may have been a determinist himself. By insisting on methodological dualism, however, he was simply pointing out that at present time, empirical science does not shed light on the topic one way or another and, for human scientists studying human behavior, the intentionality of human action seems to be a valid and constructive premise on which to build a social science.” *Id.*
- **Movie Making:** Screenwriters of movies made from songs, such as Kenny Roger’s “Coward of the County” (turned into a made-for-TV movie (1981)) and Jeannie C. Riley’s hit “Harper Valley PTA” (turned into a drive-in theatre comedy movie (1978), I watched it on TV in the 1980s) have the same problem: They are stuck with the story told by the well-known lyrics of the hit single and must imagine the story between those lines. Thus hit songs and previous movies in a franchise (and to lesser extent, original novels) act as prophecy for movies made from them.
  - ✓ The same applies to screenwriters of historical dramas, docudramas and fictions; they are constrained by the record of events known at the time. The movie Titanic (1997) cannot end with the Titanic not sinking! Which acts as a prophecy in the story, our knowledge of history is a prophecy in regards to the story’s characters. Where the historical record is not well-developed, semi-mythical, or not subject of testimonials, writers have more freedom in creating events and dramatic conflicts, which is why ancient Roman and Greek, and medieval historical movies were popular.

*“What [Leon] Festinger failed to understand is that prophecies, per se, almost never fail. They are instead component parts of a complex and interwoven belief system which tends to be very resilient to challenge from outsiders. While the rest of us might focus on the accuracy of an isolated claim as a test of a group’s legitimacy, those who are part of that group – and already accept its whole theology – may not be troubled by what seems to them like a minor mismatch. A few people might abandon the group, typically the newest or least-committed adherents, but the vast majority experience little cognitive dissonance and so make only minor adjustments to their beliefs. They carry on, often feeling more spiritually enriched as a result.”*

– Vaughn Bell, “Prophecy Fail: What happens to a doomsday cult when the world doesn’t end?” Slate Magazine, May 20, 2011 <sup>5</sup>

**Cattle Killing Movement:** The case of the South African prophetess Nongqawuse and the Xhosa cattle killing movement of 1856-1857 (and subsequent manmade famine) is an interesting study. She was an orphaned girl, about 15 years old, being raised by her religious uncle Mhlakaza in Xhosaland, near the border with British colonial territories, and her uncle had visited the Cape Colony and become familiar with Christianity. She and a younger girl allegedly had a vision of ancestral spirits who spoke a prophecy of events that would result in driving out the foreigners, mainly it called for widespread slaughter of the Xhosa cattle herds and neglect of crops, which would be purified and replenished by the ancestral spirits after the foreigners (the contamination) had left.

- ✓ If we accept as quite likely that her uncle made the whole thing up and convinced her to go along, what reason did she have to become part of this story? For starters, she is 15 years old and may have come to believe the story was real (I only need think back to what I thought and believed was real when I was 15 years old), and for her uncle, it was the innocence of the child that would give life and credibility to the religious fantasy he had woven. Additionally, if successful, she would be guaranteed wealthy and powerful suitors and a princely husband, would be well-cared for, and could not be domestically abused because of her status as a prophetess. Beyond this, the prophecy falls apart, it is difficult to see how the prophesied events would result in the ends they sought to accomplish (short of something truly emergent) and it is also quite likely that they did not anticipate the explosive reaction – it spun beyond their visions and took on a life of its own. When the prophecy failed disastrously, non-believers were blamed, it was extended eight days, failed again, and then she was handed over to the British authorities by a local chieftain.

- Information from Wikipedia article, “Nongqawuse,” June 14, 2019.

Prophecies that end in widespread disaster – in this case, famine and massive loss of wealth – seem to abrogate the retrenching process described by Vaughn Bell above – regardless of whether or why the prophecy ‘failed.’

The Xhosa cattle killing movement is an example of how prophecy can be used by the Concierge as the subject of a one-time Intervention at the planetary colony level, especially in hostile colonial situations. History is full of other examples, including the Mahdist State in Sudan-Ethiopia,

the Ghost Dance of the Native Americans, the Boxer Rebellion in China, and the curious Cargo Cults of Melanesia.

#### Endnotes.

<sup>1</sup> Commentary: Contrary to popular belief, Conan was not written so that Arnold Schwarzenegger could become Governor of California. Hindsight is not prophecy. Neither is *non-sequitur*.

<sup>2</sup> Citation & Commentary: "I hope in your stumbling around you do not wake the dragon." – Londo Mollari, Babylon 5, In The Beginning (1998). Though there are probably finer literary terms that apply ('foreshadowing'), this declaration by Londo Mollari acts as a prophecy – albeit, one that has already come true in the series by the time the prequel movie was released. The comment is in fact notable simply because of who Mollari is in the story and because the viewers already know it to be true; it would not have made sense for the writer to have inserted the line under any other circumstances.

<sup>3</sup> Citation: See Calvin & Hobbes comics for information regarding pre-destiny. You were pre-destined to anyways.

<sup>4</sup> Citation: **Deleenn**: Prophecy is a poor guide to the future. You only understand it when the event's already upon you. – Babylon 5, "Ceremonies of Light and Dark" (1996).

<sup>5</sup> Citation & Commentary: **Vir Cotto**: Prophecy is a guess that comes true. When it doesn't, it's a metaphor. You could put a gun to your head tomorrow and pull the trigger, and then the dream is just a dream, and the prophecy is just a metaphor, and so are you. – Babylon 5, "The Very Long Night of Londo Mollari" (1998).

- ✓ A 'false' prophecy is not a prophecy. It is merely a delusion. A bad guess. Or a tragedy. An incorrect interpretation of a prophecy does not make it false, however. Prophecies are largely then, more a matter of interpretation and beliefs than facts and results. So, can a prophecy ever be false? Prophecies that don't 'come true' merely tend to be 'reinterpreted' and their date of fulfillment reset into the far future, as long as they remain useful to the current generation of faithful believers.
- ✓ "Well geez. If that doesn't sink it in, then what will? Just take a couple of snippets devoid of a larger context, find two people you think it could refer to and presto, FULFILLMENT! [of Biblical prophecy]" – Nick Peters, "A Brief Look At Alexander Cain," May 6, 2015 (forum post, TheologyWeb).

**Excerpts from Cosmos, Episode 13**  
**“Who Speaks for Earth?”**  
**By Carl Sagan**

Which aspects of our nature will prevail is uncertain. Particularly when our visions and prospects are bound to one small part of the small planet Earth. But up there in the cosmos an inescapable perspective awaits. National boundaries are not evident when we view the Earth from space. Fanatic ethnic or religious or national identifications are difficult to support when we see our planet as a fragile blue crescent fading to become an inconspicuous point of light against the bastion and citadel of the stars.

There are not yet obvious signs of extraterrestrial intelligence and this makes us wonder whether civilizations like ours rush inevitably, headlong to self-destruction.

I dream about it. And sometimes they're bad dreams.

In the vision of a dream I once imagined myself searching for other civilizations in the cosmos. Among a hundred billion galaxies and a billion trillion stars life and intelligence should have arisen on many worlds. Some worlds are barren and desolate on them life never began or may have been extinguished in some cosmic catastrophe.

There may be worlds rich in life but not yet evolved to intelligence and high technology. There may be civilizations that achieve technology and then promptly use it to destroy themselves. And perhaps there are also beings who learned to live with their technology and themselves. Beings who endure and become citizens of the cosmos.

\*\*\*

Then, suddenly silence, total and absolute. But the dream was not yet done. Had we destroyed our home? What had we done to the Earth? There had been many ways for life to perish at our hands. We had poisoned the air and water. We had ravaged the land. Perhaps we had changed the climate. Could it have been a plague or nuclear war?

I remembered the galactic computer. What would it say about the Earth? There was our region of the galaxy. There was our world. I had found the entry for Earth. Humanity, third from the sun. They had heard our television broadcasts and thought them an application for cosmic citizenship. Our technology had been growing enormously. They got that right.

About six global powers. The potential to become one planet. Probability of survival over a century, here also less than 1%. So it was nuclear war. A full nuclear exchange. There would be no more big questions. No more answers. Never again a love or a child. No descendants to remember us and be proud. No more voyages to the stars. No more songs from the Earth.

I saw East Africa and thought a few million years ago we humans took our first steps there. Our brains grew and changed. The old parts began to be guided by the new parts. And this made us human with compassion and foresight and reason. But instead, we listened to that reptilian voice within us counseling fear, territoriality, aggression.

We accepted the products of science. We rejected its methods.

Maybe the reptiles will evolve intelligence once more. Perhaps, one day, there will be civilizations again on Earth. There will be life. There will be intelligence. But there will be no more humans. Not here, not on a billion worlds.

Every thinking person fears nuclear war and every technological nation plans for it. Everyone knows it's madness and every country has an excuse. There's a dreary chain of causality.

\*\*\*

The bomb dropped on Hiroshima killed 70,000 people. In a full nuclear exchange in the paroxysm of global death the equivalent of a million Hiroshima bombs would be dropped all over the world. In such an exchange not everyone would be killed by the blast and firestorm and the immediate radiation.

There would be other agonies: Loss of loved ones, the legions of the burned and blinded and mutilated, the absence of medical care, disease, plague, long-lived radiation poisoning of the soil and the water. The threat of tumors and stillbirth and malformed children. And the hopeless sense of a civilization destroyed for nothing. The knowledge that we could have prevented it and did not.

The global balance of terror pioneered by the U.S. and the Soviet Union holds hostage all the citizens of the Earth. Each side persistently probes the limits of the other's tolerance, like the Cuban missile crisis the testing of anti-satellite weapons, the Vietnam and Afghanistan wars.

The hostile military establishments are locked in some ghastly mutual embrace. Each needs the other.

But the balance of terror is a delicate balance with very little margin for miscalculation. And the world impoverishes itself by spending a trillion dollars a year on preparations for war. And by employing perhaps half the scientists and high technologists on the planet in military endeavors.

How would we explain all this to a dispassionate extraterrestrial observer? What account would we give of our stewardship of the planet Earth? We have heard the rationales offered by the superpowers. We know who speaks for the nations.

But who speaks for the human species? Who speaks for Earth?

From an extraterrestrial perspective, our global civilization is clearly on the edge of failure in the most important task it faces: Preserving the lives and well-being of its citizens and the future habitability of the planet.

\*\*\*

A new consciousness is developing which sees the Earth as a single organism and recognizes that an organism at war with itself is doomed.

We are one planet.

One of the great revelations of the age of space exploration is the image of the Earth, finite and lonely somehow vulnerable, bearing the entire human species through the oceans of space and time.

\*\*\*

Alexandria was the greatest city the Western world had ever seen. People from all nations came here to live, to trade, to learn. On a given day these harbors were thronged with merchants and scholars, tourists. It's probably here that the word "cosmopolitan" realized its true meaning of a citizen, not just of a nation but of the cosmos. To be a citizen of the cosmos.

Here were clearly the seeds of our modern world. But why didn't they take root and flourish? Why, instead, did the West slumber through 1000 years of darkness until Columbus and Copernicus and their contemporaries rediscovered the work done here?

I cannot give you a simple answer but I do know this: There is no record in the entire history of the library that any of the illustrious scholars and scientists who worked here ever seriously challenged a single political or economic or religious assumption of the society in which they lived.

The permanence of the stars was questioned. The justice of slavery was not. Science and learning in general were the preserve of the privileged few. The vast population of this city had not the vaguest notion of the great discoveries being made within these walls. How could they? The new findings were not explained or popularized. The progress made here benefited them little. Science was not part of their lives. The discoveries in mechanics, say or steam technology, mainly were applied to the perfection of weapons, to the encouragement of superstition, to the amusement of kings. Scientists never seemed to grasp the enormous potential of machines to free people from arduous and repetitive labor.

The intellectual achievements of antiquity had few practical applications. Science never captured the imagination of the multitude. There was no counterbalance to stagnation, to pessimism, to the most abject surrender to mysticism. So when, at long last the mob came to burn the place down, there was nobody to stop them.

\*\*\*

Star stuff, the ash of stellar alchemy had emerged into consciousness. We are a way for the cosmos to know itself. We are creatures of the cosmos and have always hungered to know our origins to understand our connection with the universe.

How did everything come to be? Every culture on the planet has devised its own response to the riddle posed by the universe. Every culture celebrates the cycles of life and nature. There are many different ways of being human.

But an extraterrestrial visitor examining the differences among human societies would find those differences trivial compared to the similarities.

We are one species. We are star stuff, harvesting starlight.

Our lives, our past and our future are tied to the sun, the moon and the stars. Our ancestors knew that their survival depended on understanding the heavens. They built observatories and computers to predict the changing of the seasons by the motions in the skies.

We are, all of us descended from astronomers.

\*\*\*

These are some of the things that hydrogen atoms do given 15 billion years of cosmic evolution. It has the sound of epic myth. But it's simply a description of the evolution of the cosmos as revealed by science in our time.

And we, we who embody the local eyes and ears and thoughts and feelings of the cosmos, we've begun, at last, to wonder about our origins. Star stuff, contemplating the stars, organized collections of 10 billion-billion-billion atoms contemplating the evolution of matter tracing that long path by which it arrived at consciousness here on the planet Earth and perhaps, throughout the cosmos.

Our loyalties are to the species and the planet. We speak for Earth. Our obligation to survive and flourish is owed not just to ourselves but also to that cosmos, ancient and vast from which we spring.

*“As important as these changes were, it was the [Langdell case-law] method of instruction at Harvard that revolutionized the study of law in the United States. Grant Gilmore refers to Langdell as ‘an essentially stupid man’ who early in his life hit on one great idea – the case method – ‘to which, thereafter, he clung with all the tenacity of a genius’ (1977: 42).”*

– Howard Abadinski, Law & Justice: An Introduction to the American Legal System, 5<sup>th</sup> Ed. (2003), p. 88 <sup>1</sup>

**HOMO ABNEGUS:** The fact that it took me more than 25 years to finish this project argues strongly against the utility of elementary school IQ testing. At 22, I lost badly at chess against a 7-year old opponent who was watching *Beevis & Butthead*; I’d stare at the chessboard and make a move after a few minutes, he looked down, made a move in about 10 seconds and went back to watching *Beevis & Butthead*. If I were to walk into a club with a child – whether a prodigy or not, I would be allowed to consume alcoholic beverages and he would not; not because I am smarter than he is, but because I am older and dumber.

- ❖ Abnegism is an invention of William Tenn in his 1950 short story, “Null P.” It is available for free online.

I am an essentially stupid person<sup>2</sup> who got hold of a trivial problem and wouldn’t let go; whose main ability – as I have convinced myself (self-absorption, self-delusion) – is to be able to intuitively understand and synthesize ideas and complexities from a wide range of disciplines (mostly social sciences, history and philosophy) to present a panoramic, holistic view of human Western civilization in our time. I have also convinced myself that I can create a simulation game with redeeming intellectual and andragogy value and that doing so is all that *matters* in my life.

- ❖ “One of the great challenges in this world is knowing enough about the subject to think you are right, but not enough to know you are wrong.” – Neil deGrasse Tyson, “Class Trailer” video to Master Class program.

My job in GGDM was to synthesize ideas into a simulation that works, is interesting and produces emergent play. As such, I take ideas from *secondary sources*, ideas I certainly didn’t have originally,<sup>3</sup> and mold them into the conversation of GGDM. Sometimes, I have a little to add...

- ❖ Am I the fool who had to say something or the wise man who has something to say? *That is* the question of GGDM.

✚ TOMORROWLAND: “There are fuzzy or stilted warnings, courtesy of co-writers Bird and Damon Lindelof ... about the plight of extraordinary individuals in an ordinary world, and the price we’ll eventually pay for despoiling the environment and demonizing science. Bird has been criticized for infusing ‘The Incredibles’ and ‘Ratatouille’ with simplistic and sometimes elitist-sounding statements about the privileges that should accrue to gifted people. He’ll get raked over the coals again here, thanks to the future’s ‘Atlas Shrugged’-style origin story: the world’s great scientific minds decided they’d had enough of ignorance and apathy and made their own world that’s part Shangri-La and part Emerald City of Oz, but functionally Noah’s Ark.” – Matt Zoller Seitz, review of Tomorrowland on rogerebert.com, March 18, 2015.

- ❖ There's those damned ... fuzzy things again. They snuck into our modern language. I am sure that John Locke would not approve, but he also would not be surprised by it.
- ❖ My criticism of the movie Tomorrowland (2015) is in one scene that caused me to step back from the immersion, to say 'ah yeah, right,' to suspend disbelief. It was that awful scene where an antique, presumably late 19<sup>th</sup> Century three stage rocket with capsule hidden under the Eiffel Tower was launched into orbit. That is just wrong, ridiculous on so many levels, both historical and technical; William Goddard who invented the entire science of modern rocketry, was just five years old at the time of the 1887 World Fair in Paris and somehow that rocket was hidden under the Eiffel Tower for 128 years and still worked perfectly? What murder and mayhem was employed to keep it hidden, what happened to anyone who discovered it? In addition to the whole thing being just absurd. I think they could have done something else with the scene to move the story along, but apparently, we needed a rocket launch to add boom, bang and whoosh to the movie or to cynically set up a Disney theme park ride.

*“For indeed you cannot fail to remember that the most learned men hold what the Greeks call ‘philosophy’ to be the creator and mother, as it were, of all the reputable arts...”*

– Marcus Tullius Cicero, *Of Oratory* (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, *The Rhetorical Tradition* (1990), p. 201

---

**PHILOSOPHY OF WIKI:** A 2011 Wikipedia user essay states that a web-crawler determined that 94.52% of Wikipedia pages eventually link to the Wikipedia Philosophy page through the chain of internal Wikipedia links.<sup>4</sup> This is not surprising. It reflects the structure of human knowledge; that nearly any meaningful discussion can and will end up being a discussion of philosophies.

- ❖ Wikipedians call it “falling down the rabbit hole”; you start reading about t-shirts and an hour later, you are reading about guinea pigs, and you don't know why, how you got there, and you don't notice the passage of time. The rabbit hole of human knowledge – whether on Wikipedia, the internet in general, reading books, or through formal education – always emerges into the philosophical kingdoms.

I wonder if we encountered another ‘advanced’ species, would they possibly have a meta-structure of knowledge that does not start with philosophy? Is it possible? Imagining such a thing is difficult, like imagining a non-base 10 numeral and maths systems.

- ❖ One possible definition of Philosophy is that it is the home of human thought on subjects which do not yield to empirical analysis or do not have sufficient empirical evidence. Since the discipline of empiricism came so late to humanity, Philosophy represents our first musings on the world and the dark places in the universe for most of human history. Even now, Philosophy exists at the edges of knowledge created by empirical data and scientific method, and is a vital component in any scientific study of humanity (i.e. the social sciences) where empirical data used in arguments cannot be readily repeated or confirmed by testing.
- ❖ All arguments within our current structure of knowledge can be classified broadly as one of three types: Empirical, Philosophical or Mathematics/Logic. Any argument that is not strictly empirical usually ends up being a philosophical argument. Most other arguments fall into a range between empirical and philosophical (for example,

sociological arguments). Some may consider Math/Logic to be an extremely specialized form of Empirical argument (Clarence Marsh Case referred to it as ‘quantitative logic’); others may include music, visual and performing arts as a type of argument.

✚ PHILOSOPHICAL QUESTIONS: There are some who think that because a question sounds ‘philosophical’ that it doesn’t apply to their field or to a particular field other than philosophy. This is especially true in any field that is considered technical, empirical or mathematical – this has been a widespread problem in fields struggling to be recognized as ‘empirical science’ such as economics, psychology, and sociology. For example, this response on Economics Stack Exchange to a question about Mises axiom of human action (economics):

- ❖ “I know Mises was a famous economist and that his name is hallowed in certain circles but this really seems like a question of philosophy.”

Another user, began “As a statement about human behaviour in general, it is a question of philosophy and psychology,” then went on to criticize Mises axiom as not being economics because it says nothing about decision making and doesn’t have any predictive value. Conversely, the Austrian School maintains that psychology or morality have nothing to do with the axiom of human action, that motivations and content of concrete ends are irrelevant.

It is sometimes not understood that behind every field of human knowledge lies philosophy, that because a question *seems philosophical* doesn’t mean it isn’t within any field except philosophy. That philosophy is still considered the top of every field is perhaps best attested to by the highest possible degree in any field, the Ph.D. – Doctor of Philosophy which can be awarded in chemistry as well as political science as well as nursing – in nursing there are DNP – Doctor of Nursing Practice – and Ph.D. – Doctor of Philosophy in nursing – degrees.

- ❖ Odd thing, my Rhetorical Theory professor spent much effort playing off Plato’s Gorgias (380 B.C.) and St. Augustine’s On Christian Doctrine (426 A.D.) to create a conflict between rhetoric and philosophy. None of my many philosophy courses, including Ancient Greek Philosophy in my senior year of undergrad, ever mentioned any conflict with rhetoric. While Plato may have started the fight, philosophy cares not much for it; one can picture an accomplished, charismatic young orator railing against some off-comment made by the philosopher, who snoozes in the corner, unconcerned.

---

*“In fact men will fight for a superstition quite as quickly as for a living truth – often more so, since a superstition is so intangible you cannot get at it to refute it, but truth is a point of view, and so is changeable.”*

– Hypatia of Alexandria <sup>5</sup>

---

**TEACHING FROM A PEDESTAL:** I was struck by the curious absurdity of Larentius de Voltolina’s famous illustration of a 14<sup>th</sup> Century university lecture.

The illustration shows a robed elderly master or instructor, sitting atop a huge, ornate pedestal desk platform with a curved wooden roof, accessible by steps along the side, lecturing over rows of students seated at long benches facing him. Other period images of medieval education show instructors sitting on high chairs above the students who sit on the floor in rows. I recall also seeing pictures and reading that in many reformed churches, especially the Puritan places, the sermon was delivered by the clergy from a high alcove over the congregation. I seem to recall such a scene from one of *The Scarlett Letter* movies.

- ❖ Notice that the students in front have their books open and are looking up at the master, while the students in the last two rows are barely paying attention, only one has a book open, one is writing, others are sleeping, conversing. This observation of human nature by the artist shows that not much has changed in five centuries.

In my youth, I heard many times from my mother the story of her 12<sup>th</sup> grade, alcoholic English teacher in high heels, falling face first off the teaching platform in front of the whole class (and no one helped her up). By the early 1970s, these teaching platforms were considered an anachronism and had largely disappeared, but I recall that my 3<sup>rd</sup> grade classroom at Cochran Elementary had a raised teaching platform. I recall this vividly because my desk was moved to the front of the class, onto the platform next to the American flag, where I had to sit most of the time that I was in her class. And because the elderly lady teacher used to sit in a chair at the front of the

platform and read books such as Charlotte’s Web (1952), Charlie and the Chocolate Factory (aka “Willie Wonka,” 1964), and The Trumpeter Swan (1970), to the class in the afternoons.

Since that time, and even before it in early elementary school days, I do not recall any other situation where my teachers, college professors, or other instructors stood or were seated on a raised platform or chair. It is considered sufficient for authority now that the teacher stand in front of students sitting at desks in rows. I have witnessed judges who sometimes did not wear robes or sit on the bench in their courtroom during motions (e.g., Judge Stanton R. Wettick). Many colleges have gone in the opposite direction, using amphitheater-style classrooms where the students sit above the instructor, my 7<sup>th</sup> Grade geography class was in such a room. I have also been in smaller classes where students sit at long wooden tables formed in a U-shape facing the instructor, like an egalitarian salon of intellectual fellows (e.g., my Personal Identity Theory philosophy seminar class at Lycoming College in the early 1990s).

✚ MODERNITY: The universality and persistence of this change – not just a matter of modern style or passing fashion – is indicative of something much deeper that has changed in the past half millennia. Knowledge and legitimacy of intellect and authority are no longer divinely given or spoken from above, strict Church-legitimized social hierarchy has fallen over; the Enlightenment made knowledge secular and accessible to and the property of humanity, legitimacy is granted by the people and governments are made of people.

- ❖ When authority is based on divine will, expressed through the church, any divergence of doctrine, schism, or heresy within the church is a threat to legitimacy that provokes a violent reaction from the authorities. In England, *Protestant dissidents* to the *Anglican Church* were accused of “popery,” that is, undermining the Anglican Church and aiding the Pope’s alleged schemes to reestablish Catholicism in England.
- ❖ Langdell’s case-law method of law school instruction was the application of empiricism to the process of law. An attorney instructor at the Duquesne University Paralegal Institute, commented further, that the reason the paralegal profession exists is because “the practice of law has been de-mystified.” Legal argument in English common law jurisprudence is a modified form of scholasticism.

---

*“Master Pangloss taught the metaphysico-theologo-cosmologology. He could prove admirably that there is no effect without a cause, and in this best of all possible worlds the baron’s castle was the most magnificent of all castles, and my lady the best of all possible baronesses.*

*‘It is demonstrable,’ said he, ‘that things cannot be otherwise than they are; for as all things have been created for some end, they must necessarily be created for the best end. Observe, for instance, the nose is formed for spectacles; therefore we wear spectacles. The legs are visibly designed for stockings; accordingly we wear stockings. Stones were made to be hewn and to construct castles; therefore my lord has a magnificent castle; for the greatest baron in the province ought to be the best lodged. Swine were intended to be eaten; therefore we eat pork all year round. And they who assert that everything is right, do not express themselves correctly; they should say that everything is best.’” – Voltaire, Candide (1759)*

---

**PANGLOSS DOESN'T VISIT OFTEN:** The classic formulation of Gottfried Leibniz' (1646-1716) 'best of all possible worlds' argument is:

1. God has the idea of infinitely many universes. [How do you know this?]
2. Only one of these universes can actually exist. [Really?]
3. God's choices are subject to the principle of sufficient reason, that is, God has reason to choose one thing or another. [His reason or ours?]
4. God is good. [Are you sure?]
5. Therefore, the universe that God chose to exist is the best of all possible worlds.<sup>6</sup> [Riiiiiggghht!]

The 'best of all possible worlds' argument has been criticized and lampooned enough – most notably by Voltaire's most famous book – that it need not be rehashed here. Rather, it is more curious that one of such towering intellect (of which I am but a shadow) as Gottfried Leibniz would not have noticed the fundamental flaw in this argument: the word "God." That one of such empirical and mathematical mind (e.g., he was one of two independent inventors of calculus, see Math Boy discussion, p. 221, 1 Entropy, *supra*) would make such concrete statements about something of which he could know or prove nothing, on such flimsy evidence, is amazing.

- ✓ Although "god" makes four of the five fallacious, Number 2 is equally questionable – and not considered even very likely nowadays.

Half a century later, David Hume argued against the argument from design:

- ❖ "Secondly, You have no reason, on your theory, for ascribing perfection to the Deity, even in his finite capacity, or for supposing him free from every error, mistake, or incoherence, in his undertakings.... But were this world ever so perfect a production, it must still remain uncertain, whether all the excellences of the work can justly be ascribed to the workman.... And what surprise must we feel, when we find him a stupid mechanic, who imitated others, and copied an art, which, through a long succession of ages, after multiplied trials, mistakes, corrections, deliberations, and controversies, had been gradually improving? Many worlds might have been botched and bungled, throughout an eternity, ere this system was struck out; much labour lost, many fruitless trials made; and a slow, but continued improvement carried on during infinite ages in the art of world-making." – David Hume, Dialogues Concerning Natural Religion (1750-1776, pub. 1779).
  - And who is to say that our world was not one of those botched and bungled on the way to a later perfect creation? I would not be surprised. Maybe the Big Bang was one of the "botched and bungled" creations?
  - This passage, if any single passage could be so attributed, is probably the inspiration for Robert Heinlein's Job: A Comedy of Justice (1984).

Rather, it is most likely that Leibniz was keenly aware of the fallacy of the 'Best of All Possible Worlds' argument but likely offered it for shrewd political reasons, concluding internally that:

- 1) Most of humanity is not interested in proving or disproving the existence of God (or having their religious beliefs rationally and empirically examined), and

- 2) Arguing against God in the midst of the Holy Roman Empire of the 17<sup>th</sup> Century would alienate his patrons and sabotage his ambitions of political and diplomatic advancement.

The ‘best of all possible worlds’ argument then falls into the column of criticisms of the old European patronage systems, beyond merely censorship and suppression.

But Leibniz went one step further, instead of merely refraining from arguing empirically about the existence or non-existence of God, Leibniz created a self-serving justification for the *status quo*, the *Ancien Regime* of Europe that earned him the eternal contempt of Voltaire and others who laid the foundations for the coming revolutions *and atheism*<sup>7</sup> in Europe. And this, perhaps, is the grand joke of Gottfried Leibniz’ ‘best of all possible worlds’ argument upon his patrons and intellectually inferior social betters – he was mocking his social betters and either they knew it and didn’t care, or they didn’t know it and didn’t get it – for, from the ‘evil’ of his patrons and their social systems, in the ‘best of all possible worlds,’ was caused an argument to be made revealing their fallacious smugness to the restless intellects of the following generation.

This is the genius of genius; geniuses plant time bombs under the age in which they live, in mockery of what they see around them, it is true of Socrates, of Newton, of Darwin, of Bacon:

- ❖ “Francis Bacon coughed out his life alone in a cold and borrowed bed, in a century to which he had been a stranger. He had once written to a friend, ‘I have lost much time with this age; I would be glad to recover it with posterity.’ Bacon saw, like the statesman he was charged with being, the full implications of science and its hope for man. He left his work unfinished and open to improvement, as he knew science itself to be unfinished in the world of time. He warned man of the shadows in his own brain which kept him dancing like one enchanted within the little circle of narrow prejudice and fanatic ideology. Though Bacon died childless his intellectual children in a few scant generations were destined to be legion. He would be called by Izaak Walton a few years after his death ‘the great Secretary of all Nature.’ He planned as a man of great affairs, dreamed like a poet, and yet sought to rope those dreams to earth as though, in doing so, he might more easily sail earth itself into the full wind of that oncoming and creative age toward which his vision hastened.” – Loren Eiseley, The Modern Dilemma (1957), Kindle Loc. 221-229. Bacon has Fallen to Earth.

✚ ON THE OTHER HAND: Alternatively, one might argue that viewed within a certain framework, this is the best of all possible worlds. That doesn’t say much on the positive side, but if that was what Gottfried Leibniz was thinking, shifting framework has certainly been the story of the last three centuries: calculus – which Leibniz invented independently of Newton – is certainly a prime example. We also had to change our view when physics reached the subatomic, Newtonian physics no longer applied.

But it’s a glass half-full or half-empty argument. David Hume, on the basis of the actual world before him (which hasn’t improved much in that regard), suggested strongly that this world is another botched creation. He didn’t say it directly, of course, but certainly it seemed to be hovering there. One day, the artist, with enough experience and bumbles, will get it right, perfect, but this world ain’t it.

*“If you just close your eyes and block your ears  
To the accumulated knowledge of the last two thousand years  
Then morally, guess what? You’re off the hook  
And thank Christ you only have to read one book.”*

– Tim Minchin, “The Good Book” (2009) <sup>8</sup>

**WHEN THE WORLD WAS NEW, WHEN THE WORLD WAS OLD:** When I finally came late to college, after a precocious and wildly undisciplined intellectual youth, I found to my dismay that all of the ideas, lines of thought, and questions of my youth had already been invented, bettered, and written down (but not solved, answered) by people who died centuries or millennia before I was born. Some might have found joy in the discovery that their own thinking was in line with those of our great intellectual ancestors, but to me, it caused some dismay to know that I had not really thought of anything new or clever. It seemed that I was not really that smart after all.

Scholasticism was fashioned on the idea of reverence for ancient wisdom; students were taught to make arguments and try to find solutions from Church-approved ancient texts. It must have seemed like the light of the world burned sun-bright in ancient times, and each succeeding generation, being further from the ancient world, lived their lives in slowly dimming twilight. All important things had already been said, disputed, and discussed by revered ancient intellects, all wisdom available to humanity had been discovered already and written down, nothing new could be added by the current generation. And their world of Europe was encased in stone and chaos.

- ❖ “Unlike his associates, however, [Sir Francis Bacon] saw the Ancients in the dawning light of modernity, not as Colossi whose achievements the living could not equal, but, rather, reduced to their true stature as men – men whose accomplishments the hoarded experience of succeeding generations might enable us to surpass. ... In Bacon’s time such a view of the ancients was iconoclastic and heretical to an extent difficult to appreciate in the intellectual climate of today.” – Loren Eiseley, *The Modern Dilemma* (1957), Kindle Loc. 288-294.

As elegantly described by Loren Eiseley, scholasticism had become dysfunctional, even perhaps a socially cancerous or a brain tumor on civilization, by the time of Sir Francis Bacon who died in 1626.

- ❖ “It was Bacon’s whole purpose, set against the scholastic thinking of medieval times, ‘to overcome,’ as he remarks in another of his works, the *Novum Organum*, ‘not an adversary in argument, but nature in action.’ Truth, to the medieval schoolmen of the theologically oriented universities, rested upon the belief that reality lay in the world of ideas largely independent of our sense perceptions. In this domain the use of a clever and sophisticated logic for argument, rather than observation of the phenomena of nature was the road to wisdom.” *Id.*, Kindle Loc. 70-74.
  - See ‘best of all possible worlds’ argument, p. 1495, *ut supra*.
  - Carl Sagan makes this same argument throughout *Cosmos*.

I have often wondered that it never occurred to most people of the period that, rather than trying to tease out solutions to modern problems from ancient texts through dialectic argument, perhaps we should go forth and observe, test and ask new questions?

- ❖ “Aristotle maintained that women have fewer teeth than men; although he was twice married, it never occurred to him to verify this statement by examining his wives’ mouths.” – Bertrand Russell.

Except for a few, such as Paracelsus, whose death preceded Sir Francis Bacon by 20 years, the majority seemed content to continue endlessly rehashing ancient arguments; this must have been an important aspect of their culture. See discussion in *Technosolution, 1 Patents*, p. 726, *supra*.

- ❖ “Elizabethan craftsmen or lonely seafarers sometimes made discoveries, he noted, but the experiments of calloused hands were often scorned by gentlemen. After all, what did newcomers matter in a world of falling leaves, with even the moon grown old and spots upon its face? In a sense these people lived as only we today live under the shadow of atomic disaster, with a foreboding that the human future is running out. We know a universe of greater antiquity, but we, in a different way than the Elizabethans, know our own sinfulness with a dreadful renewed certainty. It is with us as they thought it was with them. Our civilization smells of autumn.” – Loren Eiseley, *The Modern Dilemma* (1957), Kindle Loc. 149-153.

Conversely, there must have been a time when all of this was new. While an argument might be made as to Danubian and Hellenic philosophical traditions that preceded Socrates, Plato, and Aristotle, whose text were revered by Scholastic schools, their level of discourse on topics was certainly ‘new’ to the Golden Era of Ancient Greece. And before them, by several centuries, the unknown authors of the lost texts which are summarized in the Brihadaranyaka Upanishad and Chandogya Upanishad, must have introduced new levels of discourse and social religious criticism to the civilization of the Indus Valley. And between the Upanishads and the Golden Age of Greece lived Confucius whose elevated discourse introduced unprecedented senses of propriety and morality in personal and official actions in a time when such needed correction.

Confucius claimed to have invented nothing, but to have merely transmitted the wisdom of the ancient texts. Students were urged to study the ancient texts for wisdom and apply it to their daily lives. Confucianism thus contains a root of Scholasticism and certainly was practiced as official dogma 50 generations later when the Europeans first significantly encountered traditional Chinese culture. The fate of the world was determined by which culture awoke first.

✚ WRONG BOOKS: I now lament that I read the wrong books when I was young; so many books I have discovered that I should have read or should read, but are unlikely to ever do so now. But here I am now, writing GGDM, so did I read all the wrong books when I was young? Sort of an ‘anthropic principle’-like argument. Like a game of Mahjonn where one cannot be certain they made the right choices until the last tiles are removed and the board is resolved. In the design process of GGDM, the internet has been what was promised in the beginning: A vast searchable library of articles and books, blogs, news, and web pages that accelerated my understanding of subjects – and not just from Wikipedia which many criticize on various levels – and my intellectual development. If I have one stand out ability, it is that, with a half a century of intellectual and life experience, and pre-internet formal education, I have an immediate intuitive grasp of most new ideas that I encounter, and can readily synthesize them, and plug them into my GGDM cognitive framework. For what it’s worth.

Unfortunately, the potential for the internet to advance human global civilization is identical to the internet’s potential to propagate human stupidity, cultural poverty, and cognitive bias.

GGDM may be my own absurd form of Nexialism:

- ❖ “Nexialism was an anticipation of the interdisciplinary, cross-disciplinary and multi-disciplinary lines of research we now find proliferating in modern scholarship. But Nexialism was more than just interdisciplinary studies. Van Vogt also saw it as a way to encourage scientists from different disciplines to work together in a truly effective manner, with the aid of a properly trained bridge-builder: a specialist in the mechanics of interdisciplinary studies, who could bring experts together and facilitate communication between them.” – Kathleen D. Toohey, “Towards a science of Nexialism,” ResearchGate, September 2013.

I never read A.E. Van Vogt’s book, The Voyage of the Space Beagle (1950), but learned of it and the concept of nexialism in recent years through secondary sources.

---

*“Let us not be too particular; it is better to have old secondhand diamonds than none at all.” – Mark Twain*

---

**A SECONDARY PERSON:** I do not read (or speak) Latin, Greek, French, Spanish, Chinese, Russian, Arabic or any other language; I therefore depend on translations of others, when necessary, to convey texts and summaries of what foreign intellectual and historical works mean.<sup>9</sup>

I do not understand ragging or break beats, or most other musical concepts. I am fairly good at lyrical retention of songs from my youth, can hum the melodies and imitate drum beats, recognize popular songs, play air guitar, but real discussions of musicology go completely past me.

I am constantly finding the names of original works that I should have read somewhere along the intellectual path, but have never heard of before I am too old and distracted to read original works. I did read a large number of books in my youth, but not enough, of the right kinds. Then I stopped reading books and became a creature of the internet age.

Discussions of science are like discussions of original books and works written in foreign languages, I depend on secondary sources to tell me what it says and what it means, as I have an incomplete science education, but more importantly, I can never understand the original science because I lack math ability (see Math Boy discussion, 1 Entropy, p. 221, *supra*).

As such, having not engaged in scholarly studies (though I have had college courses) of most of the subjects on which I comment, I am a secondary person, depending on a multitude of secondary and tertiary summaries for my knowledge and understanding of the world. This includes, especially, the news. And Wikipedia, which has accelerated that trend.

- ❖ There is a difference between reading a work and reading about a work (or idea expressed in that work). For example, I quote Lynn Montross probably over 200 times in GGDM, but that is not the same as reading his book (which I was fortunate to have read three times in my teen youth), over a thousand pages long; my readers however come away with a secondary understanding of his ideas. But the way the world is structured and the limits of human lifespan and educational time, how can we avoid reading about other works instead of reading those works? Works and their ideas must be summarized until the time we have chips and jacks implanted in our heads.

- A person who continues reading intensely beyond the youth surge might be called ‘bookish,’ but at some point, regardless of how keenly we read

in our youth (or at some point in our lives), life opts for experience and career and the time for reading of original works diminishes.

I strongly suspect that this is true of the vast majority of the population; starting with our dependence of approved text books in public schools and undergraduate college – secondary sources which summarize and discuss their own summaries of the intellectual subjects of our civilization. We have also been long accustomed to news reporting media, starting with the evening news in the time I was growing up to the internet news today. Plus commentaries and opinion on news.

This is within the nature of an idea as expressed by Thomas Jefferson so long ago (see top feature quote, 3 Patents, p. 746, *supra*) that none are lessened by passing an idea to another, even if in summary form. Ideas can be summarized, packaged in a way stripped of all of the dithering about this and that which the authors engage on their way to the goal,<sup>10</sup> and without the terrifying mountains of empirical data that characterize writings such as those by Joseph Tainter.

- ❖ I don't criticize Dr. Tainter for the empirical mountain he climbs on the way to his conclusions about the collapse of complex civilizations. The point is though that summaries make ideas accessible. I rather enjoyed reading swaths of Tainter's book. Someone may summarize GGDM someday. Or maybe not waste their time.

Secondary summaries play an important role in our civilization; they allow us to make up time, to compress learning (like ancient Greeks watering wine). We are all secondary people. They allow us to grasp subjects quickly that took others years of original text reading to understand.

- ❖ “A doctrine or philosophy insinuates itself into culture by means of rumor as much as by persuasion occasioned by reading its founding, or even subsequent, texts.” – Theodore Dalrymple, Admirable Evasions: How Psychology Undermines Morality (2015), discussing enculturation of Freudianism.

My work is possible only because of the internet, computers and secondary works, I truly view things primarily from a secondary level, a view from a height perhaps. But at the same time, there is a risk of distortion and the risk of losing the voices from the vaults of time that speak to us across millennia from the old books and writings (see also the Inge Process, 5 Diplomacy, p. 1161, *supra*).

- ❖ It would be nearly impossible for one to write a holistic treatment of civilization as a gestalt structure or emergence and read all of the important works of the first and second order in every subject touched upon in the simulation while also going to college, working, moving, paying bills, having a career and watching sports. Thus, secondary sources were key. In fact, though I do not object to or condemn wide reading of original works – in fact, I encourage it – I think that trying to read all of the major and original works on a subject tends toward specialization, with people writing and reading within a tiny area without framework or outside interaction with other subjects, that is, I am echoing A. E. van Vogt's nexialist and modern nexialism arguments.<sup>11</sup>

Conversely, it follows and it hurts to say, but there is little, if anything, in GGDM that is original, and even less that is truly original. Almost everything in GGDM is gleaned, or was absorbed from the cultural milieu of my youth, even when I did not know of or had not read the sources of the ideas, or even secondary summaries. *I truly am a crazy man in an existential box.*<sup>12</sup>

It is a nearly daily occurrence to find quotes from other writers (often secondary writers discussing others), usually dead, who have said something that I had already written into or expressed in

GGDM, or that I find that the ideas I expressed have a name and that I accidentally arrived namelessly at the same idea. And it is a nearly certain occurrence that the quotes and/or end-notes will be added to wherever I discussed it, to show the reader that others – much brighter lights than I – have said the same or similar things, or that I know what I am talking about by properly referencing the terms, so that I am not a complete crackpot.

- ❖ C.f. “None of these claims have any sources. One would think a serious professor of this field would tell where these claims come from. Without being able to establish the premises, I see no reason to believe the conclusion.” – Nick Peters, “A Brief Look At Alexander Cain,” May 6, 2015 (forum post, TheologyWeb).

Thus it is that GGDM is filled with, and consists mostly of, appeal to authority fallacies in the finest scholarly tradition, and accidental enlightenment. The best I can offer is what a friend said once, that I have combined existing ideas in a way that they have not been connected previously.

- ❖ See Judge Learned Hand feature quote (there I go again!...) top of 2 Patents, p. 734, *supra*, to wit: “The test of invention is the originality of the discovery, and discovery depends upon the mental act of conceiving the new combination, for substantially every invention is only a combination.”

✚ POLYMATH PROBLEM: This perhaps feeds into the discussion about why there are very few polymaths and the fading influence of polymaths in our civilization. For comparison, think of a multi-sport athlete (in Britain, called sometimes a “sports polymath,” in the U.S., a three- or four-letter athlete) or in music, a person who is accomplished on several instruments, but instead, well versed and cutting edge across several fields of arts, math, science, philosophy and logic.

- ✓ The polymath is the one-person, one lifetime nexialist. The fact that we now speak of nexialism is symptomatic of the passing of the polymath from our civilization.

A modern sub-trend related to longer work life and life expectancy, are the dual professionals, i.e. lawyer-engineer, doctor-lawyer, rock star-astronomer, pornstar-doctor, engineer-mathematician, which require returning to graduate school after having had a prior professional career. The Patent Bar requires an undergraduate degree in science or engineering in addition to being a lawyer. But these are technicians, not cutting edge intellectuals (mostly).

- ❖ Some definitions of a public intellectual place them in the same position as polymaths of previous generations, e.g., Barry Gwen: “That is, public intellectuals were free-floating and unattached generalists speaking out on every topic that came their way...” (NYT, June 11, 2008). But at the same time, others have lamented the passing of the public intellectuals, e.g., Russell Jacoby, “Christopher Hitchens: The Last Public Intellectual?” *The Chronical of Higher Education*, December 18, 2011. If both can be true to a decent degree, we’ve landed right back at the beginning – the discussion of the fading influence of polymaths in our civilization! See *Anti-Intellectualism and Public Intellectuals* excerpts, *Kairotic Moments*, *supra*.

✚ ALITERATE: Though I have learned an innumerable number of concepts and dynamics in designing GGDM, and I have enjoyed reading many articles and books across many fields, and my knowledge has increased commensurate to the size and complexity of GGDM, my lack of true depth of knowledge<sup>13</sup> to accompany the breadth and inability to comprehend higher math (even in sociological articles, such as those discussing Social Entropy Theory) – like a

tall, skinny, underdeveloped, lightheaded athlete, makes me a ‘lightweight’ in academia.<sup>14</sup> Thus GGDM is not in any sense equivalent to either a master’s thesis, advanced writing project, or doctoral dissertation as the terms are currently used. It is nothing but self-puffery for me to think otherwise.

- ❖ “My feeling about whether you’re going to be happy in your chosen career has a lot to do with your personality. Being an academic biologist requires being able to focus on one particular thing for a very long time, forsaking breadth for depth. A career like journalism is just the opposite. You have to give up depth, but what you get is breadth. You learn about a lot of things and talk to a lot of people in many different circumstances.” – Carol Yoon as quoted in her Ecological Society of America profile.

Page | 1502

Does this mean that I have more the mind of a journalist than an academic? I seem to be interested in a holistic breadth of things on a macro level. This is not to say that GGDM is a work of journalism (unless as a journal of middle-age dork/nerd psychology) and I am certainly no journalist (that would be an insult to journalism) and I don’t enjoy talking to lots of people (amen!). I mumble to myself and that is about all I can handle.

- ❖ “Did you exchange a walk-on part in the war for a lead role in a cage?” – Pink Floyd, “Wish You Were Here” (1975).<sup>15</sup>

GGDM covers a lot of ground, it is, as I have claimed repeatedly, a holistic work interwoven across many disciplines. There are of course, areas where I have decent or even good understanding and knowledge, either from my youthful interests or from what I had to read in college courses, and I have read much while designing GGDM.

When I encounter new ideas, I must be able to read them and grasp the basic concept quickly, I often don’t have time to read deeply into new subjects as one would if it was their chosen interest; I am more interested now in concepts generally and my base of knowledge, learning, and experience allows generally quick comprehension of new ideas and subjects. This means that most movies and TV shows quickly bore me. I also tend to wander around in circles and encounter the same subjects or ideas in different guises, connecting the dots here and there. This is the value of secondary sources to me, I would probably love to read Steven Johnson’s book, Avi Sion’s book, or even Gilles Fauconnier’s book, and I may someday, but now I must be focused on concepts within GGDM, and secondary summaries are key. Like college students all, we depend on the deeper knowledge of others.

---

*“Our posturings, our imagined self-importance, the delusion that we have some privileged position in the Universe, are challenged by this point of pale light. Our planet is a lonely speck in the great enveloping cosmic dark. In our obscurity, in all this vastness, there is no hint that help will come from elsewhere to save us from ourselves.” – Carl Sagan, A Pale Blue Dot (1994)*

---

**ONE FEWER GOD:** It should be abundantly clear to the reader by this point that I generally agree with Carl Sagan’s statements on most matters, including religion (I occasionally exercise some independent intellect however) as they relate to the subjects of this simulation game.

Many of my statements regarding religion align generally with The Four Horsemen of New Atheism, however, true New Atheist and/or antitheist would consider my position ‘soft,’ in that I

am neither militant, pejorative, proselytizing, offensive, or certain of things that I cannot possibly know or prove. Nor am I witty or razor tongued.

- ❖ “I contend that we are both atheists. I just believe in one fewer god than you do. When you understand why you dismiss all the other possible gods, you will understand why I dismiss yours.” – Stephen F. Roberts.<sup>16</sup>
  - This quote drives theists nuts; in a singular moment, it suggests that they are the slow kids in the cognitive progression of humanity (see Mythopoeic Thinking discussion, 1 Temporal Technology, p. 809, *supra*). There are at least a dozen top result articles on Google by Christian apologists clarifying, distinguishing, and arguing against this single comment.

Instead, I offer my thoughts and observations in writing for what they are worth. I am more interested in religion as a structure of human civilization and psychology – empirical minds cannot deny that religion is and has been an important mechanism, part of human civilizations and must acknowledge that facts cannot be conveniently ignored in any honest inquiry – and I do not believe that religion will ever be wished or argued away until there is a fundamental change in base human psychology – for example, if future generations of humans spring forth from factories, pre-educated, preconditioned, with no childhood memories or infantile needs or fears, then there may be no need for religion. If that sounds like a horrific future; well there you have it, the conundrum.

- ❖ I do not think I am anti-Christian or anti-religion, rather, I am anti-stupidity. Unfortunately, religion (and its cousin, politics) and stupidity have historically been locally co-extensive, as Daniel Dennett might say. I think most of religion now doesn't know what it's really about, and in the words of the God Whisperers, “needs a good, swift kick in the shins,” (see 1 Patents, p. 732, *supra*) and I have tried to deliver that enlightenment in GGDM (though I am sure I went about it much differently than the two Reverends). Religion has a place in humanity, and both Nietzsche and Douglas Adams have warned that we should not “throw the baby out with the bath water” (Adams, see 1 Technology, p. 695, *supra*). I agree.<sup>17</sup>

I do not consider myself a New Atheist, as I understand the term. My argument isn't about God, my argument is about the relation of humanity and the universe, and I consider the arguments about God as largely irrelevant. The pillars of my argument (or assertions if you prefer) are Empiricism, Absurdism, Education (a macro view), and perhaps a brand of Anti-natalism.<sup>18</sup> Atheism has changed over the last 50 years, from ‘live and let live’ atheism, to a militant, pejorative, dismissive atheism that is the New Atheist:

- ❖ “Several thoughtful writers have already laid bare the slapdash know-nothingism of today's modish atheism, but [Nick] Spencer's not beating a dead horse – he's beating a live one, in the hope that Nietzsche might rush to embrace it. Several critics have noted that if evangelical atheists (as the philosopher John Gray calls them) are ignorant of religion, as they usually are, then they aren't truly atheists. ‘The knowledge of contraries is one and the same,’ as Aristotle said. If your idea of God is not one that most theistic traditions would recognize, you're not talking about God (at most, the New Atheists' arguments are relevant to the low-hanging god of fundamentalism and deism). But even more damning is that such atheists appear ignorant of atheism as

well.” – Michael Robbins, “Atheists Used to Take the Idea of God Seriously. That’s Why They Mattered.” Slate Magazine, July 8, 2014.<sup>19</sup>

*If I am an atheist*, I am one of the old brand, I am willing to say in writing (if anyone cares to read it), ‘this is what I believe’, point out what I think is fallacious and why,<sup>20</sup> and that I think most religious belief is ridiculous, illogical, and has been as much harmful as good, and I’ll leave it at that.

Page | 1504

- ❖ I watched the introductory video on The Richard Dawkins Foundation for Reason & Science channel on YouTube, the very same video could be reproduced *in toto* (with necessary changes) as a parody and put up as an intro video on a fundamentalist Christian YouTube channel. The video contained political mockery, caricature of the opposition, conspiracy theories, assertion that their beliefs are under attack, and the suggestion that they alone hold the absolute truth, all delivered in fast narrative in two minutes. In short, the New Atheist use the very same language, arguments, tones and tactics of the religions they criticize.

Consider the following from an article on Greta Christina’s blog, “Deepities On Parade: ‘Oh My God’ Reviewed” (movie review, November 27, 2009):

- ❖ “Any competent atheist could shoot it down in seconds. (‘If things don’t just come out of nothing and everything has to have been created, then who created God? And if God always just existed or somehow came into being out of nothing, then why can’t that be true for the universe?’ See how I did that?)”

Her comments suggest that any competent Atheist must be a stout and crafty defender of the faith (and should be so instructed), just like Christians, just like Christian Apologetics, just like any other major religion in the world.

- ❖ Neil deGrasse Tyson said, “I can’t agree to the claims by atheists that I’m one of that community. I don’t have the time, energy, interest of conducting myself that way... I’m not trying to convert people. I don’t care.”

A sensible reading of this indicates that Mr. Tyson also views the current form of atheism as evangelistic.<sup>21</sup> There is an impatience and frustration boiling over in modern forms of atheism, a stunning *lack of faith* in the eventual success of reason, the marketplace of ideas, or in developing other ways to approach the problem. They hasten to throw the baby out with the bathwater, as Douglas Adams suggests (echoing Nietzsche). Aggressive atheism only hardens the lines in to walls, competing redoubts of believers; atheism, like anything else, only succeeds in enculturation when enough people see it as natural and reasonable. And neither side is reasonable.

✚ RELIGION SUBLIME: If while reading GGDM, you ever experience a faint moment of wonder or awe, you should stop a moment and ask yourself: How could the work of an angry middle-aged asshole ever be sublime? If you think that this can be true, then it is possible that the Bible is a work sublime. Here is the quandary: I know that in order for my work to have any measure of success (whatever that might be in this case, I am not even sure myself) it must become or seem to be sublime to a significant part of its readership (sublime is always a subjective standard, individually, but a work can be said to be in some way sublime objectively when enough individuals have that opinion, see Five Types of Facts, 1 Dreamtime, p. 135, *supra*).

- ❖ Consider this: The reason we know so much about Plutarch’s works is that the Romans loved Plutarch and hand-copied (imagine: no photocopiers) probably hundreds of thousands of copies of his books. Thus, Plutarch has survived the ages, though we believe that a least half of his works have been lost. If I were to decide that success of GGDM would be that the work is being read hundreds (like Machiavelli) or a thousand years (like the Bible) from now, what would be the required basis?
  - See previous discussion of Unpublished Book, 3 Kairotic Moments, p. 1439, *supra*.

However, I cannot ever personally accept that I am creating or capable of creating something that is sublime.

- ❖ If any doubt remains to my claim of the title “angry middle-aged asshole,” go back and re-read 2112 Absurd Words, *supra*. Nothing cements a claim of ‘angry asshole’ like a refutation of educational optimism in the future universe.
  - Similar to the way that trading lady Gwendolen for an illiterate peasant girl concubine established Prince Henry as a cad in the 1964 movie *Beckett*. Gwendolen committed suicide due to the unbearable insult.

Anyone who is turned off by 2112 Absurd Words probably shouldn’t and won’t read further. In any event, I will not change a word that I have written because it still serves a purpose: If I am wrong, then you will see that I am wrong and be something else. If I am correct, in any sense or degree, the world will learn something from this, my legacy: If enough people read it or it is summarized in secondary sources.<sup>22</sup>

---

*“In a 1978 interview, Friedrich Hayek said about [Ludwig von] Mises’s book *Socialism*: ‘At first we all felt he was frightfully exaggerating and even offensive in tone. You see, he hurt all our deepest feelings, but gradually he won us around, although for a long time I had to – I just learned he was usually right in his conclusions, but I was not completely satisfied with his argument.’”*

– from Wikipedia article, “Ludwig von Mises,” captured July 9, 2019

---

**PROFOUND TRUTH:** I could write the most profound singular truth – the one thing the world needs to know to make it a better place – on a piece of paper and leave it on the desk for the world to discover. The likelihood that any good will come of it is next to nothing.

Probably, the wind would catch up the piece of paper and blow it out the window where it would become part of the swirling collection of street trash. Or the building would burn down. Or some three-year old human monkey would color on the paper with crayons and markers.

Were anyone to discover it laying on the desk and take the time to read it carefully (another barrier, most people don’t have time to read carefully, some don’t read at all, just glance at the squiggles and move on – the infuriating people who respond to emails without reading them first or order food without looking at the menu), they would have to understand the context of the message and have knowledge of the subjects to which it applies.

And they would have to be able to read the language in which it is written. If it were somehow to survive and be discovered by an archaeologist in hundreds or thousands of years from now,

the people of that time might not be able to read it. There are still about a dozen ancient languages we cannot read.

And in the end, whether readable or not, read or not read, the message of profound truth would have to matter to the reader to have any meaning. The profound truth would not be everyone's truth.

---

*“I am not very impressed with theological arguments whatever they may be used to support. Such arguments have often been found unsatisfactory in the past. In the time of Galileo it was argued that the texts, ‘And the sun stood still... and hasted not to go down about a whole day’ (Joshua x. 13) and ‘He laid the foundations of the earth, that it should not move at any time’ (Psalm cv. 5) were an adequate refutation of the Copernican theory.”*

– Alan Turing, Computing Machinery and Intelligence (1950)

---

## Endnotes.

<sup>1</sup> Citation: “To put it plainly, law school is not lawyer school.... Law school is about training legal scholars. Despite the persistence of the time-worn phrase, law school does *not* teach students to think like lawyers. It teaches them to think like law professors. Judge’s decisions, in the law school classroom, are far more important than what the lawyers did or could have done.... There is little attempt to look at the law, as practice will see it, through the remedies it affords. Practicing attorneys rarely think first about the grand sweep of the law and its rational development. They think about the needs of their client and how the law can be applied, shaped, or reformed to accomplish their client’s goals.... But most law professors don’t practice; some never have practiced and don’t ever want to. Their focus is on scholarship: cutting edge changes in the law, law review articles, complex analysis of vexed legal problems. And law school is made in their image.” – Scott Turow, One L (1977) (emphasis in original).

<sup>2</sup> Commentary: At the Replay FX Arcade and Gaming Festival in Pittsburgh in 2015, I sat down at a table with a group to learn to play the tile game Hanabi which was being taught by a lady who is considered to be very good at the game and who probably plays the game more than anyone else around. During the first game, which involves limited player communication, I did something that made her think that I was a genius of some kind, that I got the game instantly and was playing at some advanced level on my first game. As my next moves proved, however, I hadn’t a clue what I was doing, and I told her afterward that I am no genius, in fact, I am just pretty dumb overall. Twenty years ago, I knew someone who could do that, an A-rated chess player, whom I observed would win hobby board games against experienced players the first time he played, he had the ability to instantly understand the strategy of the game when it was explained, without having played. I am not, have not, that kind of mind.

<sup>3</sup> Commentary: This is one very good reason why I would never ‘steal’ or plagiarize anyone else’s work. Any work worth stealing or plagiarizing was written by someone a lot smarter than I am and it would become quickly obvious that it was not my work, as I am not smart enough or educated enough to have thought of it.

<sup>4</sup> Citation: [https://en.wikipedia.org/wiki/Wikipedia:Getting\\_to\\_Philosophy](https://en.wikipedia.org/wiki/Wikipedia:Getting_to_Philosophy).

<sup>5</sup> Commentary: Hypatia of Alexandria quotes are offered here as such because the internet sources represented them as being attributed to her (which is the case with the majority of my quotes, I have not read the original books). In the case of Hypatia, this is especially dubious as I understand that none of her writings survived, except in the works she edited in her father’s name. So I must assume that if authentic, the quotes come from those works or perhaps from works written by her students (as was common at the time, many philosophical works were edited, written or added to by students later). The quote offered here is also consistent with her historical image and troubled times.

<sup>7</sup> Citation: “[Atheism] had only a limited amount to do with reason and even less with science.... In reality ... modern atheism was primarily a political and social cause, its development in Europe having rather more to do with the (ab)use of theologically legitimized political authority than it does with developments in science or philosophy.” –

Nicholas Spencer, [Atheist: The Origin of the Species](#), as quoted in Michael Robbins, “Atheists Used to Take the Idea of God Seriously. That’s Why They Mattered.” *Slate Magazine*, July 8, 2014.

<sup>8</sup> [Commentary & Citation](#): Video available on YouTube. He begins thus, “If you find the criticism or bashing of religion tiresome, just give me five more minutes.” Which is exactly the length of the video.

<sup>9</sup> [Commentary](#): I have noted over the years how much we depend on the titling or captioning of pictures and videos for information. I have noted videos and pictures captioned where there is no other information contained in the video or picture to verify that the caption is correct, I have seen the same video or picture (or parts of) captioned in completely different ways in different places that were not in agreement or even contradictory. For example, the old-looking, black-and-white picture at the top of the Wikipedia article, “Nongqawuse,” shows two African women dressed and sitting for a portrait. It is labeled, “Nongqawuse (right) with fellow prophet, Nonkos” and is allegedly the famous picture of Nonquawuse taken at the behest of the wife of Major Gawler while the two lived in his home (as described in the article). That’s all nice, but how do I know it’s not just a random picture that someone found of two dressed African women sitting for a portrait? Yes, I am sure there are authorities who have published this picture as being of Nongqawuse and Nonkos for over a century but without actually knowing these two or having other pictures to compare (this is likely the only one) it could still be just a random pic that someone at some point decided to label as Nongqawuse and Nonkos.

- ✓ See previous discussion of the various portraits of Christopher Columbus, 1 Expansion, EN 1, p. 888, *supra*. He could have been an alien for all we know. Or maybe he was Ozzy Osbourne transported back to the 15<sup>th</sup> century? “All aboard, hahahaha!”
- ✓ This also relates back to the previous discussion of the nature of facts, see Five Types of Facts, 1 Dream-time, pp. 135-137, *supra*.
- ✓ Near the end of working on GGD, I watched a short film on YouTube titled “Celina” that was labeled as ‘post-apocalyptic.’ While the film short was very low budget, there was nothing in the film itself that showed it was post-apocalyptic. Most of the 8½ minute runtime shows a bruised young girl wandering around an abandoned residential housing development with a picture and GPS coordinates looking for something. If it was not labeled as post-apocalyptic, if the viewer did not have that preconception, what might they think is going on in the film? A young girl wandering around looking for her drug-dealer boyfriend? But people react to it as if it were a post-apoc story because it was so labeled. Labeling theory.
- ✓ Trust in secondary sources is also what makes the collectibles market so suspect – you have only the seller’s contention that this X thing has enhanced value because it was owned by Y or used as a prop in Z movie or is game-used in XYZ sporting event. Everyone who sold the item before now has claimed it and so you have a chain of secondary claims where only the original seller knows the truth. There are entire industries devoted (e.g., the guys at MLB games who certify and mark game used items or certain prestigious movie prop stores) dedicated to authenticating collectibles. Otherwise, any old fraudster could...

<sup>10</sup> [Commentary & Citation](#): The 1927 silent film *Metropolis* (long lost but now 95% recovered) is considered important as the first full length feature science-fiction film as well as for its stylish groundbreaking German Expressionist sets, cinematography and the dystopian political and social message. In 1949, Osamu Tezuka (the father of manga), while in medical school, produced a manga version of the story in the aftermath of WWII in occupied Japan; in the defeat of WWII, the time was ripe for a dystopian messaging film. However, Osamu Tezuka has stated that he never actually watched any version of the 1927 film (there were many hacked versions about) and only was inspired by seeing a screen still shot in a magazine. It is likely that he got the general idea of the movie plot from secondary sources, but the two stories – 1927 and 1949 – bear only general parallels. Information from Wikipedia articles, “*Metropolis* (1927 film)” and “Osamu Tezuka,” December 18, 2018.

- ✓ “In this sense, if in no other, [Brad] Bird’s latest owes more to ‘*Metropolis*,’ ‘*Blade Runner*,’ ‘*Dark City*,’ the first ‘*Tron*’ and other works of top-shelf eye-candy than to most of the SF-and-fantasy-tinged franchise entries that modern studios churn out. ... No matter. The ‘message’ of ‘*Metropolis*’ – a parable of labor and capital which concludes that society needs the heart to mediate between the head and the hands – was a mess, too. Today it seems at once reductive and overreaching, basically Marxism Lite. But if you had to make a list of reasons why that film is still remembered, discussed, and raided for inspiration by films like Bird’s, ‘message’ wouldn’t be on it. ‘*Metropolis*’ is remembered because watching it is as close as many of us will get to being able to have another person’s dream.” – Matt Zoller Seitz, review of *Tomorrowland* on rogerebert.com, March 18, 2015.

<sup>11</sup> **Citation:** “I experienced a classic example of the kind of extreme specialization that van Vogt envisaged, when I attended a conference on Arthurian Literature in Bangor in 2002. At the conference one of the speakers delivered a paper on the ‘First Continuation’ to Chretien de Troyes’s unfinished poem, *Le Conte du Graal*. Chretien’s poem was the first to tell the story of the (Holy) Grail, and because it was left unfinished, a string of works were penned in an effort to complete the work. The first continuation begins at the very point where Chretien’s narrative breaks off, and its story, at least in the early part, directly follows on from Chretien’s story. After the speaker had finished, questions were invited from the floor, and I asked a question about how events in the early part of the first continuation related to final incidents of Chretien’s poem. The details don’t matter. What mattered was that the speaker couldn’t answer the question because she had no real knowledge of Chretien’s poem. Her focus was solely on the ‘First Continuation,’ and on the differences between the shorter and longer versions of that work. What had happened in the preceding work was of no importance to understanding the continuation. Just one example of the growing trend amongst academics to know more and more about less and less.” – Kathleen D. Toohey, “Towards a science of Nexialism,” ResearchGate, September 2013.

<sup>12</sup> **Citation & Commentary: Dr. Who:** “I really am just a madman in a box.” – “The God Complex” (2011). Except that to have said what was really meant would not have played as well and the target audience would not have understood it; existential is not a word in common use with the under-20 audience. The TARDIS is the Doctor’s existential box; he chose it and/or it chose him, and he can control it only when it lets him. According to Google dictionary graphs, use of the word *existential* – not surprisingly, climbed sharply after the end of WWII, peaked probably in the early 1960s, and has slowly declined since. According to Merriam-Webster online dictionary (entry updated September 14, 2018), *existential* is in the top 1% of lookups, and lookups spiked after President Obama declared that ISIS was not an existential threat:

- ✓ “Groups like ISIL can’t destroy us, they can’t defeat us. They don’t produce anything. They’re not an existential threat to us. They are vicious killers and murderers who perverted one of the world’s great religions.” *Id.*

<sup>13</sup> **Commentary: Rhetorical Question:** Does knowledge consist primarily of facts (see 1 Dreamtime, p. 135 *et seq.*, *supra*) and proper forms or does it consist as much or more of understanding, depth, profundity? Is it only Justified True Belief (JTB)?

<sup>14</sup> **Commentary:** Not to mention that my once legendary attention span and focus seems to have become semi-retired at this point – it works a little here and there, but not too much, and not too long. Like a young Irish Setter:

- ✓ “Like other Setters, the Irish is known for having a bit of a short attention span when it comes to training. Small, short sessions are best to get in activities before the dog becomes distracted. Patience and repetition are key to getting concepts into the head of an Irish, hopefully before he gets too bored and moves on to hunting or other, more fun activities.” – dogarena.com (September 24, 2018).
- ✓ “Irish Setters are intelligent but can have short attention spans, so when it comes to training the owner should know what they are doing. They can alternate between wanting to please and deciding that they would rather go do something else during training time. It is the trainer’s job to keep them focused and motivated in a firm but fair (and fun) way. Like all sporting breeds, the Irish thrives when he has a job to do, and obedience training is one such job that will keep him happy and fulfilled. Once the basics of obedience are taught, an owner can move into other dog sports if desired – Irish Setters do great at hunting, dock diving, tracking, agility, rally and flyball – just to name a few!” – academichound.com (September 24, 2018).
- ✓ Thus, much to my annoyance, the process of final work on GGDM has, near the end, become a non-linear progress, with some straight progress through the sections, and a lot of bounding about through others, playtime (i.e. goofing off) and distraction (i.e. off on tangents, looking stuff up, YouTube videos).
- ✓ See Discipline & Distractibility discussion, 2 Colleges, p. 475, *supra*.

<sup>15</sup> **Commentary:** Yes.

<sup>16</sup> **Citation:** Commentary by Stephen F. Roberts: [https://freelink.wildlink.com/quote\\_history.php](https://freelink.wildlink.com/quote_history.php):

- ✓ “I first used The Quote as a tag line for postings on the newsgroups alt.atheism and talk.atheism at some point before October 1995. I don’t remember exactly when I started using it, and unfortunately lost my mailer that would have contained the archive. The earliest records that DejaNews.com have is back to

1995, and by October 1995 it appeared ‘widespread’ in taglines, so I must have originated it sometime before then. Most likely early 95 or late 94.

...The Quote is an original quote that came from an online debate I was having with religious people in the newsgroups. I used a similar comparison in a debate when my opponent wondered why I ignored the evidence for god, and in return, I wondered why my debate opponent chose to ignore the evidence for Shiva, or Zeus, or any of the other possible gods.

...I then slightly refined and shortened it the next day to the ‘modern’ form it is now to use in a tagline. Within days, The Quote was in use by others in their taglines (I added my name as an attribute a few weeks later when people asked me if it was my original quote).” *Id.*

<sup>17</sup> Commentary: I don’t mind, for example, the Bahá’í Faith – except that it is just that – an unjustified faith. It begins with the whole God thing – however it is cast – they are talking in positive, serious statements about something they cannot possibly know anything about. The appeal of the Bahá’í Faith is the same as the appeal of a used car that has been freshly repainted. Were the Bahá’í Faith to become the dominant faith in any place, I would expect that the results would be the same as when and wherever Judaism, Christianity, Islam, Shinto in feudal Japan (after syncretism with Buddhism), and Hinduism and Buddhism became dominant faiths – they would persecute others because it would then be a matter of power, control, being ‘right’, and personal gain – regardless of the unity which the faith teaches. The Faith would become the legitimacy of the authorities in those societies, clerics would bend the rules for those who rule.

There is always an interpretive way around restrictions of faith, for example, the unity of religion in the Bahá’í Faith could be interpreted to mean (in the same way that the Beatles “Hey Jude” (1968) could be interpreted as vaguely anti-Semitic if “her” is Mother Mary) that previous religions are obsolete (and subsumed) and their adherents are religious degenerates (e.g., as the sacrificial Brahmans were to Hinduism and Buddhism and as Hinduism and Confucianism were to Buddhism) and while the previous religions would be valued as created/inspired by prior Manifestations of God, the same probably wouldn’t be granted to the current followers of those religions if in conflict with the sociopolitical ascendancy of the Bahá’í Faith. Adherents will probably write unkind things about me, saying that I am ignorant, wrongheaded, and faithless (all of which are true), that faith does not require justification (and isn’t that exactly the crux of the matter?), that it would never happen, that their religion expressly forbids it or avoids past mistakes, but I see nothing there that would suggest otherwise. We’ve seen this play before...

<sup>18</sup> Commentary: I am personally and deeply insulted by having to live in this universe, by having to exist against my will. Which is the living paradox, isn’t it?

<sup>19</sup> Citation: As of September 2018, the article is still available on Slate, and can be found easily by Google search.

<sup>20</sup> Commentary: If Christianity and/or the Abrahamic Religions had been a universal, consistent, unerring force for good, had they demonstratively improved humanity, Christians would be in a better position now to argue. As the record stands, the Christians are historically as black as the Romans and Babylonians they tarred. Christianity cannot take much credit for where we are now, for the nascent global civilization following the advent of technology following the period of European Colonialism; it is in fact arguably a reaction *against* Christianity and the Church that led to science and discoveries that made it possible for the Europeans to dominate for 500 years, that eventually made possible world wars and nascent global civilization. Christianity was just along for the ride.

<sup>21</sup> Citation: “Called by the Universe: A conversation with Neil deGrasse Tyson,” The Science Network, July 23, 2009. The video of the interview was still available on The Science Network’s website in 2018.

<sup>22</sup> Citation & Commentary: “I did it again, I picked another stupid ape. I should have known. It’s not about showing you the universe. It never is. It’s about the universe doing something for you.” – Dr. Who, “Father’s Day.”

- ✓ Yep, I plead guilty, I’m a stupid ape too. With the caveat that it’s not so much what the universe does for me – not much really – but what the universe does to us every day we have to live here. That’s really the human plight. Ape here!, get yer Stupid Ape here!

<b>ENDNOTES</b> .....	1527

*“If the majority of referees like your research, you can be certain that you are doing boring work. To push forward ideas that will matter to the world, you and I may as well accept that we are going to have to upset people and crawl through the trenches of muddy carping and explosive criticism. All referees – and I suppose that must include me – are subconsciously looking for manuscripts that play back to them ideas they already find familiar and palatable, and ones that lend support to their own prior research. That is bad and sad. However, it also happens to be human.*

*Of course, all referees will tell you that they are open-minded, write gently and are on the lookout for work of fabulous creativity. But they aren't. It is hard for a human being to absorb ideas that are of first-order originality; such ideas, by definition, barely compute. Moreover, it is emotionally difficult for reviewers to be charitable about others' manuscripts. Schadenfreude survives, if quietly.*

*...The simple truth is that the scholar who is tired of referees is tired of life. Journal reviewers are going to keep on being incoherent, making fundamental mistakes, being childlike and gratuitous, forcing us to cite their irrelevant articles, thinking that after 20 minutes they understand our work better than we do after 20 months, leaving out the crucial references they claim have already shown the finding, and all the rest.”*

– Andrew Oswald, Prof. of Economics, University of Warwick, contributor to, “The worst piece of peer review I’ve ever received,” Times Higher Education, August 6, 2015 <sup>1</sup>

**ORIGINALITY IN ALIENS:** In the been-there, done-that genre of First Contact movies (whether alien invasion or not), *Arrival* (2016) is a good example of a “first-order originality” that barely computes. The same is true of *Close Encounters* (1977), compared to what came before, and *Contact* (1997) (notice the 20<sup>ish</sup>-year cycles?). I have seen comments online that *Arrival* was an ok movie, an average movie, the sure sign of people who didn't *grok* it, and went to see exploding buildings and alien weapons and were disappointed they didn't get more of the same old.

- ❖ In fact, I suspect the attempted sabotage and explosion inside the alien ship was just so that the movie had an action scene. Why didn't the heptapods know this was going to happen? Or did it have to happen?

The aliens in *Arrival* are playing a game of cosmic chess on a grand scale, their trip to Earth was to move the pawn of humanity into position in 3,000 years for some unknown event they can already see, that is already *actual* to them.

- ❖ While most ideas of ‘first-order originality’ ‘by definition barely compute’ – *No!* NASA does not have a child (sex) slave colony on Mars! See *Child Slave Colony on Mars*, 4 *Expansion*, p. 928, *supra*. That is, not all ideas of either first-order originality or that barely compute are meritorious.

**FUZZY MODELS:** So what method have I engaged in?

- ❖ “In every one of these fields of investigation the student may proceed either by the historical method, which seeks to *depict* concrete reality in all its concreteness, or by the analytic, processual method, which tries to give an account in terms of abstract generalizations, mechanisms, processes, laws and principles.” – Clarence Marsh Case, *Outlines of Introductory Sociology* (1924), p. xvii (emphasis in original).

I set out to construct a workable model of human civilization on the broadest scale (now called macrosociology which seems to have begun to be generally recognized about the same time I started working on this project), the ‘workability’ of the model would be reflected in the fact that it was playable as a game with endless possible courses and variables, to teach the players or bring forth what they know intuitively. In terms of Mr. Case, I have proceeded by a somewhat ‘processual method’ extracting process of civilizations from history, philosophy and social sciences thinking.

- ❖ If I ever were accused of being a pioneering mind or a foremost intellect in the area of macrosociology (or anything else), it would be more a statement about the underdevelopment, the poor state of the art in our current civilization. In this, I have a good feeling that Albert Einstein would agree, “I have no special talents. I am only passionately curious” (1952). Pragmatically speaking, compared to now, physics in the late 19<sup>th</sup> Century was ‘underdeveloped.’ So is the glass half full, half empty, or both?

The model is constructed from observation of what we can see, but not quite see. I find this somewhat akin to the way that physicist and chemist constructed or learned the structure of the atom and sub-atomic universe. And the way in which astronomers and cosmologist have constructed the seen and unseen nature of our universe back to the beginning.

I freely admit that some of what I have done is art, much of it is more philosophy than anything else – which is inherently damning in the current world for anything that wants scientific instead of literary respectability – and compromises must always be made for the sake of the model or simulation. Nothing here is invented or new; I have taken what mostly already exists in our intellectual tradition and assembled them (perhaps) in new ways.

- ❖ Napoleon did not invent new weapons to defeat his enemies. The weapons used in the Napoleonic Wars were the same weapons that had been used the previous century; Napoleon radically changed the tactics and combined them in ways, with speed, efficiency and precision not seen before. He did however, embrace emerging non-military technologies, such as the telegraph and new food preservation technology.

Broadly speaking, there is absolutely no empirical basis for the structures or many of the deductive claims offered in GGDM. As such, GGDM is a work of philosophy at best and/or just my considered personal opinion, at worst. In the senses of the standard definition of fact, philosophy is no more than considered opinion anyway. It is not certain how any of this is verifiable in the current sense.

✚ **GESTALT STRUCTURES:** I did not start out with the idea that civilizations are gestalt structures. I can assure the reader that I had not even heard of such a thing in December 1992. I probably first encountered the term ‘gestalt’ about the time I graduated from Point Park College, in the spring of 1997. I recall coming across an article on Gestalt Psychology or Gestalt Therapy in the Encyclopedia of Psychology at the newly-opened Library Center. I do not believe that I began thinking of civilizations as a gestalt structure until at least 2002.

- ❖ *Intellectus Magna:* The common thread of intellectuals through all ages, times and places is simply that they become fascinated, obsessed with a problem – one that others ignore or do not see as relevant, one that might not even exist yet – and pursue the problem until the results matter to others; until it changes the future world. This is the point of post-graduate training, especially of the liberal arts tradition; to learn to

frame the problem with which you are obsessed. One possible reason for my failure of post-graduate training is that I had already framed my problem. Another possible reason was immaturity. Given our penchant for accepting negative reasons...

While my references to civilization as a gestalt structure may at times sound more like faith than reason, I do not fall into the same criticism as Thomas Aquinas, who is accused of knowing the answer before beginning the inquiry and simply reasoning his way to a predetermined result (that is, justification of his Catholic faith). I am guilty more of deductive reasoning than *sacraficium intellectus*, though in some senses, they apparently appear the same: What is the difference between deducing your way to God's existence and deducing the elements of a 'large scale distributed structure' and declaring that it is a gestalt?

- ❖ Cf. Pierre Teilhard de Chardin's "Omega Point"; he was a Jesuit priest who was trained in paleontology and geology and thus had to come face to face with science and geological and biological evolution of the Earth. He could not shelter in willful ignorance like others and assert that the Bible was literal and inerrant, so he reasoned his way into accepting both, a solution that is not quite scientific and not quite Christian. Unlike Aquinas who reasoned or rationalized his way to an affirmation of his faith (a predetermined result), many of Chardin's ideas were later banned by the Church from discussion (for obvious reasons). Petty dogma is the Church tyrant.
- ✚ PROBATIVE VALUE: I do not think that my method here falls then, properly or firmly within any of the accepted scholarly methods. Yet, my method is scientifically accepted when it comes to the sub-atomic (with the concession that their hypothesis are testable and falsifiable), and, alternatively, while not precise and testable, my model nonetheless carries meaning and clarity and has probative value on the subjects of human civilization. My model then might be called a fuzzy model.
  - ❖ You could choose to think of GGDM as 'Stellar Conquest reimaged.' I don't, but it might be reasonable to analogize the development of GGDM from Stellar Conquest as being like the difference between the original Battlestar Galactica and the reimaged Battlestar Galactica, or the original Star Trek and Star Trek TNG. In each case, the series benefitted collectively from improvements in technology, budget and marketing, audience sophistication, development of new writing and filming styles, and twenty-five or more additional years for the writers to live and think about the story. And, although the original Battlestar Galactica was intended to 'cash-in' on Star Wars, and was done on a low budget, there was something to it of its own merit that would not, with the lifetime dedication of Richard Hatch, just fade to black.
  - ❖ A friend says that I am working on an "advanced logic problem" – I am not even sure what that means, therefore it is unlikely to be correct. I suppose it might be if you think of it as a "fuzzy logic" problem, but again, I don't think of GGDM or fuzzy logic in that way.
  - ❖ You might declare GGDM a masterful, deep, and cutting edge work of social philosophy, a *magnum opus*, that engages the reader and players in a conversation about civilization, or you might call it bloated 1990s-style pretentious blathering incoherent esoteric nonsense with too many endnotes, quotes and unnecessarily long introductions by an unqualified author. Either interpretation would be equally colorable. At this

point, GGDM is either a mess, an amazing work, or an amazing mess; your interpretation? What you cannot call it is a scholarly work. It is a multi-purpose work, without peers, from influences in our current civilization. I might, in my unusual vanity, determine that GGDM is an unusually and exhaustively complete work, a treatise, my *magnum opus* by default as I have not written and will not likely write anything else of such length and completeness.<sup>2</sup>

- Saying that someone has a lot of influences in their work is a polite way of saying they have no new or original ideas, just repackaged day-old donuts. In the mid- to late-80s and into the 90s, on training exercises, we received MREs with packs of M&Ms with 1980 and 1984 Olympics logos, they were really hard and stale. GGDM is a 25+ year old box of post-apocalyptic Cold War survival ration donuts.

✚ FAILED INTELLECTUAL: When analyzing GGDM or parsing my written words, don't give me credit for more intelligence than you see before you on the page. There is nothing clever here to be teased out by deep-sounding critical analysis like Chaucer's light social criticism in the Canterbury Tales. After more than 25 years of parsing my own thoughts, there is nothing hidden or obscured in GGDM, my argument is what you see before you and I believe I have polished my words and ground the subjects of GGDM down to the finest points. But I am still basically a failed intellectual. As my mother would say, "Well bully for you!"

---

*"Defeasible reasoning is a particular kind of non-demonstrative reasoning, where the reasoning does not produce a full, complete, or final demonstration of a claim, i.e., where fallibility and corrigibility of a conclusion are acknowledged."*

– from Wikipedia article, "Defeasible reasoning," captured April 7, 2020

---

**FALLACIES:** Of all of the fallacies that might be thrown at GGDM – and I don't think I could possibly imagine them all<sup>3</sup> – the one that probably sticks best is the charge of 'circular reasoning'; GGDM may be an extended exercise in circular reasoning – GGDM 'begs the question' if you will. That is, GGDM perhaps begins with a conclusion – or perhaps it didn't but somewhere along the line, the conclusion moved to the starting position – followed by premises and parts that each in turn must be accepted as true – are in need of being accepted as true – as much as the starting conclusion, and whose acceptance depends on accepting the starting conclusion.

For example, consider the following argument:

- 1) Jane is a prostitute,
- 2) Men give Jane money,
- 3) Jane has sex with men.

This is a circular argument: The conclusion is presented first, and acceptance of the premises as support depends on the conclusion being accepted first. When presented properly:

- 1) Men give Jane money,
- 2) Jane has sex with men, and
- 3) Therefore, Jane is a prostitute.

...the failure of causality becomes immediately obvious: The argument fails to state that men give Jane money for sex. There may in fact be no relationship between the two, perhaps her father and brother gave her money for her birthday (and they are not incestuous) and she had sex with her boyfriends, BFF's husband or complete strangers at some indeterminate time. But the circular argument tricks us into providing causal and temporal links that are not there.<sup>4</sup>

- ❖ On December 4, 2017, the lawyer representing the President of the United States said:
  - “(The) President cannot obstruct justice because he is the chief law enforcement officer under (the Constitution’s Article II) and has every right to express his view of any case.”

Page | 1514

This argument is so mind-bogglingly flawed, that my co-workers just shook their heads and uttered, “What?” or “Huh?” It is an example of how circular arguments are sometimes used in public, it is the King’s Argument: The King can do no wrong because he’s the King (and all that is wrong is against the King, not by the King); to accept that the king can do no wrong, you must accept the implication that being king places him above mortal error or that anything he does that appears ‘wrong’ is part of a divine play. The NR<sub>x</sub> was the likely intended audience for the lawyer’s statement.

- In November 2018, the aforementioned attorney (Michael Cohen) pled guilty to the charge of lying to Congress in closed-door testimony. So now he’s a felon. In August 2019, he pled guilty to eight other charges and was sentenced in December 2019. He was automatically disbarred from practicing law in New York State. I am sure he has plenty of money and isn’t worried about not being able to practice law, but I wonder – when he was young and in law school, did he say, “When I grow up, I am going to be a famous attorney who is a felon someday!” Anyway...

✚ PROBLEM OF INDUCTION: Science, the bedrock of the modern world, has a fatal fallacy as well. It is the bedeviling question of knowledge, known as the Problem of Induction.

- ❖ “Induction is the glory of science and the scandal of philosophy.” – C.D. Broad.

It has been around for a long time, but the current version was introduced by David Hume in the 18<sup>th</sup> Century who characterized attempts to prove science inductively as a circular argument. Science has this problem; science – which is built on induction – cannot be proven inductively by empirical evidence, that is, science cannot be proven scientifically. Induction is only valid inductively. On the street, people accept circular reasoning every day, often not directly (as would raise eyebrows), but hidden circular reasoning often passes unnoted.

- ❖ Induction can be a form of circular reasoning, for once a rule has been created by empirical evidence and inductive reasoning, the rule can become the starting position of the scientific argument – that conclusion, the scientific law, followed by questionable premises, that this is a universal law that can be ‘proven’ by continued empirical evidence in every place and time.

Asking the previous section’s question a different way, what type of reasoning was used to ‘solve’ the original problem put forth to which this game design is offered as a solution? Certainly, the design was an application of deductive reasoning, in a top-down reductionism. That is, in trying to figure out how to simulate a civilization, I took the civilization as a whole ‘thing’ or singular complex system, and broke it down into parts and subsystems until I felt

that I had a workable model of a civilization. This means I started with the premise that civilization is a whole thing or singular complex system and then decided what pieces and parts it must consist of, much as science does with the universe (e.g., the ‘dark matter’ solution).

- ❖ What I have done may be akin to an alien or someone not from our era finding a cell phone and assuming it is a whole system. It can be taken apart and examined, in a sense, it is a system in and of itself, a system of circuits and so on, but it is also at the same moment, not a whole system because it is useless without the network and other cell phones to call.

Along the way, playability and clarity of game rules presentation was always an issue; that these were procedural rules of a complex simulation game keeps all of the theory and speculation roped to the Earth (*à la* Francis Bacon). Having broken civilization down into its constituent parts, however, I then insist – largely on a metaphysical basis – that civilizations be viewed holistically and that the thing that is called a ‘civilization’ is greater than the sum of the parts I have used to describe it. Is this useful and sustainable as a view? Is this fallacy?

- ❖ To insist that civilization is greater than the sum of its parts, based on the parts I have deduced in this simulation might just as easily mean I have mistaken the original whole from which the parts were derived. That is, I don’t have the correct framework to see the whole, if you are a positivist, reductionist thinker, it’s the ‘something’s missing’ or ‘we are missing something’ problem. For others, it is faith.

Now, in regards to GGDM, the intro section begins by stating that the whole is greater than the sum of its parts. This is a conclusion (or assertion) and not a proof. *The ‘disconnect’ from circular reasoning or inductive logic, is that you don’t necessarily have to accept the conclusion in order to accept the ‘parts’ into which I have divided civilization in the game rules.* The parts can stand each on their own and in combination, which may or may not ‘add up’ to the initial conclusion. Even if GGDM is oddly circular, this does not diminish in any way its value in the current form, as a simulation and game about civilizations. Imperfect examples are as instructive as perfection.

- ❖ Rhetorical Question: What is the difference between *reductio ad absurdum* and mockery? Isn’t mockery necessarily absurd? Shall we proceed? After you...

✚ FALLACY OF MATTERS: Much of what is said in this work would or will be considered controversial, to the extent that anyone thinks it *matters*. I don’t care. Or as the lawyer’s joke about the value of oral contracts goes, this work is not worth the paper it is not written on.

- ❖ What is the purpose of being ‘cool’ (as in being fashionably attractive, hip and all that in style, looks, behavior, language, attitudes)? To attract the opposite sex and have agreeable friends, to be amusing, sociable, histrionic, to stand out. The less one cares about those things, the less one cares about being ‘cool.’ Can one be both ‘cool’ and controversial? I doubt the word is used as much now in the under-20 crowd – not however that they are any less shallow – but rather that the word mostly belongs to the pre-millennial generation (where good was bad, and bad was good); cool has lost its coolness (‘cool’ is not ‘hot’ now). “When I say she was cool she was red hot, I mean, she was steamin’!” – Thin Lizzy, “The Boys are Back in Town” (1976).

Any alleged controversial statements or positions herein are tenable and defensible. I would only be accused of expressing angst in a literary game; angst is virtually synonymous with

literature/literary and *is a fact* in the third and fourth orders of natural phenomenon. All of which is a long-winded way of saying I expect to get piled on like Jared Diamond, to the extent that anyone thinks what I say *matters*. The difference is that the Pulitzer Prize and Ph.D. and having Professor next to your name makes people *look*, makes your opinion *matter* more.

- ❖ The world pretends to care about racism, so piling on Prof. Diamond was the sport of the season. What sport I might be, I do not know exactly. I suspect that I might be accused of being a ‘globalist’ which has recently become a derogatory term and the sport of the season, whilst, ‘racist’ has become so overused, ordinary, old fashioned and boring, that the term is now sort of neutral. Ideologically, anti-globalism is still racism with a new name and the cover of nationalism.

To those who have not understood some of the more acrid and caustic comments; I would suggest that they have not grasped the concept of the existential void.

- ❖ You don’t like what I have written? You don’t like my opinions on the universe, your religion, and humanity’s relationship to the universe? Don’t read it, forget about it then. Go read a comic book instead, it will make you feel better. If you go squawking about it, more people will have to read what I wrote to understand the complaints (Streisand Effect), so the worst thing you can do for my work is to put it down and go quietly away. Isn’t that rather ironic? Don’t dust off your Bothered About Dungeons & Dragons placards (BADD since MADD was already taken in 1980; there is a YouTube video whose title suggests LoTR is demonism), GGDM isn’t that sort of thing – people who read GGDM are those who are ready to read it, and that includes very few high schoolers because GGDM is not a flashy video. Eventually, you will realize that I have at least a good chance of being correct. It makes no difference whether you like it or not. It makes no difference whether I like it or not. Maybe you’ll come back then and read my words again, maybe not.

I tend to think, in fact, that the less flattering and the less any statement is liked by the reader, the more likely that it is a profound truth. There does seem to be a relationship between profundity and denial; this is the basis of satire.

If it *matters*, argue and debate it in a socially constructive way – because everyone has an agenda, ideal, or worldview they are trying to advance – and find your own truths. I believe that at least some will come to see that I am correct, for whatever it’s worth.

- ✚ KISS-OFF FALLACY: My personal fame, or infamy as the case may be, will not help this project and while I will be liked or disliked by many (to the extent it *matters* to them), I do not seek notoriety.
  - ❖ “If you go back to the theory – this is the mind of Joseph Campbell – that heroes are the agents of evolution, the means by which one world is shattered and the new world is created, they’re not for their own sake, their purpose, like Mad Max at the end of Mad Max 3, is over. Once the kids are free, they’re going to go off and start something new [and] he can’t be part of that. He’s too fixed in his ways. At least that’s his function. He recognises that he’s not so important, just a chance of a renewal is much more important than an individual.” – George Miller as quoted by Anne Bill-

son, “George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview,” previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015.

- ❖ Whatever you think I have achieved in GGDM, it is far less than what I should have achieved, and our society is not benefitted by applauding or praising underachievement. How many of us actually deserve awards, applause and praise?

Page | 1517

I must think at this point that I have said my peace on the subjects addressed in the game – as I have been writing this for a half-lifetime with no-counterargument from anyone outside my head<sup>5</sup> – media interviews, blog posts, social media comments by me will not add much but confusion and cognitive dissonance. Like Judge Wettick said, “Read my opinion.” But who knows? I might keep writing if only for the unworthy purposes of defending my dissertation, annoying certain people, and having no unpublished thoughts, as Christopher Hitchens noted (“How to be a Public Intellectual,” Prospect Magazine, May 24, 2008).

- ❖ After reading through GGDM, you may feel that I have no unpublished thoughts. At some point along the way, I decided to ‘lay it all out there’ and hope that I had time to finish the project. I may only get one chance to do this, and I have been *damned lucky so far*. This is what I am, this is what I think, and what I think I am.
- ❖ **Capt. Picard:** I wish, I wish time had allowed me to know you better. **Mark Twain:** Well, you’ll just have to read my books. What I have is pretty much there. – Star Trek: TNG, “Time’s Arrow, Part 2” (1992).

You wish to heap abuse and criticism on my work? I’ve already beat you to it (and I’m not done yet), and I can do a better job. My thoughts and writings are so worthy of contempt that I cannot help it. You will find that it’s not much fun to troll someone who already agrees with you, who doesn’t really care what you say, and who is probably half nuts already (bearing in mind what Erasmus said on that subject). So let us skip that exercise and get back to the conversation of civilizations as I have already admitted that my being is contemptible.

- ❖ “It is also a fallacious *ad hominem* argument to argue that a person presenting statements lacks authority and thus their arguments do not need to be considered. As appeals to a perceived lack of authority, these types of argument are fallacious for much the same reasons as an appeal to authority.” – from Wikipedia article, “Argument from Authority,” captured April 7, 2020.

If instead you wish to heap praise and acclaim on my work, save it, because I will never be convinced, it’s too late, and it would not be good for the world anyway. *In causa?* Not here, save them for the posthumous; I would also be a better person for not being feted: As much as the idea might be personally satisfying – in a self-puffery way – I must reject it as contrary to my stated views. My personal satisfaction is irrelevant to the argument. *Nemo*.

- ❖ There are a lot of people who paid a lot of money, migraines and years, to earn that Ph.D. Let them have it, I will not trespass with honorary degrees or titles. I will be satisfied simply with and to be Concierge One and will pass into the Void. Likewise, prizes, awards, medals, grants are for the young, for those who need encouragement, goals, recognition and support; I do not seek these as they will do little now.
- ❖ Some may argue that my attitudes or lack of ‘self-confidence’ or discomfort ‘in my own skin’ are a symptom of lack of completion and if you want more, I didn’t attend

my high school graduation and failed to complete post-graduate education. Whether that is true or not is irrelevant, honorary degrees will not tell me that I am completed, and it will not make me a good man. Or solve the problem of being here.

- ❖ At the end of the Pittsburgh Pirates 2019 season, Steve Blass, player and Pirate’s broadcaster of 60 years combined with the organization, retired. His retirement was announced in January, so they had plenty of time to go through the process and build-up. The last weekend of the season was a three-game home stand, and the Mayor of Pittsburgh declared Saturday, September 28, 2019, “Steve Blass Day” and the MLB allowed the Pirates to use specially-marked game balls for the weekend. There was an on-field ceremony, speeches, and the broadcasters feted it out to the max, it became sappy, sentimental, emotional, repetitive, absurd. It was barely kept in bounds and on the last afternoon game, they changed their tune slightly by repeating several times that this was not a eulogy for Steve Blass; I am sure it was brought up in a production meeting that they were maybe overdoing it, but had to let it run its course. Mr. Blass was good through the whole thing, and played his part well.<sup>6</sup>

I like Mr. Blass, I certainly don’t begrudge him anything, but I don’t see fully the value in how he was feted in the last weekend, I have a different view apparently. People have made arguments about this public feting thing for millennia, but *adapting* (not quoting) a line from Camus, I say that the point is to ‘die unthanked, unfeted, unsatisfied and not of one’s free will.’

- ✚ PREACHY FALLACY: Some movies are criticized for being preachy. Every *serious* movie (including comedies in their own way) is preachy, or else it is not literary – in short, to be literary is to be somewhat preachy, *preachers and literature have always been connected* – and that is what separates serious movies from the rest of the mindless garbage in the theatres and on television. But the difference is in how it is done; compare Tomorrowland (2015) with Interstellar (2014), two movies with overlapping messages.

Claims of having no agenda are similar to claims of making no claim; such claims are very soft and easy targets in the philosophical community, it seems almost a waste of good paper to refute them (fortunately, I am not using any paper):

- ❖ “The first aspect of Nagarjuna’s statement is a brazen claim to have no claim. This, of course, is self-contradictory. Every proposition that claims to be meaningful and true (whether about some experience or about abstraction, whether positive or negative) is an assertion, a claim. To pretend making no claim, even as one plainly makes one, is a breach of the law of identity: it is denying that a fact is a fact. There is no logical way to deny or criticize the theses or methodologies of others without opening one’s own discourse to evaluation. All denial or criticism is discourse and all discourse is subject to logical review. To pretend the logical possibility of dispensation is dishonest...” – Avi Sion, Paradoxes and Their Resolutions: A Thematic Compilation, p. 209.
- ❖ “How much more should I, who am but dust and ashes, and so prone to error, desire that everyone should bring forward what he can against my doctrine. Therefore, most serene emperor, and you illustrious princes, and all, whether high or low, who hear me, I implore you by the mercies of God to prove to me by the writings of the prophets and apostles that I am in error. As soon as I shall be convinced, I will instantly retract all my errors, and will myself be the first to seize my writings, and commit

them to the flames.” – Martin Luther, “Speech before the Diet of Worms” (1521), Paragraph 7 (delivered in both Latin and German).

I think I would have liked to have known Martin Luther and Desiderius Erasmus. Though Martin Luther and I would have disagreed mightily on many things – mainly the whole God and religion issue – and many things have happened and become known in the last 500 years that lead me to much different opinions than he held in the early 16<sup>th</sup> Century; I find myself impressed by and attracted to his writings, ideas, speeches, and life and fascinated by the events of the Reformation. He was a man of mind, no fool, who was surprised by what he unleashed.

✚ FALLACY OF SERIOUSNESS: Would you say that I took this game project far too seriously? Is that a fallacy now? I have heard this criticism or observation applied to movies, stories, and people, that they/it took them/itself too seriously. I simply don’t *grok* the concept. Yes, I understand the meaning of the words and the intent, but I don’t and never have comprehended how one can take themselves and their work too seriously. Or take anything too seriously.

- ❖ If you are not going to take your works seriously, what will you take seriously?
- ❖ If you are not going to take humanity seriously, what will you take seriously?
- ❖ If life is a joke, it is one in very poor taste and I am not required to laugh.

To intentionally expect or attempt not to take anything seriously is just a sidestep away from claiming to make no claims. Or claiming to have no agenda. Or avoiding any hint of being preachy or literary or philosophical. Or intellectual. While in some cases, not taking anything seriously is intended to be disarming, it ends by disarming the mind of the speaker.

People who don’t take anything seriously (I have met a few) – the ‘don’t worry, be happy’ life-is-a-party, fight-for-your-right-to-paaaaarrty! crowd – are fluff floating away in the breezes of their lifetime. The very phrase in question – ‘take too seriously’ (and variations) – is stretched and contorted. The more you look into the combination of words, as St. Augustine argued in On Christian Doctrine (397 A.D.), the less you can be sure of their meaning. Our words seem to become alien even to us when we stare at them too long.

Walk with me for a moment. If we begin with the assumption that GGDM is probably the only work I will ever finish, or the only work of this magnitude that I will ever create (and given my age and my life, this is not a farfetched, baseless assumption), and that it is worthless, irrelevant and silly (or will be perceived to be) and not taken seriously by anyone but me, then why not put everything into it if I don’t care what you think? I have no publisher, no editor to please but myself. What if it is my only opportunity to get everything ‘on paper’ (though no paper is involved), to get it all out, say what needs said?

There is perhaps a pretzel logic – to feel the need to write it all down even if no one will read it or take it seriously, or give it any worth at all – but it is fact to me in a third-order-of-natural-phenomena way. And it is the way the human mind works,<sup>7</sup> and we need to stop pretending that it doesn’t and that it’s never correct.

✚ SILLY SPACE GAME FALLACY: There are ‘fallacies’ to be found in my work that have nothing to do with the work itself; for example, that I do not have a ‘Ph.D.’ after my name and/or that I chose to express my thoughts in the form of a simulation game rather than a polished book from a big publishing house or an article in an academic magazine or learned journal.<sup>8</sup>

- ❖ If you are reading GGDM for the commentaries or as a thesis, the game rules sections will just be in the way, an annoyance, distraction from understanding the arguments. If you are looking at GGDM as a game, the commentaries, even for a sandbox game, are excessive, distracting, and unnecessary. If you are reading GGDM for laughs, I hope I have entertained you, but I don't really care if I have.

Perhaps you think that someone who actually has a Ph.D. in anything would never have chosen this form of expression or wasted their time? For those who wish to engage in such bias, or who cannot understand or who disagree with the simulation, who don't 'get it,' or who skipped ahead without reading the whole work; it's just another silly space game and it doesn't matter.<sup>9</sup> You can forget about it and move on. Fuzzy models are not real anyway.<sup>10</sup>

- ❖ “What moral obligation do you have to those who willfully refuse to open their eyes and deem you mad for seeing?” – Norman Spinrad, *The Void Captain's Tale* (1982).
- ❖ My comments here are only anti-academic to the extent that academia is (ironically) anti-intellectual or resulting in intellectual constriction of our civilization through dictation of form. Many a professor has acted as intimidating censor.

✚ APPEAL TO AUTHORITY FALLACIES: “An argument from authority... also called an appeal to authority ... is a form of *defeasible argument* in which the opinion of an authority on a topic is used as evidence to support an argument. It is a well-known fallacy, though some consider that it is used in a cogent form when all sides of a discussion agree on the reliability of the authority in the given context. Other authors consider it a fallacy to cite an authority on the discussed topic as the primary means of supporting an argument. ... Historically, opinion on the appeal to authority has been divided: it is listed as a valid argument as often as a fallacious argument in various sources, with some holding that it is a strong or at least valid argument and others that it is weak or an outright fallacy.” – from Wikipedia article, “Argument from Authority,” captured April 7, 2020 (emphasis added).

It is quite possible thus, that any and all of the hundreds of quotes throughout GGDM – which I characterize as guest speakers in the conversation – are in fact ‘appeal to authority’ fallacies (i.e. A is an authority on a particular topic; A says something about that topic; A is probably correct, and I quote it). Where is the line drawn, as I have no ‘authority’ on the subjects of which I speak (other than GGDM)? Is it possible then that the quotes are all appeals to authority to validate my point? If so, then what can be said of any scholarly work that is loaded (as they usually are, and are required to be) with citations and quotes from or to other articles, studies, and books?

- ❖ “The argument from authority is based on the idea that a perceived authority must know better and that the person should conform to their opinion. This has its roots in psychological biases such as the Asch effect.” *Id.*

Thus, citations and quotes are an admission that there is no objective standard of human knowledge, that knowledge is woven as a self-supporting web, built on consensus, and at the same moment, the conceited conformity of saying, “See, I am not the only one who thought like this!” Many high school teachers are delighted to see a student paper that is mostly a mass of quotes and citations, which represents success in teaching students scholarship in preparation for college; it is not expected that high school students know enough or possess any independent or original thought.

- ❖ “In college I learned how to learn from other people. As far as I was concerned, writing in college didn’t consist of what little Annie had to say, but what Wallace Stevens had to say. I didn’t come to college to think my own thoughts, I came to learn what had been thought.” – Annie Dillard quoted by Lawrence Malcolm, “Lunch with Annie Dillard,” April 30, 1982 (free online).

In college, I was full of my own thoughts, quite full of myself, as you might imagine.☺ And original thought is harder to grade, for example:

- ❖ “Ironically, as a student, Jacques Derrida submitted a paper on the topic of ‘time’ to his director of studies, Louis Althusser, who passed the essay to his colleague, Michel Foucault, saying, ‘I can’t grade this.’ Foucault’s response was, ‘Well, it’s either an F or an A+.’” – Willy Maley, Prof. of Renaissance Studies, University of Glasgow, contributor to, “The worst piece of peer review I’ve ever received,” Times Higher Education, August 6, 2015.

✚ MEDITATIONS FALLACY: To the extent that some might call me crazy, I am as crazy as Descartes: Who can say with certainty that Rene Descartes did not embrace the existence of the malicious demon he described hypothetically in Meditations on First Philosophy (1641)?

- ❖ Is the Existential Void to which I refer throughout like Descartes’ Demon? Would Descartes if he were me, have used the term Existential Void? No one but Descartes thought that his demon was real; it was only hypothetically applicable to him as to discussion of his own existence, the only thing of which he could be certain. I am certain he never maintained that the demon was there for everyone who simply avoided looking at it, unlike the Existential Void.

It is quite likely that Descartes and other great minds of our civilization would, in the current time, find themselves committed to a special institution with padded rooms, to be forgotten, and to the extent they ever wrote great works, to be forever stained with the label of ‘former psychiatric patient’ by which their thoughts and lives could be dismissed out of hand. ‘Former psychiatric patient,’ is like ‘recovering alcoholic’ or not having a Ph.D. after your name.

- ❖ Do you think I am a former psychiatric patient or recovering alcoholic or should be?
- ❖ Has thinking become a fallacy in our civilization? If so, we no longer are.

---

*“There is a difference between an assertion and an argument. An assertion is just a point of view, an opinion. An argument goes further. An argument is a point of view supported by reasons that demonstrate the view is a good one.... What is often passed off as an argument turns out to be nothing more than a point of view, an assertion devoid of reasons. But you don’t simply want the persons view; you also want the reasons for that view.*

*Think of it like a house. The opinion is like the roof and the reasons for holding the view are like the walls. You want to find out if there are any walls holding up the roof. Do they have reasons for their view or are they merely asserting? And if there are walls (reasons) you want to see if the walls will hold the roof up. So once you properly understand a persons’ view an appropriate question might be, ‘How did you come to that conclusion?’ or, ‘Can you give me some reasons why you believe that?’ or, ‘Why would you believe a thing like that?’”*

– from Duane’s Mind Blog, “Assertion vs. Argument,” November 16, 2007

---

**APOLOGIZING TO THE CHOIR:** The unintended irony here is that Duane’s Mind Blog is a Christian apologetics blog, and in particular this article, is intended to instruct Christians on arguments with *non-believers* as the article calls them (you know, *us and them*), and how to demonstrate that their arguments are mere assertions. The blog is quoted here because it does provide a useful discussion of the difference between assertions and arguments; however, Christians fail generally to realize that their ‘arguments,’ especially regarding God and Creation, are simply assertions of faith:

- ❖ Their evidence consists of: the universe is here (it must have started somehow), we are here (it must have happened somehow) and this dusty old book called the Bible, which was *written by men*, tells how it happened. A sort of ‘Anthropic principle.’
- ❖ The rest of it, that there is a god/supreme being (a First Cause without a Cause) who must be the creator, and the creation stories, are mere unfalsifiable assertions, mythopoeic origin stories to cover what our ancestors did not know, could not know, and what we still do not know, cannot know (which is why Christians still think they have an argument). The Big Bang has simply replaced God (or maybe you think God caused the Big Bang? Or was the Big Bang?): A First Cause without a Cause.
- ❖ When the Christians argue subjects other than the Creation, God, and Afterlife (for which there is no evidence at all, it is neither testable nor deducible from any principles or evidence – If I were to say, prove to me that there is an afterlife, what evidence do you have? I’m waiting.), they are really making philosophical arguments (what is real – metaphysics, what is good – ethics, and how to think – logic) which can be treated as such, *sans* religion and their ancient prophets and priests can be treated as secular philosophers.

Assertions only become arguments when preaching to the choir. Much of our political discourse in recent decades (as pointed out by various pundits) is preaching to the choir; the sides are not trying to convince the other of their reasons and arguments, instead most speeches and writings are directed to people who do not need to be convinced, and are probably (or usually) written by people who don’t know an argument from assertion. Both sides are more interested in riling up their base by hammering away with assertions, because, as Chris Cillizzia pointed out:

- ❖ “Campaigns – especially those for president – are rarely won and lost on ‘carefully thought-out policies.’ They are almost always won on emotions – positive ones or negatives ones.” (CNN Politics, September 6, 2017).

**ASSERTIONS, ABSURDISM, ARGUMENTS, AGING:** Is Albert Camus’ absurdism an assertion or an argument? The Stanford Encyclopedia of Philosophy seems to treat it as a set of assertions:

- ❖ “He ignored or opposed systematic philosophy, had little faith in rationalism, asserted rather than argued many of his main ideas, presented others in metaphors, was preoccupied with immediate and personal experience, and brooded over such questions as the meaning of life in the face of death. Although he forcefully separated himself from existentialism, Camus posed one of the twentieth century’s best-known existentialist questions, which launches The Myth of Sisyphus: ‘There is only one really serious philosophical question, and that is suicide’ (MS, 3).” (article “Albert Camus,” revised, April 10, 2017).

Thus, the reader may, if it suits them, regard some of my side commentaries as assertions rather than arguments: If absurdism is an assertion, if Descartes demon is a hypothetical, then my Existential Void may be both or either.

- ❖ “Acceptance or rejection of factual assertions is a far more important process than logical validation of arguments. *Not only are assertions more persuasive than arguments; this is desirable, since we want our beliefs and actions to be reasonable and not just rational.* When do we resort to argument? Real speeches heavy on arguments aim to present the speaker as calm, serious, and knowledgeable. *In public life, one argues not in order to demonstrate the claim for which one is arguing, but to show that one shares the common prejudices or values that appear in the presuppositions and conclusions of one’s argument,* and to demonstrate mastery of the subject matter by displaying relevant knowledge in coherently organized detail. Arguing is thus a way of presenting facts and principles so as to show one’s character as worthy of trust.” – Michael S. Kochin (Tel Aviv University), abstract of “From Argument to Assertion,” *Argumentation: An International Journal on Reasoning*, August, 2009 (emphasis added).

Abstracts of journal papers are clearly assertions. In some college courses, I had to submit a 150-word proposed topic for my term paper, we were instructed to write it as if no one could argue with us; it was to avoid arguments, therefore, it was a 150-word assertion of the proposed topic. GGDM is my something-less-than-a-million-words proposed college term paper topic.

GGDM is far more than a paper abstract or a proposed topic (at about 2000 pages) but does it present an argument or is it just an extended and overblown set of assertions? I have had difficulty deciding this, but I lean toward the side of argument; throughout the process of GGDM, I have sought to gain mastery of the subject, present it coherently and in organized detail, and to impart mastery onto the reader. *A master class in human civilization by an unqualified author.*

I did not start out as an absurdist (but no one could have blamed me if I did) and neither did GGDM begin with absurdism or any philosophy at all. Like all youths, I grew up with the idea that there had to be some elusive higher meaning, I was in the sciences program in a STEM high school, served in the military during the Cold War, and though I rejected organized religion at age 16, I probably or apparently still believed in some higher meaning to it all, even if I was too dumb to figure it out. Whether or not I do now, is a question, but I am still too dumb to figure it out. I read Camus’ *The Fall* (1956) in my last semester of college in World Literature, I was 29 years old, and I loved it, though I knew nothing about absurdism, I had been introduced to existentialism via an undergraduate Abnormal Psychology lecture on Viktor Frankel. *The Fall* felt to me at the time, in style terms, a bit like reading Machiavelli’s *The Prince* as a fictional story.

The intellectual journey of my 40s seems to have been toward a syncretism of absurdism and a gestalt macrosociology.

- ❖ The fact that early peoples raided and fought for food, mates, land to migrate into, space to live, control of water sources and minerals, and eventually for ideas, kings, and politics – speaks to the absurdity of it all: We did not ask to be, no one asked to be here, and if we were not here, we would not be fighting for anything or about anything or to protect anything, because there would be nothing. Anthropic principle.

✚ ALBERT, THELMA & LOUISE: When Camus (d. 1962) said that the only real serious philosophical question is suicide, he surely wasn't speaking only about individuals; nearly everyone agreed by that time that global thermonuclear war would be the suicide of humanity – along with whatever other meanings one might choose to read into it. The world nearly preceded *Thelma & Louise* (1991) over the cliff in my lifetime and the lifetime of my parents, and we are still sitting parked 100 yards from the Grand Canyon.

- ❖ Tragedy and absurdism are natural allies, tragedy has always known absurdism, long before absurdism knew itself. Tragedy is the original playwright absurdism. *Thelma & Louise* is a tragedy, so is *Hard Times* (1854). Tragic characters make questionable decisions, caught in bad circumstances, with an absurd result, often suicide.

I am a walking cognitive museum of the Cold War, especially the last two decades, more so, I believe, than the rest of my cohort. We seem to have forgotten so soon after 1989 that we, as a civilization, both the nuclear superpowers and the rest of the world, struggled for 50 years with the concept that *we* had created a situation where *we* could wipe humanity – and most or all of life on Earth – off the map permanently in an hour of madness. Living under the Sword of Damocles, we feasted on the resources of the Earth and worried about oil running out. *We* had created our own ticket to oblivion, God didn't call the end of the world (some read God into nuclear weapons though) and there was no giant meteor to blame.

✚ HONG & JESUS: Syncretism when combined with the word, 'religion,' as in 'syncretic religion,' is usually not regarded positively, especially by the faithful of the original religions. It is the nature of the thing called faith – at least in modern exclusive religions capable of extremism – that syncretic religion is always considered a dangerous heterodoxy; the strongest example being the Taiping Rebellion where the Europeans, not accepting the God Worshipers' heterodox version of Christianity, eventually assisted the Qing in defeating the rebellion. For example, the question on Reddit Ask Historians:

- ❖ “Why did the French and British help the Qing instead of the Christian Heavenly Kingdom? The Qing required the assistance of the French and British to defeat the Heavenly Kingdom. Why didn't the west help the Heavenly Kingdom who were fellow Christians, and also pushed many more western/liberal ideas?”<sup>11</sup>

Science also does not appreciate syncretism with philosophy, unless it is presented as public science education by a scientist – sort of like psychiatric drug prescription by a medical doctor. It is particularly unappreciated by disciplines who struggle to be recognized as sciences.

✚ JOANNA & ALBERT: Has anyone ever wondered about the mental health of Albert Camus? During the Cold War, the Soviets were internationally condemned for diagnosing political dissidents with the (unrecognized outside of the Soviet Bloc) mental health condition, “Sluggish Schizophrenia” (alternatively, Slow Progressive Schizophrenia) for which they could be confined to mental hospitals, drugged and reconditioned (the KGB was in charge of Soviet Psychiatry, go figure?). I remember this discussion of punitive psychiatry from one of my undergrad psychology courses.

Suppose that Albert Camus had lived in a theocracy, Papal state, or perhaps before the Age of Reason? Would he, like Diderot, have been incarcerated, would his writings on absurdism have been convicted of lunacy – as only a madman would question the wisdom of ancient religious texts (see 1 *Fallen to Earth*, *supra*), give up the chance of eternal salvation, or deny

the afterlife – for which he would be sent to the asylum? Because, once a mental patient, always a ‘former mental patient’ for life.

It is reasonably likely that Joanna the Mad (Queen Joanna of Castile) was deemed mad and imprisoned by her brother Ferdinand of Aragon in part because she expressed skepticism of the Roman Catholic Church and was reticent toward Catholic confessional, expression, and religious ritual – no ruler of Castile, Aragon, or any relative of the Holy Roman Emperor (she was mother of Charles V; her mother, Isabella, established the infamous Spanish Inquisition) could ever rule while having any doubt about Christianity or the Catholic Church! Which incidentally also made Ferdinand effectively ruler of *Castile and Aragon* ... hmm, how convenient was his brotherly concern for his sister’s spiritual and mental wellbeing! She may have had to be protected by hypocrisy to avoid being subjected to her mother’s Inquisition.

- ❖ Joanna the Mad was a natural skeptic (Tim Minchin should write a song). She was not ‘mad’ or ‘insane’ but that world she lived in – Europe constantly churning with ethnic, dynastic, religious strife – was, in our view, quite insane.<sup>12</sup> And in the view of future generations, perhaps even the millennials, the 20<sup>th</sup> Century world was insane.
  - “But Spinoza’s naturalistic theism, for instance, was a far enough cry from Judeo-Christian orthodoxy in an age that discerned little light between skepticism and atheism.” – Michael Robbins, “Atheists Used to Take the Idea of God Seriously. That’s Why They Mattered.” Slate Magazine, July 8, 2014.
  - Spinoza was born in 1632, Joanna of Castile was born in 1479, if anything, Europe had become *less tolerant* by Spinoza’s time.
- ❖ I have thought, perhaps wistfully, in the past that there may come a day when Fundamentalist (literalist) Christians might be confined to mental institutions... but I guess that would be a violation of the First Amendment or Free Speech and Freedom of Religion in any nation that actually practices the concept. I began to wonder though, whether someone could be committed to a mental health hospital for talking to ghosts, if they are not otherwise harmful to themselves or others? That’s a really interesting question, which I am sure leads to a long discussion in medical schools about the abuse of medicine for political and social suppression and the ethics separating treatment of true medical conditions from acting to suppress political dissent.
- ❖ On the other side of the table, of course, is someone who probably thinks that in a properly Christian world, people like me would be sent to reform and reeducation camps (like a North Korea-style theocracy) and that I am mentally ill for rejecting personal salvation and salvation of humanity offered by their God, for rejecting and cursing their Lord’s creation (e.g., “Many is the time I’ve cursed the lord’s creations!” – Foreigner, “I Need You” (1977)).

The most absurdist thing one might say of an intellectual is that he has gone crazy trying to figure out the universe. If Camus went crazy trying to figure it out, certainly lesser minds have no chance of remaining sane, unless dumbness is a virtue. One might also ask whether I arrived at absurdism on my own or was it ‘just in the air’ as part of my cultural milieu? Well, I am certainly not very intelligent, while it *may feel as though* absurdism has been the natural progression of my life, The Stanford Encyclopedia of Philosophy notes of Camus:

- ❖ “He regards thinking about it as ‘provisional’ and insists that the mood of absurdity, so ‘widespread in our age’ does not arise from, but lies prior to, philosophy.... Accepting absurdity as the mood of the times, he asks above all whether and how to live in the face of it.” – Stanford Encyclopedia of Philosophy article, “Albert Camus,” captured June 11, 2018.

Might I have arrived at it had someone else not thought of it first? Perhaps, someone had to be first, but I am no Camus (and I must wonder truly that no one else saw the Existential Void before); my route and endpoint were much different: A simulation game describing a union of structuralist macrosocial ideas with a vague sort of metaphysics of civilizations.

- ✚ CARL & ALBERT: Carl Sagan in some of his views seems to agree vaguely with Albert Camus’ absurdism, however, what separates and prevents Carl Sagan and I from being true Camus Absurdist, is that neither of us rejects rational knowledge. To wit:

- ❖ “But Camus also thinks it absurd to try to know, understand, or explain the world, for he sees the attempt to gain rational knowledge as futile. Here Camus pits himself against science and philosophy, dismissing the claims of all forms of rational analysis: ‘That universal reason, practical or ethical, that determinism, those categories that explain everything are enough to make a decent man laugh’ (MS, 21).” *Id.*

Dr. Sagan, of course, believed entirely in science and rationality, more so than 99% of the human population and he took it upon himself to bring that understanding to the audience; even while his rejection of religion and afterlife, and fully-lived life for the now, is a Camus model (*Id.*), a personal syncretism perhaps. GGDM attempts, if not rational understanding, to be a workable model of civilization. But out around the edges is a dualism that acknowledges both a rational, deterministic approach and a philosophical view of human absurdism.

- ✚ NEIL & CHRIS: The universe is not your friend, or a good neighbor, or on your side (and neither is your insurance company in case you believed the commercials) and its cold, empty, endless expanses of absurdity (like an insurance company) are not here for our kindergarten wonderment or security.

- ❖ “I suppose one reason that I’ve always detested religion is its sly tendency to insinuate that the universe is designed with you in mind. Or even worse, that there is a divine plan into which one fits whether one knows it or not. This kind of modesty is too arrogant for me.” – Christopher Hitchens, Hitch-22: A Memoir (2010).

In the Hitchens’ view, Carl Sagan’s Cosmos series performs the same sly trick as religion, suggesting that the universe is our wondrous playground (see 2112 Absurd Words, *supra*).

In my reasoning then, the universe is either indifferent to us – as most non-religious people believe – or exists to annoy, anger, and irritate us with utter pointless stupidity (there seems to be some evidence on that point, but we refuse to look. Why do we refuse to look? Because we can’t handle the truth, like *A Few Good Men* (1992)). Or more likely, is just fatally flawed like David Hume’s creator. Neil deGrasse Tyson has expressed his own Absurdity:

- ❖ “Every account of a higher power that I’ve seen described, of all religions that I’ve seen, include many statements with regard to the benevolence of that power. When I look at the universe and all the ways the universe wants to kill us, I find it hard to reconcile that with statements of beneficence.” – Neil deGrasse Tyson, Neil deGrasse

Tyson, at the University at Buffalo, Q & A session, April 9, 2010, video is available on YouTube as of September 2018.

Any honest human (or even sapient intelligence) cannot deny the Absurdity in the name of science. And this, I think, is what bothers scientists the most, what keeps them up at night.

*“It is one of those books that is either complete rubbish or a work of consummate genius, nothing in between!”*

*Probably the former, but I’m hedging my bets.”*

– Richard Dawkins, [The God Delusion](#) (2006) commenting on Julian Jaynes, [The Origin of Consciousness in the Breakdown of the Bicameral Mind](#) (1976)<sup>13</sup>

## Endnotes.

<sup>1</sup> **Commentary:** See the Sokal Hoax for a practical demonstration of cognitive/confirmation bias in academia.

✓ “But – let me tell you my cat joke. It’s very short and simple. A hostess is giving a dinner party and she’s got a lovely five-pound T-bone steak sitting on the sideboard in the kitchen waiting to be cooked while she chats with the guests in the living room – has a few drinks and whatnot. But then she excuses herself to go into the kitchen to cook the steak – and it’s gone. And there’s the family cat, in the corner, sedately washing its face.”

‘The cat got the steak,’ Barney said.

Did it? The guests are called in; they argue about it. The steak is gone, all five pounds of it; there sits the cat, looking well-fed and cheerful. ‘Weigh the cat,’ someone says. They’ve had a few drinks; it looks like a good idea. So they go into the bathroom and weigh the cat on the scales. It reads exactly five pounds.

They all perceive this reading and a guest says, ‘Okay, that’s it. There’s the steak.’ They’re satisfied that they know what happened, now; they’ve got empirical proof. Then a qualm comes to one of them and he says, puzzled, ‘But where’s the cat?’” – Philip K. Dick, [The Three Stigmata of Palmer Eldritch](#) (1965).

<sup>2</sup> **Commentary:** At the time of publication of GGDM, I am almost the same age as Harry Braverman was when he published the single book for which he is considered one of the foremost social thinkers of the 20<sup>th</sup> Century.

✓ It doesn’t matter what some damned preacher who never knew me says about me at the funeral, just read what I wrote; that is my testament if you will.

<sup>3</sup> **Commentary:** I would, in fact, not be surprised to be told or to be shown that I am all wrong. But at least, my critics are going to have to do some work, hundreds of pages might be written, and it will *matter* to them at least.

<sup>4</sup> **Citation & Commentary:** [Circular logic as satire](#): “The Cabinet received quite a bit of mail today, most of it hot to the touch. Hot with the indignation of ASU students and faculty reporting that the University has seen fit to bestow its 2015 ‘Pioneer Award’ on Professor Matthew C. Whitaker. The cheerful announcement that Professor Whitaker has been honored by the University for ‘long-term dedication to the quality of life of African Americans’ did not, somehow, elicit cries of ‘Well done!’ Instead, observers noted that since Professor Whitaker has publicly brought shame on the university three times within two years, and has repeatedly committed actions that would cause students to be penalized or even expelled, he should not be given an award. The Cabinet was in a mellow mood, and initially thought, well, it’s an award for public service; Professor Whitaker is part of the public; giving him the award does him a service; what’s not to like?”

On second thought, yeah. It’s appalling. And the Cabinet is additionally unsettled by the fact that even had Professor Whitaker not been a plagiarist, his long-term dedication to the quality of life of African Americans appears to consist of being an extremely well-paid professor of African-American history and the director of the Center for Race and Democracy at Arizona State University. Thus the University has given Matthew C. Whitaker an award for occupying the lucrative position the University has given him. And when those disgusted by serial plagiarizing suggest the professor should be gently encouraged to put his talents to different use, the University can respond, ‘But he wins awards! We ought to know, because we give them to him!’ Why, yes. Perhaps next year, ASU will give Matthew Whitaker a special award for having won a lot of awards from ASU. Or perhaps Arizona State, which prides itself on its commitment to sustainability, will give Professor Matthew C. Whitaker an award for having steadfastly declined to expand the footprint of human knowledge. APS, the power company who is the Center’s corporate

sponsor – and on whose behalf Professor Whitaker continues to write articles deploring net metering, all without disclosing his financial relationship to the power company – would surely approve: Arizona State University Reuse, Recycle, and Repurpose Award for Scholars. That, Professor Whitaker does indeed deserve.” – from The Cabinet of Plagiarism, January 16, 2015 (<http://cabinetofplagiarism.blogspot.com/>).

✓ Dr. Whitaker resigned in early July 2015.

<sup>5</sup> **Commentary:** However, every time I read something, someone else’s voice gets inside my head, and sometimes they argue with me, until I bribe them by adding them to GGDM somewhere. ☺ There is a multitude in my head.

<sup>6</sup> **Commentary:** Were Howard Cosell still around, he would have launched into a frothing rant about it because the retirement of Steve Blass in a way seals the ‘jockocracy’ he criticized from the late 1970s onward; Steve Blass began his post play broadcasting career (1983) in the late Howard Cosell era. He was thus one of the objects or group of ex-athletes turned broadcasters against whom Cosell railed (Howard Cosell never played sports, ironically).

<sup>7</sup> **Commentary:** e.g., “He [Joe DiMaggio] was jealous of the attention she [Marilyn Monroe] received from other men, which is an odd and problematic attitude for a man married to an international sex goddess. ... Why DiMaggio thought it would be useful to catch his ex-wife in bed with another man is a mystery. It certainly could have damaged Marilyn’s career... Still, photographs exposing Marilyn’s affair with Hal Schaefer now would not be proof, per se, that she left Joe for someone else, and it certainly would have done nothing to repair their marriage. Quite to the contrary.” – Jon Ponder, “Wrong Door Raid: The Celebrity Scandal That Irked Sinatra, Made a Fool of DiMaggio – All at Marilyn Monroe’s Expense,” Playground to the Stars, December 7, 2010.

<sup>8</sup> **Commentary:** Of course I don’t know anything, because I am a nobody (*nemo/necuno*). Just like a great man is great because ... well ... he’s great!

- ✓ Tim Minchin has the argument down pat: “I only read one book, but it’s a good book, don’t you know; I act the way I act because the Good Book tells me so; If I wanna know how to be good, it’s to the Good Book that I go; ‘Cos the Good Book is a book and it is good and it’s a book; I know the Good Book’s good because the Good Book says it’s good; I know the Good Book knows it’s good because a really good book would; You wouldn’t cook without a cookbook and I think it’s understood; You can’t be good without a Good Book ‘cos it’s good and it’s a book; And it is good for cookin.” – from “The Good Book” (2009).
- ✓ On November 1, 2018, I decided that henceforth, I will sign all of my emails as *nemo*. Not to avoid attribution or responsibility, but so that if I receive no response and if the correspondence is never even read, the recipient has a reason: Because *nobody* sent it.

<sup>9</sup> **Commentary & Citation:** Take a moment to appreciate the beauty: Dr. Paul Linebarger, a Chinese scholar, who wrote *psychological warfare manuals for the U.S. government* as a professor at Duke and Johns Hopkins Universities took advantage of the self-created official blind spot to write science fiction under the pseudonym of Cordwainer Smith because science fiction was considered trivial and nonsensical; not worth official scrutiny. As ‘another silly space game’ GGDM pokes intellectual academia in the same self-created blind spot both by being science fiction and a game, it will not be regarded as serious work in macrosocial or macrostructural theory, despite the advantages of the simulation approach that led naturally to macrostructural thinking.

- ✓ See, Walter Jon Williams, “The What-He-Did: The Poetic Science Fiction of Cordwainer Smith,” October 7, 2016, Tor.com.

<sup>10</sup> **Commentary:** I have a specific recollection that when Eric Rudolph’s book was published (his “manifesto” as the news called it), one high-level law enforcement official who was interviewed referred to it as “second-rate college freshmen writing” and indicated that there was nothing new or novel (and hence, don’t waste your time reading it). I would assume that the laudable goal of the commentary was to prevent others from being radicalized or acting out based on Rudolph’s writing (I am sure that they don’t really care that we might waste our time reading it), which is now freely available on the internet (should you feel like *wasting* your time reading that instead of this). Were it not for Rudolph Hess, very likely *Mein Kampf* would have also been characterized as ‘second-rate freshmen writing’ in 1925 Germany. *Mein Kampf* is also widely available on the internet (if you feel like *wasting* your time reading it).

<sup>11</sup> **Citation:** See [https://www.reddit.com/r/AskHistorians/comments/3r3cef/why\\_did\\_the\\_french\\_and\\_british\\_help\\_the\\_qing/](https://www.reddit.com/r/AskHistorians/comments/3r3cef/why_did_the_french_and_british_help_the_qing/).

<sup>12</sup> **Commentary & Citation:** I love historical costume dramas, especially if historically accurate and existential. One night I was surfing TV channels and chanced upon *Flesh + Blood* (1985). I was captivated. After watching the film for awhile, I said to myself, ‘everyone in this film is nuts!’ I didn’t mean ‘nuts’ in a good, comedic way. Rather, the film seemed to accurately portray the conflicted insanity of the period on a personal level in a way that I had not fully envisioned before.

- ✓ The later Polish film, *With Fire and Sword* (1999) accomplishes the same effect.

<sup>13</sup> **Commentary:** I think you know where this is going by now, in regards to GGDM.

*“Mainstream sociology is straying from its roots. This can be clearly seen in introductory sociology and social problems texts in which a focus on microsociology and social psychology has become ever more prominent. It can also be seen in the more recent graduates of sociology programs, specialists in one or two of the more than thirty sub-fields of sociology. While all tend to be well versed in questionnaire design and data manipulation as well as being excellent specialists in such diverse fields as gerontology or deviance, most have little background in the broader traditions of the discipline, little appreciation or experience with holistic analyses.*

*Today, too many sociologists practice the discipline as one of social data collection and manipulation, a reification of method over substance. Others are specializing in a small part of the sociocultural system – say family, or deviance, or criminality – and losing the inclination or ability to communicate with their colleagues and their students either in other subfields or about the larger social whole. Some still do continue the practice of macrosociology, but it too is often the preserve of specialists with their own jargon, interests, and readership.”*

– Frank W. Elwell, Macrosociology: Four Modern Theorists (2006), p. xi

**THE ONTOLOGICAL TERRORISM OF GGDM:** The terrorism that probably won’t land you in a jail cell, but perhaps in a padded room; I’d wager that most law enforcement people would not have heard of ontology, or would confuse it with oncology (oncological terrorism? Hmmm, sounds tumorous-ly fun!). This would be an amusing scene for a dark comedy, except the audience wouldn’t get it either. *In nuce:*

1. The existential void is the curse of intelligence, the more intelligent/sapient you are, the more you can see the inherent meaninglessness of the universe. Everyone sees the existential void in some way, at some point in their lives, at some time of the week, day, month, year we catch it in our peripheral vision as we rush through the days. We know it’s there, we speak of it in different ways or not at all. We pretend not to look, except when we are alone at night.
2. Every sapient creature has an urge to non-existence (‘the gift of life is a set of shackles’). This is not the same as death, though some people become quite confused on this point. Non-existence is the desire to have never existed, not merely to die. It is the paradox of sapient existence. Go ahead and disagree, but denial is not a river in Egypt.<sup>1</sup> Frustration of the urge to non-existence is the source of most radical human behaviors.
  - ❖ “Becoming extinct has its compensations. It’s a good deal like beating the game. I would go so far as to say that becoming extinct is the perfect answer to everything and I defy anybody to think of a better. Other solutions are mere palliatives, just a bunch of loose ends, leaving the central problem untouched.” – Will Cuppy (humorist), How to Become Extinct (1941).
    - To quote Metallica (1991), “You know it’s sad but true.” As a humorist, he can say things that are supposed to be funny but aren’t really, the audience laughs it off.
    - I generally do look up and familiarize myself with the person whom I am quoting. This practice has lent me the great relief of knowing that *I will not be subsequently quoted* by anyone who cares about their work.

3. Life must be constantly looking to insure its own continued existence, by this, I do not mean ‘survival’ but instead, that life is a continuous action of the Looking Law; life necessarily self-actualizes (or maintains its own Temporal Constructural Element).
  - ❖ Yes, in many places this would be regarded as quantum mysticism. We shall see, let’s calendar a date a thousand years from now, and check back on this issue.
4. Civilization is a gestalt structure, a gestalt structure is the machine of the emergence. Life is an emergence, humanity is an emergence, most of what we consider important in the universe is an emergence. The universe was fractured by a series of emergences.
5. Civilization is what sapience/humanity does, it is our ‘purpose,’ our nature. Civilization is the only thing that can fill the Existential Void, it is what we are when we can’t help ourselves (as Oscar Wilde said, 3 Writs, p. 446, *supra*). Without civilization, we are the Existential Void. Civilization should be our eternal fascination, not a flash afterthought.

The Existential Void is the metaphysical backdrop of my thought in macrosociology. In a word, the Gestalt Structure – a thing that is greater than the sum of its parts, of which human civilization is an example, is the only thing that can ‘fill’ the Existential Void. That’s my metaphysics in a nutshell. I anticipate that many will immediately object – recoil in horror even – to inserting metaphysics into sociology; they may point to Bailey’s general macrosocial theory of Social Entropy as an example of how macrosociology can proceed from pseudo-physics without metaphysics. We’ve already discussed that, e.g., see Pseudo-physics of the KM, 2 Kairotic Moments, p. 1434, *supra*.

- ❖ Thus, not only is sociology more closely related to philosophy than it wants to admit, it needs philosophy – like the Lost Boys needed Wendy – and cannot pretend it doesn’t exist so as to obtain the certification of an empirical science.

Metaphysics is the discussion of what is reality, and sociology is currently human-centric; half of our reality is human created. The sociologists who teach, lecture, conduct surveys, crunch statistics, work in family or youth services, every one of them, has an idea of what they think is real, what is reality and it affects their work and lives, and little of it has to do with sociology. To be human, to be sapient, is to be a metaphysical being; how can serious sociology object to metaphysics, except on the basis that it won’t get you a professorship anywhere and it won’t win grant money?

- ❖ Professor Bailey’s Social Entropy Theory is very interesting, but will never work entirely satisfactorily within macrosociology understanding because it depends upon and uses the language of first order natural phenomenon. *Id.* However, it is relatable to the audience of humanity because it uses language that we all understand, it fits the cultural and cognitive schema of our times.

The only way that macrosociology makes sense is to focus on civilizations/society as emergences and gestalt structures. An assertion or argument?

- ✚ MINISTER OF LONELINESS: It’s a lonely thankless job (just ask the Maytag repair man). On January 17, 2018, the BBC ran an article about the appointment of a Minister for Loneliness in the UK. Like many readers, I would guess, my first reaction was, are you kidding? This is silly; this has got to be some sort of boondoggle on the UK taxpayers and the opposition is going to have a riot with this. A ministry position? But the BBC was quite serious and level-headed about it, referring to the work of deceased MP Jo Cox and citing to medical studies

on loneliness. Later in the day, when the subject again caught my attention, I had a different thought: This is actually precisely or damned close to what I am talking about; loneliness is a human emotion related to a sense of the Existential Void. People who are lonely feel the meaninglessness of everything very acutely (along with alienation).

- ❖ Apparently, someone else has this idea in commercial form. On April 1, 2019 (no fool'n), I encountered a chat website that boasts *an end to loneliness* and guarantees a response to anything you post there. How do they accomplish this? By use of 'fictitious ChatPals' ("Besides fictitious ChatPals you'll find real members. This website can be used for real connections besides the entertainment we are providing to you. ... It's not possible to physically connect with fictitious ChatPals.") which I assume are chatbots (hence the latter disclaimer). Could they pass the Turing Test? How close is it? I did not sign up to find out.

Though I have given thought to this and many other subjects of future humanity, I find the idea of turning to chat with a machine (or even an unknown low-paid human worker) *for the purpose advertised on that site* (which is not the same as using chatbots and AI for customer service or technical support inquiries),<sup>2</sup> revolting as a solution (like the disgusting AI psychological counseling scene at a public computer kiosk in *Demolition Man* (1993)); it's like learning that Santa Clause is a big lie, a conspiracy of civilization. But that is precisely the point of the Turing Test: What is artificial about intelligence? Can a machine pass the Turing Test without human emotion, or by mimicking human emotion?

- ❖ Who are the target audience of this website? Of the 28 pictures on the website, only 4 of them feature men, with one picture showing a young man and woman, suggesting an impending physical meeting. All of the people pictured on the web page are young, and of them, 23 of the pictures are of solo young female faces plus the one male-female picture mentioned previously. Do the 'fictitious ChatPals' use human face images? Do they pretend to have a gender? Because men speak a different language than women, and you knew that already. Are they attempting to fool users?

✚ QUIET DESPERATION: "Apathy and cynicism usually take root early in life. If unchecked by middle age, they lead to bitterness, lack of energy, health problems, depression, and related difficulties.... As the years slide by, a growing number of people don't really live, they merely exist – trapped in their lives of quiet desperation." – Jim Clemmer, "Apathy and Cynicism Zap Our Spirit."

- ❖ "Hanging on in quiet desperation is the English way." – Pink Floyd, "Time" (1973).

Mr. Clemmer is a professional business motivational writer and speaker, and his views are likely expressive of the mainstream business psychology and probably, broadly, the consensus of mental health professionals in the West. Otherwise, he'd be called a crackpot, the term for modern empirical scientific heretic. And you know Pink Floyd already, right?

- ❖ What if, however, we change the frame in which apathy, cynicism and bitterness are viewed?
- ❖ Would it make sense, for example, if these were part of the intellectual process, a status or stage – carefully avoiding teleological terms – of the individual human realization of The Absurd?

- ❖ Is it more likely than not that people who display apathy, cynicism and bitterness are intellectual sensitives who are experiencing the universe differently than their happy-go-lucky fellows?
- ❖ Is it likely that apathy and cynicism are sociosomatic manifestations of the conflict caused in individuals between the inherent meaninglessness and our society's denial of The Absurd?
- ❖ “Activist David Meslin argues that people often care, and that apathy is often the result of social systems actively obstructing engagement and involvement. He describes various obstacles that prevent people from knowing how or why they might get involved in something. Meslin focuses on design choices that unintentionally or intentionally exclude people. These include: capitalistic media systems that have no provisions for ideas that are not immediately (monetarily) profitable, government and political media ... that make it difficult for potentially interested individuals to find relevant information, and media portrayals of heroes as ‘chosen’ by outside forces rather than self-motivated. He moves that we redefine social apathy to think of it, not as a population that is stupid or lazy, but as a result of poorly designed systems that fail to invite others to participate.” – from Wikipedia article, “Apathy,” May 12, 2019.

✚ WHAT IS COMPLETION?: Many days on end, I have a hard time working on GGDM in a *linear fashion*, which is unfortunate in that the final edit requires that I make *linear progress* through the game sections.<sup>3</sup> Once in my youth, I was at a game convention; a group of players was playing the board game Kingmaker (1974), a game about the War of the Roses (1455-1487). It was near the end game, one player had a definite edge, but couldn't find a way to win. A group of others was standing around watching; one of the old players who was watching remarked to me, ‘The game is over, but they don't quite know how to finish it.’ The remark stuck in my memory, and that is how it is with my own GGDM project, it is essentially done, but I have to figure out how to finish it.

So I remembered a technique I heard in some task or motivational article I read, to envision the job or project as complete and work toward it (common advice, really). Ok, so what do I envision as the completion of GGDM? The end of the work on the GGDM rules is both the completion of a lifetime cycle and nothingness. At the end of GGDM, I expect nothing and envision nothing will happen. You may say, Ah Ha!:

- ❖ “You're missing the point. Enlightenment was not the diamond. Enlightenment was the choice.” – Dr. Who, “Enlightenment, Part 4” (1983).

At some point after I complete GGDM, I will die. Neither will make my existence any better. Have I been enlightened? No one will care much about either event. I will also die whether I complete GGDM or not. Those are projectable facts. Anything other than that would be a lie. So dear optimist reader, should I lie to myself, knowing it's a lie?

- ❖ “He who is not contented with what he has would not be contented with what he'd like to have.” – Socrates.

Still, there will come a time when GGDM is ‘complete’ because it can't get any larger, I have no more space and no more time. In this perhaps, mortality is a fortunate condition. But what of God who is said to be immortal? Universe expansion will stop, someday.

✚ EXIT LIGHT: This existence was not fun, it was not a great adventure; it was stupid, annoying, pointless, inane, and asinine. That is how I know I am not unconscious with a Dream Crab stuck to my face (Dr. Who, “Last Christmas” (2014)). I did not ask, could not have consented to be here (see Wikipedia quote about Kant, 3 Commerce, p. 1210, and 2112 Absurd Words, *supra*), I was put here (so were you) and I am very offended by the universe.

- ❖ The true moment of joy is when I can finally see the exit light out of this universe.
- ❖ Why would I want an afterlife, after this life?

It seems that is the way it must be; if I was having a great time and enjoying life, I wouldn't want to leave; I might conclude that the universe is offended by sapience. A cynical clever mind might suggest that this is the *raison d'état* and *raison d'être* of the universe (except even that would be an unnecessary kindness), so that we are glad to exit in our time, and be forgotten. Like the dining area in a presidential underground nuclear bunker that I saw in a documentary or news segment once: The floor was a checkered black and white tile and the cheap plastic tables and chairs, and overall décor, were intended to make people eat and not linger after they finished. Are ghosts really people who linger here after death? Absurd!

- ❖ The way the priests have been telling it for hundreds of generations, the afterlife necessitates a gigantic celestial bureaucracy to orderly process the deceased, handing out rewards and punishments, distributing them to different planes, putting the enlightened into eternal torment or bliss, or back to work for cosmic order; in short, it's just like life, where no one consented to their own existence, no one bothers to ask if the deceased want to continue to exist, let alone eternally, non-existence is not an option on the check list.
- ❖ Because the afterlife is not about the dead, it's about the living, reminding them that there is more of the same on the other side, and making them think they want it.

In my youth, I heard a figure that there were enough nuclear weapons on Earth to kill everyone 14 times. Regardless of what you think of the figures – and I am sure there is some dispute of these numbers (and I don't even remember where I first heard it) – just follow the math for a moment:

- ❖ On a 'good' day, assume that 80% of the nuclear weapons could be intercepted or prevented from at least hitting their targets in a full scale global thermonuclear exchange.
- ❖ That still leaves enough weapons to kill everyone on Earth 2.8 times.
- ❖ If 90% of the nuclear weapons were intercepted, destroyed, or prevented from hitting their targets, there is still enough left to kill every man, woman, and child on Earth 1.4 times.
  - “Nuclear weapons made annihilation vastly more efficient. A single bomb could now destroy a target whose elimination had once required thousands of bombs. During an aerial attack, you could shoot down ninety-nine percent of the enemy's bombers – and the plane that you missed could obliterate an entire city.” – Eric Schlosser, “World War Three, by Mistake,” *The New Yorker*, December 23, 2016 (free online).

It is quite likely in fact that these figures are accurate to some degree because planning for the thermonuclear global war would require overkill and redundancy in expectation that most

of the warheads would be intercepted by the enemy who is desperate to avoid an existential threat. It is called Mutually Assured Destruction (MAD). In fact, the Merriam-Webster online dictionary definition of *overkill* as a transitive verb (from 1957) means just that: To obliterate (a target) with more nuclear force than required.

- ❖ The general concept was confirmed by author Richard Rhodes when I watched the 2018 documentary *The Half-Life of Genius: Physicist Raemer Schreiber*. Mr. Rhodes said that the Soviet Union alone had nuclear weapons “enough to destroy the world many times over.” See *1 Combat*, bottom p. 940, *supra*, for full feature quote.
- ❖ “Is it not true that each superpower has enough nuclear weapons to kill all members of mankind several times over? Yes. And the same is true of kitchen knives.” – Petr Beckmann (pro-nuclear advocate).

Exit light humanity.

---

*“Every resultant is either a sum or a difference of the co-operant forces; their sum, when their directions are the same – their difference, when their directions are contrary. Further, every resultant is clearly traceable in its components, because these are homogeneous and commensurable. It is otherwise with emergents, when, instead of adding measurable motion to measurable motion, or things of one kind to other individuals of their kind, there is a cooperation of things of unlike kinds. The emergent is unlike its components insofar as these are incommensurable, and it cannot be reduced to their sum or their difference.” – G. H. Lewes (1875)*

---

**NOT EMERGENT:** Only one of four of the more prestigious online dictionaries that I checked offered a definition of “emergence” that was congruent with G.H. Lewes’ definition, and it was offered under the heading of “evolutionary.” The other three dictionaries stated the most literal and mindless meaning of emergence (e.g., “emerging or coming into view”) and all offered various botany-related definitions. So, anyone trying to look up the term on the internet would be unlikely to come away with this understanding of the meaning of an emergence.

- ❖ The medical definition of *emergent* is: 1. Arising suddenly and unexpectedly, calling for quick judgment and prompt action. 2. Coming out; leaving a cavity or other part – from *Medilexicon*, from *Stedman’s Medical Dictionary*.

The common thread is a sudden or unexpected appearance within human timescale.

**Rhetorical Question:** What is the difference between an emergence and a miracle? This is not to suggest they are the same, but that thinking about and comparing them is cognitively useful. What about between an emergence and quantum tunneling, quantum teleportation, or quantum entanglement? What is the difference between a miracle and anything quantum?

- ❖ “All organised bodies are composed of parts, similar to those composing inorganic nature, and which have even themselves existed in an inorganic state; but the phenomena of life, *which result from the juxtaposition of those parts in a certain manner, bear no analogy to any of the effects which would be produced by the action of the component substances considered as mere physical agents.* To whatever degree we might imagine our knowledge of the properties of the several ingredients of a living

body to be extended and perfected, it is certain that no mere summing up of the separate actions of those elements will ever amount to the action of the living body itself.” – John Stuart Mill, A System of Logic, Bk. III, Ch.6, §1 (1844) (emphasis added).

J.S. Mill refers here to what Clarence Marsh Case called the ‘second order of natural phenomena’ eighty years later in the ‘introduction’ section to Outlines of Introductory Sociology (1924); see discussion and citations, Aspects of Sociology, 2 Culture, p. 371, *supra*.

Carl Sagan made a visual demonstration and extended commentary of J.S. Mill’s abiogenesis argument in Cosmos, Episode 2, by dumping inorganic matter, the known components and amounts of each in the human body, into a large mixer which just made a discolored mess, but could not produce life (see Carbon Chauvinist, 1 Order, p. 527, *supra*). We are missing something important in a positivist, empiricist view. Stated in the modern sense:

- ❖ “We all start life as a single-celled organism, and yet by the end of our development cycle, we’re somehow composed of two hundred types of cells, all intricately connected to one another, and all performing stunningly complex tasks. How does an egg somehow know how to build a chicken?” – Steven Johnson, Emergence: The Connected Lives of Ants, Brains, Cities, and Software (2001) as cited by Matthew Mazur, “Emergence, Artificial Life, and A New Blog,” February 24, 2014.

This firmly attaches emergence to abiogenesis and biogenesis (in the modern Huxley sense, see Order of Genesis, 1 Order, p. 522, *supra*).<sup>4</sup>

**GESTALT STRUCTURE:** According to G. H. Lewes, an emergence is a combination of unlike kinds that produces an unlike result (feature quote, *ut supra*). This had been described by John Stuart Mill 30 years earlier in 1844 (*ut supra*).

A Gestalt Structure then can be described as the ‘combination’ of unlike things that tends to produce unlike results more frequently than normal randomness, such as the emergent property of chemistry called Life.

- ❖ “Mathematics, law of averages. Let a complex system repeat itself long enough, eventually something surprising might occur.” – Inner Number 6, Battlestar Galactica, “Day Break” (epilogue in New York City, 2010).

A Gestalt Structure is the ‘machine’ of emergence (as for example, life begets life, and evolves into a multiplicity of forms, trillions of natural experiments). Normal species reproduction should not be considered an emergence since, for example, a human male and a human female produce a human baby, male or female (usually). Rather the situation where offspring is produced that is permanently unlike either parent is called xenogenesis, a term that came into our language between 1865 and 1870 in the time when Darwin’s evolution was being hotly argued. A Fuzzy Group then, is possibly another form of or another description for an emergence within a civilization. However, the two concepts may not be completely or always congruent. We are standing here at an intellectual frontier which will later be populated by essays, definitions, academic journal articles, and debates.

- ❖ *Structure* tends to imply intention and design, the first three parts of the Merriam-Webster online dictionary definition, for example, discuss intentional structures. However, structure is also capable of being used in a very *neutral sense*, as in Merriam-Webster definition at *structure*: **4a:** the arrangement of particles or parts in a substance or body; **4b:** organization of parts as dominated by the general character of

the whole; **4c**: coherent form or organization; or **5**: the aggregate of elements of an entity in their relationships to each other. For some, structures must always imply intelligence and as such, they wish to attribute the universe, life and to a supreme being. We've already covered that. Gestalt Structure as used here, is *neutral* in all of the senses cited above.

The follow up question to this is what constitutes 'unlike things,' that is, what degree or properties of 'unlikeness' (or incommensurability or perhaps 'degrees of differencing,' see Order of Genesis, *et seq.*, 1 Order, p. 522, *supra*) is sufficient to create an emergence?

- ❖ Notably, I have not found any discussion about degrees of unlikeness or differencing in its own right (a true philosophical discussion); rather, all such discussions seem to relate directly to some concrete time-observation issue or model. It is difficult to meaningfully discuss anything without reference to the universe's universal regulator.

Without answering the question directly, one might begin with a list of the very obviously unlike things that we can imagine created emergences related to human civilization of today (because we are, after all, narcissistic and our view is human-centric): Life on Earth and the universe (in the form of a big freak'n meteor), humans and pets, humans and domesticated animals, humans and machines, humans of different cultures and races, humans and the laws of physics, humans and entropy, sentience and sapience, life and death, religion and science. Each of these is presented as a pairing because that is the easiest and most natural way of grasping concepts, but that is not to say that pairings cannot be rearranged, or that there may be emergences from three or more unlike things, spinning off into an infinity of complexities. See continued discussion in The Axiom and Theory of Opposites, 5 Fallen to Earth, *infra*.

- ❖ The study of emergent properties of the internet (currently the unexpected, unplanned "fractal distribution of nodes" and a "scale-free power law," see "Emergent Properties of the Net" by Guy Tal<sup>5</sup>) is still nascent, but the internet itself is an emergence arising from, among other things, sapient control of matter through materials science and technology, and a different understanding of information. Insofar as the alleged emergent qualities of the internet, we must first define what 'unlike things' are producing identifiable and quantifiable 'unlike results.'
- ❖ Would it be interesting, and would we be surprised, if the occurrence of life in the universe followed some "fractal distribution of nodes" (*ut supra*)? This may have been quietly suggested by the ending of the 2017 movie Magellan (which received average ratings because it was cerebral while Star Trek 2009 received good ratings because it was big, colorful, loud and dumb).<sup>6</sup>

In fact, nearly anything different than ourselves has the potential to create an emergence. The basic realization of infancy that there are two things in the universe, me and not-me, creates in the developing human mind the necessity to begin naming or differentiating the things outside of me (and me is always outnumbered by  $\infty:1$  in this universe), classifying them as friendly, neutral/indifferent, or hostile/dangerous, perhaps creates the very first emergence: A piece of information associated in the infant's mind with a specific ontological thing. The creation of information (the resolution of uncertainty) is probably the very first human emergence. Is information the 'third thing' in combination with matter and energy, pushed along by time that creates universal emergence? As part of our education, we learn to accept the emergences of others as part of our collective commonality and civilization.<sup>7</sup>

✚ NEUTRAL EMERGENCE: Emergence is a neutral term, a neutral process insofar as the results are irrelevant to whether they are planned or accidental, or whether we like or dislike the results. One should *never assume that all emergences are favorable* to humanity even when caused by human civilization. Emergences are not always ‘good’ and not always beautiful babies. Some of those human-caused, existentially-unfavorable emergences are becoming quite apparent in recent years.

For example, this quote from the Wikipedia article about the Kardashev Scale:

- ❖ “Excessive use of energy without adequate disposal of heat, for example, could plausibly make the planet of a civilization approaching Type I unsuitable to the biology of the dominant life-forms and their food sources. If Earth is an example, then sea temperatures in excess of 35 °C (95 °F) would jeopardize marine life and make the cooling of mammals to temperatures suitable for their metabolism difficult if not impossible. Of course, these theoretical speculations may not become problems in reality thanks to evolution or the application of future engineering and technology.” (Retrieved February 12, 2017).

It is within the power of sapient beings to at least exert some control and foresight over the emergences that affect them.<sup>8</sup>

✚ TIMELESS EMERGENCE: It is of first importance to grasp that there is no inherent discrete time period defined in the emergence. There is a beginning, where we describe the original conditions from which the emergent end originates.

- ❖ We have a tendency to frame the emergence within time periods meaningful to humanity, but this is just a fallacy of mortal provincial thinking.

An emergence is a comparison of the end product to the beginning; one may have observed the entire process, or not. Like many physical laws, it may be irrelevant whether time is running forward or backwards as we are only concerned about the origin and the end. One may understand step-by-step how A got to Z, or not. But if Z (the end result) is unlike a (the beginning), Z is logically and definitively related to A, and Z is not the result of simple addition or subtraction proceeding from A (are B, C, etc. ‘additions’ to A?), then Z is an emergence from a, and the time involved is irrelevant. It is thus that, in terms of human civilizations and the study called sociology, *that macrosociology is the branch of knowledge most likely to encounter and most suitable for, the study of emergences* within human civilizations.

- ❖ The way that emergence is currently defined, it is a *before and after* condition. To do so we must look, and have reason to look and it must matter. We can only see emergence by first connecting it to whatever it came from and then second, comparing what resulted from what preceded and concluding that an *incongruence* exists between the two, for example, the inorganic universe and the phenomenon of life, which lacking any other empirical evidence, we assume arose from the inorganic universe.
  - Merriam-Webster online dictionary at *incongruous*: Not harmonious, not conforming, inconsistent within itself, lacking propriety.

That is, we lack an operational understanding of emergence which might be linked to a lack of operational understanding of “internal structures of large distributed systems” (see feature quote, 2 Culture, p. 363, *supra*).

✚ IMPERFECT INFORMATION: Emergence is arguably the result of imperfect information at any given moment. In a Newtonian clockwork universe sense, emergence is merely a product of humanity’s lack of vision, understanding, foresight, and predictive abilities. In the clockwork universe, God or the Gods, as envisioned by humanity, have no emergences – as they are omniscient and omnipotent, they see all and know all, and can predict all with absolute certainty; every game has already been played to conclusion and the outcomes are all known or precisely predictable (like the chess players in Robert Sheckley’s “Fool’s Mate” (1953).

However, in the quantum universe of probabilities, the condition of Godliness and emergence are not so certain; quantum probability leaves room for emergence even on the smallest scale, here all possible outcomes *are probabilities*. All games have been played, but only the probability of the possible ranges of outcomes are known. It is thus that *an emergence is likely an illusion*, but one that is useful for human purposes, like the planetarium mechanics which still use the Ptolemaic system, an intentional illusion, because it is most useful there.

✚ EMERGENT MACROSOCIOLOGY: Is it possible to meaningfully discuss macrosociology without emergences? Is macrosociology married to emergence philosophy? Is there another way to describe the macrostructures of civilization? I do not get the sense that macrosociology currently embraces the emergence idea of civilization or that civilization is a gestalt structure. Macrosociology does not appear to have shifted much in its frame of reference from microsociology; the appreciation of civilization as an emergence and a gestalt structure provides the basis for a true frame of reference in macrosociology. That’s my assertion.

✚ EMERGENT DE-MYSTIFICATION: Emergence is just the latest term to describe what most of history has considered wondrous, puzzling, magical or mystical about human civilizations. As such, it is possible for “emergence” to be used in mystical or pseudo-religious ways – to simply be in the habit of calling things emergences without any real meaning, in ways similar to what modern physics dismisses as ‘quantum mysticism’ as an improper ‘interpretation’ of the meaning of quantum experiments. Or the way we use “miraculous.”

The problem with emergences from an empirical, modernity perspective is that we are still treating them like magic. They just happen and we pat ourselves on the back that we can recognize them, like the quantum (see Daniel Styer quote, 4 Colleges, p. 506, *supra*). In a sense, emergences are not different in our perception than is  $\pi$ , the ‘magic number’ tying together mathematics (see Weird Circle Fixation excerpts, The Big Bang, *supra*). I am not saying that emergence will ever be predictable, it is possibly a statistical law like the Second Law of Thermodynamics, and perhaps in that sense, Social Entropy Theory is moving in the correct direction. To get a grip on emergences will require a different sort of thinking, of the same magnitude as the change in thinking that finally allowed humanity to understand the natural physical laws such as gravity, waves, the atom, the quantum. Unfortunately, all of my efforts here have failed (except perhaps framing the problem for others, if I am correct) to make anything but a huge game model of human civilizations from which I hope that participants will engage in emergent narrative and game play.

- ❖ In my primitive pre-epochal, pre-transhuman, pre-FTL brain, I tend to think of emergences – in relation to humanity – as a human echo of the tesseract. It is that thing that goes off in a direction that we cannot point to, but we know exists theoretically. It is thus that the emergence has properties that do not seem to be the sum of its parts, and it is not surprising that the tesseract has also been associated with magic sources

(e.g., Ebony Anpu). If there is a ‘statistical tesseract,’ that might be the model for an emergence in biological intelligence and civilizations.

For the term to have any utility in the future of macrosociology (or many other fields), it will need to be further disciplined: A definition will need to be crafted that places it firmly within the context of macrosociology, it will need to be used consistently in the field, expanded and modified with care; this process will inspire a whole sub-field of thought and historical study. It should at least be a task within the purview of macrosociology *to develop a terminology and language suitable to describing the fourth order of natural phenomenon* (see Pseudo-physics of the KM, 2 Kairotic Moments, p. 1434, *supra*). Emergence, a first and second order phenomenon term, was the best I could do without writing a book that no one will read.

- ❖ “Complex systems research has been hindered by a lack of precision when people refer to ‘emergent properties.’ Contemporary views of emergence in philosophy include Chalmers’ spectrum ranging from a mystical property to the whole-part relationships in mundane objects including filing cabinets. They also include Bedau’s distinction between ‘weak’ emergence, based on simulation and modeling, and ‘strong’ emergence relying on downwards causation.

As we have seen, problems arise because engineers combine many different aspects of these ideas when referring to emergence in complex systems. They refer to the surprise implicit in predictive approaches while talking about the design of emergent properties. In contrast, we have attempted to ground recent research into complex systems by surveying different approaches to emergence. The intention has been to help engineers avoid some of the paradoxes that arise when inconsistent definitions are used.” – Christopher W. Johnson (University of Glasgow), “What are Emergent Properties and How Do They Affect the Engineering of Complex Systems?” 2005.

I could have tried to write a book instead, but along the way decided that the simulation was what interested me more, was more suited to my meagre talents, and would be more instructive, educational, fun and engaging than a book if people actually played the game and got an intuitive feel for the macrosocial dynamics. To add value, which is what any writing should do. Maybe I did actually write a book in the end, that no one will read.

Adding value is, of course, a rather tricky and slippery argument, a copyright is not an affirmation of redeeming social value of an original work. Even Mein Kampf ‘added’ value: It was read by millions, which ‘added value’ to the Nazi party ideology in its current time, and it brought forth in to *written form* the basest mumbled, guttural racial arguments of the early 20<sup>th</sup> Century for examination and argument (but not in 1930s Germany), it also has value, of course, as the ultimate form of historical record. To whom or what has GGDM added value?

---

*“The field of sociology can be broadly split into two categories. Microsociology focuses upon relatively small-scale social groups and processes. This field is focused on such phenomena as face-to-face interaction (say classroom behavior), the socialization of children, or the influence of a particular group on the political behavior of its membership. As can be seen from a look at our introductory texts, microsociology increasingly dominates the field of sociology. I believe the field is increasingly emphasizing micro because it resonates with Americans who tend to be very much oriented to the individual. Consequently, they find micro sociology much easier to grasp and apply to their daily lives; and we do need students.*

---

*Macrosociology, on the other hand, is the study of large-scale social patterns. Closely related to history and anthropology, it focuses upon total societies and their constituent parts, such as economic and political structures, family and religious institutions, and how these institutions interrelate with one another and with the whole.... Immanuel Wallerstein believes the micro/ macro is the only distinction within the social sciences that has use and relevance.”*

– Frank Elwell, Macro Social Theory (2009), Kindle Edition, p. 11

**MOVING THROUGH KASHMIR:** Another possible explanation is simply that macrosociology is more ‘philosophical,’ and mainstream sociology has followed the modern information-driven empirical drift of our culture, for which microsociology and social psychology are best suited.

- ❖ “Sociology once debated ‘the social’ and did so with a public readership. Even as late as the Second World War, sociologists commanded a wide public on questions about the nature of society, altruism and the direction of social evolution. As a result of several waves of professionalization, however, these issues have vanished from academic sociology and from the public writings of sociologists. From the 1960s onwards sociologists instead wrote for the public by supporting social movements. Discussion within sociology became constrained both by ‘professional’ expectations and political taboos. Yet the original motivating concerns of sociology and its public, such as the compatibility of socialism and Darwinism, the nature of society, and the process of social evolution, did not cease to be of public interest. With sociologists showing little interest in satisfying the demand, it was met by non-sociologists, with the result that sociology lost both its intellectual public, as distinct from affinity groups, and its claim on these topics.” – Stephen Turner, abstract of “De-intellectualizing American sociology: A history, of sorts,” *Journal of Sociology*, November 5, 2012.
- ❖ “Basically, [Stephan Turner’s] wondering: what happened to sociologists? When did they give up questions of human nature, altruism, society? Well, Turner argues that a big problem is that sociologists started getting political. ‘It is evident that many of the most enthusiastic adherents of the new model of professionalization in the United States had roots in the left, and not infrequently in the Communist Party itself.’ And that political slant limited the types of questions sociologists were allowed to ask. Turner’s basic point is that sociology is now a joke because every sociologist is a liberal. That’s not untrue: over 85 percent of the members of the American Sociological Association (ASA) vote for either the Democratic or Green parties. One survey found the ratio of Democrats to Republicans in the ASA to be 47 to 1. Now, whether or not sociology is joked about because its researchers’ political leanings is another question. But that’s the argument Turner seems to be making here.” – Rose Eveleth, “Whatever Happened to Sociologists?” *SmartNews* (on [smithsonianmag.org](http://smithsonianmag.org)), November 6, 2012, referring to Stephen Turner, “De-intellectualizing American sociology: A history, of sorts,” *Journal of Sociology*, November 5, 2012 (*ut supra*).

➤ Exhibit A: GGDM, ‘the macrosocial’ sim written by a *paralegal*.<sup>9</sup>

Social data collection and microanalysis, statistics and hard numbers, not philosophical musings, win grant money. Schopenhauer wins the prize in 1839, but today, he would receive no grant

money, they would not even read his paper. And, as Tom Wolfe (“In the Land of the Rococo Marxists,” Harpers, June 2000) suggested:

- ❖ “Today, at any leading American university, a Kant, with all his dithering about God, freedom, and immortality, or even a Hume, wouldn’t survive a year in graduate school, much less get hired as an instructor.”

Or as stated recently in the movie Einstein’s God Model (2016):

- ❖ **Dr. Mastenbrook** [talking about string theory]: Right. A unified theory of everything. The Holy Grail of physics. It makes sense mathematically, but we don’t know any of it. This is science that is literally pushing the envelope.  
**Dr. Taylor:** Sounds more like philosophy.  
**Dr. Mastenbrook:** They don’t give out Nobel Prizes for philosophy.

This work does not belong specifically within any of the four or five identifiable traditions of macrosocial theory. Frank Elwell in Macro Social Theory, holds out four traditions of macrosocial theory originating from Karl Marx, Emile Durkheim, Max Weber and T. Robert Malthus (instead of Spencer). George Herbert Mead is excluded from the pantheon, in fact, a word search of Elwell’s book shows that Mead is never mentioned. Whereas, Mary Jo Deegan, published a book, Self, War, and Society: George Herbert Mead’s Macrosociology (2008), specifically placing George Herbert Mead alongside Emily Durkheim and Max Weber in macrosociology.

None of the existing traditions of macrosocial theory embraces the emergence, more specifically, the structural tendency of human civilizations to produce and act in the manner of an emergence; that human civilization can only be properly understood as an emergence.

Further, while each of the existing traditions analyze human civilization from this or that perspective – all very interesting – none have really attempted to tackle the large distributed structures of human civilization, *a process that became necessary when I set out to simulate human civilizations as something more than numbers and points*. What macrosociology needs is an *a priori* science of the emergent. Without that, it will remain a vague smudge in the backwater of our civilization’s public space:

- ❖ “Researchers, as yet, have very little ability to identify internal structures of large distributed systems like human societies, which is an important scientific problem. Genuine structural collapse seems, in many cases, the only plausible explanation supporting the idea that such structures exist. However, until they can be concretely identified, scientific inquiry appears limited to the construction of scientific narratives, using systems thinking for careful story telling about systemic organization and change.” – Wikipedia article, “Societal Collapse,” retrieved February 24, 2015.

However, as Prof. Elwell cautions:

- ❖ “If you attempted to account for all of social reality, the resulting theory would be long, boring, and as confusing as social reality itself. The best social theories attempt to describe the most important features of social reality using the fewest possible statements and assumptions.” – Frank Elwell, Macro-Social Theory (2009), Kindle Edition, p. 20.  
 ➤ GGDM already failed on that issue: Long, boring, confusing, not useful.

✚ LOST SOME MARBLES: For example, think of the problem in this way: There was a science-fiction short story that I read long ago – I do not remember the title or author, and I cannot find it in my books or the internet – where mechanical engineers were trying to build a rocket to go into orbit. The problem was the world (and the engineers) had not discovered electrical engineering (or electronics) and could not accept the existence of anything they could not see. These were very practical nuts and bolts men. The story is quite a bit of a stretch however because they would require some knowledge of chemistry to make rocket fuel – but after the fifth or sixth major premature ignition accident while working on the rocket, they finally called in the crazy eccentric pariah scientist who explained to them about electricity (see also discussion of space flight technology and weaponry relationships, Skylab is Falling, 2 Construction, p. 670, and The Cool Ship, 2 Stardrive, p. 795, *supra*).

The problem of trying to build a rocket without modern electronics, or at least electrical controls, was compared in the story to trying to tie together marbles with a piece of string. Without emergences and gestalt structures, it seems that macrosociology has been trying to tie together marbles with a piece of string.

- ❖ For example, could you write a story about the invention of the internal combustion engine without electricity? And without resorting to magic, little demons, or mystical forces? Eventually, the author would find that something critical is missing – the spark to rapidly and repeatedly ignite the compressed gasified fuel.

Is the gestalt structure that missing thing in macro-human studies or am I – like a hack writer – inventing mystical forces and little demons to solve the problem and tell the story?

Gestalt is really the only explanation that makes any sense of the fourth order phenomenon before us and of us; Aristotle knew it, “The whole is more than the sum of its parts.” (Metaphysics).<sup>10</sup> I would call this new school, approach, perspective or tradition an emergence-structural approach to macrosocial theory. Others may choose to call it my absurd vanity and pretentiousness. We’ll discuss that later.

- ❖ More likely, I will be dismissed as a pseudoscientific quack (that might be a notable achievement, since sociology hasn’t attracted as many as medicine and physics, maybe even an Ig Nobel achievement) who tries to, and almost makes sense, but ultimately is trying to inject mysticism into macrosociology as the ‘missing piece.’

I don’t really know what a new macrosociology based on emergences will look like or where it is going to lead us. As Sir Francis Bacon very likely only had a limited vision of where the new natural, empirical sciences might lead, he certainly could not have imagined the world of 400 years later. So, it had to start with the idea, working out the principles, philosophy, making arguments for why the new way was a better way, and waiting for the right people to find the right leads to get it started. And it took his entire life to reach *Novum Organum*, he died a broken man in 1626, six years after it was published.

- ❖ “Thomas S. Kuhn wrote a famous and highly recommendable book called The Structure of Scientific Revolutions. He points out that, whatever we might like to think, and whatever the mythology of the history of science tells us, new ideas are not accepted as soon as they come along, as soon as the evidence makes it clear that new ideas are needed. Actually, science progresses in a series of convulsive hiccups, during each one of which the attempt to suppress the coming convulsion is the strongest

feature of the landscape. There is always a body of conservatism which is defended to the death before the actual overthrow takes place. He calls this – the characteristic feature of this body of conservatism – paradigms, and he defines them as follows: ‘universally recognised scientific achievements that, for a time, provide model problems and solutions to a community of practitioners.’” – James Blish, The Tale that Wags the God (1987), Kindle Loc. 529-535.

✚ FOURTH DEGREE OF SEPARATION: It is possible then, if other theorist understand what has been attempted here and follow their own lines of development (without which, GGDM is just an anomaly, a “historical artifact” (quoting Elwell)), that a new holistic macrostructural tradition may be inadvertently introduced from this work. This new approach would focus on identifying the large distributed structures of civilization – in a non-reductionist way – and the *a priori* recognition that civilizations are gestalt structures and emergences.<sup>11</sup>

❖ “In most fields of human endeavor, new developments are unlikely to receive immediate endorsement by the authorities in that field, and the QJM [Quantified Judgment Method] was no exception. One of Trevor’s greatest frustrations was his inability to get the US Defense establishment to pay more attention to the results of his historical analysis. He was impatient with people who did not recognize the wisdom of his insights, and his criticism tended to be explicit. In Europe and the Middle East he was considered an eminent person and became the confidant of chiefs of staff and defense ministers. In the US, while many agencies valued his research and insights, they often downplayed the value of his analysis, as it was not based on ‘traditional’ operations research methods. In fact, he was often prevented from following his frequent creative urges by the pressure of meeting payrolls and deadlines.

Yet although he could easily have sold out for the comfort of a stable job, he believed that his independence was a prerequisite for pursuing his work. Besides, he was not really interested in making money; what he really wanted was recognition of the validity of his theories about the historical analysis of combat. For over 30 years he persevered in this cause despite indifference, opposition and lack of reward, hoping to advance the use of history to protect both national and global security.” – Susan Rich, biography page for Trevor N. Dupuy at The Dupuy Institute website.

As a precursor to this, argument was made separating the standards of the third and fourth order sciences from the empirical science of the first order, though there is also room for empiricism in psychological and social sciences, with due care. Arguments were made in *Unsolved Problems*, 3 *Constructural Elements*, p. 209, *Math Boy and Turbulence of Being*, 1 *Entropy*, p. 221 *et seq.*, 223, and **Aspects of Sociology**, *et seq.*, 2 *Culture*, p. 371, *supra*, discussing the history of sociology in the early 20<sup>th</sup> Century in relation to science development, the nature of social sciences as non-predictive (even biological science is not predictive, see Carl Sagan, *ut infra*), and the complexity of the subject as a whole. At the heart of this is the idea that empiricism and empirical science does not equate to predictability in all cases:

❖ “Biology is more like history than it is like physics. You have to know the past to understand the present. There is no predictive theory of biology, nor is there for history. The reason is the same: Both subjects are still too complicated for us.” – Carl Sagan, *Cosmos*, Episode 2.<sup>12</sup>

Prediction-testing-falsification are the triumvirate of empirical science.

- ❖ “If a theory doesn’t make a testable prediction, it isn’t science. It’s a basic axiom of the scientific method, dubbed ‘falsifiability’ by the 20<sup>th</sup> century philosopher of science Karl Popper. General relativity passes the falsifiability test because, in addition to elegantly accounting for previously-observed phenomena like the precession of Mercury’s orbit, it also made predictions about as-yet-unseen effects – how light should bend around the Sun, the way clocks should seem to run slower in a strong gravitational field, and others that have since been borne out by experiment. On the other hand, theories like Marxism and Freudian psychoanalysis failed the falsifiability test – in Popper’s mind, at least – because they could be twisted to explain nearly any ‘data’ about the world. ...

Now, some physicists and philosophers think it is time to reconsider the notion of falsifiability. Could a theory that provides an elegant and accurate account of the world around us – even if its predictions can’t be tested by today’s experiments, or tomorrow’s – still ‘count’ as science? As theory pulls further and further ahead of the capabilities of experiment, physicists are taking this question seriously. ‘We are in various ways hitting the limits of what will ever be testable, unless we have misunderstood some essential point about the nature of reality,’ says theoretical cosmologist George Ellis.” – Kate Becker, “Does Science Need Falsifiability?” NOVA, February 11, 2015.<sup>13</sup>

Once those two concepts are separated, a non-predictive empirical science is possible; if biology can be accepted as a science then sociology and mental science can be equally accepted. But they are not: Biology has more relation to physics, chemistry and the first order of natural phenomenon than social or psychological sciences. If one cannot accept the prior arguments made in this work (and the entirety of the work itself), then the gestalt-emergent-embracing conclusion for a macrostructural macrosociology will not be accepted.

- ✚ FOURTH ORDER LANGUAGE: It seems that macrosociology as a discipline has been wandering around aimlessly – like me at a party – unsure, alienated, and lost in the in-crowd of disciplines that belong to microsociology (‘in-crowds’ being a favorite subject of microsociology). Macrosociology has to become the equal of microsociology for this scheme to work. Macrosociology has to be the kid standing against the wall at the dance who goes on to become a brilliant researcher or successful writer, while half of the other kids at the party become druggies or felons. Thus, I am arguing a ground for macrosociology to get its footing (dare I ... use the dirty term, ‘paradigm shift?’), to get to work in the correct framework:

- 1) Treat fourth order natural phenomenon as equal to all else in reality and fact, and develop a language suitable for describing fourth order phenomenon as independent as possible from language used for the preceding orders of natural phenomenon (see Case and Mises quotes, *Aspects of Sociology, 2 Culture*, pp. 371-372, *supra*), and
- 2) Embrace the emergence, and refine the terminology, begin with the axiom that human civilization is ***an emergence from emergent creatures*** which is the true scope of the problem, the true meaning of ‘super-organic’ and what makes it so damn difficult.

This situation is very comparable to when you are trying to explain something to someone and they obviously are not comprehending, or when you are trying to figure out a problem and not making progress – it isn’t working, you need to try a different approach, a different assumption, a different framework. It isn’t and hasn’t been working for macrosociology for a

long time. While I perfectly understand the appropriation of first and second order phenomenon language imagery to describe groups, society, civilization, and whatever is inside our heads, it is at best a very crude and misleading comparison to the fourth order. Part of the problem is that the fourth order has not been regarded as an equal among reality; the mental health sciences in this regard are way ahead (no pun intended) of macrosociology.

- ❖ Most of the language describing human civilizations, by sociologists, historians, anthropologists, is first and second-order language – I cannot even avoid it myself: Macrosociology needs a new approach that is as startling as the general and special theories of relativity or of quantum mechanics were to classical physics. As discussed in Pseudo-physics of the KM, 2 Kairotic Moments, p. 1434, *supra*, even Joseph Tainter described a pseudo-physical process of civilization, but avoided using the terms ‘entropic’ and ‘entropy’ in his book, though that is what he describes.

Have I lost my marbles, do you think? Sociology is the study of the society of volitional sapient. Those sapient – persons in another word – are congruent or nearly congruent with humanity in the local sense (Daniel Dennett, 1976, see feature quote, 2 Diplomacy, p. 1110, *supra*). We do not normally apply the term sociology to the study of social organization and behavior of herd animals, mammals, birds, fish, or eusocial creatures. Because we do not regard them as either sapient, or human equivalent in any possible sense. We do not think of these creatures – other than eusocial species and perhaps dolphins and whales – as having any complex social structure, as having much beyond mating and milk bond relationships.

Eusocial creatures we credit with more complex structures, and a form of altruistic behavior and collective intelligence, without free will (see meta-law and altruism discussion, Mephisto’s Marriage Counseling, *et seq.*, 3 Diplomacy, p. 1135, *supra*). Thus, we do not normally apply the study of sociology to any creatures other than humans and human relationship to creatures we keep as pets. But sociology, especially microsociology as Professor Ellwell describes it, does not treat humans as sapient, but more like herd animals. Thus, we have made very limited progress in understanding human society; a theory here, a theory there, each one illuminates a small corner of human society or civilization, but there is no enlightening view of the whole, no view from a height, even in current macrosociology.

- ❖ Rhetorical Question: Is sociology and especially macrosociology like G.K. Chesterton’s man who is *partially convinced* that social phenomenon are facts, or like the man who is *entirely convinced* that social phenomenon are facts? Sociology needs to decide one way or the other. Is it science, is it philosophy, is it faith? See G.K. Chesterton, Orthodoxy, Ch. 6 (1908), feature quote 4 Government Titles, p. 634, *supra*.

Macrosociology needs a better view of the whole, it needs to occupy the high ground overlooking the valleys, coasts, and plains where humanity lives. If sociology is the study of the society of sapient, then it needs to understand first, sapience, and second, to apply the proper framework. The Existential Void and Gestalt Structure are the starting frame of sapience.

- ❖ This entire argument, threading through dozens of sections of GGDM as well as what is presented here, is not written to ASA or journal standards. If that causes a furrowing of the brow, curl of the lip... For one, it lacks citations in every sentence, every line, to someone else’s study or article, as if the author’s thoughts would not sufficiently stand on their own merit. The argument I am making here may not even be properly a ‘sociology’ argument in the current profession, but more of philosophical

argument. GGDM’s argument may be acceptable as a paper in some philosophy courses, but still is not up to APA or journal standards. The argument here is made in the style of GGDM, it is probably at best, a ‘lay’ argument.

- ✚ FALLACY OF PRETENTIOUSNESS: “One of the great challenges in this world is knowing enough about the subject to think you are right, but not enough to know you are wrong.” – Neil deGrasse Tyson, “Class Trailer” video to Master Class program. Mr. Tyson is describing the paradoxical Dunning-Kruger effect.<sup>14</sup> Is it pretentious for a non-Ph.D. to write on such weighty matters as structure of civilization, gestalt structures and macrosociology?

There are some who seem to think that anyone writing on non-trivial topics without a Ph.D. after their name is being pretentious. Is it pretentious for someone to think that a game design can be a *magnum opus*, a major intellectual project in the humanities? And in the end, to call for a revival, shift in macrosociology? If so, GGDM may be the *art brut* and I may be the Henry Darger (Chicago, 1892-1973) of macrosociology, social philosophy, game design, social metaphysics, or whatever other category you interpret.

- ❖ “Writing and other arts are criticised as pretentious when they seem to aim at the highfalutin aesthetic or intellectual stratosphere while lacking the chops to see it through. But that, of course, is an inevitable risk of any ambitious creative work. To employ the word ‘pretentious’ against it is empty as criticism, because all it means is ‘not good’; but it is disgustingly full as moral injunction: it means that it is better not to try at all than to try and fail.... Some writers complain about the pretentious use of words, *as though the very act of writing down words and hoping that others will read them and approve of one’s ideas is not itself fantastically pretentious in the first place.*” – Steven Poole, “Pretentiousness by Dan Fox review – why anti-intellectualism is the real snobbery,” *The Guardian*, February 11, 2016 (emphasis added).

What I have written should not be ignored or considered ignoble out of hand because I don’t have Ph.D. after my name (*ad hominem*), nor should I have received a free pass if I did have Ph.D. after my name (appeal to authority, elitism). Compelling elegance of the simulation in explaining humanity and modeling the civilization phenomena will not alone redeem GGDM from being another silly space game (see EN 13, *ut supra*, p. 1550).

---

*“One of the things that I find interesting about Dwarf Fortress is that (to use programming jargon) it’s sort of a declarative game rather than an imperative game. In e.g. StarCraft you select an individual unit and demand that it move to a specific point on the map; in Dwarf Fortress you configure which dwarves are allowed to perform certain tasks, then you place a task in a queue, and some dwarf somewhere will (eventually (hopefully)) take care of it (until they get distracted by a party, or decide to go fishing, or get hungry and wander off to the dining hall, or fall asleep in a stockpile, or drop anything they’re carrying and run screaming from the forgotten beast hurtling down the hallway at them). It’s a fascinating difference in paradigm, and I wish more games would explore the idea of actors in the world being chaotic/free agents which will only somewhat prioritize your wishes.”*

– By kibwen, “The Brilliance of Dwarf Fortress (2011) (nytimes.com),” found on forums at <https://news.ycombinator.com/item?id=13754307>

---

**EMERGENT ASPECTS OF GAMING:** In a sense, the declarative format of Dwarf Fortress mirrors the answer that Western religion has settled upon in the question of human free will: That God generally shapes people’s lives and requests that we do certain things, but it is our free will to do or not do so, to execute when and where we feel compelled. That the relationship between God and individual humans is an imperative one or any sort of pre-destiny argument has been the dismissive stuff of freshman philosophy and religion courses for centuries.

- ❖ The declarative relationship is the core subject of the lampooning of Christian evangelists in Robert Heinlein’s Job: A Comedy of Justice (1984): If the relationship of Yahweh to humans was imperative, they would not be volitionals.

Emergent game play has become the sexy fascination and frontier of video gaming in the last decade or two, driven possibly by the concepts of Dwarf Fortress. The classic definition of emergent game play are complex systems or situations arising from simple game play mechanics; most definitions suggest that the emergence is unintended or unanticipated by the designers (sometimes via massive programming snafu, such as the famed Corrupted Blood incident in World of Warcraft), and all definitions necessarily imply – without saying so – that the emergent game play is (really) the human players.

- ❖ “Emergent narratives are stories that are not authored by a single person or by any person really. They are stories that emerge from the interaction between players and the systems that govern gameplay. They are random, transient, ephemeral things that only ever exist for one person at one moment in time. I like emergent stories as much as the next person. ... Yet when I look back at my emergent experiences or when I try to tell the stories to others, I realize just how shallow an experience they really are. Emergent stories feel more engrossing than authored stories because they’re personal for the player, and that personal interactivity gives it the illusion of importance.” – Nick Dinicola, “The Problem With Emergent Stories in Video Games,” Pop Matters, July 30, 2013.

Although emergence in video game play was initially ‘accidental,’ emergence is an intentional part of role-playing tabletop games and diplomacy or social tabletop gaming which precedes video gaming by a couple of decades.<sup>15</sup> GGDM began as an expansion to a board game.

GGDM may be regarded as intentional emergent game play and emergent narrative via group storytelling, depending on what is considered as simple game mechanics – admittedly, most gamers would not regard the mechanics of GGDM as ‘simple’ but might agree readily that the situations created by the mechanics and human players are potentially complex. GGDM is as emergent as the players and Concierge wish and can find a way to implement.

GGDM invites and is built upon emergent narrative, see 3 Constructural Elements, p. 205, *supra*.<sup>16</sup> The current game structure, based on the duality of Interpretations and Power Activations, has been in place since about 2002-2004. At that time, I was not familiar with emergence or various forms of the term, as now, when I invented the Interpretation mechanics, I was thinking in terms of adding role-playing opportunities to the game, as I had been familiar with tabletop role playing games since the early 1980s. The final game title occurred sometime in about late 2006, as I remember a very specific conversation about it. In the end, however it came about, Interpretations, News Events, and Interventions became the tools of emergent narrative in GGDM.

Technological emergence is exactly at the heart of the technological singularity. It is the thing we fear; it is the thing beyond our control; ‘event horizon’ is the current first order phenomenon metaphor for emergent behavior. That computers may reprogram themselves in ways we cannot predict and did not intend (and Deep Learning AI already has, see The AI Problem excerpts, Corporations, *supra*), and that they might find us abhorrent, primitive, slow, obsolete or consider us an existential threat, or a plaything of their emerging intelligence (like a little animal is treated by children as a toy), that we may be superseded by our own creations, is the stuff of our nightmares. Given our appreciation of the nature of things, we expect nothing else.

❖ I never heard of Dwarf Fortress or emergent gaming until an office conversation in June 2017, after 25 years of working on GGDM and after I had already written the sections about emergence and gestalt structures. I am not by any measure, a PC or video gamer, I have a PlayStation 2 that I have not turned on in over 10 years, and would not work with my current television in any case. I am from the Space Invaders – PacMan – Galaxian – Asteroids – Defender generation and spent way too many hours in the arcades, but really, my interest in video games waned in the mid-90s (Gex, Zoop, Time Bandit). My regular PC play now consists of FreeCell, Mahjongg, and Race for the Galaxy, which I regard as a mental break from my routine – a *placebo* for my mind when I am supposed to be focusing on GGDM editing – and at the same time, intense focus and problem-solving training. I’ve never MMOGed.

✚ AI EMERGENT PLAY?: An interesting area for study would be whether and when emergent game play occurs when all players are AI? We already know AIs can create their own language if not required to use standard English (see The AI Problem, Corporations, *supra*).

❖ This is probably as good or better a measure than the Turing Test.

In order for AI to experience emergent game narrative, the AI would first have to be a separate entity from the game, and second, experience the game as a human would; that is, create an imaginative semi-fact based story from game mechanical events that it experienced. Connecting dots that are not connected in the game mechanics. And to feel the need to do so as well, almost as if necessary to completing the experience.

✚ NO LOTUS FOR YOU: My obsession with GGDM in part arises possibly from the twin notions that the universe is a gestalt structure and that gestalt structures begat gestalt structures through emergences, e.g., see fractured universe discussion Order of Genesis, 1 Order, p. 522, *supra*. Thus, the Big Bang was an emergence event (or another botched creation, if you like David Hume’s arguments, see quote, 1 Fallen to Earth, p. 1495, also ON THE OTHER HAND, p. 1496, *supra*). This is not an assume-the-lotus-position-and-levitate enlightenment – GGDM should never become that. And it does not answer the question of the Prime Mover or First Cause. But it does suggest that entropy is part of a larger non-linear structure, that we are not ‘getting it’ by physical science alone (but science cannot become religion, we need something new, a nascent role currently being filled by the mental and social sciences).

---

*“The greater the decrease in the social significance of an art form, the sharper the distinction between criticism and enjoyment by the public. The conventional is uncritically enjoyed, and the truly new is criticized with aversion.”*

– Walter Benjamin

---

## ENDNOTES.

<sup>1</sup> Commentary: I didn't make that up, it was on a poster for an anti-drug abuse campaign many years ago. Drug abuse, of course, goes back to the urge for non-existence, seeking the drug to cure sapience and meta-consciousness.

<sup>2</sup> Commentary: Which is why science fiction's envisioned sexual relations with bioroids or sophisticated human appearing androids (e.g., *Bladerunner* (1982), *Cherry2000* (1988), *The Stepford Wives* (1975)), while it may appeal to young men, would ultimately in the long term be personally unsatisfying and unwholesome to humanity.

<sup>3</sup> Commentary: My progress on this project and the progress of our civilization in any sense, is only wondrous because we are humans, we have nothing else to compare to, and we love the sense of self-satisfaction. In other words, progress is always measured compared to a relative standard and contrasted with what existed before.

<sup>4</sup> Commentary & Citation: As an aside, the description of his ideas in the current Wikipedia article about him (February 2019) *which reads somewhat like a promo for his books*, makes it seem like he was writing about the development of GGDM, to wit:

- ✓ “His book Where Good Ideas Come From advances a notion to challenge the popular story of a lone genius experiencing an instantaneous moment of inspiration. Johnson instead argues that innovative thinking is a slow, gradual, and very networked process in which ‘slow hunches’ are cultivated, and completed, by exposure to seemingly unrelated ideas and quandaries from other disciplines and thinkers. He lists the themes he has identified from studying which environments and conditions have been correlated, historically, with high innovation. He argues that they make theoretical sense because of their tendency to effectively explore the ‘adjacent possible,’ Stuart Kauffman’s concept (which Johnson cites) of the space of innovations waiting to be made from combining immediately-available notions and solutions.” – from Wikipedia article, “Steven Johnson (author),” February 14, 2019.
- ✓ Steven Johnson’s 2001 idea is echoed by Benjamin Aldes Wurgraff, “Thinking, Public and Private: Intellectuals in the Time of the Public,” *Los Angeles Review of Books*, July 15, 2016:
  - “In our focus on the immediate interventions that public intellectuals can make in the public sphere, is there room for private contemplation, and the glacial tempo at which ideas must sometimes develop?”
  - ‘Glacial tempo’ of ideas is an idea I can identify with... I ideate, cerebrate, percolate the noetic (all this, of course, is taradiddle, but you get the idea).

<sup>5</sup> Commentary: The paper is undated, but I found it in February 2017 and shared it with a blockchain guy.

<sup>6</sup> Commentary: Big, loud and dumb wins big about once every seven years, or wins all the time with about 1/7<sup>th</sup> of the population.

<sup>7</sup> Commentary: It may seem a completely trivial thing, but in kindergarten, I used to say, “fumb” or “fum” instead of “thumb.” My teacher pointed it out to my mother who went to great lengths to make sure I learned to say it correctly and stopped pronouncing it incorrectly. I also used to drag out the tail ends of “5” when writing it in kindergarten. All of such education says: ‘This is the right way to do it because this is the way everyone else does it.’

<sup>8</sup> Commentary: The *Babylon 5* television series overtly describes a sort of emergence with humans (of course) as the central catalyst. The ‘overtly’ part is what made the series story arc new and unique. Other science-fiction literature, in television or other forms, may naturally, but as almost an afterthought, describe an emergence of some kind. The reimaged *Battlestar Galactica* series also described an emergence in the form of a human-cylon hybrid, but did so in the context of (more than) a hint of divine intervention and as part of a greater cycle of history.

<sup>9</sup> Commentary: While I have avoided being overtly political in designing GGDM, admittedly there is not much in GGDM that will be liked by the current right side of the political aisle. Especially those for whom conservative values equate to religious Christianity, who will immediately dismiss GGDM as a typical ASA-like liberal work (of which I am not and cannot be a member because I don't have the educational requirements) and that cursory dismissal will be the end of their argument and inquiry on GGDM. Sad for them it is true.

- ✓ Continuing the Kiss-Off Fallacy: Suppose I were offered an honorary membership in the ASA on the strength of GGDM... what exactly does that mean? It means you do not meet the normal criteria, but they think it would be beneficial – mainly for them – if you were an ‘honorary member.’ It's like being an honorary member of the Mensa Society; it says you are not really smart enough. It's like when a Make-a-Wish child is signed to a one-day contract to be an honorary Pittsburgh Penguin, Steeler or Pirate – it's not real, it's make-believe, cosplay, puffery. It's almost insulting actually *for an adult*.

<sup>10</sup> **Commentary:** However, I suspect that GGDM might be like the Ptolemaic system of geocentric cosmology, which, with a lot of fudging, produced the demonstratively correct results (predictions) of heavenly movement from an incorrect assumption. Planetariums, which are geocentric, still use the Ptolemaic model.

<sup>11</sup> **Citation:** “Frigyes Karinthy, in his 1929 short story “L’ancszemek” (in English, “Chains”) suggested that any two persons are distanced by at most six friendship links. Stanley Milgram in his famous experiments challenged people to route postcards to a fixed recipient by passing them only through direct acquaintances. Milgram found that the average number of intermediaries on the path of the postcards lay between 4:4 and 5:7, depending on the sample of people chosen. We report the results of the first world-scale social-network graph distance computations, using the entire Facebook network of active users ( $\approx 721$  million users,  $\approx 69$  billion friendship links). The average distance we observe is 4:74, corresponding to 3:74 intermediaries or ‘degrees of separation,’ prompting the title of this paper. More generally, we study the distance distribution of Facebook and of some interesting geographic subgraphs, looking also at their evolution over time. The networks we are able to explore are almost two orders of magnitude larger than those analysed in the previous literature. We report detailed statistical metadata showing that our measurements (which rely on probabilistic algorithms) are very accurate.” – Lars Backstrom, Paolo Boldi, *et al.*, “Four Degrees of Separation,” WebSci, June 22-24, 2012 (found on <http://www.leonidzhukov.net/hse/2015/sna/papers/web-sci12-fourdegrees.pdf>).

<sup>12</sup> **Commentary:** Suppose one declared that every human has to obey the Hayflick limit. While it is probably true, it is also probably an unfalsifiable statement because it would be impossible to test every living human now, and not every dead human has died of old age. After that, would come definition arguments, would someone like John in *The Man from Earth* (2007) be considered a human? Is the Hayflick limit central to the condition of being human?

- ✓ Thus, biology cannot be said to ‘predict’ senescence, other than by probability and experience, unlike physics prediction of gravity.

<sup>13</sup> **Citation:** “‘It would be completely non-scientific to ignore that possibility just because it doesn’t conform with some preexisting philosophical prejudices,’ says Sean Carroll, a physicist at Caltech, who called for the ‘retirement’ of the falsifiability principle in a controversial essay for *Edge* last year. Falsifiability is ‘just a simple motto that non-philosophically-trained scientists have latched onto,’ argues Carroll. He also bristles at the notion that this viewpoint can be summed up as ‘elegance will suffice,’ as [George] Ellis put it in a stinging *Nature* comment written with cosmologist Joe Silk. ‘Elegance can help us invent new theories, but does not count as empirical evidence in their favor,’ says Carroll. ‘The criteria we use for judging theories are how good they are at accounting for the data, not how pretty or seductive or intuitive they are.’” *Id.*

- ✓ “So my book ... is an examination of what has gone wrong. As the subtitle says, the problem is that physicists rely on unscientific methods to develop new theories. These arguments are variations on arguments from mathematical beauty, though many physicists are not aware that this is what they are doing.” – Sabine Hossenfelder, “Physics is still in crisis,” Sabine Hossenfelder YouTube Channel, June 5, 2020.

<sup>14</sup> **Citation:** “The Dunning-Kruger effect ... is simply the observation that incompetent people ... can’t know the shortcomings or incompetencies that they may possess. ... The key in the way that people ... get it wrong is that they ... think that this ... afflicts other people and it’s all about them ... but actually ... this is a phenomenon that sooner or later hits all of us. It’s really about us and ... our own shortcomings. ... The reason we have trouble is because of a paradox which is to spot expertise in other people, obviously you need expertise in yourself, but that’s also true for spotting lack of expertise. That is, to tell when someone has a shortcoming ... you need true expertise to judge that. Now, if you lack that expertise, it means that you lack the very knowledge you need in order to identify shortcomings, and that is true not only in judgments of other people, but it’s also true in the self. So ultimately what that means is that people who lack the knowledge lack the knowledge to know they lack the knowledge.” – David Dunning interview, *The Damage Report* YouTube Channel, February 24, 2019.

<sup>15</sup> **Commentary:** Fans of the *Race for the Galaxy* card game may recognize “six drop” (a player term) developments as a simulation of emergences in an interstellar civilization. In many ways, Tom Lehman (designer) and I are covering similar conceptual ground, except that we are using vastly different game formats, with different objectives.

<sup>16</sup> **Commentary:** I found an image on the internet that made an interesting point about Dr. Who:

- ✓ “The first Doctor tries to act old and wise, but deep down inside is pretty much a stropopy teenager while the eleventh tries to act young and silly but deep down is a tired old man.”

Now, as the story goes, the producers chose an older man to play the first Doctor because they didn’t know what a time lord should look like, but clearly the initial run of the show had to be targeted for a certain demographic – young British males in the ‘60s. It is possible that the writers of the Eleventh Doctor might have deliberately, cleverly created this contrast with the First Doctor, but it is just as or more likely that the comparison is an unintentional result of the post-Cold War and post-millennial reemergence of Dr. Who.

---

*“I don’t want to believe, I want to know.” – Carl Sagan*

---

**DEATH OF A YOUNG GROUNDHOG:** Late in the afternoon of a late June workday, I was walking along Grant Street in front of the Federal Courthouse, on my usual way home. I glanced over toward the Federal Reserve Bank and was stunned to see a groundhog running to and fro in the rush hour traffic across the street. A bus pulled up to the stop in front of the Federal Courthouse on my side of the street, and I lost sight of the groundhog, so I walked back a bit hoping to see him safely on the sidewalk on the other side.

Suddenly, he emerged from under the Port Authority bus. I think some people must have slowed down to allow him to get that far. He emerged from under the center of the bus at least 20 feet from me, came up on the sidewalk, then suddenly went off the curb and back under the bus as it started moving forward. No one was near him, he just saw people, sidewalk, the big building in front of him, and turned to flee. I looked away and saw a lady standing at the bus stop avert and close her eyes. We both knew what was about to happen; when the bus cleared down the street, the critter was dead, killed under the wheels of the bus.

I admit to being slightly upset at the senseless death. No one could have saved him or helped him, unless they had the power to freeze him in place. Yelling or lunging for him would have been futile, if I had even thought of it at that moment.

I do not know where the groundhog came from or why he was there; he must have been living somewhere and was spooked out. He was not large by groundhog standards, I think he was young, maybe a yearling, with his coat still dark. The bus driver certainly didn’t know he was there and had the bus not hit him (or had stopped), he would have run back out into the center lanes traffic. Sadly, it reminds me of the video game Frogger that used to be fun and seemingly harmless, in the gaming arcade days of my youth.

Somehow the creature found itself in a situation outside of its normal habitat, a situation that evolution, instincts and its processing power, were not prepared to survive. Undoubtedly, the creature was scared and confused; cars are much larger and move much faster than anything a groundhog would know in the wild. Their movements would be completely *alien* to it.

Humans, and especially young children, and occasionally entire civilizations, sometimes find themselves in situations for which evolution, physical abilities, sentience quotient, and civilization, has not prepared them, such as migrations and displacement, peer and political pressure, epidemics, riots, crowd stampedes, accidents and catastrophes, sudden violence, warzones; the European invaders were *aliens* to the Native American world and brought death, diseases, alcohol.

- ❖ Situations and conditions beyond our evolution and civilization – the fish out of water scenario – are the core of horror literature, especially science fiction, supernatural

and post-apocalyptic horror, people placed in lethal situations for which they are not prepared and do not understand (but which the audience has a god-view).

Increasingly, this is the situation in which humanity has placed the rest of life on Earth – and probably itself – as population expands and pollution and climate change accelerate the process, the remaining wilderness of the world is the groundhog running in center city rush-hour traffic.

And, unless some creature of higher intellect – probably *alien* – observes the demise of groups of humans and life on Earth, whom they cannot save or help, and chooses to remember and reflect upon it, we will simply perish, fates unknown to a meaningless universe.

✚ HUMAN WORTH: ‘Human Worth’ is like religion; if I do not believe in it, you cannot convince me otherwise, if I do believe in it, you will never take my dignity. How many really believe in human worth other than their own?

- ❖ The value of someone’s life in our legal system is expressed in dollars. We have no other means to frame compensation and survivorship. The system creates an inherent inequality between the dead, the life of a McDonald’s employee is less valuable than the life of an attorney based on their projected lifetime wages and economic support benefit to their parents, children, and spouses. It creates a *cognitive dissonance* because most of us don’t think of it in this way; I discussed this many, many times at the law firm where I worked. But some have taken it to heart as if that is the measure of someone’s human worth; it may be that it is factual and calculable, but it is most likely also that it reinforces their ego *vis-à-vis* others who make less money than they.
- ❖ “It’s a little hard not to be an elitist when you’re making millions of dollars a year.” – Walter Cronkite.

People who point out the value of a life, the contributions to culture and society of each individual, how many people were enlightened, entertained, or made to laugh, are answering *the wrong question*: The value of someone’s contributions to the world of their time and to posterity is not an answer to the question of absurdity, the self-evident injustice (in the Kantian sense) of having been placed here without our consent (however absurd that may seem).

Their answer is the favorite of fiction writers, priests, motivational and positive psychology speakers, it makes us feel human worth of our lives until the moment you realize that it’s not an answer to the question.

---

*“Where did the universe come from? Asking this question is a hallmark of our species. There’s a natural tendency to understand the origin of the cosmos in familiar biological terms. The mating of cosmic deities or the hatching of a cosmic egg or maybe the intonation of some magic phrase. The big bang is our modern scientific creation myth. It comes from the same human need to solve the cosmological riddle.”*

\*\*\*

---

*“These are not easy questions. Cosmology brings us face to face with the deepest mysteries with questions that were once treated only in religion and myth. ‘Who knows for certain? Who shall here declare it? Whence was it born? Whence came creation? The gods are later than this world’s formation. Who then can know the origins of the world? None knows whence creation arose or whether He has or has not made it. He who surveys it from the lofty skies. Only He knows or perhaps He knows not.’ These words are 3500 years old. They’re taken from the Rig-Veda a collection of early Sanskrit hymns.” – Carl Sagan, Cosmos, Episode 10*

**RELIGION:** Conspicuously absent from the human structures in GGDM is any direct treatment or description of religion as a part of the gestalt structure of civilizations.<sup>2</sup> Like most science fiction (much of which is distinctly uncomfortable with religion<sup>3</sup>) literature, Gestalt Genesis-Day Million assumes as a baseline that technologically-advanced civilizations would be secular and scientific with some pre-technological religion vaguely hovering in the background as a historical leftover, whose creation myths<sup>4</sup> have been debunked by science. However, such assumption leaves a large gaping hole in the identification of the internal structures of human societies.

- ❖ This discussion immediately bypasses the thorny threshold question of whether sapient alien life (technologically advanced or not), whether ‘humanoid’ or otherwise, would have, need or conceive of religion (and what that might imply). The model of the game is quite obviously human civilization, and players are free to adapt.

I have some ideas of where the inquiry might begin and the probable outcome within the structures described in this game design. Here are some important initial questions to ask:

✚ IS THE RELIGION PROSELYTIZING OR NON-PROSELYTIZING?: This is a key question for game purposes; history has shown what happens when a proselytizing (i.e. missionary) religion obtains sovereign power. This is the stuff of literary historical drama and catastrophe.

- ❖ “In the case of the righteous unlearned, ‘It may be supposed that such persons would have desired Baptism explicitly if they had known its necessity’ and, by extension, God may permit them to attain salvation. ...

With regard to the fate of the unlearned, Willard Francis Mallalieu, a Methodist bishop, wrote in Some Things That Methodism Stands For:

Starting on the assumption that salvation was possible for every redeemed soul, and that all souls are redeemed, it has held fast to the fundamental doctrine that repentance towards God and faith towards our Lord Jesus Christ are the divinely-ordained conditions upon which all complying therewith may be saved, who are intelligent enough to be morally responsible, and have heard the glad tidings of salvation. At the same time Methodism has insisted that all children who are not willing transgressors, and all irresponsible persons, are saved by the grace of God manifest in the atoning work of Christ; and, further, that all in every nation, who fear God and work righteousness, are accepted of him, through the Christ that died for them, though they have not heard of him. This view of the atonement has been held and defended by Methodist theologians from the very first. And it may be said with ever-increasing emphasis that it commends itself to all sensible and

unprejudiced thinkers, for this, that it is rational and Scriptural, and at the same time honorable to God and gracious and merciful to man. ...

According to Qur'an, the basic criteria for salvation in the afterlife is the belief in one God, the Last Judgment, acceptance and obedience of what is in the Quran and ordained by the prophet, and good deeds. As the Qur'an states:

Surely those who believe (Muslims) and those who are Jews and the Sabians and the Christians whoever believes in Allah (God) and the last day and does good – they shall have no fear nor shall they grieve.

The problem of the unevangelized does not arise in religious or spiritual traditions such as deism, pandeism, and pantheism, which do not include any revelation or require obedience to revealed rules. In deism, some believe that individuals will be judged by one's obedience to natural laws of right and wrong to be obtained by the exercise of reason alone, and so, failure to exercise reason in the effort to make this determination is itself the cause for punishment.

In Buddhism, all beings, whether evangelized or not, will continue to be reborn until they have achieved Nirvana. However, Buddhist scholars have said that '*any suggestion that enlightenment is immediately available to anyone who really wants it, even if he has never heard of Buddhism, is likely to be received with incredulity or even resentment.*'

Dante attempted to answer this question with the first level of Hell in the Divine Comedy, where the virtuous pagans live. They are described as those who lived before the time of Jesus and therefore unable to enter Purgatory or Heaven. Amongst them is Virgil, Dante's guide through Hell and Purgatory." – from Wikipedia article, "Fate of the Unlearned," captured October 1, 2019 (emphasis added).<sup>5</sup>

✚ IS THE RELIGION WORSHIPFUL, DEFERENTIAL OR PHILOSOPHICAL?: Or put another way, to what extent did the Greeks (and other ancient polytheistic religions) *actually believe* their gods existed and did they worship them the same way that later pejorative monotheistic religions worshipped? See also Dream Police, 1 Dreamtime, p. 132, *supra*.

- ❖ For example, Roman religion has been described as 'contractual' in nature. Roman religion was an element of the state, rites were important to state functions and leaders would often hold both state and religious office. The Romans were non-pejorative, they did not seek to convert anyone to their religion, only requiring that conquered peoples recognize the Roman religion in mesh with local traditions and myths (syncretism) and build a Roman temple. The Romans were not fanatical, extremist or militant with regard to their religion; they were practical and economic in administration of the wider empire. Finally, the 'contractual' sense implies that they have the right and position to bargain with the Gods; that is, that the Gods needed their worship as much as they needed the Gods' favor. Compare to Abrahamic religions.<sup>6</sup> Yet, even Abrahamic religions (and possibly all religions) have a 'contractual' feeling or arrangement, the modern kind is deferred mostly to the afterlife.

The most direct expression of the 'contractual' relationship in fiction that I recall is Fred Saberhagen's Books of Swords series (1983-1984), where the 'gods' are infinitely powerful as long as they are worshipped, but fade away at the end when people start to question them and stop deferring to them.

#### ✚ IS THE RELIGION ORGANIZED OR INDIVIDUALIZED?:

- ❖ “Spirituality vs. Religion. These two concepts often coexist, but they certainly don’t have to. Spirituality occurs and exists within. It’s an experience that one harbors inside their soul and mind. On the other hand, religion exists within the masses. You join others in one set of beliefs to practice and worship a higher being and holy books that exist outside of yourself. Look at religious leaders if you need help distinguishing between the two. They weren’t part of the religion they created, but spiritually-oriented individuals. Buddha didn’t subscribe to Buddhism and Jesus didn’t subscribe to Christianity. They weren’t religious, they were spiritual. People can also be religious but not spiritual if they don’t view themselves as containing the ultimate knowledge they seek and simply accept the word of another individual or establishment without question. Or if religion and spirituality function as a trend or something to tout over other people, you unquestionably are not spiritual.” – Sarah Braddock, “Spirituality vs. Religion: Which is Best for You?” undated article appearing on metiza.com and metizamagazine.com.

Incidentally, Ms. Braddock just admitted that Christianity (and Buddhism) are ‘made up’ religions; Buddha wasn’t a Buddhist, and Christ wasn’t a Christian.

- ❖ “Religion is belief in someone else’s experience. Spirituality is having your own experience.” – Deepak Chopra.

#### ✚ HOW HAS THE RELIGION ADAPTED TO SCIENCE, TECHNOLOGY, INTERSTELLAR TRAVEL AND EXPOSURE TO THE LARGER UNIVERSE?:

- ❖ “‘How could he be God and leave extraterrestrials in sin?’ asks the Rev. George V. Coyne, the former director of the Vatican Observatory ... ‘After all, he was good to us. Why should he not be good to them?’ This has engendered a sort of how-many-angels-can-dance-on-the-head-of-a-pin argument about whether Christ died for the entire cosmos, or whether the son of God or the metaphysical equivalent has to be born and die on every populated planet. Each alternative sounds ridiculous on the face of it. The first alternative would make Earth the center of the universe again, not just in space but in time, carrying the hopes for the salvation of beings that lived and died millions or billions of years ago and far, far away. The second alternative would be multiple incarnations, requiring every civilization to have its own redeemer – ‘its own adventure with God,’ in the words of Professor Peters. That is hardly better. As the old troublemaker Thomas Paine wrote in *The Age of Reason*, ‘In this case, the person who is irreverently called the son of God, and sometimes God himself, would have nothing else to do than to travel from world to world, in an endless succession of deaths, with scarcely a momentary interval of life.’” – Dennis Overbye, “Do Aliens Know It’s Christmas?” *New York Times*, December 22, 2014.
- ❖ *Cf.* “Let’s suppose that, against all odds, they do find life. What would it mean for biblical interpretation? It depends on the type of life discovered. Intelligent life is ruled out, because we know from Heb. 9:24–26 that Christ died for sins once, and only once – for the sins of humanity. He did not have to ‘suffer repeatedly since the foundation of the world’ (i.e., the universe). Nowhere in Scripture is there any hint that Christ became incarnate for the sins of any other beings. For this reason, it is

highly unlikely that alien intelligence (as opposed to fallen angels impersonating aliens) will ever be found. But what about non-sentient, e.g. microbial, life? Though one cannot rule it out, it is highly unlikely that this exists, either. All of creation seems focused around mankind on earth, and the plants and animals are part of our life support system.

All life is intelligently designed. Only humans are made in the image of God, have fallen into sin, and are in need of salvation. Christ Jesus provided grace uniquely to humans by His death on the cross and His glorious Resurrection. Unverifiable speculation about life on other planets may be fun, but in the end, it is futile. We can know for sure what we need to know: that God has provided for our physical and spiritual needs on our superbly designed planet.” – David F. Coppedge, “Extrasolar planets: a challenge to biblical cosmology?” *Creation* 36(3):42–44, July 2014 (creation.com).

- ✚ WHAT IS THE EMOTIONAL CORE OF THE RELIGION?: This inquiry began when I asked the question of why Iceland converted to Christianity? Is the destruction of pagan sacred places by invaders, as happened to the Saxons (a deliberate subjugation campaign by Charlemagne), enough or is there something more? Eventually, my thinking arrived at the idea that each religion has an emotional core, or core group of emotions to which it appeals. Religion then, is an emotional need or experience, and all accounts that do not address this are fallacious. So it should come as no surprise that the competition between religions is a competition for base emotions of the audience. The competition is won when a religion becomes the culture.
- ✚ WHAT DOES THE RELIGION SAY ABOUT THE AFTERLIFE<sup>7</sup> AND THE EXISTENTIAL VOID?: Empiricism is a *rejection of the habit of making factual statements about things of which the speaker cannot possibly have knowledge*; it stood thus in stark contrast to the world of religious dogmatism and scholasticism in which Sir Francis Bacon lived (see PANGLOSS DOESN'T VISIT OFTEN and WHEN THE WORLD WAS NEW, WHEN THE WORLD WAS OLD, 1 Fallen to Earth, pp. 1495, 1497, *supra*). Conversely, empiricism by its nature must abide strictly by its own limitations, to which sapience refuses to be held. And thus, we come full circle as philosophical conjecture and new age religion leap into the twilight, always keeping just beyond the bounds of empirical knowledge.
  - ❖ “You’re in such a strong position when you understand the scientific process because all you say is, ‘Do you understand that the great breakthrough of humanity was figuring out how to make decisions about things whilst discarding human foibles? So, anecdotal evidence involves all your subjectivity – if we do it like this we don’t have that anymore. Why, surely do you understand how powerful that is?’ And if they don’t, then that’s what you have to explain to them. It’s an extremely powerful thing and a very basic thing.” – Tim Minchin interview, The Skeptic Zone (podcast), April 17, 2009.
  - ❖ I think that if on any one day, each of us individually had the choice to have never existed, the world’s population would be immediately halved, the other half having – not merely died or vanished – but never existed. In some religious sense, this might pass for Judgment Day. But do not miss the forest here for seeing only the trees, it is very likely that only humans – of all the creatures of the Earth – question their existence and it likely that only humans would wish to have not ever existed. The Existential Void is the curse of intelligence.<sup>8</sup>

- ❖ It seems most likely that the universe is a prison to torment and annoy us for no particular reason at all. All things being equal, it is as good an explanation as any. I might offer that we are constantly being punished for being alive and trying to accomplish anything, or for doing nothing – it doesn't matter which, except that the punishment is just as likely to be for no reason at all, for no transgression, for none other than the 'amusement' of the universe. Some people think god and the universe are the same (which would be very sad if true). And further, if anything at all happens after we die, there is no reason to believe that the punishment will end, that we will go to heaven or wherever, or that the punishment and torment will not simply continue in another guise. Heaven may well be punishment too.

You can tell me I am wrong, write volumes, I don't care, I am a 'big boy' and I can handle it (especially after I am dead, a curious fringe benefit of that condition in the 'marketplace of ideas'). But can you honestly tell me that you think what I say might not be true? Does it seem true to you? If you think this is moral, mortal sickness, who do you blame? My statements do not violate any sense of empiricism because they are being offered not as facts that I know, but rather, as the daily feelings of an intellectual who has parted and peered through the layers of veils our ancient ancestors constructed separating us from the Existential Void.

- ✚ ONE RELIGION OR MANY?: How many religions or spiritual traditions are being carried into galactic space? Is one religion dominant and can all the religions be grouped as similar enough to be considered one for game purposes? Has one or more major religious groups stayed at home?

- ❖ "Dr. [Geoffrey] Marcy, with tongue fairly firmly in cheek, evoked what he called 'the multi-god model of the universe.' There might be room in the universe for more than one truth, he said, if every inhabited planet had its own gods. The inhabitants might be as certain of their beliefs as we humans are of ours. 'The deities have carved out their operating galactic territories, like so many cosmic Corleone families,' Dr. Marcy said. 'Only with SETI research,' he went on, referring to the search for extraterrestrial intelligence, 'will we learn whether our particular God is alone in the universe.'" – Dennis Overbye, "Do Aliens Know It's Christmas?" New York Times, December 22, 2014.

What a fun idea for a game! How much of science-fiction's vast content has dared to discuss any other than one particular Western religion being carried into space and to the stars? Christianity only makes sense within the limited framework of the time it was created and the mortal thoughts of humans.

- ✚ IS THE RELIGION PORTABLE?: That is what is the relationship or dependency of the religion on the original Homeworld for context, organization and sacred places and qualities?

- ❖ "Some 500 'Saudis and other Arabs,' most of whom are probably Muslim, have signed up with a private company, Mars One, which promises to bring them to the Red Planet to establish a permanent human colony. But a new fatwa may force those would-be astronauts to put those plans on hold. This week, a United Arab Emirates-based group called the General Authority of Islamic Affairs and Endowment (GAIAE) has issued a fatwa against living on Mars, reasoning that such an attempt would be akin to suicide, which is prohibited in Islam. 'Such a one-way journey

poses a real risk to life, and that can never be justified in Islam,’ the committee said. ‘There is a possibility that an individual who travels to planet Mars may not be able to remain alive there, and is more vulnerable to death.’ (In case you’re wondering: There is a fierce debate among Islamic scholars as to whether suicide bombings are forbidden or permitted because they are a ‘supreme form of jihad,’ in the words of influential cleric Sheikh Yusuf al-Qaradawi. Some Muslim clerics have even issued fatwas in support of suicide attacks despite the seemingly rock solid prohibitions against it under Islamic law.)” – Katelyn Fossett, “What a Bummer for Muslim Astronauts: A New Fatwa Bans Travel to Mars,” Foreign Policy, February 20, 2014.<sup>9</sup>

Mars One’s Response (in part):

- ❖ “If we may be so bold: the GAIAE should not analyze the risk as they perceive it today. The GAIAE should assess the potential risk for humans as if an unmanned habitable outpost is ready and waiting on Mars. Only when that outpost is established will human lives be risked in Mars One’s plan. With eight successful consecutive landings and a habitable settlement waiting on Mars, will the human mission be risk-free? Of course not. Any progress requires taking risks, but in this case the reward is ‘the next giant leap for mankind.’ That reward is certainly worth the risks involved in this mission.

Mars One respectfully requests GAIAE to cancel the Fatwa and make the greatest Rihla, or journey, of all times open for Muslims too. They can be the first Muslims to witness the signs of God’s creation in heaven, drawing upon the rich culture of travel and exploration of early Islam.

The lives and journey of the first Mars settlers will tell us more about our place in the universe than any other humans before us.

The Fatwa prohibits Muslims from going to Mars, but not from applying to Mars One’s mission or training for the mission. In the next ten years, Mars One is open to working with the GAIAE to assess the risk of the mission as the unmanned settlement is under construction. Hopefully before departure of the first crew, the GAIAE will cancel the Fatwa and support the Mars One mission.

As Ibn Battuta also wrote: ‘Travelling – it leaves you speechless, then turns you into a storyteller.’” (available on marsone.com)

Walter M. Miller, Jr.’s novel, *A Canticle for Leibowitz* (1959), ends with the transfer of Church authority to a colony ship bound for the stars to escape a second pending nuclear apocalypse on Earth.

---

*“You can safely assume you’ve created God in your own image when it turns out that God hates all the same people you do.”*

– Anne Lamott, *Travelling Mercies: Some Thoughts on Faith* (1999)

---

**PROBLEM TO SOLVE:** It seems likely that Ms. Lamott might have been thinking of the late Fred Phelps at just that moment.

That religion has not been directly simulated in the structures of GGDM suggests that it’s a frame of reference problem, very similar to quantum mechanics.

- ❖ “Unlike classical physical processes, some quantum mechanical processes (such as quantum teleportation arising from quantum entanglement) cannot be simultaneously ‘local,’ ‘causal,’ and ‘real,’ but it is not obvious which of these properties must be sacrificed, or if an attempt to describe quantum mechanical processes in these senses is a category error such that a proper understanding of quantum mechanics would render the question meaningless.” – from Wikipedia article, “List of Unsolved Problems in Physics,” captured June 18, 2018.

That is, *strictly within the framework provided by the GGDM rules*, religion may act like a quantum mechanical category error, as described above. Religion has been discussed in relation to happiness (i.e. as the meta-aspect), legitimacy (religion’s secular ‘unity of opposites’ being security, the ‘supra-legitimacy’), aspects (Kairotic Moments, faith Aspect) and Constructural Elements (i.e. apostasy). When presented in this way, the problem seemed better handled by judgment and interpretation of the participants, and Concierge Interventions to determine which properties to sacrifice to manifest religious effect in that moment of the game.

This is not to say that a ‘meta-structure’ could not be developed by participants if desired; we are not entirely clueless on this issue. For example, a possible starting point might be Mircea Eliade’s classic hierophany:

- ❖ “HIEROPHANY (from Greek hiero-, ‘sacred,’ and phainein, ‘to show’) is a term designating the manifestation of the sacred. ***The term involves no further specification.*** Herein lies its advantage: It refers to any manifestation of the sacred in whatever object throughout history. Whether the sacred appear in a stone, a tree, or an incarnate human being, a hierophany denotes the same act: A reality of an entirely different order than those of this world becomes manifest in an object that is part of the natural or profane sphere.

The sacred manifests itself as a power or force that is quite different from the forces of nature. A sacred tree, for instance, is not worshiped for being a tree. Neither is a sacred stone adored, in and of itself, for its natural properties as a stone. These objects become the focus of religious veneration because they are hierophanies, revealing something that is no longer botanical or geological, but ‘wholly other.’” – from Encyclopedia.com article, “Hierophany,” captured October 2, 2019 (emphasis added).

Expressed in this manner, a hierophany is a ‘fuzzy concept’ and ties religion, or at least expression of the sacred, to Fuzzy Groups in GGDM terminology (see Fuzzy Concepts, 4 Culture, p. 404, *supra*), and as such, might find expression in Writ activations. A hierophany is also implicitly an interpretation, as the previous quote makes clear, the stone or tree has no innate quality or intrinsic value of ‘sacredness.’

- ✚ **STEPPING STONES:** Within the game, religion would have to consist of a number of interrelated structures, but the relationship of these structures would have to exist in a slightly different way than can be currently described in the game terms. Or perhaps more accurately, religion might be a ‘quasi-structure’ or ‘meta-structure’ which the game is not designed to handle directly. This would be an interesting problem for the players to solve; I have twisted my ankle a few times on stepping stones while crossing shallow creeks and runs...<sup>10</sup>

1. A religion would almost certainly have to begin with a Fundamental Reality; the pre-technological religion – if it still has any force at the beginning of the game – would have to begin as a Fundamental Reality. It is possible that a new religion could develop

as a result of the story of the game, but in most cases, the religion of the Native Populations would be ancient and pre-technological.

- ❖ The Fundamental Reality ‘religion’ is not as onerous as it might seem in the game, it is well known that religion can be bent any way desired, e.g., preceding quote discussing fatwas for or against suicide bombings in Islam.
2. Religions address psychological and emotional needs of their society (must have a function), legitimacy and worldviews and as such, in game terms, they would have some relationship to Aspects and Constructural Elements (see ‘asabiyyah’). Perhaps Aspects that are identified with the emotional core of the religion would have more staying power and certain other Aspects would be eliminated or marginalized.
    - ❖ One interesting effect or consequence of the major world religions has been the spread and internalization of ‘reproductive consciousness’ in the population. Marriage and various measures to control who can reproduce and when have embedded firmly the idea that heterosexual intercourse causes pregnancy.
  3. Other parts of the civilization might be affiliated with the religion, depending on circumstances, for example, Colleges (e.g., Madrasa in Islam, and/or the original Medieval European universities requiring theology studies) or Government Titles (especially social titles, but religious organizations historically have been an estate title as well).

Religion would certainly be involved – positively or negatively – in conversion and naturalization or genocide of **alien colonies**. We have discussed that already...

- ❖ An interesting and informative historical example is the introduction of Christianity into Japan, China and Southeast Asia. In Japan, Christians were persecuted, segregated, and marginalized; the community there remained small and isolated. In China, the result was one of the largest and most brutal civil wars in history (the Taiping Rebellion, little known to the West), followed by a collapse and rejection of Christianity (and the duality) and return to traditional Chinese culture. Another interesting study is the introduction of Islam into India, the birthplace of the ancient Hindu and Buddhist religions and the rise of the anti-Muslim Sikh Confederacy.<sup>11</sup>

Religion could certainly continue to effect populations on Conquered, Converted and Naturalized Colonies. Religion could also make planet Balkanization (as the term is used in this game) impossible, difficult, or easy. Religion has also played a large role in the legitimacy.<sup>12</sup>

- ❖ Science-fiction, the “literature of ideas” according to James Gunn, developed in the very milieu that serves as the baseline assumption of future society. Science-fiction literature has not fared well outside of Japan and Western technological/industrial culture; there is, to my knowledge, very few Islamic or Hindu/Buddhist science-fiction writers, nor is science-fiction – especially as satire – welcome by religious extremist (e.g., where they kill atheist bloggers and the police do nothing) or places where authoritarian regimes don’t want people to dream or have unapproved ideas.
  - See also “Defining ‘Science Fiction,’” Gunn Center for the Study of Science Fiction (<http://www.sfcenter.ku.edu/SF-Defined.htm>).

✚ **NO TRANSFER, NO TICKET:** While I have been significantly tempted to apply the structures of GGDM to situations in the real world, I would advise caution in doing so, as the game itself is a simulation or ‘model’ of civilization made on conjecture; not a coherent theory.

The simulation has grown to the level of being very complex, but it falls far short of the complexity of the real things that it simulates (e.g., a combat simulation is cannot really be like the real thing!). It is as if I painted a picture (albeit, a dynamic picture, not static), theories can and have been developed about various paintings and pictures, and pictures can be painted based on an art theory, but the painting or picture itself is not a theory.

There are significant areas of human history and civilization (or even scenarios dreamt by fiction writers, intellectuals and academics) that would be difficult to simulate within the structures of GGDM. The game therefore, is not Asimov's psychohistory (and I admit to being peculiarly infatuated with the idea, merging with Alan Parsons' "Games People Play" (1980) when I was young); it has **no** predictive value, it is **not** testable or verifiable, it is therefore, a work of intuition and philosophy (as is most of social science in a Baconian sense), and probably some wishful thinking, in the guise of macrosociology and with a whiff of ontology. The best possible result is that some of the ideas and simulation inspire discussion and learning. I have, however, described a framework for why it *matters*.

---

*"A knowledge of the existence of something we cannot penetrate, of the manifestations of the profoundest reason and the most radiant beauty – it is this knowledge and this emotion that constitute the truly religious attitude; in this sense, and in this alone, I am a deeply religious man."*

– Albert Einstein, The World as I See It (1949)

---

*"Einstein's conception is closer to mine. His God is somehow involved in the immutable laws of nature. Einstein has a feeling for the central order of things. He can detect it in the simplicity of natural laws. We may take it that he felt this simplicity very strongly and directly during his discovery of the theory of relativity. Admittedly, this is a far cry from the contents of religion. I don't believe Einstein is tied to any religious tradition, and I rather think the idea of a personal God is entirely foreign to him. But as far as he is concerned there is no split between science and religion: the central order is part of the subjective as well as the objective realm, and this strikes me as being a far better starting point."*

– Wolfgang Pauli (1927), quoted by Werner Heisenberg in Physics & Beyond (1971)

---

**THE ZERO SUM PROBLEM OF RELIGION:** In the inherited and developed Abrahamic Tradition, there is but one God, who is all powerful, all knowing and all good (more formally described as 'omnipotent,' 'omniscient,' 'omnipresent,' 'omnibenevolent,' 'almighty,' 'transcendent,' etc.).

If this is so, God does not need us to do anything, such a being can do what it wants, does not need to waste any effort on what we want or trying to convince us to do what it wants, and we are just in the way. It doesn't need our volition. It doesn't even need to convince us to be good and moral or worshipful; we could simply be changed or remade to be so at a whim.<sup>13</sup>

- ❖ "Are you never afraid of God's judgment in denying Him? Most certainly not. I also deny Zeus and Jupiter and Odin and Brahma, but this causes me no qualms. I observe that a very large portion of the human race does not believe in God and suffers no visible punishment in consequence. And if there were a God, I think it very unlikely that

He would have such an uneasy vanity as to be offended by those who doubt His existence.” – Bertrand Russell, “What is an Agnostic” (1953).

- Despite Bertrand Russell’s excellent explanation of “What is an Agnostic,” most agnostics are people who don’t really want to argue about whether or not there is a God (in any sense), especially with certain people who haven’t a care about evidence, facts or reason. There are many more interesting things; “bugs, for instance” – quoting Clarence Darrow, another famous early 20<sup>th</sup> Century agnostic (see excerpt of Closing Arguments in the Sweet case, The Next Season, *supra*).

If God needs to counsel, cajole, guide, teach, impose laws, punish, test, or anything else described in the Bible, if it needed to sacrifice its ‘son’ or avatar on Earth for us, then it is not all powerful, all good, and all knowing in the absolute sense. If it even needs our worship, it is so lessened (even more narcissistically absurd is the oft-repeated claim that God has a plan for us). The all-powerful God would have made golems (as in Robert Heinlein’s Job: A Comedy of Justice (1984)); in the strict zero-sum sense, God is diminished by having created volitionals.

- ❖ This is the zero-sum problem of Christianity, Judaism and Islam: No one has ever explained or examined why God needs us; we simply have no evidence on the issue other than idealized parental assumptions.

The other frequently asked question in Christianity, “If God is all knowing, all powerful, and all good, why is there Evil in the world?” almost gets there, but also misses the point. The answer is obvious when the question is answered out of context. The fact that the question is asked is the answer to the question.<sup>14</sup> He/She/It isn’t.

- ❖ People don’t realize what a thorny problem they create when they proclaim “God Hates Fags” (popularized by Fred Phelps, Westboro Baptist Church protest signs) – as if their God is powerless to do anything about ‘fags.’ ‘Fags’ everywhere should rejoice because the powerlessness of their God (not to mention their intellect) is inherent in the statement. God is apparently powerless before volitionals or is restrained by a higher power still or by circumstances we don’t know – or doesn’t hate ‘fags’ enough to do anything. Or doesn’t exist. Occam’s Razor; Hitchen’s Razor.

This then must have been one of the first points of contention with the existing and established Roman state religions which were ritualistic and contractual in nature; the Romans believed that the gods needed their worship and they needed the gods’ favor. The Romans believed in a *quid pro quo* relationship with their gods that was incomprehensible to Jews and early Christians whose god was tyrannical, paternal, and demanded utter submission, whose only benefit was a “pocketful of mumbles, such are promises” (Simon & Garfunkel, “The Boxer” (1970)).

- ❖ There is probably a colorable correlation between the decline in practicing Christianity and decline in the understanding and knowledge of the Roman Empire. The New Testament is an artifact of the Roman world; study of the New Testament leads to study of the Roman Empire in general, can also stretch to ancient Greece and ancient Egypt, but leads to widespread ignorance of cultures and history beyond Europe.
- ✚ CHILDREN’S GOD: The Genesis Mandate and Ten Commandments seem like they were written for children. Because they were. By children. Like Doctor Moreau’s laws to the Beast Folk. See Mythopoeic Thinking discussion, 1 Temporal Technology, p. 809, *supra*.

- ❖ **God:** (standing on a chair behind Noah, he rings a bell once) NOAH! **Noah:** (Looks up) Is someone calling me? (Shrugs and goes back to his work) **God:** (Ding) NOAH!! **Noah:** Who is that? **God:** It's the Lord, Noah. **Noah:** Right ... Where are ya? What do ya want? [whining] *I've been good.* – Bill Cosby, “Noah” skit, transcript from iComedy TV (emphasis added).
- ❖ “Swing your partner by the hand; Have a baby if you can; But if the voices in your head; Say to sacrifice your kid; To satiate your loving God's; Fetish for dead baby blood; It's simple faith, the Book demands; So raise that knife up in your hand! ... Good is good and evil's bad; And kids get killed when God gets mad; And you'd better take a good look; At the Good Book.” – Tim Minchin, “The Good Book” (2009).

We have made progress: If anyone attempted now to do what Abraham tried to do to his infant son, Isaac, in the name of God, they would be heavily sedated and locked in a padded room. Or incarcerated for life for murder. *Yet, this story is the basis and the core of three major world religions!* As the BBC pointed out (Kelly Grovier, BBC Culture, “The second a father saved his son,” March 11, 2016), the rote repetition of the Biblical story of Abraham's intent to kill his son at God's command has rendered the horrific moment of ritual infanticide emotionally empty. The parental horror of the concept is gone, the moment of salvation is lost in the empty stares of bored students filing past old paintings in the museum. And it doesn't take long for novelty to wear off now:

- ❖ “The realist in Snider knows that the schoolyard-fence-rattling message of Twisted Sister and its crown jewel ‘We're Not Gonna Take It’ has been diluted by karaoke bars, commercials and sports arenas – and yes, a certain Broadway musical.” – Rolling Stone Magazine, October 28, 2016.

✚ FREE WILLY: That we have and/or were given free will to choose detracts even more from God's absolute power, goodness and perhaps, knowledge, in the zero-sum sense. Conversely, to the extent that we are compelled by divine will or intervention to do anything or refrain from doing anything at all, is a corresponding reduction in our free will (like GGDM Interventions...). This has always been a thorny problem in religion and philosophy. Most religion easily settled on the concept of surrendering to divine will as it went hand in hand with the superiority of divine wisdom and/or obedience to the creator, *in loco parentis*.

- ❖ “The problem of freewill makes its first large-scale appearance in a religious context, when men had come to believe that here was one God, omnipotent, omniscient, and concerned with human action. The problem of freewill was first definitely stated as a problem of Christian theology. The problem arose, in fact, from a number of different roots in Christian belief: Christianity asserts on the one hand that man does freely choose his actions, but also asserts on the other hand statements not evidently compatible with this, for instance that God being omniscient knows from all eternity what actions a man will in fact perform.” – Bernard Williams, Freedom and The Will (1963), p. 5.<sup>15</sup>

From a philosophical point of view, free will might just as well be a myth as we are all hemmed in by decisions made by others both before we were born and during our lifetime;<sup>16</sup> none are actually free, and cultural rebels trade their little freedom for delusion of freedom.

- ❖ “Rebels can never really be free.” – Dr. Stephen Griffith, Lycoming College. I think this memorable line was part of a lecture in the Philosophy of the Occult course. The

point was that rebels must always be against something and that forms their existential boundary. See also *Rebels, Romans and Ruins of Religions*, 1 Constructural Elements, p. 182, *supra*.

It is thus in the latter half of the 20th century that philosophy and psychology (in the wake of WWII, and during the Cold War) settled on the idea of existential freedom; that we are all free to act and live within the confines of our existence, which is determined by the universe and the world we inherited from others. Existential freedom does not exclude the idea of divine will or intervention, as those would simply add *additional boundaries* to our existence.

---

*“I would love to believe that when I die I will live again, that some thinking, feeling, remembering part of me will continue. But as much as I want to believe that, and despite the ancient and worldwide cultural traditions that assert an afterlife, I know of nothing to suggest that it is more than wishful thinking.”*

– Carl Sagan, *Billions & Billions: Thoughts on Life and Death at the Brink of the Millennium* (1997)

---

**POINT OF NO RETURN:** A fully developed human religion has four essential parts: Creation and cosmology, life and death, moral and ethical codes, and symbols and rituals. All of the world’s major religions cover these areas, any belief system that does not is not generally a religion.

With regards to life and death, human religions, very broadly speaking, have settled on two models over the millennia: afterlife and reincarnation.

- ❖ Models that posit an immediate afterlife (that is, the soul continues to exist in another place) tend to regard life on Earth as a transit across the stage, a momentary imprisonment, and the afterlife as a moral judgment of your deeds on Earth.
- ❖ Whereas the reincarnation idea seeks to connect life with death, such that death is never really the end, but just a stage in a cycle; the concept here is not one of punishment but of just deserts, that is, one gets what they deserve in the next incarnation. All of it seemingly comforting. The cosmology of reincarnation then usually goes on to express that the cycle has an ultimate philosophical end, a teleological purpose, of creating perfect, enlightened beings, that one may eventually attain no matter what is their current station in life on Earth.

Escape from the *saṃsāra* – “the cycling of all life, matter and existence” or the “cycle of aimless drifting, wandering or mundane existence” (from Wikipedia article, “*Saṃsāra*”) – is the goal of even religions that embrace karmic concepts. Thus, ‘reincarnation’ religions are actually based on a trick of *reverse psychology*. It is thus an error to think that those religions want or think in terms of eternal imprisonment on this Earth; rather the point of their philosophic traditions is escape by a somewhat longer route than those same concepts in the West, to wit:

- ❖ “The *Saṃsāra* doctrine is tied to the Karma theory of Indian religions, and the liberation from *Saṃsāra* has been at the core of the spiritual quest of Indian traditions, as well as their internal disagreements.” – Wikipedia, *Id.*
- ❖ “Adherents engage in practices such as prayer, veneration of ancestors, nonviolence, and vegetarianism with the goal of union with God and freedom from *saṃsāra*.” –

from Wikipedia article, “Caodaism,” June 19, 2019. Caodaism is a monotheistic syncretic religion from 19<sup>th</sup> Century Spiritism created by a native colonial French administrator in Vietnam in 1926.

Viewed in this light, Christianity’s direct ascension to heaven or damnation in hell looks like a cheap parlor trick. Earth then, is a school, a petri dish, a morality play on the road to somewhere. Both believe, necessarily, in a soul that is indivisible and indestructible, eternal yet Earthly.

- ❖ Even new religions, New Age, neo-Pagan and UFO religions, follow these models. There is truly nothing new in religions in this sense for the last 10,000 years. If you want to start a truly new and innovative religion, start with a new model of life and death and build from there. The third alternative, that absolutely nothing happens after death, that you just cease to exist, has not worked out well as the basis of any religion or politics; logic, practicality and empirical evidence have no place in religion.

Religion began and continues to exist mainly because we are afraid to die and irked to live – avoiding the Void. Animals probably do not have religion precisely because they probably don’t have any *concept of death*, especially their own (they seem to only be afraid of bodily injury),<sup>17</sup> both of which go hand in hand with whatever is the advanced mental state we call sapience.

- ❖ **Regarding Concepts:** “...but a cat can’t understand the concept of anticipation and therefore is unable to allow for it in other species. So this is where we have them almost surely. Cats virtually always underestimate human intelligence just as we, perhaps, underestimate theirs.” – Roger Caras, *A Cat is Watching* (1989), p. 17.
- ❖ **Regarding Mortality:** “They [dogs and cats] seem closed off from their own mortality and the peril of it all. That level of comprehension would appear to be ours alone.” – *Id*, p. 208.

We still have difficulty explaining death to children, we choke up and don’t know what to say when their pet or grandparent dies. When I was young, the typical cover was that the decedent went to sleep but could not be woken up, most children don’t notice the decedent isn’t breathing. Among the very first archeological signs of religion are deliberate and ritualistic burials at least back to 80,000 years ago. Until science and philosophy can state definitively what happens when we die (and not as a matter of faith in what we cannot possibly know), religion will remain the main human psychological element.

- ❖ The veneration of human skulls by Neolithic peoples suggests that they intuitively understood that the human head is the center of our personhood. We should not make the assumption that they were only displaying trophies of enemies killed in war (for example, the way hunters mount animal heads for display), as there is evidence, from other sites in the period, that skulls of family members and friends were also kept, altered and decorated for veneration. Perhaps this is some precursor to the idea of afterlife featured in every world religion for the last 3,000 or more years. The key with the finds is we have no context in which to place them, we don’t know the language spoken, there are no writings from this period, no real idea of their social structures, religion or relationships, we don’t know what they believed or what the ritual veneration of skulls meant to them. We are not even sure of what *we* believe now.

Life and death are so central to religion that all else bends to it;<sup>18</sup> cosmologies, creation myths, moral and ethical codes, symbols and rituals all revolve around how a religion chooses to address birth, life, and death.

- ❖ And for those who believe in reincarnation, living over and over again, “*déjà vu or what you please*” (Aerosmith, “Kings and Queens” (1977)), instead of a straight trip to the afterlife – are you sure that this is what you really want to believe? To live over and over again, century and millennia, shackled to this stupid reality? How do you know you are not living in a prison cell? Like the characters in a science-fiction television episode who thought they were in an underground prison when in fact, they were in an orbital prison (with artificial gravity – because it’s science fiction!)? Of course, the Western heaven may equally be a prison cell (a padded room instead of a dungeon cell in hell) – one with no exit and no chance for renewal. The universe makes no guarantees of teleological transcendence. What evidence is offered other than wishful thinking and human psychological need?

---

*“Agnosticism, in fact, is not a creed, but a method, the essence of which lies in the rigorous application of a single principle ... Positively the principle may be expressed: In matters of the intellect, follow your reason as far as it will take you, without regard to any other consideration. And negatively: In matters of the intellect do not pretend that conclusions are certain which are not demonstrated or demonstrable.”*

– Thomas Henry Huxley, “Agnosticism,” *Popular Science Monthly* (April 1889) <sup>19</sup>

---

*“... many professing agnostics are nearer belief in the true God than are many conventional church-goers who believe in a body that does not exist whom they miscall God.”*

– Leslie Weatherhead, *The Christian Agnostic* (1965)

---

## Endnotes.

<sup>1</sup> Citation: “‘This is a deathwatch,’ Carl told me calmly. ‘I’m going to die.’ ‘No,’ I protested. ‘You’re going to beat this, just as you have before when it looked hopeless.’ He turned to me with that same look I had seen countless times in the debates and skirmishes of our twenty years of writing together and being wildly in love. With a mixture of knowing good humor and skepticism, but as ever, not a trace of self-pity, he said wryly, ‘Well, well see who’s right about this one.’ Sam, now five years old, came to see his father for one last time. Although Carl was by now struggling for breath and finding it harder to speak, he managed to compose himself so as not to frighten his little son. ‘I love you, Sam,’ was all he could say. ‘I love you, too, Daddy,’ Sam said solemnly. Contrary to the fantasies of the fundamentalists, there was no deathbed conversion, no last minute refuge taken in a comforting vision of a heaven or an afterlife. For Carl, what mattered most was what was true, not merely what would make us feel better. Even at this moment when anyone would be forgiven for turning away from the reality of our situation, Carl was unflinching. As we looked deeply into each other’s eyes, it was with a shared conviction that our wondrous life together was ending forever.” – Ann Druyan, Epilogue to Carl Sagan’s last book *Billions and Billions* (1997), p. 271.

<sup>2</sup> Citation: “Science does not require theory to explain all ([Braverman] 282-283). Marxists are insistent that their brand of social science is truly scientific.” – Frank Elwell, *Macro Social Theory* (2009), Kindle Edition, p. 75.

<sup>3</sup> Commentary: Notable exceptions being the classic books, *A Canticle for Lebowitz* (1959) and *Dune* (1965), and the Babylon 5 television series (1993-1998), and the reimaged Battlestar Galactica television series (2004-2009).

<sup>4</sup> Citation & Commentary: “Many people who say they believe in God no longer mean a person, or a trinity of persons, but only a vague tendency or power or purpose immanent in evolution.” – Bertrand Russell, “What is an Agnostic” (1953).

- ✓ Most Westerners who accept evolution and modern science tend to think, assume, without realizing it, that humans are the purpose of evolution, life on Earth and perhaps the universe. That is, secular teleological beliefs have simply replaced ancient creation myths in Western secular society.

<sup>5</sup> Commentary: Once you make factual assertions about God of which you cannot possibly know, what’s the difference in saying that ‘virtuous pagans’ who lived before Christ would have embraced Christianity?

<sup>6</sup> Commentary: Because religion was a state matter in Rome, that is, religious observances were state ceremonies, the Roman leadership had divine sanction and claimed divine lineage (later the Imperial Cult), priests were state officers often holding other military and civil authority appointments, and the Roman Senate had the power to confer *divus* on living and deceased leaders, failure to observe or neglect of the Roman gods was *treason*. The Jews (and Christians) simply could not accept this.

- ✓ “Stricter Christians didn’t mix with non-Christians. More importantly, they didn’t worship other gods along with their one god. Much of ancient civic life – the holidays and public festivities which were many people’s only opportunity to eat any quantity of meat – was wrapped up in sacrifice to the various deities of a flexible and syncretic Greco-Roman pantheon. Good Christians were expected to shun these celebrations, the festivals and ceremonies their fellow townsfolk kept at the centre of their social lives. That made Christians very strange.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” *Aeon*, January 30, 2017.

We cannot imagine with anything but horror, a state where it is treason to neglect worship of the official state religion; though the Church in the recent past has been happy to crusade against and execute people (e.g., Catharism) for heresy – a form of doctrinal treason within the Church.

<sup>7</sup> Commentary: Any claim by any church or religion to have any authority or influence (or knowledge even) over what happens after death is just an absurdity beyond words. Is the Church or religion greater than the god it worships? This was no small matter five centuries ago when the Protestants objected to claims of Papal authority over purgatory. Nor is it a minor matter when it leads to mass suicides, such as Heaven’s Gate or Jonestown.

<sup>8</sup> Commentary & Citation: It appears as though I have naturally wandered into a sort of anti-natalist position (e.g., 2 *Constructural Elements*, EN 9, p. 202: “the gift of life is a set of shackles” and *THE ONTOLOGICAL TERRORISM OF GGDM*, 3 *Fallen to Earth*, p. 1529, *supra*), though I had never heard of anti-natalism as a formal philosophical argument until I stumbled upon an interesting quote from David Benatar in September 2018. I have, of course, long been aware of the sentiment of one wishing they had never been born (e.g., “I don’t want to die, I sometimes wish I’d never been born at all.” – Queen, “Bohemian Rhapsody” (1975)) – I think it is common to humanity, and that anti-natalist sentiment can be traced back to ancient Greece (long before it was given a formal name in modern philosophy) and even to the ancient Biblical Israelites, suggests that I am correct.

- ✓ “Did I request thee, Maker, from my Clay, To mould me Man, did I sollicite thee, From darkness to promote me, or here place?” – John Milton, Paradise Lost (1667), Book 10, 743-745. Mary Shelly cites these lines in *Frankenstein*.
- ✓ “Mr. Samuel says he remembers first having anti-natalist thoughts when he was five. ‘I was a normal kid. One day I was very frustrated and I didn’t want to go to school but my parents kept asking me to go. So I asked them: ‘Why did you have me?’ And my dad had no answer. I think if he’d been able to answer, maybe I wouldn’t have thought this way.’” – Geeta Pandey, “Indian man to sue parents for giving birth to him,” *BBC.com*, February 7, 2019.

<sup>9</sup> Commentary: A Fatwa is the very same instrument issued by Ayatollah Ruhollah Khomeini, the Supreme Leader of Iran, for the assassination of Salman Rushdie in 1989.

- ✓ If you were on Mars, which way is Mecca?

<sup>10</sup> Commentary: Un-construction of Scientology: Scientology is a reconstructed late Greco-Roman ‘Mysteries’ cult/religion (probably largely *Mitras*), moved to a science-fantasy setting, and sprinkled liberally with new wave, neo-pagan, psychobabble, amateur psychotherapy, and a little Christianity. It is interesting what L. Ron Hubbard attempted, resurrecting an ancient Mysteries religion in a modern context. It just doesn’t work well, the results have been thus far unimpressive.

<sup>11</sup> Commentary: Sadly, it became apparent that Americans don't know the difference between Muslims and Sikhs.

<sup>12</sup> Commentary: If you want to tie a priest in knots for an hour, ask him if you can baptize yourself and keep pushing with questions. The ensuing hour-long dissertation goes to the heart of the priestly power in a given society.

<sup>13</sup> Commentary & Citation: How long did it take God's perfect plan to fall apart?

- ✓ “First, regardless of what defenders of an ancient Earth may wish were true, the simple fact of the matter is that the Bible sets an outer limit on the amount of time that man could have lived in the Garden of Eden. Genesis 5:5 states clearly that ‘all the days that Adam lived were 930 years.’ We know, of course, that ‘days’ and ‘years’ already were being counted by the time of Adam’s creation because in Genesis 1:14 (day four of the Creation week) God mentioned both in His discussion of their relationship to the heavenly bodies. Therefore, however long Adam and Eve may have been in the garden, one thing is certain: they were not there for any time period that exceeded Adam’s life span of 930 years. But there is additional information that must be considered as well. Genesis 4:25 explains that Seth was born after Cain slew Abel. Since the biblical account makes it clear that Seth was born outside the garden, and since Genesis 5:3 informs us that Adam was 130 years old when Seth was born, it is obvious that Adam and Eve could not have been in the Garden of Eden any longer than 130 years! Second, surely it is not inconsequential that all the children of Adam and Eve mentioned in the Bible were born outside the Garden of Eden. Not one conception, or birth, is mentioned as having occurred while Adam and Eve lived in the garden (see Genesis 4:1 for the first mention of any conception or birth – only after the couple’s expulsion from Eden).” – Bert Thompson, Ph.D., “How Long Were Adam and Eve in the Garden of Eden?” Apologetics Press, 2002 (bolds removed). **[This has been taken to suggest that the knowledge for which they were expelled was carnal]**

And who was Cain’s wife, if Eve is the mother of all? Oops. I think you have a few guesses already. More likely, the concept of Cain’s wife was added later to clean up the story to conform to the commandments, otherwise, not only was Cain committing incest, but also adultery if the mother of his children was not his wife.

But like any lie, it falls apart under any sort of inquiry, and the story became a vague, convoluted mess. But because it’s a Big Lie (see Adolf Hitler feature quote, 1 Diplomacy, p. 1106, *supra*), the bamboozle (Carl Sagan feature quote, *Id.* at p. 1107), it has been taken as literally true by believers, because they would not contemplate such a lie themselves, even as the absurdity becomes plain under any sort of questioning.

<sup>14</sup> Commentary: Note to the Fifth Monarchists: It has been over 550 years since the English Civil War. Christ has not returned to Earth. Or if he did, he hasn’t told anyone, and there is no Kingdom. Many things have passed since and many candidates for the title of anti-Christ have arisen and died. Perhaps the universally accepted best candidate for the title committed suicide in April 1945. Most of the world now finds the idea of monarchy quaint in the least, and very objectionable in practice. Especially a Heavenly Kingdom based on someone else’s religion.

<sup>15</sup> Commentary: Some argue that ‘free will’ is a concept that long predates Christianity or even Judaism. It would be hard to imagine – for example, given the long history of criminalization of certain behaviors – that ‘free will’ was not an issue from the very beginning of criminal law: To be criminalized, the act must imply free will; one cannot criminalize breathing. Origins questions aside, the quote does succinctly address the contradiction and zero-sum problem of Abrahamic religion.

<sup>16</sup> Commentary: But not after we die, as the argument would imply all sorts of absurdities (more than the usual); similar to any argument about “deserving to be born,” see Planet Narn, 3 Taxation & Census, p. 316, *supra*.

<sup>17</sup> Commentary: People might say that a cat or dog is ‘running for their life.’ That is not likely, it is more likely that the animal is running to avoid pain, from fear of bodily injury; it is unlikely they understand their imminent death.

<sup>18</sup> Commentary: My 9<sup>th</sup> Grade English teacher introduced the class to the idea that everyone is dying slowly after 18 years old. If you are not growing, you are dying, thus, most of our lives are spent slowly dying (e.g., Hayflick limit), until we actually do. *This is the essence of literary*. I had some very cynical teachers in high school, the most cynical one was my American Culture teacher. At the beginning of the year, I thought he was cool, his class was fun, he was cynical in a funny way (i.e. satire). By the end of the year, his constant cynicism made me feel ill.

- ✓ “We live for just these twenty years, Do we have to die for the fifty more?” – David Bowie, “Young Americans (1975).

<sup>19</sup> Commentary: Thomas Henry Huxley, aka “Darwin’s Bulldog,” is the ancestor of the Huxley family, grandfather of Aldous Huxley, author of Brave New World (1932). The family includes accomplished engineers and physicists.

*“Does an agnostic do whatever he pleases? In one sense, no; in another sense, everyone does whatever he pleases. Suppose, for example, you hate someone so much that you would like to murder him. Why do you not do so? You may reply: ‘Because religion tells me that murder is a sin.’ But as a statistical fact, agnostics are not more prone to murder than other people, in fact, rather less so. They have the same motives for abstaining from murder as other people have. Far and away the most powerful of these motives is the fear of punishment. In lawless conditions, such as a gold rush, all sorts of people will commit crimes, although in ordinary circumstances they would have been law-abiding.*

*There is not only actual legal punishment; there is the discomfort of dreading discovery, and the loneliness of knowing that, to avoid being hated, you must wear a mask with even your closest intimates. And there is also what may be called ‘conscience’: If you ever contemplated a murder, you would dread the horrible memory of your victim’s last moments or lifeless corpse. All this, it is true, depends upon your living in a law-abiding community, but there are abundant secular reasons for creating and preserving such a community.*

*I said that there is another sense in which every man does as he pleases. No one but a fool indulges every impulse, but what holds a desire in check is always some other desire. A man’s anti-social wishes may be restrained by a wish to please God, but they may also be restrained by a wish to please his friends, or to win the respect of his community, or to be able to contemplate himself without disgust. But if he has no such wishes, the mere abstract concepts of morality will not keep him straight.”*

– Bertrand Russell, “What is an Agnostic” (1953) <sup>1</sup>

**THE AXIOM AND THEORY OF OPPOSITES:** Humans naturally look for opposites; we understand best when presented with clear opposites. Our entire cognitive structure is built on opposite ideas and identities in our world and degrees more or less by which they are opposite. ‘Oppositeness’ is the first quality a child understands – hungry, not hungry, mom, not mom, cry loudly.

- ❖ “Anyone with a child knows that children learn about the world through binary options: up or down, hot or cold, big or little, inside or outside, wet or dry, good or bad, boy or girl, man or woman.” – Phyllis Schlafly.
  - The venerable children’s program Sesame Street uses this frequently.

The major component of sapience is our ability – not to judge moral right and wrong – but to judge degrees of oppositeness.

- ❖ “Time and again in this book I have placed the cat and ourselves in analogous positions although I vowed to avoid that pitfall whenever I could. As it turns out, that was not possible *because nothing could be quantified without some kind of comparison*. Using a dog, ape, or crocodile would not have worked well in any but very few instances cause those animals, all animals, are as little understood as the cat is. No sense comparing apples to oranges for someone who doesn’t know either fruit.” – Roger Caras, A Cat is Watching (1989), p. 219 (emphasis added).

The easiest opposite is two: Male and female, child and adult, younger and older, good and bad, doing or not doing, me-not-me, us and them. As a third thing, fourth thing, more things are added to the group, each thing tends to become *less opposite* in relation to all other things in the group until it all gets quite fuzzy. Complexity then, *can be defined as the process by which the*

*relationships between things become less and less clearly opposite* through the addition of new things to the group (complexity of numbers) and/or the discovery of new relationships and dynamics between previously existing parts that make their relationships less starkly opposite (complexity of depth). Both occur regularly in every part of our lives and complexity can grow exponentially. Tainter describes ‘layers of complexity’ in societies trying to solve problems.

- ❖ The ‘theory’ arose out of considerations of the cognitive structure of human knowledge, early child learning, and complexity of groups – and rules writing; ‘opposites’ sits at the base of the many asymmetrical relationships of parts in GGDM.

So, when Carl Sagan complains that the ancient philosophers separated the mind from the body, the heavens from the Earth (Cosmos, Episode 7), he is complaining (unfairly) in part about the basic human tendency to learn and frame in opposites.<sup>2</sup> Empirical science considers itself the opposite of religion and nearly the opposite of philosophy (on whom it keeps a wary eye to make sure it doesn’t cross the boundary fence); whilst philosophy I don’t think considers itself exactly the opposite of either, but recognizes the militant tendencies in the other two.

- ❖ Philosophy and religion were for much of history the masters of civilization; not quite opposites, not quite the same. Science is the newcomer that makes modern civilization truly complex compared to what came before.
- ❖ Is there anything that prevents something from being both an axiom and a theory?

It is true that such tendency from our infancy, propagated through the epistemology we absorbed growing up, does retard a holistic view of things, until at some point it can be established an underlying unity between holistic and non-holistic worldviews. Holism serves as both the closure of the ends of the opposites and a pull against increasing specialization and compartmentalization (i.e. nexialism) that has been noted both in current Western professions, and as a general trend of urbanized and complex civilizations through history, who suffer the most in collapse.

- ❖ Paradoxes are usually presented as two things that are both true, but cannot both be true. *That is, they are presented in pairs of truths.* Because that is what we can readily comprehend. What if there were paradoxes where three things were true that could not all be true, but are not quite opposite? Like, uh, quantum mechanics?
- ✚ UNITY OF OPPOSITES: The concept of opposites has a long intellectual history; ancient pre-Socratic philosophers debated about what it meant in terms of the universe (i.e. what it told us about the nature of reality), and came to the conclusion that it was both a duality and a continuum of change or underlying principle (Heraclitus of Ephesus). Despite all that we ‘know’ now, the concept is still relevant and debatable:
  - ❖ “Dialecticians claim that unity or identity of opposites can exist in reality or in thought. If the opposites were completely balanced, the result would be stasis, but often it is implied that one of the pairs of opposites is larger, stronger or more powerful than the other, such that over time, one of the opposed conditions prevails over the other. Yet rather than ‘stasis’ the identity of opposites, there being unity within their duality, is taken to be the instance of their very manifestation, the unity between them being the essential principle of making any particular opposite in question extant as either opposing force.

For example ‘upward’ cannot exist unless there is a ‘downward’, they are opposites but they co-substantiate one another, their unity is that either one exists because the

opposite is necessary for the existence of the other, one manifests immediately with the other. Hot would not be hot without cold, due to there being no contrast by which to define it as ‘hot’ relative to any other condition, it would not and could not have identity whatsoever if not for its very opposite that makes the necessary prerequisite existence for the opposing condition to be. This is the oneness, unity, principle to the very existence of any opposite. Either one’s identity is the contra-posing principle itself, necessitating the other. The criteria for what is opposite is therefore something *a priori*.” – from Wikipedia article, “Unity of Opposites,” October 1, 2019 (emphasis in original).

Some philosophers or religious thinkers have suggested that everything in the universe has an opposite, implying that the universe is always in ‘balance’ despite constant changes. This is a sort of statement that is neither provable nor falsifiable to humanity; one would need to understand every possible opposite condition or existence, what time frames are involved, and also be able to *grok* the entire universe in a given moment to test the truth of the proposition.

Although direct ‘oppositeness’ is presented above as *a priori*, humans are able to recognize ‘sorta opposite’ and ‘mostly opposite’ conditions which allows us to grasp more complex relationships. It creates a situation where a hot thing might be balanced by a cool (not cold) thing and a wet thing that is at room temperature; the hot thing is the ‘more powerful’ and will eventually dry the wet thing and warm the cool thing, but will lose much of its hotness in the process through the laws of thermodynamics which will eventually average the energy in the system (as the common example goes, why your cup of coffee gets cold), i.e. a high entropy state.

---

*“Well, most folks seem to think they’re right and you’re wrong ...”*

*“They’re certainly entitled to think that, and they’re entitled to full respect for their opinions,” said Atticus, “but before I can live with other folks I’ve got to live with myself. The one thing that doesn’t abide by majority rule is a person’s conscience.” – Harper Lee, To Kill a Mockingbird (1960), p. 101*

---

**RIGHT AND WRONG:** Most arguments about what is right and wrong are really arguments about what behaviors are *useful and not useful to society as a whole*, and are much better framed in that way. Conscience is quite another thing.

- ❖ For example, once it was decided that individuals own chattels, it immediately becomes apparent that there must exist socially recognized procedures for the transfer of chattels, that the chattels of the deceased must be passed on in an orderly manner, and that behaviors such as taking chattels by force or surreptitiously, must be discouraged or prohibited by the group. Chattels were the first things that people owned, even in groups where ownership of real property was unknown or communally held, people had things they thought belonged to them. The necessity of ownership of chattels begins with food and clothing, tools, and hunting implements, and the skill and labor required to make them and enables specialization and the beginning of trade.
- ❖ For example, once it was decided to create public office as a necessity of civilization, it became immediately apparent that the power of the office was tempting, could be exploited as property, and that for the concept to work properly, it was necessary to

criminally prohibit certain non-useful behaviors and results, such as bribery, kick-backs, illegal seizure, embezzlement and official oppression and official dishonesty.

Humans do not really have the capacity for recognizing right and wrong in any absolutely objective sense outside of ourselves (if such even exists); *our civilization* is the one place where we are *the actual center of the universe in every sense*, just as we used to believe we were the center of the physical universe until science disabused us of that notion.

- ❖ Prior to empiricism, we projected ourselves upon the universe through mythopoeic and increasingly complex religions. We were the center of the universe, both literally and religiously (e.g., David Coppedge). Empiricism separated us from the universe.

To recognize what is morally right objectively, we need to see what is morally wrong objectively, and we have neither; we have only ourselves and what happens to prove useful or not useful to gauge our actions. Conscience then is not really related to wrong or right, but to mental satisfaction (or mental utility).

- ❖ The question and measure of ‘usefulness’ applies not only to behaviors and right and wrong, but to every intellectual endeavor, social or public policy decision, every part of every system devised by humanity. Scientific theories and philosophical arguments go through predictable cycles; that is, when first articulated, they seem to be useful at solving a particular problem or shedding light on an area of intellect. Later, under critique and expansion, their limitations become apparent, but the idea remains as a useful approach for discussion and education.

The extent that you believe that my right and wrong analysis of morality is correct, is the extent to which morality has been unable to make itself objective reality and to separate itself from specific social situations. In the *objective morality view*, morality is lessened, diluted and derailed by implementation of ethical codes in the same way that some felt that Catholicism was damaged by being reduced to catechisms in the late 17<sup>th</sup> Century or the way that education was squashed by the Lancastrian method of mechanical factual recitals modeled on the catechisms.

It has been suggested that the human capacity to reason is an evolutionary survival adaptation and that reasoning is best accomplished in groups; groups that could solve complex problems together through civil argument and cooperation had a better survival chance than groups that could not reason together. See Mo-Jo, 2 Beginnings, p. 34, *supra*. It is natural then that such groups must decide what behaviors are to be encouraged and what behaviors are to be discouraged. Expulsion from the group into the wild was the ultimate punishment short of death (but was also useful). Later, when awareness of the universe beyond ourselves developed, the rules of the group were codified into religions to be passed on, their origins forgotten in the lost past.

- ❖ “Institutions get the behaviors they reward.” – Gen. Jim Mattis (USMC Ret.) op-ed, “Jim Mattis: Duty, Democracy and the Threat of Tribalism,” Wall Street Journal, August 28, 2019.<sup>3</sup>

GGDM does not discuss or address in any way, right or wrong, ethics or morals (excepting the discussion of explicitly cheating in the game). There simply was no place for it within the structure of civilizations presented in the game, this is perhaps a shortcoming of the simulation; tangentially, it is or could be a part of government legitimacy and interstellar diplomacy. Probably, players will develop some rules of interstellar diplomacy and order that include the players’ pregame concepts of right and wrong (“bust the deal, face the wheel!” or “two men enter, one

man leaves.” – Mad Max, *Beyond the Thunderdome* (1985)). How will such rules be enforced in the game and who will enforce them? I think you already know the answer.

❖ **Thug:** [returning to consciousness after being knocked out finds himself in a stranglehold from behind] Come on, give me a break! **Marcus Cole:** Certainly, what would you like? An arm? A leg? We’re fresh out of broken hearts. We just had a run on those. How about we start with your fingers and work our way up? – Babylon 5, “Ceremonies of Light and Dark” (1996).<sup>4</sup>

➤ **Marcus Cole:** You see? It’s like I’ve always said. You can get more with a kind word and a two-by-four than you can with just a kind word. *Id.*

❖ **Rhetorical Question:** Is it more useful for a work to be technically correct in an objective sense, or to be not completely objectively correct while significantly advancing our understanding of a subject? This would be a great debate question and how you answer the question says much about perception of truth and worth.

✚ **VISCERAL REACTIONS:** Human sexual conduct has long been the most intense example of ‘morality’ in terms of what is useful or not useful to society (e.g., *To Kill a Mockingbird*). Right and wrong are about acts and consequences, any discussion of morality and ethics without acts and consequences is pure æther and about as useful.

Society has decided that sexual acts for the purpose of oppression, control, gain, exploitation, and for most of our history, recreation, are wrong acts because of various consequences, not the least of which is unwanted *or illegitimate* pregnancies (e.g., *The Scarlet Letter* (1850)). From this base then extended prohibition of sexual conduct between siblings and parents and their children (this, long before inbreeding genetic problems were understood), sexual relations between or with minors, and adultery or pre- or extra-marital sexual relations.<sup>5</sup> At the same time, however, modern birth- and STD-control has mitigated the risks of bad consequences, temporarily moving the dial toward libertine sex.

❖ “Rose [Elizabeth ‘Libby’ Cleveland] struggled to name their relationship – ‘I cannot find the words to talk about it,’ ‘the right word will not be spoken.’ Indeed, there was not a word for a same-sex relationship between women at the time. The word ‘lesbian’ existed, but only in reference to the Greek poet Sappho. ‘This was before there was a concept of sexual orientation the way that we know it today,’ said Lizzie Ehrenhalt, co-editor of the book. ‘That was really being invented right at the time they were writing letters in the 1890s, because that’s when sexology as a field gets going.’ The concept of ‘romantic friendship’ was popular among women of the day, which were emotionally and intellectually intimate friendships, though not necessarily sexual, Ehrenhalt said. ‘That created a sort of bubble of freedom’ for women, particularly wealthy white women, to have ‘more or less open relationships with each other,’ she said. Rose and Evangeline’s relationship was undoubtedly sexual, in addition to loving and intimate, Ehrenhalt said. One letter describes ‘long rapturous embraces’ that ‘carry us both in one to the summit of joy, the end of search, the goal of love!’ ... They vacationed together in Europe and the Middle East. They bought property together in Florida. They didn’t hide their relationship from family, and it appears to have been accepted. Rose even wrote to Evangeline’s [Evangeline Simpson Whipple’s] mother about her love for her daughter.” – Gillian Brockell, “A gay first lady?”

Yes, we've already had one, and here are her love letters," Washington Post, June 20, 2019.

- ❖ "Contemporary accounts described [Frances E.] Willard's friendships and her pattern of long-term domestic assistance from women. She formed the strongest friendships with co-workers. It is difficult to redefine Willard's 19<sup>th</sup>-century life in terms of the culture and norms of later centuries, but some scholars describe her inclinations and actions as aligned with same-sex emotional alliance (what historian Judith M. Bennett calls 'lesbian-like')." – from Wikipedia article, "Frances E. Willard," captured August 8, 2019.

- ❖ "I still can't figure out sexuality; I mean it's such a big mystery to us all. It's like violence and aggression, it's something we try to understand with our heads, our intellect, but they're really to do much more with the instinctual side of us. It's old brain versus new brain, you know.

So dealing with something like sexuality and women... If you're talking about it in conventional mythology, being nothing fancy, just simple storytelling, if you look at stories like Beauty and the Beast, which is a myth that was very common – you know, King Kong, right up to the fifties – and then I guess they invented the pill and abortion and a freer sexuality, and a certain liberation of women, which most of us agree was long overdue.

The Beauty and the Beast story is no longer a viable one in society, because women aren't as mystified – they're much more people than they are mystical. Yet women are still sex objects, yet they're not demystified sex objects. And yet we have more women artists, women this and there are women that, so it seems clear that you can have a female hero. [But] historically there haven't been very many." – George Miller as quoted by Anne Billson, "George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview," previously unpublished interview published on Multi-glom: The Anne Billson Blog, May 12, 2015.

Homosexuality has been at the tip of this discussion for a very long time. Visceral reaction against homosexual relations – especially in males against male homosexual relations, behavior, personality and lifestyle struggle against intellectual reasons prohibiting certain sexual acts as wrong or immoral due to possible consequences; e.g., it is very difficult to state that homosexual relations might result in unwanted pregnancies! Visceral reactions also notably produce *inconsistent results*, e.g., lesbian sex and female bisexuality is common and normal in *mainstream pornography* made for *heterosexual males*, but male homosexuality or bisexuality is never shown.

- ❖ The first rule you learn in philosophy is consistency; inconsistent application of beliefs or philosophical principles is hypocrisy. The Romans were experts in political and philosophical convenience which colored their post-Empire reputation.

Thus, philosophers have usually ruled out visceral reaction as a or even the *measure of what is right or wrong*, but this dismissal is also problematic on its own, for example, visceral reaction to the horrors of war, especially the images of the aftermath in Hiroshima and Nagasaki (which the U.S. government tried to suppress for a short time) were key in preventing the Cold War from ending in World War III. Is there any argument against this? History

strongly suggests that whatever temporary restraint occurred as a result of WWII and Hiroshima prevented us from going down the nobody-wins, everyone-loses path to WWIII long enough for the ridiculousness of the situation and the systemic inefficiencies to work themselves out to a useful ending (i.e. we are still here, you are reading this now).

Thus, to the extent that visceral reactions (see Aspects and active/inactive Constructural Elements) lead to useful acts and consequences, they are equally potent as a measure of right and wrong.

- ❖ Visceral reactions are also why most people think that the major crimes – rape, murder, robbery (i.e. theft, burglary, corruption), kidnapping – are wrong. Are they wrong in thinking this, or do visceral reactions serve useful social purposes (e.g., see *The Future is Coming*, 7 Beginnings, p. 69, *Losing My Religion*, 1 The Sidereal Stage, p. 111, regarding ‘cheating’; *The Other Hole In Your Head*, 1 Order, p. 520, and *Homo reciprocans* discussion, Big Endian, Little Endian, 6 Diplomacy, p. 1174, *supra*) as many or more times than not? Of course, there are also very convincing utilitarian reasons why these acts are wrong based on consequences to society, which is why they are considered *the major crimes* in all nations and times.
  - “Metaphysics, said the late nineteenth-century idealist philosopher Bradley, is the finding of bad reasons for what we believe on instinct; but metaphysics has changed in the meantime, and is now the finding of bad reasons for what we cannot possibly believe however hard we try.” – Theodore Dalrymple, *Admirable Evasions: How Psychology Undermines Morality* (2015).
  - Many years back in Texas during a school field trip, a young schoolgirl went missing. Her father looked for her and discovered a man molesting his daughter on the ground, he was on top of her with his pants down around his ankles. The father grabbed the perp by the collar to yank him off his daughter, there was a struggle, the perp hit his head on a rock and died. The District Attorney investigated and wisely decided not to charge the father with the death: No jury would have convicted a man for accidentally killing another man molesting his grade-school daughter.
- ❖ I must also acknowledge that visceral reactions, especially those manipulated for ideological reasons and by leaders of nations, have also led to very bad consequences, even to the extent of making systematic commission of major crimes (theft, murder, rape) part of the national policy; this is both Plato’s criticism of rhetoric and the sophists (e.g., Gorgias) and the lesson of WWII and the events leading to it. Thus, neither reason nor visceral reactions alone are sufficient guides for humanity, both must be present and applied carefully. It is the tightrope act, the path we tread.

✚ BEING RIGHT VS. RIGHT BEING: The Christian end of the world is \*yawn\* material, it’s all been seen, heard and done before:

- ❖ “But my serious advice is to please ignore people like [Alexander] Cain who are in my opinion ends times hucksters. We’ve seen it all before folks. It’s always been wrong before. How many times do these people have to be wrong before we finally stop taking them seriously?” – Nick Peters, “A Brief Look At Alexander Cain,” May 6, 2015 (forum post, TheologyWeb).

- Now, that is an odd question, considering the religion is built on prophets... might the Biblical prophets have been called hucksters in their time? Because it is organic to the religion, should we be surprised; isn't lack of evidence and "wild conclusions from flimsy evidence" (*Id.*) the very definition of faith?

I have watched with amusement the passage, one after another, of millennialist and end-of-the-world-now religious groups whose overt and fondest wish is to witness the religious, divine, prophesied ending of the world during their lifetime (in my youth, I watched the similar near glee of some who thought the Cold War would end in the world nuclear holocaust). It doesn't really matter what religion they claim, though in our time mostly they are apocalyptic Christian groups; why would anyone be in such a hurry for the end of the world? Simply, because they believe when the divine end of the world occurs, they and their usually small, closed group will be right and everyone else will be wrong and suffer various degrees of divine judgment and damnation. So basically, it comes down to their need to be right and everyone else is wrong, and you can hear that in their words if you are listening. It's a full feature, not a bug as they say, of Western religion.<sup>6</sup>

This is religion that is simply not useful; why not instead, fight to hold off the end of the world and save everyone from divine damnation? Isn't that what the holy books teach? Because, then everyone else wouldn't be wrong. *Capisce?*

- ❖ In the movie *March or Die* (1977), both Maj. Foster and the Moroccan rebel leader El Krim were correct in their comments, but still, hundreds of men had to die in battle.
- ❖ See also Prophecy discussion, *2 Wheels in the Sky* generally, *supra*.

✚ NO CHATTELS, NO REALTY: Could some civilization exist that has no concept at all of ownership of property, even of chattels? I suppose it could, but it is difficult to mentally embrace the vision of such a place, evidence of how deeply the concept of property ownership is embedded in our civilization. Players in GGDM may attempt such a civilization within the game, and while the idea may at first evoke Shangri-La visions (or maybe leftist utopias), removal of the concept of ownership of any sort of property from civilization (it simply never occurred to their ancestors, for example) would have a profound effect and produce a civilization, coming into the game, radically different and alien to us. I don't think you could even really sidestep the issue by substituting the concept of possession without ownership; the possessor of the chattel or real property would have a certain bundle of rights, privileges, duties and responsibilities while in possession and rules would have to exist for transfer of possession, abandonment of possession and failure to adhere to communal duties and responsibilities of possession. This is ownership by another name.

- ❖ Rhetorical Question: Could 'sovereignty' be construed as a sort of 'group ownership' of a geographical area, even though individuals (both nationals and extra-nationals) may own parcels within the area? Consider that legal enforcement of individual ownership rights to individual parcels is only possible through the sovereign judicial systems who have the exclusive right to the use of legitimized physical force? Thus, as frequently occurs in history, when sovereignty is forcefully changed, individuals lose ownership of real property, frequently fleeing, and even sometimes chattels (through looting, seizure). The property and titles are then redistributed to the victors, e.g., the Norman Conquest of England and Ireland, the Ottoman Turks system of conquest,

various monarchical changes in England (e.g., the family of Elizabeth Woodville, Richard Neville, Earl of Warwick).

*“And do you think that unto such as you  
A maggot-minded, starved, fanatic crew  
God gave the secret, and denied it to me?  
Well, well – what matters it? Believe that, too!”*

– Richard Le Gallienne’s translation of Omar Khayyám as quoted by Richard Hitchens in his 2007 book

**SOMEWHERE A TRUTH:** Everyone who takes the time to write or do, asserting an opinion or argument, whether intended or not, has an ‘agenda.’ Science and science-fiction are not immune.

- ❖ Merriam-Webster online dictionary at *agenda*: **2:** an underlying often ideological plan or program.
- ❖ “Back in Sudan he struggled to find a cinematic language that could reach people on an emotional level, that could be political without being owned by any particular government or movement. ‘We must open our eyes and develop a means of resistance,’ he told one interviewer. ‘All films are political. They carry a message. Cinema is a language. If you make a good film, you are understood by society.’” – Nadja Kornith (quoting Gadalla Gubara), “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun (bidoun.org), Issue 20, Spring 2010.

During the Cold War, anthropology was particularly subjected to various agendas. The ‘nature vs. nurture’ argument about whether war is natural or learned seemed urgently important, feminism arguments about whether men or women led the way to civilization, and claims – desperately seeking proof – that early Cro-Magnons caused the extinction of Neanderthal populations through genocide (they did not) seemed to portend the inevitable catastrophe.

- ❖ Carl Sagan in the Cosmos series, certainly had an agenda. Sometimes the accuracy of historical fact was the sacrificial victim in the presentation.

Any television or movie series that has a story arc – and a story arc requires dramatically presenting and resolving competing agendas – will eventually wander into a chosen set of philosophical questions. Babylon 5 stated its questions most clearly, the reimagined Battlestar Galactica did a very good job, eventually getting to the point; Matrix was pretty good if also pretty much *out there*. Andromeda, sidetracked by direction disputes, wandered off into trippy sci-fantasy.<sup>7</sup> When a series wanders around and loses coherence or its story arc, it becomes Lost.

- ❖ Somewhere between conflicting agendas are little gems of truth that we can mine and hold. It is the basis of our *adversarial legal system*, dialectic argument, and of knowledge formation since the beginning of civilization.

I grew up during the Cold War, undoubtedly, some witty crank will comment that I caught a bad case of the Cold (War) and never got over it. I have no doubt that my thoughts expressed here reflect that background. And the astute reader can probably pick out my political views and what news I read, from whom I choose to quote. I am equally sure that I have an ‘agenda.’<sup>8</sup>

*“In 1867, George Campbell, Duke of Argyll, had published The Reign of Law, a book that Darwin found deeply annoying. A supporter of Richard Owen, Campbell argued that while evolution (or ‘Development’) might be observable in the fossil record, it was merely evidence of God’s purpose. God, for example, would cause horses and oxen to evolve in time to meet human needs. The brightly colored plumage of birds, Campbell went on, were simply God’s decorations of nature for humanity’s enjoyment.”*

– Jonathan Clements, Darwin’s Notebook: The Life, Times, and Discoveries of Charles Robert Darwin (2009) <sup>9</sup>

**THINKING AS RECREATION:** My maternal grandmother, born in 1926, has a special place in my youth, a green suburban refuge of kindness, calm, and fun in a youth of chaos, malnutrition, cultural confusion, senseless violence, crime, animal death, fear and *appalling adult stupidity*.

One day when I was about 15-years old, I was happily telling my grandmother about Dungeons & Dragons and talking about player-character creation. At some point after about the 15 minute mark, my grandmother said, “That seems like a lot of work to play a game!” It suddenly occurred to me at that point how much things had changed in two generations; here I was happily engaging in intellectual activities for a game, whereas, for my grandmother’s generation (as my mother explained), thinking was something that was work, that you did at work and for raising a family and keeping house, recreation was non-thinking.<sup>10</sup>

- ❖ Some of the confusion on this point seems to be reflected in the dialogue of the movie *The Whole Wide World* (1996) about the life of Robert E. Howard through the eyes of his part-time girlfriend, schoolteacher and writer Novalyne Price. He expresses that he has felt pressure to get a job, get ‘real work’ by his cohorts of townfolk, but then says that writing *is* work. His father was the town doctor and that perhaps protected him socially from some of the pressure; I would guess that his father thought, well, if some guy in New York City is paying him real money to publish whatever he writes, he has a job.

A brief look at the games that would have been popular in the 1930s and 40s when my grandmother was growing up shows games that involve high luck and minimal thinking; as opposed to the analysis paralysis feature of modern board games.

I have seen dozens of definitions of an “intellectual person” (i.e. ‘intellectuals’) over the years; most of them focus on sociology and professions related to intellectual persons. Most of them range from snarky to vaguely critical,<sup>11</sup> the best that can seemingly be hoped for in any definition of an intellectual person is careful neutrality. I do not believe I have seen a definition of an intellectual person that includes primarily thinking and learning as a recreational activity.

Tabletop gaming hobby, in its current state, is an intellectual activity, though tabletop gaming as a hobby and activity does not make gamers intellectuals – far from it. But still, there must be a base quality of recreation to learning and thinking that makes some people grow and evolve into intellectuals; it would be difficult to be an ‘intellectual’ when thinking is work, when doing so feels like pushing a boulder up a hill every day.

- ❖ This is parallel to but also goes beyond the assertion of Erasmus regarding learning as a game.

✚ VOID PILOTS: One of my frequent mental recreations in younger years was to imagine having a conversation with someone from the past, trying to explain to them what has happened in the world since their time, or some particular event, development or nuance of our times. Such imaginary conversations can be very instructive. What would Martin Luther think of nuclear weapons? Can you introduce Isaac Newton to Hypatia of Alexandria at a telescope viewing party? Even though they are both exceptional intellects in the same or similar areas of study, would there be any personal, overcoming sexual-romantic attraction?

In the last ten or fifteen years, I have spent far more time playing FreeCell, Kyodai Mahjongg 2006 and the Race for the Galaxy PC game, than in tabletop gaming. I never seem to tire permanently of FreeCell or Kyodai Mahjongg – I have played thousands of games of each (often while musing about other things), I am probably no better than any other player – but I have come to think that what keeps me playing these games is that I like – am addicted to – the interlocking complexities of unraveling (or ‘solving’) the game boards. More than I enjoy human company, I’ve never been addicted to humanity (and isn’t that what we really mean by ‘well adjusted’? – a term that almost makes me cringe like a backache). Like Spinrad’s Void Pilots, GGDM is a vast extension of my ‘addiction’... not to humanity. My understanding of great thinkers such as Isaac Newton, Rene Descartes, Friedrich Nietzsche and others suggests it was true for them too.

---

*“I’m not a fan of simulations where, ‘Oh, we’ll go play a simulation of world peace and figure out how to make peace’ and then somehow magically that will get translated into the real world. No, that’s not the kind of games that I make.” – Jane McGonigal*

---

**SIMULATING A LIFE:** From the time I was young, I was obsessed with simulation games. My first hobby games were crunchy commercial wargames (historical/sci-fi military simulations) from Avalon Hill, Yaquinto, SPI, Metagaming, GDW, and later, Victory Games; I also picked up my first D&D box set when I was about 13 or 14 years old. To me, at that age, game and simulation were synonymous, I viewed all games as basically simulations. This is still common today, I receive regular spam emails advertising ‘airplane flying games’ which are flight simulators; there is no game to it, it’s a flight simulation! They are even less a ‘game’ than solitaire.

I played solitaire, I didn’t play wargames with people (or at least, normal, competent opponents) until I arrived at artillery school in October 1985 and didn’t play D&D with people (other than my mother two or three times, once with the first dungeon I created) until I arrived in Okinawa, Japan, in early 1986.<sup>12</sup>

- ❖ Later, as a battlefield intelligence analyst, I experienced real military ‘map-ex’ training, such as ARTBASS. A most memorable line was the Lt. Col. yelling, “Capt. Campbell, where are my HEMTTS!?” during a precision attack maneuver. Uh oh.

I began designing games when I was 13; my first design was, laughably, a clone of a proprietorship board game that I was fascinated with at the time, The American Dream, and had played numerous times with my family (mother, aunt and uncle). I had, of course, played Easy Money, Payday and Monopoly many times with other people, and Life once or twice, and many, many games of Aggravation on my grandmother’s homemade game board. In the days before home PCs (I programmed Trash 80s in 11<sup>th</sup> grade), I handwrote the rules for my first game on college

ruled paper in blue pen, and taped together a dozen sheets of paper to hand draw the game board with pen and ruler. I think I played it once with my mother – the things mothers have to endure! The game design project quickly dissipated as I discovered Avalon Hill games and D&D.

Sometime when I was about 14 years old, I read Brian Aldiss' Galactic Empires anthologies (Vols. 1 and 2), and especially liked Alfred Coppel's "The Rebel of Valkyr" and Gardner F. Fox's "Tonight the Stars Revolt." Also in that time, I read Roger Zelazny's Chronicles of Amber (The Corwin Cycle, 1970-1978) and Robert Holdstock's Where Time Winds Blow (1981). I still have all of those same book-club edition books (and a lot of other books!).

- ❖ I reread both of these stories again 35 years later. "Rebel of Valkyr" still holds up well enough, "Tonight the Stars Revolt" less so. The *latter* feels thin, like if you think about it too hard, the story will fall apart; it lacks memorable insights, it feels lacking in substance, depth and cohesion: Ok, so the pirate guy uses the Elders' black energy pool to defeat the evil government (aka *dues ex machina*), kills the leader, wins the sexy courtesan, Moana (and we get a glimpse of a future utopian Earth too!). I can see why I liked the story when I was 14 – it fits perfectly in every respect Spinrad's "Emperor of Everything" pulp formula, a wank fantasy – and why it was published in Planet Stories (the entire issue is available to read online for free), and it was definitely an image influence that fed into the Machines & Mercenaries project (*ut infra*). "Rebel of Valkyr" was also available on ePub for free.

Somehow, all of this combined with wargaming into a sprawling idea that I called "Machines & Mercenaries," a strategic and tactical wargame set in a world where the time winds blow, and armies from many periods co-exist as mercenary units. Sort of Heroscape before Heroscape.

I wrote and rewrote the rules by hand maybe a dozen times, then later started using my mother's old typewriter by kerosene lamp. I bought a big sheet of one inch blocks paper and drew a world map. I started thinking about things like, well, how high can you build a medieval tower? How would a Macedonian phalanx fare against the British thin red line?

- ❖ You see hundreds of these sorts of (increasingly ridiculous) game simulation videos on YouTube now with titles such as "5,000 German soldiers vs. 60,000 Spartans," "1,000 Jedi vs. 25,000 Spartans" or "300 U.S. Marines vs. 25,000 Spartans." For the record, Sparta never fielded an army that was much more than 8,000 hoplites.

I started thinking about fuel and ammo consumption, how many practice rounds does it take to improve the quality of a unit? The game got really detailed, logistical, with military engineering and civilizations tossed in. I invented two sapient alien species that inhabited the world, High Spidera – undoubtedly inspired by Tolkien's spiders of Mirkwood, because at that age, what you think is your genius creativity is actually self-deluded, purblind, thinly veiled imitation – and another race that I cannot now recall. I worked on it until I went to boot camp the summer I was 17 years old, and then picked it up and fiddled with it some more when I was 19 years old (there was also another game, called "Again!" that I started when I was about 16, inspired a bit by Avalon Hill's Starship Troopers, and worked on again when I was 19). It was never transferred to a computer file, so all I have left is the memory and the big rolled map I created.

- ❖ "During the 1950s, I decided, as did many others, that many practical problems were beyond analytic solution and that simulation techniques were required. At RAND, I

participated in the building of large logistics simulation models; at General Electric, I helped build models of manufacturing plants.” – Harry Markowitz.

There is not much simulation value in modern mainstream tabletop hobby games. There are still a few small hex-and-counter wargame and block-wargame companies – and wargames must always be simulations – but they don’t produce enough to get into the main distribution channels (and tend to detest the modern gaming industry generally, with good reason); board historical wargaming has been sidelined from the tabletop gaming mainstream to a niche hobby. The modern tabletop game market has moved to dumbed-down mass appeal<sup>13</sup> and instant playability, gloss, color and plastic; modern tabletop games – following the German model – are abstractions, not simulations, with rules built for absolute fairness, balance, playability, and ‘gamey mechanics’ (e.g., the last place player getting an extra resource by virtue of being in last place) *that don’t make sense in any reality test*. Unsurprisingly then, modern tabletop gaming has moved away from real history into fantasy and science-fiction themes, and vague sorts of pseudohistory where the designer can control the setting and rules don’t have to answer to simulation value.

- ❖ You may, if you like, conclude that GGDM and much of my commentary is in some significant part, a reaction or revolt against ‘dumbing down’ and that I am a symptom or product of the system described by New York City school teacher John Taylor Gatto in his books. In Gatto’s terms, I struggle to rise above the “diminishment” of my public schooling, to think.<sup>14</sup>

Starting from the conflict simulation games of my youth, GGDM has travelled in the opposite direction as far from those games as modern tabletop gaming has; GGDM is about as directly *opposite* as possible in relation to modern tabletop gaming. They say that the surface of the universe may be some sort of a hypersphere however.

---

*“I never said, ‘I want to be alone.’ I only said, ‘I want to be let alone!’ There is all the difference.” – Greta Garbo<sup>15</sup>*

---

**GRETA & GATTICA:** I identify with Greta Garbo. No, I don’t cross-dress, she and I don’t have the same tastes in clothing.

- ❖ “Garbo is lonely. She always has been and she always will be. She lives in the core of a vast aching aloneness. She is a great artist, but it is both her supreme glory and her supreme tragedy that art is to her the only reality. The figures of living men and women, the events of everyday existence, move about her, shadowy, unsubstantial. It is only when she breathes the breath of life into a part, clothes with her own flesh and blood the concept of a playwright, that she herself is fully awake, fully alive.” – Marie Dressler.
- ❖ “I think an artist who abandons his art is the saddest thing in the world, sadder than death. There must have been something about Garbo’s film career that profoundly revolted her.” – Tennessee Williams.

We are born alone, we die alone, even if surrounded by people. In between is an eyes-averted, head-down trip through the Void while our two feet remain firmly on Earth. I am not, however, advocating for a ‘hive mind’ (e.g., Ender’s Game (1985), Starship Troopers (1959), or Star Trek TNG’s Borg) – no human wants that, to the extent we can think about it, the idea is (strangely) one of our worst horrors. But we may be heading toward a ‘sort of’ collective intelligence with

global communication, expedient air travel, virtual reality settings (*a la* Second Life, though Linden has done a very poor job with it), and acculturation – this concept is expanded to its natural final state by the New Commonality/Mindscape in Mindjammer RPG (2009), a trans-human RPG that combines elements of Traveller RPG, Eclipse Phase RPG and a little Cordwainer Smith (from TV Tropes, “Mindjammer,” December 25, 2018).

I also fancy that the decision I made at 50 years old to spend a year or more finishing GGDM (as in a *sabbatical* – err self-employed, unemployed, I am a little too old to use a ‘gap year’ excuse, eh?) is similar to Vincent’s (natural born, not engineered) decision in the movie Gattaca (1997) when he finally beat his younger, genetically-engineered brother Anton in a game of chicken that involved swimming as far out to sea as possible before turning back:

❖ **Vincent:** You wanna know how I did it? This is how I did it Anton: I never saved anything for the swim back.

I often feel that I am swimming in the deep, but I don’t know if it is toward or away from land. The only reason I know that there must be land is that I am not a sea creature. I’ll end up someplace, probably in Davy Jones locker.

❖ “The ocean is a desert with its life underground and the perfect disguise above.” – America, “Horse with No Name” (1971).

If I may flatter myself, I feel like my life is moving in a direction that most people cannot point, it feels like a tesseract. Don’t ask me which direction that is because ... it’s a tesseract.

❖ “It was said of Abba John the Dwarf, that one day he said to his elder brother, ‘I should like to be free of all care, like the angels, who do not work, but ceaselessly offer worship to God.’ So he took off his cloak and went away into the desert. After a week he came back to his brother. When he knocked on the door, he heard his brother say, before he opened it ‘Who are you?’ He said, ‘I am John, your brother.’ But he replied, ‘John has become an angel, and henceforth he is no longer among men.’ Then the other begged him saying, ‘It is I.’ However, his brother did not let him in, but left him there in distress until morning. Then, opening the door, he said to him, ‘You are a man and you must once again work in order to eat.’ Then John made a prostration before him, saying, ‘Forgive me.’” – from Wikipedia article, “Desert Fathers” quoting The Sayings of the Desert Fathers, p. 86, trans. by Benedicta Ward, SLG, available for free online (<http://www.g4er.tk/books/sayings-of-the-desert-fathers.pdf>).

➤ I think there is a bit of dishonesty when religious adherents claim to have no material possessions in the world, or desires, and are living in poverty as a pious example to all, but are living off the donations and support of others. This includes that crazy guy who wandered around Palestine spreading his delusions while being financially supported by his wealthy convert and possible lover, Mary of Magdalene. But we have been trained and reflexively accept without question that religiously inspired poverty is *de facto* evidence of purity and holiness – and the financial support of others considered evidence of rightness and religious conversion – rather than the whole charade being understood as stupidity, delusion and laziness, for some would rather live a lie than do honest work.

It is thus that with 5 Fallen to Earth, my ‘sabbatical’ comes to an end, this part of the GGDM project is crossed off my ‘bucket list’ and I must now fall to the Earth, descend again into the profane, and once again work in order to eat (or more properly, so that my cats can eat).

- ❖ “[Gertrude ‘Trudle’] Junge died from cancer in Munich on 10 February 2002 at the age of 81, reportedly having said shortly before her death, ‘Now that I’ve let go of my story, I can let go of my life.’” – Gertrude “Trudle” Junge, after the publication of her memoirs Until the Final Hour (2002), as quoted in Wikipedia biographical article about her, captured May 27, 2019.

---

*“Carry on, you will always remember,  
Carry on, nothing equals the splendor!”*

– Kansas, “Carry On Our Wayward Son”

---

**WHAT A FOOL BELIEVES:** When I was a young teenager, in the early 1980s, filled with the lust for everything that was possible, I knew a 30-something man, who was a UFO believer and belonged to local UFO social gatherings. We had many conversations about UFOs, ghosts, the occult, and rock ‘n roll music. UFOs were exciting and made sense to my young mind,<sup>16</sup> I read all of the UFO and Bermuda Triangle books (I love that BT pink bunny commercial) of the day.

- ❖ When I was young, from my teens into my twenties, one of my favorite songs was Styx “Come Sail Away” (1977). I especially liked the final lyric. Now, decades later, I think that the final lyric was unnecessary and even kind of cheapens the song. “Come Sail Away” was Styx’ attempt to create a song like Led Zeppelin’s “Stairway to Heaven,” but didn’t quite work as well overall in duplicating the effect and the addition of the final lyric is a transparent appeal to a youth audience (like me), or just exasperation and a desperate attempt to give the song more cowbell.

Ten years later, after service and travel, and some college, he lived with us for a time (his wife kicked him out, I think, a regular occurrence in his life). Literally, nothing had changed in his life or his personality, except that he seemed a lot dumber than he was when I was younger.

- ❖ Empirical appreciation of evidence is usually lacking in youth. The true child prodigy is one who has a grasp of evidence and empirical method and reasoning at an age when the others (like me) are playing pretend.

At that point, his situation became transparent to me; he was a burnt-out drug user, hippie wannabe from the early 70s; he was still mentally living in the early 70s and the world had passed him by – nothing had changed for him since high school; he really didn’t understand much of what went on in the world or his own life. In a world where he felt dumb (and don’t we all?), *his belief in UFOs was the one thing that could never be falsified or argued away* (like God for most other people) – and he would smugly and willingly argue for hours about it with that stupid grin; that UFOs existed was the one *special thing* he knew that the rest of the world didn’t apparently. It made him feel wiser than the rest of us, similar to his apparent belief that he knew secret meanings to the lyrics of 70s rock songs.<sup>17</sup>

- ❖ “What a fool believes he sees, no wise man has the power to reason away.” – Doobie Brothers.

When I was young, I believed in UFOs more than I believed in God. Others have had similar thoughts; there are fringe religions that believe that God sent UFOs, that UFOs are piloted by angels, and other such syncretisms. If you are a religion in search of a modern miracle to refresh the dusty old books, why not UFOs? Unprovable and unfalsifiable. Just like anyone's God.

Arguments about the existence of God and Love (and 'the love of God') have the same characteristics,<sup>18</sup> there is little practical difference between arguments about God and UFOs; the latter only seems more concrete and empirical for being modern. Note the rise of 'UFO religions' in the mid-20<sup>th</sup> Century (and from the 19<sup>th</sup> Century, Western Esotericism), countering the de-mystification of the world by empiricism. It seems to be an essential core or bedrock of human psychology that we must 'believe' in something that cannot be disproven directly, empirically or argued away.<sup>19</sup>

- ❖ There is an argument that the Robertson Panel's inquiry was perfunctory and that the conclusion was predetermined, and that the panel's report discouraged serious scientific or intellectual inquiry of UFOs and extraterrestrial life possibilities for decades. This is reflected in the movie Contact (1995), and also thus exported the whole subject into the realm of fiction, conspiracy theories, and fringe religion through the 60s, 70s, and 80s. However, the way the question was phrased and the way the panel went about answering the question they were asked to investigate and their conclusions and recommendations, clearly show that they were a creature of their time – 1953 – more concerned with how the enemy (you know who) might exploit UFO paranoia in an attack on the United States.<sup>20</sup> They were not interested in whether UFOs were real.
- ❖ In or about 1990 or 1991, I was reading some fringe book about UFOs or strange occurrences, and for some reason, I decided to look at the bibliography appendix. This was possibly the first time I had ever seriously glanced at the bibliography in any book I had read, and I possibly did so because I was going to Lycoming College at the time, my first attempt at college. What I saw in the bibliography shocked me, the author was mainly citing articles from the National Enquirer, Weekly World News, Globe and other supermarket checkout line tabloids that I knew well from working as an overnight janitor in a grocery store. I couldn't believe that anyone would seriously list those as bibliographic references; I remember that I literally tossed the book back over my shoulder and left it on the ground for some other fool.

---

*“Keeping silence, I resigned  
My friends would think I was a nut  
Turning water into wine  
Open doors would soon be shut.”*

– Peter Gabriel, “Solsbury Hill” (1977)

---

---

*“Do not be guilty of possessing a library of learned books while lacking learning yourself.” – Desiderius Erasmus*

---

**THE LIBRARY:** Sometime in the last two months of 1996, I had a dream that I still remember. When I was a teenager, I had many vivid dreams and could remember many of them when I woke up. Some of those, I still remember vaguely, but by 1996, it was more unusual for me to remember anything when I awoke. In 1996, I was standing in some place; my mind interpreted it as a warehouse. It was dark there, except for one overhead light where I was standing. There was a small table, just a basic worktable, grey metal at the edge of the light. I was speaking to people I could not see, about something I don't remember clearly. What I did remember when I awoke was that we discussed the Library of Alexandria. I recalled being told that the Library of Alexandria was not lost; that it still existed and that we would find it when the time came.<sup>21</sup>

While it is true that I had seen Carl Sagan's Cosmos episode featuring his distorted story of the destruction of the Library of Alexandria and the death of Hypatia of Alexandria many times,<sup>22</sup> thinking about it immediately afterward, I determined that I had no reason to think about the Library at that time and certainly no reason to dream about it; I had not thought about it in a very long time before that dream, nor had I watched Cosmos in many years.

The destruction of the Library of Congress and the major world university libraries would be a comparable event to the loss of the Libraries of Alexandria, Pergamum, and Celsus, and is a factor and feature in any societal collapse following a worldwide catastrophic event.<sup>23</sup> This was especially true in our fears of nuclear holocaust prior to the internet and modern mass data storage; that the knowledge of civilization would be lost to those who survived.

- ❖ This account is stated matter-of-factly; I have no desire to follow the esotericism and/or channeled or received ancient knowledge ways of Crowley, Blavatsky, or John Smith or a thousand others of their ilk. It's not my business, it's not useful here. If you claim to be receiving knowledge and inspiration from extraterrestrial or extra-dimensional sources (both terms are used in the broadest sense), people will stop hearing you seriously, you will be heard from the kid's table with amusement – even if it is perfectly clear that you are correct in whatever you are saying. Humanity only currently accepts knowledge, suggestion and inspiration from humanity. Thus the Bible and other ancient holy books have fallen far in the public view as their ancient authors claimed to have inspiration and power from transcendent beings in the universe.

*“No serious futurist deals in prediction. These are left for television oracles and newspaper astrologers.”*

– Alvin Toffler as quoted by Courtney Subramanian, “Alvin Toffler: What he got right – and wrong,” BBC, July 1, 2016, following his passing in June 2016

---

**SUNRISE:** The Sun rises every morning. It has, as far as we can tell, risen every morning for billions of years; however long this spinning rock or its asteroid predecessors spun in orbit, the Sun has risen. The Sun was rising (and setting) long before humans or their ancestors or *any form of life on Earth*, were present to *look*.

There are only two possible results each day; either the sun rises or it does not. While there are arguably a lot of stellar mechanics involved, it basically comes down to heads or tails from the Earth point of view. Even if the sun rose, but barely cleared the horizon (as in some extreme latitudes), or rose on the wrong side of the bed, for most of the Earth (except the poles) the Sun rises or it does not. The cosmic coin-flip has come up heads every day for 4.6 billion years.

Who or what was or is *looking* such that the ghost probabilities continually collapse into ‘heads’ results, not only here, but across the trillions of planets of the expanding universe, each ‘day’? Of course, the suggested answer runs to all sorts of possibilities and ideas that science does not embrace, and thus belongs in the realms of philosophy and/or religion, but is not anywhere close to ‘proof’ of the existence of the Abrahamic God.

- ❖ For example, scientist have rejected generally and implicitly, the human consciousness explanation for the experiment with the two holes as untenable or unacceptable, and is thus an example of ‘quantum mysticism.’ However, they have generally failed to offer a better explanation. See Peek-a-Boo discussion, 2 Expansion, p. 893, *supra*.

Looking is the trait that life shares with the universe; evolution – at the risk of using teleological language – generally seems to drift toward greater sentience, sapience, all of which result in exponentially greater abilities to *look* at the universe, or at least, the environment in which the creature lives. The ‘purpose’ or ‘function’ of consciousness may be to ‘look’ at the universe.

**Prologue to Doggerel**

*Staring into the existential void as unblinking as I can<sup>26</sup>*

*I did not ask to be born, I did not ask to survive*

*I am not allowed to be un-born*

*My mother’s life would have been a lot better*

*had I not been born*

*If there was any ‘greater purpose’ to this living farce –*

*and GGDM is not it –*

*50+ years onward, I am thoroughly unimpressed with the results*

*That may be incredibly shortsighted*

*But that is humanity <sup>27</sup>*

\*\*\*

**End Game**

*There were times when I thought I was great and leading the intellectual charge.*

*There were times when I thought I was delusional and wasting my time,*

*but at least I wasn’t wasting anyone else’s time or money.*

*In the end, I thought only that this was the one thing I had left that I could accomplish.<sup>28</sup>*

*It takes as long as it takes, but I don’t have even a fraction of forever.<sup>29</sup>*

*I am an evolutionary dead end.<sup>30</sup>*

\*\*\*

**Epilogue**

*Someday, GGDM will be a work attributed to an unknown ancient writer.<sup>31</sup>*

*Or probably not. What do we know about the best seller list of 1000 B.C.?*

## Endnotes.

<sup>1</sup> Commentary: Notice that Bertrand Russell is using the “what is an agnostic” discussion to answer the Why Not question independent of religion: “Why do you not do so?” is a long-winded version of the Why Not question. See Why Not discussion in 2 Disruption, p. 269, *supra*.

<sup>2</sup> Commentary: Male cats have no chivalric code; today I watched a young male suddenly attack another male from behind as he had turned to leave following an earlier stare-down confrontation over food dishes where the younger male had backed slightly away. There was no female present; the young male simply considers the heated cathouse, the food dish, and my porch as his territory and the other male was an intruder. Chivalric code is part of a worldview where heaven and earth, humans and animals were separated by divine sanction, it was an attempt to make humans not like animals – similar to religious promotion of the missionary position as the only proper, non-bestial sex for humans (because they thought that only humans copulate face to face, and all the other beasts do it the other way) – even though humans fight like animals, eat like animals, eliminate like animals, and breed like animals.

<sup>3</sup> Citation: “And even if the Astros receive the biggest punishment in baseball history, is it really going to stop teams from trying to cheat. There’s a reason why players privately believe that PED use is on a rise and the baseballs aren’t the only thing being juiced. ‘Why are the pitch stealing allegations a surprise to anyone?’ free agent infielder Trevor Plouffe tweeted. ‘Do you know the stakes involved? That’s why guys still get popped for PEDs. The reward outweighs the risk for many. That goes for organizations and players.’” – Bob Nightengale, “‘This tarnishes everything’: Astros cheating allegations have baseball world demanding punishment,” USA Today, November 14, 2019.

<sup>4</sup> Commentary: *Normal people*, if they found anyone injured in a fight and knocked unconscious, would call emergency medical assistance and try to help. Unless they were the criminal who did it, or Hollywood action heroes, who instead complain that they have to wait for someone to wake up so that they can continue the ‘interrogation.’ ☺

<sup>5</sup> Commentary: I worked on a civil liability case involving sex between a high school teacher and students. Despite being a worn-out fiction sub-trope of the older-younger trope (e.g., *Lolita* (1955) which became a generic term by the 1970s) and the subject of a popular song (The Rolling Stones, “Don’t Stand So Close to Me” (1980)), it is strictly illegal and consent is irrelevant, both because of the age of consent and because of the public authority and responsibility of school teachers over students (even when the student is over the age of consent). The perp and his pal were sentenced to jail.

<sup>6</sup> Commentary: The fact that R.N. Smart’s “benevolent world exploder” – a euphemism for a moral supreme being (if not God or a Creator) – has not exploded this world, is only evidence of the fact that the benevolent world exploder has not exploded the world. It strongly suggests, however, that no such entity exists and/or that we have vastly misunderstood the whole premise on which our religion is based, that we have been making affirmative statements about things we cannot possibly know.

- ✓ “And this abdication of the responsibility to understand reality, this utter dismissal of reality in favor of pretty stories and profound-sounding deepities, this casual shrugging off of the question ‘What is real?’ as if it were irrelevant trivia, is probably the thing I find most maddening about religious belief.” – Greta Christina (blog), “Deepities On Parade: ‘Oh My God’ Reviewed” (movie review), November 27, 2009.

<sup>7</sup> Commentary: How to lose an audience: I was an original fan of the Andromeda television series, I watched it every week for at least the first two seasons from when it began airing in the U.S. At some point early in the third season, the series went off the rails, the episodes became asinine, with unbearable attempts at slapstick comedy and the story arc seemed to fall into the black hole. I understood from reading online at the time that Kevin Sorbo wanted the series to be lighter, wanted it more comedic, wanted less doom and gloom, less serious story arc (more like his Hercules series, I guess). Some fans apparently disliked his character, Dylan Hunt; I did not dislike Dylan Hunt, but I did dislike Kevin Sorbo and thought that his action-hero ego was destroying the program. They lost me as a viewer in the middle of the third season.

- ✓ A television or film series, or even just a movie, has a contract with the audience. The people who became Andromeda fans were people who liked serious New Wave sci-fi, and doom and gloom, and a big story arc; switching to lighter, comedic, standalone episodes, and silliness in the third season lost the audience.
- ✓ The film *Passengers* (2016) made this mistake; critics called it a science-fiction story that turns into a rom-com that dodges all of the ethical issues it raises.
- ✓ I did later watch Andromeda sporadically in the last two seasons, but I had lost the thread and the series had evolved into a bizarre dark science-fantasy story.

<sup>8</sup> **Commentary:** Go ahead, call me an ‘east coast urban elitist globalist’ and ignore me. I wear that badge of honor like any red blooded hoop’n hollering American deplorable does. But I won’t share the basket space with you.

<sup>9</sup> **Commentary:** It is amazing how utterly self-centered humanity was in those Victorian days ... wait ... nothing has changed really in the last 150 years (e.g., see David Benatar feature quote, 3 Diplomacy, p. 1134, *supra*)! The arguments of Campbell are naught but a desperate attempt to maintain a human-centric universe where the Christian God is a doting parent and the Europeans are his favorite children. *Argument from design* that everything was made for humans is the ultimate expression of human conceit.

- ✓ Compare George Campbell’s argument in 1867 to Pangloss in Voltaire’s *Candide* (1759). This oddly demonstrates that Pangloss wasn’t an outlandish fictional character, but rather representative of an actual strain of thought in Europe.

<sup>10</sup> **Commentary:** Do you ever get tired of breathing? Ok, give your chest a rest for a few minutes. You can’t, of course. Thinking is almost as imperative for humans as breathing, the two are connected both through the rhythm of the most primitive part of your brain and the fact that it supplies the brain with blood and energy and carries off waste. It is thus that someone like myself can never understand not thinking which is akin to suicide.

<sup>11</sup> **Citation:** e.g., “Sociology is a cult based around the intellectual pseudoscience of studying society. Originally popular with old bearded men who smoke pipes whilst reclining in arm-chairs, it has now managed to find a younger generation of converts thanks to its curricular introduction into sixth-form colleges and universities. Synonymous with Scientology, Sociology uses various methods of empirical investigation and critical analysis to develop and refine a body of knowledge and theory about human social activity.” – from the *Uncyclopedia*.

- ✓ This was quoted in both the RationalWiki article, “Sociology” and by Rose Eveleth in “Whatever Happened to Sociologists?” *SmartNews* (on smithsonianmag.org), November 6, 2012.

<sup>12</sup> **Commentary:** My first gaming convention was OrcCon 12, about two months before I went to Origins ‘89 in LA. I was 20 years old, I was in gaming heaven for two three-day weekends. A group of 10 Marines and Sailors rented a hotel room for 3 people, had an extra bed rolled in, and slept and showered in shifts; everyone brought their own sleeping bag, the closets and corners were piled high with luggage and game stuff. Two years later, Origins ‘91 in Atlanta, run concurrently with ACE (Atlanta Comics Expo), felt dull and lifeless in comparison. Likewise, my first GenCon was two years before it moved from Milwaukee to Indianapolis, and it was fantastic; I went again the next year, the last year in Milwaukee, and GenCon then felt absurd, overblown, and a gigantic hassle, not fun.

<sup>13</sup> **Commentary:** There is an *interesting intersection* of ‘dumbing down’ and the Dunning-Kruger effect that shows the widespread effects of dumbing-down in politics, media, and schools: Everything is much larger and more complicated and grander or sublime than most people realize, and I have tried very much to emphasize this in GGDM. It is what I have spent my life figuring out when learning to see dynamics and wholisms. Part of the problem is the increase of dumbing-down proportional to the growing scale and complexity of our world; in the Dunning-Kruger effect on a mass scale, people do not know the incompetence of their understanding of the world, in fact, they don’t even know to ask the questions that would reveal to them their own incompetence of understanding the world.

<sup>14</sup> **Commentary:** As to Gatto’s theories, I have not read his books, but have secondary knowledge (not to mention that the concept of ‘dumbing down’ is his permanent mark on our culture, though the term was used by filmmakers in the 1930s), and I guess it comes down to what you think is the purpose of public education and the responsibility of parents? And that is exactly what he challenges. I have heard in the past that the purpose of public education (and colleges) is to create a universal level of life skills – basic literacy, knowledge of our culture, work problem solving, and math skills – in the population and to prepare people for the workforce.

On some level, this would be contrary to Gatto’s more radical proposals, as English 17<sup>th</sup> to 19<sup>th</sup> century pedagogy which sought to standardize English (replacing rhetoric teaching with grammar and composition) and accommodate children of immigrants into English culture, required children to become used to authority and control, to memorize and be tested in retention of facts, to become empirical (again, I return to the opening paragraphs of Charles Dickens’ *Hard Times* (1854), see discussion of Lancastrian education, *Gradgrind*, 1 Colleges, p. 463, *supra*), to continue the nation and culture, and this pedagogy was inherited by the United States which had many of the same problems to solve. English pedagogy and Gatto’s objections represent opposite ends of the spectrum.

- ✓ Gatto takes a similar dim view of the purpose of the current state education systems that I take of the universe without intrinsic meaning, that I take of humanity, and that I take of the petty entropy we experience every day, as expressed here and there in GGDM, *supra*. Has anyone called him a wacko? Probably. But his publishers love him at least, because he has sold lots of copies of his books. I am not here selling.

<sup>15</sup> Commentary: Ultimately, in the end, in a reasonably free society, many or most people get what they really want (within existential limits); I wanted to be left alone, to think, to be in my own zone, to exit in my own time. That is what I got. I don't mind too much, but there are tradeoffs always.

<sup>16</sup> Commentary: Dr. Turzanski (a Hungarian holocaust survivor), my high school astronomy teacher (his son Stanislaw, "Stan the Sun Man" was in my class) and the only one who could operate the school planetarium, whom I admired greatly in my youth, could easily have squashed my belief in UFOs but chose not to do so. We watched Carl Sagan Cosmos episodes on different occasions during the school year, and most certainly watched the ones where he references and discusses UFOs and the possibility of technological alien intelligences. Whatever his personal beliefs, having embraced Cosmos as teaching aids (and being trained in empiricism and science), Doc Turzanski could not and would not say directly to me or the class that UFOs don't exist. Whether UFOs exist or not, there was perhaps more value in letting youthful fancy run wild about such things (even as I look back with some embarrassment 35 years later), and I recall encountering a similar opinion in a rhetorical theory essay that I read much later at Duquesne University which criticized education of youth that emphasized memorization of facts, suggesting that youth being more prone to physical activity and imagination, should be taught dance, sport, music, rhetoric and oratory, art, literature and such as more appropriate to their interests.

<sup>17</sup> Commentary: I have no musical ability, but I *grok* the silence.

<sup>18</sup> Commentary: I was also a post-hippy wannabe Free Love anarchist in my youth, or thought I was and tried to be. It turned out to be irrelevant in the end – your opinion matters little if you weren't invited to the party. Now, I no longer care. Because if I did, I'd probably be angry about it. So you have a choice. To care or not care, to be angry or not (see also Programming Dilemma, 1 Culture, p. 352, *supra*). You eventually find out that it didn't matter in the end, that the things you argued about in your youth seem petty, pointless in hindsight. And when you grow too tired to be angry, you take your jagged little bitterness pills and no longer care.

<sup>19</sup> Commentary: Take for example the usual spam email that says something like, there is a cure for disease X and Big Pharma/Big Government is hiding it because they are making billions off selling medicines. Is it possible? Yes, it's also possible that the sun won't rise tomorrow; I can't imagine how, but it is possible that the sun won't rise tomorrow.

- ✓ It's also possible that the Earth has been visited by extraterrestrials and my stupid uncle – possibly the only thing on Earth dumber than a cow – might even have been abducted by one of them for study (I think he would have liked it).
- ✓ And it's also possible that the NFL is being destroyed by global liberals and that the Catholic Church needs illegal immigrants to survive. Both charges were made during the 2016 U.S. Presidential Election.

But this is the kernel of hype, paranoia and conspiracy theories (and even literal religious beliefs in any sort of supreme being(s)); the pitch is phrased in a way that because it's possible – because your mind cannot immediately dismiss the assertion as impossible, lacking evidence or commitment – then it must or might be true because they are saying so. When someone makes claims as such, the burden is on them to provide evidence; ask to see the evidence (see Hitchens' Razor: "What can be asserted without evidence can be dismissed without evidence"). The really good cons will have some scant evidence (sort of like religious arguments), which should still be treated critically. The vast majority will be found to be making statements about things they cannot possibly know or defend.

<sup>20</sup> Commentary: The UFO community understood the television program Project Blue Book (aka Project UFO, 1978-1979) as an assault on their beliefs and an attempt to discredit and explain away UFOs (a logical extension of the recommendations of the Robertson Panel, using television programming to suppress the UFO groups). I remember the program, but I was not a regular TV viewer then, I saw perhaps half a dozen scattered episodes. But such is the nature of their beliefs that the UFO community reacted in generally the same way as fundamentalist Christianity did when presented with archeological evidence of the historical inaccuracy of the Bible or of their creation story.

- ✓ In my opinion, the best approach to UFOs is an agnostic one. No one can say with absolute certainty whether aliens have visited the Earth in previous decades of the 20<sup>th</sup> Century or whether humans have encountered or communicated with them. No one can, with seriousness, dismiss it with absolute certainty either, although there is plenty of room for suspicion in what UFO reports indicate about our inflated sense of self-importance in the universe. Simply put, whether the discussion is UFOs or God (either separately or if as some believe, they are the same or connected), the evidence is so frustratingly inconclusive, sporadic, and human-centric that it is hard to take the matter seriously and certainly does not raise to any level of fact (other than that people believe or have reported sightings, as a mystic reports encounters with the divine or visiting other planes of existence in dreams). It is difficult to find value in even discussing it.

<sup>21</sup> Commentary: The other great ancient Library at Pergamum may have been looted by Mark Anthony to restock the Library of Alexandria thus placing most of the written works of the classical ancient world in one place where they were destroyed. The Library also borrowed original works from the Athens Archive and never returned them.

<sup>22</sup> Commentary: The movie *Agora*, though it follows faithfully Sagan’s whole argument in *Cosmos* regarding the destruction of the Library and the death of Hypatia in 415 A.D., does mention that the Library in Hypatia’s time was but a remnant of the vast Library, which had suffered disasters and partial destruction in previous times and was not rebuilt. Sagan in *Cosmos* makes it seem like the destruction of the Library of Alexandria was done all at once following the death of Hypatia (in the movie, the destruction occurs and she is killed much later). The movie drives home the point when Hypatia calls her small improvised classroom in her quarters with the remaining scrolls, her Library. Critics of the movie however, claim that the “library” where Hypatia taught was not in any way related to the original Library of Alexandria, of which there is no record past 260 A.D. and that the massive shelves of scrolls that were burnt by the mobs in the movie probably weren’t present in 415 A.D.

In this film version of the story, the last repository of the pagan knowledge of the ancient world was sacrificed to the fanatical mob to retain control and loyalty of the major port city in Egypt to the Roman Empire. The repository of history was sacrificed by Emperor Theodosius I (ruled 379 to 395 A.D., last to rule both West and East) in 391, in line with his accommodationist policies, to the needs of the moment – desperately trying to keep the two halves of the Roman Empire together. The wobbly Roman Empire could not afford another rebellion led by fanatics.

<sup>23</sup> Commentary: The U.S. Copyright Office is a function of the Library of Congress. Filing for a copyright requires depositing a copy. Though I do not know statistically, I suspect that a large portion of works copyrighted are not published or have limited publication (like GGDM), thus the only copy of many works exists not in university libraries but at the U.S. Copyright Office, wherever they keep the copies.

✓ How many members of Congress visit the Library of Congress in a year?

<sup>24</sup> Commentary: In the end, it only matters what the next generation thinks.

<sup>25</sup> Commentary: Sir Isaac Newton and Dame Hypatia are probably happily married and living in a distant reality.

<sup>26</sup> Commentary: We have a tendency to squint and look away from certain parts of our civilization and history. We need to get over that in order to gain a complete (or better) understanding of our civilization. GGDM provides a framework in which the participants can avoid squinting and looking away from the uncomfortable.

<sup>27</sup> Commentary: I might actually be flattered that many will disagree with me (probably on faith) and some might actually consider me dangerous (those types should know as they are dangerous too). Label me a lunatic. Go ahead, make your arguments, prove me wrong. Come out into the cold. Look to those places where you dare not look.

<sup>28</sup> Commentary: Perhaps in the sense of an ‘intellectual William “Burro” Schmidt.’ What started as a two-page game expansion has become a *magnum opus* of human civilization, and, like Schmidt’s narrowing tunnel, I sense that I am running out of time – I can feel, for example, a cognitive decline already from my youth, a constriction of focus and possibilities. And without computers and the internet, this project may well have taken 42 years to ‘tunnel’ through civilization. William “Burro” Schmidt demonstrated that one can work on a project for a lifetime and produce only a curious, but useless and meaningless result, then just pack up and wander away into history.

<sup>29</sup> Commentary: Edward Gibbon’s famous *magnum opus*, took 17 years to write and the rest of his life to defend. A like argument could be made for Darwin’s major work. The literary enormity of *War and Peace* seems to have been written in a mere 6 or 7 years. Jared Diamond’s *Guns, Germs and Steel* (1997) apparently took 25 years to come to fruition – he offhandedly refers to the period between Yali’s question and the publication of the book as being 25 years. All are much greater works by much greater intellects than I. *Und so weiter.*

<sup>30</sup> Commentary: Karoshi is an honorable way to die. Unfortunately, I have not that kind of honor. Ants are honorable creatures. Living longer doesn’t mean I’ll get more done or do a better job. To die sooner from working too hard, and honestly, trying to do what needs done, is better than to live long and prosper. But I am a slave to evolution. I am the impediment to the things I need to accomplish. I need to overcome myself.

<sup>31</sup> Citation: “How could you possibly know that!” the alien exclaimed as meteors begin striking the ship. “Because I am an archaeologist from the future and I dug you up!” Riversong replied [ship shaking from impacts] “See you in 400 years!”

## Keijijōgaku

*Our ancient ancestors observed that “things” existed in three categories. There were things that were alive (life), there were things that were not alive and had not been previously (inanimate objects), and then there were things that were not alive now, but had been previously (dead). There was clearly something invisible and untouchable, but very crucial that the first had that the last had lost, some essence that slipped away quietly at the moment of death.*

*This has been the fundamental and axiomatic concept of life and death among humanity from time immemorial; that something is present in the living that is not present in inanimate matter and that was present in the dead but has departed. Most also imagine, through their religions and belief systems that the thing that departs upon death is not dissipated, but remains and passes to some other place reserved for departed essences, where it retains the personality, memories and burdens of the deceased. The modern form of the idea has been codified in popular visual entertainment, in children’s cartoons and adult horror movies, and evidence suggests that burial rites and ideas of the afterlife have been in human culture for at least the last 200,000 years.*

*The fundamental equation always works in only one direction, that something is subtracted from the living to make the dead. Fiction may provide that the equation can work in the other direction, but such is not known to occur or to have ever occurred in the combined experience of humanity. Further, as humanity has no control over the creation of life or the moment of death; that this essence has not thus far submitted to empirical study, or even appeared to our senses, it has uniformly historically been regarded as something beyond humanity, something from the realms of the gods or God.*

*Eighty thousand humans and countless other living creatures were instantly incinerated in the flash at Hiroshima on August 6, 1945. In milliseconds or less, bodies disappeared in uncontrolled heat and light that approximates the temperatures found on the surface of the Sun. Another flash followed at Nagasaki three days later.*

*No one has ever known the amount of time it actually takes for the essence of life to depart a body; but most people assume – without the slightest substantiation – that the process happens rather instantaneously at the moment of death – a letting go or losing the grip on life. Most would also agree that regular light bulbs come on instantaneously or nearly so the moment a light switch is flipped. Thus an idea can be formed of the amount of time that appears to be instantaneous and momentary to a human observer.*

*What happens or what is the difference then, if the body of living matter is destroyed in a millisecond or less, less time possibly than that “instant” required for the essence to depart or dissipate from the body in the normal manner of death? What happens if it is the body that departs the essence rather than the essence that departs the body at the moment of death?*

### Appendix AGE – Aging Out

Aging-out mechanics represent ‘automatic entropic effects’ built into the game, triggered by the end of processing of each Regular Turn. There are five ‘resources’ in the game that are affected by aging-out processes: Acts (Powerstrip), Resource Points (Treasury), Aspects (Public Space), Enlightenment (Colleges) and Special Operations Missions (Galactic Space).

- **Acts:** There is a 15% chance at the end of each Regular Turn, before new Acts are placed that each remaining Act on the Powerstrip will ‘age-out’ as political will dissipates, opportunities are lost and political theatre distraction sets in... <sup>1</sup>
  - Scenes never ‘age-out.’ However, all Scenes on stars and planets will be lost if the star or planet is no longer on any position’s Public Space at the end of any Regular Turn.<sup>2</sup>
- **Resource Points:** Resources don’t last forever; you have 50 apples today, a month from now you will have 50 rotten apples crawling with bugs. While resources are accumulated as ‘points’ in an imaginary pool called the Treasury, at the end of each Regular Turn, between 10% and 30% of RPs *in the Treasury* will be automatically lost due to various general entropic effects (this is not a Concierge Intervention). Five percent will be added to the loss for each disrupted Government Title at the end of the Regular Turn.<sup>3</sup>
  - RPs on Cargo Ships do not ‘age-out’ so it is possible to end-run the aging process by storing RPs on Cargo Ships. Presumably, they represent hard RPs, not soft RPs, however, RPs loaded onto Cargo Ships become immediately less useful (e.g., you cannot use them to fund Technological Research or recruit Special Operations Missions). If this becomes an abuse in the game (and players should never seek to abuse the mechanics of the game), there are ways of dealing with it in-game, e.g., Interventions.
- **Aspects:** The primary quality of Aspects are that they are momentary, transitory; the mood changes, values recede from the forefront, times change. As a result, Aspects are not permanent. Aspect pieces have a light side and a ‘dark side’; on the turn they are placed, they are placed light side up (or occasionally, the dark side up, at the judgment of the Concierge). At the end of each Regular Turn, the Aspects that started the turn with the light side up are flipped to the dark side, and Aspects that started the turn with the dark side showing are removed at the end of the Regular Turn. ... Thus, Aspects age off the Public Spaces if they are not removed before then due to other causes.<sup>4</sup>
  - Each time the Census Power is activated there is a 30% chance that each Proficiency will be eliminated from the Public Space due to turnover of generations. ... Each time a Government Title becomes disrupted or changes, there is a 20% chance that each Proficiency on the Public Space will be eliminated.<sup>5</sup>
- **Enlightenment:** Immediately prior to Faculty generation (i.e. College Tries) each Regular Turn (after the operation of Institutes and Enlightenment), half of the Faculties in each

<sup>1</sup> See Managing Act, 3 The Sidereal Stage, p. 123.

<sup>2</sup> See Lost Scenes, 3 The Sidereal Stage, p. 123.

<sup>3</sup> See Ageing Resources, 2 Taxation & Census, p.

<sup>4</sup> See Between the Candle and the Stars, 2 Culture, pp 366-367.

<sup>5</sup> See And the Cradle Will Rock, 3 Culture, p. 382.

College's 'class' will retire (i.e. 'age-out' like RPs in the Treasury). Faculties in a College's 'class' are not immediately lost if the College's Host Colony is Conquered or if the College ceases to function or closes for any reason, but of course, without replenishment, they will eventually dwindle away, losing half each turn. Or put another way, the half-life of a Faculty is one Regular Turn if not used.<sup>6</sup>

- Unused Faculties will be returned to the Classes at the end of the turn, before aging is processed. Faculties committed to Combat Rounds, used or not, will not be returned at the end of the Round or at the end of the Combat.<sup>7</sup>
- **Special Operations Missions:** At the end of each Regular Turn after a Mission (of either type) is either first Recruited or initially Lodged (i.e., not on the initial turn it is Recruited or Lodged), at the end of the Regular Turn there is a 30% chance that each Mission (whether Lodged or not) will be lost as circumstances change, opportunities pass, loyalties change, places change, security upgrades, and agents quit, defect, die or are compromised. This aging process is independent of any losses caused by successful Counter-Operations (see Spy vs. Spy, 3 Special Operations, p. 1323), failure to Lodge, or use of Missions in Black-ops at the location where the Mission is Lodged.<sup>8</sup>
  - This is a matter of game-mechanical timing. A Mission that is Recruited cannot be Lodged on the same Regular Turn; the position must wait until the next Regular Turn to attempt to Lodge the Mission. Thus, Recruited Missions should not 'age-out' before an attempt can be made to Lodge them. And a Lodged Mission should not 'age-out' before the position has at least one opportunity to use it (however, see Treason, 3 Special Operations, p. 1310).<sup>9</sup>
  - Like Special Operations Missions, Counter Operations Missions 'age-out' at the end of each Regular Turn; there is a 50% chance that each Counter Operations Mission will be lost at the end of each Regular Turn. Unlike Special Operations Missions, Counter Operations Missions are not 'expended' or lost during the defense against any operation.<sup>10</sup>

**Appendix ART – Articles of Incorporation Examples****Sample 1 – Articles of Incorporation for Broadcasting Corporation**

The Confederacy will transfer to the Big Broadcasting Corporation (BBC) the orbital Tachyon Virtu Module (TV Module) located at the Capital Colony, an expensive Technological Device which broadcasts real-time, instantaneous news and information to planets within 50 movement of the Capital Colony which have been equipped with the proper receivers. Additionally, The Confederacy will build a network of proper orbital receivers on all colonies including the Capital Colony (cost, Technological Devices, 5 RPs and a Construction Power Activation each), and will support the BBC with 1 RP per turn from the Treasury. Receivers must be built at all new colonies or newly Converted colonies.

In return, The Confederacy receives one randomly determined Communication, Education, Equity, Nationhood, or Spirit Proficiency each Regular Turn for every 200 Friendly or Naturalized population reached by the BBC. The Proficiencies received will be randomly placed in an open available Monad on the Public Space. The Capital Colony is designated the Host Colony for BBC. The Articles of Incorporation expire every three Regular Turns.

**Example Notes:** This requires a large up-front investment by The Confederacy, for the Technological Device, and all of the receivers, could require hundreds of RPs, and perhaps a dozen Commerce & Construction Power Activations, plus having to obtain a Patent and build the TV Module, before the Corporation. Conversely, the ability to gain free Proficiencies each Regular Turn is priceless, especially in Culture Power activation savings.

- ✓ The Corporation functions as one or more Culture Power Activations for the purpose of Perfecting Proficiencies, a non-location specific Power Activation which cannot fail due to inactive Constructural Elements (see 1 Corporations, p. 1248 and 3 Culture, p. 381).
- ✓ Note that while Culture Power Activation for the purpose of Perfect Proficiencies is non-locational, the Corporation as described here is sufficiently location specific to function.

The BBC would cease to operate, however, if the TV Module is destroyed (e.g. in a Special Operations Black-Op or perhaps a Strike). The Concierge may suspend the BBC, or the position might not renew it if this happens and there could be Interventions at the colonies when instantaneous real-time communication from the Homeworld suddenly cease.

**Sample 2 – Treaty for receipt of BBC signals.**

This Treaty by and between The Confederacy, owner of the BBC, and Catspaw, is an agreement by which the Catspaw can receive BBC signals. The Confederacy hereby provides technical information to Catspaw sufficient to build a TV receiver at Dog IV, a Converted Colony of the Native Population Type of The Confederacy that is owned by Catspaw, and the Concierge will immediately remove 10 RPs from Catspaw's Treasury upon Catspaw's activation of the Diplomacy Power to Accept Treaty to cover the build cost of the receiver. Catspaw will begin receiving the benefits of this Treaty in the form of one free Communications Proficiency per Regular Turn (a savings in Culture Power activations, also supporting use of Writs) placed adjacent to the Dog IV colony at the end of Catspaw's Regular Turn processing.

**Example Notes:** This Treaty does not make the BBC a MegaCorporation. Catspaw (a position) does not gain any ownership in the BBC, and is only subscribing to receive the services. The game mechanical function of the Treaty (see Trick or Treaties, 1 Diplomacy, p. 1104) is the one-time removal of 10 RPs by the Concierge and the automatic receipt of a Communication Proficiency by Catspaw each Regular Turn. To benefit, Catspaw has to insure there is an open Monad to receive the Proficiency as specified and *protect the orbital receiver*. What does The Confederacy gain out of this? Who knows? It may be part of a larger agreement, concession of a planet or system for colonization, or a one-time delivery of RPs to a

Confederacy colony all of which are strictly beyond the bounds of a Treaty in GGDM terms. Catspaw on the other hand may be attempting Reverse Engineering or Special Operations.

### **Sample 3** – Articles of Incorporation for Larry, Curly & Mo Cargo MegaCorporation

The Larri-Mor-ons, Curly Quadrant (CurlyQ) and the Big Mo (3 positions) issue these Articles of Incorporation to form the Larry, Curly & Mo Cargo MegaCorporation. All three positions agree to automatically allow the Cargo Ship described in these Articles of Incorporation to Unload RPs only at their specified colonies. The Larri-Mor-ons for their part will supply one Cargo Ship of the capacity to carry 20 RPs and the ability to move between the three designated colonies in one jump from each colony to the next. The colonies agree to resupply and protect the Cargo Ship at each stop. Larri-Mor-ons' Slap Stick II colony is designated the Host Colony for the MegaCorporation.

- ✓ Said Cargo Ship will proceed empty from Larri-Mor-ons colony to the CurlyQ colony at Quadrant 51. There it will Load 20 RPs (enhanced value), which CurlyQ will have reserved a sufficient amount in the Treasury for that purpose (less than 20 RPs), and the Cargo Ship will then proceed to Big Mo colony at Spade III.
- ✓ At Spade III, the Cargo Ship will Unload 10 RPs of the 20 CurlyQ RPs for a fixed enhanced value of 15 RPs added to the Big Mo colony.
- ✓ The Cargo Ship will then load 10 Big Mo RPs (enhanced value) from the Spade III colony and depart with 20 RPs cargo for the Larri-Mor-ons colony at Slap Stick II, where it will unload 20 RPs.

The Cargo Ship will then return to the CurlyQ colony at Quadrant 51 where it will begin the route again. The movement of the Cargo Ship is keyed to Larri-Mor-ons' Regular Turn orders.

**Example Notes:** The Larri-Mor-ons provide a Cargo Ship to receive 20 enhanced value RPs at Slap Stick II every three Regular Turns; to take advantage of this, the Larri-Mor-ons must be ready to activate the Construction Power at Slap Stick II on the Unloading turns or the RPs are wasted.

- ✓ No Power Activations would be used to move, load or unload the Cargo Ship as that is the function of the Corporation (see Corporation Games, 1 Corporations, p. 1243); it would occur automatically per the program.

But they are not giving up any RPs or giving any RPs to their partners to get it. Moving RPs to Slap Stick II would require a Cargo Ship anyway and multiple Power Activations.

Big Mo gets 15 RPs at Spade III colony every three Regular Turns for free, but has to load 10 RPs enhanced value to the Cargo Ship which will take a lesser amount from the Treasury. Maybe Big Mo is exploiting the Cargo Ship for a Special Operation? Or maybe there is a side deal between CurlyQ and Big Mo? The Concierge will not judge or prevent an 'unfair' MegaCorporation arrangement.

CurlyQ gives up enough from the Treasury and against Quadrant 51 Colony's GDP limit once every three Regular Turns to load 20 RPs enhanced value on the Cargo Ship, and receives nothing in return via the MegaCorporation. Why would they agree to this? MegaCorporations might be created for many reasons, CurlyQ might be paying tribute or war reparations (e.g., France in 1870, Germany in 1919), or may be subsidizing allies e.g., the English subsidized the Prussians during the Seven Years War to counterbalance France, Russia and the Austrian Habsburgs on the Continent while they won a global colonial empire in India, North America and Africa.

As this MegaCorporation consists of only one Cargo Ship making rounds to three colonies, it would cease to function if the Cargo Ship in question is destroyed. The MegaCorporation would also cease to function if there were no RPs in the Treasury when needed or if any one of the three colonies were Conquered or destroyed. "It's all fun and games until someone loses an eye!" my mother used to say.

<sup>1</sup> **Commentary:** “Queer” as in strange, different, unusual, not a reference to male homosexuals. This is an example of a not-quite-opposite ‘dark side’ of an Aspect, as discussed in 2 Culture, pp. 366-367 – for some people, being quiet is queer, and for others, experiencing quiet morphs into queer feeling (i.e. eerie silence).

### Appendix CEX – Combat Example

**Introduction:** Avaral Rex is at war with SPQR. SPQR has a major Naturalized Colony, Colonia Londinium, at Caledonia II, which has a 100 RPs of 2<sup>nd</sup> Era Fighters and 30 RPs of 1<sup>st</sup> Era Ship Missiles, and SPQR also has one 2<sup>nd</sup> Era Warship in the Caledonia II system at the start of the war. The Caledonia system is on Combat Alert in full 36-hour Highland dress.

- ✓ History records that the war between Avaral Rex and SPQR had to do with balls, or lost meatballs, or something covered with cheese. SPQR calls the Rex guys ‘lizards’ and the Rex calls SPQR ‘skirt guys.’ And the war begins...

An Avaral Rex Scout Ship arrives in the system (which it previously explored) to see how many SPQR colonies and ships are in the system. Upon arrival, the Scout observes one colony and one warship defending the colony. The Avaral Rex brain trust then decides immediately to launch two fleets toward Lima. The First Fleet, a small fleet, has the task of clearing away the sole defending warship, and will arrive in one jump, while the Second Fleet, of fifteen ships, will arrive in two Regular Turns to attack the colony.

Meanwhile, the SPQR commanders decide to use their Combat Alert to initiate combat (before their next Regular Turn), so as to eliminate the Scout and keep it from penetrating further into their territory on Avaral Rex’s next turn.

**Opening Round:** Upon informing the Concierge that they are initiating a Ship Combat against the Scout, the Concierge informs Avaral Rex that their Scout is being attacked. Avaral Rex informs the Concierge that their Scout will retreat, however, the attacker gets one attack before the Scout can attempt to retreat (which it has a 50% chance) at the end of the Combat Round. The orders submitted by SPQR upon initiating the combat do not include the Fighters, so SPQR has opted to take a shot with their warship.

- ✓ SPQR may be hiding their colony fighters, if they attack with them, they will be revealed. Avaral Rex’ Scout would only see the colony, not the fighters which are enhancements, by simple observation, see ABBA Arrival 2 Information, p. 1340.

The SPQR warship is a 2<sup>nd</sup> Era Warship, the Avaral Rex Scout is a 1<sup>st</sup> Era non-warship. The basic chance of a 2<sup>nd</sup> Era Warship to hit is 50% (10% times 5 for the 2<sup>nd</sup> Era, see Firing Solution, 3 Combat, p. 978). The SPQR warship is 2<sup>nd</sup> Era, however, Avaral Rex is also a 2<sup>nd</sup> Era position and thus the non-warship Scout is treated as a 2<sup>nd</sup> Era target for purposes of combat (see Civilian Targets, 3 Combat, p. 978), so there are no shifts for Era differentials. However, the Scout ship is a non-warship, so the SPQR receives two offensive shifts, giving it a 70% chance of hitting the Scout. But Scouts are made for this kind of situation... and the Scout receives one Defensive Shift (see Scout’s Honor, 1 Expansion, p. 879 and Civilian Targets, 3 Combat, p. 978), bringing the chance to hit down to 60%.

The roll is made by the Concierge and the result is 43%, which being less than 60% means that the SPQR warship hit the Avaral Rex Scout and destroyed it (see A Hit, 3 Combat, p. 979). The Scout has no opportunity to retreat, as it would have had to survive to the end of the round to have a chance to retreat.

**The Battle of Caledonia II:** Regardless of the fate of the poor Avarar Rex Scout, the Avarar Rex First Fleet is *en-route* and cannot turn back or stop (see The FTL Missile, 2 Movement, p. 849) even if the brain trust felt remorseful. SPQR will have their next Regular Turn to prepare before they arrive, and during that turn, SPQR and transfers 30 RPs of 1<sup>st</sup> Era Ship Missiles from Caledonia II to the 2<sup>nd</sup> Era Warship guarding the colony (see Transfers, 3 Construction, p. 680).

- ✓ The transfer occurred at the beginning of SPQR's Regular Turn. The receiving Warship began the Regular Turn in the system and the Ship Missiles were already on the colony. *Id.* Because the transfer occurs at the beginning of the turn, the Ship Missiles cannot be constructed that turn. *Id.*, p. 680.

SPQR is unable, however, to put the system on Combat Alert again, as the Combat Power is activated elsewhere to initiate Combat Movement with other fleets. But SPQR is able to add enough Enlightenment to allow for two rerolls during the coming Combat (see Web of Night, *et seq.*, 2 Colleges, p. 477). The warship and colony both have an active Epistemological Constructural Element (see Skool Tyme, 2 Constructural Elements, p. 190) and thus can benefit from Enlightenment.

When the Avarar Rex First Fleet arrives at Caledonia, it consists of two 2<sup>nd</sup> Era Warships and two 1<sup>st</sup> Era Warships, facing the sole defender (4:1), the SPQR 2<sup>nd</sup> Era Warship. Because the Avarar Rex movement was initiated by use of the Combat Power, Avarar Rex can, and of course does, submit First Round Combat Orders shortly after confirming that there is still only one warship guarding the colony (see Run Away!, 1 Combat, p. 944). SPQR is informed by the Concierge that combat has been initiated and timely responds with its own Combat Orders (see Capoeira, 3 Combat, p. 970).

On the first combat round, of course, all Avarar Rex warships fire at the lone SPQR defender. None of the Avarar Rex warships have Ship Missiles or Fighters. The SPQR 2<sup>nd</sup> Era warship fires at one of the enemy 2<sup>nd</sup> Era warships, and launches all of its 1<sup>st</sup> Era Ship Missiles at the other Avarar Rex 2<sup>nd</sup> Era warship. The Fighter Component from Caledonia II, divides its sorties between the second Avarar Rex 2<sup>nd</sup> Era Warship (the one targeted by Ship Missiles) and one of the 1<sup>st</sup> Era Avarar Rex warships. The true odds are now 4:1 + Ship Missiles + Fighters.

- **Will You Marry Me?:** The Fighter attacks resolve first, then the warship attacks resolve simultaneously, and finally the Ship Missile attacks are resolved (see Combat Resolution, 3 Combat, p. 976).

The total size of the Caledonia II Fighter Component is 100 RPs, which is divided in half so that 50 RPs attacks each target. It is irrelevant in this situation which is resolved first. SPQR declares that Enlightenment will not be applied to Fighter Attacks (see Blacksheep, 2 Carriers & Fighters, p. 1054).

The fighter attack on the second Avarar Rex 2<sup>nd</sup> Era Warship will be resolved first. Resolution of the Fighter Attack starts with an Effectiveness die roll, and a 6 is rolled, which divided by 10 is converted into .6 (see Fighter Combat, 2 Carriers & Fighters, p. 1054) The 50 RPs of Fighters is then multiplied by .6 for a base chance of 30% to make a successful attack. Finally, the Era multiplier of 2.5 for 2<sup>nd</sup> Era Fighters (*Id.*) is applied raising the chance to of a successful attack to 75%. A roll is made and the

result is 62%, so the second Avaral Rex 2<sup>nd</sup> Era Warship is “engaged” by the Fighter Component.

The Effectiveness Roll against the Avaral Rex 1<sup>st</sup> Era Warship is .3, which yields a basic 15% chance to successfully attack the 1<sup>st</sup> Era Warship. When the Era multiplier of 2.5 is applied, the chance of a successful attack raises to 37.5%. Finally, the attacking Caledonia II Fighters receive one offensive shift due to the difference in Eras, raising the chance of a successful attack to 47.5% or 47%. The die roll is 45%, so the Caledonia II Fighters barely engage the Avaral Rex 1<sup>st</sup> Era Warship.

Immediately following the Fighter attacks the target Avaral Rex ships get their Close-in Defense Fire. The Avaral Rex 2<sup>nd</sup> Era Warship has a 25% chance (half of its normal chance to hit a 2<sup>nd</sup> Era Warship) of hitting each 10 RPs of attacking 2<sup>nd</sup> Era Fighters (see Tail of the Gunner, 2 Carriers & Fighters, p. 1059). The die is rolled five times, and the 2<sup>nd</sup> Era Warship obtains three Close in Defense Weaponry hits against the attacking SPQR 2<sup>nd</sup> Era Fighters. A 10 sided die is then rolled three times, with the results of 5, 2, and 1, so 8 RPs (16%) of the 50 RPs of Fighters attacking the 2<sup>nd</sup> Era Warship are destroyed while engaging the ship for one round (see Down in Flames, 2 Carriers & Fighters, p. 1059).

The Avaral Rex 1<sup>st</sup> Era Warship has a 10% chance of hitting the attacking Fighters with Close-in Defense Weaponry (normal 30% chance to hit for 1<sup>st</sup> Era Warships, Fighters receive one Era Defensive Shift, *before* the chance is divided in half, *Id.*). The 1<sup>st</sup> Era warship misses on all five rolls (vs. 50 RPs of Fighters) and does no damage to the attacking Fighters while being engaged for the round.

- Marital Disputes: The warships may now fire directly at each other, and as with the Fighter Component attacks, it really doesn’t matter what sequence they are resolved. The Avaral Rex 2<sup>nd</sup> Era Warships each have a 50% chance to hit the defending SPQR 2<sup>nd</sup> Era Warship, except that the Avaral Rex 2<sup>nd</sup> Era Warship that was engaged by the Fighters has a 30% less chance to hit due to being engaged by 2<sup>nd</sup> Era Fighters (see Engaged, 2 Carriers & Fighters, p. 1055). So the two Avaral Rex 2<sup>nd</sup> Era Warships attack at 50% and 20% chance to hit respectively. The first attacker rolls a 71% and the second attacker rolls a 36%, so both miss, with the second ship missing *only because* it was Engaged previously by Fighters!

The two 1<sup>st</sup> Era Avaral Rex warships each have a basic 20% chance to hit the SPQR 2<sup>nd</sup> Era Warship, which is the normal 30% basic chance to hit, minus 10% for the difference in Eras, firing at a higher Era target (see Combat Shifts, 3 Combat, p. 978). Additionally, the 1<sup>st</sup> Era Warship that was engaged by the Fighters has no chance to hit due to the 30% reduction and so cannot fire! The unengaged 1<sup>st</sup> Era Warship fires and rolls a 33%, narrowly missing the target.

The SPQR defending warship has a 50% chance to hit the target non-engaged 2<sup>nd</sup> Era Avaral Rex warship and rolls a 68%, missing the target. However, one Enlightenment is immediately used to force a reroll and the second roll is a 49%, narrowly hitting and destroying the target!

At this point, SPQR has lost 8 RPs of Fighters and Avaral Rex has lost one 2<sup>nd</sup> Era Warship to Enlightenment.

- I Want a Divorce!: Finally, last in the combat round, the 1<sup>st</sup> Era Ship Missile attack against the other, previously engaged 2<sup>nd</sup> Era Avarar Rex warship is resolved. Because the target ship was already engaged by Fighters earlier in the round, it does not get to fire Close-in Defense before being attacked by 30 RPs of 1<sup>st</sup> Era Ship Missiles (see Fire-and-Forget, 4 Carriers & Fighters, p. 1080). The Ship Missile attacks are resolved the same as Fighter attacks, therefore, the attack starts with an Effectiveness Roll. *Id.* The result of the roll on a ten-sided die is 8, which converts into  $.8 \times 30$  equals a 24% chance of hitting the target. The target is a 2<sup>nd</sup> Era Warship, so there is also an Era Defensive Shift applied, reducing the chance to hit to 14%. The die is rolled for the Ship Missile attack and the amazing result...a 12% is rolled, so that the Ship Missiles successfully attack the target. Because the target was previously engaged by Fighters, the second attack is a hit and the second Avarar Rex 2<sup>nd</sup> Era warship is destroyed.
- Divorce Decree: The Avarar Rex lizard-brain trust is stunned by this unfortunate turn of events. They now have two 1<sup>st</sup> Era Warships facing a SPQR 2<sup>nd</sup> Era Warship and 92 RPs of 2<sup>nd</sup> Era Fighters from Caledonia II. Perhaps they logically expected the skirt-wearing SPQR warship to retreat from the combat in the first round, perhaps they didn't expect that many Fighters from the colony, perhaps they underestimated the value of Ship Missiles. Avarar Rex would not have been informed by the Concierge of the use of Enlightenment by SPQR, but they might guess it from the result of the first round fire by SPQR. They know, however, the SPQR has burned 30 RPs of Ship Missiles to achieve that expensive result.

So, what to do now? Avarar Rex decides that retreating is not a good option as their 1<sup>st</sup> Era warships will probably be destroyed, so orders are submitted for both 1<sup>st</sup> Era Warships to fire at the SPQR 2<sup>nd</sup> Era warship. The Avarar Rex Second Fleet is due to arrive on their next Regular Turn, and they must take the chance to eliminate that one defender so that they can immediately attack the colony. Avarar Rex decides not to commit any Enlightenment, saving them for later.

Meanwhile, SPQR moves in for the kill, ordering his 2<sup>nd</sup> Era warship to fire at one attacker, and putting both of his Caledonia II Fighter Sorties on the other attacker. SPQR has one remaining Enlightenment from the first combat round and decides not to add any additional Enlightenment, saving some for later (see Combat Resolution, 3 Combat, p. 976). SPQR designates that Fighters can use Enlightenment this round (see Blacksheep, 2 Carriers & Fighters, p. 1054).

Caledonia II has 92 RPs worth of fighters, and because only one target is being attacked, each sortie uses 75% of the strength of the Fighter Component because this is a Concentrated Attack. So, each Fighter attack is made by the equivalent of 69 RPs worth of Fighters (see Blacksheep, 2 Carriers & Fighters, p. 1054).

The Effectiveness Roll for the first sortie is 5, which converts to  $.5 \times 69$  RPs, or a 34% chance to hit. The chance to hit is increased by one offensive shift (10%) to 44% because 2<sup>nd</sup> Era Fighters are attacking a 1<sup>st</sup> Era target and then multiplied by the 2.5 2<sup>nd</sup> Era multiplier to over 100%, but the attempt is resolved at 99% (see Fighter Combat, 2 Carriers & Fighters, p. 1054). The die roll is 40% meaning that the first Caledonia II sortie engaged the target 1<sup>st</sup> Era warship. The Effectiveness Roll for the

second sortie is 2, which converts to  $.2 \times 69$  RPs, or a 13% chance to hit, which when the Era difference shift is applied, gives a 23% chance to hit and the 2.5<sup>nd</sup> Era multiplier makes a 57% chance to hit. The die roll for the second sortie is 89%, an unsuccessful attack (i.e. a miss). The Concierge immediately applies the remaining Enlightenment and rolls the attack again, this time obtaining a 19%, which makes a second successful attack on the target, for a hit.

The Avarar Rex 1<sup>st</sup> Era Warship is destroyed by fighters, but it will get to fire before being removed from the game (see A Hurt, 2 Carriers & Fighters, p. 1056) and will also be able to immediately execute a Close-in Fire against the attacking Fighters. The 1<sup>st</sup> Era warship gets 9 die rolls vs. the 92 RPs of attacking Fighters (not at the enhanced value of 138 RPs, see Counting Whale Tails, 2 Carriers & Fighters, p. 1059), and has a 10% chance to hit (the normal 30% chance to hit, minus 10% for the Era shift, and then halved to 10%). With nine rolls at 10%, the 1<sup>st</sup> Era Warship hits twice and then gets to roll two ten sided dice for damage to the Fighters. The results of those rolls are 8 and 5, meaning that the Caledonia II Fighter Component lost 13 RPs of Fighters destroying the 1<sup>st</sup> Era Warship!

The two Avarar Rex 1<sup>st</sup> Era Warships fire at the 2<sup>nd</sup> Era SPQR warship. They each have a basic 20% chance to hit. However, since the second ship was engaged (and eventually destroyed) by the Caledonia II Fighters, 30% is subtracted from its chance to hit, and it then has no chance to hit, and cannot fire. So it is removed.

The remaining Avarar Rex Warship rolls its attack and rolls a 15%, meaning it hit and destroyed the SPQR 2<sup>nd</sup> Era Warship. The SPQR defender gets to fire before being removed and has a 60% chance (50% base chance, plus one offensive shift for firing at a lower Era target) to hit the remaining Avarar warship. SPQR has no remaining Enlightenment for the combat. Fortunately, SPQR rolls a 23%, hitting and destroying the remaining Avarar Warship.

**After Action Report:** The combat is over, all attacking and defending ships were destroyed, and the Caledonia II Fighter component returns to the Colony, minus 21 RPs of Fighters (now at a value of 79 RPs of 2<sup>nd</sup> Era Fighters). SPQR has also expended 30 RPs of 1<sup>st</sup> Era Ship Missiles and two Enlightenment.

Avarar Rex obtained a pyrrhic victory but they did accomplish the mission, despite being surprised at the resistance, and when the Second Fleet arrives on their next Regular Turn (which will be before SPQR's next turn) it will be able to immediately attack Caledonia II without interference (as there are no warships in the system). SPQR did not put the Caledonia System on Combat Alert last time, so the Caledonia II Fighters cannot initiate a ship combat to delay the attack on the colony. Additionally, A-Rex did some preemptive damage to the colony's defenses by destroying 21 RPs of Fighters.

SPQR had a good day, tactically, though they may come to regret the cost of it later, as in the strategic analysis (in post-game hindsight), they may have only gotten a strategic draw or loss from the smashing tactical victory at Caledonia II. SPQR doesn't know about the fifteen-ship Second Fleet that bearing down on Caledonia II, SPQR only knows that they scored a great victory, destroying an entire enemy fleet while losing only one 2<sup>nd</sup> Era Warship, some Fighters and Ship Missiles. SPQR also burned 30 RPs of Ship Missiles taken from the colony's defenses; the loss of Fighters and Ship Missiles from

Caledonia II's defense might doom Colonia Londinium. Additionally, SPQR used two Enlightenment to obtain this victory whereas Avalar Rex used none (perhaps they were unenlightened, or they just were being pennywise and pound foolish).

Conversely, the initial loss of five ships to one might make Avalar Rex proceed with more caution, or change building strategies to build more Fighters and Ship Missiles, giving SPQR more time to recover.<sup>1</sup> The early loss of those many ships might also effect Avalar in the long run, especially if that was exceeded number of 'extra ships' Avalar was able to build by adhering to a policy of not building Ship Missiles. Avalar might not have enough ships (and is short on Ship Missiles), combined with the probable losses in the following battle at Caledonia II, to effectively carry out the remainder of the attack plan. Any ships that would have survived the initial battle at Caledonia II would have joined the attack on Colonia Londinium, which now makes the next battle that much more difficult.

It was a hurt'n thing over a meatball in the sky.

## Appendix COM – Trading with Scene-snitching Aliens Example

### State of the System

Ziggy Stardust arrived first in the starsystem early in the game and established a colony on an Unpleasant Planet with a Maximum Habitability of 60 (see 3 Taxation & Census, pp. 315-317). The planet is a ‘special planet’ (see 2 Taxation & Census, p. 307) and the colony has grown to significant size with additional offloading of population (see 3 Expansion, pp. 914-915).

The second arrival was Generativity, Inc. (a position name, not a Corporation or MegaCorporation<sup>1</sup>) who established a colony on a Hostile planet with 13 Maximum Habitability which the position named Martian Spider 1. The colony on the surface is currently very small, only 2 population factors, while most of the colonist occupy an Orbital Condo (a smaller variation of the Orbital City Existential Patent, see 2 Construction, p. 667) holding 10 population factors. The colony also has 4 Industry (maximum industry).

There has been peace in the system, there are no other colonies in the system, and the colonies are lightly defended. Generativity Inc., is a 2<sup>nd</sup> Era position while all of the others in this story are late 1<sup>st</sup> Era positions (see 1 Eras, pp. 756-757). The *Uber Alles* (see 2 Eras, p. 767) for the 2<sup>nd</sup> Era are:

- a. Technology: Resources received from population during Taxation Power activations increases to 1 per 4 population factors on sovereign native colonies that are currently at 90% or more Maximum Habitability. This also improves the planet’s GDP.
- b. Culture: Each time the Commerce Power is attempted to be activated, 1-3 RPs are added to the position’s Treasury.
  - See Appendix UA – The Uber Alles

### THE PLAN

Generativity, Inc. has just secretly perfected a Technological Device Patent which allows it to build Terraformers (see 2 Patents, p. 741). Terraformers (built via this specific Patent) are one-use Technological Devices specific to the planet on which they are constructed thus must remain on the planet where they are built to keep the planet stable after terraforming. Generativity has selected Martian Spider 1 as the target of the first Terraforming attempt.

The Terraformer requires activation of the Construction Power for the purpose of Colony Enhancement for two consecutive Regular Turns and costs 20 RPs per turn.<sup>2</sup> Even with the Uber Alles, the planet’s current population is only producing 5 RPs during taxation (3 RPs from 12 population at 1 RP per 4 factors due to the Uber Alles because the colony is over 90% Maximum

---

<sup>1</sup> Just like certain dishonest businesses in the real world that give themselves business names that sound like official government agencies. We used to have one that called our office and acted like they were a state agency; I also receive weekly spam e-mails from another who uses “qualification department” as part of their business name.

<sup>2</sup> It appears that the Concierge set the cost at 1 RP per Maximum Habitability, thus Martian Spider 1 is a prime candidate being a very small planet. Technology can almost always be improved later to reduce such costs to manageable levels. These details apply only to this particular TD Patent in this particular game for the purpose of example; the operational details, arrangements and requirements could vary from game to game depending on the participants.

Habitability,<sup>3</sup> plus .5 per Industry for 4 Industry) and thus the planet's GDP is 5 RPs (see 1 Construction, p. 662), which it draws from the position Treasury. Thus, additional RPs will be needed from outside sources to have the ability to spend 20 RPs per turn on the colony. And further, 20 RPs will all need to be present *at the same time* for two consecutive turns!

This is gonna be a project! Time for some trade diplomacy!

### Keep on Truck'n

Ziggy Stardust agrees to a reciprocal Trucking Transaction (see 4 Commerce, p. 1225) with Generativity between their colonies in the system. Ziggy happens to have a Cargo Ship (or ships) currently in the system which the parties agree will serve as the conduit for the transaction and that Ziggy will not move the ship away (see Planet Caravan, 4 Commerce, p. 1226).

- ✓ Since Generativity, Inc. is going first, they must provide the *Scene* for the Transaction. *Id.*

The parties agree to each send 10 RPs to the other through the Ziggy Cargo Ship during the Trucking Transaction.<sup>4</sup> For Generativity, Inc. this is the maximum that the planet can send because its GDP is 5 RPs and Trucking RPs only count as half against the planet's GDP, thus it can send 10 GDP if it does nothing else for the turn. *Id.* p. 1226.

- ✓ The Ziggy Stardust colony must also have the capacity to send 10 RPs, this could be from its own GDP (e.g., 50 population factors or less plus industry, at normal taxation rates because Ziggy is not 2<sup>nd</sup> Era yet) drawn from Ziggy's Treasury or from expected Unloading of the Cargo Ship in the same Regular Turn that the Trucking Transaction RPs are sent away.<sup>5</sup>
- ✓ The Ziggy Stardust Cargo Ship must also have capacity sufficient for the RPs each is sending. *Id.* p. 1226. A basic Cargo Ship can carry 15 RPs (see Cargo Ships, 1 Commerce, p. 1186), which would be sufficient for the 10 RPs being sent each way.

So Generativity goes first. On their Regular Turn, actions are submitted activating the Commerce Power for the purpose of Trucking Transaction at the colony, costing an Act, specifying 10 RPs to be sent to the Ziggy colony where everything zags, and using a Scene at the Generativity colony (the Scene must have been placed there on a previous Regular Turn). Trucking Transactions are subject to Power Activation failures (see Shanzhai Products, 4 Commerce, p. 1225), but all Constructural Elements are active at the Generativity Colony (everything is just peachy, leaving only a 5% chance of failure, see Power Off, 2 Constructural Elements, p. 193), and the Power Activation in this case does not fail.<sup>6</sup>

<sup>3</sup> The surface population and the population in orbit form one colony for game purposes (see Lebensraum, 3 Taxation & Census, p. 321), and 12 is 92% of the 13 Maximum Habitability.

<sup>4</sup> Both are being equally inconvenienced. One is using a Scene, the other is providing a Cargo Ship conduit, both are spending an Act and a Power Activation. There are a myriad of possible factors in each deal; e.g., if one partner was providing both, or someone was Scene snitching from a third party, or if they are allies in a great war, etc.

<sup>5</sup> One might assume, envisioning this, that all or part the cargo of the Cargo Ship is simply diverted to be unloaded (possibly by interplanetary shuttle craft) at the Generativity Colony instead of the Ziggy colony (instead of envisioning tedious loading and unloading and interplanetary movement).

<sup>6</sup> Because it didn't fail, it is not necessary to 'look' to see whether an Enlightenment was committed to the Power Activation, but it probably isn't a bad idea to do so if possible just to avoid bad appearances to aliens. Unused Enlightenment would be returned to the College, see Vampire Suicide, 2 Colleges, p. 478. On the flip side of it, it is probably unwise to use 'compromised colonies' for Trucking Transactions: Get your own house in order first!

- ✓ Had the Power Activation failed, the Commerce Power would not have been activated and the 10 RPs would not have been subtracted from Generativity’s Treasury (see *But Nobody is Home...*, 2 Constructural Elements, p. 194) and the Scene not used. It would have also been kind to inform Ziggy either way.

To continue execution of THE PLAN, Generativity probably may also need to place a Scene on the colony in anticipation of the next turn’s Power Activations at the colony.<sup>7</sup> Finally, Generativity just happens to have a partially-loaded Cargo Ship in short hop (i.e. Short Movement, see *Space Hop*, 2 Movement, p. 850) range of the colony (what a coincidence!) which is sent in interstellar flight on the same Regular Turn that the Trucking Transaction is activated so as to Unload RPs to make up the difference for the needed 20 RPs on the first Terraforming turn.

- ✓ At the beginning of Ziggy’s Regular Turn, they will receive the 10 RPs sent plus enhanced value of 5-8%, plus ½ RP for each previous time the same two colonies have sent RPs via Trucking Transaction (see *Fairies Wear Boots*, 4 Commerce, p. 1227). Ten RPs plus 5-8% is a range of 10.5 to 10.8 RPs. Plus the two colonies have previously made the same reciprocal trade twice previously (i.e. two rounds, four Trucking Transactions) which adds 2 RPs to the value received, for a range of 12.5 to 12.8 RPs received by Ziggy, which rounded up, is 13 RPs received.
- ✓ Additionally, Ziggy may also receive a free Cultural Traits piece (30% chance) adjacent to their colony if there is an empty Monad to place it, and a 15% chance that an Intervention Potential or IP+ will either be generated or eliminated as a result. *Id.* This is an important side consideration to Trucking Transactions, but irrelevant to this example, so we will not look to see what happened.

On Ziggy Stardust’s next Regular Turn, they activate the Commerce Power twice at their colony, once for the purpose of Unloading RPs from the Cargo Ship and once for the purpose of Trucking Transaction using the Cargo Ship. The Construction Power is also activated that turn to use the RPs downloaded, and the Construction Power and Commerce Power activations can share the same Scene on the colony in the same turn (see *Material Handling*, 1 Construction, p. 664). Ziggy is getting the most zag for the buck in this Regular Turn.

Ziggy specifies in the Trucking Transaction that 10 RPs will be sent and that the Generativity colony is the target. Things aren’t quite as peachy with Ziggy’s people (more like lemony) and thus Enlightenment is dedicated to each of the three Power Activations to insure no failures. Whether they are used or not is irrelevant to this example, we must assume that at least the Commerce Power activations occurred as scheduled.

- ✓ Generativity was taking a chance in going first, but Ziggy provided the Cargo Ship conduit and has been an honorable fellow and no-nose neighbor. See *Fairies Wear Boots*, 4 Commerce, pp. 1227-1228.

On Generativity’s next Regular Turn, the Martian Spider 1 colony receives the 10 RPs sent plus 5-8%, for a range of 10.5 to 10.8 RPs as previously discussed. However, there have now been five transactions between the colonies (Ziggy’s previous doesn’t count, but Generativity’s does, see *Fairies Wear Boots*, 4 Commerce, pp. 1227-1228), so the RP value of previous Trucking

---

<sup>7</sup> However, Generativity could also have built up a number of Scenes on the colony in advance, there is no limit to the number of Scenes that can be at a star or colonized planet, see 3 *The Sidereal Stage*, p. 121.

Transactions between these colonies is 2.5 RPs, yielding a range of 13 to 13.3 RPs. With rounding up, Generativity will receive either 13 or 14 RPs back in the reciprocal; this is perhaps some small benefit to going first. In any event, Generativity's Cargo Ship arrived at the end of the previous turn by Short Movement and is available to Unload RPs to Martian Spider 1 to insure that 20 RPs are available for the first stage of terraforming. Generativity's Cargo Ship will only Unload enough RPs to cover the needs of the colony on that turn, preventing wastage, see Downloading, 2 Commerce, p. 1202.

- ✓ So the first turn terraforming cost of 20 is covered by: 5 RPs from the colony GDP drawn from the Treasury via activation of the Construction Power for the purpose of Colony Enhancement, plus 13 or 14 RPs received via the Trucking Transaction, plus 1 or 2 RPs Unloaded from the Cargo Ship (which was previously taken from the Treasury during Loading at another colony).
- ✓ Like Ziggy Stardust, Generativity will also have a chance to receive a Cultural Traits piece at Martian Spider 1 as a side benefit, and either generate or eliminate an Intervention Potential or IP+.

### **Eminence Front**

It's a put on. Well, sometimes anyway.

Through a previous Marketing activation of the Commerce Power, Eminence Front had determined that the RPs on his partially loaded Cargo Ship had an enhanced value of 13 RPs at the Generativity colony (see Marketing, 2 Commerce, p. 1193). It was not the best bargain, being only a 30% enhancement in value on 10 RPs, but Generativity, Inc. called in an IOU and one who maintains an Eminence Front without paying their debts is a vivid Glamor Boy and a Guess Who.

Thus, the Cargo Ship departed on a Trade Mission (see Green Goods, 1 Commerce, p. 1188) for the Generativity colony and will arrive at the beginning of the Eminence Front Regular Turn (via Long Movement, see Long Jump, 2 Movement, p. 851) following the first turn of the terraforming build by Generativity, Inc. The Cargo Ship Unloads RPs onto the Generativity colony on the Eminence Front Regular Turn (using a Scene on Generativity's colony, see Load & Unload Activations, 1 Commerce, p. 1185) in which it arrives (see Downloading, 2 Commerce, p. 1202) and taking a chance – because Eminence Front has no knowledge of the current state of the system – the Cargo Ship is ordered to return to an Eminence Front supporting colony via Movement Power Activation after Unload RPs.

- ✓ In the normal processing sequence of Power Activations, Movement Power activations occur before Unload RPs Commerce Power activation (see Appendix PAT2 – Normal Sequence of Power Activations), however, Eminence Front does not have an undisrupted Government Title associated with the Movement Power (see Associates & Acquaintances, 1 Government Titles, p. 580), so the Movement Power costs one more Act and processes well after the Unload RPs Commerce Power activation.<sup>8</sup> In this case, the extra cost of Movement Power activations is actually a *boon* for Eminence Front, allowing the Cargo Ship to drop, dump and run (see Downloading, 2 Commerce, p. 1202).

---

<sup>8</sup> Eminence Front does have an undisrupted Government Title associated with the Commerce Power, so it processed in the normal sequence.

It is fortunate for Eminence Front that Ziggy Stardust had placed a Scene on the star of the system at the end of their previous turn in anticipation of being able to move the Cargo Ship (the same one used as the conduit for the Trucking Transaction) away on Ziggy's next Regular Turn. Eminence Front's Movement Power activation snitches the Scene (see Scene Snitching, , leaving Ziggy unable to move the Cargo Ship away on their next turn.<sup>9</sup> If there had not been a Scene on the star, Eminence Front's Cargo Ship would have remained and a Power Activation would have been wasted (but the Act would not have been used, see Power Off, 2 Constructural Elements, p. 193).

- ✓ As a result, and Eminence Front reporting that the Unload RPs was successful, Generativity knows that 13 RPs are waiting on the terraforming colony for the next Regular Turn actions. See Cha-Ching!, 2 Commerce, p. 1203.
- ✓ Eminence Front's Cargo Ship unloading to the Generativity colony may have suffered *apostasy*, see Alienev Apostasy, 3 Disruption, p. 283.

On Generativity's next Regular Turn, the Construction Power is activated at the colony again, in conjunction with the Commerce Power for the purpose of Unload RPs from the Cargo Ship, to complete the terraforming of the planet. In anticipation of the Eminence Front unload, Generativity must have had at least two Scenes on the colony so that the terraforming could be completed, had a second Scene not been on the colony, Eminence Front would have been able to Unload RPs during their turn, but Generativity would have missed the second consecutive turn requirement for terraforming.

### Terraforming Martian Spiders

Terraforming a planet is an inherently generative activity – the question is for who? Any position that has previously explored the system may note, if they enter the system again, a change to the planet where the Generativity, Inc. colony is located (see Xenobiology Section, 1 Information, p. 1333). Terraforming will likely change the Habitability Class at least in relation to every position in the game – a little extra chlorine gas in the atmosphere will do that...

The average cynical observer will assume – if it is noticed – that the planet was terraformed to be more habitable for Generativity, Inc.'s Native Population Type. More astute observers may note that the planet is still Hostile Habitability Class for Generativity's Native Population Type so either it failed, or that wasn't the purpose. Perhaps Generativity was making a new home for someone else? Perhaps a bargain with another position, perhaps an evacuation planet for a minor race they discovered?

---

<sup>9</sup> If Ziggy is really mad about it, they might query Generativity, Inc. and Generativity Inc. might volunteer that Eminence Front was here, or might not say anything. Ziggy will then have to decide whether or not they believe Generativity's response, however, the Generativity Cargo Ship was the only other ship in the system on Ziggy's last Regular Turn results and is still present, so didn't use the Act. Diplomacy and the information game.

- ✓ Eminence Front may have also placed a Scene there at the end of their Regular Turn so that the Cargo Ship could move away on the next Regular Turn if the current turn's Movement Power activation failed for lack of a Scene. In that case – a Scene is a Scene is a Scene – Ziggy Stardust would have never known that their Scene was snitched by Eminence Front for a Movement Power activation.
- ✓ However, since the Cargo Ship was successful in moving away from the system, that means the Scene that Eminence Front may have tried to place on the system (so that the Cargo Ship was not stuck there) was not placed because the system is not on the Public Space at the end of the Regular Turn (as Eminence Front had no presence there). That Scene would have been lost, see Lost Scenes, 3 The Sidereal Stage, p. 123.

### Appendix CON – Writ & Construction Example

The besieged colony of Jerusalem,<sup>1</sup> owned by the Church of the Star (position name, referring to Arthur C. Clarke’s famous 1955 short story), finally received relief in the form of two loaded Cargo Ships which both succeeded in running the Blockade (see *Crashed the Gate Doin’ 98*, 4 Commerce, pp. 1234-1236). It is possible that these Cargo Ships were specially modified Blockade Runners (by a patent and/or enhancements) or maybe they were helped by the native Truly Alien colony that is also in the system and not owned by the besiegers.

- ✓ “Why he didn’t shoot, well, we’ll never know, Or was it the bells from the village below?” – The Royal Guardsmen, “Snoopy’s Christmas” (1967).

The problem is that the colony needs multiple Construction Activations in a single Regular Turn (so that the RPs are not wasted), in addition to Unloading RPs at the colony. Fortunately, there is a pill for this problem – activation of a Writ at the colony to gain extra Construction Power Activations and possibly even dip into the domestic subsistence to exceed the GDP limits (i.e. the Directive).

The Writ is associated with the Construction Power, which must be activated at the target colony on the Regular Turn that the Fuzzy Group is actualized. The required Fuzzy Group must contain a Panic Aspect and Engineering Proficiencies and the Fuzzy Group currently exists on the Public Space. The Writ is based on a previous siege in the game where a colony was eventually obliterated (i.e. the History) and states simply “Never Again” (this is possibly part of The Body). Finally, all of the Conditions Precedent exist, mainly, a siege condition at a Friendly Colony; the besiegers may also be the ones who did the previous dirty deeds.

- ✓ See 2 Writs generally, pp. 438-439, for the form of the Writ, outlined above.

Activation of the Writ however will be costly in terms of the Fuzzy Group that will be removed from the Public Space (see *Actualization*, 4 Culture, p. 406) and might eventually need to be replaced if the Writ is to be used again. This will cost future activations of the Culture Power to Expose Aspects and Perfect Proficiencies (see generally 2 and 3 Culture). Still, in the heat of the moment, the heat of the night... it seems reasonable.

- ✓ Activation of the Writ satisfies the Interpretation requirement for the Construction Power activation on the same Regular Turn, meaning that no News Event must be published (but one must be provided, just in case), see *Writ of Extent*, 3 Writs, p. 444.

So the decision taken, the Writ will be activated at the colony to gain a ‘free’ extra Construction Power activation on an emergency basis. As it was expected on the previous turn that Construction would occur at the besieged colony this turn, a Scene was placed on the colony. The extra Construction Power activation by use of the Writ temporarily abrogates the rule that the Construction Power may only be activated once per Regular Turn at each colony (see *Construction Zone*, 1 Construction, p. 661).

Further, the Unload RPs activation of the Commerce Power and the Construction Power activations at the colony may all share the same Scene at the colony, so only one Scene is used (see *Material Handling*, 1 Construction, p. 664). And sharing a Scene in this way also insures that the Unload

---

<sup>1</sup> According to [militaryhistorynow.com](http://militaryhistorynow.com), “Surprisingly, the most besieged city in history is Jerusalem, having been surrounded and attacked as many as 27 times, beginning in 1443 BCE. Over the next 2600 years, the holy city would be cutoff by King David, the Egyptians, the Philistines, the Ethiopians, the Syrians, the Assyrians, the Babylonians, the Macedonians, the Romans (several times), the Arabs, the Crusaders, and finally the Tartars.” – Editors, “Surrounded – Some of History’s Most Incredible Sieges,” August 31, 2012.

RPs at the colony will execute before the Construction Power activations allowing the RPs to be used for Construction (an exception to the processing rules in *Clockwork Universe*, 3 *The Streams of Time*, p. 90).

With the normal Construction Power activation, plus the extra Construction Power Activation from the Writ, and the RPs downloaded from the Cargo Ships, it's time to party! What to do?

There are some unfinished warships at the colony, so an activation of the Construction Power for the purpose of Ship Building might be mandatory so that the warships can be completed with the parts brought by the Cargo Ships (manufactured parts being represented by the RPs value of some of the cargo) allowing the new warships to operate and defend themselves, possibly even engaging the besiegers in Ship Combat to break the siege?

- ✓ Unfinished ships are in danger from Raid/Strike attacks against the colony (see *Fire Fall*, 4 *Carriers & Fighters*, p. 1086) or could be destroyed if the attacker resumes the Colony Combat after reinforcements arrive. Unfinished ships (i.e. Keels) are attached to the colony and have no defense or ability (see *Shipbuilding*, 3 *Construction*, p. 675). Due to this danger, it is unlikely that the Construction Power will be activated to Lay Keel on this Regular Turn (unless the position is just brazen), unfinished ships are of no use.

The second Construction Power activation (the free one) is more debatable. If activated for the purpose of Ship Supply, it would allow Fighters, Ship Missiles and/or Enhancements at the colony to be transferred to the new Warships (see *Costly Resupply*, 3 *Construction*, p. 679) if they existed at the colony before the beginning of the current Regular Turn (see *Transfers*, 3 *Construction*, p. 680). This may amount to degrading the colony's defense to give the new warships a better chance in a ship combat against the besiegers.

- ✓ It is possible, but unlikely that Colony Enhancement will be used in this case to build Industry at the colony – unless the position thinks the colony will not be captured and/or is thinking more long term. It could be an interesting option.

However, if the warships are not intended to sally forth against the besiegers or it is not sure they can win a combat (they may instead run the blockade and escape by initiating interstellar movement, see *About to Put the Hammer Down*, 4 *Commerce*, p. 1236), it may be prudent to instead use the second Construction Power activation for the purpose of Colony Enhancement to build additional Defense Bases (see *Orbital Platforms*, 2 *Construction*, p. 666). Fighters and Ship Missiles might also be constructed by the same activation of the Construction Power for the purpose of Colony Enhancement (see *On the Flight Deck*, 1 *Carriers & Fighters*, p. 1047 and *Torpedoes at Trafalgar*, 4 *Carriers & Fighters*, p. 1079).

Finally, the second activation might be used for the purpose of Colony Defense Era Upgrade if 1) the position's current Era is higher than the Era of the colony's Defense Bases and 2) if the Cargo Ships delivered enough RPs to complete the upgrade (or complete a previously begun upgrade) with the addition of the colony's GDP (see 2 *Combat*, pp. 954-955). The Cargo Ships brought the critical parts manufactured on other worlds. While this will not offensively break the siege, it would be a rude surprise if and when the attackers resume the Colony Combat. It may be decisive if the attackers are annihilated, ending the siege.

- ✓ Activation of the Construction Power for the purpose of Colony Enhancement is not the same as the activation for the purpose of Colony Defense Era Upgrade (see *Orbital Defense Base*, 2 *Construction*, p. 668).

Appendix CST – Combat Shift & Situation Tables

Combat Shifts Table

Combat Situation	Combat Effect
Basic Defensive Shift	Subtracts 10% from chance of successful attack (-10%) <sup>1</sup>
Basic Offensive Shift	Adds 10% to chance of successful attack (+10%) <sup>2</sup>
Firing at Scout Ship	Defender receives one Defensive Shift (+10%) <sup>3</sup>
Firing at Non Warship	Attacker receives two Offensive Shifts (+20%) <sup>4</sup>
Firing at Orbital City or Orbital Shipyard or incomplete ship/boat	Attacker receives three Offensive Shifts (+30%) <sup>5</sup>
Era Shifts	<u>Lower Era Firing at Higher Era</u> : One Defensive Shift Per Era Difference between the attacker and the target (-10%, -20%, etc.) <u>Higher Era Firing at Lower Era</u> : One Offensive Shift Per Era Difference between the attacker and the target (+10%, +20%, etc.)
Engaged Attacker	<u>Engaged by 1<sup>st</sup> Era Fighters</u> : 1.5 Defensive Shifts (-15%) <u>Engaged by 2<sup>nd</sup> Era Fighters</u> : 3.0 Defensive Shifts (-30%) <u>Engaged by 3<sup>rd</sup> Era Fighters</u> : 4.5 Defensive Shifts (-45%) Subtracts from chance of doing <i>anything</i> , including retreating, also prevents some actions (e.g., Combat Resupply).
Ambush Combat	Ambusher receives three Offensive Shifts against targets that cannot detect the Ambusher’s presence. (+30%) Ambusher receives one Offensive Shift against targets that can detect the Ambusher’s presence. (+10%) <sup>6</sup>
Fighter Area Patrol	One Combat Shift to a Friendly unit per 30 RPs of Fighters (+/- 10%) <sup>7</sup>

<sup>1</sup> Shifts always apply to or against the attacker’s chance of a successful attack, not to the defender or target (see Combat Shifts, 3 Combat, p. 978).

<sup>2</sup> When the chance to hit reaches 100%, it is treated as 99% with a 1% chance of missing. *Id.*

<sup>3</sup> See Scout Ship Existential Patent, Appendix EPAT.

<sup>4</sup> Civilian targets are assumed to be at the current Era of the position that owns them, for purposes of Era shifts, no matter when they were constructed (see Civilian Targets, 3 Combat, p. 978). This is solely a matter of convenience.

<sup>5</sup> See Civilian Targets, 3 Combat, p. 978. Orbital Cities and Ship Yards and incomplete ships really have nowhere to run if someone starts shooting, assuming they can even move. Orbital Defense Bases have some maneuverability, armor, and intimidating weaponry enough to keep attackers at a respectful distance, even though they cannot leave orbit. No maneuver, no armor, no weapons = bad day.

<sup>6</sup> See, Ambushwhacked, 7 Combat, p. 1038 for attacks by units in Ambush Mode, i.e. those units that can either Cloak or Time Shift. Stealth technologies would not allow Ambush, but probably allow a first round offensive shift. See also Temporal Sensors, 2 Temporal Technology, p. 820.

<sup>7</sup> See A FAP in the Night, 7 Combat, p. 1041. Although FAP is introduced with the concept of Ambush and Protective Fire, it could be applied in normal battles. No unit may receive more than one Combat Shift per round from FAP; Defensive Shifts from FAP must be allocated with targeting and Combat Screening assignments. Enhancing the chances of Protective Fire, however, using the CAP does not require pre-assignment of CAP resources.

## Combat Situations Table

Combat Situation	Combat Calculation
1 <sup>st</sup> Era Warship Attacking	10% x 3 = 30% base chance to hit.
2 <sup>nd</sup> Era Warship Attacking	10% x 5 = 50% base chance to hit.
3 <sup>rd</sup> Era Warship Attacking	10% x 7 = 70% base chance to hit. <sup>8</sup>
1 <sup>st</sup> Era Carrier Direct Fire	10% x 3 = 30% - 20% = 10% base chance to hit.
2 <sup>nd</sup> Era Carrier Direct Fire	10% x 5 = 50% - 20% = 30% base chance to hit.
3 <sup>rd</sup> Era Carrier Direct Fire	10% x 7 = 70% - 20% = 50% base chance to hit.
1 <sup>st</sup> Era Fighters/Missiles <sup>9</sup> Attacking	Effectiveness Roll/10 <sup>10</sup> x RPs <sup>11</sup> x 1.5 = base chance to successfully attack the target. <sup>12</sup>
2 <sup>nd</sup> Era Fighters/Missiles Attacking	Effectiveness Roll/10 x RPs x 2.5 = base chance to successfully attack the target.
3 <sup>rd</sup> Era Fighters/Missiles Attacking	Effectiveness Roll/10 x RPs x 3.5 = base chance to successfully attack the target.
Close in Defense Weaponry Fire <sup>13</sup>	Base Chance to Hit halved vs. every 10 RPs of Fighters or Ship Missiles. <sup>14</sup>
Close in Defense Weaponry Damage	One ten-sided die is rolled for each successful Close in Defense Weaponry Fire; the result is the RPs lost by the attacking Fighter Component. <sup>15</sup>

<sup>8</sup> See Firing Solution, 3 Combat, p. 978.

<sup>9</sup> Ship Missiles may not receive the benefits of Enlightenment, see Fire-and-Forget 4 Carriers & Fighters, p. 1080.

<sup>10</sup> An Effectiveness Roll is made on a ten-sided die for each Fighter Sortie, see Fighter Combat, 2 Carriers & Fighters, p. 1054.

<sup>11</sup> RPs are the size of the Fighter/Missile Component in the attack. When a single Fighter Component attacks two targets, the RPs are divided in half, for each attack (see Blacksheep, 2 Carriers & Fighters, p. 1054). When a single Fighter Component attacks the same target twice in a turn, the RP value of each sortie is 75% of the total RP value of the attacking Fighter Component. *Id.*

<sup>12</sup> First successful attack by Fighter Component or Ship Missiles in a combat round Engages the target, second successful attack in the combat round by Fighters or Ship Missiles is a hit on the target (see Engaged and A Hurt, 2 Carriers & Fighters, pp. 1055-1056). Fighter attacks resolve before regular ship fire, Ship Missile attacks resolve at the end of the combat round (see Combat Resolution, 3 Combat, p. 976) and Engaged results from Ship Missiles carryover to the next Combat Round, see Fire-and-Forget, 4 Carriers & Fighters, p. 1080.

<sup>13</sup> Close in Defense Weaponry fires at Fighters immediately after Fighters resolve attacks on target (see Tail of the Gunner *et seq.*, 2 Carriers & Fighters, p. 1059), and fires at Ship Missiles before Ship Missiles resolve attacks on target, unless target was previously Engaged (see Fire-and-Forget, 4 Carriers & Fighters, p. 1080). Close in Defense Weaponry Fire is automatic and does not substitute for the unit's normal targeted fire or other activity (see Tail of the Gunner, 2 Carriers & Fighters, p. 1059).

<sup>14</sup> For Carriers, the base chance to hit in Close in Defense Weaponry Fire is the same as a regular warship of the same Era – not *halved* – and is not based on the Carrier's poor direct fire chances (see Battle at Planet Midway, 2 Carriers & Fighters, p. 1060).

<sup>15</sup> 1<sup>st</sup> Era Carriers add 1 to the die roll, 2<sup>nd</sup> Era Carriers add 2 to the die roll, 3<sup>rd</sup> Era Carriers add 3 to the die roll, but the result of the die roll can never be more than 10 (see Battle at Planet Midway, 2 Carriers & Fighters, p. 1060).

Ground Base Regular Fire	Base 20% chance to hit in Colony Combat. Ground Base becomes unit in Ground Combat. May fire Close-in Defense in Ground Combat against Fighters <sup>16</sup> and landing Ground Units. <sup>17</sup> Ground Bases fire Close-in Defense at Raiders after they have attacked the colony. <sup>18</sup>
Orbital Base Regular Fire	Base 30% chance to hit in Colony Combat. Orbital Defense Base may (40% chance) fire Close-in Defense before Raiders attack colony. <sup>19</sup>
System Base Regular Fire	Base 30% chance to hit in Colony Combat. <sup>20</sup>
Interception (Combat Screening)	Interception is automatically successful, however only Fighters can intercept Fighters. <sup>21</sup> Fighters must be preassigned to Intercept Ship Missiles. <sup>22</sup> If Interceptor hits attacker, attacker cannot attack its target that round, can only fire at Interceptor. <sup>23</sup>
Retreating	Base 50% chance to successfully retreat if not destroyed. <sup>24</sup>
Orbital Bombardment	1 <sup>st</sup> Era Warship destroys 3 population factors. 2 <sup>nd</sup> Era Warship destroys 7 population factors. 3 <sup>rd</sup> Era Warship destroys 12 population factors. <sup>25</sup>
Ground Unit	May only participate in Ground Combat and Pacification Combat, may fire Close-in Defense.
Pacification Combat	Ground Units count at full RP Value, supporting Fighters at half, 1 <sup>st</sup> Era Warships as 1 RP, 2 <sup>nd</sup> Era Warships as 4 RPs, and 3 <sup>rd</sup> Era Warships as 9 RPs.

<sup>16</sup> See Air Attacks in Ground Combat, 4 Combat, p. 996.

<sup>17</sup> See Dropping In, 4 Combat, p. 991.

<sup>18</sup> See Giv'n Them Some Flak, 4 Carriers & Fighters, p. 1087.

<sup>19</sup> See Under Your Desk, 4 Carriers & Fighters, p. 1085.

<sup>20</sup> However, if a colony with System Defense Bases is attacked, only the System Defense Bases and colony Fighter Complement may be attacked and return fire in the first Combat Round of a Colony Combat, see Something Here From Somewhere Else, 2 Combat, p. 960.

<sup>21</sup> See Nolo Contendre, 3 Carriers & Fighters, p. 1070.

<sup>22</sup> See Flying Telephone Poles, 4 Carriers & Fighters, p. 1081.

<sup>23</sup> See Normal Interception, 3 Carriers & Fighters, p. 1069.

<sup>24</sup> See Zigged When He Should Have Zagged, 3 Combat, p. 981. The chance of retreating is reduced by 15%, 30% or 45% if the ship is Engaged by Fighters or Ship Missiles during the round, see Engaged, 2 Carriers & Fighters, p. 1055.

<sup>25</sup> See In This Dust That Was a City, 2 Combat, p. 961. Additionally, the planet will suffer damage to Maximum Habitability and Habitability Class and industry and other enhancements and installations will be destroyed.

**Appendix CTC – Continuous Turn Cycle Example**

<b>July 2007</b>						
<b>Sunday</b>	<b>Monday</b>	<b>Tuesday</b>	<b>Wednesday</b>	<b>Thursday</b>	<b>Friday</b>	<b>Saturday</b>
1 A	2 A B	3 A B C	4 B C D	5 C D E	6 D E F	7 E F G
8 F G H	9 G H I	10 H I J	11 I J A	12 J A B	13 A B C	14 B C D
15 C D E	16 D E F	17 E F G	18 F G H	19 G H I	20 H I J	21 I J A
22 J A B	23 A B C	24 B C D	25 C D E	26 D E F	27 E F G	28 F G H
29 G H I	30 H I J	31 I J A				

The preceding is an example of how the game would run continuously with the maximum of ten positions playing, if the game began on July 1, 2007, where each position is represented by a letter, such as Position “A,” Position “B,” to Position “J.” Each position has a three day period to submit their Regular Turn actions, for example, Position A must submit actions on July 1, 2, or 3, then again on July 11, 12, or 13, and again on July 21, 22, or 23. With ten positions playing, on average, each position will have three turn periods per month, with less positions playing, the turn cycle would be shorter. Optimally, a game should have at least six active positions to keep the game ‘interesting’ and dynamic; it is possible in shorter games to extend the periods to submit Regular Turn actions.

✓ See Three Daze, 2 The Streams of Time, p. 84.

On any given date when two or three positions are eligible to submit actions, the actions would be processed in the order received. So, for example, Position “A” might decide to submit their actions on Sunday, July 22<sup>nd</sup>, and Position “J” may have already submitted actions the previous day, and Position “B” decides to wait until July 23<sup>rd</sup> to submit actions (because the players cannot agree on their actions). On July 23<sup>rd</sup>, Position “C” submits their actions just after midnight, while Position “B” submits their actions in the late afternoon of the 23<sup>rd</sup>. When actions from the 23<sup>rd</sup> are processed by the Concierge, Position “C’s” actions would be processed first, then Position “B’s” actions, according to the sequence of Power Activations (see Clockwork Universe, 3 The Streams of Time, p. 90). Depending on the relationship of Positions “B” and “C” it may or may not be important whose actions are processed first.

Remember that combat runs semi-independently of the Continuous Turn Cycle, see Relativity, 2 The Streams of Time, p. 85.

## Appendix DE&A – Disruption Events, Inactive Constructural Elements & Apostasy

### **Effects of inactive Constructural Elements on colonies and ships (all references are to 2 Constructural Elements):**

- Each inactive Constructural Element adds 15% to the chance of a Power Activation failure at the target colony or ship (Power Off, p. 193).
  - The maximum chance is 50% with three inactive Constructural Elements; it becomes a coin flip whether the colony or ship obeys, executes, or not.
  - Enlightenment assigned to the Power Activation may be applied to reroll.
- Inactive Epistemological Constructural Element (Skool Tyme, p. 190):
  - Operation of College is suspended if Host World has an inactive Epistemological Constructural Element,
  - Units with an inactive Epistemological Constructural Element cannot receive the benefit of Enlightenment,
  - Research Groups are disrupted if they are not adjacent to a sovereign colony with an active Epistemological Constructural Element
- Inactive Symbolic Constructural Element (Waving the Flag, p. 190):
  - Capital Colony with inactive Symbolic Constructural Element loses its Capital status and cannot access the Diplomatic Spaces,
  - Adjacency to an active Symbolic Constructural Element on a colony is required to form a Fuzzy Group (the formation can be there, but it's not a Fuzzy Group),
  - The Diplomacy Power can only be activated to Form Meanings while the Capital Colony status is suspended due to an inactive Symbolic Constructural Element.
- Inactive Ideological Constructural Element (Body Politic, p. 190):
  - Colony or ship with inactive Ideological Constructural Element cannot be affected by a Writ activation,
  - Adjacency to an active Ideological Constructural Element on a colony is required to form a Fuzzy Group (the formation can be there, but it's not a Fuzzy Group).

### **The following events can cause Constructural Elements to become inactive at colonies:**

- Chance of inactivation of Constructural Elements is Base Chance (in parens) + 3% per Government Title over three + 5% per currently disrupted Government Title + 2% if position had a Disruption Event the previous Regular Turn + 8% if the same colony had a Disruption Event the previous Regular Turn.
- Each Disruption Event can only occur at a colony once per Turn Cycle, however, a single colony can suffer multiple different Disruption Events in a Turn Cycle or even at the same time, with an individual check for each.
- All Disruption Events at colonies generate an Intervention Potential Plus (IP+).
- A siege condition itself does not affect the colony's Constructural Elements, but the events leading to the siege condition can generate Disruption Events at a colony.
- The following are Disruption Events at colonies listed in 2 Disruption, with base chances:
  - Loading Population from Colony (2%, Highschool Friends, p. 272),
  - Unloading Population to Colony (5%, The New Neighbors, p. 273),

- Forced Balkanization (4%/8%, also an IP+ for all positions that have colonies already on the planet, Forced Balkanization, p. 273),
- Population Growth on surface colony from Census exceeds Maximum Habitability resulting in lost growth (3%, Peaches for Mad Molly, p. 273),
  - Population Loss from reduction of Maximum Habitability (5%, *Id.*),
  - Colony Planet loses Habitability Class (8%, *Id.*),
  - Colony Planet loses both Habitability Class and Maximum Habitability at the same time (15%, *Id.*),
- Destruction of Colony Ships resulting in loss of population (2%/4%, Vesta & Tellus, p. 274), check is made at the origin colony(s) of the population,
  - Destruction of Orbital Cities resulting in loss of population or an Orbital Shipyard (3%/10%, *Id.*), check is made for all colonies on the planet below (not just the owner of the platform or of the same Native Population Type),
- Population is killed/destroyed by hostile act on surface colony (15% base or the percentage of total population killed, whichever is more, Mars Bombing Run, p. 274),
- Colony owner retreated from or was eliminated in a Ship Combat in the same system, including non-warships (10%, The Burning Sky, p. 275),
  - All colony Defense Bases were eliminated in Colony Combat or alien warships arrived and the colony has no Defense Bases (20%, *Id.*)
  - If either the Ship or Colony Combat was a First Contact, add 5% (*Id.*),
- Ongoing Ground Combat at the colony at the end of any Regular Turn (20%, Downfall, p. 274),
  - Add 5% if enemy force is larger than defending force (*Id.*),
  - Add 8% if total RP value of attacking force is equal to or greater than 1/3 of the defending colony's theoretical taxation value (*Id.*),
  - Add 10% if Industry or Technological Device was destroyed during the Ground Combat since previous Regular Turn (*Id.*),
  - Subtract 2% if defending Ground Units are larger than attacking Ground Units (*Id.*),
  - Subtract 3% if Ground Combat is between two colonies on the same planet and/or if aliens are assisting in the defense of the colony (*Id.*),
- These checks only apply to Host Worlds:
  - Destruction, removal or dissolution of College (10%, Extinguishing the Light, p. 276),
  - College is unendowed (5%, *Id.*),
  - Destruction, removal or dissolution of Corporate or MegaCorporate Headquarters (5%, *Id.*)
  - Unlike normal Disruption Events, these checks will continue for 2 to 4 turns afterward.
- Taxation exceeds more than is allowed by the base rules, i.e. dipping into the domestic subsistence (10%, Barrowing the Future, p. 276),
- All Disruption Events at the time of colony conquest are resolved before transfer of sovereignty. The conqueror inherits the mess, as usually happens in history.

- If a colony is completely destroyed either by hostile action or environmental degradation, an IP+ attaches to both the former owner and the position representing the colony's Native Population Type (maximum one IP+, The Way of the Dodo, p. 276).

**The following are *additional* Disruption Events or modifiers applying to colonies controlled by a position:**

- 5% is added if population is Loaded from a Conquered or Converted Colony (Eviction Notice, 2 Disruption, p. 278), relating to Highschool Friends, p. 272.
- Looting a Conquered Colony (25%, Hager's Faucet, 2 Disruption p. 278) in addition to other Disruption Checks such as for loss of population from Looting or Forced Balkanization,
- When a Minor Race is involved, the Concierge may dole out IP+ assessments based on judgment of the situation (Trail of Tears, 2 Disruption, p. 278),
- At the end of any Ground Combat in which the defenders were victorious (15%, The B-Team, 3 Disruption, p. 281),
- At the end of any Colony Combat in which the defenders were victorious (5%, The B-Team, 3 Disruption, p. 281).

**The following events can cause inactivation of Constructural Elements on ships:**

- End of any combat (15%, The B-Team, 3 Disruption, p. 281).
- Being in a system with a sovereign colony at the end of a Regular Turn (Mutiny on the Bounty, 3 Disruption, p. 282):
  - Inactive Constructural Elements opposing active Constructural Elements on the colony may become active,
  - Active Constructural Elements opposing inactive Constructural Elements on the colony may become inactive,
  - The colonies are not reciprocal effected by the ships, only the ships are affected by the colonies in this way,
  - Multiple checks can occur if there are multiple qualifying colonies in the same system with the ship.
- **Apostasy** (10%, Alieneq Apostasy, 3 Disruption, p. 283):
  - **Apostasy** arises from any non-combat ship interaction with an **alien colony**, or any ship or Ground Unit participating in Orbital Bombardment or Pacification Combat or Looting on a Conquered Colony,
    - **Apostasy** does not occur if the Power Activation failed,
    - Colony Ships which are Landed to form a new colony don't exist, and are not affected,
    - **Alien colony** includes planets inhabited by a Minor Race and Conquered Colonies that are being Looted (which is how Looted RPs have enhanced value),
    - Orbital Cities are considered part of the **alien colony** (no workaround).
  - Constructural Elements *inactivated* by **Apostasy** can only be **reactivated** after a Census Power Activation has occurred (The Apostasy, 3 Disruption, p. 284).

- Activation of the Census Power may cause loss of Proficiencies<sup>1</sup> and Disruption Events from exceeding Maximum Habitability at colonies.<sup>2</sup>
- An Engaged result from Fighters or Ship Missiles in Combat serves as a partial ‘disruption’ of the target (decreased chances of doing this or that in Combat) during the Combat Rounds only.<sup>3</sup>

### **Special Disruptions and Inactivation of Constructural Elements:**

- Government Titles can become disrupted.
  - Social and Estate Titles are disrupted if they fail all Conflict Checks at the end of any Regular Turn (Trouble in The Trees, 2 Disruption, p. 270).
    - An Intervention Potential Plus (IP+) is generated when the disruption occurs and at the end of each Regular Turn in which a position has a disrupted Social or Estate Title (Changing the Gardener, 2 Disruption, p. 271).
    - A disrupted Social or Estate Title is removed from the Public Space.<sup>4</sup>
    - Disrupted Titles can either be restored, abandoned or replaced.<sup>5</sup> Changing an Estate or Government Title generates an Intervention Potential Plus (IP+) (Changing the Gardener, 2 Disruption, p. 271).
  - Structural Titles become disrupted if a position does not have a Capital Colony, if there are no undisrupted Social or Estate Titles, or if the position cannot comply with the requirements of the Structural Title for any reason.<sup>6</sup>
    - Disruption of a Structural Title does not generate an Intervention Potential Plus (IP+).
  - Disrupted Government Titles no longer provide Power Activations or an Act or Scene each Regular Turn.<sup>7</sup>
    - Government Title disruption in the long term can also affect other areas such as increased chance of inactivation of Constructural Elements at colonies (Power Off, 2 Constructural Elements, p. 193) or inability to create or renew Corporations.<sup>8</sup>
- Capital Colonies lose their Capital Status if the Symbolic Constructural Element becomes inactive (Waving the Flag, 2 Constructural Elements, p. 190).
  - Suspended Capital Status blocks access to Diplomatic Spaces.
  - Suspended Capital Status blocks Diplomatic Power Activations except to Form Meanings.<sup>9</sup> Sort of a ‘Diplomatic Disruption.’ Like when the power goes off and your cell phone battery is dead...
  - Suspended Capital Status does not mean the position does not have a Capital Colony.

<sup>1</sup> See And the Cradle Will Rock, 3 Culture, p. 282.

<sup>2</sup> See Peaches for Mad Molly, 2 Disruption, p. 273.

<sup>3</sup> See Engaged, 2 Carriers & Fighters, p. 1055.

<sup>4</sup> See Foreclosure of a Dream, 3 Government Titles, p. 615.

<sup>5</sup> See A House Divided, *et. seq.*, 5 Government Titles, p. 637.

<sup>6</sup> See World Powers Fall, 3 Government Titles, p. 617.

<sup>7</sup> See Foreclosure of a Dream, 3 Government Titles, p. 615.

<sup>8</sup> See We Built This City, 1 Corporations, p. 1244.

<sup>9</sup> See Stepping Out, 1 Diplomacy, p. 1096.

- Research Groups become disrupted if not adjacent to an active Epistemological Constructural Element on a sovereign colony (Friendly, Naturalized or Converted, but not a Conquered Colony).<sup>10</sup>
  - Disrupted Research Groups cannot be used for Development Attempts.<sup>11</sup>
- Fuzzy Groups become ‘disrupted’ (though the term is not used in the rules text) if not adjacent to a sovereign colony(s) (Friendly or Naturalized, but not Converted or Conquered) that have an active Ideological Constructural Element and either an active Symbolic or Epistemological Constructural Element.<sup>12</sup>
  - Actualization of a Fuzzy Group may cause the Ideological Constructural Element on the adjacent colony to become inactive.<sup>13</sup>
- Kairotic Moments:
  - Ships have an enhanced (‘intensified’) chance of *apostasy* when interacting with **alien colonies** undergoing a Kairotic Moment.<sup>14</sup>
  - A ship belonging to a position undergoing a Kairotic Moment may inflict *apostasy* on non-sovereign **alien colonies** with which it interacts (sort of a ‘reverse apostasy’). This is the only time a ship can cause *apostasy* on an **alien colony**.<sup>15</sup>
    - The chance of *apostasy* on the colony is enhanced if it is of the same Native Population Type as the position undergoing the Kairotic Moment.
  - Kairotic Moments may also affect the Aspects adjacent to **alien colonies** that share the same planet or starsystem with a colony belonging to a position undergoing a Kairotic Moment; this is not technically a disruption of the colony or *apostasy* (as it does not affect Constructural Elements).<sup>16</sup>
    - An **alien colony** located on the same planet as the *Terra Sancta* of the Kairotic Moment has an enhanced chance of adjacent Aspects being effected.<sup>17</sup>
    - Ships which have *apostasy* from contact with **alien colonies** undergoing a Kairotic Moment may affect the Aspects adjacent to their own sovereign Friendly or Naturalized colony by interacting with that colony.<sup>18</sup>
    - Shared Meanings with the position undergoing a Kairotic Moment and hosting a MegaCorporation enhance the chances of affecting the aspects adjacent **an alien colony**.<sup>19</sup>

### Appendix EGTEX – Emergent Government Title Generation Example

Construction of an emergent Government Title is accomplished in the following steps (which easily can be automated):

1. It must first be decided whether the proposed title is a Social Title or Estate Title. This can be done by a 50-50 die roll, or it can be a conscious decision.
2. Next must be determined the ‘scope of the concept’ in GGDM terms, a die is rolled to determine if the Government Title has 1, 2, 3, or 4 Conflict Checks.
3. The third step is to determine whether one of the Conflict Checks will come from the Interstellar Civilization Themes instead of either the Social or Estate Title Themes. This can be done on a 50-50 die roll as well. If the result is positive, one of the Social or Estate Title Theme is replaced by rolling a Theme from the Interstellar Civilization Group for that Conflict Check. This is done even if the proposed Title has only one Conflict Check; that is, a single Conflict Check Social or Estate Title can arise from Interstellar Civilization Themes, and still act as either a Social or Estate Title in the game.
4. The fourth step then is to make two rolls for each Conflict Check, one to determine which Emergent Government Titles Theme is to be used (#1-20), and the second roll is to determine which Conflict Check is selected from the Theme (#1-10). Do not re-roll duplicates of the first die roll (i.e. two Conflict Checks can come from the same Theme), but do reroll duplicates on the second roll (i.e. a Government Title should not have exact duplicate Conflict Checks).
5. After installing the Conflict Checks, the final step to creating an Emergent Government Title is to first roll a die to determine how many Vital Powers are associated with the Government Title and then to roll to determine which Vital Powers are associated with the Title, re-rolling all duplicates.

For example, a new *Estate Title* is being generated, the die roll result indicates that it will have four Conflict Checks (Steps 1 and 2).

- A die is rolled and on an even result it is determined that one of the four Conflict Checks will be rolled from the Interstellar Civilization Themes (Step 3). So let’s get to it! One d20 is rolled and the result is a 15 which is the Security and Survival Theme (i.e. ICT15). A d10 is rolled in that theme group and the result is a 1: “(T) No other **alien colonies** exist in systems where a Friendly Colony is located *or* all **alien colonies** in a starsystem with a Friendly Colony are owned by the position.” This is the first Conflict Check for the new Estate Title. Hmmmm...
- A d20 is then rolled three times for the Conflict Checks from the Estate Themes (Step 4), with results of 1, 1, and 9, meaning that two Conflict Checks will come from EGT1 - First Estate - Legitimizers and one from EGT9 - Military-Industrial Complex of the Estate Title Themes.
- On EGT1, two d10 are rolled resulting in Conflict Checks: #5 “(F) Friendly population factors (including related Lost Colonist population) are under the control of alien sovereigns (i.e. other Major Positions).” and

#9 “(F) The position has lost a colony to alien conquest within the last three turns.”

- On EGT9, one d10 is rolled, resulting in Conflict Check: #4 “(F) Position has not lost any Warships, Logistical Ships, Bases, or Fighters or fired any Ship Missiles in Combat in the last two turns (in order to lose something in combat, you have to be involved in a combat...).”
- Note that Conflict Checks which begin with (T) pass if they are objectively true, and Conflict Checks which begin with (F) pass if they are objectively false.
- Taken together, the final Estate Title looks like this:
  1. (T) No other **alien colonies** exist in systems where a Friendly Colony is located or all **alien colonies** in a starsystem with a Friendly Colony are owned by the position.
  2. (F) Friendly population factors (including related Lost Colonist population) are under the control of alien sovereigns (i.e. other Major Positions).
  3. (F) The position has lost a colony to alien conquest within the last three turns.
  4. (F) Position has not lost any Warships, Logistical Ships, Bases, or Fighters or fired any Ship Missiles in Combat in the last two turns (in order to lose something in combat, you have to be involved in a combat...).

Players are free to name Social and Estate Titles whatever they wish, I might call this one an ugly bit of xenophobia. To satisfy all of the Conflict Checks the position would 1) need to have exclusive control of all stars where they have Friendly Colonies, 2) control all population factors of their Native Population Type in the game, 3) not lose any colonies to alien attackers and 4) lose ships, bases, fighters or fire Ship Missiles in combat every two turns. This Title may be one of up to ten choices available to the position and the position may choose to install it when conditions warrant.

Finally, the last step, a die roll indicates that two Vital Powers are associated with this Estate Title, and two more rolls result in the Taxation Power and Combat Power being associated.

## Appendix ENVAL – Enhanced Value & Looting Summary

### Enhanced Value

- Enhanced Value applies to Loading from and Unloading RPs to **alien colonies** (i.e. non-sovereign colonies). It accrues to the benefit of the recipient only.<sup>1</sup>
  - Enhanced Value does not take into account the Native Population Types of either the colony or, theoretically, the ship crew or sovereign, or the source of the RPs.<sup>2</sup>
  - Loading and Unloading from **alien colonies** makes the Cargo Ships involved subject to **apostasy** – a risk consideration in enhanced value transactions.<sup>3</sup>
- Enhanced Value is created when the owner of the Cargo Ship is not the same as (i.e. different from) the owner of the colony from which the RPs are being Loaded to which the RPs are being Unloaded.<sup>4</sup>
  - RPs Loaded to an alien Cargo Ship count against the colony’s GDP on the owner’s next Regular Turn. The RPs subtracted from the position Treasury will, however, be less than what the Cargo Ship received due to enhancement of value.<sup>5</sup>
  - RPs received by a colony Unloaded from an alien Cargo Ship will be at Enhanced Value and will be available to the colony’s GDP on the owner’s next Regular Turn; if not used, they are lost.<sup>6</sup>
    - The enhanced value RPs will be ‘dumped’ on the colony regardless of the colony’s actual needs, unlike Unloading RPs from sovereign Cargo Ships, which only Unload the amount of RPs needed for turn activities.<sup>7</sup>
- Enhanced Value is a boundary-control function in the game, and **never applies** to Loading or Unloading RPs between a colony and Cargo Ship owned by the same position (except Looting, *ut infra*), regardless of Native Population Types or in most cases, the political status of the colony (except Conquered Colonies for Looting purposes), or to the transfer of Supplies, Enhancements, and such, regardless of ownership.
  - Enhanced Value does not apply in these cases, even if the RPs were Loaded from an **alien colony**, as the Enhanced Value was established during the Loading – i.e. no double Enhanced Value, getting it on both ends.
  - Conversely, RPs Loaded from an **alien colony** and then subsequently Unloaded to another **alien colony** may be enhanced in value on both ends. Whether or not the is profitable to the owner of the Cargo Ship is a matter of the game situation, but it is possible to receive a double enhancement of value in this and in Looting.
- Enhanced value in GGDM is a vague, over-simplistic system that avoids tracking the origin of RPs, ship movement and history and so forth; to the extent that these may be important, the Concierge may use Interventions to apply specific situation game effects.<sup>8</sup>
- Enhanced Value may be obtained in advance by Marketing, except when the RPs in question have been Looted.<sup>9</sup>

<sup>1</sup> See Enhanced Value and Back End Loading, 2 Commerce, pp. 1193, 1200.

<sup>2</sup> The game does not track the native population types of ship crews or their origin worlds, see Maiden Voyage, 3 Construction, p. 677, and Valarie and the Fleet of a Thousand Worlds, 1 Carriers & Fighters, p. 1052.

<sup>3</sup> See Aliency Apostasy, 3 Disruption, p. 283 and Packing It In, 2 Commerce, pp. 1200-1201.

<sup>4</sup> See Enhanced Value, 2 Commerce, p. 1193.

<sup>5</sup> See Packing It In, 2 Commerce, pp. 1200-1201.

<sup>6</sup> See Intrinsically Profitable, 2 Commerce, p. 1203.

<sup>7</sup> See Downloading, 2 Commerce, p. 1202.

<sup>8</sup> See Enhanced Value, 2 Commerce, p. 1193.

<sup>9</sup> See Marketing, 2 Commerce, pp. 1193-1194 and Black Market, 3 Commerce, p. 1211.

- Looted RPs do still receive Enhanced Value when Loaded, possibly greater than normal. If Unloaded subsequently to another **alien colony**, they may be enhanced again.
- Enhanced Value does not occur when RPs are transferred between Cargo Ships at a colony, regardless of ownership of the Cargo Ships or the colony, or the source of the RPs.<sup>10</sup>
- Enhanced Value in Unloading RPs to a colony is the actual RPs Unloaded plus a percentage. The percentage may have been previously determined by Marketing, if not, then the positions take their chances randomly at the time of Unloading.<sup>11</sup>
  - Conversely, when RPs are Loaded to an alien Cargo Ship, only unenhanced RPs sufficient to create the Enhanced Value for the recipient are subtracted from the colony owner's Treasury and count against the colony's GDP on the next turn. This may also be established in advance by Marketing, or randomly determined at the moment of the Load RPs.<sup>12</sup>

## Looting

- Looting occurs when *any* Cargo Ship Loads RPs from a Conquered Colony.<sup>13</sup>
  - *Any* Cargo Ship includes those of the owner of the Conquered Colony.
  - Looting is not triggered by Unloading RPs to the Conquered Colony, which may be done to enhance the chances of Conversion and for Construction.<sup>14</sup>
- Conquered Colonies are treated as **alien colonies** for the purpose of Load RPs to Cargo Ships owned by the colony's owner. Thus, the Looted RPs are received at enhanced value when Loaded to the Cargo Ship.<sup>15</sup>
  - Conquered Colonies, for the purpose of Load RPs only, are an exception to the sovereignty rule for Load and Unload RPs at colonies.
  - Because the Conquered Colony is treated as an **alien colony**, Cargo Ships engaged in Looting may be subject to **apostasy**.<sup>16</sup>
- RPs Loaded to a Cargo Ship from a Conquered Colony are not subtracted from the position's Treasury, rather, they are subtracted from the colony in the form of industry and enhancements destroyed equal to the unenhanced value of the RPs Looted.<sup>17</sup>
  - Looting is not limited to the GDP of the Conquered Colony.
  - Looting will probably cause population loss at the Conquered Colony as well following the collapse of complex society.
  - Looting is always a Disruption Event at the Conquered Colony.<sup>18</sup>
- Grey areas and tricky issues abound in Looting, which can be handed by the Concierge through story-enhancing use of Interventions.<sup>19</sup>

<sup>19</sup> See Black Market, 3 Commerce, pp. 1211-1212.

**Appendix EPAT1 – The Existential Patents**

- This Appendix contains all of the Existential Patents (17) which positions may purchase with Inheritance Points during the set-up or prosecute normally once the game begins.
- Existential Patents are those Patents which are available prior to the start of the game; they are available and can be acquired during set up. Existential Patents recognize technology that must preexist the invention of Stardrive, which marks entry into the 1<sup>st</sup> Era of interstellar technology at the beginning of the game or shortly afterward.
- See Appendix IPT2 for Flat Rate Costs of Existential Patents during set up.

<b>Existential Patents</b>	<b>Page #</b>	<b>Section Introduced</b>	<b>Other Sections</b>
Industry	CLVII	Construction	Taxation
Orbital Shipyard	CLVIII	Construction	Combat
Orbital City	CLIX	Construction	Census
Generic Star Drive (GSD)	CLX	Stardrive	Movement
Ship Systems	CLXI	Movement	Expansion Commerce
Logistical Support Ship	CLXII	Movement	Construction
Scout Ship	CLXIII	Expansion	Intelligence
Cargo Ship	CLXIV	Commerce	Construction
Colony Transport	CLXV	Expansion	Combat
Controlled Environment Technology	CLXVI	Expansion	Taxation
Ground Defense Base	CLXVII	Combat	Carriers & Fighters
Orbital Defense Base	CLXVIII	Construction	Combat
System Defense Base	CLXIX	Combat	
1 <sup>st</sup> Era Warship	CLXX	Combat	Technology
1 <sup>st</sup> Era Carrier	CLXXI	Carriers & Fighters	
1 <sup>st</sup> Era Fighters	CLXXII	Carriers & Fighters	
1 <sup>st</sup> Era Ship Missiles	CLXXIII	Carriers & Fighters	

**Existential Patent: Industry**

Theory: EGY ⇔ MTR ⇔ IND

OpQal: Enhancement Technology (ET, colony enhancement)

Effects (Theory – 1 = 2)

IND – May build Industry Installations on Friendly, Naturalized and Converted colonies by activation of the Construction Power costing 2 RPs each.<sup>1</sup>

MTR – Industry produces .5 RP each during taxation.

Cost (Base 5 RPs/Effect) = Special (modified, above)

IND – May build a maximum of 1 Industry for every 2.5 populations on a colony.

MTR – Each time Census or Taxation Power is activated, Pollution Potentials are generated at each colony that has Industry.<sup>2</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

❖ Habitability loss does not apply to Unpleasant and Hostile planets.

✓ With maximum Industry, every five population factors can produce 2 RPs.

<sup>1</sup> See Industry, 2 Construction, p. 666, for Industry colony enhancement details and limits.

<sup>2</sup> See Pollution Potentials, 3 Taxation & Census, p. 320.

**Existential Patent: Orbital Shipyard**

Theory: EGY ⇔ MTR ⇔ SHP ⇔ IND

OpQal: Enhancement Technology (ET, colony enhancement)

Effects (Theory – 1 = 3)

IND – May build Orbital Shipyard at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

SHP – Orbital Shipyards build starships and lay keels, and build Orbital and System Defense Bases, and Orbital Cities.<sup>2</sup>

MTR – Orbital Shipyard may build as many ships or lay as many keels in a turn as the colony can afford.<sup>3</sup>

Cost (Base 5 RPs/Effect) = 15 RPs each

IND – Limit one Orbital Shipyard at one time per colony.<sup>4</sup>

SHP – Construction of ships and Orbital Cities requires two turns, one turn to lay keel (pay half cost of ship) and second turn to build the ship (pay other half of cost of ship).<sup>5</sup>

MTR – Colony must have minimum 10 population factors to build an Orbital Shipyard

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Orbital Shipyards are targeted in Colony Combats as non-warships.<sup>6</sup>
- ❖ Keels are targeted in Colony Combats as non-warships
- ❖ Unfinished ships are targeted in Colony Combats as non-warships.
- ❖ Destruction of Orbital Shipyard does not destroy keels and unfinished warships.
- ❖ Obviously, an Orbital Shipyard is not required to build an Orbital Shipyard.

- ✓ A colony with 75 populations and no industry or a colony with 25 populations and maximum industry (10 industry) could build an Orbital Shipyard by itself. A colony with only 10 population factors would need unloading from Cargo Ships to build an Orbital Shipyard.
- ✓ Positions which begin the game with the Homeworld, Lost Colony or Outposter Primal States may not begin the game with any ships unless they have first obtained the Orbital Shipyard Existential Technology and purchased at least one Orbital Shipyard. This balances out somewhat their early population base and industry advantages vs. Expedition Leader, Nomadic Warfleet, and Truly Alien Primal States.

<sup>1</sup> See Orbital Shipyard, 3 Construction, p. 667 for most details relating to Orbital Shipyards.

<sup>2</sup> See Orbital City and Orbital Defense Base, 3 Construction, pp. 667-668.

<sup>3</sup> See Laying Keel and Shipbuilding, 3 Construction, p. 675.

<sup>4</sup> See Orbital Shipyard, 3 Construction, p. 667.

<sup>5</sup> See Laying Keel and Shipbuilding, 3 Construction, p. 675.

<sup>6</sup> See Civilian Targets, 3 Combat, p. 978.

**Existential Patent: Orbital City**

Theory: SHP ⇔ PLT ⇔ LIF ⇔ LIF ⇔ IND

OpQal: Enhancement Technology (ET, colony enhancement)

Effects (Theory – 1 = 4)

IND – May build Orbital City at any Orbital Shipyard in two turns at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

LIF – Populations may permanently reside on Orbital Cities.

PLN – Populations on Orbital Cities do not count against Maximum Habitability.<sup>2</sup>

SHP – Populations are loaded to (and unloaded from) Orbital Cities like Colony Ships by use of Expansion Power.<sup>3</sup>

Cost (Base 5 RPs/Effect) = 20 RPs each

IND – Each Orbital City holds 15 population factors of one Native Population Type, may have Industry.<sup>4</sup>

SHP – Orbital City may not move or leave planet; and is targeted as a civilian orbital target, and has no attack.<sup>5</sup>

LIF – Populations on Orbital Cities do not grow when Census Power is activated<sup>6</sup> but do produce when taxed.

PLN – Total population on Orbital Cities may not exceed half of planet's *original* Maximum Habitability.<sup>7</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Orbital Cities are targeted in Colony Combats as non-warships.
- ❖ Population on destroyed Orbital Cities is killed.
- ❖ Population on Orbital Cities are a separate colony if the native population type is different from any colony on the planet; otherwise, they are considered to be part of the colony of their native population type on the planet.
- ❖ When they are considered part of a colony on that planet, populations on Orbital Cities participate in taxation when the Taxation Power is activated.
- ❖ When populations on Orbital Cities are considered a separate colony, even if owned by the owner of the colony(s) on the planet, Orbital Cities are taxed as a separate colony.
- ❖ A planet may have Orbital Cities and no population on the ground.
- ❖ Industry may be built on Orbital Cities to the limits of the population.

<sup>1</sup> See Orbital City, 2 Construction, p. 667.

<sup>2</sup> See Dayworld, 3 Taxation & Census, p. 316.

<sup>3</sup> See Sardine Tins and Opening the Can Of..., 3 Expansion, pp. 911, 914-915.

<sup>4</sup> See Industry, 2 Construction, p. 665 and Sardine Tins, 3 Expansion, pp. 911-912.

<sup>5</sup> See Civilian Targets, 3 Combat, p. 978.

<sup>6</sup> See Cabin Fever, 4 Taxation & Census, p. 326.

<sup>7</sup> See Dayworld, 3 Taxation & Census, p. 316.

**Existential Stardrive Patent: Generic Stardrive (GSD)**

Movement Formula: Distance between any two stars is the absolute value of  $(x_1 - x_2)$  plus  $(y_1 - y_2)$  plus  $(z_1 - z_2)$  where the first coordinates are the origin star and the second coordinates are the destination star. All fractions are truncated.

Put another way: The total difference between the three numbers making up the respective Positional Values of the origin star and the destination star is the **movement distance** between them.

Base Ship Speed: Base ship speed is two movement per turn, with distance calculated using the above formula.

Operational Characteristics: This stardrive does not make any noise as it travels through space or when it takes off; it does not take off to the sounds of blaring, heart-pounding orchestra music.

The maximum possible ship speed for this stardrive is 8 movement per turn.

Ships equipped with this stardrive may not change destinations during the voyage and may not stop or turn around between stars. All trips are directly from the origin to the destination at a constant speed, in a straight line.

Ships equipped with this stardrive always move at the maximum possible speed. Movement at lower speeds is not possible.

Stardrive ignores mass of ships, all ships move equally with this stardrive.

User Manual: (to be filled in by the Concierge)

Simmung: *Space is open for business!*

- ✓ As this is a Stardrive Patent, it looks different than regular Patents and is not prosecuted the same. See Stardrive section.
- ✓ Positions must have a Stardrive technology before purchasing or prosecuting any starship Patents. Positions beginning as the Expedition Leader, Nomadic Warfleet, or Truly Alien Primal States must begin the game with Stardrive. It is highly recommended that all positions begin with the Generic Stardrive Patent—you can't be interstellar without a stardrive.

**Existential Patent: Ship Systems**

Theory: SHP ⇔ LIF ⇔ LIF

OpQual: Enhancement Technology (ET, permanent ship enhancement).

Effects (Theory – 1 = 2)

LIF – Starship Operational Flight Limitation (OFL) is two Regular Turns.<sup>1</sup>

LIF – Starship Operational Supply Limitation (OSL) is two Regular Turns.

Cost = \*none (see Operational Qualities for COT Patents)

SHP – May not obtain (buy during set up, prosecute later) any starship patent, except Scouts, until Ship System Patent is obtained.<sup>2</sup>

LIF – Starships that exceed their OFL & ODL combined are subject to Supply Rolls and may be lost.<sup>3</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

❖ Ship Patent includes 1<sup>st</sup> Era Carrier Patents.

- ✓ This Patent allows a starship to scamper out two turns, and then scamper back to a supporting colony in two turns, maximum four turns round trip.

<sup>1</sup> See Life Support, 3 Movement, p. 854.

<sup>2</sup> See Star-Driven, 7 Beginnings, p. 72 and Physical Item Technologies, 2 Patents, p. 739.

<sup>3</sup> See Death Ship and Running on Empty, et seq., 3 Movement, pp. 856, 862.

**Existential Patent: Logistical Support Ship (1<sup>st</sup> Era)**

Theory: SDR ⇔ IND ⇔ SHP ⇔ IND ⇔ SHP

OpQal: Physical Item Technology (PIT)

Effects (Theory – 1 = 4)

IND – May build Logistical Support Ships at any Orbital Shipyard at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

SHP – Logistical Support Ships may load and transport *Supplies*, Fighters, Missiles, or other enhancements from colonies for use by other ships.<sup>2</sup>

IND – Logistical Support Ship capacity and items carried are measured in RP value.<sup>3</sup>

SHP – Logistical Support Ships may automatically transfer anything they are carrying to another eligible ship or colony that begins the turn co-located with the Log Ship<sup>4</sup> or in by joining an ongoing combat.<sup>5</sup>

Cost (special)

IND – Logistical Support Ships cost 15 RPs to build, Orbital Shipyard required.<sup>6</sup>

IND – Logistical Support Ships may carry 20 RPs worth of Supplies, Fighters, Missiles, or other enhancements.<sup>7</sup>

SHP – Logistical Support Ships are targeted as non-warships in combat and may not initiate combat or attack,<sup>8</sup> may move using Combat Movement however.<sup>9</sup>

SHP – Logistical Support Ships may not use any Fighters, Missiles, or any enhancements they are transporting, Log Ships may only use Supplies.<sup>10</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ A ship receiving a transfer must be able to legally use what is received.<sup>11</sup>
- ❖ Logistical Support Ships are the only ships that may carry Supplies which extend the Operational Supply Limitation (OSL) of other ships when transferred.
- ❖ In combat, the receiving ship or Defense Base may not do anything else for the round.
- ❖ Unless there is a reason otherwise, Logistical Support Ships may carry Fighters and Missiles of any Era and transfer to any eligible ship, regardless of the relative Eras of the Log Ship and the receiving ship.

<sup>1</sup> See Logistical Support Ships, 3 Movement, p. 860.

<sup>2</sup> See Costly Resupply, 3 Construction, p. 679.

<sup>3</sup> See Costly Resupply, 3 Construction, p. 679 and Take Your Protein Pills, 3 Movement, p. 860.

<sup>4</sup> See Transfers, 3 Construction, p. 679 and Running Outtime, 3 Movement, p. 861.

<sup>5</sup> See Combat Resupply, 4 Movement, p. 868 and Victuals & Vitals, 3 Combat, p. 975.

<sup>6</sup> See Logistical Support Ships, 3 Movement, p. 860.

<sup>7</sup> See Costly Resupply, 3 Construction, p. 679 and Take Your Protein Pills, 3 Movement, p. 860.

<sup>8</sup> See Victuals & Vitals and Civilian Targets, 3 Combat, p. 975, 978.

<sup>9</sup> See Warship, 1 Combat, p. 941.

<sup>10</sup> See Logistical Support Ships, 3 Movement, p. 860.

<sup>11</sup> See Combat Resupply, 4 Movement, p. 868.

**Existential Patent: Scout Ship (1<sup>st</sup> Era)**

Theory: SDR ⇔ IND ⇔ IND ⇔ SHP ⇔ DEF

OpQal: Physical Item Technology (PIT)

Effects (Theory – 1 = 4)

IND – May build Scout Ships at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

IND – May build Scout Ships at colonies that do not have an Orbital Shipyard.<sup>2</sup>

SHP – Scout Ships have two extra turns of Operational Flight Limitation and Operation Supply Limitation (OFL/OSL).<sup>3</sup>

DEF – Scout Ships receive one Defensive Shift in Combat.<sup>4</sup>

Cost (special)

IND – Scout Ships constructed at Orbital Shipyards cost 8 RPs each.<sup>5</sup>

IND – Scout Ships constructed “on the ground” (i.e. without an Orbital Shipyard) cost 10 RPs each.<sup>6</sup>

DEF – Scout Ships are targeted as non-warships in combat.<sup>7</sup>

SHP – Scout Ships may never attack, are unarmed and targeted as non-warships, and may not be armed even with Enhancements such as Ship Missiles.<sup>8</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Scout Ships which are not moving to a destination system with a supporting colony must move by activation of the Expansion Power for the purpose of Scouting.<sup>9</sup>

- ✓ The Scout Ship is the only starship that may be constructed without an Orbital Shipyard. This allows all positions which start the game with Stardrive to have Scout Ships at the beginning of the game. Additionally, this ability also allows small frontier colonies, those lacking Orbital Shipyards, to participate in farther exploration by constructing Scouts on the frontier to replace those that have gone out before, or been lost.
- ✓ Without the Ship Systems Existential Patent, a ship has no turns of OFL/OSL and cannot move away from a supporting colony and cannot be constructed. The Scout Ship’s two extra turns allow it to be constructed and to move without Ship Systems Existential Patent.

<sup>1</sup> See Building Up, 1 Expansion, p. 880.

<sup>2</sup> See Building Up, 1 Expansion, p. 880.

<sup>3</sup> See Imperial Interstellar Scout Service, 3 Movement, p. 855 and Scout’s Honor, 1 Expansion, p. 879.

<sup>4</sup> See Scout’s Honor, 1 Expansion, p. 879 and Civilian Targets, 3 Combat, p. 878.

<sup>5</sup> See Building Up, 1 Expansion, p. 880.

<sup>6</sup> See Building Up, 1 Expansion, p. 880.

<sup>7</sup> See Scout’s Honor, 1 Expansion, p. 879.

<sup>8</sup> See Scout’s Honor, 1 Expansion, p. 879.

<sup>9</sup> See Through the Never, 3 Expansion, p. 907

**Existential Patent: Cargo Ship (1<sup>st</sup> Era)**

Theory: SDR ⇔ IND ⇔ IND ⇔ SHP

OpQal: Physical Item Technology (PIT)

Effects (Theory – 1 = 4)

IND – May build Cargo Ships at an Orbital Shipyard at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

SHP – Cargo Ships are the only ships that may load, transport and unload RPs to and from colonies.<sup>2</sup>

IND – RPs unloaded to colonies may gain enhanced value.<sup>3</sup>

SHP – Cargo Ships may resupply at any **alien colony** by Loading/Unloading or with permission or may attempt to resupply in any starsystem if there is no Supporting Colony.<sup>4</sup>

Cost (special)

IND – Cargo Ships cost 8 RPs to build.<sup>5</sup>

IND – Cargo Ships may carry up to 15 RPs and may not transport anything else.<sup>6</sup>

SHP – Cargo Ships are targeted as non-warships in combat and may not initiate combat or attack.<sup>7</sup>

SHP – Cargo Ships may not move to any system where there is not a known colony.<sup>8</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ A colony to which RPs are unloaded be able to legally use what is received in the same turn as the Unload or the RPs are lost.<sup>9</sup>

- ✓ Cargo Ships are pure economics. A Cargo Ship that is too small is not economical in terms of Power Activations. A Cargo Ship that is too big and expensive is not necessarily economical either. At 8 RPs cost, any colony that can build an Orbital Shipyard can build a Cargo Ship. The ability of the Cargo Ship to transport 15 RPs worth of Cargo is equivalent to transporting an entire Colony Transport, Log Ship, Orbital Shipyard, or Ground Defense Base, or enough to lay the keel on a 1<sup>st</sup> Era Warship or build a load of 1<sup>st</sup> Era Ship Missiles or Fighters.

<sup>1</sup> See Cargo Ships, 1 Commerce, p. 1187.

<sup>2</sup> See Cargo Ships, 1 Commerce, p. 1187.

<sup>8</sup> See Cargo Ships in Combat and Trade Mission, 1 Commerce, pp. 1187, 1189.

<sup>9</sup> See Gross Domestic Product, 1 Construction, p. 662.

**Existential Patent: Colony Transport (1<sup>st</sup> Era Colony Ship)**

Theory: SDR ⇔ IND ⇔ SHP ⇔ SHP ⇔ PLN

OpQal: Physical Item Technology (PIT)

Effects (Theory – 1 = 4)

IND – May build Colony Transports at any Orbital Shipyard at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

SHP – Only ship that can Transport populations between planets and starsystems.<sup>2</sup>

SHP – Only ship that can Load and Unload population to and from established colonies.<sup>3</sup>

PLN – Only ship that can Land to establish new colonies on planets not currently colonized by the population type on the Colony Transport.<sup>4</sup>

Cost (special)

IND – Colony Transports constructed cost 10 RPs each.<sup>5</sup>

SHP – Colony Transports each hold three population factors of one Native Population Type.<sup>6</sup>

PLN – Colony Transports are consumed by Landing to form a new colony, and are thus removed from the game.<sup>7</sup>

SHP – Colony Transports are targeted as non-warships and may never attack or be armed.<sup>8</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Colony Transports, as Colony Ships, may never go to an unexplored system.<sup>9</sup>
- ❖ Population onboard Colony Transports when they are destroyed are lost.<sup>10</sup>
- ❖ Population onboard Colony Transports does not produce or grow when Taxation and Census powers are activated.<sup>11</sup>
- ❖ Colony Transports loaded with population are moved *only* by activation of the Expansion Power for the purpose of Transporting Population.<sup>12</sup>
- ❖ Loading and unloading of population to and from established colonies is not automatic, “loading” and “unloading” rolls required with an activation of the Expansion Power for the proper purpose.<sup>13</sup>

<sup>1</sup> See Building Up, 1 Expansion, p. 880.

<sup>6</sup> See Sardine Tins, 3 Expansion, pp. 911-912.

<sup>7</sup> See Pandorum, 4 Expansion, p. 923.

<sup>8</sup> See Colonies in a Can, 3 Expansion, p. 913.

<sup>9</sup> See Send the Enterprise!, 3 Expansion, p. 909.

<sup>10</sup> See Colonies in a Can, 3 Expansion, p. 913.

<sup>11</sup> See Colonies in a Can, 3 Expansion, p. 913 and Cabin Fever, 4 Taxation & Census, p. 326.

<sup>12</sup> See Engage!, 1 Movement, p. 838 and Colonization, 1 Expansion, p. 876.

<sup>13</sup> See Sardine Tins and Opening the Can Of..., 3 Expansion, pp. 911, 914.

**Existential Patent: Controlled Environment Technology (CET)**

Theory: LIF  $\Leftrightarrow$  PLN  $\Leftrightarrow$  SHP

OpQal: Enhancement Technology (ET, permanent, based on Colony Transport Patent)

Effects (Theory – 1 = 2)

PLN – Allows Colony Ships to establish new colonies on planets with a Habitability Class of Unpleasant or Hostile to the Native Population Type of the species that developed this technology.<sup>1</sup>

SHP – Is a permanent Enhancement to each Colony Transport.<sup>2</sup>

Cost = (Base 5 RPs/Effect) = 10 RPs ( for each Colony Ship)

PLN – Population on Unpleasant Planets grow by one factor per Census activation.<sup>3</sup>

LIF – Population on Hostile Planets do not grow when Census Power is activated.<sup>4</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ CET applies only to the Native Population Type of the position that developed it. It is possible to develop CET for other Native Population Types if the position had a significant population and long term close exposure to that Native Population Type.<sup>5</sup>
- ❖ CET does not change the Habitability Class of the colony planet.<sup>6</sup>

- ✓ It can be deduced that CET initially provides a controlled environment for three population factors. Hence, if larger capacity Colony Ships are developed later, they may either require a new CET or use of multiple CET enhancements per ship. It may also be concluded that, at least on Unpleasant Planets, CET expands slowly with the population.

<sup>1</sup> See Wagon Train to the Stars and Building Up, 1 Expansion, pp. 879-880 and The Landing and Survival & Ethical Dilemmas, 4 Expansion, pp. 920, 922.

<sup>2</sup> See Building Up, 1 Expansion, p. 880.

<sup>3</sup> See Unpleasant & Hostile Planets, 4 Taxation & Census, p. 326.

<sup>4</sup> See Unpleasant & Hostile Planets, 4 Taxation & Census, p. 326.

<sup>5</sup> See Building Up, 1 Expansion, p. 880.

<sup>6</sup> See Wagon Train to the Stars, 1 Expansion, p. 879.

**Existential Patent: Ground Defense Base**

Theory: IND  $\Leftrightarrow$  DEF  $\Leftrightarrow$  DEF  $\Leftrightarrow$  WEP

OpQal: Enhancement Technology (ET, Installation, colony enhancement)

Effects (Theory – 1 = 3)

INP – A Ground Defense Base, 1 per 3 population factors *on the planet's surface* may be built by activation of the Construction Power in a single turn at any Friendly, Naturalized or Converted colony (Orbital Shipyard not required).<sup>1</sup>

DEF – Ground Defense Bases convert to Ground Units if the colony is attacked in Ground Combat (i.e. act as fortifications, tunnels, extra heavy weapons).<sup>2</sup>

WEP – Ground Defense Bases have a base chance to hit of 20% times the Current Era in Colony Combat<sup>3</sup> and have a 25% chance of firing at outgoing Raiding Fighters.<sup>4</sup>

Cost = (Base 5 RPs/Effect) = 15 RPs<sup>5</sup>

WEP – Ground Defense Bases may not Combat Screen in Colony Combat.<sup>6</sup>

DEF – Ground Defense Bases may participate in any Colony Combat on the second round (come closer, that's right, good boy, you want this right?...BANG!).<sup>7</sup>

DEF – Ground Defense Bases may not retreat from combat or leave the surface.<sup>8</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Fire at Raiding Fighters by Ground Defense Bases occurs after damage inflicted by the Raiding Fighters.<sup>9</sup>
- ❖ Current Era multiplier refers to the Era of the Colony Defenses.<sup>10</sup>
- ❖ Ground Bases fire Close-in Defense against attacking Fighters.<sup>11</sup>
- ❖ Ground Bases damaged in Ground Combat are repaired by activation of the Construction Power and do not function until repaired.<sup>12</sup>
- ❖ Ground Defense Bases may only be attacked in the first round of a Colony Combat if there are no Orbital or System Defense Bases.<sup>13</sup>

- ✓ Colony Defense Era Upgrades are expensive, but eventually the multipliers make Defense Bases (all kinds) more powerful than 3<sup>rd</sup> Era Warships. However, in the early and mid-game, warship Era progression will easily outrun Defense progression.

<sup>1</sup> See Orbital Defense Base, 2 Construction, p. 668.

<sup>2</sup> See Verdun, 4 Combat, p. 997.

<sup>3</sup> See Firing Solution, 3 Combat, p. 978.

<sup>5</sup> See Orbital Defense Base, 2 Construction, p. 668.

<sup>6</sup> See Colony Screens, 3 Carriers & Fighters, pp. 1068-1069.

<sup>7</sup> See Something Here from Somewhere Else, 2 Combat, p. 961.

<sup>8</sup> See Something Here from Somewhere Else, 2 Combat, p. 961.

<sup>9</sup> See Giv'n Them Some Flak, Carriers & Fighters, p. 1088.

<sup>10</sup> See Colony Defense Era Upgrade, 2 Combat, p. 954.

<sup>11</sup> See Fortress North America, 4 Combat, p. 997.

<sup>12</sup> See Orbital Defense Base, 2 Construction, p. 668 and Verdun, 4 Combat, p. 997.

<sup>13</sup> See Something Here from Somewhere Else, 2 Combat, p. 961.

**Existential Patent: Orbital Defense Base**

Theory: EGY ⇔ IND ⇔ DEF ⇔ DEF ⇔ WPN

OpQal: Enhancement Technology (ET, Installation, colony enhancement)

Effects (Theory – 1 = 4)

IND – Orbital Defense Bases may be built at an Orbital Shipyard at any Friendly, Naturalized, or Converted colony by activation of the Construction Power.<sup>1</sup>

DEF – Orbital Defense Bases receive one Defensive Shift in the first combat round.<sup>2</sup>

DEF – Orbital Defense Bases have a 40% chance to fire at incoming Raiding Fighters.<sup>3</sup>

WPN – Orbital Defense Bases have a base 30% chance times current Era to hit in Colony Combat.<sup>4</sup>

Cost (Base 5 RPs/Effect) = 20 RPs each<sup>5</sup>

IND – One Orbital Defense Base may be built per 10 population factors on colony.<sup>6</sup>

DEF – Orbital Defense Bases cannot retreat from combat or leave planet.<sup>7</sup>

DEF – Orbital Defense Bases may only Combat Screen other things in orbit.<sup>8</sup>

WEP – Orbital Defense Bases may only participate in Colony Combat<sup>9</sup> and sometimes in Ground Combat.<sup>10</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Fire at Raiding Fighters by Orbital Defense Bases occurs before damage inflicted by the Raiding Fighters.<sup>11</sup>
- ❖ Current Era multiplier refers to the Era of the Colony Defenses.<sup>12</sup>

- ✓ Orbital Defense Bases – not warships – are the primary colony defense. If your warships are pinned to defending a colony, or colonies, they might as well be defense bases.
- ✓ In the 1<sup>st</sup> Era, Orbital Defense Bases are equal to 1<sup>st</sup> Era Warships, but afterward, in the 2<sup>nd</sup> and 3<sup>rd</sup> Eras, Orbital Defense Bases gain the edge.

<sup>1</sup> See Orbital Defense Base, 2 Construction, p. 668.

<sup>11</sup> See Under Your Desk, 4 Carriers & Fighters, p. 1086.

<sup>12</sup> See Colony Defense Era Upgrade, 2 Combat, p. 954.

**Existential Patent: System Defense Base**

Theory: EGY ⇔ IND ⇔ DEF ⇔ DEF ⇔ DEF ⇔ WPN

OpQal: Enhancement Technology (ET, Installation, colony enhancement)

Effects (Theory – 1 = 5)

IND – System Defense Bases may be built at an Orbital Shipyard in one turn at any Friendly, Naturalized, or Converted colony by activation of the Construction Power.<sup>1</sup>

DEF – System Defense Bases receive one Defensive Shift on the first combat round.<sup>2</sup>

DEF – System Defense Bases may carry 30 RPs of Ship Missiles (2/3 of their cost, normal is RP capacity equal to half of cost for warships, less for Carriers).<sup>3</sup>

DEF – Attackers may only attack System Bases in the first round of any Colony Combat and only System Bases (and colony Fighters) can fire at the attackers.<sup>4</sup>

WPN – System Defense Bases have a base 30% chance times current Era to hit in Colony Combat.<sup>5</sup>

Cost (Base 5 RPs/Effect) = 45 RPs each (\*see below)<sup>6</sup>

IND – One System Defense Base may be built per 30 population factors on colony.<sup>7</sup>

DEF – System Defense Bases cost an extra 20 RPs each.<sup>8</sup>

DEF – System Defense Bases cannot retreat from combat or leave planet.<sup>9</sup>

DEF – Attackers may choose to initiate combat against only the System Defense Bases without engaging the rest of the colony defenses in Colony Combat.<sup>10</sup>

WEP – System Defense Bases may not fire at Raiding Fighters.<sup>11</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Current Era multiplier refers to the Era of the Colony Defenses.<sup>12</sup>
- ❖ Colony Combat may not be initiated against the colony if System Bases are attacked separately. Orbital and Ground Defense Bases may not join or be targeted, but Fighter Complements on the planet may choose to join.<sup>13</sup>

**Existential Patent: 1<sup>st</sup> Era Warship**

Theory: SDR ⇔ IND ⇔ WEP ⇔ WEP ⇔ WEP ⇔ DEF

OpQal: Physical Item Technology (PIT)

Effects (Theory – 1 = 5)

IND – May build 1<sup>st</sup> Era Warships at any Orbital Shipyard at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

WEP – 1<sup>st</sup> Era Warship may initiate combat vs. ships and colonies.<sup>2</sup>

WEP – Base Chance to hit when attacking is 30% (vs. ships and defense bases).<sup>3</sup>

WEP – May destroy during Orbital Bombardment 3 population factors on Conquered Colony and/or participate in Pacification Combat.<sup>4</sup>

DEF – May re-roll one failed Hazard Roll when entering an unexplored system.<sup>5</sup>

Cost (special)

IND – 1<sup>st</sup> Era Warships cost 30 RPs to build.<sup>6</sup>

DEF – When attacked by higher Era ships and bases, the attackers receive one Offensive Shift per Era difference.<sup>7</sup>

WEP – May only have one target assigned per Combat Round (i.e. fires/acts once per round).<sup>8</sup>

WEP – May fire Close-in Defense against Fighters and Ship Missiles.<sup>9</sup>

WEP – May not Combat Screen against Fighters.<sup>10</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ 1<sup>st</sup> Era Warships are assumed to be the average Ship of the Line of the Era, with no class differentiation.<sup>11</sup>
- ❖ Combat may be initiated by either Initiate Combat, Combat Alert or by initiating combat upon arrival via Combat Movement.<sup>12</sup>
- ❖ 1<sup>st</sup> Era Warships may not carry or support Fighters, but may be equipped with expendable Ship Missiles which give an additional attack.<sup>13</sup>

<sup>1</sup> See First Era Warship, 2 Combat, p. 952.

<sup>2</sup> See Warships, 1 Combat, p. 941.

<sup>12</sup> See The Combat Power, Warships, and Move Out!, 1 Combat, pp. 941-942.

<sup>13</sup> See Fighters vs. Ship Missiles and First Fire, 4 Carriers & Fighters, pp. 1080-1081.

**Existential Patent: 1<sup>st</sup> Era Carrier**

Theory: SDR ⇔ IND ⇔ SHP ⇔ WEP ⇔ DEF ⇔ DEF

OpQal: Physical Item Technology (PIT)

Effects (Theory – 1 = 5)

IND – May build 1<sup>st</sup> Era Carriers at any Orbital Shipyard at any Friendly, Naturalized or Converted colony by activation of the Construction Power.<sup>1</sup>

WEP – 1<sup>st</sup> Era Carrier may initiate combat vs. ships and colonies (with or without Fighters).<sup>2</sup>

SHP – Carrier may load, transport, launch, and support operation of a Fighter Complements whose RPs equal to half of its base construction cost;<sup>3</sup> Fighter Complements are ready to launch as soon as the Carrier arrives in system and there is no delay in the ability of a Carrier to initiate combat.

DEF – Carriers fire Close in Defense Weaponry with the same chance to hit as a warship of the same Era and add one to each damage die roll.<sup>4</sup>

DEF – Carriers may not be attacked by Defense Bases in Colony Combats unless it direct fires at a target in the same Combat Round.<sup>5</sup>

Cost (special)

IND – The maximum size of a 1<sup>st</sup> Era Carrier is 100 RPs (supporting a 50 RP Fighter Complement).<sup>6</sup>

SHP – Carrier may retreat with Fighter Complement only if they are Combat Screening the Carrier on the round of the retreat (or they are left behind).<sup>7</sup>

DEF – When attacked by higher Era ships and bases, the attackers receive one Offensive Shift per Era difference.<sup>8</sup>

DEF – Carriers may not Combat Screen against Fighters.<sup>9</sup>

WEP – Carriers have one direct fire per round and the target receives two Defensive Shifts in addition to normal Era Shifts, if applicable.<sup>10</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Fighter Complement is not included in the cost of Carrier construction. Fighter Complements must be constructed and transferred to the Carrier separately.<sup>11</sup>
- ❖ Damage from Carrier Close in Defense Weaponry Fire cannot exceed 10 RPs per damage die roll.<sup>12</sup>
- ❖ Carriers may be attacked by Ship Missiles and colony-based Fighters in Colony Combat on any round, regardless of whether the Carrier direct fires or not.<sup>13</sup>
- ❖ Fighters from a destroyed Carrier must find another place to land or perish on the next Combat Round.<sup>14</sup>

<sup>1</sup> See Carriers, 1 Carriers & Fighters, p. 1049.

<sup>2</sup> See Carriers, 1 Carriers & Fighters, p. 1049 and Warships, 1 Combat, p. 941.

<sup>4</sup> See Battle at Planet Midway, 2 Carriers & Fighters, p. 1060.

<sup>5</sup> See Carrier Direct Fire, 1 Carriers & Fighters, p. 1051.

<sup>6</sup> See Carriers, 1 Carriers & Fighters, p. 1049.

<sup>7</sup> See Carrier Operations, 1 Carriers & Fighters, p. 1050.

<sup>8</sup> See Combat Shifts, 3 Combat, p. 978.

<sup>9</sup> See Nolo Contendre, 3 Carriers & Fighters, p. 1070.

<sup>10</sup> See Carrier Direct Fire, 1 Carriers & Fighters, p. 1051.

<sup>11</sup> See Laying Keel, 3 Construction, p. 675 and How Big is Your Flight Stick?, 1 Carriers & Fighters, p. 1050.

<sup>12</sup> See Battle at Planet Midway, 2 Carriers & Fighters, p. 1060.

<sup>13</sup> See Carrier Direct Fire, 1 Carriers & Fighters, p. 1051.

<sup>14</sup> See Space Debris, 1 Carriers & Fighters, p. 1051.

**Existential Patent: 1<sup>st</sup> Era Fighters**

Theory: SHP ⇔ IND ⇔ WEP ⇔ WEP ⇔ WEP

OpQal: Enhancement Technology (ET, colony or ship (i.e. Carriers) enhancement)

Effects (Theory – 1 = 4)

SHP – Fighters may be built at any Friendly, Naturalized, or Converted colony by activation of the Construction Power for the purpose of Colony Enhancement.<sup>1</sup>

WEP – Fighters may initiate combat and join combats,<sup>2</sup> Fighters attack first in each Combat Round.<sup>3</sup>

WEP – Each Fighter Complement has two attacks (sorties) or two combat screening assignments (interceptions) per Combat Round<sup>4</sup> and cannot be blocked by non-Fighter Combat Screens.<sup>5</sup>

WEP – Fighters may pass through colony defenses and enemy ships, to Raid or Strike an unconquered colony.<sup>6</sup>

Cost (Base 5 RPs/Effect) = special (\*see below)

SHP – Fighters have zero turns of Operational Supply Limitation (OFL/OSL), must always be attached to a ship or colony.<sup>7</sup>

WEP – First successful Fighter attack against target Engages target, requires two successful Fighter (and/or Ship Missile) attacks in the same combat round to “hit” the target.<sup>8</sup>

WEP – Fighter Complements are measured in RPs, therefore, cost is special, not related to effects.<sup>9</sup>

IND – Maximum colony Fighter Complement size is 1 RP per population factor on colony.<sup>10</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Newly built Fighters form a new Fighter Complement, if none exists, or are added to the existing Fighter Complement. Each colony and Carrier may have only one Fighter Complement to which all assigned Fighters belong.<sup>11</sup>
- ❖ Engaged targets can fire Close-in Defense, but have less chance of doing whatever they were assigned to do.<sup>12</sup>

<sup>1</sup> See On the Flight Deck, 1 Carriers & Fighters, p. 1047.

<sup>2</sup> See On the Flight Deck, 1 Carriers & Fighters, p. 1047.

<sup>3</sup> See Blacksheep, 2 Carriers & Fighters, p. 1054.

<sup>4</sup> See Blacksheep, 2 Carriers & Fighters, p. 1054.

<sup>5</sup> See Nolo Contendre, 3 Carriers & Fighters, p. 1070.

<sup>6</sup> See World in Flames, 4 Carriers & Fighters, p. 1084.

<sup>7</sup> See See How Big is Your Flight Stick, 1 Carriers & Fighters, p. 1050.

<sup>8</sup> See Engaged and A Hurt, 2 Carriers & Fighters, pp. 1055-1056.

<sup>9</sup> See How Big is Your Flight Stick, 1 Carriers & Fighters, p. 1050, and Blacksheep, 2 Carriers & Fighters, p. 1054.

<sup>10</sup> See How Big is Your Flight Stick, 1 Carriers & Fighters, p. 1050.

<sup>11</sup> See On the Flight Deck, 1 Carriers & Fighters, p. 1047.

<sup>12</sup> See Engaged, 2 Carriers & Fighters, p. 1055.

**Existential Patent: 1<sup>st</sup> Era Ship Missiles**

Theory: EGY ⇔ SHP ⇔ IND ⇔ WEP

OpQual: Enhancement Technology (ET, expendable, based on any Warship, Carrier, or Defense Base patent)

Effects (Theory – 1 = 3)

IND – Ship Missiles may be built at any Friendly, Naturalized, or Converted colony by activation of the Construction Power for the purpose of Colony Enhancement.<sup>1</sup>

SHP – Ship Missiles (all or some) may be fired by any Warship, Carrier, or Orbital or System Defense Base in any combat round in addition to the unit's normal attack or assignment.<sup>2</sup>

WEP – Engaged results from successful Ship Missile attacks carryover to the next Combat Round, and are cumulative with other successful Ship Missile and Fighter attacks.<sup>3</sup>

Cost (Base 5 RPs/Effect) = special (\*see below)

WEP – Ship Missile attacks resolve last in the Combat Round (but before retreats)<sup>4</sup> and are resolved as Fighter attacks.<sup>5</sup>

SHP – Ship Missiles are measured in RPs, therefore, cost is special, not related to effects.<sup>6</sup>

IND – Each Warship, or Base may carry Ship Missiles equal to half of its construction cost, while Carriers may be equipped with Ship Missiles equal to one third of the construction cost of the Carrier.<sup>7</sup>

Manual (Post-patent notes and rulings by the Concierge to flesh out technology, only as necessary; advanced rulings requests are prohibited!):

- ❖ Ship Missile attacks from multiple ships on one target must be resolved separately (as waves of missiles).<sup>8</sup>
- ❖ Ship Missiles cannot be used against Ship Missiles or Fighters.<sup>9</sup>
- ❖ Ship Missiles are lost if the unit they are attached to is destroyed.<sup>10</sup>
- ❖ Ground Bases cannot fire Ship Missiles.<sup>11</sup>
- ❖ Ship Missiles may not receive the benefits of Enlightenment.<sup>12</sup>

### Appendix EPAT2 – Existential Patents Quick Summary

- This is a quick reference summary of the attributes of the basic units of the game from the starting Existential Patents. Existential Patents may, and many times must, be purchased during set up for a flat rate, see Appendix IPT2.
- IPs costs refers only to the per unit cost during set-up, see Appendix IPT1. RPs refers to the normal in-game cost to build each unit, shown on the Existential Patent.

Civilian Infrastructure (Construction Power, Colony Enhancement purpose):

- Industry: Cost 2 RPs each (3 IPs). Produces .5 RPs each during taxation. Max 1 Industry for every 2.5 population on Colony.
- Orbital Shipyard: Cost 15 RPs each (30 IPs). Max one Orbital Shipyard per colony. Need 10 or more population on colony to build an Orbital Shipyard. Orbital Shipyard required to build any ship, except Scout Ships. No attack ability, no combat power.
- Orbital City: Cost 20 RPs each (35 IPs). Orbital Shipyard required. Each holds 20 population, does not count against Maximum Habitability. Population on Orbital Cities does not grow during Census, but does produce during Taxation. May have industry, may not move. Population on Orbital Cities may not exceed half the original Maximum Habitability of the planet. No attack ability, no combat power.

Civilian Ships (Construction Power, Laying Keel and Shipbuilding purposes):

- Ship Systems: Required to construct any ship, no cost per ship. Gives two Regular Turns each of Operational Flight Limitation and Operational Supply Limitation.
- Logistical Ship: Cost 15 RPs each (15 IPs). Orbital Shipyard required, built in two turns. May carry 20 RPs worth of Supplies, Fighters, Missiles, or other enhancements (but not RPs). Transfers to other ships during Regular Turns and in combat. Critical to extending Operational Supply Limitation (OSL). Not a warship, but can move using Combat Movement. Must have both a Stardrive Patent and Ship Systems Existential Patent.
- Scout Ship: Cost 8 RPs each at Orbital Shipyard, or 10 RPs each constructed on the ground (5 IPs). No combat power, non-warship, but receives one Defensive Shift in combat. Scout Ships have two extra turns of OFL/OSL, can be constructed without Ship Systems Existential Patent, but a Stardrive Patent is still required.
- Cargo Ship: Cost 8 RPs each (8 IPs). Requires Orbital Shipyard, built in two turns. Can carry 15 RPs of cargo, can only carry RPs (not a Logistical Ship). Not a warship. Capable of *enhanced trade value* at **alien colonies**. Must have both a Stardrive Patent and Ship Systems Existential Patent.
- Colony Transport: Cost 10 RPs each (8 IPs). Requires Orbital Shipyard, built in two turns. Only ship that can load, unload, and transport population factors. Carries 3 population factors of any Native Population Type. Only ship that can establish a new colony (by Landing), during which it is consumed. Non-warship. Must have both a Stardrive Patent and Ship Systems Existential Patent. CET Patent (below) only needed to Land a Colony on Unpleasant and Hostile Class Planets.
- Controlled Environment Technology: Permanent Enhancement on all Colony Ships. Required to colonize bad planets, i.e. Habitability Class Unpleasant or Hostile.

## Colony Defenses (Construction Power, Colony Enhancement purpose):

- Ground Defense Base: Cost 15 RPs each (5 IPs). Maximum of 1 per 3 population factors on colony. Chance to fire at Raiders after they attack, converts to Ground Unit during Combat. May not fire during the first round of a Colony Combat, frequently also cannot be attacked in the first round. May not Combat Screen but may be Combat Screened, may not retreat or leave the planet surface. May not have Ship Missiles. Base 20% chance to hit times Era.
- Orbital Defense Base: Cost 20 RPs each (15 IPs). Maximum of 1 per 10 population factors on colony. Orbital Shipyard required, built in one turn. Chance to fire at Raiders before they attack. May have Ship Missiles. May Combat Screen other things in orbit only. Receives one Defensive Shift in first Combat Round of Colony Combat. Cannot retreat or leave the planet. Base 30% chance to hit times Era.
- System Defense Base: Cost 45 RPs each (45 IPs). Maximum of 1 per 30 population factors on colony. System Defense Base requires Orbital Shipyard, built in one turn. May not fire at Raiders. Has extra Ship Missile capacity. Attackers may only target System Defense Bases in the first round of a Colony Combat; attackers may choose to forgo attacking the colony to just attack System Defense Bases. Receives one Defensive Shift in the first round of Colony Combat. Cannot retreat from combat, cannot leave the planet. Base 30% chance to hit times Era.

## Warships and Weapons:

- 1<sup>st</sup> Era Warship: Cost 30 RPs (30 IPs). Orbital Shipyard required, build in two turns. May carry Ship Missiles. May initiate combat, base 30% chance to hit. May reroll failed Hazard Roll during exploration. May destroy population by Orbital Bombardment, may support Pacification Combat after conquest. Average non-specialized warship of the Era. May fire Close-in Defense against fighters.
- 1<sup>st</sup> Era Carrier: Cost based on RP size, maximum size is 100 RPs in 1<sup>st</sup> Era. Orbital Shipyard required, two turn build. May load, support and launch Fighter RPs up to half its size. May carry reduced Ship Missile load. Superior damage in Close-in Defense hits against attacking Fighters. Weaker direct fire ability against ships and bases, but cannot be hit in Colony Combat unless it direct fires. Fighters may retreat with Carrier.
- 1<sup>st</sup> Era Fighter: Cost 1 RP each (2 IPs for 3 RPs). Fighter Complements are measured in RPs. Max 1 RP of Fighters per population factor on colony. Fighters have no OSL, must be attached to ship or colony at all times. Each complement has two Sorties each Combat Round, can hit two different targets. Fighter attacks always resolve first. Requires two hits in same Combat Round to destroy target; Engaged targets have a lesser chance of doing whatever it is assigned in the Combat Round. May intercept and dogfight opposing Fighters. Cannot be intercepted by non-Fighters. May Raid colonies.
- 1<sup>st</sup> Era Ship Missiles: Cost 1 IP each (2 IPs for 3 RPs). Can be added to any warship or Orbital or System Defense Base for an extra attack ability. Expendable RPs. Resolved last in the Combat Round, resolved like Fighter attacks with some small differences. Engaged results carryover to the next Combat Round. Works best in conjunction with Fighter attacks earlier in Combat Round. Only Fighters can intercept Ship Missiles.

### Appendix EXP – Exploration & Colonization Example

Long ago in a Galactic Space far, far away ... the colony ship *Cllpygn* (named after a prehistoric form of mermaid on their homeworld) arrives in an unexplored system after a mis-jump (damned Concierge!).<sup>1</sup> The Colony Ship must explore the system, a Hazard Roll is made on 1d6, and, alas, the colony ship rolled a 5 and, as it is a non-warship and not a Scout, it is destroyed (see *Then Never Comes*, 3 Expansion, p. 907) by a solar flare because it arrived too close to the star (not the sort of ‘enlightenment’ they were seeking). Unfortunately, the colony ship was the last hope of a dying planet populated by technologically-advanced amphibians without vowels whose water supplies were shrinking and ....

Long afterward in the same Galactic Space, far, far away ... All webbed paws on deck! The Scout Ship *Callipygian*, built by a technologically-advanced species with vowels and named after an ancient, mythic mermaid goddess, hits the pre-plotted splashpoint in the unexplored system. A Hazard Roll is made, and the result is a 5, the *Callipygian* survives, narrowly avoiding collision with an ancient alien derelict in orbit around the star. The Scout Ship automatically explores the system (no Power Activation required, see *Then Never Comes*, 3 Expansion, p. 907) and sends back the information by FTL communication, along with the exciting discovery of a derelict ancient ship.

The system is immediately placed on the Scout Ship owner’s Public Space at the designated Monad location; it would not have been had the Scout Ship been destroyed in exploration, or for any other reason. The owner of the Scout Ship additionally took a chance that the exploration would be successful, and placed a Scene on the Monad where the star would be placed on the Public Space at the end of the Regular Turn when it was due to arrive. Thus, a Scene was immediately placed on the star since it was on the Public Space at the end of the Regular Turn when Scenes are placed. See *On the Soapbox*, 3 *The Sidereal Stage*, p. 122.

While the exploration was occurring, the position also finished Loading Population to several Colony Transports at a nearby colony, luckily avoiding Power Activation failures (see *Sardine Tins*, 3 Expansion, p. 911), and because there is already a Scene on the star on the Public Space, the Colony Ships can initiate interstellar movement on the next Regular Turn to the newly-explored star to colonize a promising Hospitable Class planet, via the Transport Population purpose of the Expansion Power activation (see *Canned Food*, 3 Expansion, p. 913). The Scenes are removed from the target star and the origin star when movement is initiated.

- ✓ As the Scene is used in initiation of the Transport Population movement, the colony ships are en-route in the Galactic Space and will arrive at the star regardless of whether it is still on the Public Space, thus, the Scout could move onto the next destination. *Id.*

When the Colony Transports arrive in two Regular Turns, they see an Aardvark-var-k-varkian Scout Ship in the system ... (see *ABBA Arrival*, 2 Information, p. 1340). The Scout belongs to a species with whom they had First Contact previously (see *Bump in the Night*, 1 Diplomacy, p. 1099), so this is not a First Contact situation, but it’s not a happy situation for the owner of the Colony Ships because they will be seen and reported by the alien Scout Ship on The Aardvark-var-k-vark’s next Regular Turn. Fortunately, it’s just a Scout Ship as the Colony Ships have no military escort. But they can do nothing about it and most proceed in full view.

---

<sup>1</sup> Normally a Cargo or Colony Ship cannot go to an unexplored system, see *Send the Enterprise!*, 3 Expansion, p. 909.

- ✓ In anticipation of the arrival of the Colony Transports in the previously explored starsystem, the owner designated Monads on the Public Space to place the star with a scene on it that will be required for the Landing (see Colonization, 1 Expansion, pp. 876-877 and The Landing, 4 Expansion, p. 920). Had the Colony Transports mis-jumped... (damned Concierge!).

With nothing else amiss, on the next Regular Turn, the Colony Transports are ordered to Land on the target Hospitable Class planet to form a new colony (thus CET is not required). The target planet is completely uncolonized before the Landing, although it is only necessary that it not contain already a colony of the Native Population Type that is on the Colony Ships (see The Landing, 4 Expansion, p. 920).

As the Colony Transports are at the end of their Operational Supply Limit (OSL), they will not fail to obey the Power Activation to Land (see Spiffy Spaceman, 4 Expansion, p. 920). The successful Landing of at least one Colony Transport is sufficient to found a new colony on the planet. All Colony Transports Landed in this case, thus avoiding the necessity of Unload Population Expansion Power activations on later turns. The Colony Transports are consumed in the Landing (see Pandorum, 4 Expansion, p. 923) and removed from the game universe.

- ✓ Colony Ships that fail the Power Activation to Land may be Unloaded on later turns, or may be resupplied by the new colony (which is now a supporting colony, see Supporting Colony, 1 Movement, p. 839) and sent off to the next colonization target. These situations are equally good and bad, happy and unhappy. If population that failed to Land is subsequently Unloaded to the new colony (see Spiffy Spaceman, 4 Expansion, p. 920, and Opening the Can of... and ...Vienna Sausages, 3 Expansion, pp. 914-915), it will cost extra Acts, Scenes, RPs, and Power Activations, however, the Colony Ships will continue to exist (will not be consumed) and thus they don't have to be replaced (see Pandorum, 4 Expansion, p. 923). If they can be directed off to the next colonization target, that may be fortuitous actually in the overall strategic development of the position, however, the colony where they failed to Land will be smaller than it should have been and thus less immediately productive.

With the new Friendly Colony established, now officially called Callipygian IV and the Pathway formed to a Government Title (see The Claaaw is Our Master, 2 Government Titles, p. 597), the owner is looking toward a Reverse Engineering attempt (see 3 Technology, p. 712) on the ancient alien derelict ship ... however, an Aardvark-var-k-varkian warfleet arrives in the system shortly after the colonization, without initiating combat. The new colony is completely undefended and The Aardvark-var-k-var-k already had a Low Population Friendly Colony on another planet (see 4 Taxation & Census, p. 326) in the same system that was undetected by the Scout and Colony Transports (see ABBA Arrival, 2 Information, p. 1340). Has a trap been sprung?

- ✓ Because The Aardvark-var-k-var-k had a Friendly Colony already in the system, they were able to send the warfleet by normal Movement Power activation, see Engage!, 1 Movement, p. 838. Depending on the distance travelled, they may have departed before the new colony arrived in the system, so it may not be assumed to be a reaction or threat.

Oh, what to do, what to do?.... Send a warfleet, send an e-mail or both? Is The Aardvark-var-k-var-k trying to kick over some anthills? Will he lap up our colony with his long Varkian tongue?

# Ancien Régime

*“However, Louis XVI, his ministers, and the widespread French nobility had become immensely unpopular. This was a consequence of the fact that peasants and, to a lesser extent, the bourgeoisie, were burdened with ruinously high taxes levied to support wealthy aristocrats and their sumptuous lifestyles.” – from Wikipedia article, “Ancien Régime”*

*“Those who have not lived in the eighteenth century before the Revolution do not know the sweetness of living.”*

– Charles-Maurice de Talleyrand-Périgord (aka Talleyrand)

**Major:** The Ancien Régime has ruled your civilization for a significant period (many generations) prior to the beginning of the game; it is intertwined with most aspects of your culture. If this Fundamental Reality is drawn, you cannot discard it. The old regime is tottering, inefficient, corrupt, and ready to fall. It is not a government for the new times and will need to be replaced either peacefully or by force. There will, of course, be old loyalists who are nostalgic for the old days and not in agreement with the new times.

**Minor:** The Ancien Régime has ruled your civilization for a significant period (many generations) prior to the beginning of the game; it is intertwined with most aspects of your culture. If this Fundamental Reality is drawn, you cannot discard it. The old regime is tottering, inefficient, corrupt, and ready to fall. It is not a government for the new times and will need to be replaced either peacefully or by force. There will, of course, be old loyalists who are nostalgic for the old days and not in agreement with the new times.

- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same. The difference is in the strength with which they will be applied (i.e. the drama of the fall) during the course of the game.
- ✓ Note: A position taking this Fundamental Reality should not be too attached to their starting Social and Estate Government Title choices. This Fundamental Reality invites early Concierge Interventions targeted (hopefully with some creativity) at causing failed Conflict Checks and Government Title disruption. Players thus, should not complain when it happens and should embrace it as part of the early game story.
- ✓ Note: This Fundamental Reality is attached mostly to the beginning of the game (thus, early game Intervention may be heavy-handed) and its immediate effect will fade over the course of the game unless it is considered that any Government Title that has been in power for more than 3-5 turns is an Ancien Régime... which allows continued churning of this Fundamental Reality.
- ✓ Note: The long-term effect of this Fundamental Reality will be to expedite the exhaustion of the Foresight, which will eventually be replenished with new potential Social and Estate Titles. It is also implied that the position is not democratic.

Possible Effects:

- The centre cannot hold...
- Early legitimacy failure/change of Government Titles
- Churning
- Replenishment of the Foresight

# Ahistoricism

**Major:** Historically, your civilization has embraced ahistoricism, a lack of concern related to history, historical development, or tradition. Your civilization is generally of the view that history has no relevance or importance in the decision making of daily life. While there are some interesting arguments for ahistorical view, and certainly some situations where it would seem to be an advantage, historians suggest that it is not supported by historical analysis. But nobody listens to them. ‘Cuz they are historians.

**Minor:** Historically, your civilization has embraced ahistoricism, a lack of concern related to history, historical development, or tradition. Your civilization is generally of the view that history has no relevance or importance in the decision making of daily life. While there are some interesting arguments for ahistorical view, and certainly some situations where it would seem to be an advantage, historians suggest that it is not supported by historical analysis. ‘Cuz they are historians.

- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same. The difference is in the strength with which they will be applied during the course of the game.

Possible Effects:

- Fundamental Realities
- Proficiencies
- Enlightenment
- Diplomacy
- Past News Events
- The Expose’

# Alien Nation

**Major:** Your civilization actually represents two intelligent, technologically advanced but distinct starfaring species (Major Native Population Types) that evolved in parallel on the same Homeworld. These two species are symbiotically dependent on each other but have not always peacefully co-existed. Absence of one or the other species from the population has historically had a devastating effect. The Public Space of your civilization represents both species together, but some attributes may be more attributable to one or the other.

**Minor:** Your civilization actually represents two intelligent, technologically advanced but distinct starfaring species (Native Population Types) that have learned peaceful co-existence and become politically and culturally united. The Public Space of your civilization represents both species together, but some specific parts may be more attributable to one or the other.

Possible Effects:

- Census
- Colonization
- Government Titles
- First Contact
- Johns and Mollys

# Alienation

**Major:** There is something about your species that is universally considered repulsive by every other intelligent (whether starfaring or not) species encountered. The degree of subliminal visceral repulsion seems to be directly related to the individual intelligence and sensory level of the opposing aliens. Proximity of large numbers of your species and/or intelligent individual aliens seems to multiply the problem. The type of sensory organs employed by the aliens is irrelevant, the repulsiveness goes beyond the sensory input and does not seem to wane in force.

**Minor:** There is something about your species that is universally considered repulsive by every other intelligent (whether starfaring or not) species encountered. The degree of subliminal visceral repulsion seems to be directly related to the individual intelligence and sensory level of the opposing aliens. Proximity of large numbers of your species and/or intelligent individual aliens seems to multiply the problem. While your species is repulsive in an extra-sensory way, continuous proximity does seem to gradually reduce the effect, that is, other species may grow to like your people or not notice the repulsion after continuous contact for long periods of time (like when you no longer notice a room smells bad after you have been there for awhile).

Possible Effects:

- First Contact
- Diplomacy
- Conversion/Naturalization
- Balkanized Planets
- Trade

# Antimicrobial Resistance

---

*“Antimicrobial resistance occurs when microorganisms such as bacteria, viruses, fungi and parasites change in ways that render the medications used to cure the infections they cause ineffective. When the microorganisms become resistant to most antimicrobials they are often referred to as ‘superbugs.’ This is a major concern because a resistant infection may kill, can spread to others, and imposes huge costs to individuals and society.”*

– from World Health Organization online Q&A, “What is antimicrobial resistance?” July 2017

---

**Major:** Microbes that infect your species have developed resistance to every drug treatment devised and always seem to be one evolutionary step ahead of the medical profession. Injected nanobot treatments have not always been effective. The microbes may be evolving into an intelligence of sorts. Periodically, antimicrobial resistant epidemics or outbreaks occur. Is there an intelligence behind it? Diaspora from the Homeworld was driven in part by a desire to escape the homeworld microbial environment, but may also bring woe to the galactic space.

**Minor:** Microbes that infect your species have developed resistance to every drug treatment devised and always seem to be one evolutionary step ahead of the medical profession. Injected nanobot treatments have not always been effective. Periodically, antimicrobial resistant epidemics or outbreaks occur. Diaspora from the Homeworld was driven in part by a desire to escape the homeworld microbial environment. It has not worked effectively, Stardrive may be to blame.

- ✓ Note: Most future interstellar science-fiction settings assume (for extremely convenient reasons) that science has defeated all microbial diseases (unless necessary for the plot). This helps to gloss over the troubling problems of reciprocal exposure to alien microbes (or a science-fiction repeat of the smallpox epidemic among Native Americans). Players are asked to assume the opposite with regard to this Fundamental Reality for this position in the game.

Possible Effects:

- Alien microbial infection
- Epidemic, Pandemic, Outbreaks
- Balkanized Planets
- Minor Races

# Aspirations of Godhood

*“Which leads to an obvious conclusion: We are the gods now.”*

– Peter Weyland, Prometheus (2012)

**Major:** The elite of your species aspire to godhood, often in the most literal sense. Their aspirations and actions are not always in the best interest of either the species or the current government. But, that’s godhood! As far as anyone knows, all have failed to attain the elusive ‘godhood,’ but have caused much destruction, mass misery and bad fortune, or at least, official embarrassment, by their actions. Occasionally, one of them achieves something ingenious or useful on their way to ‘godhood.’

**Minor:** The elite of your species aspire to godhood, often in the most literal sense. Their aspirations and actions are not always in the best interest of either the species or the current government. But that’s ‘godhood.’ As far as anyone knows, all have failed to attain the elusive ‘godhood,’ but have caused much destruction, mass misery and bad fortune, or at least, official embarrassment, by their actions. Occasionally, one of them achieves something ingenious or useful on their way to ‘godhood.’

- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is the success of the government in keeping these elites in check.
- ✓ Note: ‘Godhood’ has a number of varying definitions; the use here is generally pejorative. This Fundamental Reality makes no comment on whether the position practices official deification or Imperial Cult.

Possible Effects:

- Entropy
- Colleges
- Technology
- Orbital Bombardment
- Conquest of Aliens (you know, the usual hegemonic stuff)
- Combat Retreats
- Doghood

# Balkanized Homeworld

**Major:** Your species has never achieved global government or even agreed on any global authority for system space and interstellar expansion. More so than most, your political system is a hodge-podge of competing traditional states, corporations, criminal syndicates, virtual realities, microstates and authorities. This position must choose the Confederation Structural Government Title to begin the game and likely will not be able to change it during the course of the game.

- ✓ Note: It is a generally unstated assumption of the game that positions enter the game with a globalized central political and military authority, even when choosing the Confederation Structural Title. This illusion is necessary for the way that Government Titles are presented; they must be seen as at least a unified central authority, though not monolithic. The government of this position will be treated the same as any other positions, but with more opportunity for entropy due to fiercely competing, independent factions.
- ✓ Note: This Fundamental Reality is only available to positions that begin the game in Galactic Space, that is, the Homeworld, Lost Colony, and Outposter Primal States. In the case of the Outposter Primal State.

Possible Effects:

- Entropic Effects
- Must choose Confederation Structural Title
- Unlikely to change Structural Title during game
- Constant low-level insurgency
- Policing and security
- Colony Drift
- Political paranoia

# Barbary

---

*“In the 17<sup>th</sup> century piracy was just another part of diplomacy.”*

– The History Guy (Lance Geiger), “Jamestown Settlers versus Spanish Pirates,” YouTube Video, January 21, 2019

---

Minor: Pirates, from your own Native Population Type, demand payment for tribute and protection, so that they can continue enjoying their ‘freedom’ from oppression. If they are not paid regularly, they may attack your colonies, shipping and orbital facilities. Further, it has been communicated to your government that any attempt to build warships will lead to an attack, sabotage or reprisals before the ships can be completed.

- ✓ Note: This Fundamental Reality is only available to positions that begin the game in the Galactic Space, that is, the Homeworld, Lost Colony and Outposter Primal States.
- ✓ Note: The piracy is controlled by the Concierge. Obviously, the pirates must be located in systems where the homeworld and/or colonies are located to start the game. The pirates probably do not have stardrive or starships, but that is up to the Concierge to determine, based on the story and starting positions.
- ✓ Note: The United States paid \$1 million per year tribute, ransom and protection money to the Barbary Pirates between 1786 and 1800 on the advice of European powers who could not defeat them. This ranged between one sixth and one tenth of the federal budget during those years, paid over to pirates! This ended with the Barbary War. Thus, this is a problem that may eventually ‘go away’ during the course of the game, as suits the story, or it may morph into something else (there are states on Earth ruled by criminal cartels).

Possible Effects:

- Early Piracy Interventions
- Payment of significant RPs as tribute
- Story hook
- Interstellar Law

# Better Part of Valor

**Major: Your species comes into space with no military or naval traditions (perhaps your world has no large bodies of liquid). This is not to say that discipline, or concepts of organization, command and control, or hierarchy don't exist, as those developed by other means, such as business, government, social and community organizations. Additionally, this does not indicate that violence and conflict are not known, or police or security forces. Rather, large scale violence, for any purpose, was never given the sanction of civilization or backed by the industrial and organizational might of nations. War is considered illegitimate.**

**Minor: Your species comes into space with no current military or naval traditions (perhaps your world has no large bodies of liquid) but does have a strong ongoing policing tradition. Discipline, and concepts organization, command and control, or hierarchy are developed by other means, such as business, government, social and community organizations. Largescale violence, for any purpose, was successfully banned in ancient times.**

Possible Effects:

- Combat Power Activations Second Checks
- Doctrinal Templates
- Combat related Existential Patents
- First Contact
- Combat College
- Shipbuilding

# Bucket List

**Major:** ‘Everything dies, everything turns to dust.’ Your species enters Galactic Space ‘knowing’ that they have only a limited time before physical extinction. What will you accomplish, what will be your legacy? What is on your ‘bucket list’? Will anyone care?

- ✓ Note: It is recommended that a position that takes this Fundamental Reality be limited to 100 Power Activations during the game. This is enough to last perhaps, 20 to 30 turns. Positions who take this Fundamental Reality are expected to refrain from ‘turtling’ during the game; this limited time is to be played with gusto!
- ✓ Note: Other players should not be aware of the limitation imposed by this Fundamental Reality.
- ✓ Note: Being limited to a set number of Power Activations is a very Major Operational limitation; therefore there is no Minor form. The Concierge can adjust to a shorter period if necessary.
- ✓ Note: The cause and nature of the physical extinction is unknown, and within the cosmic control of the Concierge, and should be a major story element in the game.

Possible Effects:

- Power Activations
- Everything the position does in the game
- Physical Extinction
- Bad Wolf

# Civilized Discrimination

**Major and Minor:** “Moved by the understanding that purity of Interstellar Civilization is the essential condition for the continued existence of the Star-belly Peoples, and inspired by the inflexible determination to ensure the existence of the Interstellar Civilization for all time, the Martian Reichstag has unanimously adopted the following law, which is promulgated herewith:

**No persons, firms, Corporations or Megacorporations, who or which furnish meals to passengers at Space Port restaurants or food dispensers, in times limited by common carriers of said passengers, shall furnish said meals to Star-bellies and Human passengers in the same room, or at the same table, or at the same counter.”<sup>1</sup>**

- ✓ Note: This Fundamental Reality departs from the normal presentation format. However, unless you have been living under a rock in Antarctica, you’ll get the point. *Both Major and Minor forms are available for this Fundamental Reality.*
- ✓ Note: This Fundamental Reality addresses long-standing, pre-game ‘irrational’ and systemic or institutional discrimination by the position’s native population against a significant portion of the population of the position’s own Native Population Type. It does not reflect legitimate discrimination such as determining the most qualified person for the job on merits, or legal discrimination against those who harm society by committing crimes or are a danger to themselves or others by virtue of mental deficiency or minor age.
- ✓ Note: The practical operational effect of discrimination is to marginalize and reduce or displace the economic, social and cultural contributions of the inferior group. Bluntly, a civilization where irrational discrimination exists is ‘not firing on all cylinders.’

Possible Effects:

- Reduced production
- Legitimacy
- Colony Capture and Conversion
- Diplomacy
- Entropy
- Pragmatic Ethics

---

<sup>1</sup> Adapted from the high-handed preambles to the famous 1935 Nuremburg Laws and the famous South Carolina “lunch counter” Jim Crow Law.

# Crisis of Entitlement

**Major: The old world is out of resources. Through limited resource production, synthetics, and intense recycling, and using geothermal, wind, and other natural energy sources, your Homeworld produces just enough to support domestic subsistence at the levels where your population begins the game. Population growth threatens to strain the system; Taxation (as the term is used in the game) is necessary to go into space and find resources, but dips into the domestic subsistence (no Writ or Writ activation is required for this on the Homeworld only) without provision of external resources.**

Minor: The old world is out of resources. Through limited resource production, synthetics, and intense recycling, and using geothermal, wind, and other natural energy sources, your Homeworld produces slightly more than needed to support domestic subsistence at the levels where your population begins the game. Population growth threatens to consume this precious little excess; Taxation (as the term is used in the game) is necessary to go into space and find resources, yields little unless some is taken from the domestic subsistence.

Possible Effects:

- Cargo Ships
- Taxation
- Census
- Emigration
- Malthusian Catastrophe
- Soylent Green

# Dead Zone

**Major:** At some point in the past, your civilization took a radical turn. This turn blocked off or buried an entire area of species perception, awareness and historical memory such that the Public Space received for this Fundamental Reality is partially inaccessible during the game.

- ✓ Note: The Public Space represents the ‘shape of reality’ experienced by your species as well as a place of public discourse of civilization. The ‘missing’ Public Space is something your ancestors could see, but the current population of the species cannot. Literary examples might include uchronian histories, such as Hyborian Age or Middle Earth, fantasy settings where magic is fading from the world to be replaced by technology; or even radical science-fiction settings such as Dune. Except that the current species doesn’t even remember because the current perception of reality is all they know, like an amnesia story where the main character doesn’t know he has amnesia. What might have we forgotten?

Possible Effects:

- Reduced Public Space
- Reformation
- Kairotic Moment

# Dementia

---

*“You forgot the last time. You remembered the fear and you put it into fairy stories. It’s a human superpower, forgetting. If you remembered how things felt, you’d have stopped having wars. And stopped having babies.” – Dr. Who, “In the Forest of the Night” (2014)*

---

**Major:** The invention of Stardrive subtly changed some unknown quality in the universe that was important to your species. Your species has suffered from periods of collective dementia, directly traceable to the date of the invention, wherein your people ‘forget’ important parts of your Public Space for periods of time. This effect is not limited to those on starships, rather, it ‘runs through’ your civilization, including all Native Population Factors located on planets, the Homeworld, or wherever they may be in the universe.

**Minor:** The invention of Stardrive subtly changed something in the universe that was important to your species. Your species has suffered from periods of collective dementia, directly traceable to the times and proximity of any starship at any Native Colony. This effect is not limited to those on starships, rather, it ‘runs through’ all Native Population Factors located on planets where starships have visited recently.

Possible Effects:

- Constructural Elements
- Expanded Galactic Space, contracted Public Space
- Movement
- Taxation
- Order
- Diplomatic Space
- Reformation

# Desolate Places

---

*“The English have a great hunger for desolate places...I think you are another of these desert-loving English...No Arab loves the desert. We love water and green trees. There is nothing in the desert. And no man needs nothing.” – Prince Faisal, Lawrence of Arabia (1962)*

---

**Major:** Your species has an unusual ‘migration urge’ to colonize ‘desolate places,’ i.e. Hostile and Unpleasant Class Planets. Space, of course, is the ultimate desolation, but is somehow, not quite the same as colonizing a Hostile or Unpleasant planet. This urge is not limited to Hostile or Unpleasant Planets that are also Special Planets.

**Minor:** Your species has an unusual attraction or interest in colonizing ‘desolate places,’ i.e. Hostile and Unpleasant Class Planets. Space, of course, is the ultimate desolation, but is somehow, not quite the same as colonizing a Hostile or Unpleasant planet.

- ✓ Note: This Fundamental Reality implies that the position must make a special effort to colonize Hostile and Unpleasant Class Planets. This Fundamental Reality could also have been classed as a Type 3.

Possible Effects:

- Legitimacy
- Colonization
- Exploration
- Technology
- Census

# Deviation

**Major: Biological deviation of a few individuals is called mutation; deviation of entire populations is called evolution! Early in the age of colonization and exploration of the Homesystem, it was discovered that some Friendly Colonies had an unexpected capacity for significant and seemingly spontaneous population-level biological deviation when away from the Homeworld.**

**The mutated populations are not quite a new species, not quite alien, but not quite the same people as those left at home. Attempts to reintegrate mutant populations by mixing and reproducing with natural Homeworld populations proved disastrous, resulting in the fall of Governments. Medically reversing the mutations has similarly proven impractical.**

**Minor: Biological deviation of a few individuals is called mutation; deviation of entire populations is called evolution! Early in the age of colonization and exploration of the Homesystem, it was discovered that a few Friendly Colonies had a rare, unexpected capacity for significant and seemingly spontaneous population-level biological deviation when away from the Homeworld. The mutated populations are not quite a new species, not quite alien, but not quite the same people as those left at home. Pre-colonization medical screening and treatments have been mostly successful in limiting the effects, however, it can still happen, unexpectedly, and cannot be reversed once a population is ‘afflicted.’**

Possible Effects:

- Colonization
- Expansion
- Reformation
- Public Spaces
- Entropy, discrimination
- Medical Proficiency
- Frontier Drift

# Discontinuity

**Major:** Can you imagine not being able to remember parts of your life? What if, in fact, they never existed and therefore, no one else could remember them for you? And then suddenly they did exist? Yeah, it's been that kind of day. From time to time, parts of your species being just 'disappears' from collective memory, or maybe just isn't there. Then it comes back. Further, wherever large numbers of your people are gathered (as in a colony), a slight temporal disturbance occurs in the system space, making entry into and exit from the system 'slowed,' as if near an event horizon.

**Minor:** Can you imagine not being able to remember parts of your life? What if, in fact, they never existed and therefore, no one else could remember them for you? And then suddenly they did exist? Yeah, it's been that kind of day. From time to time, parts of your species being just 'disappears' from collective memory, or maybe just isn't there. Then it comes back. Like it was always there.

- ✓ Note: All Fundamental Realities should be active to begin the game. Discontinuity sometimes causes a Fundamental Reality to 'not exist' or become inactive for game purposes and applies best to Types 2, 3, and 4 Fundamental Realities; it should be used with care when applied to Types 1 and 5 Fundamental Realities. At some unpredictable point, the discontinuity 'snaps back' and the Fundamental Reality suddenly becomes active.
- ✓ Note: This Fundamental Reality could have Type 4 effects in the game, but is Type 1 because of its concrete operational effects on Fundamental Realities and Galactic Space.

Possible Effects:

- Fundamental Realities
- Public Space
- Schizophrenia
- Mayhem
- Non-permanent, transient Temporal Disturbance Modifiers

# District X

---

*“Xenophobia and racism often overlap, but they also differ because the latter is based on physical characteristics while the former is based on the perception that the other is foreign to the community or nation or originated outside it.”*

– from Wikipedia article, “Xenophobia,” May 20, 2020

---

**Major:** Your species has a xenophobic streak. There are broadly, two possible types of xenophobia, cultural and physical. Cultural xenophobia is a fear of contamination by foreign cultures and ideas, and is quite familiar to the history of humanity. Physical xenophobia toward alien forms has been an underlying assumption of most science-fiction xenophobia. Whatever the cause, both have the same effect: territory, resources and safety. Long term exposure to aliens, especially sapient, intelligent, organized, or technologically advanced aliens, makes the xenophobia worse, not better.

**Minor:** Your species has a xenophobic streak. There are broadly, two possible types of xenophobia, cultural and physical. Cultural xenophobia is a fear of contamination by foreign cultures and ideas, and is quite familiar to the history of humanity. Physical xenophobia toward alien forms has been an underlying assumption of most science-fiction xenophobia. Whatever the cause, both have the same effect: territory, resources and safety. Long term exposure to aliens, especially non-threatening non-sapient or technological aliens, tends to eventually relaxes the xenophobia.

- ✓ Note: This borders on a ‘Supra-Legitimacy’ Type 3 Fundamental Reality depending on interpretation. Is the xenophobia subliminal in the population or is it openly tied to government legitimacy through a paranoid-level security expectation?
- ✓ Note: It is possible to have ‘non-science-fiction xenophobia’ – so the distinction is historically valid. Physical xenophobia is closer to racism and speciesism, both blurring into a common feature in space-opera fiction.

Possible Effects:

- Balkanized Colonies
- Diplomatic Spaces
- Commerce with Aliens
- Technology
- Colony Conquest, Conversion and Naturalization
- Orbital Bombardment Combat
- Extinction

# Elan Vital

**Major:** The vital impetus to reproduction in your species is migration. The arrival of strangers, people from other places, who settle in the area (not just visitors), triggers reproductive activity. Conversely, isolated pockets of population, even if reproductively viable, will die off over time, or migrate elsewhere.

As the population of your homeworld grew and cultural exchange homogenized into a global culture, it was noted that the vital impetus diminished and less young were born to each generation. Eventually, it was feared, the species would perish entirely. Various methods were devised that attempted to reinvigorate the reproductive drive of the species, but were mostly unsatisfactory. The Census Power vanished slowly. The species gained new life when system colonies were established; suddenly, the arrival of new emigrants from Homeworld would trigger reproductive activity at the colonies. The future of the species was diaspora!

- ✓ Note: The normal Census Power activation only triggers population growth at large populous colonies (where migration can occur on the planet) and even there at a reduced rate. A Census Power activation is triggered locally (without extra costs) when Unloading new population onto an existing colony, at that colony only (an ‘emigration bonus’).
- ✓ Note: It is not allowed to Load and then Unload Population back to the same colony to trigger the population growth. That’s cheating.
- ✓ Note: The Concierge will determine the level of population required for a ‘large colony’ and the amount of reduction of growth from Census and the local Census effect of Unloading new population.
- ✓ Transfer of population to and from colony ships to orbital cities does not count.

Possible Effects:

- ‘Emigration Bonus’
- Unload Population
- Census
- Constant Stirring of the Gene Pool
- Stagnate Waters

# Elephant Envy

**Major: Your species is ‘blessed’ with an extremely long gestation cycle. It seems to have increased since prehistoric times. The result is that population growth from activations of the Census Power appear 1-3 turns afterward. The Concierge will determine when to add the new population factors. This will be true regardless of who owns the colonies where your Native Population Type resides, as long as they can be affected by the current owner’s Census Power Activation.**

Minor: Your species is ‘blessed’ with an extremely long gestation cycle. It seems to have increased with the advent of Stardrive. The result is that population growth from activations of the Census Power appear 0-2 turns afterward. The Concierge will determine when to add the new population factors. This will be true regardless of who owns the colonies where your Native Population Type resides, as long as they can be affected by the current owner’s Census Power Activation.

- ✓ Note: The variable time should be determined by a die roll. The die roll is necessary because of the indeterminate time passage represented by each Regular Turn of the game.
- ✓ Note: The Minor version of this Fundamental Reality only comes into effect after the species invents Stardrive. It offers an interesting pregame and early game choice for positions that begin without Stardrive.

Possible Effects:

- Census Power
- Taxation
- Conversion/Naturalization

# Endless Insurgency

**Major:** Your species has an endless insurgency; there has never been universal acceptance of any government, institution, arrangement, or solution to any problem, and the normal predictable recourse of the very dissatisfied is an insurgency in an attempt to destabilize the government by means illegal to that government. Change of governments always lead to more insurgency, because one man's terrorist is another man's freedom fighter. Insurgency lends impetus to factionalization and extremism, to a point where rebellion is for its own sake.<sup>1</sup> Weakened and distracted government control, and the supply needs of insurgents makes them bedfellows with organized crime. And when those aliens come and conquer the planet, there is already an organized, well trained insurgency waiting for them. Insurgencies hang around because they are useful.

**Minor:** Your species has an endless insurgency; there has never been universal acceptance of any government, institution, arrangement, or solution to any problem, and the normal predictable recourse of the very dissatisfied is an insurgency in an attempt to destabilize the government by means illegal to that government. Change of governments always lead to more insurgency, because one man's terrorist is another man's freedom fighter. Insurgency lends impetus to factionalization and extremism, to a point where rebellion is for its own sake. Weakened and distracted government control, and the supply needs of insurgents makes them bedfellows with organized crime. And when those aliens come and conquer the planet, there is already an organized, well trained insurgency waiting for them. Insurgencies hang around because they are useful.

- ✓ Note: If you are trying to institute an insurgency, the government already considers you criminals. As 'criminals' the insurgents are somewhat freed from the restraints of their society and thus have a link to organized crime.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same, the difference is the strength with which they will be applied. For example, the Major form of this Fundamental Reality could be borderline civil war and/or almost full open rebellion; the minor form would represent terrorist attacks by extremist groups who are supported by some of the population.

Possible Effects:

- Special Operations
- Entropy
- Legitimacy
- Security/Police Proficiency
- Colony Conversion and Naturalization

---

<sup>1</sup> If you are rebelling, you are not free. Because those who rebel must always be opposite of or nearly opposite of what they are rebelling against. Therefore, their course is set, they cannot be what they want to be or could be. Rebellion is the illusion of freedom. Rebellion becomes its own self-fulfilling purpose.

# Extremophiles

**Major:** The habitability requirements of your species is slightly narrower vis`-a-vis` the other species in the game. Generally, it will be very difficult to find Optimal Class planets and more difficult than average to find Hospitable and Habitable Class planets when exploring.

**Minor:** The habitability requirements of your species is slightly narrower vis`-a-vis` the other species in the game. Generally, Maximum Habitability for your species on newly discovered planets will be lower than expected.

- ✓ Note: This is physical and cannot be easily dodged. This Fundamental Reality requires a pre-game adjustment to the percentages for Habitability Class when exploring and is less subject to in-game Concierge Interventions than other Type 1 Fundamental Realities.

Possible Effects:

- Exploration
- Colonization
- Census
- Taxation
- Habitability Class
- Maximum Habitability
- Terraforming

# Face Cannibal

**Major:** Your species history is filled with episodes of planned and un-planned violent psychotic (by the standards of other sapient species, that is) unprovoked attacks. Your religion and literature explain, encode and exonerate this fundamental nature of your species. Unprovoked attacks can be made by states and groups against others (massacres) or by individuals randomly. A key element in these attacks is that there is nothing to be gained, so since no one is committing a crime to gain materially, it is not considered either immoral or unethical. The experience is considered by some to be holy; the attacks can be regarded as cosmic or divine interventions or punishments.

- ✓ Note: This Fundamental Reality does not require unprovoked ‘violent psychotic’ attacks on other positions every turn. The ‘just because’ and ‘holy revelation’ attacks can be timed for the story arc, but they should never be coordinated with other positions or for any immediate benefit.
- ✓ Note: Coincidental and collateral benefits from an attack on another position are not in violation of this Fundamental Reality. However, attacks for gain should not appear as a pattern.
- ✓ Note: In the periods before, after and between psychotic breaks, your populations appear to be normal, pleasant, peaceful, even enlightened, sapient beings. Unless paired with a xenophobic Fundamental Reality, the attacks are not a form of xenophobia.

Possible Effects:

- Combat
- Internal and External Entropy
- First Contact
- Balkanized Colony Planets

# Falling

**Major:** Your Homeworld has been ‘falling’ through various universes. It arrived in this universe a good long time ago and appears to have ‘come to a rest here.’ Finally, after horrific passages, your people have the hope that it has ended and they can go about colonizing and collecting resources in a new universe. But without knowing the reasons for the previous occurrences, there is no guarantee that those who leave for the colonies won’t be left behind if the Homeworld resumes ‘falling.’ It has happened before.

**Minor:** Your Homeworld has been ‘falling’ through various universes for a long time, dropping into a universe, staying for awhile, then suddenly disappearing and appearing in the next universe. Your scientists have finally developed an ‘anchor’ technology that will hold your Homeworld in place as long as it is maintained. After centuries of falling, your people now have a new universe where they can colonize and make a home.

- ✓ Note: When choosing this Fundamental Reality, the position must choose the Homeworld Primal State and may not choose another Fundamental Reality that requires a non-Homeworld Primal State.
- ✓ Note: The initial effect may be a difficulty in Loading populations to Colony Ships, the fear of being left behind in a strange universe. But in the analysis, it is really no different than other species colonization, if you leave home, you may never see it again. This is true also each day you leave for work and school.
- ✓ Note: If this position drops from the game, it can literally be ‘dropped’ from the game. Anyone who conquers the Homeworld may get an interesting surprise!

Possible Effects:

- Technology
- Colonization
- Technological Device (the Anchor)
- Loss of Homeworld during the game

# Famine, Pestilence & Death<sup>1</sup>

**Major:** Ancient embedded social customs, law and economics in your civilization mandate a system whereby members of a certain sex have an unnatural number of bound mates that results in others not being able to find, acquire, or afford a mate – in short, a certain percentage of the population that is unattached, resentful, frustrated, and not entirely supportive of the current social order.

**Minor:** Ancient embedded social customs, law and economics in your civilization mandate a system whereby members of a certain sex have an unnatural number of bound mates that results in others not being able to find, acquire, or afford a mate – in short, a certain percentage of the population that is unattached, resentful, frustrated, and not entirely supportive of the current social order.

- ✓ Note: This Fundamental Reality necessarily assumes that social custom has upset the ‘evolutionary stable strategy’ (ESS) with regard to reproductive pairings. It does not suggest in any way how many sexes the species has naturally, or what the natural ESS ratio might be for the species. Among humans, we have two sexes for reproduction, and an ESS ratio of 1:1 (Fisher Principle).
- ✓ Note: This Fundamental Reality does necessarily assume that there are in fact sexes in your species and that one or more of the sexes possesses a ‘sex drive’ for reproduction which can result in frustration and hostility. Thus, by looking (i.e., this Fundamental Reality), sexes and sex drive can be said to exist in the species.
- ✓ Note: This Fundamental Reality is probably most applicable to the Census and Order Power Activations. The gist of the Fundamental Reality is an endless source of ‘trouble’ caused by a population that cannot find suitable mates for reproduction; thus Intervention Potentials may be generated as part of the effect. This has been noted as a source of wars in pre-modern times.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same, however, the difference is how far and how widespread social custom has departed from the ESS with regard to reproduction.

Possible Effects:

- Order
- Census
- Intervention Potentials
- Entropy and Disruption
- Romantics

---

<sup>1</sup> Famine, Pestilence and Death are Ambassador Londo’s pet names for his three spoiled, aristocratic wives in Babylon 5, all the while sarcastically extolling the virtues of polygamous marriage. Without Babylon 5, this Fundamental Reality would have been named ‘Poly-something.’ Londo doesn’t have any children and rarely goes home, his wives are also rarely home.

# Fiersig<sup>1</sup>

**Major:** ‘Fiersig’ is a term used by your species to describe the sudden, seemingly random emotional changes that sweep over your populations. This is not a case of one or two individuals being moody, but rather, abrupt changes in the mass feelings of the native population that was first noted when population began gathering. Like a school of color changing fish that move and change in unison, the change has little to do with rational conviction or intellect.

**Minor:** ‘Fiersig’ is a term used by your species to describe the sudden, seemingly random emotional changes that sweep over your populations. This is not a case of one or two individuals being moody, but rather, abrupt changes in the mass feelings of the native population, that was first noted when population began gathering. Like a school of color changing fish that move and change in unison, the change has little to do with rational conviction or intellect.

- ✓ Note: The most direct game device measuring the mood of the masses are Aspects in the Public Space. This Fundamental Reality may result in sweeping random changes in Aspects; some may be lost, or flipped over, or replaced. Native Populations not located in the Public Space may also be affected to the chagrin of their sovereign positions who have Naturalized colonies of this population type.
- ✓ The Concierge should control or randomly determine when Fiersig occurs. This should happen without explanation to any affected position.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is the strength with which they are applied.

Possible Effects:

- Aspects
- Fuzzy Groups
- Zietrice
- Conversion/Naturalization

---

<sup>1</sup> This term was appropriated from Robert Holdstock’s Where Time Winds Blow (1981) which I read in the early 1980s. I am using the term in a different context here.

# Flight

**Major:** Your species arrived in Galactic Space fleeing from an extreme existential threat. It was simply the most horrific encounter you could have imagined. Knowledge of the threat, and the reason for your flight, is widely spread through the population. Like an animal being stalked by lions, the slightest hint that the threat is present will cause panic and disorder among your Native Populations. The worse situation is to be trapped on a planet colony, and the government is expected to be on constant guard against the threat.

**Minor:** Your species arrived in Galactic Space fleeing from an extreme existential threat. It was simply the most horrific encounter you could have imagined. Knowledge of the threat, and the reason for your flight, is widely spread through the population. Like an animal being stalked by lions, the slightest hint that the threat is present will cause panic and disorder among your Native Populations. The worse situation is to be trapped on a planet colony, and the government is expected to be on constant guard against the threat.

- ✓ Note: This Fundamental Reality is only available to the Expedition Leader, Nomadic Warfleet, and Truly Alien Primal States.
- ✓ Note: A sharp loud thump or bang will send cats, especially semi-feral or feral cats, fleeing in different directions, especially when gathered to be fed; dishes and cat food go flying. Some form of this describes the panic of threat, above.
- ✓ Note: That from which you flee may, but probably won't, arrive in Galactic Space during the game; at the discretion of the Concierge and the story arc.
- ✓ Note: Other positions will not likely know this at the beginning of the game, but may eventually learn it through contact.
- ✓ Note: Existential threat does not equate to death or malicious intent. It also does not mean that your species will be automatically afraid of other species met in the game; compared to what you fled from, they are not much threat: Compared to a T-Rex or two or three, a pack of dogs is not much threat.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is the strength with which they are applied.

Possible Effects:

- Entropy
- Migration
- Legitimacy
- Certain Aspects may be more prevalent

# Flirting with Aliens

**Major:** Your species relationship with aliens depends in large part on the alien's resemblance to one or another of the sexes of your species, especially sexual paedomorphism. Upon First Contact, it must be immediately determined, probably on a scale of 1-10, the degree to which the alien species resembles the favored sex of your species. The result should affect all relations with the aliens, including Diplomatic Spaces.

**Minor:** Your species relationship with aliens depends in large part on the alien's general resemblance to one or another of the mature sexes of your species. Upon physical First Contact, it must be immediately determined, probably on a scale of 1-10, the degree to which the alien species resembles the favored sex of your species. The result should affect all relations with the aliens, including Diplomatic Spaces.

- ✓ Note: As a concrete example, humans might view more favorably, aliens who resemble 'elf-like' pubescent female humans (e.g., the Abh in Banner of the Stars). Humans, of all sexes and ages, show a slight preference for computer voices and recorded messages with female voices.
- ✓ Note: The Concierge will need to determine exactly how the operational effects play out over the course of the game and what the numbers on the scale represent with regard to Diplomatic Spaces and other cooperation or diplomacy. The position should also try to act the part as much as possible in-game (so this is a bit like a Type-4 Fundamental Reality). Interposition diplomacy is an area of the game where the Concierge has less tangible input or effect than most other areas of the game but this definitely should have an effect on any Meanings and Shared Meanings authored by the position.
- ✓ Note: This Fundamental Reality implies (by the fact of existing in the game) that your species has two or more sexes, that one sex is 'favored,' and that your species perceives the world through the lens of sexuality. Sort of like humans.
- ✓ Note: The feeling certainly might not be mutual, so this is more of a one sided infatuation kind of thing...

Possible Effects:

- Diplomatic Spaces
- Meanings and Shared Meanings
- First Contact
- Commerce and Mega-Corporations
- Special Operations
- Conversion and Naturalization of Colonies

# Flower Children

**Major:** The vegetative-like reproductive cycle of your species involves an extended period during which the young are in a plant-like state, with roots extending into the soil, from which they grow into fully mobile adult individuals. This means that at any given time, a certain percentage of the population is immobile, as the young suffer trauma if moved during this time and must be cared for by adults in ‘gardens.’ The young tend to take on the ‘characteristics’ of the soil and place where they spend their planting period, and thus cultural and species deviation may develop, which is jealously guarded against by the adults. During the initial period of home-system exploration and colonization, a joyous discovery was made: There were others of your kind already on other planets. How they got there is a mystery, it seems they just blew there on the ‘cosmic wind.’

**Minor:** The vegetative-like reproductive cycle of your species involves an extended period during which the young are in a plant-like state, with roots extending into the soil, from which they grow into mobile adult individuals. This means that at any given time, a certain percentage of the population is immobile, as the young suffer trauma if moved during this time and must be cared for by adults in ‘gardens.’ In low population situations and/or if not properly cared for by adults, the young may reproduce pre-maturely during their planting period (an evolutionary safeguard) which is a known cause of species deviance.

- ✓ Note: This Native Population Type mirrors some Earth species that have classically been difficult to classify as either plant or animal, e.g., sea anemone, hydra, etc. of Phylum Cnidaria. The difference here is that this species has achieved advanced technological civilization and should not be automatically assumed to be a marine-like species, though they may prefer planets with ‘soupy’ atmospheres, e.g., science-fiction has imagined enormous jelly-fish like creatures in Jupiter.
- ✓ Note: A certain percentage of the population will be unavailable and may be deemed not taxable. It also means that a colony of this Native Population Type can never be fully evacuated.
- ✓ Note: All habitable planets of the Homesystem must begin the game colonized by the flower children who blew there on the cosmic wind. Whether this occurs in other systems once colonized is at the discretion of the Concierge.

Possible Effects:

- Colony Evacuation
- Low Population Colonies
- Census
- Expansion
- Taxation

# Food Drive

---

*“How about you? You still on Earth, or on the ship with me? Really doesn’t make very much difference, because sooner or later, all of us will be on the menu... all of us.”*

– Mr. Chambers, Twilight Zone, “To Serve Man” (1962)

---

**Major:** It is very difficult to be friends with something that thinks you are dinner. Beyond basic true omnivore behavior, your species has a ravenous appetite for evolved, biologically complex species, which frequently means, species of advanced intelligence. Further, your reproductive cycle requires living hosts, for which purposes domesticated animals previously served during your pre-Starflight history. The first question that must be answered in First Contact is whether the other species is food; however, not all aliens are edible.

**Minor:** It is very difficult to be friends with something that thinks you are dinner. Beyond basic true omnivore behavior, your species has an appetite for evolved, biologically complex species, which frequently means, species of advanced intelligence. The first question that must be answered in First Contact is whether the other species is food; however, not all aliens are edible.

- ✓ Note: The Lion and the Mouse. Humans do not normally think of pets as food, or food animals as pets, though both are equally chattels under the law. There is some blurring of the line though, on small farms, the milk cow often gains the attachment of a kind of pet, especially to the children. And some humans keep food animals, e.g., pigs as pets. In Looney Toons’ predatory parodies, well-known characters (e.g., Road Runner) are sometimes seen as walking dinner.
- ✓ Note: That not all alien species (i.e. the Major and Minor Races in the game) are edible provides a practical out so that the position can have a few ‘friends’ in the game. Diplomatic Spaces, Meanings and Shared Meanings should all be heavily predicated upon this division.

Possible Effects:

- Conversion and Naturalization
- Balkanized Colony Worlds
- Diplomacy
- Colony Conquest
- First Contact (dinner is served!)

# Four Temperaments

**Major:** It is historically well noted that your species collectively displays four temperaments or ‘moods’ which phase from one to another, rotating in predictable order. The temperaments are sanguine (pleasure-seeking and sociable), choleric (ambitious and leader-like), melancholic (introverted and thoughtful), and phlegmatic (relaxed and quiet). During the period of each temperament, your civilization as a whole acts in the way of the prevailing temperament, no matter where they are located; they seem to ‘vibrate’ together to the same prevailing mood. The temperaments could be said to be the main or only Aspects of your species. Any change in the rotation order of the temperaments or interruption in the natural phasing of one to another has always been accompanied by upheaval and change.

**Minor:** It is historically well noted that your species collectively displays four temperaments or ‘moods’ which phase from one to another, rotating in predictable order. The temperaments are sanguine (pleasure-seeking and sociable), choleric (ambitious and leader-like), melancholic (introverted and thoughtful), and phlegmatic (relaxed and quiet). During the period of each temperament, your civilization as a whole acts in the way of the prevailing temperament, no matter where they are located; they seem to ‘vibrate’ together to the same prevailing mood. The temperaments could be said to be the main or only Aspects of your species. Any change in the rotation order of the temperaments or interruption in the natural phasing of one to another has always been accompanied by upheaval and change.

- ✓ Note: The Major and Minor form of this Fundamental Reality have identical wording; the difference is how strongly it will be applied to the position’s conduct in the game.
- ✓ The Four Temperaments are a medical-philosophical classification system developed in ancient times from Humorism. It is a proto-personality psychology worldview that dominated literature and plays for thousands of years.

Possible Effects:

- Aspects List
- Power Activations
- Writs
- Fuzzy Groups
- Expose’ News Events

# Future Shock

**Major:** The invention of Stardrive and the beginning of the First Era caught the majority of your population by complete surprise; Stardrive was developed with the utmost secrecy, after an unannounced breakthrough discovery, and the changes wrought by new technology and/or massive population emigration has left your society strained and disconnected. *Changes are just happening too fast...*and while your civilization will eventually transition and settle into a comfortable 1<sup>st</sup> Era interstellar civilization, it could happen again whenever technological change occurs too quickly or with the advent of a new Era. Your people don't like change; they prefer tradition, stability, repetition.

**Minor:** The invention of Stardrive and the beginning of the First Era caught the majority of your population by complete surprise; Stardrive was developed with the utmost secrecy, after an unannounced breakthrough discovery, and the changes wrought by new technology and/or massive population emigration has left your society strained and disconnected. *Changes are just happening too fast...*and while your civilization will eventually transition and settle into a comfortable 1<sup>st</sup> Era interstellar civilization, it could happen again whenever technological change occurs too quickly or with the advent of a new Era. Your people don't like change; they prefer tradition, stability, repetition.

- ✓ Note: Despite all of the discussion, Future Shock is still a vaguely defined and hard to pin down term. Discussing Future Shock in our current worldview is like trying to closely examine the back of your head using two mirrors and a flashlight.
- ✓ Note: The description of the Major and Minor forms of this Fundamental Reality are the same. The difference is in the strength with which they will be applied during the course of the game.
- ✓ Note: This Fundamental Reality is only available to positions which begin the game with the Homeworld or Lost Colony Primal State. 'Do Not Disturb' sign on the door handle.

## Possible Effects:

- Constructural Elements
- First Turns of the Game or any new Era
- Frequent Technology Power Activations
- Emigration (location change through colonization)
- Change in Government Titles

# Galactic Prisoner

**Major:** Those who are properly educated know that, of course, there is no Truly Alien entity that actually controls the government and businesses of your civilization. The Truly Alien Entity idea is just a fantasy spread by the unenlightened who want to detract from the achievements of your people and distract from the problems of the world. The government, however, refuses to admit or deny the allegations of extradimensional tampering...

- ✓ Note from the Unenlightened: From prehistoric times to the present, a Truly Alien entity has been trapped or imprisoned within your civilization. Its only desire is to escape; however, it has need to exert control from time to time over parts of your civilization for unknown reasons or ends. Sometimes, it has seemed that the intervention has served only to amuse it, other times, it seems to be working toward an escape plan. Development of FTL drive technology is surely part of the plan.
- ✓ Note: At a few various times during the game, the Concierge may place Acts and Scenes where they are not desired by the position players and may involuntarily activate a Vital Power (instead of one desired by the position players) that has sufficient Acts and Scenes. There must be some operational effect during the game for this to be considered a Type 1 Fundamental Reality and that responsibility rests on the Concierge.
- ✓ Note: The Truly Alien being rarely or never communicates nor does it intentionally give anything of value to the civilization. It doesn't care.
- ✓ Note: Stardrive will probably not allow the Truly Alien essence to escape back to its home dimension or parallel universe, it may not even know where it came from originally. Whether the entity moves between colonies or what it actually does, or how much it is part of the game storyline, is for the Concierge to decide.
- ✓ Note: This Fundamental Reality is not available to the Truly Alien Primal State and does not relate to or receive any Truly Alien Fundamental Realities.

Possible Effects:

- Involuntary placement of Acts and Scenes
- Involuntary Power Activations
- Interventions for unknown purposes

# GenDom

**Major:** A certain set of Cultural Traits, Power Activations, Fundamental Realities and/or Constructural Elements are closely associated with the dominant gender of your species and therefore, are disproportionately prominent and potent in your civilization. Likewise, a certain set of Cultural Traits, Power Activations, Fundamental Realities and/or Constructural Elements are closely associated with the least dominant gender of your species and are considered abhorrent and disgraceful even if occasionally necessary. Gender is not the same as sex, nor should it be assumed that your species has only two genders or biological sexes, or that the dominant gender is only associated with one sex in your species. The dominant gender and all things associated with it constitute the majority self-identity of your species.

**Minor:** A certain set of Cultural Traits and/or Constructural Elements are closely associated with the dominant gender of your species and therefore, are disproportionately prominent and potent in your civilization. Likewise, a certain set of Cultural Traits and/or Constructural Elements are closely associated with the least dominant gender of your species and are less frequently exercised. Gender is not the same as sex, nor should it be assumed that your species has only two genders or sexes, or that the dominant gender is only associated with one sex in your species. The dominant gender and all things associated with it constitute the majority self-identity of your species.

- ✓ Note: The classic historical examples of this range from warrior cults and war states (e.g., the classic perception of the Assyrians) to later male dominance hierarchies.
- ✓ Note: This Fundamental Reality implies that participants must determine which things 'belong' to the dominant gender and that those things must be truly dominant on the Public Space. The operational effect is to somewhat narrow options for Aspects and Proficiencies and the Writs, perhaps also certain types of technologies and Government Titles (e.g., Estate vs. Social, Unity vs. Confederation).

Possible Effects:

- Power Activations frequency
- Fundamental Realities strength
- Cultural Traits
- Government Titles
- Patents
- Constructural Elements

# In Our Puddle

**Major: The old planet is just not the same. Millennia of civilization or perhaps just a natural planetary aging progression have resulted in unstoppable catastrophic changes to the planet's former habitability glory. The origin planet is rapidly changing and will eventually become an Uninhabitable Class planet. Thus, your people must move out to space or find a technology to stop the change.**

Minor: The old planet is just not the same. Millennia of civilization or perhaps just a natural aging progression have resulted in unstoppable catastrophic changes to the planet's former habitability glory. The origin planet is slowly changing, losing Maximum Habitability, and may eventually lose Habitability Class as well. Thus, your people must move out to space or find a technology to stop the change.

- ✓ Note: This Fundamental Reality may only be taken by positions who chose Homeworld or Lost Colony Primal States.
- ✓ Note: The degradation of the Homeworld is not instant and catastrophic. The Concierge should set a schedule, or a probability of loss of Habitability Class each Regular Turn and apply when necessary. The degradation is, however, irreversible at least with 1<sup>st</sup> Era technology; whether it can be reversed and restored later is for the game story.
- ✓ Note: The operational liability of this Fundamental Reality is the forced exodus and eventual loss of the Homeworld, which is the center of the starting position. Imagine evacuating the entire human population of the Earth over the course of a century or two? Seven billion people, plus all of their descendants for five or ten generations, no child left behind. We may need to do that someday soon...

Possible Effects:

- Homeworld Maximum Habitability Loss
- Homeworld Habitability Class Loss
- Industry
- Census & Taxation
- Colonization
- Load Population

# Indifference of Ants

**Major: Your species displays a marked and complete indifference to other lifeforms as you go about expanding into the universe unless they are either a threat or food or resource. This indifference is neither from a lack of intelligence or arrogance, it is merely a task-oriented indifference (your entire population may be Asperger's candidates). Within your civilization, your species fully reacts to and interacts with other members of the species.**

**Minor: Your species displays a marked and selective indifference to other lifeforms as you go about expanding into the universe. That is, some lifeforms are disregarded and ignored while toward others, your species shows keen notice and interest. This indifference is neither from a lack of intelligence or arrogance, it is merely a task-oriented indifference. Within your civilization, your species fully reacts to and interacts with other members of the species.**

- ✓ Note: Like a combat medic who ignores enemy bullets and danger to rescue a wounded comrade....
- ✓ Note: This does not automatically imply that your Native Population Type are eusocial insects or mammals or anything else, zombies and robots in movies are portrayed often as being indifferent as described above, while also sometimes being highly intelligent.
- ✓ Note: Your species naturally displays the kind of one minded collective focus that it takes years to train in humans.

Possible Effects:

- First Contact
- Diplomacy
- Trade
- Mega-Corporations
- Exploration
- Colonization and Construction
- Combat

# Inertia

*“I am in fact a Hobbit (in all but size). I like gardens, trees and un-mechanized farmlands; I smoke a pipe, and like good plain food (unrefrigerated), but detest French cooking; I like and even dare to wear in these dull days, ornamental waistcoats. I am fond of mushrooms (out of a field); have a very simple sense of humour (which even my appreciative critics find tiresome); I go to bed late and get up late (when possible). I do not travel much.”*

– J.R.R. Tolkien, Letter to Deborah Webster (1958)

**Major:** Whether the cause is evolutionary, biological, historical, social or political, there is a lack of initiative generally among your people resulting in delays or uneven implementation of Vital Power Activations. Even combat and necessary survival (or other automatic actions) may seem to be done lethargically and haphazardly at times.

**Minor:** Whether the cause is evolutionary, biological, social or political, there is a lack of initiative generally among your people resulting in delays or uneven implementation of Vital Power Activations. Self-defense in combat, actions necessary for survival, and most local ‘automatic’ actions (such as exploration) are generally unaffected.

- ✓ Note: There is much room for play here. Some interpretations might lead to Power Activations occurring a turn later, it might also eliminate ‘Second Checks’ for Power Activations initiating interstellar flight. It might also affect technology if discoveries are not followed up on until much later. The position players are going to issue actions and do whatever they do, it is largely the Concierge’s decision on how to implement this.
- ✓ “For every species bar one, Medieval Stasis is how the world works. Changes in technology and society take hundreds of years, and any existing alien civilization or elf kingdom today looks more or less the same as it did a century ago – or will in a century more. For most races in the setting, slow change is the norm. The great exception are humans.” – TV Tropes.com article, “Humans Advance Swiftly.”
- ✓ Note: On the other hand, there is almost never a panic stricken reaction...

Possible Effects:

- Delayed Vital Power Activations
- Combat Initiative/Seize the Initiative
- Exploration
- Writs
- Enlightenment
- Power Activation Failures
- Technological Development

# Irrationality

*“When a man asks himself what is meant by action he proves that he isn’t a man of action. Action is a lack of balance. In order to act you must be somewhat insane. A reasonably sensible man is satisfied with thinking.” – James A. Baldwin*

**Major:** It was totally irrational to think that science and technology would surely lead to utopia and a rational citizenry. And neither will the invention of Stardrive. When finally confronted with the vastness of interstellar space and our insignificance, the response will range from art to madness.

**Minor:** It was slightly irrational to think that science and technology would surely lead to utopia and a rational citizenry. And neither will the invention of Stardrive. When finally confronted with the vastness of interstellar space and our insignificance, the response will range from art to madness.

- ✓ Note: This Fundamental Reality refers to a penchant for irrationality among the position’s Native Population Type. Irrationality comes in hundreds of flavors. The Concierge should determine a few forms of irrationality that universally afflict this particular population type, then determine how it affects the normal operation of the position and thereafter, apply them consistently and thoroughly throughout the game as circumstances dictate.
- ✓ Note: Is irrationality the same as being unreasonable? Participants will need to decide this in applying this Fundamental Reality to the game.
- ✓ Note: The term ‘irrational’ is usually viewed pejoratively in the modern world; however, there are some respected parts of our civilization who view it as least a necessary component of our being, and in many cases, a useful alternative to academic, enlightened and scientific society.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is in the strength with which they are applied.

Possible Effects:

- Entropy
- Sudden course changes
- Pretty much anything in the game
- Insurgencies
- Murphy’s Law

# Itinerants

**Major:** Hawkers, peddlers, vegabonds, vegarants, tramps, thieves, raiders – the many names of the itinerant populations. Your people are on the move, to where, for why, no one knows for certain. Late to the interstellar Mesopotamia, your populations enter the Galactic Space after the second Turn Cycle, and progress in the game is measured by the passage of our people through the *original* Galactic Space, to completely evacuate and exit at a point approximately opposite the point of entry. Exit does not mean exit from the game, as continued exploration will provide new star destinations with the expanding Galactic Space.

**Minor:** Hawkers, peddlers, vagabonds, vagrants, tramps, thieves, raiders – the many names of the itinerant populations. Your people are on the move, to where, for why, no one knows for certain. Progress in the game is measured by the passage of our people through the *original* Galactic Space, to completely evacuate and exit at a point approximately opposite the point of entry. Exit does not mean exit from the game, as continued exploration will provide new star destinations.

- ✓ Note: The Roma arrived in Eastern Europe centuries after the Great Migration and shortly after (in historical time) the retreat of the Mongols back to Ukraine. The progress of the Roma across Europe is a story of disruption, prejudice, corruption, discrimination, as will be the progress of this position across Galactic Space.
- ✓ Note: Non-entry of population into the Galactic Space does not preclude other appropriate Power Activations during the first two turns, it does not cancel the position's first two Regular Turns.
- ✓ Note: This Fundamental Reality does not preclude colonization or other normal activities in the course of the game. However, it is not a 'seeding space' position, the exit requirement is no 'one left behind' in the original Galactic Space.
- ✓ Note: Enforcement of this migration is up to the Concierge and the story arc of the game. What does it mean if the position's Native Population Type does not completely exit the original Galactic Space? What does it mean if the position isn't moving in the right direction? Or moving at all? There has to be some genuine honor on the part of the position players as to the dictates of this Fundamental Reality in the game, as the normal urge is to establish big permanent colonies.
- ✓ Note: This Fundamental Reality is only available to 'invader' Primal States.

Possible Effects:

- Exploration
- Migration
- Movement
- Diplomacy

# Jynx-us

**Major:** If it wasn't for bad luck, we'd have no luck at all! As chance would have it, your species seems to run into more than your share of bad luck; the oddest strings of improbable events with ultimate bad endings. It is part of the caustic humor mindset of your species whose view is largely focused on the vagaries of life's chances and rolling the dice. Other Starfaring species with whom your species interacts will surely notice a 'bad vibe' around your people and note your cultural obsession with bad luck and chances.

**Minor:** If it wasn't for bad luck, we'd have no luck at all! As chance would have it, your species is prone to perhaps more than their share of odd strings of improbable events with ultimate bad endings. It is part of the caustic humor mindset of your species whose view is largely focused on the vagaries of life's chances and rolling the dice. Other starfaring species with whom your species interacts will surely notice your cultural obsession with bad luck and chances.

- ✓ Note: 'Stupidity' has open season your species. The operational effect of this Fundamental Reality must be numerous and tragic Concierge Interventions to create 'bad luck' in addition to normal bad luck in the course of the game.
- ✓ Note: There is some question as to whether this position can benefit from Enlightenment rerolls? Perhaps the extraordinary back luck can simply be explained by the lack of Enlightenment rerolls even when the position has Enlightenment?
- ✓ Note: This is capable of being played like a Type 4 Fundamental Reality, except that it has real operational effect in any situation involving a die roll or chance.

Possible Effects:

- Combat
- Enlightenment rerolls
- Exploration
- Colonization
- Diplomacy
- Any other events requiring a die roll
- Murphy's Law
- Just about any classic country song or trucker's song

# Kindred

**Major: In kindred we trust – as long as it's not important. Your species shares one Fundamental Reality with each other position starting the game, up to the limit of Fundamental Realities allowed. The Concierge will choose the Fundamental Realities and will not inform the players of this position which other positions have those Fundamental Realities. Contradictions are allowed, but the Concierge has full ability to assemble an interesting set of Fundamental Realities for this position.**

- ✓ Note: Type 2 and 5 Fundamental Realities should not be chosen by the Concierge unless necessary. Type 4 Fundamental Realities are still limited to one for this position.
- ✓ Note: If a position chooses this Fundamental Reality, no other Fundamental Realities are chosen by the position. All prerogatives are surrendered to the Concierge to shape the story arc.

Possible Effects:

- Diplomacy
- Diplomatic Space
- Xeno-cultural Intelligence

# Love

---

*“What’s love got to do, got to do with it?  
What’s love but a second hand emotion.”*

\*\*\*

*“What’s love got to do, got to do with it?  
What’s love but a sweet old fashioned notion?”*

– Tina Turner, “What’s Love Got to Do With It” (1984)

---

**Major: Love (or whatever you call it) is not associated with reproduction in your species - rather it is the opposite. There really is no concept of family as humans know it based on kinship of genetic relations and marriage. This is not to say there is no concept of love or bonding (even parental bonding), but it’s different. As such, reproduction times are the times of mass social entropy; damaging things tend to happen whenever the Census Power is activated.**

**Minor: Love (or whatever you call it) is not associated with reproduction in your species. There really is no concept of family as humans know it based on kinship of genetic relations and marriage. This is not to say there is no concept of love or bonding, but it’s different, rather platonic or paternalistic. As such, reproduction times are the times of social entropy; strange events tend to happen whenever the Census Power is activated.**

- ✓ Note: Expect some bad things to happen when the Census Power is activated by the position controlling your Native Population Type. What those are is up to the Concierge, but some pattern should be established.
- ✓ Note: The losses in relation to the Census are in addition to the loss of Proficiencies on the Public Space due to generational turnover.
- ✓ Note: Can a position afford not to activate the Census Power several times during the game? Additionally, inactive Constructural Elements due to *apostasy* require activation of the Census Power before Cohesion.

Possible Effects:

- Census
- Naturalization
- Chaos

# Metacommunication

**Major:** Your species evolved the ultimate metacommunications tool: telepathy. During person to person communication in any form, the communicators involuntarily broadcast and receive telepathic signals echoing and adding content to the communication. Nobody really thought anything of it or noticed it until the invention of Stardrive; prior to that, it was just ‘normal’ supra- or subliminal communication.

**Apparently, your species has been broadcasting massive uncontrolled telepathic content into space for its entire existence, and these broadcasts travel great interstellar distances, and may contain a temporal effect as well, allowing them to propagate at FTL. Any species that has achieved Stardrive is capable of intercepting and learning to understand these broadcasts, even if they cannot themselves broadcast.**

**Minor:** Your species only natural means of person to person communication is by actively signaling with limbs and tentacles using the native ‘sign language’ of body touching. Your species is ‘deaf’ and ‘blind’ to electromagnetic waves and sound waves (possibly your homeworld has thin air and low gravity) but does have ground vibration sensitivity and other means to determine their surroundings. After the invention of Stardrive, it was discovered that your species naturally broadcasts telepathically a ‘communal music’ (perhaps like a whale song) that communicates mood and other types of information about the state of the community. These broadcasts are supra- or subliminal stimuli to members of your species and the constant presence of the Muzick is required for social and mental well-being of individuals.

- ✓ Note: The Major form of this Fundamental Reality is only available to Homeworld and Lost Colony positions.
- ✓ Note: To develop a technical ability to read these ‘broadcasts’ the other species must have reason to suspect, or firm knowledge that they exist and the ability to experiment with them. How this comes about might be part of the story, and certainly requires some diligence by other positions and strong contact situations.
- ✓ Note: There are many possible effects for this metacommunication, and it must be given an effect on the game in order to be a Type 1 Fundamental Reality. The participants must choose a couple of possibilities and apply them consistently.

Possible Effects:

- Diplomacy
- Aspects
- Special Operations
- First Contact
- Surveillance and Information Operations
- Cohering

# Makers Fakers & Takers

**Major:** “No matter where or what, there are makers, fakers and takers.” – Robert Heinlein

- ✓ Note: It will be up to the Concierge and the position players to interpret and develop the meanings of “makers,” “fakers” and “takers” through the course of the game. The English-language dictionary is a good starting point; jot down some key words for each “aspect.”
- ✓ Note: A possible implementation of this Fundamental Reality would require the position to rotate through “makers,” “takers,” and “fakers” personas on a regular basis, operating accordingly during each period, regardless of outside events, Government Titles or other factors.
- ✓ Note: This Fundamental Reality has an operational effect because it requires or may require a position to play or act in a way that the players may not desire or find optimal in a given situation. By taking this Fundamental Reality, the players of a position understand and will honor the operational imposition.

Possible Effects:

- Make other positions really mad at your guys
- This could be fun ... sort of
- Smile politely while taking or faking

# Nationalist Rhetoric

**Major:** Ultra-nationalist, ethno-nationalist rhetoric, usually of the angry and manipulative sort, dominates the public conversation; it is something in the fundamental psychology of your species that probably cannot be changed. The government is not always the source, nor does the government always control the level of rhetoric. Frequently, the rhetoric is directed against the government by break-away groups. Tensions between groups are always high, frequently erupting into conflict until someone else restores order. No one is ever satisfied.

**Minor:** Nationalist and factionalist/party rhetoric, usually of the offensive sort, dominates the public conversation; it is something in the fundamental psychology of your species that probably cannot be changed. The government is not always the source, nor does the government always control the rhetoric. Frequently, the rhetoric is directed against the government by break-away groups. Relations between groups are always tense, sometimes erupting into conflict until someone else restores order. Peace may last for a generation.

- ✓ Note: The position taking this Fundamental Reality should be required to have the Confederation Structural Title and probably cannot change Structural Title during the course of the game.
- ✓ Note: A perpetually unhappy people filling their Void with angst and Balkanizing conflict never ending; perhaps an extreme fictional example is the Skeksis from *The Dark Crystal* (1982). What makes it fundamental is that it is an unchanging trait of the species; think about how much progress we have made in ridding humanity of violent conflict, prejudice and discrimination? And how long it has been going on? This Fundamental Reality is in the same vein.

Possible Effects:

- Confederation Structural Title
- Patriotism
- Entropy & material destruction
- Factionalized government
- Never a passive acceptance of government legitimacy

# Natural Sets

*“A pair of 45s made me open my eyes,  
My temperature started to rise!”*

– The Hollies, “Long Cool Woman in a Black Dress” (1971)

**Major:** Your species fully embraces the ideas of ‘human attachment theory’ (i.e. John Bowlby, et al.), especially in relationships with aliens. In addition, however, they also believe in balances (positive-negative) and that both sides are necessary. Thus, in relationships they see natural sets – for example, if they have a secure attachment with the first aliens they encounter, they must have an anxious attachment with the next alien race they encounter. Sets can come in two, three, or four – when all four (secure, anxious, avoidant, and anxious-avoidant) are in play, then the cycle starts again.

- ✓ Note: Play of this Fundamental Reality requires familiarity with human attachment theory in relationship and developmental psychology. To this is added a Terra Australis Incognito- or ying-yang- like sense of cosmic balance.
- ✓ Note: The problem with this Fundamental Reality – like most concepts in GGDM – is how to convert a larger abstract concept to something playable in the game, concepts need game mechanical expression to work. It would be difficult (but not impossible, might even be interesting) to impose this Fundamental Reality on the internal workings of a position, but aliens provide a convenient us-and-them foil that is fully congruent with the inherent us-and-them nature of human relationships (whether mother-child, peers, or as adults).
- ✓ Note: While positional relationships may shift during the game, this Fundamental Reality requires the position to immediately determine the relationship shortly after each First Contact and stick stubbornly to the attachment type chosen for as long as possible. The position may need to communicate the chosen attachment to the Concierge as a matter of record, so that the Concierge may exercise judgment as to whether the position is complying with this Fundamental Reality.

Possible Effects:

- Psycho-Therapy
- First Contact
- Official Diplomacy
- Diplomatic Spaces
- Shared Meanings

# Nearer My Light to Thee<sup>1</sup>

**Major:** The reason your species learned to fly using artificial mechanical means was to be nearer the sun; afterward they learned how to fly into space, to be nearer the sun, but the universe played a cruel trick, because space is vast, dark and cold and the sun is far away. Still, the stars beckon and there is a bright cluster of light at the center of the galaxy that beckons like a lodestone. Your species is attracted to, has a very strong affinity for light; your cities are well lit with artificial light, but there is always a bigger light out beyond and another beyond that. Naturally, your species is attracted most to light that resembles your own Homesystem star. The attraction of light is greater than the fear of dark and empty.

**Minor:** The reason your species learned to fly using artificial mechanical means was to be nearer the sun; afterward they learned how to fly into space, to be nearer the sun, but the universe played a cruel trick, because space is vast, dark and cold and the sun is far away. Still, the stars beckon and there is a bright cluster of light at the center of the galaxy that beckons. Your species is attracted to light; your cities are well lit with artificial light, but there is always a bigger light out beyond and another beyond that. Naturally, your species is attracted most to light that resembles your own Homesystem star.

- ✓ Note: The Concierge must generally determine a direction to the Galactic Core and this position is compelled to explore and expand generally in that direction. This will possibly be away from the core of the original Galactic Space or through it.
- ✓ Note: This position should dominate stars of the color of the home starsystem during the game, it might even be causa belli for war. The preference for light also might make this species easier to surveil and raid during the game.

Possible Effects:

- Exploration
- Emigration
- Observation
- Surveillance & Raids
- Stellar Class

---

<sup>1</sup> Parody of “Nearer, my God, to Thee” by Sarah Flower Adams (1841).

# Née

Minor: Your species had another name previously. It may be known by a few who keep it secret or are dismissed as fringe lunatics, or it may not be known by anyone at the beginning of the game. Having another previous name may also not mean anything to your species until it is discovered to have meaning out there among the stars.

- ✓ Note: This Fundamental Reality doesn't fit well into any of the five types and so ends up here as a minor Type 1. It barely fits even that criteria as there is no immediate or permanent operational effect.
- ✓ Note: The implication here is that first, there is some sinister secret associated with the former name of your species, second, that the name will be known to, recognized by or eventually discovered by others, third, that your species has or is related to some pregame interstellar history (possibly a 'fall'), possibly involving other major species in the game, and forth, that it will have some effect operationally on this position later in the game. 'It's a secret, if I told you, I'd have to kill you.'
- ✓ Note: This Fundamental Reality is a story hook. By developing this angle, the Concierge will directly affect the position taking it.

Possible Effects:

- Story hook
- Sinister and mysterious implications
- Will affect position later in the game
- Discovery by aliens could cause the government to fail all Conflict Checks

# Noumenon

Minor: It has long been known, without any sensory or perceptive evidence (that is, noumenon), that others of your Native Population Type exist among the stars. Later, when the others are discovered to be another Major Position in the game, evolved independently on another Homeworld, your species becomes a recurring phenomenon of the galaxy.

- ✓ Note: Science (and this game) currently assumes that species evolved on different worlds will share only the most basic similarities of life, but will otherwise be incompatible. To have two technologically advanced, starfaring civilizations of the same species, which evolved – independently – on different worlds would be ... phenomenal!
- ✓ Note: The ‘others’ will share the same Native Population Type but will have their own Fundamental Realities. The ‘other’ position will not learn of this until First Contact and neither position will know the other’s identity until First Contact. The Concierge will randomly (or maybe not) determine which other position shares Native Population Type with this position. This is not the same as a Lost Colonist Primal State because the other position does not begin knowing they are ‘related’ to someone in the game and actually, in this case, there is no ‘relation’ between the two, rather independent parallel evolution.
- ✓ Note: Philosophers may quibble with the use of the term ‘noumenon’ here; that’s alright because it works for the game purposes and the game is intended to be educational, so go ahead and quibble. And grammarians and English teachers will rankle at how ‘alright’ was used as well.

Possible Effects:

- Native Population Types
- A surprise for another position in the game, a story hook.

# Nuclear Winter

**Major: Those Fools! Immediately prior to the start of the game, the major factions on your Homeworld mutually destroyed each other in a global total nuclear war featuring both counterforce and countervalue targeting. Nuclear war was their only remaining solution. Even those not participating in the war were affected by the aftermath. The planet suffered major damage and most species were extinguished in the following nuclear winter. Your starting population are the survivors who feel the need to leave the Homeworld.**

**Minor: Those Fools! Immediately prior to the start of the game, the major factions on your Homeworld engaged in a nuclear exchange with counterforce targeting. Eventually it stopped when the end result became apparent. Even those not participating in the war were affected by the aftermath. The planet suffered significant lasting damage and some urban centers near military targets were destroyed collaterally. Your starting population are the survivors who feel the need to leave the Homeworld.**

- ✓ Note: This is the equivalent of starting the game with a self-inflicted orbital bombardment combat against the Homeworld.<sup>1</sup> Orbital facilities are largely unaffected but could have been hit in the exchange.
- ✓ Note: The Concierge will determine the damage prior to the game. The choice for the population is the cold vacuum of space or the poisoned planet.
- ✓ Note: This Fundamental Reality may only be taken by positions who chose Homeworld or Lost Colony Primal States.

Possible Effects:

- Homeworld Maximum Habitability
- Homeworld Habitability Class
- Starting Population and Industry
- Load Population

---

<sup>1</sup> “We’re off to outer space, to save the human race...” – Starblazers’ Theme Song.

# OCD

**Major: Prior to the game, the players of this position and the Concierge should choose a suitably major ‘OCD-like’ behavior for the position which will be repeated ritualistically throughout the game for no particular or rational purpose.**

- ✓ Note: This Fundamental Reality is not intended to trivialize Obsessive Compulsive Disorders. Rather, it is intended as a practical demonstration within the framework of the game. Whatever representative behavior is chosen by the position and the Concierge prior to the game should be compulsive, irrational, ritualistic, repetitive, and serve little or no purpose in the normal course of game activities. It might even be a neurotic paradox.
- ✓ Note: The behavior may change during the course of the game, especially if the previous behavior becomes impossible to repeat or too operationally trivial. The ‘OCD’ should never be ‘cured’ during the game unless it is the end point of a story arc. Otherwise, the behavior should demonstrate no rational purpose to any other position or observer.
- ✓ Note: This Fundamental Reality bears some similarity to a Type 4 Fundamental Reality except that it imposes useless activity as an operational requirement on the position.

Possible Effects:

- Therapy
- Repetitive ritualistic behavior<sup>1</sup>

---

<sup>1</sup> Imagine playing Monopoly with someone who has to thoroughly examine the space under the table on their hands and knees for several minutes each time it’s their turn to roll the dice.

# Of Carnivores

**Major:** Your species comes into the game with a strong carnivore behavior that is only slightly checked by civilization and technology; dinner is domesticated prey served live; no substitutes allowed. Though most aliens are not suitable for food, nor does your species care for intelligent prey, this behavior shapes the overall worldview, cognitive schema, or ‘mindset’ of your species, which is carried into space with the advent of starflight. Your species descends from one of three types of primitive carnivores: Chasers, Pouncers, or Trappers, which will be determined before the game begins and will determine their behavior during the game.

**Minor:** Your species comes into the game with a strong carnivore behavior that is checked by civilization and technology; dinner is a ritual involving hunting in communal food parks, followed by solemn cooking and feasting and supplemented by synthetically produced substitutes. Though most aliens are not suitable for food, nor does your species care for intelligent prey, this behavior shapes the overall world view, cognitive schema, or ‘mindset’ of your species, which is carried into space with the advent of Starflight.

- ✓ Note: This Fundamental Reality could be considered ‘similar’ to a Type 4 Fundamental Reality except that it is operational.
- ✓ Note: This Fundamental Reality is more about how a position acts during the game toward other positions, Concierge intervention should be minimal.

Possible Effects:

- Combat
- Diplomacy
- Constructural Elements
- Aspects
- Expansion

# Opulence

**Major:** The modern technological period of your species prior to Stardrive was quite long and comfortable, perhaps even ‘utopian.’ Some actually re-sented the invention of Stardrive as disruptive. Life was pretty good, all things considered, if you were in the right group. Thus, the historical and cultural expectations of domestic subsistence are quite high, leaving less for Taxation (which is probably why it took so long to research Stardrive).

**Minor:** The modern technological period of your species prior to Stardrive was quite long and comfortable, perhaps even ‘utopian.’ Life was pretty good, all things considered, if you were in the right group. Thus, the historical and cultural expectations of domestic subsistence are quite high, leaving less for Taxation (which is probably why it took so long to research or reverse engineer Stardrive).

- ✓ Note: The description of the Major and Minor forms of this Fundamental Reality are the same. The difference is in the strength with which they will be applied during the course of the game.
- ✓ Note: Opulence implies materialism. There are a couple of possible ways to implement this: One way is to reduce the amount received from taxation by a set percentage, a second is to set a voluntary schedule of sparse Taxation Power activations. The position may then be forced into other means of obtaining RPs...

Possible Effects:

- Taxation
- Income from Native Population Factors
- Income from Industry on Native Colonies
- Income from the Homeworld
- Colonization
- Trade with Aliens
- Looting

# Outer Limits

Minor: At the outer limits of the galactic range for life is your species. Planets that others find awful, are your paradise. You don't have much of a galactic tourist industry. But your people also usually don't have difficulty finding uncolonized planets.

- ✓ Note: Generally, the Habitability Class for planets explored by this species should be the opposite of the best or worst Habitability Class for any other species that has explored the planet. For example, if this species explored the planet first, establishing a Habitability Class, the next species that explores (and all others) should have something approximately opposite for Habitability Class. If others have already explored the planet, then this species gets something of the opposite of their best Habitability Class after exploring the planet. Earth for us, Pluto for you.
- ✓ Note: This does not provide an advantage to this position. It is possible that some advantage might be gained by being there first, but due to random generation, any advantage is marginal at best.

Possible Effects:

- Habitability Class
- Colonization
- Conflict avoidance

# Pacific Rain

**Major:** Prior to First Contact, your species had no concept of war, weapons or military organization. Though the technological means was there prior to starflight, the concept of war simply never occurred to your pre-starflight ancestors. This is not the same as being a pacifist, because to be a pacifist, you must first know the concept of war. However, other species will view your people as pacifist to the extent that they yearn to avoid conflict.

**Minor:** Prior to First Contact, your species had banished war and achieved a historic and long-lasting global peace and unity. This required largescale disarmament, strong social conditioning and other safeguards, and a conversion of the military-industrial complex.

- ✓ Note: This position should avoid or be disallowed from military Existential Patents during the set-up, and thus should not take any Primal State that requires them. This does not bar development of those Patents in-game, but may put the position slightly behind the curve in achieving the 2<sup>nd</sup> Era. It is an operational constraint that may or may not matter depending on the game.
- ✓ Note: On the social side, the position may avoid for the first several Regular Turns, developing any Combat College, Doctrinal Templates and so forth; there should be a specific in-game event to trigger a sudden, rushed reversion to military proficiency. Until then, the position should be quite restrained by this Fundamental Reality.
- ✓ Note: This Fundamental Reality effectively precludes exploration with warships for most of the game. That would be considered among the possible violations.

Possible Effects:

- Set-up
- Combat
- Exploration
- Technological Development
- Combat College

# Passages

**Major:** Your Homeworld had a most peculiar orbit and during a regularly occurring part of that orbit, known as the Passage, your species collectively ‘loses its mind’ and a period of mayhem ensues. The exact cause and process by which this happens is well known and can be simulated, but, despite the consequences, the Passage is necessary to the psychological wellbeing of your population and cannot be avoided. The Passage has been occurring during your entire evolution, and is enshrined in recurring themes, ideas, and belief systems of your culture. Groups have reacted to the Passage in various ways; some have engaged in Donnybrook like wild festivities, others have locked themselves away or put themselves into sleep during this period, while other groups have been left with burning cities and scores of dead and injured from the Passage.

**Minor:** Your Homeworld had a most peculiar orbit and during a regularly occurring part of that orbit, known as the Passage, most of your species collectively ‘loses its mind’ and a period of mayhem ensues. The exact cause and process by which this happens is well known and thus it can be suppressed, but with long-term consequences. The Passage has been occurring during your species evolution, and is enshrined in recurring themes, ideas, and belief systems of your culture. Pre-technological cultures reacted to the Passage in various ways; some have engaged in Donnybrook like wild festivities, others have locked themselves away or put themselves into sleep during this period, while other groups have been left with burning cities and scores of dead and injured from the Passage. But you don’t have to do any of that...

- ✓ Note: One must assume that for the ‘psychological wellbeing’ of colonist, the effects of the Passage are artificially simulated. Would they go otherwise? The Passage can possibly be compared to someone who needs to have a good drunk every weekend to function during the week; there are people who don’t want to go to parties unless there is a keg. If cured, it should be part of the game story arc.
- ✓ Note: This Fundamental Reality will require the Concierge to intervene regularly to simulate the effects. The participants will need to agree on some regular schedule when it occurs. Perhaps the alternative to Concierge intervention is that the position voluntarily skips a turn every x number of Regular Turns, simulating the mayhem in the form of a lost turn and lost Combat Actions.

Possible Effects:

- Entropy
- Damage to installations and Technological Devices
- Constructural Elements
- Power Activations
- Balkanized Colonies

# Pendulum

*“So the pendulum swings, now violently, now slowly; and every institution not only carries within it the seeds of its own dissolution, but prepares the way for its most hated rival.”*

*– Dean William Ralph Inge, “Democracy and the Future,” Atlantic Monthly, Vol. 129, March 1922, p. 290*

**Major:** Your species population moves predictably and inevitably from one extreme viewpoint to another. For example, between militarism and pacifism, or art and anti-art, sheepish compliance and open rebellion, technology and esotericism, angry and lethargic, sanguine and melancholic. This process occurs in unison regardless of outside events, location, or which group is in power at the time and it deeply affects all parts of civilization.

- ✓ Note: There is only a major form for the Fundamental Reality; a minor strength form would be nearly meaningless in game terms.
- ✓ Note: Prior to game, the Concierge and position players should decide on two (approximately) opposite extremes that will be used throughout the game. It is suggested that the cycle of the pendulum be three turns, with one turn at each extreme and one turn in the middle transition. It must also be decided where in the process the position begins the game. The movements are in addition to any Light/Dark flipping of Aspects on the Public Space.
- ✓ Note: The most obvious play effect of this is the position is capable of satisfying a Conflict Check on a Government Title, but must let it fail by not taking action that would violate the current state of this Fundamental Reality. A position may refrain from activating certain Powers on turns when it would be a violation.
- ✓ Note: This is an Operational Fundamental Reality because it should affect regularly how the position plays the game and reacts to internal and external events. It is also capable of being role-played in News Events and other communications.

Possible Effects:

- Diplomacy
- Combat
- Power and Writs activations
- Corporations, Commerce, MegaCorporations
- Government Titles
- Aspects

# Phlegmatic

Minor: Your species is, on the whole, very calm and relatively unemotional; aliens you contact may notice. Emotion is tied to the human concept of intelligence, probably because human language is tied to emotion – there are no, or very few words, in any human language which can be said to be devoid of emotion. As soon as any emphasis is added to a communication of fact, a change of tone, an extra word (for example, ‘I have it’ and ‘I have it, now’), an emotion has been added to the communication. Phlegmatic does not mean emotionless or devoid of emotion, nor is it an emotionless word; it can rarely be expressed matter-of-factly.

- ✓ Note: The most notable operational effect of this Fundamental Reality is on those parts of the game that simulate the human group emotion in Public Space. This is borderline as a Fundamental Reality because participants will need to work out ways to operationally express it in the game, which is why it is only available in minor form.
- ✓ Note: This Fundamental Reality could have also been classed as a Type 4 Fundamental Reality (position persona). The difference in making it a Type 1 Fundamental Reality is that it must become an annoying operational liability of the Native Population Type in some way. It can still be part of the position’s persona if players desire it, without counting as a Type 4 Fundamental Reality.

Possible Effects:

- Entropy
- Aspects
- Zeitrice
- Fuzzy Groups
- Enlightenment

# Pleasure Principle

*“No. You have done no more than any wild animal would do. It always makes me laugh, but when men lose their self-restraint they say they’re natural. They are more natural than men who have nothing to restrain.” – Capt. Bligh, The Bounty (1984)*

**Major:** Your species’ decisions and behavior are strongly motivated by the instinctual desire of the id, arising in infancy, to experience pleasure and avoid pain. Any Government that forces the population to violate this principle would risk loss of legitimacy.

**Minor:** Your species decisions and behavior are strongly motivated by the instinctual desire of the id, arising in infancy, to experience pleasure and avoid pain. However, there is some recognition of the necessity of postponing pleasure for greater purposes.

- ✓ Note: More so than others (even lazy house cats), this species avoids unpleasant, dangerous and painful situations (combat, risky colonization, exploration Hazard Rolls) and seeks pleasure. Why would they leave home, unless compelled? This is in fact the image of the late Roman Empire urban population, especially those living in Italy (e.g., the alleged marriage ban by Roman Emperor Claudius Gothicus, who felt that marriage made his soldiers decadent and weak – this story is associated with the execution of St. Valentine).
- ✓ Note: It is certain that in play of the game, the position will regularly violate this Fundamental Reality. To make it mean anything, the Concierge must be the gatekeeper, representing the population’s reaction. It is also possible that the position may find creative ways to entice (‘sugar coat’) voluntary compliance, for which it should be rewarded.
- ✓ Note: This Fundamental Reality could have also been classed as a Type 3 Fundamental Reality (supra-legitimacy). It can still be part of legitimacy in the Major Form of this Fundamental Reality.

Possible Effects:

- Taxation
- Construction
- Commerce
- Combat
- Colonization of Unpleasant and Hostile Planets
- Load Population, Landing
- Corruption and criminal organizations
- Anything dangerous or unpleasant to the population
- A bit of immaturity

# Purblind

**Major:** Your population has purblind spots – as in lack of discernment or understanding. Enlightenment often falls on closed minds. The spots move from generation to generation, population to population. Cure the blindness over here, it crops up again the next generation over there. The purblind often end up in positions of authority, making matters worse. But as long as two thirds of your species reach concrete operational intelligence, you'll probably survive.

**Minor:** Your population has purblind spots – as in lack of discernment or understanding. Enlightenment often falls on deaf minds. The spots move from generation to generation, population to population. Cure the blindness over here, it crops up again the next generation over there. The purblind often end up in positions of authority, making matters worse. But as long as two thirds of your species reach concrete operational intelligence, you'll probably survive.

- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is the strength with which they will be applied.
- ✓ Note: The most practical effect of this Fundamental Reality is that Enlightenment committed to a Power Activation will not be able to be used in event of a failed die roll. This should occur randomly, a die roll (to which Enlightenment cannot be applied) to see if the Enlightenment can be used, participants should set a percentage for the game. This may not apply to activities mainly involving population of Conquered, Converted or Naturalized Colonies.
- ✓ Note: The Concierge may find other creative ways to simulate this purblind state, possibly with neurotic paradoxes or an extra dose of incompetence here or there. It may also happen that attempts to found or re-endow Colleges may fail inexplicably.

Possible Effects:

- Colleges, anti-education, populist anti-intellectualism
- Enlightenment loss or failure
- Smoking, drinking and substance abuse

# Red Shift, Blue Shift

**Major:** Evolution has insured that your species prefers the light of a Red Giant (red) or Blue-White Dwarf (blue) star. The Concierge will choose which before the game. At the preferred star types (color), there is an enhanced chance of finding the best planets for your species to colonize; while the chance is less at other star types.

**Minor:** Evolution has insured that your species prefers the light of a Red Giant (red) or Blue-White Dwarf (blue) star. The Concierge will choose which before the game. At the preferred star types (color), there is an enhanced chance of finding the best planets for your species to colonize; while the chance is less at other star types.

- ✓ Note: The description of the Major and Minor forms of this Fundamental Reality are the same. The difference is in the strength with which they will be applied during the course of the game.
- ✓ Note: If this Fundamental Reality is taken by a Homeworld position, the home system star must be of the appropriate stellar class (i.e. color).
- ✓ Note: This may require some tinkering by the Concierge to set the enhanced percentages for the game.

Possible Effects:

- Exploration
- Habitability Class
- Maximum Habitability
- Colonization
- Conflict avoidance

# Red Space

**Major:** Your species has no concept of individual property ownership, all real property and chattels are communally held. Instead, your social order contains an ancient, sophisticated, comprehensive, refined, and nuanced code of conduct with regard to proper use of community resources, living spaces, possession of chattels, and production and distribution of same. This condition is not a result of a radical ideological revolution which displaced a human-style class and ownership system (a human-style class and ownership system would be a radical ideological revolution to your people). Rather, individual ownership just simply never occurred to your species and would have seemed silly and/or appalling if anyone suggested it; communal ownership and sharing is just the natural order.

**Minor:** Your species has no concept of individual real property ownership, all real property is communally held. Instead, your social order contains an ancient, sophisticated, comprehensive, refined, and nuanced code of conduct with regard to proper use of community resources, living spaces, and production and distribution of same. Individual real property ownership just simply never occurred to your species; communal ownership and sharing is just the natural order. Possession of chattels is recognized and it is also understood that aliens might have different property systems which should be respected.

- ✓ Note: Game operational effects of this Fundamental Reality will require some creativity. This position would certainly never think they ‘own’ a planet or starsystem, but on the other hand, aliens are not part of their culture and the same rules may not apply. First Contact or resistance to Landing on an alien colonized planet may shock this culture.
- ✓ Note: Internally, it is difficult to see how this might be simulated, since the ‘things’ of a position are considered in-game to be owned by the entire position (for game convenience) regardless of government type or political status. That is, the game only primarily enforces external boundaries of a position (i.e. sovereignty). However, this position will probably have a Confederation Structural Title, but it is not required.
- ✓ Note: Information is an interesting issue, because no one really owns information, it is not zero sum, one is not usually lessened – in the classic sense – by sharing information. So, perhaps this species will be less guarded than others about aliens obtaining information?

Possible Effects:

- Exploration
- Balkanized Colonies
- Minor Races
- Sovereignty
- Information

# Repression

---

[Marcus has just cleared out a bar of thugs singlehandedly]

**Lennier:** *I see they trained you well back home.*

**Marcus Cole:** *Well, they said I was carrying around a lot of repressed anger.*

**Lennier:** *And?*

**Marcus Cole:** *I'm not repressed anymore!*

– Babylon 5, “Ceremonies of Light and Dark” (1996)

---

Minor: Within a civilization there is a certain percentage of the population whose primal urges are barely held in check by society. Within this group are two subgroups: Those who know it, and those who do not. Some become criminals, some live out their lives as repressed angry people, some become stand-up comedians.

- ✓ Note: Mainly this Fundamental Reality provides extra impetus for Concierge Interventions and insurgencies. By taking this Fundamental Reality, the position players should understand that; but there may also be some creative angles that can be used in other ways throughout the game.

Possible Effects:

- Entropy
- Anarchy
- Rebellion
- Angry Comedians
- Policing and Security Proficiencies
- Conversion of your Native Population Type by others
- Passive-aggressive behavior

# Resisting Nature<sup>1</sup>

**Major:** Your species has a history of or is regarded as having poor personal hygiene (and all other types of hygiene as well). Although your medical science is advanced enough to document and educate, and some progress has been made in that front in the last generations, there are still widespread lapses in personal hygiene and other health related habits that lead to widespread medical problems, loss of productivity and lifespan, pandemics and epidemics, and radical emergency solutions, such as the use of high-heat yield weapons. Further, your species seems to be especially vulnerable to microbes.

**Minor:** Your species has a history of or is regarded as having poor personal hygiene (and all other types of hygiene as well). Although your medical science is advanced enough to document and educate, and some progress has been made in that front in the last generations, there are still widespread lapses in personal hygiene and other health related habits that lead to widespread medical problems, loss of productivity and lifespan, pandemics and epidemics, and radical emergency solutions, such as the use of high-heat yield weapons.

- ✓ Note: One way to give this Fundamental Reality a game effect: On some Regular Turns during the game, the Concierge may choose to take an Intervention Potential Plus instead of an Intervention Potential when this position's Regular Turn is run.
- ✓ Note: The position should expect regular Interventions based on microbial outbreaks, or other population health-related issues. It will require a constant, game long, strong effort (which the Concierge should take into consideration) to hold this in check, and that is the operational effect of this Fundamental Reality on the position: Medical Proficiency College first instead of Combat College.
- ✓ Note: Until an alien position has had significant contact with your populations, this Fundamental Reality might not be immediately apparent, they may take sickly or unclean appearance as normal for your species.

Possible Effects:

- First Contact and Balkanization of Planets
- Major and minor outbreaks and health problems
- Shortened lifespan, loss of productivity (i.e. Taxation & Census)
- Galactic Quarantine
- Biological Warfare

---

<sup>1</sup> 'Resisting nature' is a phrase found sometimes in older writings which refers to men who bathed regularly, shaved and cut their hair. They were 'resisting nature' before it became the social norm, centuries later, men who had long hair, were unshaven and – god forbid – didn't bathe often, were ridiculed as rebels. In 1778, John Wesley introduced "Cleanliness is next to godliness" in a sermon and it became the 'battle cry' of proper 19<sup>th</sup> and 20<sup>th</sup> century social manners and personal appearance (and was incorporated as justification into the White Man's Burden ideology). Until the 60s counter-revolution.

# Restoration

---

*“Meet the new boss, same as the old boss.”*  
– The Who, “Won’t get fooled again” (1971)

---

Minor: The historiography of your race is that there are really only three or four groups in society and that any change of government title is merely a “restoration” of a previous group to power.

- ✓ Note: Before the game, the Concierge will draw a group of seven Estate and Social Government Titles as the position’s Foresight. These titles will then be arranged into three or four groupings whose membership can overlap. These groupings are the only allowable arrangements of Government Titles for the position; any changes in Government Titles must be a change to one of the groupings.

Possible Effects:

- Limitations on Government Titles
- Government Title Changes
- “Refreshing” the Foresight means returning previously discarded Government Titles to the Pool

# Risk Takers

*“In the founding days of the Imperium, great men dreamed great dreams...and achieved them. In the last days of the Imperium, petty men dreamed petty dreams...and achieved them too.”*

– MegaTraveller RPG, [Rebellion Sourcebook](#) (1988)

**Major:** Glory to the risk-takers, gamblers, go-getters. Risk-taking is a major element of what your species regards as leadership; moral responsibility for others who might be affected, is less of a consideration. Send the Colony Ships instead of a Scout, make First Contact by landing on their colony planet, dispatch Cargo Ships to an **alien colony** without permission from the aliens. Crazy risks make crazy success or failure, glory or infamy. Those who fail, will be replaced by others willing to take the chance to be the leader.

**Minor:** Glory to the risk-takers, gamblers, go-getters. Risk-taking is a major element of what your species regards as leadership; moral responsibility for others who might be affected, is less of a consideration. Send the Colony Ships instead of a Scout, make First Contact by landing on their colony planet, dispatch Cargo Ships to an **alien colony** without permission from the aliens. Crazy risks make crazy success or failure, glory or infamy. Those who fail, will be replaced by others willing to take the chance to be the leader.

- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is the strength with which they are applied: Crazy or crazy like a fox.
- ✓ Note: As a guideline, one Power Activation per turn should involve a gambit or significant risk factor. Play like a Roman, this is one reason why Fabian (Quintus Fabius Maximus Verrucosus) was so controversial in Rome. The Concierge will monitor to insure that the position substantially complies with the risk-taking requirement. Successful risk-taking becomes a feedback loop such that little monitoring should be required.
- ✓ Note: This Fundamental Reality could arguably have also been a Type 3; as a Type 1, it is intended to have a more direct operational effect.

Possible Effects:

- Exploration
- Combat
- Commerce
- Colonization
- Advanced Research & Development

# SDUI

*“Do illegal drugs, get a big chicken dinner”*

– U.S. Marines anti-drug poster, 1989 <sup>1</sup>

**Major: Stardriving Under the Influence. Movement from location to location at FTL (Faster than Light) speeds causes disorientation and diminished capacity in your species for a period after arrival.**

**Ticketed! The effect of the disorientation may be applied to actions taken on arrival, such as Combat and Exploration. It may also last until the following Regular Turn. If no actions are taken on arrival, the effect the following Regular Turn may be lessened.**

Minor: Stardriving Under the Influence. Movement from location to location at FTL (Faster than Light) speeds causes disorientation and diminished capacity in your species for a period after arrival.

Ticketed! The effect of the disorientation may be applied to actions taken on arrival, such as Combat and Exploration. It may also last until the following Regular Turn. If no actions are taken on arrival, the effect the following Regular Turn may be lessened.

- ✓ Note: Using a different FTL Stardrive will not diminish this effect. The problem is the FTL movement, no matter how accomplished.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same. The difference is in the strength with which they are applied.
- ✓ Note: There are variable ways of creating a game effect for this. For example, a position may voluntarily not initiate interstellar movement with ships that arrived the previous Regular Turn; this would be an operational hindrance, decreasing the efficiency of the position. The Concierge could also play with the percentages, or bar Enlightenment (or the position could voluntarily not use Enlightenment) the Regular Turn of arrival from FTL flight. And maybe one or two Pandorum-like Interventions.

Possible Effects:

- Movement
- Combat
- Exploration
- Commerce

<sup>1</sup> “Big Chicken Dinner” is Marine Corps slang for a Bad Conduct Discharge. I worked in a Substance Abuse Control Office (SACO) in 1989. Another read, “Denial is not a river in Egypt.”

# Senseless People

---

*“And the people bowed and prayed  
To the neon god they made...”*

– Simon & Garfunkle, “The Sound of Silence” (1964)

---

Minor: There are two types of people who do not partake of philosophy (and learning): Gods and Sages, because they are wise already; and senseless people because they think they are wise (when they are not). Your species is not godlike and has few Sages. That leaves most of your population in the latter category.

- ✓ Note: Sound like any sapient technologically advanced species you have encountered recently?
- ✓ Note: The implication of this Fundamental Reality is a permanent and widespread anti-intellectualism in this civilization, rooted in an anti-philosophy ideology. An intentional, proud sort of ignorance, those who called themselves Simpletons in Walter M. Miller, Jr.’s *A Canticle for Leibowitz*, in reaction to the “smart bastards” who started the global nuclear war. So, reaction to technological catastrophe is one instance where this may take root in the recovering civilization (and thus this Fundamental Reality might well pair with some others).
- ✓ Note: This Fundamental Reality might also imply a failure of public education and the print revolution, a lack of middle class in the civilization, and a wide gulf between the educated and the under-educated masses (e.g., the Carl Sagan version of the Library of Alexandria destruction). Whether any of these things can be cured during the course of the game is part of the story and should not be easy.
- ✓ Note: The Concierge will need to be creative in the use of Interventions to simulate the effects of this Fundamental Reality from time to time in the game. This could include civil disorder and destruction (e.g., of Institutes, etc.).

Possible Effects:

- Education Proficiency
- Colleges
- Enlightenment
- First Contact

# Smuggler's Blues<sup>1</sup>

*“It's a losing proposition  
But one you can't refuse.”*

– Glenn Frey, “Smuggler's Blues” (1984)

**Major:** They say they're gonna stop it, but it doesn't go away. The contraband trade is here to stay. The government either spends resources to fight it, or accepts the social and economic losses while it flourishes. It's a losing proposition, but one you can't refuse; it's the politics of contraband. It's the Smuggler's Blues.

**Minor:** They say they're gonna stop it, but it doesn't go away. The contraband trade is here to stay. The government either spends resources to fight it, or accepts the social and economic losses while it flourishes. It's a losing proposition, but one you can't refuse; it's the politics of contraband. It's the Smuggler's Blues.

- ✓ Note: Raise a tentacle if you've heard this before...
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same, the difference is how loudly your blues are played.
- ✓ Note: Taking this Fundamental Reality implies that the civilization has a major uncontrollable (near catastrophic) contraband problem reflective of our current world. Since the issue is well documented and well debated and well discussed ... it should not be difficult to imagine how it could be reflected in in-game events and Interventions. The Concierge might even need a few more Interventions.
- ✓ Note: That said... will the problem be solved in-game? Well, we've had a couple of centuries at it and it's only getting worse, not better. Whatever solution is devised in the game should be epic and literary. Will going into space and colonizing other planets make people stop using powerful, addictive recreational drugs to fill their Existential Void? Star Trek TNG seemed to think so without providing details. Is there a technological solution that can be forcibly implemented?

Possible Effects:

- Economic and cultural losses (RPs)
- Special Operations
- Police Proficiency
- Corruption
- Corporations and MegaCorporations

<sup>1</sup> Ode to Glenn Fry (1948-2016).

# Spontaneous Combustion

**Major:** During the pre-game history of your species, there are many recorded cases of Spontaneous Combustion whereby individuals are spontaneously consumed by fire. But not just individuals, later occurrences included entire groups, families, communities, usually under stress, spontaneously combusting. In one famous instance, ancient religious rebels fighting a powerful empire, besieged on a mountain top fortress, all died of spontaneous combustion as they were about to be captured. The cause remains unknown.

**Minor:** During the pre-game history of your species, there are many recorded cases of Spontaneous Combustion whereby individuals are spontaneously consumed by fire. But not just individuals, later occurrences included entire groups, families, communities, usually under stress, spontaneously combusting. In one famous instance, ancient religious rebels fighting a powerful empire, besieged on a mountain top fortress, all died of spontaneous combustion as they were about to be captured. The cause remains unknown.

- ✓ Note: Whether or not spontaneous combustion has happened is a real-world controversy; there are alleged isolated cases of Spontaneous Human Combustion and no good explanations. This Fundamental Reality blows the paranormal up into a larger than life verifiable phenomenon in the game. For the purposes of the game, unless it is part of the story arc, the cause should remain unknown.
- ✓ Note: The Major and Minor Forms of this Fundamental Reality are the same; the difference is the frequency with which it occurs and the damage done each time.
- ✓ Note: The meaning and operational effects are up to the participants, but mainly it seems to invite News Events and Concierge Intervention as the tools of implementation. As the description suggests, it could be regarded as a spontaneous form of mass suicide or of political protest (like the self-immolation of monks in south-east Asia or the fruit vendor, Mohamed Bouazizi in Tunisia in 2011 who started a revolution).
- ✓ Note: Spontaneous Combustion may also be taken as a metaphor for political and social movements that may suddenly sweep away the previous order, often destructively, even self-destructively. Thus, the position may see sudden internal changes.

Possible Effects:

- Random loss of population factors & RPs or Enlightenment
- Low population or Specialized Colonies vanishing
- Conquered and Converted Colonies (imagine...)
- Thesis Statements, Reformations, Kairotic Moments

# Stained Glass Stories

*“Fairy tales build churches.” – John, The Man from Earth (2007)*

**Major: A significant part of public perception of reality and public discourse of your civilization lies in semi-mythic stories that are primarily emotional but not factually instructive. These stories are untouchable, not to be disturbed or criticized, as they are part of the legacy of your ancestors. As a result, some Monads on the Public Spaces may only be used to place Aspects (inviolable even to Pathways).**

**Minor: A significant part of public perception of reality and public discourse of your civilization lies in semi-mythic stories that are primarily emotional but not factually instructive. These stories are untouchable, not to be disturbed or criticized, as they are part of the legacy of your ancestors. As a result, some Monads on the Public Spaces may only be used to place Aspects (inviolable even to Pathways).**

- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same, the difference is the strength with which they will be applied.
- ✓ Note: It is suggested, for example, that the Major form affect no more than 10-10% of the Public Space reserved for Aspects only. Whether or not this is an operational hindrance or liability is a question of style of play, management of the Public Space. It certainly suggests an Aspect-heavy position with lots of turnover on the Public Space, but may hinder placement of Friendly or Naturalized Colonies and Research Groups, as well as Pathways.
- ✓ Note: Other possible concrete effects of this Fundamental Realities might be Symbolic Constructural Elements or situations involving a Kairotic Moment. This depends much on the story being told.

Possible Effects:

- Public Spaces
- Aspects Placement
- Fuzzy Groups Placement
- Zeitrice
- Colony Placement on Public Spaces
- Writs activation
- Symbolic Constructural Elements
- Terra Sancta

# Strange Sun

---

*“Mama always told me not to look into the eyes of the sun  
But mama, that’s where the fun is!”*

– Manfred Mann’s Earth Band, “Blinded by the Light” (1976)

---

Minor: The star around which your Homeworld orbits acts strangely. Until your people began closely observing other stars, and eventually visiting other stars, your sun was considered ‘normal’ because it has always been that way. Sophisticated observations with modern instrumentation has led to the conclusion that there is *something else* in your sun or at least *something very odd* going on in the heart of your homesystem sun. Some argue that whatever it is, is the cause of life on your Homeworld; others have different opinions.

- ✓ Note: This Fundamental Reality is only available to positions who chose the Homeworld or Lost Colony Primal State.
- ✓ Note: This Fundamental Reality is a ‘story hook’ for the Concierge to exploit if desired. What the in-game effects might be depend on what that *something* is... it is not intended to imply that the sun is about to go nova, so this is not an exodus type Fundamental Reality. The strength of this Fundamental Reality depends mostly on Concierge Intervention rather than position players though the players could creatively detail some of the beliefs surrounding the enigma.

Possible Effects:

- A mystery to solve
- Wait, are you telling me that stars are just other suns?!

# Sycophant

---

*“Truth is in the streets, Stil, not in this parade of sycophants who flutter around this palace with their meaningless statistics and empty ritual.”*

– Maud’dib (aka Paul Atreides), Frank Herbert’s Children of Dune (miniseries, 2003)

---

Minor: Your species has a strong, basic, primal sycophant drive. It was defined as normal behavior by social and mental health professionals, and evolutionary arguments were made to justify and explain it. No one thought it unusual until contact was made with alien species; all alien species who are in personal or social contact with your people for a time, will immediately recognize you as sycophants.

- ✓ Note: The Concierge is free to apply all of the various meanings of sycophant, for example, ‘false litigant, extortionist’ (ancient Greek), ‘informer’ (Modern Greek, French), ‘insincere flatterer’ (modern English, sycophancy). Note also that when laws are Draconian (and Capital Punishment is the main punishment), being a sycophant (in the sense of ‘informer’) can also become legal murder of another.
- ✓ Note: Concrete in-game effects might range from being unable to get rid of a failed Government Title, or on the positive side, a Government Title continuing undisrupted for a Regular Turn after it would have been disrupted. There might be resistance to changes in Shared Meanings, forced renewal of Corporations, or refusal to move the Capital Colony are examples of unreasonable dedication. Most of this depends on Concierge Intervention.
- ✓ Note: This Fundamental Reality has also a Type-4 possibility, sycophantic devotion to another position in the game, or even to a Minor Race.

Possible Effects:

- Entropy
- Special Operations
- Colony Conversion and Naturalization
- Groveling to authority
- Untrustworthy

# Under A Wavering Eye

**Major:** Your Homeworld star is unstable and has been for a long time. Stellar instability usually doesn't occur suddenly, rather, it is part of a process, so stellar instability is part of the long evolution and history of your species. But now it is accelerating; perhaps the invention of Stardrive triggered an acceleration of the process. It is certain that shortly and/or eventually, your Homeworld will soon catastrophically become Uninhabitable.

**Minor:** Your Homeworld star is unstable and has been for a long time. Stellar instability usually doesn't occur suddenly, rather, it is part of a process, so stellar instability is part of the long evolution and history of your species and probably contributed to your species evolution. Thus, your Homeworld star was dying even as it was giving birth to life.

- ✓ Note: This Fundamental Reality is only available to positions who chose the Homeworld or Lost Colony Primal State.
- ✓ Note: It's a fascinating question what effect stellar instability would have on evolution of a sapient species on their native world. What exactly is stellar instability anyway? It's a fascinating question, but the suggestion here is that it has something to do with brightness and temperature variation of a rapidly cooling, shrinking sun. It does not imply that the sun will go nova, as that will take tens of millions or billions of years, beyond the scope of the game.
- ✓ For a fascinating look at this subject, look up Snowball Earth theories that try to explain the "Great Unconformity" in the Grand Canyon and other places around the Earth where a billion years of rock strata seems to be missing.<sup>1</sup> Some theories posit glaciation to the equator as a result of dimming of the sun.
- ✓ Note: For game purposes, the Concierge will need to determine the game effect of whatever is happening with the star. It could be a schedule of loss of Habitability Class and Maximum Habitability (in the vein of modern cl-fi classics such as *Snowpiercer* (2013) and *The Day After Tomorrow* (2004)) with some small possibility of temporary reversals. It could be Interventions affecting Orbital Platforms, ships at the Homeworld, or population and industry on the ground. On the other side, of course, are the imperatives to legitimacy that form the operational liability of this Fundamental Reality on the position taking it.

Possible Effects:

- Homeworld Habitability
- Colonization
- Aspects
- Order
- Cosmic Entropy

---

<sup>1</sup> Snowball Earth ideas might have been the inspiration for Arthur C. Clarke's 1949 short story, "History Lesson."

# Universal Predator

**Major:** It is a cold comfort that no one would want to invade your Homeworld! Your people have awakened a universal predator on your Homeworld that only preys on sapient populations and Stardrive was invented to escape. Thus far, this predator has not been defeated by technology. It was originally thought the predators would not be able to follow your people into space, but the predators seem to appear wherever your people go.

**Minor:** It is a cold comfort that no one would want to invade your homeworld! Your people have awakened a universal predator on your homeworld that only preys on sapient populations and Stardrive was invented to escape. Thus far, this predator has not been defeated by technology. The predators cannot follow your people into space, but the predators seem poised to overwhelm the Homeworld soon.

- ✓ Note: This Fundamental Reality may only be taken by Homeworld, and Lost Colony positions.
- ✓ Note: The Major form of this Fundamental Reality acts somewhat like an Uber Alle, if the Concierge allows other positions Native Populations to also be affected by the spread of the predators. The position taking this Fundamental Reality in Major Form may be making the choice to impose another Uber Alle on the game.
- ✓ Note: It should be assumed that the predators will not be defeated by technology for most of the game, or perhaps, never. Their exact nature is not detailed here, but seem paranormal. There are non-technical ways of improving survival odds, but these require considerable diligence and sustained effort on each colony (e.g., security forces, police, fortifications, paranoia, medicine).
- ✓ Note: The effect of the predators is progressive, the more population they consume, the more of them there are (that is, they reproduce); Census Power activations on extremely infected colonies may result in negative population growth. In less infected places, population growth is slowed. Assume the normal effects of food supply and demand, the predators would die off if all their prey are removed or as the food supply diminishes.
- ✓ Note: This is an exception to the assumption that the Major Races are or were the top of the food chain on their native world. In fact, the predators thrive on sapient, technologically advanced, industrialized populations as prey, but do not otherwise affect the biosphere: They are never found dead and do not emit waste products, nor do they seem to breathe the air and have little energy effect.

Possible Effects:

- Census
- Taxation
- Colonization/Balkanization
- Diplomacy

# The Why Files

**Major:** For the past couple of generations, your Homeworld (or Capital or major colony) has been under unconventional low intensity subversive attack from an unknown source and for an unknown reason and purpose. For some time, the population was unaware of these attacks or attempts, and the secret was kept closely by the governments. Now, such attacks might be considered an ‘open secret’ and have grown in scale and destructive intent. Still, there is no invasion, nothing to fight, no enemies to kill in battles. And the government still has no clue how the attacks are originating.

**Minor:** For the past couple of generations, your Homeworld (or Capital or major colony) has been under unconventional low intensity subversive attack from an unknown source and for an unknown reason and purpose. For some time, the population was unaware of these attacks or attempts, and the secret was kept closely by the governments. Now, such attacks might be considered an ‘open secret’ and have grown in scale and destructive intent. Still, there is no invasion, nothing to fight, no enemies to kill in battles. And the government still has no clue how the attacks are originating.

- ✓ Note: This Fundamental Reality is available to positions that begin the game within the Galactic Space, that is, the Homeworld, Lost Colony and Outposter Primal States.
- ✓ Note: The Concierge will control the attacking forces. Whatever their methods are, where they get knowledge and support, and purpose or lack of purpose, is part of the game story. It is implied that the effect is limited to a major starting colony (Homeworlds are considered colonies in GGDM), but the Concierge can decide whether or not the attacks migrate to other colonies.
- ✓ Note: The Major and Minor Forms of this Fundamental Reality are the same, the difference is the frequency and intensity of the attacks.

Possible Effects:

- Counter-Operations on Capital, Homeworld, or major colony
- Security and Police Proficiencies

# Winkle

**Major:** At regular intervals in the Homeworld’s orbit when the sun’s glare faded, your species collectively and communally, retreated to shelters for a long, deep hibernation period that may last the equivalent of years on other species’ Homeworlds. While technology may have made this physically unnecessary, it is still culturally and mentally necessary (like sleep for humans) and a very important part of the communal culture. History, lifetimes, and recollection of times are measured by Winkle periods.

**Minor:** At regular intervals in the Homeworld’s orbit when the sun’s glare brightened the sky to periwinkle, the child bearing of your species entered a collective torpor. The torpor was a vital part of gestation during which the child-bearers could not be disturbed or moved and must be protected by the rest of the community. This process has not been disturbed by technology, for to change how we are born is to change who we are; thus it follows your species to the stars as important part of your collective view and identity.

- ✓ Note: In short, entire populations of your species go to sleep for extended periods of time. The position can either go with it or fight it, the implication is that it probably can’t be changed (we have not yet defeated sleep, but there is plentiful scientific investigation and science-fiction imagination about the problem). The participants must decide whether the entire species is affected at once, regardless of location, or whether it happens on different colonies at different times. In the former, the position might be required to voluntarily periodically miss a Regular Turn and not respond to Combat Actions or News Events (like arguing with someone who is passed out) during that period (which could be fatally inconvenient). In the latter, it may mean no Power Activations can affect randomly determined<sup>1</sup> specific colonies (who also would not act as Supporting Colonies, no second checks) for a Regular Turn or two at a time (like a sleeping holiday) – which may or may not be important depending on circumstances and events.

Possible Effects:

- Combat
- Power Activations at Colonies
- Regular Turns missed
- May be unaffected by adverse News Events during a Winkle

---

<sup>1</sup> Hologram Universe: “The halting problem is an example: there is no algorithm that correctly determines whether arbitrary programs eventually halt when run.” – from Wikipedia article, “Undecidable problem,” January 27, 2019.

# Aggressive Greenery

---

*“You must return here with a shrubbery or else you will never pass through this wood alive!”*

– Head of the Knights of Ni, “Monty Python and the Holy Grail” (1975)

---

Your Homeworld and all colonies and places where your people live is covered by an aggressive, fast growing, lush, and possibly intelligent greenery. Your population has a special and important relationship with this greenery from the Homeworld; it takes root in any place where they live regardless of whether it is intentionally introduced. The greenery is also very hardy and adaptable to alien soil. Unfortunately, other species don't find the greenery so attractive; any planet colonized by your Native Population Type (even if they have all died or departed) is reduced in Habitability Class and possibly Maximum Habitability for most alien species.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The ‘advantage’ of this Fundamental Reality is basically free terraforming (intentional damage to the preexisting biosphere of the planet, if any), very likely to the detriment of other Major Races in the game. This does not promise that Habitability Class and Maximum Habitability will be improved for your species, but that it will be reduced at that location for others.

Possible Effects:

- Habitability Class and Maximum Habitability for aliens
- Ground Combat
- Balkanized Planets could be a problem
- It's just a harmless plant, right?

# Artifact

---

*“Lunar expedition discovers ‘artifact’ ... U.S. technicians attacked by Russian force.... scientists confirm ‘artifact’ is ‘alien’ ... laser armed Rovers fight for control... film at 11:00.”*

*– back of box for Metagaming’s “Artifact” (1980)*

---

An artifact of alien origin was found on one of your moons by an expeditionary team. The team had to fight a group of aliens (not related to any species in this game) to get it. No one knows what it is for or what it does or who the aliens were. It’s a mystery. But it seemed important to them.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: You get a goodie, a gift to unwrap or Pandora’s Box to open. This artifact will be located in the beginning of the game on the Homeworld or Lost Colony, or largest colony, or on a ship if no colony is available. It will be dropped on the first colony. It can be moved, captured, and used by others if they can figure it out.
- ✓ Note: The details of the artifact will be determined by the Concierge. It might just be some child’s toy and the parents didn’t want you taking their kid’s toy because it’s going to be a long ride back to the Betelgeuse if the little (brat) prince doesn’t have his favorite toy!

Possible Effects:

- A mystery to solve, a story hook
- Capture and use by other players
- Alien technology from outside the Galactic Space
- Unknown effects, might do nothing at all
- The previous owners might want it back and come looking for it

# Baby Boomers

---

*“The 1,700-ton Sinpo class (also called the Gorae) ... is the smallest ballistic missile submarine today and, aside from China’s Type 032 test boat, the only one that is diesel-powered. Only one submarine has been observed in service. The boat features one launch silo in the conning tower. The KN-11 ballistic missiles is estimated to have a range between 745 and 1,550 miles.”*

– Dimitrios Mitsopoulos, “All the Nuclear Missile Submarines in the World in One Chart,” *Popular Mechanics*, June 8, 2018

---

There is a well-documented relationship between combat and reproduction in your species. Birth rates and population growth following violent conflict spike, regardless of the ability of the resources or environment to support it. Which then leads to more conflict between groups... It is thought to be an evolutionary adaptation that helped your ancestors survive, to replace losses. Very few think there is anything wrong with it and to change it would be to change who you are as a species.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The Baby Boom effect can be strongly localized to the point of conflict or generalized to all colonies. The Concierge will determine the level of overall and how widespread is the stress your native populations feel after conflict. To gain an advantage from this Fundamental Reality, the position must commit to regular Combats – actual combats, not just Combat Power activations – or expect to be attacked frequently if they are pacifists in a hostile Galactic Space.

Possible Effects:

- Combat
- Census, baby!

# Cliché

---

*“... When the books have gone and the histories have been burned every world will look back to learn what went before. And they will turn to us, and we will be there...keepers of the past, the present and the future.”*

– Vindrizi parasite speaking through its human host, Babylon 5, “Exogenesis” (1996)

---

Unknown to the rest of the universe and perhaps, to the majority of your own native host population, your real native population type is a species of ultimately adaptable, stealthy, intelligent parasites, who live inside the ‘host species’ that the aliens think is your actual Native Population Type upon First Contact. To insure survival, the parasite population is always less than the host population. Whether or not the parasite population is native to the host population’s Homeworld or an invader or hitcher, and when they arrived, is unknown to the few hosts who know of their existence.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: **Every** space-opera setting has a hitchhiking parasite form...sometimes sapient.
- ✓ Note: The potential for Colony Conversion and Naturalization, and Special Operations by controlling intelligent universal parasites is well-developed science-fiction trope (every other television sci-fi show has an intelligent parasite, even if just for a throw-away episode). The Concierge will determine the characteristics of your species in that regard and regulate use.
- ✓ Note: To gain an advantage from this Fundamental Reality, the position probably must either engage in or be the victim of colony conquest; take-over in Balkanization is also possible. And it must be kept secret for as long as possible.

Possible Effects:

- Conversion
- Easy Naturalization
- Unguarded Converted Colonies may not revert automatically
- Special Operations

# Contact

---

*“If the government is covering up knowledge of aliens, they are doing a better job of it than they do at anything else.” – Stephen Hawking*

---

First Contact with aliens occurred a significant time before the start of the game. It was very strange. The Contact happened only once and has been enshrined in religion and literature for generations. The aliens have not returned and have not communicated further. It is thus that the concept of stardrive and existence of intelligent, technologically advanced alien life was not a theory or fiction in pre-game civilization, but was instead, an accepted fact and it was only a matter of time before your species got there. The discovery of stardrive was not a surprise and caused minimal disruption; First Contact with aliens was doctrinalized and practiced.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The First Contact did not occur with any position in the game.
- ✓ Note: To gain an advantage from this Fundamental Reality beyond First Contact situation will require aggressive creativity by the position players. Possible other advantages may include trade at **alien colonies**, understanding **alien biology** and culture, and perhaps consideration in Naturalization attempts.

Possible Effects:

- Superior First Contact Results
- Possible advantages in Reverse Engineering, Xeno-culture and Xeno-biology

# Crowding

*“Phonebooth stuffing was a fad that involved a number of people consecutively entering a phonebooth, until the point where the phonebooth would accommodate no more, or there were no more individuals available.” – from Wikipedia article, “Phonebooth Stuffing”*

In most places, two objects cannot occupy the same space at the same time. For most species in the universe, this is axiomatic. I think you can see where this is going... your species is notable for being able to greatly exceed the Maximum Habitability of any colony planet or colony ship. The ability to co-occupy space by co-mingling bodies (called Crowding) only becomes apparent when crowds gather and/or habitability crowding occurs; and only affects living biological population factors of your Native Population Type (that is, industry installations etc. do not have the ability to co-occupy space). In fact, the ancient survival and battlefield tactics of your ancestors was a struggle for massing based on Crowding principles (better than an overlapping shield wall!).

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The Concierge will have to determine the percentage by which your Native Population can exceed Maximum Habitability. And any effects such as resource depletion and pollution. Maximum Habitability probably should not be doubled.
- ✓ Note: How many college kids can fit into a phone booth? And why does Superman need his own phone booth when there are so many college kids without one? It is not recommended that Crowding be available in Colony Ships due to the issue of limited consumable resources.
- ✓ Note: Some think that your species ancestors must have been Truly Alien. This Fundamental Reality does not make this species a Lost Colony of any Truly Alien position in the game.

Possible Effects:

- Exceed Maximum Habitability
- Higher losses from Orbital Bombardment
- Possible advantage in Ground Combat?

# Dereliction

*“The Syria Planum Incident covers the events of March 2253 which begin with the excavation of a Shadow Vessel on Syria Planum by IPX...” – from Babylon 5 Wiki article, “Syria Planum Incident”*

An ancient derelict alien ship was found on your Homeworld or one of your starting colonies. The technology of the ship was nearly beyond anything that your pre-Stardrive culture could have imagined. Vast sums were spent just to make this ship operational and able to be controlled in flight (in a rudimentary way) by your scientists and technicians. While the ship excited the popular imagination, and offered a potential shortcut to starflight, this expenditure was not without critics or resistance (or conspiracy theorists, there is always a conspiracy theory), who argued that the project was spending their grandchildren’s inheritance.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This Fundamental Reality is only available to Homeworld, Lost Colonist or Outposter Primal States.
- ✓ Note: Taking this Fundamental Reality in any form does not grant the Stardrive Existential Patent which must still be obtained through regular means.
- ✓ Note: With this Fundamental Reality, you get an alien ship of unknown origin to start the game. This ship does not belong to any of the positions in the game, which immediately suggest that there are (or were) intelligent, technologically advanced aliens that are not any of the current positions in the game. The description also implies (in a Thesis Statement-like way) that there was dissent, conspiracies, disinformation, and possibly violent resistance to the project before the game.
- ✓ Note: What the ship is or does, or how well it can be operated is determined by the Concierge.

## Potential Effects:

- Get an alien ship to start the game
- Start with a possibly violent resistance movement
- Spend your grandchildren’s inheritance for it!

# Gemini Dream

---

*“There’s a place a Gemini dream, There’s no escaping from the love we have seen.” – Moody Blues, “Gemini Dream” (1981)*

---

Romulus and Remus. Two species evolved on different Homeworlds in the same system, from a common ancestor. These species appear outwardly as two distinctly different Native Population Types, but share the same Fundamental Realities, Public Space, and Government Titles. However, they alternate Regular Turns during the game.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This Fundamental Reality is only available to Homeworld positions.
- ✓ Note: This Fundamental Reality creates two Homeworlds in the same Homesystem. The position must meet the Homeworld Primal State requirements for both Homeworlds prior to the start of the game.
- ✓ Note: You get to play two culturally closely related, but biologically distinct positions, with two Native Population Types, alternating Regular Turns (e.g., for Census Power Activations, etc.), but with one government, Public Space, and sharing Fundamental Realities, Era Matrix.

Possible Effects:

- Alien Confusion
- Self-Balkanization
- Two Optimal Habitability Class Homeworlds in one system
- Potential for crafty deviousness in relation to other positions

# Holodead

*“Pepper’s ghost is an illusion technique used in the theatre, amusement parks, museums, television, and concerts. It is named after the English scientist John Henry Pepper (1821–1900) who popularized the effect in a demonstration in 1862. Examples of the illusion are the Girl-to-Gorilla trick found in old carnival sideshows and the appearance of ‘Ghosts’ at the Haunted Mansion and the ‘Blue Fairy’ in Pinocchio’s Daring Journey at the Disneyland park in California. ... The technique was used by Digital Domain for the appearance of Tupac Shakur onstage with Dr. Dre and Snoop Dogg at the 2012 Coachella Music and Arts Festival and Michael Jackson at the 2014 Billboard Music Awards.” – from Wikipedia article, “Pepper’s Ghost”*

Your species has always had a ‘ghost problem’; it seems that dead isn’t really quite dead on your Homeworld (or Lost Colony). Reports of ‘ghosts’ of your species dear departed began in ancient times and slowly increased in substantiality and frequency over time, and the level and quality of interaction with the living seemed to increase as well.

Ghosts showed an apparent keen interest in the development of video, 3D and virtual reality technologies, until an event occurred where a ghost merged with and ‘took over’ an experimental 3D holographic projection and was able to then move independently of the projector. Afterward, the ghost seemed to have a permanent holo-body and the process was then refined and repeated until the insubstantial Holodead became a ubiquitous sight on your Homeworld, interacting regularly with the living. The Holodead process only works on the Homeworld as no ghosts of your species departed have been observed off-world and even the Holodead don’t last forever; they have been observed fading or dissipating over time until they are finally gone for good.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: Your Homeworld is like a thin spot between dimensions...
- ✓ Note: Imagine the effects of 1) being able to converse with ghosts in the real time of our world (imagine what we might learn, imagine the effects on crime, science, technology, history) and 2) knowing that when you die, you will continue as a holodead (this would make some sublimely happy, others would be horrified, but at least multi-life term convicts would serve out their full sentences!).
- ✓ Note: The practical effect of the Holodead might be an increase in the Maximum Habitability of the Homeworld (and resource value), depending on the physical characteristics of the holodead (e.g., non-exclusive space, do they need to live somewhere?). They may also ‘grow’ with the Census (i.e. the newly departed).

Possible Effects:

- Creeping other positions out if they ever see your homeworld
- Homeworld Maximum Habitability
- Homeworld Taxation
- Colonization (who wants to leave? Those who are horrified!)

# Hostage Situation

*“The powerful, if they carry oppression beyond a certain point, necessarily end by making themselves adored by their slaves. For the thought of being under absolute compulsion, the plaything of another, is unendurable for a human being. Hence, if every way of escape from the constraint is taken from him, there is nothing left for him to do but to persuade himself that he does the things he is forced to do willingly, that is to say, to substitute devotion for obedience. ... It is by this twist that slavery debases the soul: this devotion is in fact based on a lie, since the reasons for it cannot bear investigation. ... Moreover, the master is deceived too by the fallacy of devotion.”*

– Simone Weil, Gravity and Grace (1972), pp. 142-143

Your position starts the game with a hostage situation of cosmic proportions. An extra-dimensional race plucked the population of entire cities from your planet and are holding them in a wormhole whose opening is near the planet(s) where the taking occurred. They will return your population in exchange for resources (RPs) sent into the wormhole. You do not have the technology to enter the wormhole and rescue on that scale is impossible. Further, the wormhole is becoming more unstable by the turn, and may eventually close, taking any unredeemed population *before* the fifth turn of the game.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This Fundamental Reality is only available to Homeworld and Lost Colonist Positions.
- ✓ Note: Effectively, this Fundamental Reality allows a position to ‘buy’ population after the beginning of the game, for a limited time. If you are not going to pay the ransom, there is no point in taking the Fundamental Reality.
- ✓ Note: The Fundamental Reality impliedly introduces a wormhole-controlling, immoral, immensely powerful aliens that may appear elsewhere in the Galactic Space during the game. Why did they need the resources? Will they come back again? Why couldn’t they just take the resources instead of millions of people?
- ✓ Note: The population being held hostage counts against the planet’s Maximum Habitability and also as population for purposes of satisfying the Primal State. Players do not have to purchase this population with IPs before the beginning of the game, but will have to redeem them later for RPs at a price set by the Concierge. This may work to some advantage if the position can get technologies and industry with IPs that would have been spent on pre-game population.

Possible Effects:

- Culture shock
- Helplessness and powerlessness among the population, fear of a recurrence of the same events, failure of supra-legitimacy
- RPs drain early in the game
- A mystery for the game, a story hook

# Late Bloomer

*“Hence the classic late bloomer is Grandma Moses whose painting career began in her seventies after abandoning a career in embroidery because of arthritis.” – from Wikipedia article, “Late Bloomer”*

The pre-Stardrive history of your species is long; longer than any other species. Long after your people should have been starbound, they remained planetbound, obsessed with the problems of their own world. Now that we’ve finally got it straightened out, we can move out to the stars, together. That’s the official line. Perhaps as a result of having learned lessons on the ground, your position begins the game with extra Public Space as if this Fundamental Reality was a Major Fundamental Reality.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This Fundamental Reality assumes that being a ‘late bloomer’ is not considered a detriment.
- ✓ Note: The amount of extra Public Spaces received depends on what is normal for a Major Fundamental Reality in that particular game – it may vary from game to game depending in the Concierge and the type of game desired.
- ✓ Note: Why would a position take this instead of a Major Fundamental Reality where it would also receive 100 Inheritance Points? It probably depends on the luck of the draw, the Fundamental Realities they have to choose from, maybe the players don’t like the available choices, maybe they want to avoid Major Fundamental Realities if possible. Or maybe there aren’t any other Majors available? This could also sit well beside a Type 5 ‘Double Major’ Fundamental Reality.

Possible Effects:

- Public Spaces – Max Headroom, man!

# Libraries

---

*“We have already seen the Ptolemies’ efforts in Alexandria, but others of the period included Pella, Antioch, and at Pergamon, created by the Attalids (282-133 BCE), said to have had 200,000 scrolls.”*

– Mark Cartwright, “Libraries of the Ancient World,” Ancient History Encyclopedia, July 23, 2019

---

The vast and nearly complete contents of several ancient libraries long thought completely lost in antiquity have been discovered in a most unusual and unexpected place, near perfectly preserved inside a carefully protected area. It will take considerable time and effort to fully examine and understand this cultural historical treasure trove of lost works and knowledge and the effect will certainly change your species perception of its own culture and history. Who knows what you might find? Some people might not like it.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This Fundamental Reality is open to all Primal States; imagine how odd it would be to find the lost contents of ancient Earth libraries perfectly preserved in another starsystem? Like they knew we were going to be there. This would be the case with the Outposter and Invader Primal States taking this Fundamental Reality.
- ✓ Note: Intrigued? This Fundamental Reality is very open to creative development and interpretation. Participants will have to work for it in the game to make it into any concrete effect or part of the story. It is implied that by taking this Primal State, the position intends to do that, otherwise, there is little or no benefit.
- ✓ Note: Initially, it’s a secret, but may be discovered by aliens who may be very interested as well. It is not certain from the description whether this discovery is public knowledge, an ‘open secret’ or well known on your Homeworld or colonies.

Possible Effects:

- Special Mission College
- Culture
- Proficiencies
- Counter-Operations
- Mystery Prize?

# Looking in the Mirror

---

*“Suite Madame Blue, gaze in your looking glass  
You’re not a child anymore  
Suite Madame Blue, the future is all but past...”*  
– Styx, “Suite Madame Blue” (1975)

---

One of the central themes of your culture coming into the 1<sup>st</sup> Era is looking to see whom you can become. A fierce drive toward universal (and legitimate) higher education has produced a culture of very educated individuals (and many Ph.D. frauds) such that your species begins the game with Education and Intelligencia Proficiencies and an Education College on one of your starting worlds.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: Trading Inheritance Points for starting Proficiencies and a College. The participants will need to work out the College Endowment and provide RPs within the first two Regular Turns. There are some weights and balances to consider and the Concierge will need to judge what is appropriate compensation. The position players will also need to determine how to best gain from this Fundamental Reality choice.

Possible Effects:

- Proficiencies
- Colleges
- Enlightenment
- Legitimacy
- Endowment

# Lost World

---

*“There is a possibility that legends regarding Kuhikugu may have influenced the British explorer Lieutenant Colonel Percy Fawcett to go on his ill-fated last expedition in 1925, looking through the Amazon rainforest for what he called ‘City Z.’”*

– from Wikipedia article, “Kuhikugu”

---

Extant records hint at a world related to your Homeworld and its approximate location in the *starting Galactic Space*. Beyond that, the myths and legends are a jumbled fantasy, likely containing few useful facts.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This does not relate to or create a Lost Colony Primal State. That is, it does not make any other position in the game related to this position as a Lost Colony and it does not make this position a Lost Colony of any other position, independent of choosing the Lost Colony Primal State.
- ✓ Note: The Concierge will determine any details regarding this alleged world. It may or may not be inhabited, it may or may not be another Homeworld. This is a story hook and the story hook works best if the position actually searches for it.

Possible Effects:

- Exploration
- Maybe a good place to colonize or maybe someone else got there first?
- Story hook

# Mirror Race

*“Minor Human Races are distinguished from major human races by the assertion that minor human races didn’t discover jump drive on their own, while major races have. ... A Minor Human Race is a human population whose ancestors were believed to have been planted on a world of their own ... and who developed separately from other human-inhabited worlds until it was eventually contacted by a star-faring society.”*

– from Traveller RPG Wiki article, “Minor Human Races”

A minor race is discovered on one of the planets in the system where your fleets enter the Galactic Space. They are your people, they are in all respects, population factors of your Native Population Type. Yet there is something different about them, something slightly disturbing. And they don’t know how or when they arrived there; it seems they have been there for many generations. They have a well-established planetary civilization, a good population base, and complex pre-stardrive civilization. An image of your civilization before the 1<sup>st</sup> Era, before the Exodus. And your arrival ruins it for them.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This Fundamental Reality is only available to Expedition Leader, Nomadic Warfleet and Truly Alien Primal States.
- ✓ Note: The Concierge will determine all information regarding the sovereign Minor Race in question; the Concierge represents all Minor Races in the game. How will they react?

Possible Effects:

- Sub-species of your Native Population Type
- Integration of minor race
- What makes them different? How did they get there?
- One planet in starting system is occupied by Minor Race

# Old Rusty

---

*“In a typical television commercial of 1979, the animated character rode on the roof of a car while saying, ‘Hi, I’m Rusty Jones, and you know what? I’m the one new car option you can buy that’ll appreciate in value. That’s right, cause I’ll stay with your new car as long as you own it. Winter and summer, day ‘n night, not even a coffee break. Workin’ to save your car from rust. And a rust-free car is worth more. So at new car time, insist on Rusty Jones rustproofing.’”*

– from Wikipedia article, “Rusty Jones”

---

Legend says that Old Rusty was first assembled in orbit as an International Space Station, then new modules were added later, then propulsion and control, and it became an enormous patchwork emergency cargo boat to haul supplies to the new in-system colonies. Many events have happened, the computer has gone insane, and a few have died serving on the storied Old Rusty cargo boat. Some say ghosts roam the corridors; some cargo tends to get lost from time to time as well. Someday it will be permanently docked at the shipyard and used as a museum or tourist attraction if the ghosts or insane computer doesn’t scare away the paying customers!

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This position starts the game with a ‘cargo boat’ in one of their starting systems. A cargo boat is a Cargo Ship without stardrive. Probably, a stardrive cannot be added to the current vessel; it would be cheaper to build a new Cargo Ship than to modify the ramshackle Cargo Boat. But it serves for Carting RPs between colonies in system.
- ✓ Note: And what about the bonus ghosts and the insane computer? The Concierge will determine the RP capacity of the ‘cargo boat’ and any other necessary details.

Possible Effects:

- ‘Free’ Cargo Boat
- Ability to transport RPs between in-system colonies early in the game

# Planet Mother

---

*“Mother please forgive them, For they know not what they do.”*

– Ozzy Osbourne, “Revelation (Mother Earth)” (1980)

---

There is a special sacred individual of your species who is thought to be nearly immortal. This person, called the Planet Mother, has been alive for a significant part of your species history. The Planet Mother is not part of any Government, it has lived to see the passage of many thousands of Governments. Rather, the Planet Mother is a living symbol of the life of your species, prosperity, and of good works and good fortune. Wherever the Planet Mother resides, people are empowered and unusual (usually good) events sometimes happen.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The Planet Mother will begin on the Homeworld, Lost Colony or an Outpost Colony if those Primal States are chosen. For all other Primal States, the Planet Mother begins on a ship. The Planet Mother is initially unknown to all other positions, but may be discovered, the Planet Mother proceeds with pomp and ceremony, and it is difficult to hide her presence from the media.
- ✓ Note: The Planet Mother can be killed or captured. The Planet Mother can travel to any place where your people reside, via normal starship movement. There is no cost for the Planet Mother to move between a planet and ship. The death of the Planet Mother would be culturally devastating.
- ✓ Note: The Concierge will determine from time to time the boon granted by the Planet Mother’s presence or the effect of her demise (a cataclysmic failure of supra-legitimacy). The Planet Mother must be protected at all costs.

Possible Effects:

- Acts and Scenes
- Involuntary Power Activations
- Proficiencies
- Aspects
- College Endowment
- Research Pieces

# Prude

---

*“Her name is derived from Mrs. Grundy, a name that has been used to refer to a prudish woman since the early nineteenth century.”*

– from Wikipedia article, “Miss Grundy”

---

Miss Grundy would consider your people a race of prudes! Historians of future ages will remember your species as being so embarrassed by bodily functions that they learned how not to breathe. The first thing your species wants to know upon First Contact is whether or not the aliens wear suitable clothing and conceal their bodily functions. It is thus that whenever the Census Power is activated, this position is not required to (and may not choose to) issue a News Event or any other form of interpretation.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The Power Activation for each News Event is not published on the forums to avoid giving away unnecessary intelligence. However, smart players may notice the number of News Events published when each position’s Regular Turn is run; not being required to publish a News Event when the Census Power is activated can be deceptive (along with other Power Activations that use non-News Event Interpretations), card-counters may think this position is hoarding Acts and Scenes or has less Government Titles. How much effect this has throughout the game depends on how often the Census Power is activated. But there are cons to frequent Census Power activations – Maximum Habitability, loss of Proficiencies.

Possible Effects:

- Census
- News Events
- Card Counting

# Refugee Crisis

*“Meanwhile, the remnants of the Ostrogoths reached the Danube, and appealed for refuge in the empire. When this was refused, they crossed the river anyway, since the Romans were too busy trying to look after the Visigoths – and their women – to pay much attention....”*

–R. Ernest Dupuy and Trevor N. Dupuy, The Encyclopedia of Military History, 2<sup>nd</sup> Rev. Ed. (1986), p. 156

Congratulations, you just inherited a refugee crisis. Immediately prior to the beginning of the game, Colony Transports loaded with population factors of your Native Population Type arrived at one of your starting colonies or Homeworld. Medical examination confirms that they are your people, cultural and social observation confirms that they are culturally and linguistically related but show cultural and language drift. The occupants don't know where they came from, or why they left, or how they arrived in the Galactic Space. The colony ships are in emergency condition and will need to be Unloaded. Yet, there are doubts about these people, some might be undesirable.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: Can you do better than the Roman Empire did at the Danube River in 376 A.D.? Can you do better than the EU today? This Fundamental Reality necessitates Unloading the refugee population on the first two Regular Turns or they will die. If the population dies, what is the point in taking this Fundamental Reality?
- ✓ Note: This Fundamental Reality is only available to positions that begin in the Galactic Space, that is, Homeworld, Lost Colony and Outposter Primal States. The refugee population cannot be used to satisfy population requirements of the Primal State before the game.
- ✓ Note: A position that begins with this Fundamental Reality must begin the game with Colony Transport and Stardrive existential technologies.
- ✓ Note: This Fundamental Reality is a story hook for the players and Concierge in the early game. The Concierge will determine the number of refugee population but it should not cause the receiving world to exceed Maximum Habitability. Unloading the refugee population is not a Disruption Event (a one-time special dispensation form higher up) and the Colony Transports must be Scrapped.

Possible Effects:

- Maximum Habitability
- Extra Population Growth

# Second World

---

*“There has always been, for me, this other world, this second world to fall back on – a more reliable world in so far as it does not hide that its premise is illusion.” – Graham Swift*

---

It was discovered in the Space Age, that a second world in your Homesystem bore life, in particular, a species of intelligent sapient technologically capable life. The other species has not achieved Stardrive and is in fact, still technologically primitive by your standards; they became a Minor Race the moment your people invented Stardrive. What will you do? No direct contact has yet been made with the others. They do not seem to be aware of you yet.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The Concierge will create and provide the details of the Minor Race as necessary. This Minor Race is not in any way related to your Native Population Type.
- ✓ Note: When choosing this Fundamental Reality, the position players will determine that having a minor race in the Homesystem is beneficial. If that determination cannot be made, then there is no point in taking this Fundamental Reality unless just for the story potential.

Possible Effects:

- First Contact
- Minor Race
- One planet in the Home System is occupied by a Minor Race, not available for *pre-game* colonization

# Space Hulk

*“Von Braun described a majestic, 250-foot-wide wheel that would orbit 1,075 miles above Earth and rotate to provide artificial gravity. Von Braun’s ideas and an artist concept by Chesley Bonestell inspired the station in the movie 2001: A Space Odyssey. In von Braun’s grand scheme, a station would have been built before human voyages to the moon – a plan he outlined in a subsequent Collier’s article. He described the station as ‘the ever-watchful guardian of the peace’ and continued on to say, ‘the station will provide the springboard for one of the greatest scientific advances in history: the lunar journey men have dreamed of for centuries.’ His station of the 1950s resembled a combination fortress and research lab capable of housing eighty men. He and other experts featured in Collier’s predicted the station could be built by 1967 for a cost of \$4 billion (in 1952 dollars) and called it ‘the next long step in space,’ to be followed by lunar missions by 1977.”*

– Tracy McMahan, “From Dream to Reality: Marshall Space Flight Center’ Role in Developing Space Stations,” from nasa.gov, undated article

Got Shipyard? Check!

An ancient, remarkably well-preserved and still functioning Orbital Shipyard has been located in your starting system. And look, nobody’s home! And they left the keys in the door.

Now we just have to add industry and population.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: The Concierge will randomly determine the location of the Shipyard at a planet in the starting system. It is not required to be at a world that begins colonized or a Homeworld or at a planet that is desirable to colonize. However, the location where it is will likely begin the game colonized so that it can be used. For game purposes, it is a normal Orbital Shipyard.
- ✓ Note: This Fundamental Reality is available to any Primal State. It counts as having an Orbital Shipyard Existential Patent if one is required by the Primal State chosen (this is a one-time exception to the normal rules).
- ✓ Note: The position is not required to have Orbital Shipyard, Stardrive or any Ship Existential Patents to take this Fundamental Reality. This Fundamental Reality does not allow a position to build another copy or any other Orbital Shipyards before the Orbital Shipyard Existential Patent is completed.

Possible Effects:

- ‘Free’ Orbital Shipyard at start of game
- Random location
- Hope the owners don’t come back and serve an eviction notice

# Spiral Stairs

---

*“I stand atop of spiral stairs  
An oracle confronts me there.”*

– Rush, “The Oracle” (1976)

---

Your species has precognition. The first historically verifiable episodes of precognition occurred in relation to the events leading to the discovery of Stardrive; however, possible signs of precognition occur throughout your recorded history. Precognition is not the same as prediction; precognition reveals ‘unpredictable’ events or events that cannot be predicted by mortal intelligence based on what is known at the time of the precognition. Precognition is a sort of ‘looking’ (without seeing), it is not merely a possible future, the precognitive event has in a sense, ‘already happened.’ Attempts to prevent an event that has already happened from happening have always failed or possibly led to disaster, as have many attempts to exploit precognitive knowledge. S

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: Twenty years ago, I witnessed a chain-reaction fender bender on the Smithfield Street Bridge. I could see the driver was talking on the phone and going too fast across the bridge (which has a hump), I could see he couldn’t stop in time, but there was nothing I could do except call 911 afterward. This is not a case of precognition; it is a case of prediction based on what I observed moments before the accident. Precognition would have required that I know, before reaching the bridge that an accident would happen.
- ✓ Note: For this to be an advantage, the position will need to develop specific concepts in-game. If not, it simply becomes latent.

Possible Effects:

- Anything
- A Walking Causality Violation
- Predestiny? vs. Freewill?

# The Undoo

*“...the story of our lives that we would write if we had our fingers on the Keyboard in the Sky...”*

– Norman Spinrad, Science Fiction in the Real World (1990)

Your race possesses a powerful, ancient, alien artifact called The Undo Butt-un, which is said to be able to reverse time once. It is held in secret, unknown to the majority of the population, lest someone try to use it for personal gain or to relieve personal pain.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This artifact will be located in the beginning of the game on the Home-world or Lost Colony, or largest colony, or on a ship if no colony is available. It will be dropped on the first colony. It can be moved, captured, and used by others. The original owners may come looking for it.
- ✓ Note: It’s just a story, it might not actually work. Or not quite work as expected. Whatever science is behind the alleged effects of this artifact might as well be magic.
- ✓ Note: When activated – if it actually works – the Undoo erases the previous Regular Turn Cycle, or Combat Round involving the position and resets all affected positions to where they were, *status quo ante*. The Undoo can only be used once and its use may attract unwanted attention from outside the Galactic Space... or not.
- ✓ Note: The Concierge must be able to restore the game data from backup files when the Undoo is used.

Possible Effects:

- Undo Previous Turn – is this the ultimate Enlightenment?
- Capture and use by other players
- Déjà vu and Yogi Barra
- Unknown side effects
- The previous owners might want it back and come looking for it

# UFO-ology

---

*“Now, there are all kinds of ideas that would be fun to believe in: mental telepathy, time travel, immortality, even Santa Claus. Now I know it’s no fun to go home and say: ‘Guess what happened! I was in a shopping center. There was this tremendously bright light, and I rushed outside, and it was an airplane.’ ... You know, for fifteen years I’ve been looking for these damn silly lights in the night sky. I’ve never found any. I’d like to, because I believe in life elsewhere.”*

– from *Close Encounters of the Third Kind* (1977)

---

Mysterious lights pass in the night sky. Your commanders have knowledge of three previously explored starsystems before entering the Galactic Space. Your fleet can only reach one. You must choose wisely.

- ✓ Note: Type 2 Fundamental Realities receive no Inheritance Points and have no Major or Minor Forms.
- ✓ Note: This Fundamental Reality is only available to Expedition Leader and Nomadic Warfleet Primal States.
- ✓ Note: The Concierge will provide exploration information on three random (but suitable) systems in the Galactic Space. Results are not guaranteed to please. Positions should choose quickly so as not to hold up the start of the game.<sup>1</sup>

Possible Effects:

- Pre-exploration of Galactic Space
- Superior initial colonization options

---

<sup>1</sup> “The Beings of Light are a mysterious race that travel using the Ship of Lights. Called angels by the primitive people on Kobol, these creatures helped them develop the civilization that would become the Twelve Colonies (War of the Gods).” – Battlestar Wiki Clone article, “Beings of Light”

✓ “In the comic series, the Seraphs are responsible for providing Galactica and her Fleet a ‘warp system’ that permits them to reach Earth.” – Battlestar Wiki clone article, “Seraphs”

# Axiom of Responsibility

*“In economics, moral hazard occurs when someone increases their exposure to risk when insured, especially when a person takes more risks because someone else bears the cost of those risks. A moral hazard may occur where the actions of one party may change to the detriment of another after a financial transaction has taken place.”*

– from Wikipedia article, “Moral hazard”<sup>1</sup>

**Major: Responsibility (social, civic, legal, moral and personal duty and accountability) can never be achieved while the intellectual development of adult members of society remains so widely variable. Failure of responsibility or irresponsible behavior<sup>2</sup> on all levels is toxic to civilization.**

**Minor:** Responsibility (social, civic, legal, moral and personal duty and accountability) can never be achieved while the intellectual development of adult members of society remains so widely variable. Failure of responsibility or irresponsible behavior on all levels is toxic to civilization.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same, the difference is in how seriously you take your responsibilities!
- ✓ Note: Responsibility is a form of boundary control, establishing bounds beyond which certain behaviors are unacceptable (e.g., ethics, duty, customs) and formal division of areas of responsibility (roles, departments, expectations, licensing, warrants, charters, contracts). Education has long been tied to responsibility, with criminal laws enforcing it externally.

Supra-Legitimacy *sine qua non*:<sup>3</sup>

- Maintenance to minimize the effects of entropy
- Custom Proficiency, Education Proficiency, Integrity Proficiency, Police Proficiency
- Enlightenment
- Education College and Institutes and education-based Writs

<sup>1</sup> The most fun can be had when spending someone else’s money.

<sup>2</sup> Blame sits at the intersection of Causation and Morality.

<sup>3</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Birthright

*“Although proud of their Arab heritage and ancestry, the Palestinians considered themselves to be descended not only from Arab conquerors of the seventh century but also from indigenous peoples who had lived in the country since time immemorial, including the ancient Hebrews and the Canaanites before them. Acutely aware of the distinctiveness of Palestinian history, the Palestinians saw themselves as the heirs of its rich associations.”*

– Walid Khalidi, *Before Their Diaspora: A Photographic History of the Palestinians, 1876–1948* (1984)

**Major:** Birthright, promised lands, manifest destiny, your species’ *a priori* claim to the stars. Your people have a right to expand and a right to the resources that are out there. What are we willing to do, how far will we go? Warrior princes, philosopher kings striding across the stars, or slavers and tramp traders struggling from one starport to the next? How will this cycle end?

**Minor:** Birthright, promised lands, manifest destiny, your species’ a-priori claim to the stars. Your people have a right to expand and a right to the resources that are out there. What are we willing to do, how far will we go? Warrior princes, philosopher kings striding across the stars, or slavers and tramp traders struggling from one starport to the next? How will this cycle end?

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of the Fundamental Reality are the same; the difference is the strength with which they will be applied.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Regular, endless expansion of the colonial footprint in Galactic Space
- Continuous expansion of the population on colonies
- Technological Development, especially in weapons
- Protection of sovereignty above all else

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Born Pregnant

*“A baby born in Hong Kong was pregnant with her own siblings at the time of her birth, according to a new report of the infant’s case. The baby’s condition, known as fetus-in-fetu, is incredibly rare, occurring in only about 1 in every 500,000 births. It’s not clear exactly why it happens.”*

– Tia Ghose, “Baby Born Pregnant with Her Own Twins,” LiveScience.com, February 10, 2015

**Major:** Thank goodness you invented computers; the Census never ends! Your population-obsessed species multiplies and matures very quickly; one of the main tasks appointed to the government is simply to determine how many of you there are at any given time. In the words of a famous alien doctor, your species is ‘born pregnant.’

The Census problem started when your ancestors gained enough intelligence to drive all native predators into extinction. Efforts to curb population growth have met with intense social resistance (even in the face of food shortages); further complicated by the fact that gestation is tied to most vital biological functions including digestion, circulation, and respiration, i.e. contraceptive attempts are ineffective unless they also cause death.

**Minor:** Thank goodness you invented computers; the Census never ends! Your population-obsessed species multiplies and matures very quickly; one of the main tasks appointed to the government is simply to determine how many of you there are at any given time. The Census problem started when your ancestors gained enough intelligence to drive all native predators into extinction. Efforts to curb population growth have met with intense social resistance (even in the face of food and space shortages) and failure.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Very large total Native Population in the Galactic Space, the vast majority of which is under the sovereignty of this position (the Concierge could set a measuring stick such as # Regular Turns processed times X population factors = total population target for that stage in the game).
- Available Maximum Habitability room on Friendly Colonies both locally and globally (can be expressed in percentages locally and multiples of the current population globally).
- Frequent Census Power Activations with no loss due to Maximum Habitability (the Concierge must define what is considered frequent, but doesn’t need to inform the position players – a little paranoia!).
- No excessively frequent taxations (RPs are needed to raise the young!).

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Broken Windows

*“Social psychologists and police officers tend to agree that if a window in a building is broken and is left unrepaired, all the rest of the windows will soon be broken.”*

– James Q. Wilson and George L. Kelling, “Broken Windows,” orig. pub in *The Atlantic*, 1982 (now available free online in PDF)

**Major:** Litter, vandalism, broken windows, lack of maintenance lead to the perception of public disorder. Public disorder leads to fear and more public disorder. A broken window not punished today leads to greater criminal acts later. Fear overwhelms, paralyzes, strains and tears at the fabric of society, incivility prevails. Trust is lost in the government who cannot pick up the litter.

**Minor:** Litter, vandalism, broken windows, lack of maintenance lead to the perception of public disorder. Public disorder leads to fear and more public disorder. A broken window not punished today leads to greater criminal acts later. Fear overwhelms, paralyzes, strains and tears at the fabric of society, incivility prevails. Trust is lost in the government who cannot pick up the litter.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: This is the ‘broken windows theory’ of policing blown up to a Fundamental Reality. Fundamental Realities are axiomatic; the population considers this not a theory, but an axiom. Order is an obsession.
- ✓ Note: The Major and Minor forms of the Fundamental Reality are the same; the difference is the strength with which they will be applied.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Constant police presence, maybe even a police state (i.e. Police Proficiencies, Police College, Police Institutes, Order Power-based Writs) is required to keep petty crime from becoming major crime.
- Expectation of a pristine civilization (i.e. Maintenance Shields), if the government can’t even pick up the litter...
- Deviant thought is mental litter of civilization that must be cleaned up by the government – e.g., frequent activation of the Culture Power for the purpose of Cohering and Special Operations Power activations for Counter-Operations, even if unnecessary – it is the appearance that is important, it’s a numbers measure, control public primary school education, political correctness, thought police).
- Stern, solid, stable (e.g., probable Unitary Structural Title, no disrupted Titles or changes in government, no Thesis Statements, etc.).

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Common Wealth of Systems

*“A commonwealth is a traditional English term for a political community founded for the common good. Historically it has sometimes been synonymous with ‘republic.’ The noun ‘commonwealth,’ meaning ‘public welfare general good or advantage,’ dates from the 15th century. Originally a phrase (... echoed in the modern synonym ‘public wealth’) it comes from the old meaning of ‘wealth,’ which is ‘well-being,’ and is itself a loose translation of the Latin *res publica* (republic). The term literally meant ‘common well-being.’ In the 17th century, the definition of ‘commonwealth’ expanded from its original sense of ‘public welfare’ or ‘commonweal’ to mean ‘a state in which the supreme power is vested in the people; a republic or democratic state.’” – from Wikipedia article, “Commonwealth”*

**Major:** An expectation exists that the taxes collected represent the wealth of the people and that the wealth of the people should be carefully managed and that a budget surplus is evidence of success. Therefore the Treasury is carefully watched and a surplus must be maintained for legitimacy.

**Minor:** An expectation exists that the taxes collected represent the wealth of the people and that the wealth of the people should be carefully managed and that a budget surplus is evidence of success. Therefore the Treasury is carefully watched and a surplus must be maintained for legitimacy.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of the Fundamental Reality are the same; the difference is the strength with which they will be applied.
- ✓ Note: This ‘spreadsheet position’ Fundamental Reality makes the Treasury somewhat more literal than it is in the regular game rules. The Concierge will have to establish a level of expectation, it will probably be a ratio of current treasury to taxation, but other measures are possible. RPs will still age and disappear, making this a tricky balancing act of legitimacy.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Minimum loss of RPs due to aging, expressed as a percentage of total theoretical taxation set by the Concierge.
- RPs in Treasury at the end of each Regular Turn equal to a percentage of total theoretical taxation set by the Concierge.
- Increase in RPs received on each activation of the Taxation Power expressed as a minimum percentage set by the Concierge (no exceptions are made here for Power Activation failures due to inactive Constructural Elements).
- Total theoretical industry output in RPs if taxed increases at least every two Regular Turns (minimum of 1 RP increase).

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Community Builders

*“Of course it is, for the simple reason that no one else would’ve ever built a place like this. Humans share one unique quality. They build communities. If the Narns or the Centauri or any other race built a station like this, it would be used only by their own people, but everywhere humans go, they create communities out of diverse and sometimes hostile populations. It is a great gift and a terrible responsibility, one that cannot be abandoned.”*

– Delenn, Babylon 5, “And Now for a Word” (1995)

**Major:** Your species builds communities, taking the lost, the diverse, integrating them into the whole, developing the community strength through diversity. This may seem to imply that there have been no wars in your history, but that is not the case. Much of community building, cross cultural exchange and development of administrative systems is owed to the empires of history and to waves of mass migration.

**Minor:** Your species builds communities, taking the lost, the diverse, integrating them into the whole, developing the community strength through diversity. This may seem to imply that there have been no wars in your history, but that is not the case. Much of community building, cross cultural exchange and development of administrative systems is owed to the empires of history and to waves of mass migration.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same. The difference is the strength with which they are applied.
- ✓ Note: Xeno-phobic Fundamental Realities and Government Titles would seem to be at odds with this Fundamental Reality. Contradiction is allowed in a position.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Population expects to quickly Naturalize aliens, who must easily see the purity of our great intent (regardless of the conquest) and that we have the best intentions.
- Destruction of Colony Ships – which is quite un-neighborly, even to prevent Landing – is abhorrent.
- We love alien commerce (bring your juke box money!), commerce builds communities, shrinks distance. MegaCorporation memberships may also be considered positive community building.
- Community building requires mixing it up, like socializing at a party, so everyone pile in the car (i.e. Colony Ships), it’s as big as a whale! And it’s about to set sail for the place out in the wild (Love Shack, Baby!) where we can Land or Unload. We are a people on the move, checking on our friends who moved onto different worlds (i.e. circulation of population helps build communities by connecting).

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Dirty Laundry

*“We got our dirty little fingers in everybody’s pie.”*

– Don Henley, “Dirty Laundry” (1982)

**Major:** Your civilization keeps a secret. If I told you what it was, it wouldn’t be a secret, unless I killed you right afterward.<sup>1</sup> This secret is of such a compelling nature that it cannot simply be forgotten by the passage of generations. Prior to the start of the game, those who knew this secret determined that aliens could never be allowed to learn this secret and that revelation to aliens would be catastrophic to your posterity. The danger of this secret may even justify mass murder and cause the fall of governments.

**Minor:** Your civilization keeps a secret which predates the beginning of the game. This secret is of such a compelling nature (in the mind of your species) that it has not been lost by the passage of generations. Prior to the start of the game, those who knew this secret determined that aliens could never be allowed to learn this secret.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The ‘secret’ is always kept at the current Capital Colony, where the government can best protect it. If it is ever revealed, the Concierge will determine what it is, how it fits into the story. Until then, there is no need to specify.

Supra-Legitimacy *sine qua non*:<sup>2</sup>

- The Secret must be protected from discovery; i.e. Counter-Operations Missions (*missions* – plural, that is, two or more) target protecting ‘the Secret’ (i.e., this Fundamental Reality) around the clock on the Capital Colony (watch for ‘aging-out’ of the COMs) after the first-First Contact.
- Aliens are not welcome at the Capital Colony, any alien contact is a risk (e.g., Load/Unload RPs, MegaCorporations, Combat), they can do their business at the other colonies.
- The Secret cannot be voluntarily erased or destroyed (can’t solve the problem by changing the definition): The Capital Colony must never be Conquered (this would be a catastrophic failure for both the Major and Minor of this Fundamental Reality). If this ever happens, or it is ever destroyed, the Concierge will need to determine how this affects the position population. Orbital Bombardment of the Capital Colony or Raid/Strike against it should not be assumed to automatically destroy the Secret.
- Any mention of the Secret by other positions (e.g., in News Events, Thesis Statements), even if they are just guessing, causes instant paranoia and consternation (i.e. an Intervention Potential Plus), because you never know if they know.

<sup>1</sup> Old military joke, “I’d tell ya, but then I’d have to kill you!”

<sup>2</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Empty Nest, Empty Shell

*“Oh peachy! A new form of primitive life leaving the nest.”*

– Marvin the Martian watching an Earth rocket launch (Looney Tunes)

**Major:** Leaving the nest, leaving the shell, is one of the strongest and most basic urges of your species (related to and stronger than the mating urge). Where humans have romance novels, your species has the equivalent empty nest literature. Throughout history, the leaving the nest urge has resulted in regular sweeping migrations across the Homeworld. It is so ingrained that the ultimate goal of your species is to leave the Homeworld and return it to a natural, pristine state. Any sapient species that has the ability to leave the Homeworld, but remains, even with a small population, is considered immature and unworthy.

**Minor:** Leaving the nest, leaving the shell, is one of the strongest and most basic urges of your species (related to the mating urge). Where humans have romance novels, your species has the equivalent empty nest literature. Throughout history, the leaving the nest urge has resulted in regular sweeping migrations across the Homeworld. It is believed that the ultimate destiny of your species is to leave the Homeworld. If even a small population remains on the Homeworld, we are to be considered immature and unworthy.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: This Fundamental Reality is only available to Homeworld positions.
- ✓ Note: There are some other Fundamental Realities that would directly contradict this one, e.g., some with damaged Homeworld conditions to start the game, contradiction in Fundamental Realities is not prohibited, but it would be a hard climb to make it work, but a greater impetus and glory.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Cultural expectation of progressive depopulation, deindustrialization of the surface of the Homeworld during the course of the game (judgment of the pace of this is at the discretion of the Concierge, one measure might be whether the population is less after each Census, but the frequency of Census activations is controlled by the position players). Population in Orbital Cities may remain.
- Prejudice against or disdain for any species (other than Minor Races) known to still inhabit their Homeworld (i.e. a preference for Outposters and Invader Primal State positions, minimum Diplomatic Spaces with others).
- Homeworld must returned to nature in the best possible condition.
- The Homeworld should not be the Capital Colony after the first interstellar colony is established and meets the minimum criteria (the Concierge will determine if the Capital Colony transfer has not occurred with sufficient expediency).

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# First Cause

*“There is no case known (neither is it, indeed, possible) in which a thing is found to be the efficient cause of itself; for so it would be prior to itself, which is impossible. Now in efficient causes it is not possible to go on to infinity, because in all efficient causes following in order, the first is the cause of the intermediate cause, and the intermediate is the cause of the ultimate cause, whether the intermediate cause be several, or only one. Now to take away the cause is to take away the effect. Therefore, if there be no first cause among efficient causes, there will be no ultimate, nor any intermediate cause. But if in efficient causes it is possible to go on to infinity, there will be no first efficient cause, neither will there be an ultimate effect, nor any intermediate efficient causes; all of which is plainly false. Therefore it is necessary to admit a first efficient cause, to which everyone gives the name of God.”*

– Thomas Aquinas, Summa Theologica, 1 Q2.3

**Major:** The soul of your species is an obsession with finding the First Cause and Unmoved Mover of everything. Every scientific and philosophical theory or argument seems to run head first into the Unmoved Mover.

**Minor:** The soul of your species is an obsession with finding the First Cause and Unmoved Mover of everything. Every scientific and philosophical theory or argument seems to run head first into the Unmoved Mover.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: This Fundamental Reality is not available to a Truly Alien Primal State.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same, the difference is in the strength of application.
- ✓ Note: This Fundamental Reality might be characterized by some as a literal search for ‘God’ but ‘God’ is only a theoretical construct of the First Cause and Unmoved Mover. The question of this Fundamental Reality is what would a civilization with the means to interstellar travel and on a literal quest for the First Cause do?

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Quest to reach the Big Bang (the Concierge will determine direction), the position continuously explores and expands in that direction.
- Quest to reach a super-massive black hole – there probably aren’t any in the Galactic Space because that would be rather catastrophic to the game – one discovered in 2012 was 17 billion solar masses (there is a ‘small’ 4-million solar masses back hole in the center of our galaxy).
- Quest to reach the entry point of a Truly Alien position if one exists in the game.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Hallowed Homeworld

*“Fleeing from the Cylon tyranny, the last Battlestar Galactica leads a rag-tag fugitive fleet on a lonely quest... a shining planet known as Earth.”*

– Commander Adama, Battlestar Galactica (1978)

**Major:** The utopian legend of Homeworld has become part of the literature, myth, and lore of your population. A distant, shining place of pre-space history, a gleaming gem in the sky that was lost as part of a moral fall and/or exodus of your people. The location of the Homeworld is unknown, but it is assumed to still exist, peopled with the enlightened descendants of the ancients, waiting for the return of the lost. The moral authority of the government descends allegedly from the code of the ancients; legitimacy of the government continues to rely on those ancient codes.

**Minor:** The utopian legend of Homeworld has become part of the literature, myth, and lore of your population. It is a distant, shining place of pre-space history, a gleaming gem in the sky that was destroyed as part of a moral fall and/or exodus of your people. The moral authority of the government descends from the code of the ancients; legitimacy of the government continues to rely on appeal to those ancient codes.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: This Fundamental Reality is only available to non-Homeworld Primal States.
- ✓ Note: The Hallowed Homeworld is not located in Galactic Space and will never be found during the game. The government, however, may be required to make efforts to locate it, to maintain legitimacy.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Species seeks to *recreate* the lost Homeworld on every Friendly Colony; selectivity in colonization, environmental preservation and even terraforming efforts may be required.
- The original Homeworld was crowned with a halo of glittering Orbital Cities.
- The original Homeworld is Terra Sancta and every Friendly Colony seeks to *emulate*.
- It is a clear catastrophic violation if a Friendly Colony’s Maximum Habitability or Habitability Class is damaged in Combat or by Special Operations Black-op.
- The original Homeworld is thought to be enlightened and diverse, its inhabitants something above mortal stature in understanding and moral reasoning (but this rather contradicts the mythic loss... but few take serious notice because it makes their loss even more mythic).

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Hausmannization

*“Hausmann’s renovation of Paris was a vast public works program commissioned by Emperor Napoléon III and directed by his prefect of Seine, Georges-Eugène Hausmann, between 1853 and 1870.”*

– from Wikipedia article, “Hausmann’s renovation of Paris.”

**Major:** The urban centers of the old world(s) demand major remodeling, and the materials for this will have to arrive from the outer colonies. This drive to renew goes beyond merely replacing the old and unmaintained with the new, no sir, the urban centers shall be transformed into shining jewels of perfection and extravagant art peopled by wealthy citizens.

This goes beyond the normal process of the flow of resources from the outer areas to urban centers and the flow of civilization outward from the urban centers; rather, the urban rebuilding will require more than the outer areas are willing to give and they may not receive much benefit in return. Failure to produce the desired situation, by any means necessary, will bring the legitimacy of the Government into question. Oh, and some unfortunates will have to be displaced to make room for the new construction...

**Minor:** The urban centers of the old world(s) need major remodeling, and the materials for this will have to arrive from the outer colonies. There is a strong expectation that the outer colonies will produce resources to enhance the older worlds. Failure to produce the desired situation will bring the legitimacy of the Government into question. Oh, and some unfortunates will have to be displaced to make room for the new construction...

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Get with the long term program: Urbanization Proficiency, College, Writs.
- Space to live! Overcrowded colonies are unhealthy, unclean (like Paris in the 19<sup>th</sup> Century). Friendly colonies should not pass 80% of Maximum Habitability; being on a Balkanized planet makes no difference in this. Orbital Cities should not be a pigsty – the same concept applies as that of a surface colony (*ut supra*).
- Any outbreak of disease on a Friendly Colony is a violation of this Fundamental Reality. This applies mainly to plagues and epidemics caused by other positions (whether or not they know about this Fundamental Reality is irrelevant), however, depending on the game, the Concierge may be the cause.
- Domestic subsistence should never be invaded or impaired by the interstellar government, doing so causes urban decay.
- A healthy maintenance level (i.e. Maintenance Shields), is required so that civilization does not return to its previous, horrific state.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Horror Vacui

*“The concept of horror vacui, named as such, appears to have arisen during the Victorian era. It was first used as a criticism of interior design in architecture and wasn’t considered to be any kind of compliment. However, the term has Latin roots, and the concept turned up in the time of Aristotle.”*

– Mads Soegaard, “Horror Vacui: The Fear of Emptiness,” Interaction Design Foundation, 2019

**Major:** A primal drive of your species is to fill all living spaces. A colonized planet with lots of empty space is terrifying. A sense of fullness, of details in every space permeates the works of your species from the ancient times. Civilized and arranged fully urban spaces, crowds, are satisfying and a vital component to the legitimacy of the authorities.

**Minor:** A primal drive of your species is to fill all living spaces. A colonized planet with lots of empty space is terrifying. A sense of fullness, of details in every space permeates the works of your species from the most times. Civilized and arranged fully urban spaces, crowds, are satisfying and a vital component to the legitimacy of the authorities.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is the strength with which they will be applied.
- ✓ Note: New colonies must reach maximum habitability as quickly as possible; loading populations from established colonies makes them less full, unsatisfying and the government less legitimate. The population may act out of fear, disorder.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Every available planet in a colonized system should have a Friendly Colony (this may mean war, it’s a straightforward idea).
- Planetary surface frontiers are abhorred (e.g., unfilled Maximum Habitability represents ‘frontier’ space at a Friendly Colony).
- Orbital Cities are not favored (but not forbidden), each Orbital City is a small mark against the legitimacy of the government. Why fill Orbital Cities instead of unfilled planets?
- Loading population from existing colonies decreases the legitimacy of the government (i.e. empty houses, ghost towns,) however, it may be balanced by population growth and Unloading population to other unfilled colonies.
- Aliens do not understand... any un-colonized planets and/or unfilled **alien colony** planets *can be improved with the addition of a Friendly Colony (!)*, whether the aliens approve or not. They can be made to understand, eventually...

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# If You Have Face

“Let the other person save face.” – Dale Carnegie

“While you are saving face, you are losing your ass.”

– Lyndon B. Johnson

**Major:** Your species would be described as ‘prideful’ in the extreme (whether they actually have prides or not...). The concept of pride, for which there are 999 different variations and sub-variations in your language (including one that sounds suspiciously like ‘U2’ when translated), is so deeply rooted in your culture and pre-Starflight history that it affects the legitimacy of Governments and Institutions above and beyond the mundane daily politics. It would be called Face...if your species has one...and no legitimate Government would lose Face to aliens.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: Don’t tread on me! Loss of face is to be avoided at almost all costs, short of a potentially worse loss of face situation later, but it happens. When it happens, it must be restored shortly and decisively. Protecting against loss of face is a requirement of government legitimacy, a government that cannot keep face cannot protect the people or itself.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Never lose a combat, never turn and run (this is in addition to any Disruption Events and loss of active Constructural Elements that may result), loss or flight is *disgrace*.
- Inability to break a colony siege is a *loss of face* for the government.
- Power Activation failures are an *affront* to the government and the people (i.e. a violation of this Fundamental Reality), rebels maybe be tolerated, even respected somewhat, but not allowed to interfere.
- A broken Shared Meaning is an *insult* (i.e. a violation of this Fundamental Reality).
- Destruction of any sovereign ship or harm to any Friendly Colony is a *grave offense*.
- Offenses, insults, affronts, disgrace are redeemed by punishment and extreme action; extreme action goes beyond merely reestablishing *status quo ante* or evening up the score, it requires a great success to restore honor, prestige and esteem.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Kayfabe

**Major: Be Fake. Politics for entertainment. A significant part of the legitimacy of your government is the provision of a constant stream of kayfabe; staged political feuds, rhetoric, fights, elections, and rivalries portrayed as real and important, but that are really a media circus act. All matters are actually decided beforehand and the kayfabe distracts the public and lends credibility to the process where the outcome is predetermined. Occasionally, there must be a tragedy to keep it ‘real.’**

**Minor: Be Fake. Politics for entertainment. A significant part of the legitimacy of your government is the provision of a constant stream of kayfabe; staged political feuds, rhetoric, fights, elections, and rivalries portrayed as real and important, but that are really a media circus act. All matters are actually decided beforehand and the kayfabe distracts the public and lends credibility to the process where the outcome is predetermined. Occasionally, there must be a tragedy to keep it ‘real.’**

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is in the strength with which they are applied.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Heels & Faces: Pageantry and broadcast media (i.e. Spirit and Communications Proficiencies).
- ‘Drama queen’ and soap-opera like News Events (a little like a Type 4 Fundamental Reality), and symbolic acts in-game.
- The population must be especially attuned to symbolic acts, and ideological symbolism (i.e. mostly active Symbolic and Ideological Constructural Elements) for political theatre to be sufficiently entertaining (like if you have to explain it, it’s not as dramatic or funny).
- Population conditioned to accept formulaic and repetitive melodrama and hyperbole, an expectation of constant entertainment, to which education and sophistication of worldview are antithetical (this may harm the position by preventing use of Enlightenment),<sup>2</sup> allowing people to see through smoke & mirrors.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

<sup>2</sup> WWE fans are not going to like the suggestion behind this, but the last time I watched the WWF, I and my best friends were about 9 to 11 years old and we, like most boys of the age, thought it was real (and I believe the beer-drinking, cigarette-smoking, brain-donation-returned-by-science adult men who watched it with us also thought it was real, if they gave it any thought at all). Taxation does wonders: When New Jersey sought to tax WWF events as a competitive sport, it was finally admitted in public hearings in 1989 by the WWF owner that pro-wrestling was fake, scripted, choreographed and therefore, more akin to a circus act or movie stunting than a sport – to avoid taxation! They also lost a lawsuit against the World Wildlife Fund (the real WWF) and had to change WWF to World Wrestling Entertainment (WWE).

# Krewl-T

*“Xenophobia, a frustrated desire to join the imperialist ‘club’ dominated by the Western powers, plus perceived British and American racism coalesced in Japan with nationalist ideologies: racial superiority; domination of an ‘inferior’ China as a holy war; a belief that Japan was destined to rule the world; a distorted bushido code; a young, disaffected officer corps seething with Imperial Way and Toseiha ideology; and the powerful message that the emperor was an infallible living god. All these elements blended in an ideological witch’s brew that had a direct bearing on the treatment of Japan’s enemies.”*

– Mark Felton, “A Culture of Cruelty,” Military History, January 2011

**Major:** Your culture comes into the game with a very strict militaristic hierarchical system where order is enforced by violence, infliction of pain, economic sanctions, and an ancient codified worldview and belief system. While some aliens might find the conditions of your society shocking and cruel, they are just aliens, outsiders, at the bottom of the order.

Within your society, the system is considered the normal, natural, and right state of relations, that serves a greater purpose, and is not questioned by anyone who matters. The ultimate legitimacy of any government is the ability to apply force to maintain its position, above all lesser issues.

**Minor:** Your culture comes into the game with a very strictly enforced hierarchial system supported by an ancient codified worldview and belief system. Within your society, the system is considered the normal, natural, and right state of relations, that serves a greater purpose, and is not questioned by anyone who matters. Aliens can never become part of the system, and cannot be expected to understand.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major version of this Fundamental Reality basically implies an oppressive empire and cultural ideological superiority, the Minor version may permit empire building, but is basically just more culturally xenophobic.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Sovereignty over significant alien populations.
- Pacification Combat is preferred method of Conversion, followed a close second by Orbital Bombardment (especially in the Major form).
- Long time to Naturalization of **alien colonies**.
- Looting is acceptable, and expected in many cases.
- Not in favor of Balkanization, other colony on planet will probably need to be conquered eventually.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Malevolence

*“Some people are in such utter darkness that they will burn you just to see a light. Try not to take it personally.” – Kamand Kojouri*

**Major:** Your people believe that in ancient times, their ancestors ‘crossed over’ and inadvertently (or foolishly, naively) brought back malevolence (perhaps what humans call ‘evil’). Malevolence comes in many shades and does not always mean instant death, but is hard to grasp or contain. The most important task of government is to defeat the malevolence and return your people to the ideal state.

**Minor:** Your people believe that in ancient times, their ancestors ‘crossed over’ and inadvertently (or foolishly, naively) brought back malevolence (perhaps what humans call ‘evil’). Malevolence comes in many shades and does not always mean instant death, but is hard to grasp or contain. The most important task of government is to defeat the malevolence and return your people to the ideal state.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is the strength with which they will be applied.
- ✓ Note: This is your species version of ‘The Fall.’ The story may or may not be true, depending on the direction the Concierge wants to take the game. It is important however that the majority of the population believe that malevolence lurks around every corner, waiting to corrupt and infiltrate society, want to believe it, and will continue to do so after leaving the Homeworld. The legitimacy of the government is largely dependent on the expectation that it is protecting society from the malevolence. The ‘factual truth’ of it doesn’t matter to your people.
- ✓ Note: Aliens may be regarded as agents of the malevolence...

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Government Legitimacy is strengthened by alien Special Operations after First Contact, and by successful or at least regular, Counter-Operations at Friendly Colonies. **Alien colonies** on your planets are a malevolence threat. *En garde!*
- Government Legitimacy is weakened somewhat by Thesis Statements (dissidents are agents of malevolence), especially if they linger for a long time. Alien trade and contact is a guarded necessity.
- Inactive Constructural Elements represent those who have been corrupted by the malevolence, especially those in **Apostasy**. Cultural change is malevolence.
- Strong Police, Security, Spirit, Nationhood, Integrity Proficiencies and related Colleges and Writs, along with a Combat College to keep alien malevolence away.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Migration Urge

*“Plunder, trade rivalry, migration, conquest, religious fanaticism – every compelling motive of war lent moral force to invaders pressing in from all sides.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 116*

**Major:** Your species has the strongest migration impulse ever. It is the essence of your pre-space age history, but instead of vast migrations east to west or north to south on your Homeworld, the migration is into space and away from home in all directions. Governments naturally need to control something – resources, population, defined areas – while the uncontrolled migration urge left your species history littered with failed governments, emptied cities and barren areas. This is not seen as a ‘problem’ but rather the natural ‘process’ of your history; technology has not curbed migration.

**Minor:** Your species has a very strong migration impulse, which from time to time triggers massive population movements, followed by significant periods of settlement. It is the essence of your pre-space age history, but instead of vast migrations east to west or north to south on your Homeworld, the migration is into space and away from home in all directions. The development of civilization and governmental institutions in your pre-Starflight history was an attempt to channel and control the migration urges.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Barely controlled orgy of interstellar colonization over periods of time, the government loses some legitimacy by trying to control or restrain the process (i.e. by going a number of Regular Turns without expansion activities). Population growth on planets with space is a short-term substitute in lieu of expansion.
- Expansion activities do not always require activation of the Expansion Power, other possible interpretations might include building an Orbital Shipyard, building Scout and Colony Ships, to a lesser degree, building Cargo Ships and warships. The buildup, countdown, getting ready to launch again angle may satisfy in the short-term.
- The migration urge is defense; when conflict threatened, pre-stardrive ancestors simply moved to another place. Thus, standard defense preparation is antithetical.
- Uniformity of culture is important to both avoid conflicts and to insure that migrants shortly ‘fit into’ any place they may go, and are interchangeable enough to leave when other migrants take their place. Cultural isolation and variation is abhorrent, exceptional individuals are both suspect for being different, and highly sought after for migration from place to place.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Never Again

*“There are humans for whom the words ‘never again’ carry special meaning.” – G-Kar, Babylon 5 TV Series*

**Major:** In the ‘modern’ pre-Starflight history of your species, an event occurred that was so shocking and catastrophic, and so affected the collective self-image of your civilizations, that the world acknowledged that such an event can never be allowed to happen again. Governments tremble and tread carefully when addressing these event(s), the perpetrators of these events are vilified in mythology, and any circumstance or series of events that seems to be leading to the same or similar events produces negative public and political reactions.

**Minor:** In the ‘modern’ pre-Starflight history of your species, a shocking or catastrophic event or series of events occurred that affected the collective self-image of your species. But while the events are roundly reviled publically, condemnation is not universal. There exists a strong minority view that perhaps we should have gone even further, and underground and fringe groups have developed along the fault lines.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: You know already what historical Earth event may be the basis of this Fundamental Reality, however, there are many other possibilities to explore. The historical event does not need to be named or specified unless the Concierge and participants think it needs to be part of the game story.
- ✓ Note: The event is well known and well discussed in your civilization, is not a secret and not intended to be kept secret from aliens if they happen to notice. It is core, it is both pride and pragmatic shame to the worldview of your civilization.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Disruption of the Structural Government Title and/or Social or Estate Titles, anything that appears like the collapse of government, will seem to the population like a ‘Fall’ or a prelude to a repeat of the same events. Legitimacy then depends on the strong, stable government to make sure it doesn’t happen again.
- Inactive Constructural Elements rouse suspicion that some of the population has forgotten, drifted away in a way that may lead to a repeat of the events, especially those who have left the Homeworld, mingled with aliens.
- Education is paramount to make sure it never happens again; Enlightenment represents understanding and foresight necessary to prevent a recurrence.
- Estates played a major part in the horrific event(s) and are always suspect.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Nothulhu

*“It’s the end of the world as we know it ... and I feel fine!” – R.E.M.*

**Minor:** The end of the world came and went – according to ancient religious prophecies – before the start of the game, and nothing bad happened. Nothing at all happened. Sometimes people are disappointed when nothing bad happens. Vigorous re-interpretation and researches have not shown that anything at all happened at the end of the world. The entire structure of your civilization, and legitimacy, exists because nothing at all happened that day. Nothing should be disturbed.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: This species is holding their breath and ‘hiding’ and from what they thought might have happened, from the ‘predator’ that passed them by but isn’t quite gone yet. Don’t breathe, don’t make a sound, don’t peek.
- ✓ Note: Another way to think of this species is to analogize them to the characters in *The Wonderful Wizard of Oz* (1900); the Wizard could not give the Cowardly Lion courage, or the Tin Man a heart, or the Scarecrow a brain.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Nothing should be disturbed. What that ‘nothing’ is and what constitutes ‘disturbing’ it is a matter for interpretation during the game. Something is being disturbed merely by leaving the homeworld after the end of the world passed. But probably rapid changes would be disturbing to the population of this position.
- The fundamental desire of the population is stasis or at the least, very slow change. It could be said that this population lacks or has been scared out of an expectation of forward progress and that an enculturation of that has occurred. Historically, some careful comparison might be made to Middle Ages Europe where Christianity and the promise of the afterlife was the ‘forward expectation’ of the population (however, there were other socio-economic-political factors as well, which is why one needs to be careful in this analogy). However, in other cultures, a similar phenomenon has happened, where the expectation of progress became the perfection of a peasantry and skilled tradesmen class and social order that mirrored the ideals of the local religious philosophy (e.g., Confucianism, Buddhism, Hinduism, etc.).

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Open Secret

*“After a while, I lost my intimacy with Tiwa. As she grew up, she gave up her playthings.” – Human character, Fantastic Planet (1973).*

**Major:** While it never will be officially acknowledged, it is an open secret among your population that your species was ‘bred’ and served another species as non-working pets kept for companionship and comfort. There is even rumored to be a ‘pet cemetery planet’ somewhere in the Galactic Space containing the remains of your ancestors. The government fears that a return of the kind Masters will destroy their legitimacy as loyalty naturally shifts back to the Masters, and second the reaction of the other races when they learn the secret. So, plausible denials are put into place, alternate explanations are advanced by ‘independent’ experts and intellectuals.

**Minor:** While it never will be officially acknowledged, it is an open secret among your population that your species was ‘bred’ and served another species as non-working pets kept for companionship and comfort. The government fears that a return of the kind masters will destroy their legitimacy as loyalty shifts back to the masters, and second the reaction of the other races when they learn the secret. So, plausible denials are put into place, alternate explanations are advanced by ‘independent’ experts and intellectuals.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: There is a Listopia on Goodreads with 381 books or stories where humans are treated as animals – pets, food, beasts of burden, prey for sport, etc.
- ✓ Note: The ‘alien masters’ will never be another Major Race in the game. This Fundamental Reality, by implication, introduces to the game universe the idea that there is an ancient, vastly superior alien species lurking beyond the bounds of Galactic Space or our current dimension, with unknown motives and abilities.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- The alien masters do not seem to have been unkind or malicious, so that is not the issue; rather, the issue is whether the fear of return of the kind masters is selfishness disguised as legitimacy concerns on the part of the ruling class or whether it is truly a species or universal yearning for freedom as far as their existential situation will allow? There is significant story-generation space in this question.
- The government of this position will jealously guard their legitimacy and fight any perception that it is slipping. It may also be that the ancient alien masters are the subject of religious veneration, philosophies, and pseudo-religions.<sup>2</sup>

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

<sup>2</sup> If you look at the creation story at the bottom of the Abrahamic religions, weren’t humans just pets in the garden? Who were scolded for getting into something and chased out into the wild?

# Outreach

*“I said brothers (Hallelujah) Now you got yourself two good hands (Halle-hallelujah) And when your brother is troubled, You gotta reach out your one hand for him (Hallelujah) ‘Cause that’s what it’s there for (Halle-hallelujah) And when your heart is troubled, You gotta reach out your other hand (Hallelujah) Reach it out to the man up there (Halle-hallelujah) ‘Cause that’s what he’s there for!”*

– Neil Diamond, “Brother Love’s Travelling Salvation Show” (1969)

**Major:** A transcendent obligation of legitimacy is the moral obligation to help in by outreach programs, usually aimed at the ignorant, disadvantaged masses. A pregame encounter with some unfortunate aliens has convinced your people that the galaxy is in need of zealous outreach programs ... <sup>1</sup>

**Minor:** A transcendent obligation of legitimacy is the moral obligation to help by outreach programs, usually aimed at the ignorant, disadvantaged masses.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: Outreach programs carry with them an implication and a sense of moral and social superiority that is not always appreciated by the recipients (e.g., Appalachian Autumn (1969)). Receipt of assistance may be considered shameful.
- ✓ Note: What if you have to conquer them to help them? ... like capturing feral kittens. Outreach programs may also be considered to be or applied in a manner that is wasteful, condescending, misguided, bureaucratic, and ineffective. They are often ripe for corruption and abuse of power.

Supra-Legitimacy *sine qua non*:<sup>2</sup>

- The species has found its mission. The mission (like those of a religion to a far-off land) is what fills the existential void of the species, helped along by FTL travel technology (like sailing ships for Christian missionaries). Failure to vigorously pursue this mission leaves emptiness, idleness, frustration at not achieving the ideal goal over the practical reality (*à la* Arnold Toynbee).
- The mission is what makes you superior, all others are just running from one thing to another, fighting for no reason, or wandering aimlessly about the Galactic Space. They need help, why wouldn’t we go to help them? We might hurt them, but they need our help.
- There remains an internal outreach obligation as well, not just directed toward aliens. With regard to other positions, Outreach may also seem to be a Type 4 Fundamental Reality.

<sup>1</sup> Outreach in this instance is used in the noun form, Merriam-Webster: Outreach (n) at 3: the extending of services or assistance beyond current or usual limits <*an outreach program*>; also : the extent of such services or assistance.

<sup>2</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Ozymandias

*“And on the pedestal these words appear: ‘My name is Ozymandias, king of kings: Look on my works, ye Mighty, and despair!’ Nothing beside remains.” – Percy Shelly, “Ozymandias” (1818)*

**Major:** Deep in your species mental make-up is the drive and need to overawe, to demonstrate, to build bigger and better, especially monuments, enigmas, and impractically large versions of current technological objects. Planning, supporting and constructing such objects is part of the legitimacy of any government, institution or movement; a necessary demonstration of power, authority, or perhaps, just cultural mental satisfaction. The more pointless and impractical, the more seemingly satisfying the project.

**Minor:** Deep in your species mental make-up is the desire to build monuments (which frequently do not serve any other purpose), enigmas, and impractically large versions of current technological objects. Planning, supporting and constructing such objects is a necessary cultural mental satisfaction.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: Tsar Bomba, Tsar Pushka.... We have been so far in awe of what our ancient ancestors built without modern power that nowhere have I seen their monuments effort called neurotic or a neurotic paradox, though it might well qualify!

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Those who are overawed will not dare attack you... must worship you... must fear you... must remember you. If you are attacked, forgotten, or not worshipped... ?
- What passes for monument-building in a science-fiction, space-opera setting? Carving a planet-sized face? Probably enigmas and Technological Devices, especially of the enormous, opulent, resource hogging, and nearly useless kind.<sup>2</sup>
- Monument building is a legacy battle, not only to dominate your time, but also to overawe even later generations, a battle against time and entropy. The monument remains when all else falls to dust or is forgotten; it guarantees you will not be forgotten.<sup>3</sup> It would be a supra-legitimacy failure if this doesn’t seem likely to happen.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

<sup>2</sup> In the late 1980s, I passed through a permanent transient settlement called Slab City on the way to military training at Chocolate Mountain, across the bridge over the ‘canal’ waterway. It’s a place you don’t forget if you saw it in the 1980s ... anyway, one of the religious fanatic residents had carved “JESUS” into the side of a mound or small hill facing the road, a distance off to the left as we approached.

<sup>3</sup> Though less famous and later retitled, the final lines of Horace Smith’s competing poem – written also in 1818 – presages modern post-apocalyptic far future fiction, picturing a future, savage wolf-fur-clad hunter discovering the ruins of London and wondering what unknown great race created that city?

# Prester John

*“All Prester John ever was king of, was Wishful Thinking.”*

– Frank Jacobs, “The Kingdom of Prester John, Christianity’s Imaginary Ally,”  
bigthink.com, July 23, 2010

**Major:** There is an (unfounded) belief among your people that another civilization of your Native Population Type exists out there, among the stars. They must be located and joined with your people to complete some important historical epoch. Some legends hold that they are trying to come and help, others hold that your people must go rescue them, as they are surrounded by hostile aliens. The story changes and varies with the teller’s intent and circumstances, but never goes away and never loses seriousness. Members of your government claim to believe it, the people demand it.

**Minor:** There is an (unfounded) belief among your people that another civilization of your Native Population Type exists out there, among the stars. They must be located and joined with your people to complete some important historical epoch. Some legends hold that they are trying to come and help, others hold that your people must go rescue them, as they are surrounded by hostile aliens. The story changes and varies with the teller’s intent and circumstances, but never goes away and never loses seriousness. Members of your government claim to believe it, the people demand it

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: Prester John is the underlying science-fictionized concept of the original Battlestar Galactica series (1977).
- ✓ Note: This Fundamental Reality does not make this position a Lost Colonist of any other position and vice versa. The ‘place’ is assumed to somewhere beyond the starting Galactic Space, but *probably* will not be found in the game.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- The government must maintain at least a façade of trying to find this other place. That this requires expansion and exploration (and exploitation) is a side benefit.
- Likely, this ‘story’ or concept has been idealized to the extreme, it is probably part of a religion, the violation of the supra-legitimacy requirement occur when impatience over inaction or lack of results overtakes reason and restraint; when the population believes that the government is just giving it lip service.
- The eagerness (and glory) of discovering the mythic place may assist in or push the position involuntarily into certain Power Activations. Even if the senior leadership doesn’t believe in fairy-tales, imagine the historical glory in being behind the discovery? Like those who sponsored Lope de Aguirre or Juan Ponce de León in their mythic searches.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Space Race<sup>1</sup>

**Major:** Your species was born in hell. The dark Galactic Space is not anywhere near the Galactic Core, it is way out on a spiral arm (or perhaps in a Globular Cluster). There is a bright light in the Core, something is waiting there for you. You just have to get there. At First Contact, it is assumed that all species are moving toward the Core.

**Minor:** Your species was born in hell. The dark Galactic Space is not anywhere near the Galactic Core, it is way out on a spiral arm (or perhaps in a Globular Cluster). There is a bright light in the Core, something is waiting there for you. You just have to get there. At First Contact, it is assumed that all species are moving toward the Core.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same; the difference is in the glaring brightness with which they are applied.
- ✓ Note: The Concierge will randomly determine the general direction to the Core before the game begins. The Core should not/will never be reached during the course of the game.

Supra-Legitimacy *sine qua non*:<sup>2</sup>

- Species is very much attracted to light, like a bug around a porch light, the galactic core calls. The government must move the species toward it, or will not be supra-legitimate; this may even override the universal security supra-legitimacy.
- Attraction to light probably permeates the entire species psychology, finding expression in literature, fear/terror, industry, mining, cities and infrastructure, language, political symbols and myths. Early scientific leadership of the species were fine astronomers, who are also pseudo-religions icons. The species will not willingly go into dark places, thus must go from star to star inside brightly lit ships with no windows (probably). If there was ever convict punishment and slavery in the history of the species, it was for the purpose of mineral mining underground (incidentally, this means that the preferred mining method of the species is probably surface open pit or strip mining).
- Impatience to reach the light is mitigated by speed and range improvements and whatever this implies in the game. Perhaps by the time we reach the galactic core, we will have to power to jump directly to other galactic cores?
- Each settlement placed in the divine direction is a step toward the light that your children may see someday that you cared for them. Going the other direction shows the opposite, misguided parents who didn’t care for their children.

<sup>1</sup> “Space Race” is a painting by Charles Lynn Bragg, which I have had as a framed poster since the 1990s. His art has appeared on magazine covers, postage stamps and in art galleries.

<sup>2</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Spectacle

*“Pollice verso or verso pollice is a Latin phrase, meaning ‘with a turned thumb,’ that is used in the context of gladiatorial combat. It refers to the hand gesture or thumb signal used by Ancient Roman crowds to pass judgment on a defeated gladiator.” – from Wikipedia article, “Pollice verso”*

**Major: Bread & Circuses, Bread & Bulls, Pageantry, Televised Sports, Video Binging, Virtual Reality, Amusing Ourselves to Death. The public wants spectacle. Escape. Entertainment. Distractions. From the daily existence. From the void. The fleeting vicarious experience of drama and greatness that is not in themselves. To say we were there, we saw it happen.**

**Minor:** Bread & Circuses, Bread & Bulls, Pageantry, Televised Sports, Video Binging, Virtual Amusing Ourselves to Death. The public wants spectacle. Escape. Entertainment. Distractions. From the daily existence. From the void. The fleeting vicarious experience of drama and greatness that is not in themselves. To say we were there, we saw.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are equally damning; the difference is the strength with which they are applied.
- ✓ Note: This Fundamental Reality works against what is normally considered positive for society. Especially, it works against Enlightenment. However, this Fundamental Reality is not what is best for society, but government legitimacy.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- The parade of ceremonial spectacle may become overwrought, politicized, pointless, grandstanding, but it will continue because it is expected (like the Pointless spectacle of the Super Bowl Half-Time Shows).
- Supra-legitimacy and legitimacy are whatever is expected, even if only in appearances (e.g., suit and tie in business, vestments, intonation and hand gestures by the priesthood, a certain look of professional hockey players, top hat, white gloves and a bowtie for stage magicians, glasses and beard on writers, college professors and classic political ideological intellectuals<sup>2</sup>).
- Ceremonial spectacle is the rhythm of the seasons, the rhythm of generations, and must be provided on schedule – a disruption of the schedule signals something is wrong and no government wants the people think something is wrong.
- Ceremonial spectacle reinforces existing meanings, the meanings cannot be changed without rendering the ceremonial spectacle meaningless. Thus, everyone must have the same meanings (i.e. worldview) that the spectacle have value.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

<sup>2</sup> “The parting on the left is now a parting on the right and the beards have all grown longer overnight.” – The Who, “Won’t Get Fooled Again” (1971).

# State of War

*“To secure peace is to prepare for war.”*

– Metallica, “Don’t Tread on Me” (1992)

**Major:** The state is expected to be ready for war at any moment, to respond forcefully to any provocation. The show of force and capability without provocation, the state of quasi-war during peace keeps enemies at a distance and the people strong and resolute. Declaration of war is just a diplomatic nicety, any state that waits for a formal declaration of war is weak and will be punished.

**Minor:** The state is expected to be ready for war at any moment, to respond forcefully to any provocation. The show of force and capability keeps enemies at a distance and the people strong and resolute. However, force that is never needed is the best investment for peace and security.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: Think of World War 2, think of North Korea, think of the Cold War... “Political power grows out of the barrel of a gun” - Mao Zedong.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- The universal security supra-legitimacy taken to Type A-1 extremes. Since a high military level has been established, why not use it to push the aliens and enemies ever farther away?<sup>2</sup> Pretext, provocation, *causa belli* to the native population.
- Risk and reward. Obviously, any harm or destruction of native population and places is antithetical to this Fundamental Reality (i.e. a violation of the supra-legitimacy), but also serves as a boost to effort, as long as the material means remain to do anything effective.
- Military glory and political power: The road to political power is paved with dead enemies (in the case of Julius Caesar, dead Gauls and Celts). When a state is in constant high military alert, the military has the power and the aspiring go into the military service.<sup>3</sup>

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

<sup>2</sup> “There remained only one further step, since it is an adage of history that no perfect military instrument has ever been suffered to rust from disuse. And in line with ancient precedent, Louvois soon began to suggest to his sovereign the advantages to be gained from aggression.” – Lynn Montross, *War Through the Ages* (3rd Ed., 1960), p. 322.

<sup>3</sup> In *The Man in the High Castle* series, the Crown Prince of Japan feared that the generals were using the throne as a shield to gain power, wealth, and prestige. In this dialogue was expressed the simple truth of Japanese governance from feudal times to the 20<sup>th</sup> Century invasions of Manchuria and Korea. In the West, this connection between military glory and political power has long been noted as a factor leading from the Roman Republic to the Roman Empire (i.e. Julius Caesar).

# Terra Australis

*“The name given to the great and unknown southern continent required by the classical Greek geographers, who knew that the earth was spherical, to balance the land mass which was known to exist north of the equator. For a period in the Middle Ages the Church’s insistence that the earth was flat led to the complete eradication of all belief in a southern continent, but the great years of exploration by sea in the 15<sup>th</sup> and early 16<sup>th</sup> centuries confirmed the approximately spherical shape of the earth.”*

– from Oxford Reference article, “Terra Australias Incognita”

**Major: A supreme sense of expected geometric balance in the cosmos. Balance must be achieved in all things in a civilization to be in harmony. A civilization in harmony with the cosmos will last long and prosper.**

**Minor: A supreme sense of expected geometric balance in the universe, reflected in our civilization, which is itself, a balance to something else in the universe.**

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: Participants may need to decide what, if anything, is the difference between ‘cosmos’ and ‘universe’; if they are considered the same, then there is (mainly) no difference between the major and minor versions of this Fundamental Reality. There are numerous discussions on the internet (Quora, Stack Exchange, university astronomy departments) about the two terms.
- ✓ Note: Terra Australis is the source of the name of Australia. It comes from a time when the educated believed that the cosmos consisted of perfect spheres on which the stars resided.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- The essence of this is balance; it is the operative keyword in both Public Space and Galactic Space for this position’s supra-legitimacy.
- In Galactic Space, it may be expressed by expansion in all directions, arrangement of colonies in relation to the Homeworld (if it is in the Galactic Space), etc.
- In the Public Space, it may also be arrangement related, but could also extend to other areas, such as even and opposing development of colleges and technological development. Would opportunities be ignored if they lead to imbalance?
- It might also be expressed in balance of Government Titles, symmetry of Conflict Checks. Or in numbers of Cultural Pieces on the Public Space.
- Balance means both patience (because sometimes it takes time for the cycle to complete) and impatience with that which is sticking out (the nail that sticks up the most gets hammered down the hardest). Balance might also require and justify despotic tyranny and acts of war to maintain or restore.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Tutelary

*“You have often heard me speak of an oracle or sign which comes to me ... . This sign I have had ever since I was a child. The sign is a voice which comes to me and always forbids me to do something which I am going to do, but never commands me to do anything, and this is what stands in the way of my being a politician.” – Socrates in Plato, [Apology of Socrates](#)*

**Major:** The received traditions and ancient codes, and the expectations of your native populations place the government in an especially (or heightened) tutelary position. It is expected that the wisest shall govern (which is far more often not the case), and the population is their protectorate. The protected and the guardians legitimize each other until something fails.

**Minor:** The received traditions and ancient codes, and the expectations of your native populations place the government in an especially (or heightened) tutelary position. It is expected that the wisest shall govern (which is far more often not the case), and the population is their protectorate. The protected and the guardians legitimize each other until something fails. The expectations would likely transfer to any new alien rulers...

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- Tutelary as a supra-legitimacy is parental instead of attack guard dog. Thus, foresight is one of the most valued attributes, the government is expected to exercise generational foresight (which governments rarely do) instead of vote-getting politics of the moment. And foresight requires a rare, profound level of understanding. Thus, Tutelary can be expressed in this sense as ‘good government.’
- Failure as a tutelary is easy to define – entropy events, loss of population and industry, colonization failure – harm, stagnation – but participants should also focus on, and discover, the less obvious proactive tutelary steps.
- To stay within the bounds of this Fundamental Reality will require the position players to act as most of us wish our government would, act in a way that would generate genuine respect for elected representatives and bureaucratic servants. Thus, the position players should simply read the news; you already easily know what you think is wrong, now figure out what is right and how to accentuate it.
- This Fundamental Reality embraces a cagy sort of forward expectation.
- The ‘God-view’ inherent in GGDM makes this task easier than in the real world, so any failure should be considered a gross violation. Echoes and ramifications.

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# Tyranny of Threes

*“The rule of three is a writing principle that suggests that a trio of events or characters is more humorous, satisfying, or effective than other numbers.”*

– from Wikipedia article, “Rule of Threes”

**Major: Threes rule your civilization; your species might even be tri-sexual. Or perhaps bi-sexual with an encultured one child per-couple limit due to crowding and resource depletion. Whatever it is, when your people see two (either in a pair or opposites), they look for an emergent third.**

Minor: Threes rule your civilization; your species might even be tri-sexual. Or perhaps bi-sexual with an encultured one child per-couple limit due to crowd-ing and resource depletion. Whatever it is, when your people see two (either in a pair or opposites), they look an emergent third.

- ✓ Note: A Type 3 Fundamental Reality imposes a ‘supra-legitimacy’ requirement on the position, above and beyond any Government Titles; an Intervention Potential Plus (IP+) may be assessed for violation at the discretion of the Concierge.
- ✓ Note: The Major and Minor forms of this Fundamental Reality are the same, the difference is in whether it’s a tyrant or enlightened despot.

Supra-Legitimacy *sine qua non*:<sup>1</sup>

- The fundamental of this Fundamental Reality is the expectation of threes, the shaping of the worldview in threes, the expectation of threes occurring throughout the universe, if we just know where to look for them. Compare this to human understanding based on opposites and unity of opposites; the base understanding of this species is both less stark and more complex at the same time.
- The understanding in threes has little or no relationship to good or bad; each thing in the three might be either or neither.
- The Tyranny of Threes Fundamental Reality is an extreme version of the Rule of Three (no longer just a rule of thumb, but an existential threat that is tyranny). The, or a, Rule of Three exists in many different areas (statistics, Wicca, fictional writing, etc.), and any of them could be applicable to satisfy this Fundamental Reality requirement. The position players may need to ‘defend’ a little by showing the Concierge which Rule of Three they are using to satisfy the Fundamental Reality.
- Visual evidence of this Fundamental Reality might also express in the way that objects are arranged on the Public Space, the organization of ships into fleets, the types of Government Titles and Power Activations, and so forth.
- Of the Type 3 Fundamental Realities, this might be the most challenging to determine if or if not a violation occurred. Perhaps if a pair of something was done by the position, the third could be the Intervention Potential Plus?

<sup>1</sup> *Sine qua non* is an essential and indispensable condition, action or part. Actions, or failure to act, or events and circumstances opposite of those listed above, are violations of this Fundamental Reality.

# A Simple Proof

---

*“People from North Korea are very paranoid,’ said Kim Heekyung, a clinical psychologist at Hanowan [in South Korea] who supervises group therapy for defectors. Paranoia, she added, is a rational response to reality in North Korea.”*

– Blaine Harden, “N. Korean Defectors Bewildered By the South,”  
Washington Post, April 12, 2009

---

I am holding a ball; I let it go. It falls to the ground. I do it again and again, I notice that the ball only travels in one direction when I let it go. It has no options to go up, left or right unless I force it; it will always fall down. After about the 100th repetition, I decide this is not a coincidence; it must a law of the universe, at least where I am standing. Similarly, whenever you are trying to accomplish anything, it seems that something stupid always has to happen. Out of all of the possible results, in all of the possible universes, the one where the stupid thing happens is the one that always happens. After some hundred repetitions, it is no longer a coincidence. Someone or something apparently takes pleasure in tormenting us in petty ways and has an eternity with nothing better to do.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Rational Frustration. Rational Paranoia. Grinding Teeth. To Screw List.<sup>1</sup>

Character & Chorus:<sup>2</sup>

- Survivalist
- Rational
- Cartesian
- Biased
- Persecuted

---

<sup>1</sup> “We say someone has a mental problem if they are more paranoid than we think makes sense in our society. But of course personal circumstances will vary, so we should beware of overconfident paternalism in judging when others are excessively paranoid.” – Robin Hanson, Overcoming Bias (blog), April 13, 2009.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Anthropomorphism

From our earliest childhood and the earliest ‘modern’ history of humanity, human traits and forms have been attributed to animals – the sly fox, the grumpy bear, the quick-witted rabbit. Someone is being fox-like, bearish, or squirrely. It is possible that the earliest forms were a result of either an architectural change in the human brain or hunters empathizing with the animals they killed. Early religions developed anthropomorphic deities and spirits to represent the natural world and human traits. During the game, positions taking this Fundamental Reality will present a stereotype persona consistent with the traits typically attributed to certain well-known animal species.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: This Fundamental Reality does not automatically assume an anthropomorphic physical appearance of the species holding this Fundamental Reality. However, science-fiction settings and gaming are well populated with sapient and technologically advanced cat-like, dog-like, lizard-like, and bird-like alien species.
- ✓ Note: The choice of species must be made before the game and played consistently through the game to its logical conclusion. The persona cannot be changed once the game begins.
- ✓ Note: Furrries! Archetype anthropomorphized animal persona (i.e. fursona, your what’s AAAP). Animal Farm (George Orwell, 1945).<sup>1</sup>

## Character & Chorus:<sup>2</sup>

- Wise Owl
- Sly Fox
- Slow Tortoise
- Squirrely
- Industrious Beavers, Ants
- Careless Grasshopper
- Smart Crow
- Batty
- Rabbitry
- Hounding
- Loyal like a Dog

---

<sup>1</sup> In the Beastmaster TV series, the Enchantress turned his two ferret friends into humans so she could interrogate them. But they kept acting like ferrets, voraciously looking for food instead of answering. ☺

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Catastrophization

---

*“If ten years from now you were to realize that this ‘catastrophe,’ although clearly not part of your plan, was actually the best thing for you at the time...”*

– “Cognitive Distortions Definition of Catastrophizing,” cogbtherapy.com (blog), September 10, 2015

---

Despite having made it to the 1<sup>st</sup> Era and the invention of Stardrive (and all those other achievements), avoiding nuclear annihilation, the outward face that your species presents to the rest of the universe is one of paranoia and catastrophization. Utopia has simply refused to appear. You just know that ‘they’ are out to get you and the latest bad news can always be traced back to ‘them.’ This is not just a political gimmick of the current government to distract the population from their own internal problems; no sir, the struggle is real!

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Catastrophizing current and future events. Cosmic persecution complex. Waiting for the other shoe to drop. Waiting for Darkness (Ozzy Osbourne, 1983). Paranoid? Who’s paranoid?

Character & Chorus:<sup>1</sup>

- Pessimistic
- Distrustful
- Fearful
- Depressed
- Crouched
- Clenched
- Careful

---

<sup>1</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Claptrap

---

*“There is power for good and evil on the net and we are starting to see how it can be used for both purposes,’ Marc Andreessen, founder of Netscape and one of the gurus of the internet revolution, warned an internet magazine back in 1999. ‘The internet is just a reflection of us. There’s still a lot of euphoria around the technology but ... the net is a terrific place for people who share a common hatred to get together and reinforce their tribalism.’”*

– Paul Sheehan, “Sinking to the level of internet claptrap,” Sydney Morning Herald, September 15, 2013

---

It seems that the destiny of your species is to keep the galaxy supplied in claptrap. The best sort of claptrap is the kind that is not obvious at first glance. Sometimes absurdity turns out to be truth.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Absurdity. Nonsense. Spindizzy.

## Character & Chorus:<sup>1</sup>

In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Conspiracy Theory

*“Because official accounts are insufficient and disbelieved, people are turning to conspiracy theories, defined as ‘the unnecessary assumption of conspiracy when other explanations are more probable’ (Aaronovitch, 2009, p. 5). This disjunction between reality and belief is not necessarily false, considering some contemporary and historical examples where conspiracy did happen – for example, the attempt to experimentally test the effect of mind control by dosing people with LSD in the MKUltra program of the CIA (Wilson and Rose, 2013).”*

– Andreas Goreis and Martin Voracek, “A Systematic Review and Meta-Analysis of Psychological Research on Conspiracy Beliefs: Field Characteristics, Measurement Instruments, and Associations With Personality Traits,” *Frontiers in Psychology*, February 11, 2019

Does anyone think it was an accident that all of the Major Races in the game arrived in or were resident in the Galactic Space all at the same time (i.e. the beginning of the game)? No, it’s not an accident. **They** set up that way for some unknown reason. And if they won’t come forth and provide a transparent reason, then they must have a nefarious plan. We don’t want to let **them** play us for fools.<sup>1</sup>

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: ‘They.’ ‘Them.’ Coincidences & Conspiracies. Distant, monolithic entities. Unknown motives & plans. Everyone has a conspiracy theory. Some conspiracies are real.

## Character & Chorus:<sup>2</sup>

- Suspicious Minds
- Anxious
- Bunker mentality
- Disagreeable
- Paranoia
- Narcissism
- Cynicism
- Novelty

<sup>1</sup> In a reimagined *Battlestar Galactica* discussion with a friend, I think it was early in the second season, I described the remaining human population on the fleet of ships as being in a petri dish for Cylon study.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Danse Macabre

*‘All are equal in death.’*

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Egalitarianism in Death.<sup>1</sup> Death humor, gallows humor. Grim & Ghastly. Medieval woodcut allegory. *Memento mori*. Holographic performances of deceased music stars with live dancers.

## Character & Chorus:<sup>2</sup>

- Mortal
- Artistic
- Medieval
- Humble
- Pained
- Repentant
- Charitable

---

<sup>1</sup> Death was the ‘liberal’ release from the conservative, religious, impoverished, structured society of the Middle Ages. The revolution was in bringing liberalism to the living, worldly liberalism.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Deadpan

---

**Ambassador Mollari:** [emotional] *“Why don’t you eliminate the entire Narn homeworld while you’re at it?”*

**Mr. Morden:** [menacing, chilling deadpan] *“One thing at a time, Ambassador. One thing at a time.”*

– Babylon 5, “Revelations” (1994)

---

It is said that your species once expressed their feelings by playing pipes; that a language developed of pipes. Then the last piper died and interest was lost in expression. Having no other means of bodily or outward expression recognizable to most alien intelligences, and little desire to communicate with them, your species presents an expressionless ‘face’ (if they had one) to the universe.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Deadpan Comedian...

## Character & Chorus:<sup>1</sup>

- Blank
- Stoney
- Stoic
- Calm Demeanor
- Un-emotional<sup>2</sup>
- Impassive

---

<sup>1</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

<sup>2</sup> Deadpan is not without emotion, the deadpan actor, speaker or comedian has emotions, rather, it is deliberate emotionless and impassive delivery. Thus, contrary to the description of this Fundamental Reality, in humans, deadpan is a deliberate act. The participants will need to determine if this species is emotionless or simply deadpan, as this may affect Aspects and other parts of the game.

# Doom & Gloom

*“You want me to be all doom and gloom, or just shut up?”*

– Stephenie Meyer, *Breaking Dawn* (2008)

Mr. & Mrs. Doom & Gloom have entered the room! Your message to the Galaxy is that we are all DOOMED! Maybe we are all DooMED to an intergalactic war of mutual destruction because we can't get along. Maybe some divine intervention is at hand and, you, the righteous, will survive while all other wicked civilizations perish. Perhaps living is just pointless and we are all going to fail no matter what we do, so why are we out here trying? Pick you poison and broadcast it to the Galaxy. Maybe you have an angst to grind? Maybe your lover just left. Just try not to be too over the top because it gets old very quickly.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Predictions of disaster, the end of the world. Repent! M.A.D.-ness. Big Crunch vs. Heat Death of the Universe. Notice the page number below?

Character & Chorus:<sup>1</sup>

- Pessimistic/Nihilistic
- Hopeless
- Tragic/Ill-fated
- Glum
- Miserable
- Dark
- Confused
- Guilty

<sup>1</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Epic Interpretation

*“The word ‘epic’ is one of the most misused and overused filler words in the English language. ... If you have used the word out of context, which means any time since 2008, you should stop whatever it is you’re doing and start plowing fields, because you lack the ability to form language that doesn’t involve mimicking others, and are therefore a cow. ... Using words like ‘epic’ to describe how extremely impressed you are by everything has ruined the word. If everything is epic, nothing is epic.”*

– Maddox (George Ouzounian), “Not everything is epic, shitheads.”  
thebestpageintheuniverse.net, undated blog

Everything is ‘epic’ nowadays. Before that, everything was ‘bogus’ or ‘rad’ or ‘hyper.’<sup>1</sup> Before that, everything was ‘super’ and ‘super-duper’ in the 1970s. After good became bad, and bad became good, and cool became kewl.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Periodic Overuse of Words, Mind-blowing Heroic Melodrama, Out-of-this-World Significance. This Fundamental Reality is about cliquish language.
- ✓ Note: If something is ‘truly epic’ were all of the other ‘epic’ things before it less truly so?

Character & Chorus:<sup>2</sup>

- Drama Queen/King
- Histrionic
- Self-Promoting
- Larger than Life
- Hammy
- Over-blown
- Cliché

<sup>1</sup> I recently encountered an intellectual blog where everything was ‘hyper-’ this and that – hypermodern, hyperconnected, etc. I asked the author if super-carriers (aircraft carriers over 70,000 tons displacement) should be renamed hyper-carriers. I never received a response, of course.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Evil Empire

*“Yes, let us pray for the salvation of all of those who live in that totalitarian darkness – pray they will discover the joy of knowing God. But until they do, let us be aware that while they preach the supremacy of the State, declare its omnipotence over individual man, and predict its eventual domination of all peoples on the earth, they are the focus of evil in the modern world .... So, in your discussions of the nuclear freeze proposals, I urge you to beware the temptation of pride – the temptation of blithely declaring yourselves above it all and label both sides equally at fault, to ignore the facts of history and the aggressive impulses of an evil empire, to simply call the arms race a giant misunderstanding and thereby remove yourself from the struggle between right and wrong and good and evil.”*

– Ronald Reagan, famous “Evil Empire Speech,” March 8, 1983

Evil empire, complete with Dark Lords (both supervillains and faceless bureaucrats), hallow malicious laughter, and pin-stripes. Throw lots of money around, hire hench-  
goons named Bruno, Batty and Guano, buy or take what you want, build a skull-shaped  
skyscraper headquarters, and laugh in their face. Change the world so that it revolves  
around your desires, regardless of consequences to others. Maybe even taunt them.  
Then crush them. Mercilessly.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Physical or Political Extinction of your species is possible. Hallow and obnoxious behavior, corny lines and overbearing threats of others imminent demise, profoundly wicked, immoral, depraved. Dark comedy, black humor. Political incorrectness. The need to gloatingly explain your diabolical plans to the imminent victims... so they can appreciate your cleverness before their demise.<sup>1</sup> May be hazardous to your species long term viability in the game.
- ✓ “I didn’t spend six years in evil medical school to be called mister!” – Dr. Evil.

## Character & Chorus:<sup>2</sup>

- |                 |                         |
|-----------------|-------------------------|
| ➤ Self-centered | ➤ Manipulative          |
| ➤ Warped        | ➤ Subtle or Overbearing |
| ➤ Ingenious     | ➤ Focused/Goal Oriented |
| ➤ Vulnerable    | ➤ Ambitious to a fault  |
| ➤ Confident     |                         |

<sup>1</sup> This was comically exploited in a television commercial for insurance in 2018 titled, “A presentation in world domination.” Rather than executing the hero – tied to a chair, with a dangerous looking oversized weapon pointed at him – the villain rolls out a Power Point projector to explain his diabolical plan.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Girly Girl – Manly Man

Be the Little Missy of the galaxy! You can even be a little missish if you want. Sweet Lolita dress required.

In the alternative, by the Power of Grayskull!, this Fundamental Reality can also be played in the opposite, as Manly Man. And Crom count the dead!

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: This Fundamental Reality delves into the feminine and masculine tropes that have been around since the first creation myths. These can be regarded as either solely human and among the human players (for amusement) or they can be regarded as universal forces that exist in all species evolved on exoplanets.<sup>1</sup>

Character & Chorus:<sup>2</sup>

- Feminine::Masculine
- Demure::Brazen
- Squeamish::Thick-skinned
- Sentimental::Unfeeling
- Effeminate::Manly
- Lolita::MILF
- Little Endian::Big Endian
- You get it.

---

<sup>1</sup> There is also a running neuroscientific-social dispute about whether men and women have physiological differences in their brains. This could have significant ramifications and might be of interest to this Fundamental Reality.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Housecat Happy

---

*“Though chains be of gold, they are chains all the same.”*

– Bruce Cockburn

---

No cat is happier than the lady Tabby cat who finds a new, unsniffed, unknown, unexplored space.

Batting things around is fun, especially things that crinkle and crackle, and if you are not supposed to be playing with it, the better.

A quiet sunny window (with chirping birds) greatly improves your perspective on life.

Getting food from others is the second happiest moment of the day, right after being the first to mess the clean litterbox.

Meowing/growling loudly will get attention and anything you want (except freedom); claws must be sharpened at least 20 times a day.

Everything is done for your entertainment; sometimes it's dangerous too!

Living in a Gilded Cage.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.

Character & Chorus:<sup>1</sup>

- Contented
- Domesticated
- Blissful
- Sleepy
- Curious
- Familiar
- Accepting

---

<sup>1</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Humblebrag

I'll be in sweats everyday [attached picture of sender standing on deck of massive warship crewed by military officers in uniform]<sup>1</sup>

Just achieved godhood. Must be a mistake. Wonder how long 'til God takes it back?<sup>2</sup>

Seriously? 2 Diplomatic Protests in 1 day? Only me. I should enter a contest.<sup>3</sup>

That's cool! I got my dream internship and got funding to travel to Paris. Ugh, it's so hard to decide which one to choose.<sup>4, 5</sup>

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Humblebrag occurs when people want to boast, but are trying to be modest by showing humility or by adding a complaint. Boasting by not boasting.
- ✓ Note: If you are not on social media and cannot humblebrag naturally, in 140 characters, you probably should not take this Fundamental Reality. If the preceding is false, have fun driving the other positions insane with galaxy-sized false modesty while you are kicking their alien butts.

Character & Chorus:<sup>6</sup>

- Irritating
- Braggart
- False Modesty
- Natural complainer

---

<sup>1</sup> Modeled after Instagram by Jordyn Woods which had a picture of her in front of a shiny black BMW.

<sup>2</sup> Modeled after an actual Tweet by Jared Leto.

<sup>3</sup> Modeled after an actual Tweet by the band Counting Crows.

<sup>4</sup> Actual humblebrag used in a study published in the Journal of Personality and Social Psychology.

<sup>5</sup> All text modeled after actual social media posts shown in or the study referenced from Victoria Allen, “‘Humblebragging’ is MORE irritating than outright boasting because it makes you look insincere,” Daily News, January 11, 2018 (caps in original).

<sup>6</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Kawaii

*“If you are feeling down, I can feel you up!”*

– anonymous, found on kwaii GIF site

The cuteness is the function. Culture of cuteness. Disarming cuteness. Gender performance. Neotenic.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Sweet Lolita fashion. Hello Kitty. ACeR – Acute Cuteness Revulsion (for which one takes an ACeR inhibitor pill with a shot of whiskey).
- ✓ Note: Cuteness is a human thing, it plays on our nurturing instincts, it is our reaction to a baby or a small furry mammal that is manipulated by animation, filmmaking, and books, and in some places, culturally to smooth over conflict and stress. It is difficult to think that the concept may exist among sapient lizards or in any species that does not nurture their young, or where the young are not helpless. So a distinction must be made in play between the cuteness persona’s appearance to the human players in the game, and whether or not it works on other creatures in the game universe who might simply be indifferent to it (e.g., ants<sup>1</sup>).

Character & Chorus:<sup>2</sup>

- Big-eyed innocence
- Shy
- Coy
- Childlike rapport
- Non-threatening
- Evokes nurturing instincts

<sup>1</sup> Though much maligned and respected for their seeming single-minded performance of tasks, ants do nurture their young and have been observed carrying injured comrades back to the nest.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Left & Right

*“And the parting on the left  
Is now parting on the right  
And the beards have all grown longer overnight!”*  
– The Who, “Won’t Get Fooled Again” (1971)

Whatever your internal politics may be, your interstellar diplomacy and vision for multi-species interstellar civilization is either consistently far left or far right. The position’s players should choose before the game to be either leftist or rightist, whichever they are more comfortable playing.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Leftist and rightist are hard to pin down exactly in our political language, but it’s one of those things that you know it when you see it. The players will know what they think are left or right positions, characteristics and ideologies and should play them in the game.<sup>1</sup> There are not a large amount of theatre-like character traits that establish conclusively that one is left- or right-leaning; position players will create those traits in the game by consistently promoting far leftist or far rightest views in game interactions; the ‘far’ is necessary to create recognizable character for the position.

## Character & Chorus:<sup>2</sup>

- Liberal (leftist)
- Egalitarian (leftist)
- Anti-consumer/ Anti-materialism (leftist)
- Conservative/Reactionary (rightist)
- Hierarchy/Social Stratification (rightist)
- Traditionalist/Religious<sup>3</sup> (rightist)

<sup>1</sup> Rightist originally meant monarchist in the French Republic; there are not many monarchist around now, demonstrating that the political terms left and right have shifted left, right, and center with the social, economic and political changes of the 19<sup>th</sup> and 20<sup>th</sup> centuries. Thus, it is expected in the game that players from different places may have slightly differing ideas on what it means to be leftist or rightist.

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

<sup>3</sup> ‘Hierarchy’ in English derives from the ancient Greek terms for the rule of priests and presiding over rituals.

# Moocher

*“You want to talk about a senseless killing? A plate of food. The defendant alleged that the victim had been mooching food from his mother and that upset him,” District Attorney Patrick Dougherty said. “The ironic thing was she made a plate of food for the defendant and one for the victim, for some reason that didn’t sit well with the defendant.”*

– Ashley Hardaway, “Man gets 4½ to 10 years in shooting death over food,” Channel 4 News, Pittsburgh, January 31, 2015

IOUs never repaid. The psychology of begging is to put the target into a position where they feel obligated to help, despite the fact that there is no immediate emergency, and despite any misgivings or suspicions the target may have toward the requestor or the, probably fictional, reasons for the request. Whether the begging is successful or not, the target suffers a degraded image of themselves, either because they refused to help when asked and could have, or because they feel as though they have been taken advantage of when they help someone they probably consider inferior.

Mooching has a more personal connotation, as being between neighbors or people who know each other, who have some established relationship; as opposed to the beggar on a crowded street who is in a position to be ignored (an object), or someone who approaches strangers on the street and tries to strike up a conversation leading to a request.

People feel less offended when the solicitor is a child or pet animal; no one thinks that an animal or child is being deceptive in asking for food or drink. In my grandmother’s youth, it was common to send children to the neighbors to mooch, it served as a social introduction to the neighborhood and created space separation for the parent.

The moocher is also debased by this activity; it’s amazing the stories that people will spin to get a couple of dollars or a loaf of bread or cup of sugar or a few cigarettes...

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.

## Character & Chorus:<sup>1</sup>

- Smooth-talker, confidant
- Crafty
- Calculating
- Creative
- Conniving
- Exploitive
- Entitled
- Best Drinking Buddy

<sup>1</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Ontological Obsession

---

*“I have been far away all this time, and I haven't left the room...It was clear to me that it was because I was a spirit that I had so vividly ‘seen’ and felt a place a thousand miles away. Space was nothing to spirit!”*

– Helen Keller, My Religion (1927), p. 33

---

You are going to drive everyone in the game into another state of being!<sup>1</sup>

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Whatness. Howness. Category of Beings. Ontological Terrorism. Entity Words. Shakespeare. Universals and Particulars. Existenz - err, Existence.

Character & Chorus:<sup>2</sup>

- Philosophical
- Tendentious
- Preoccupied
- Compelled
- Disturbing
- Prepossessed
- Logomaniac
- Persistence of Existence
- Idée fixe

---

<sup>1</sup> “Process philosophy is based on the premise that being is dynamic and that the dynamic nature of being should be the primary focus of any comprehensive philosophical account of reality and our place within it. Even though we experience our world and ourselves as continuously changing, Western metaphysics has long been obsessed with describing reality as an assembly of static individuals whose dynamic features are either taken to be mere appearances or ontologically secondary and derivative. For process philosophers the adventure of philosophy begins with a set of problems that traditional metaphysics marginalizes or even sidesteps altogether: what is dynamicity or *becoming* – if it is the way we experience reality, how should we interpret this metaphysically? Are there several varieties of becoming – for instance, the uniform going on of activities versus the coming about of developments? Do all developments have the same *way* of occurring quite independently of *what* is coming about? How can we best classify into different *kinds* of occurrences what is going on and coming about? How can we understand the emergence of apparently novel conditions?” – from Stanford Encyclopedia of Philosophy article, “Process Philosophy.”

<sup>2</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Paranoid. Delusional.

---

*“Finished with my woman ‘cause she couldn’t help me with my mind  
People think I’m insane because I am frowning all the time.”*

\*\*\*

*“Make a joke and I will sigh and you will laugh and I will cry  
Happiness I cannot feel and love to me is so unreal.”*

– Black Sabbath, “Paranoid” (1970)

---

Are they laughing at you or with you? They should double-think that. Why are those two talking over there? One thing is sure, they will remember you for a long time.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: The leader of a certain country on the northern border of China that we cannot name here. Paranoid that we are deluded, or deluded that we are paranoid? Might as well add some megalomania too.

Character & Chorus:<sup>1</sup>

- Anxious/Fidgety
- Conspiratorial
- Idiosyncratic
- Eccentric
- Suspicious
- Fearful
- Conceited

---

# St. Anger

**Missy:** *I think you're forgetting you're surrounded by a bunch of very old, very angry Daleks. ... Meet the locals? All blind and squelchy and out of their tiny minds, but they can still smell! Nobody hates like a Dalek.*

\*\*\*

**Dr. Who:** *Generations of Daleks just woke up very cross, and they are coming up the pipes. – from Dr. Who, “Witch’s Familiar” (2015)*

Have you ever known an ‘angry person’? Known someone who somehow seemed angry even when they were smiling and seemingly having fun? The underlying current of your species civilization is one of ‘anger’ whether they have a word for it or not; your species will act toward other species as what the humans would call an ‘angry person.’ Except that they don’t know it; to your species, the way they present themselves to the universe is ‘normal.’

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Some languages sound angry, gruff or harsh to speakers of other languages, one of the most common discussions of this type on the English language internet is the spoken sound of German to English speakers. Some offer that German doesn’t have more throaty sounds, isn’t more guttural than other languages, and is actually easiest for English speakers to learn as a foreign language. Still, others do admit that it does not have a roll-off-the tongue melodic sound that other languages with the same linguistic base do to English speakers. It’s a mystery, but the independently recurring perception each generation is enough to make it ‘fact’ to English speakers.
- ✓ “You inspire my inner serial killer.” – anonymous meme.

Character & Chorus:<sup>1</sup>

# “Vampires in the U.S. are Dying of AIDS”<sup>1</sup>

How would you describe ‘tabloid personality disorder’ if such a clinical diagnosis existed? A compulsive need for sensationalism, a disregard of facts, trivializing the sensational and sensationalizing the trivial? All, not in any form of propaganda, but rather sensationalizing for its own sake.

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Huh? What did you say? Aren’t vampires by definition dead already?<sup>2</sup> Who makes this stuff up?
- ✓ Note: Google dictionary notes that the North American usage of ‘tabloid’ differs, specifically meaning “sensational in a lurid or vulgar way.”

## Character & Chorus:<sup>3</sup>

- Double take
- Histrionic
- Hammy (‘chewing the scenery’)
- Melodramatic
- Sensationalist, lurid, vulgar
- Drama Queen/King

---

<sup>1</sup> This was a memorably ridiculous super-market tabloid headline I saw in the early 1990s when I was working on a night cleaning crew, while going to college during the day. I might have also been watching Forever Knight episodes around that time.

<sup>2</sup> Yes, there is a narrow subculture group who call themselves vampires – often thought to be goths, but goths don’t really like them from what I have read – but I didn’t get the impression that this was what was meant by the headline. Perhaps at best the headline was a double entendre?

<sup>3</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Vociferous!!!!!!

*“Meowing is an interesting vocalization in that adult cats don’t actually meow at each other, just at people. Kittens meow to let their mother know they’re cold or hungry, but once they get a bit older, cats no longer meow to other cats. But they continue to meow to people throughout their lives, probably because meowing gets people to do what they want. Cats also yowl – a sound similar to the meow but more drawn out and melodic. Unlike meowing, adult cats do yowl at one another, specifically during breeding season. When does meowing become excessive? That’s a tough call to make, as it’s really a personal issue.”*

– ASPCA article, “Meowing and Yowling,” [aspca.org](http://aspca.org), undated, unattributed

Polite aliens describe your species as vociferous!!! The other alien riff-raff of the universe use less flattering terms for your species!!!!!!

- ✓ Note: A Type 4 Fundamental Reality provides a persona for the position to develop and play in the game. Hopefully, it will be taken for and as enjoyment. A position is limited to one Type 4 Fundamental Reality, which has neither Major nor Minor forms.
- ✓ Note: Vociferous Synonyms: blatant, caterwauling, clamant, clamorous, obstreperous, squawking, vociferant, vociferating, yawping (or yauping), yowling (from Merriam-Webster online dictionary).

Character & Chorus:<sup>1</sup>

- Clamorous
- Vehement
- PUSHY!!!!!! RUDE DUDE!!!!!!!!!!!!
- Demands and Protests
- SPEAKING IN ALL CAPS!!!! (WITH TOO MANY EXCLAMATIONS!!!!!!!!!!) BECAUSE ANYTHING YOU HAVE TO SAY IS THE MOST **EXTREMELY IMPORTANT** THING TO BE SAID AT THE MOMENT!!!!!!!!!!!!!!!!!!!!

<sup>1</sup> Theatrecrafts.com Glossary of Technical Theatre Terms at *character*: 1. The mental and moral qualities distinctive to an individual within the world of the play and at *chorus*: 1. In Greek theatre, a character (or group) representing an element in the drama which comments on the action, and advances the plot.

# Judgment Day

Ripple 1: On all colonies of this position's Native Population Type, regardless of current ownership, 15% of the population vanishes (fractions truncated). This does not affect the Habitability Class or Maximum Habitability of the planet, there is no loss to either.

Ripple 2: For three random Aspects currently on the position's Aspect List, 50% is added to the number of Turn Cycle wins in the game (rounded up).

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Loss of population factors – this time likely the result of people never being born – is generally not viewed favorably. However, it might not be horrible if several colonies are at or near Maximum Habitability and loss of population due to overcrowding would be a Disruption Event at the colonies or bad for the Government Titles. Loss of population due to this Type 5 Fundamental Reality is not a Disruption Event because they never existed. It might also be a rude surprise for any conqueror when subjects suddenly disappears.
- Ripple 2 could cause or accelerate Kairotic Moments for this position and for any others who share the same Aspect. Fifty percent added to nothing is nothing, so it is possible that Ripple 2 will have no effect.
- Thus, this Type 5 Fundamental Reality is capable of affecting other positions directly and indirectly.
- Both Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game where their effects will be more devastating in terms of numbers.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Neurotic Paradox

**Ripple 1:** One to three population factors (amount randomly determined) times the current Era are lost from each colony of the position's Native Population Type each Regular Turn regardless of sovereignty.

**Ripple 2:** Five to ten RPs per turn (amount randomly determined) times the current Era are subtracted from the Treasury *before* the processing of each Regular Turn.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Ripple 1 perhaps represents some ritual human religious sacrifice or ritualistic local warfare; it is by definition neurotic because despite being deplorable and damaging the civilization, it must continue and is perpetrated through generations. This is not considered a Disruption Event at each colony affected. Alien overlords whose culture and psychology does not fully embrace the practice may find ways to suppress it after understanding (as part of Naturalization).
- Ripple 1 has an interesting double edge. Absent Census Power activations, some native colonies may destroy themselves, it also makes small colonies problematic. On the other thumb, it might sometimes postpone loss of population growth due to Maximum Habitability and avoid that Disruption Event. Aliens who share a Balkanized Planet might also be pleased to have more room to expand...
- Ripple 2 easily represents the socio-economic cost of neurotic social behaviors on the civilization. In our current world, it should not be too difficult to imagine what this might represent – it is whatever crisis, habit, addiction, or activity is in the news with an annual monetary cost estimate in lost man-hours, taxes, social medical costs, etc. yet is a problem that is not going away or if it does, is replaced by something seemingly worse.
- The key to this Type 5 Fundamental Reality is the current Era multiplier, which suggests that the problem is inherent and will never be solved short of rewriting the universe (this is a Fundamental Reality that did 'rewrite' the universe!). It would be like uninventing the atomic bomb by rewriting the universe – we wouldn't be here.
- The effects of both Ripples are permanent once it occurs, however, checks need to be made each time for any un-triggered Ripple until both have been triggered.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Night Capps

**Ripple 1:** The position's total native population is reduced to and capped at 300 factors on sovereign colonies.

**Ripple 2:** All expiring Corporations are automatically renewed for the next three turns, regardless of the position's wishes, but without need for power activations, but one random currently passing Conflict Check fails each of those Regular Turns.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Ripple 1 creates a 'maximum habitability' in Galactic Space for the species when it happens. The inability to grow beyond 300 populations on sovereign colonies in the Galactic Space is not a Disruption Event, and does not affect the Maximum Habitability of any sovereign Friendly Colonies.
- The key term for Ripple 1 is 'sovereign' – population can grow, if allowed, on non-sovereign colonies, thus the survival of the species may depend on non-sovereign population. Ripple 1 may also cause the position to become militant and aggressive, conquering **alien colonies** in order to grow once the limit has been reached.
- The cosmic reason for Ripple 1's effects are unknown. As are the alternate historical connection, if any, between Ripples 1 and 2.
- Ripple 2 perhaps represents a period where the Corporations control the government. It may be good or bad, depending on timing, saving Fuzzy Groups and related Power Activations but also making the position unable to change, sort of rigid, perhaps being forced to continue a process that is currently extraneous. In some cases, it may have no effect at all.
- The effect of Ripple 1 is permanent once triggered, however, Ripple 2 is capable of being triggered multiple times in a game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered, even after Ripple 1 is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game where their effects will be more devastating in terms of numbers.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Permutations

**Ripple 1:** Position gains 15 extra COMs (Counter Operations Missions) which must be assigned immediately at the position's largest sovereign native colony, however, 1-3 randomly determined, currently passing Conflict Checks fail this turn.

**Ripple 2:** Each planet with a native colony of the position (whether sovereign or not) gains or loses (50% chance) one habitability class in relation to that species (in other words, the species changed the planet did not).

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Ripple 1 represents some sort of increased diligence or paranoia as a result of something that happened in the alternate reality that leaked into this one. Increased diligence leads to discovery of government corruption altering the course of the species future history. Like all Ripples, there is story potential ...
- Ripple 2 represents a situation where the species changed physically and globally; imagine if humans suddenly needed higher oxygen levels to survive on Earth due to some biological mutation in the distant past? This is why Habitability Class for other Native Population Types is not affected, only Habitability Class as to the Native Population Type of this position changes. In borderline cases, this could be catastrophic if the change requires Controlled Environment Technology to survive the new Habitability Class.
- Because these are Ripple effects, no one will notice except the players; though in cases where a whole colony suddenly dies, it may be a mystery of how they got there, and why (unless you interpret it as they were never there because they would have never been there).
- How these two Ripples might be related to a single incident in the past is the stuff of science-fiction imagination. But no one has invented it yet in this reality.
- Both Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game where their effects will be more devastating in terms of numbers.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Ripple Reformation

Ripple 1: The Foresight (pool of potential Social and Estate Titles) is completely discarded and redrawn.

Ripple 2: The value assigned to all Thesis Statements lodged against the position is doubled.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- The Foresight is a group of ten randomly generated Social and Estate Titles from which the position chooses Government Titles during set-up and whenever needed during play. It may be replenished by the Concierge if necessary during play if it becomes exhausted, though this should not happen often. Thus, discarding the Foresight is essentially wiping the slate, some ripple effect from an alternate history changes the potential Social and Estate Titles of a future civilization (e.g., if Athens had never been a democracy or Rome a republic). This Ripple may or may not matter to the position depending on circumstances such as other Fundamental Realities requirements and/or the situation in the game. Like all such things, a good draw can make everything feel better.
- Thesis Statements are lodged against the position by other positions and represent internal dissent. The second Ripple creates a situation making the dissent in the present louder, more organized, more compelling. This Ripple might trigger an in-game Reformation of the position; whether this is good or bad or otherwise, is a matter of circumstances, views and how it comes out in the end. Some positions may welcome a Reformation.
- Both Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Rock the Boat

Ripple 1: All sovereign Colony Defense Eras are upgraded to the current Era, however, all colony based Fighters and Ground Units *currently on colonies* vanish. Population in Ground Units is returned to the colony and resumes as if they never enlisted.

Ripple 2: All sovereign warships below the current Era are eliminated, vanishing as if they never existed (never mind the paradoxes).

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Overall, this Type 5 Fundamental Reality posits an extremist position with regard to defense and technology.
- Ripple 1 appears to stress a complete faith in defense bases such that no one thinks Fighters and Ground Units are necessary for defense (sort of like the post WWII argument for elimination of conventional forces to depend entirely on nuclear deterrence). The effects apply to *any* sovereign colony, which could be bad if the position has been out conquering aliens.
- Ripple 1 does not preclude building Fighters and Ground Units on colonies, only creates the risk they will be arbitrarily eliminated by the ripple.
- Ripple 2 is the most problematic, of course. Ships engaged in combat when the Regular Turn is processed and the 'leak' event triggers, will simply vanish as if they were never there (never mind the paradoxes – déjà vu), even if they have affected the combat before the 'leak' event caused them to vanish. The vanishing ships may also liberate Conquered Colonies and/or end an ongoing siege.
- Some 'greater intelligence' must be in operation to choose only warships, instead of all ships of a lower Era.
- First Era positions will be unaffected by this 'leak' event; there is no 'lower' Era. Like the people on the ground, they need never know it happened.
- Both Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game where their effects will be more devastating in terms of numbers.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# 6565

Ripple 1: Population no longer grows by Census Power activations, instead, population is constructed by activation of the Construction Power for the purpose of Colony Enhancement at 1 RP per population.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Perfect population control, there will be no more Disruption Events due to exceeding Maximum Habitability! However, population growth now costs RPs and is subject to possible failures of the Construction Power activation.
- Population growth is now a consuming effort, gathering RPs and multiple Construction Power activations across the colonies.
- This Ripple is permanent once it occurs and there is no further need to check.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Half-Life of Fruit Flies

Ripple 1: All native colonies, whether sovereign or not, experience a 5% loss of population at the end of each Regular Turn processed by this position. This also affects population on Orbital Cities, but not on Colony Ships. Fractions are rounded down.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Solves the Maximum Habitability problem. However, because of the constant loss, without frequent Census Power activations, the species will disappear (mostly).
- Because fractions are rounded down, the last population factor of a colony will never be lost.
- As this affects all population, it will be seen by any aliens co-habiting with or controlling colonies of this position's Native Population Type.
- This Ripple is permanent once it occurs and there is no further need to check.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# News You Can Use

Ripple 1: Each time this ripple occurs, the position must publish an Expose' News Event on the next Regular Turn.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Expose' News Events are intended to be mutually beneficial to the game as a whole. This may or may not cause an extra one or two during the game. This is only a 'problem' for positions whose players tend to be secretive. By taking this Fundamental Reality, position players are affirming that they do not disagree with publishing an Expose' News Event.
- This Ripple is capable of occurring multiple times in a game and will need to be checked each Regular Turn throughout the game; it could happen consecutively turn after turn (a 'leaky position' ☺). It is more likely to happen mid- to late-game than earlier in the game by operation of the percentages.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# The Big Crunch

Ripple: Your star never formed from the galactic dust, game over... just kidding! Any time that the position would gain Monads on the Public Space, instead one Monad is lost from the Public Space and all Diplomatic Spaces that have more than a First Space.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- When triggered, this removes any chance of gain of Monads on the Public Space and may affect other positions by removing a Monad from each Diplomatic Space. Loss in each Diplomatic Space as well negates any attempt to overcome this effect on the Public Space.
- The position doesn't have to worry about things getting farther apart on the Public Space...
- This Ripple is permanent once it occurs and there is no further need to check.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Uber Check

**Ripple 1:** The following Conflict Check is added to each of the position's Social and Estate Government Titles, including those in the Foresight and those which may be generated later. The Title fails if and only if this Conflict Check and at least one other Conflict Check are failing.

Estate Titles (F): The position has not Conquered, Looted, or Converted an **alien colony** or Landed a new colony in the last Regular Turn.

Social Titles: (T): Position owns no Friendly colonies on Balkanized planets with unconquered (i.e. non-sovereign) **alien colonies**, **and** has Landed a new colony in the last two turns **or** has Converted or Naturalized a colony in the last two turns (the first and one of the last two must be true for this Conflict Check to pass).

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- The new Conflict Checks require aggressive expansion every Regular Turn, the Landing option is only available because there may not be conquerable **alien colonies** within reach (especially very early in the game).
- The new Conflict Check is uber because it is outsized in importance, the Government Title cannot fail, no matter what, as long as it is passing. Keeping up this effort however, is arduous in terms of Power Activations and RPs constantly required, it is a singular focus of the position above all else.
- If this Conflict Check is failing however, all other Conflict Checks must be passing in order to keep a Title from becoming Disrupted. And that is difficult too.
- Whatever happened in the alternate reality that leaked into the position's game reality has caused the position to become hyper-expansive, this is the classic aggressive position.
- This Ripple is permanent once it occurs and there is no further need to check.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Falling Away

Ripple 1: All Shared Meanings in which this position participates cease to exist with loss of associated Monads gained on the Diplomatic Space.

Ripple 2: Kairotic Moments are triggered keyed to the two Aspects with the highest number of Turn Cycle wins currently.

Ripple 3: Aging of resources in the Treasuries of *all positions* is suspended on their next Regular Turn.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one two, or all could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Of all the Type 5 Fundamental Realities, this one will have the widest effect on other positions in the game, it will be hard to ignore.
- The loss of Diplomatic Spaces on both sides in Ripple 1 may be significant, depending on how the game has developed. Only Shared Meanings in which this position is a partner are affected, so all others are safe. The Diplomatic Spaces vanish as if they never existed; this may necessitate the Concierge moving things back to each position's Public Spaces.
- Ripple 2 does not necessarily imply that this position will be affected by a Kairotic Moment, it causes the premature triggering of Kairotic Moments across the Galactic Space. This position is only affected if it has one of those two Aspects on the Aspect List.
- No one is going to complain about Ripple 3, and may simply wonder how it happened, if Ripple 2 is not also triggered.
- All three Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Kodachrome

Ripple 1: All Research Pieces currently on the Public Space are removed.

Ripple 2: All ‘aging’ – Aspects, RPs in the Treasury, Faculties, Special Operations Missions and Counter Operations Missions is suspended for the next Regular Turn.

Ripple 3: The Taxation Power may not be activated for two Regular Turns.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position’s population. When a ‘leak’ event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position’s Native Population Type. Because of the chance, one, two or all could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Ripple 1, research undone, never happened. It likely will hurt, it’s just a matter of luck and timing in how much it hurts. The strategy would be to turnover Research Groups as quickly as possible (which is the strategy anyway). On the bright side, there will be some newly opened Monads on the Public Space...
- Ripple 2 represents a sort of stasis effect, a living memory loop; the world keeps moving forward, but the position is dragging its claws in the spinning hypersphere for a turn, being pulled sideways by some alternate history. The effect could be quite impressive overall on the following Regular Turn.
- The third Ripple may be related or unrelated, no explanation is provided. If the position just taxed, three turns is not too much to wait, but if the Treasury is getting down to gold dust on the floor, it may be a problem.
- All three Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# The Great Vowel Shift

**Ripple 1:** All Government Titles, excluding those in the Foresight, lose one random association (if being used) or one random current undisrupted Government Title immediately fails one Conflict Check they are currently passing (regardless of circumstances).

**Ripple 2:** The current endowment **and** class of the oldest College is moved to the next oldest College.

**Ripple 3:** The position cannot be affected by adverse News Events for the next three turns but cannot activate the Combat Power in the next turn.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one or the other or both could occur. The population will not be aware of the changes, but the position players will.<sup>1</sup>

## Ramifications:

- It is more likely that two of the three Ripples will happen.
- Vital Power Associations to Government Titles are optional, but if in play, they may make some Power Activations more expensive, changing the sequence of processing and cost dynamics. The other option of Ripple 1 could cause a Government Title to become Disrupted regardless of whether the optional associations are in play and rarely would that be considered good (unless change is needed).
- Ripple 2 causes the first ('oldest') College to become sort of 'unfounded' though it will still exist if not re-endowed for a few turns and can be re-endowed. Endowments and Faculties are preserved by moving them to the second College. This is just weirdness, it may or may not matter, other than the re-endowment emergency.
- If Ripple 3 is in effect, Maintenance Shields will still age out. The other positions will not be informed of the immunity to adverse News Events. Being unable to activate the Combat Power (a media magnet) may or may not be important.
- Nothing in this Type 5 Fundamental Reality will likely be noticed or seen by other positions.
- All three Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

# Three Witches

Ripple 1: The chance of Power Activation failures in the next two Regular Turns is increased by 10%.

Ripple 2: All inactive Epistemological Constructural Elements (including those in *apostasy*) become active and an equal number of randomly determined other Constructural Elements become inactive. This affects Constructural Elements that are currently in *apostasy*; it affects Constructural Elements whether on ships and colonies.

Ripple 3: The Order Power cannot be activated for three Regular Turns.

- ✓ Note: A Type 5 Fundamental Reality represents a pre-game alternate reality that leaks into the game, partially overwriting the present for the position's population. When a 'leak' event occurs, each of the preceding Ripples has a 50% chance of instantly affecting the position and the position's Native Population Type. Because of the chance, one, two or all could occur in a turn. The population will not be aware of the changes, but the position players will.<sup>1</sup>

Ramifications:

- Resistance, Clarity, Confusion. Which two are you? Or is it all a bigger cycle?
- Ripple 1 and Ripple 2 will have variable effect depending on the current state of inactive Constructural Elements across the position.
- Ripple 3, 'land of confusion,' is another sort of stasis of the position, possibly caused by competing multi-world timelines pulling. It could be devastating, it could cause the collapse of the position, or a Capital emergency, or it could be a nothing.
- All three Ripples are capable of being triggered multiple times during the game and must be checked each turn throughout the entire game whenever the Fundamental Reality is triggered. By operation of the percentages, they are more likely to occur in the mid- to late game.

---

<sup>1</sup> For a fine example of ripple effects in time, I recommend watching the excellent mockumentary *The History of Time Travel* (2014). The viewer is in the same position as the position players; a reasonably astute viewer will notice the little changes caused by the time travelers, but the people in the film know no different world. Thus, there should be no News Events or other interpretations in reaction to a leak event.

## Crack Up

*“Someone in your shape shouldn’t be driving, Someone in your shape shouldn't be doing anything at all!”*

– Huey Lewis & The News, “You Crack Me Up” (1983)

You are a mess, the transition of dimensions has left your species psyche in tatters. An Aspect List is not generated for this Truly Alien position at the beginning of the game, rather, when Exposing Aspects, the Aspects received are randomly generated from other position’s Aspect Lists. There is a good chance that each Aspect received will be added to an Aspect List for the Truly Alien position until the list is filled. However, your people are attracted to sacred places, and the Truly Alien position will know the location of every Terra Sancta in the Galactic Space as soon as the Kairotic Moment process is triggered. The Truly Alien position wins a special, exclusive objective victory condition during game Resolution if they have native colonies on the majority of known Terra Sancta planets; sovereignty is not required.

- ✓ Note: All Truly Alien Fundamental Realities are treated as Major. Of necessity, the Truly Alien Fundamental Realities will need to create and act as mini-rules or special rules in the game. Truly Alien FRs break the rules of the game, rather than simply acting as operational guidelines and liabilities. However, the ‘no advantage gained’ rule remains generally true as each introduces possible advantages and disadvantages of being in this universe from somewhere else.

Possible Ramifications:

- Because of the link between Aspects Exposed and Kairotic Moments, this Truly Alien position may inadvertently contribute to triggering Kairotic Moments in the game for both the Truly Alien position and other positions.
- The special exclusive objective victory criterion is not known to the other positions in the game and may result in winning the Objective Victory Criteria without resorting to either a tiebreaker or a shared victory. It may not be easy however, to have a native colony on the majority of Terra Sancta planets – sort of a Zeno’s Paradox-like situation.
- Not having an initial Aspect List may hamper the position in other areas, such as Writs, in the early game, may cause the position to overexpose Aspects early in the game to quickly generate the Aspect List, if it is important to do so. This also may link to rapid colonization since Aspects must be placed adjacent to Friendly and Naturalized Colonies (and at least one adjacency is already taken by the required Pathways for Government Titles).
- This position may have Aspects Exposed early in the game that are never added to their Aspect List, which is an unusual situation, like being a genius for five minutes and then suddenly forgetting it (did you take your smart pills today?).<sup>1</sup>

<sup>1</sup> This phrase, like “eat your Wheaties,” I heard much in my youth. It was thus popular at least in the last third of the 20<sup>th</sup> Century and refers to nootropic substances and not to digital pills or capsule endoscopy.

# Frequency

---

*“Another hypothesis ... is that wind going around Kholat Syakal created a Kármán vortex street, which can produce infrasound capable of inducing panic attacks in humans. According to Eichar’s theory, the infrasound generated by the wind as it passed over the top of the Holatchahl mountain was responsible for causing physical discomfort and mental distress in the hikers. Eichar claims that, because of their panic, the hikers were driven to leave the tent by whatever means necessary, and fled down the slope.”*

– from Wikipedia article, “Dyatlov Pass Incident,” captured December 17, 2019

---

Conquered Colonies populated by your Native Population Type may never be Converted, but may only be Naturalized (thus, the path is directly from Conquered Colony to Naturalized Colony). Conquerors will not be informed of this initially, and may waste multiple attempts to Convert (including Pacification Combats); may even conclude that the Truly Alien Conquered Colony can never be converted. Conversely, your species can never Convert or Naturalize a Conquered Colony in this universe.

- ✓ Note: All Truly Alien Fundamental Realities are treated as Major. Of necessity, the Truly Alien Fundamental Realities will need to create and act as mini-rules or special rules in the game. Truly Alien FRs break the rules of the game, rather than simply acting as operational guidelines and liabilities. However, the ‘no advantage gained’ rule remains generally true as each introduces possible advantages and disadvantages of being in this universe from somewhere else.

Possible Ramifications:

- In a game where there is little or no conflict or colony conquests, this Truly Alien Fundamental Reality will have little effect. If so, it’s (almost) free Inheritance Points.
- Regardless of force, bribes, die roll modifiers, the Concierge knows that this Truly Alien Native Population Type can never be converted; this is a case of acute alterity.
- Repeated failure to convert may lead to Looting and Orbital Bombardment.
- Naturalization of this Truly Alien Native Population Type is the process of finding and understanding the correct receptive frequencies. As discussed in the rules, understanding and acceptance are keys to Naturalization and it is a judgment of the Concierge whether the position has met this burden and if the target colony is ready to accept Naturalization. However, it is also possible that the frequencies may change suddenly and be lost to the alien sovereigns.
- On the flip side, the inability to convert Conquered Colonies of other races in this universe means that this Truly Alien position will likely either be non-militant or genocidal, either of which may leave it diplomatically isolated in some games.

# One Channel

*“...there are some distinct advantages to mono sound in certain situations. For example, musicians such as the Beatles would focus on the mono mixes of their songs rather than the stereo mixes, as AM radio stations preferred the sound of mono for hit singles. Stereo was considered a new technology and was thus generally ignored by many great early rock musicians. Since performers intended for their music to be heard in mono, earlier recordings can sound more powerful and dynamic in mono. Additionally, mono is a better format for public speeches, where the clarity of a single amplified voice is the focus of the sound mix.”*

– Ben Firke, “Mono Vs. Stereo Audio,” TechWalla, undated article

The home stereo has become mono on the AM car radio. This Truly Alien position may activate only one Vital Power per Regular Turn but may do so as many times as it has Power Activation and Acts, Scenes and RPs to pay for it. Each Power Activation costs one less Act, but never less than one Act. Power Activation checks are still made for each instance where normally necessary.

- ✓ Note: All Truly Alien Fundamental Realities are treated as Major. Of necessity, the Truly Alien Fundamental Realities will need to create and act as mini-rules or special rules in the game. Truly Alien FRs break the rules of the game, rather than simply acting as operational guidelines and liabilities. However, the ‘no advantage gained’ rule remains generally true as each introduces possible advantages and disadvantages of being in this universe from somewhere else.

Possible Ramifications:

- This one Vital Power activation per Regular Turn activation restriction applies only to Vital Powers; the single Vital Power may be activated for different purposes in the same Regular Turn.
- This does not abrogate the limit of one Taxation and one Census Power Activation per Regular Turn. Planning and allocating are key to managing this.
- The shifting of Power Activation costs by one Act can have a significant effect on the sequence in which Power Activations are resolved during the Regular Turn.
- If Government Titles are associated with Power Activations (see Associates & Acquaintances, 1 Government Titles, p. 580, an optional rule), the subtraction of one Act from activation cost would offset the addition of one act for Vital Powers not associated with a currently undisrupted Government Title of the Truly Alien position.
- Being able to activate only one Vital Power per Regular Turn will certainly change the feel of the position; it will be an all or nothing type position, less responsive in an emergency perhaps, but can rocket off in one direction or another making huge progress in a single area in a Regular Turn.

# Ripples

*“A kind of a redneck lookin' joint called the Dew Drop Inn...”*

– Charlie Daniels Band, “Uneasy Rider” (1983)

A ripple, whether or not it is a collapsing wave function, is entropic to something in the pond or mud puddle. Your species’ drop into the Galactic Space is a ripple in the cosmic ocean. One Intervention Potential Plus or two Intervention Potentials (randomly determined) are generated each time your position’s Regular Turn is processed; additionally, strange things, bad and good, tend to happen when your ships and colonies are present. Other positions may eventually detect the ‘waves of entropy’ emanating from wherever the Truly Alien position exists, however, these same waves act as one Maintenance Shield for each adverse News Event directed at the Truly Alien position. This is an inexhaustible supply of Maintenance Shields at one per adverse News Event.

- ✓ Note: All Truly Alien Fundamental Realities are treated as Major. Of necessity, the Truly Alien Fundamental Realities will need to create and act as mini-rules or special rules in the game. Truly Alien FRs break the rules of the game, rather than simply acting as operational guidelines and liabilities. However, the ‘no advantage gained’ rule remains generally true as each introduces possible advantages and disadvantages of being in this universe from somewhere else.

Possible Ramifications:

- As these Maintenance Shields only exist when an adverse News Event is directed at the Truly Alien position, they do not age out, and therefore cannot eliminate or reduce Intervention Potentials and Intervention Potential Pluses. To do this, the position will need to create its own Maintenance Shields in the normal way.
- The extra Interventions or Intervention Potential Plus generated, plus the very strangely good and bad things that happen in this position’s presence gives extra license to the Concierge for creative Interventions in the game. As discussed in the rules, this is not for evening up or leveling up or leveling the playing field...

# Truly Generic

*“Ripley, she doesn’t have bad dreams because she’s a doll.”*

– Newt, *Aliens* (1986)

Generic Stardrive is the only type of Stardrive that your species can use in this universe. When your species reaches the end of the 1<sup>st</sup> Era (i.e., the 1st Era Matrix is filled), a wait time of 1-3 Regular Turns is required before the Current Era becomes the 2<sup>nd</sup> Era. On the other paw, ships of your species are never affected by Disturbance Modifiers during interstellar movement.

- ✓ Note: All Truly Alien Fundamental Realities are treated as Major. Of necessity, the Truly Alien Fundamental Realities will need to create and act as mini-rules or special rules in the game. Truly Alien FRs break the rules of the game, rather than simply acting as operational guidelines and liabilities. However, the ‘no advantage gained’ rule remains generally true as each introduces possible advantages and disadvantages of being in this universe from somewhere else.

Possible Ramifications:

- Transport of your population by any other stardrive results in death of the population. This will likely be quite a surprise to other positions when attempting forced emigration from Conquered, Converted, or Naturalized Colonies of Truly Alien Native Population Type.
- This will also be true in situations where alien sovereigns who are not using GSD and obtain crew and Carrier Fighter RPs from Conquered, Converted, or Naturalized Colonies of your Native Population Type.
- In a game where other positions continue to use GSD, this effect may never be noticed.
- The lack of Disturbance Modifiers on the Truly Alien position’s ships may or may not be noticed by others. But it sure will save a lot of time and distance over the course of the game.
- Depending on the situation, the wait time to progress at the end of an Era could be a real problem (e.g., an arms race, colony defense Era upgrades), or a nothingness. Advanced research, at great expense, and still be conducted during the ‘stagnation’ period. Further, the Concierge may not tell the position players how long the stagnation period will last, but should inform them when it ends.

## Appendix GT – The Emergent Government Titles

Estate Title Themes			
EGT1 – First Estate – Legitimizers	CCCLIX	EGT11 – Intellectual Elite	CCCLXIX
EGT2 – Second Estate – Rulers	CCCLX	EGT12 – Oligarchic Drift	CCCLXX
EGT3 – Third Estate – Commoners	CCCLXI	EGT13 – Planetary Governments	CCCLXXI
EGT4 – Fourth Estate – Press	CCCLXII	EGT14 – Down Below	CCCLXXII
EGT5 – Producers – The Industrialists	CCCLXIII	EGT15 – Sovereign Aliens	CCCLXXIII
EGT6 – Producers – The Workers	CCCLXIV	EGT16 – The Great Migration	CCCLXXIV
EGT7 – The Reproducers	CCCLXV	EGT17 – Cabals, Cartels & Syndicates	CCCLXXV
EGT 8 – The Military	CCCLXVI	EGT18 – Great Builders	CCCLXXVI
EGT9 – Military Industrial Complex	CCCLXVII	EGT19 – Youth Bulge	CCCLXXVII
EGT10 – Starship Captains	CCCLXVIII	EGT20 – Big Business	CCCLXXVIII
Interstellar Civilization Themes			
ICT1 – Population	CCCLXXIX	ICT11 – Ships	CCCLXXXIX
ICT2 – Power Activations	CCCLXXX	ICT12 – Exploration & Expansion	CCCXC
ICT3 – Constructural Elements & Disruptions	CCCLXXXI	ICT13 – Combat & Conquest	CCCXCI
ICT4 – Culture	CCCLXXXII	ICT14 – Colony Defenses	CCCXCII
ICT5 – Colleges	CCCLXXXIII	ICT15 – Security & Survival	CCCXCIII
ICT6 – Order & Other Government Titles	CCCLXXXIV	ICT16 – Progress	CCCXCIV
ICT7 – Colonies	CCCLXXXV	ICT17- Diplomatic Spaces	CCCXCV
ICT8 – Homeworld & Capital Colony	CCCLXXXVI	ICT18 – Commerce	CCCXCVI
ICT9 – Conversion & Naturalization	CCCLXXXVII	ICT19 – Corporations & MegaCorporations	CCCXCVII

ICT10 – Technology	CCCLXXXVIII	ICT20 – Little Secrets & Special Operations	CCCXCVIII
<b>Social Title Themes</b>			
SGT1 – Liberty, Equality, Fraternity	CCCXCIX	SGT11 – Modernity – Nationalism	CDIX
SGT2 – Conservative & Reactionary Forces	CD	SGT12 – Modernity – Remote Authority	CDX
SGT3 – Temperance	CDI	SGT13 – History	CDXI
SGT4 – Militarism	CDII	SGT14 – Music	CDXII
SGT5 – Imperialism & Colonization	CDIII	SGT15 – Social Complexity	CDXIII
SGT6 – Mysticism	CDIV	SGT16 – Urbanization	CDXIV
SGT7 – Isolationism	CDV	SGT17 – Remorse	CDXV
SGT8 – Proselytism	CDVI	SGT18 – Cultural Narcissism	CDXVI
SGT9 – Modernity – Prosperity	CDVII	SGT19 – Conformity	CDXVII
SGT10 – Modernity – Technology	CDVIII	SGT20 – Radicals, Revolution, Reformation	CDXVIII

**Emergent Government Titles**  
**Estate Government Title Themes 1 – First Estate – The Legitimizers**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) An Estate Title has been replaced by a Social Title while this Title has been active (note, this is a permanent failure once breached).
2. (F) A Title has become disrupted while this Title has been active (note, this is a permanent failure once breached).
3. (F) The position does not have an active, endowed Legitimacy College.
4. (F) One or more other Social or Estate Titles have at least one failed Conflict Check.
5. (F) Friendly population factors (including related Lost Colonist population) are under the control of alien sovereigns (i.e. other Major Positions).
6. (F) The position has suffered effects from adverse News Events in the last two turns (note, loss of Maintenance Shields is not an adverse effect for this purpose).
7. (F) The position lost Maintenance Shields to causes other than aging last turn *and* has not added new Maintenance Shields in the last turn.
8. (F) The position currently has an undisrupted Social Title.
9. (F) The position has lost a colony to alien conquest within the last three turns.
10. (F) The position has no Naturalized Colonies *and* a Reformation has occurred while this Title has been active (note that the latter fails permanently once breached).

(Themes: absolute stability, tyranny in the nursery, being true to purpose, sovereignty over all Friendly populations [great defender, the one and only true leadership, etc.], Naturalized Colonies as a form or reinforcement of legitimacy, no Reformations)

**Emergent Government Titles**  
**Estate Government Title Themes 2 – Second Estate – The Rulers**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (F) Position has more than one Social Government Title whether disrupted or undisrupted.
2. (F) Position has more than three undisrupted Government Titles and either a undisrupted Confederation or Dualistic Structural Title.
3. (F) Position has a Confederation or Dualistic Structural Title and less than half of the Cultural Proficiencies are either Police or Security Proficiency pieces.
4. (F) There are sovereign colonies without a Ground Unit and at least 10 RPs of Fighters.
5. (F) Position has more Friendly Colonies than Conquered or Converted Colonies.
6. (F) Position has no Titles with a Conflict Check from EGT1 that is currently passing *and* has not failed for the last three turns.
7. (F) Position has more than one Fuzzy Group on the Public Space.
8. (F) Position does not have more than the First Space in more than half of the Diplomatic Spaces with other species with which it has had First Contact.
9. (F) Position has at least two other Friendly Colonies which have the same or more population than the Capital Colony.
10. (F) Position has not activated the Order Power within the last two turns and has not activated the Combat Power within the last three turns.

(Themes: isolationism, conquest of aliens insures loyalty of friendlies, imperialism, gain of wealth through power, no competing friendly power centers, police state, security, stagnation/no change/no social movements that can upset the balance, support of legitimizers)

**Emergent Government Titles**  
**Estate Government Title Themes 3 – Third Estate – The Commoners**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) A Friendly or Naturalized Colony has not been Orbital Bombarded while this Title has been active (note, this is a permanent fail once breached).
2. (F) A colony with Friendly Population, whether sovereign or non-sovereign, has not been Orbital Bombarded while this Title has been active (note, this is a permanent fail once breached)
3. (F) A Friendly or Naturalized Colony has not been involved in a Ground Combat while this Title has been active (note, this is a permanent fail once breached).
4. (F) A Friendly or Naturalized Colony has not been reduced in either Maximum Habitability or Habitability Class in the last eight turns.
5. (F) A Friendly or Naturalized Colony has not been the target of a Raid in the last eight turns.
6. (F) The Taxation Power has been activated within the last three Turns.
7. (F) The Taxation Power has been activated twice since the last activation of the Census Power.
8. (F) No Friendly Population factors on Colony Ships or Orbital Cities have been destroyed while this Title has been active (note, this is a permanent fail once breached).
9. (F) Less than seventy-five percent of the combined Epistemological, Symbolic and Ideological Constructural Elements on Friendly and Naturalized colonies are active (note, the percentage is not per type of Constructural Elements, but in total).
10. (F) A Friendly or Naturalized Colony has suffered a Disruption Event in the last turn.

(Themes: the base of the structure, the mass of humanity, without whom there would be no civilizations and nothing to rule; security, peace, prosperity, propagation, meaning, the makers and the consumers, note that there an unusual number of permanent fails in this Theme)

**Emergent Government Titles**  
**Estate Government Title Themes 4 – Forth Estate – The Press**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position does not have any Conflict Checks on any other Social or Estate Titles that are currently failing.
2. (F) Position currently does not have any disrupted Social or Estate Titles.
3. (F) Position has not added or restored a Government Title in the last three turns.
4. (F) Position does not currently have a Communication Cultural Proficiency adjacent to every sovereign colony on the Public Space.
5. (F) Total of Intelligentsia, Nationhood, and Powers Proficiency pieces is not more than 50% of the Cultural Proficiency pieces on the Public Space.
6. (F) Position has not successfully prosecuted a Patent in the last three turns that required multiple Information Applications.
7. (F) Position has not issued a Thesis Statement (see Reformatations) in the last three turns (note, not required to be issued against another position but will still cost a Power Activation).
8. (F) Position has not issued an Expose’ News Event within the last five turns.
9. (F) Position has not issued any adverse News Events in the last turn.
10. (F) A Diplomatic Protest has been lodged against the position in the last two turns.

(Themes: knowledge economy, information age, social and political criticism, news, public intellectuals)

**Emergent Government Titles**  
**Estate Government Title Themes 5 – The Producers – Industrialist**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Population has been loaded to Colony Ships from a Friendly Colony that was at less than 90% Maximum Habitability in the last three turns.
2. (F) The Construction Power has not been activated for the purpose of Colony Enhancement on three different Friendly or Naturalized Colonies in the last three turns.
3. (F) An Estate Title, other than this one, has been disrupted in the last five turns.
4. (F) Position has more undisrupted Social Titles than undisrupted Estate Titles.
5. (F) A Writ requiring a Fuzzy Group containing either a Police or Security Proficiency piece has not been activated in the last three turns.
6. (F) A sovereign colony has doubled in size due to Unloading Population from Colony Ships in the last five turns (this can occur over multiple turns, not just in one turn).
7. (F) Position has not established a new Corporation within the last three turns.
8. (F) Position has not unloaded RPs from more than one Cargo Ship *and* has not Loaded RPs to more than one Cargo Ship in the last turn (note, both must be false to pass).
9. (F) Position has not spent 20% of RPs in each of the last two turns building Industry at Friendly colonies.
10. (F) Position has not successfully prosecuted a Patent requiring both Industry and Matter or Energy Applications in the last three turns.

(Themes: Urbanized industrialization, consumer economy, big government spending, energetic commerce, demand for goods, profit profit profit, influence over government regulation, spending, economic measures, suppression of worker power, protection of wealth and property accumulation, industrial technology)

**Emergent Government Titles**  
**Estate Government Title Themes 6 – The Producers – Workers**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position does not have the Planetary Government Estate Title as a current undisrupted Government Title.
2. (F) Position has an undisrupted Unitarian Structural Title.
3. (F) Position does not have an active, endowed Medical College *and* does not have Institutions connected to the Medical College on all Friendly Colonies (note, both must be true or this statement is false).
4. (F) Position has a Police or Security Proficiency piece adjacent to any Friendly Colony on the Public Space.
5. (F) All Friendly and Naturalized Colonies obeyed the last Taxation Power activation.
6. (F) No other Estate Titles have been disrupted in the last five turns.
7. (F) Position does not have a Spirit Proficiency piece adjacent to each Friendly Colony on the Public Space *or* has not activated a Writ requiring the Spirit Proficiency in the last three turns (note, if either is true, the statement is not false).
8. (F) Position has had a Social Title disrupted in the last five turns.
9. (F) A Friendly or Naturalized Colony has suffered a disruption event in the last three turns.
10. (F) RPs from alien Cargo Ships have been unloaded at any Friendly or Naturalized Colony while this title has been active (note, this is a permanent fail once breached).

(Themes: *Secessio plebis*, conflict of the orders, collective power of workers focused through representative organizations as a form of estate, trade protectionism, government that embraces dualistic powers, provision of social welfare, safety net, no bondage)

**Emergent Government Titles**  
**Estate Government Title Themes 7 – The Reproducers**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position has not activated the Census Power in the last three turns.
2. (F) Position does not have one Customs and one Regeneration Proficiency adjacent to each Friendly Colony on the Public Space.
3. (F) One or more colonies, whether sovereign or non-sovereign, with Friendly Population Factors on the planet surface has been subjected to either Orbital Bombardment or attacked in Ground Combat while this Title has been active (note, this is a permanent fail if it is ever true).
4. (F) Friendly Population Factors in Orbital Cities at sovereign colonies have been destroyed while this Title has been active (note, this is a permanent fail if it is ever true)
5. (F) A Friendly Colony with 20 or less population factors was either Conquered or destroyed by aliens in the last two turns.
6. (F) More than 10 Friendly population factors were on Colony Ships when the Census Power was activated in the last five turns (note, this can only be true if the Census Power was activated in the last five turns).
7. (F) The position does not have five active, endowed Colleges.
8. (F) The position has an active, endowed Combat College.
9. (F) The position does not have an active, endowed Medical College *and* at least two other active, endowed Colleges, neither of which is a Combat College (note, all elements of this must be false to pass).
10. (F) At least one other Social or Estate Title is either disrupted *or* failing two or more Conflict Checks (i.e. failure of other Social or Estate Titles will cause this to fail).

(Themes: the power of parents, social power, parental government, regeneration of the species, parental protectionism, legitimacy of the civilization)

**Emergent Government Titles**  
**Estate Government Title Themes 8 – The Military**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position has more than one undisrupted Estate Title.
2. (F) This Title did not replace another Title *and* the position does not have an active, endowed Combat College.
3. (F) Position does not have a Warship, Ground Unit (on the colony) and Fighters (on the colony or on a ship) and Ground and Orbital Defense Base at every Friendly or Converted Colony.
4. (F) Position has Naturalized population *and* 70% or more of Cultural Proficiencies are not Police or Security Proficiencies (note, having Naturalized Population is auto-fail)
5. (F) Position has two or more active endowed Colleges.
6. (F) Position has Equity, Expression, Integrity, or Intelligentsia Proficiencies on the Public Space (note, one piece of any of these Proficiencies is sufficient to fail) *or* any other Title has failed two or more Conflict Checks currently (note, if either is true, the Conflict Check fails).
7. (F) Position has not successfully prosecuted a Patent that includes a Weapons or Defenses Application within the last two turns.
8. (F) Position does not have the current Era Warship Patent, all three Defense Base Patents, and half of the position’s warships are not of the current Era.
9. (F) Position has fought a combat against a Warship or Defense Bases of a higher Era during the time this Title has been active (note, this is a permanent failure once breached)
10. (F) Position has not initiated interstellar movement with any Warships in the last two turns *or* has not initiated any Combat or Seized the Initiative within the last three turns (note, if either is true, the Conflict Check fails).

(Themes: dictatorship, martial glory, military ownership of society and the economy, security, police state, politics of the gun, arms race)

**Emergent Government Titles**  
**Estate Government Title Themes 9 – Military Industrial Complex**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position has spent less than 35% of total RPs on construction of Warships, Carriers, Fighters, Defense Bases, or Ground Units in the last two turns, not counting upgrades or other enhancement technologies.
2. (F) Position has not purchased Ship Missiles or Fighters at two or more Friendly Colonies in the last two turns.
3. (F) Position has not completed any Colony Defense Era upgrades in the last two turns.
4. (F) Position has not lost any Warships, Logistical Ships, Bases, or Fighters or fired any Ship Missiles in Combat in the last two turns (in order to lose something in combat, you have to be involved in a combat...).
5. (F) Position has not successfully prosecuted any Patents that contain Weapons, Defense or Industry Applications in the last three turns.
6. (F) Position has not been successful in Advanced Research or Development in Weapons, Development or Industry in the last three turns.
7. (F) Position has not improved its Orbital Bombardment capability in the last five turns.
8. (F) Position has not won a Combat in the last three turns.
9. (F) Position has not scrapped any Warships in the last three turns.
10. (F) Position has not built at least three new Warships or Logistical Ships in the last three turns.

(Themes: arms race, defense spending, profit from military losses, profit from military expansion, obsolescence of military equipment...they want you to buy weapons and go to war)

**Emergent Government Titles**  
**Estate Government Title Themes 10 – Starship Captains**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Any sovereign colony has a System or Orbital Defense Base or Fighters.
2. (F) Position has initiated no interstellar movements in the last turn *or* any sovereign colony has a System or Orbital Defense Base (note, if either of these is true, the statement is not false)
3. (F) Position does not have active, endowed Ship, Commerce and Stardrive Colleges.
4. (F) A sovereign starship has been destroyed or lost (by any means) in the last two turns *and* no sovereign colonies are currently under attack or siege (note, if either is true, the statement is not false).
5. (F) Position has not Landed any new colonies or transported population (activation of the Expansion Power for that purpose) in the last three turns.
6. (F) Position does not have a number of supporting colonies within Short Movement of another supporting colony, equal to half the turns elapsed in the game so far (note this is dependent on Ship Speed and number of supporting colonies)
7. (F) Position does not currently have either a number of starships equal to the number of undisrupted Government Titles or sovereign colonies (whichever is greater) cubed, *or* a number of Warships equal to the number of undisrupted Government Titles or sovereign colonies (whichever is greater) squared (note, cannot be false if either is true)
8. (F) Position has not either increased Ship Speed in at least one Stardrive Patent, or successfully prosecuted any Patent with either Stardrive or Ship Applications within the last two turns.
9. (F) Position currently has more than half of the Constructural Elements on ships inactive, *or* has one third or more of Ideological Constructural Elements on ships inactive (note, if either of these are true, the statement is not false).
10. (F) Position has not improved either Operational Flight Duration (OFL) or Operational Supply Limitations (OFL) in the last two turns.

(Themes: power of starship captains over connectedness of civilization, control of ships, inability of colonies to resist starship captains, expanding colony networks, ship technology)

**Emergent Government Titles**  
**Estate Government Title Themes 11 – Intellectual Elite**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position does not have a Fuzzy Group adjacent to each colony hosting a College, for each College hosted there.
2. (F) Position does not have at least one other Social or Estate Title that is not currently failing a conflict check.
3. (F) Position has not operated Institutions on every Friendly and Naturalized colony in the last turn.
4. (F) Position has not spent at least half of its Faculties operating Institutions in the last three turns *or* has not operated an Institution on a Converted Colony in the last turn, if the position has at least one Converted Colony currently (note, if either is true, the statement cannot be false).
5. (F) Position does not have five active, endowed Colleges *and* a total number of Communication and Rhetoric Proficiency pieces on the Public Space equal to either the number of undisrupted Government Titles or active Colleges, whichever is greater (note, both must be true for this statement to not be false).
6. (F) Intelligentsia Cultural Proficiencies do not currently amount to 25% of Cultural Proficiency pieces on the Public Space.
7. (F) Position has not activated the Technology Power for any purpose in the last two turns.
8. (F) Position has an active, endowed College hosted on the Capital Colony.
9. (F) Position has not founded a new College *or* issued a new Land Grant Writ in the last three turns (note, if either is true, the statement cannot be false).
10. (F) Position has more active Colleges than inactive or suspended Colleges.

(Themes: intelligentsia as either a force for social change or for legitimizing the current scheme, knowledge based economy, connectivity or lack of connectivity between society and intelligentsia (e.g., ancient Library of Alexandria), anti-intellectual forces, pretentiousness)

**Emergent Government Titles**  
**Estate Government Title Themes 12 – Oligarchic Drift**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position has not unloaded RPs from Cargo Ship(s) at the position’s largest Friendly Colony equal to at least half of that colony’s GDP in the last three turns.
2. (F) Position has loaded RPs to Cargo Ship(s) from a sovereign colony that is in the top one-third of colonies by GDP in the last two turns.
3. (F) Position has unloaded RPs from Cargo Ship(s) at a sovereign colony that is in the bottom one-third of colonies by GDP in the last three turns.
4. (F) Position has more sovereign colonies above the average GDP of sovereign colonies than colonies below the average GDP.
5. (F) Position has a College, Corporation or MegaCorporation hosted on a sovereign colony that is in the bottom three-quarters of GDPs of sovereign colonies.
6. (F) Position does not have three sovereign colonies of 20 or less population for each sovereign colony of population 60 or more (note that Census Power can affect this).
7. (F) Position has a Friendly or Naturalized Colony of 50 or greater population located on a planet that is neither Optimal nor Hospitable Habitability Class to any resident population (note that pollution and entropy can affect this).
8. (F) No alien Cargo Ships have Unloaded RPs at any sovereign colony in the top half of GDPs of sovereign colonies in the last five turns.
9. (F) More than half of the top half of sovereign colonies by GDP are at 80% or greater Maximum Habitability (note, fractions rounded down).
10. (F) The Commerce Power has not been activated for any reason in the last two turns *or* the position has at least one colony of 30 or less population that has a greater GDP than a sovereign colony of 60 or more population (note, if either is true, the statement is not false).

(Themes: Oligarchic drift in this instance is the tendency of big colonies to get bigger and wealthier by their power at the expense of smaller colonies, and is not in GGDM terms, individual wealth accumulation, but generational and locational wealth accumulation; it is inequality and wealth gap as an identifiable estate in civilization)

**Emergent Government Titles**  
**Estate Government Title Themes 13 – Planetary Governments**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position does not have a Confederation Structural Title.
2. (F) Position has a Confederation or Unitary Structural Title *and* the total Friendly and Naturalized Population on sovereign colonies, excluding the Capital Colony, do not outnumber the population of the Capital Colony 10 to 1 (note, both must be false to pass)
3. (F) The number of sovereign warships exceeds the number of sovereign Friendly or Naturalized Colonies in any one starsystem where these colonies exist.
4. (F) RPs exceeding half of a sovereign colony’s GDP were loaded or unloaded at any sovereign colony in the last turn.
5. (F) All Friendly and Naturalized Colonies do not have an Orbital Shipyard.
6. (F) All Friendly and Naturalized Colonies do not have both Orbital Defense and System Defense Bases and Fighters on the colony as well.
7. (F) All Friendly Colonies are not in a system with another Friendly or Naturalized Colony.
8. (F) The Taxation Power has been activated within the last five turns.
9. (F) During the last activation of the Taxation Power, all colonies obeyed (i.e. none failed to pay taxes due to inactive Constructural Elements).
10. (F) The position has used all available Power Activations on any turn within the last three turns.

(Themes: fierce local independence, suspicion of interstellar government, suspicion of warships, grudging acceptance of the minimum benefits of centralized civilization, planetary survival, local urbanization)

**Emergent Government Titles**  
**Estate Government Title Themes 14 – Down Below**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position has not generated an Intervention Potential Plus in the last three turns *or* currently has more than two Maintenance Shields (note, if either of these are true, the statement is not false).
2. (F) Position has no Medical or Spirit Cultural Proficiency Pieces on the Public Space.
3. (F) Position does not have a Confederation Structural Title *or* has Police or Security Proficiency pieces on the Public Space currently (note, if either of these are true, the statement is not false).
4. (F) Position has more Police, Security, and Integrity Proficiency Pieces on the Public Space, combined, than undisrupted Government Titles.
5. (F) Position has Police, Security or Integrity Proficiency Pieces adjacent to the Capital Colony on the Public Space (remember, all First Spaces in Diplomatic Space are adjacent to the Capital Colony on the Public Space).
6. (F) Position does not have any disrupted Government Titles.
7. (F) Position is currently unable to activate any Writs (due to either lack of Writs or matching Fuzzy Groups), or does not have any Writs established.
8. (F) Position has published an Expose’ News Event within the last 20 turns *or* has a Zeitrice currently on the Public Space (note that a Zeitrice can be formed inadvertently).
9. (F) Position has less than three Corporations currently *or* owns any colony with a Ground Unit present (even if on a ship or Orbital City) (note, if either of these are true, the statement is not false).
10. (F) At least half of the position’s colonies are not at 20 or less population factors and the position has no Conquered or Converted Colonies.

(Themes: *laissez faire*, permissiveness, non-conformity, weak central government, pro-business, low or weak policing and security presence, little regulatory oversight, expanding economy, vice and addiction, inconsistent enforcement, government corruption, illegitimate power, Cpt. Stern)

**Emergent Government Titles**  
**Estate Government Title Themes 15 – Sovereign Aliens**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) At least one Conquered or Naturalized **alien colony** did not obey the last activation of the Taxation Power (i.e. due to inactive Constructural Elements).
2. (F) At least one attempt to Convert or Pacify a conquered **alien colony** failed in the last three turns *or* no Conversion attempts have been made or Pacification Combats initiated in the last three turns (note, if either is true, this statement is not false).
3. (F) No sovereign alien population factors have been loaded to Colony Ships in the last three turns.
4. (F) One or more sovereign **alien colonies** have reverted while this Title has been active (note, if this ever true, this is a permanent fail).
5. (F) A sovereign **alien colony** exists on a planet that is Optimal Habitability Class for the Native Population Type of your position.
6. (F) A sovereign **alien colony** has been Orbital Bombarded but not destroyed in one Combat Round while this Title has been active (note, if this is ever true, this is a permanent fail).
7. (F) A College, Corporation or MegaCorporation of which the position is a shareholder is hosted on a sovereign **alien colony or** a sovereign **alien colony** is currently the Capital Colony (note, if any are true, this statement is not false).
8. (F) Sovereign alien population is located on the surface of a planet controlled by the position (being under the surface of the planet still counts as being on the surface for this purpose).
9. (F) Sovereign alien population are located on a colony planet that is not either Hostile or Unpleasant Habitability Class to their species.
10. (F) Naturalized alien population failed to obey any Power Activation in the last three turns (i.e. due to inactive Constructural Elements).

(Themes: what to do with captured aliens, impact of sovereign alien colonies on position’s government, failure to keep the aliens “in line,” militant occupation of alien colonies, terror)

**Emergent Government Titles**  
**Estate Government Title Themes 16 – The Great Migration (Diaspora)**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) The Homeworld has more than 10% of the Maximum Habitability in Friendly population factors (note, reroll if the position is not a Homeworld or Lost Colonist).
2. (F) The Homeworld has not been reduced to zero Maximum Habitability or Hostile Habitability Class for your species (note, reroll if the position is not a Homeworld or Lost Colonist).
3. (F) Position does not own more Colony Ships than any other type of ship *or* position has not Landed a colony within the last three turns (note, fails if either is true)
4. (F) Position owns more non-Colony and non-Scout Ships than Colony and Scout Ships combined.
5. (F) Position has neither Loaded at least five Friendly Population factors to Colony Ships *nor* Landed a colony in the last turn.
6. (F) A sovereign **alien colony** exists on a planet surface whose Habitability Class is optimal for the position’s Native Population Type (note, alien orbital cities will not cause this statement to be true).
7. (F) Sovereign Friendly Colonies that are not special colonies, exist on planets that are Unpleasant or Hostile Habitability Class for the position’s Native Population Type.
8. (F) Non-sovereign **alien colonies** co-exist with sovereign Friendly population colonies on planets (i.e. Balkanized Planets) that are Optimal Habitability Class for the position’s Native Population Type.
9. (F) Position has not activated the Expansion Power (for any purpose) and/or Census Power for the last eight consecutive turns.
10. (F) A friendly population colony in Galactic Space, whether sovereign or non-sovereign, that is not the Capital Colony of some other position, exceeds the Friendly population of the position’s current Capital Colony.

(Themes: leaving the nest, fearless & land-grab expansionism, spreading out colonies for species survival, outward population pressure, optimal colony planets, slight xenophobia)

**Emergent Government Titles**  
**Estate Government Title Themes 17 – Cabals, Cartels & Syndicates**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position is not currently passing Conflict Checks from both the Military and Military Industrial Complex Estate Themes.
2. (F) Position is not currently passing Conflict Checks from both the Military Industrial Complex and Producers: The Industrialist Estate Themes.
3. (F) Position is not currently passing Conflict Checks from both the First Estate: Legitimizers and Second Estate: Rulers Estate Themes.
4. (F) Position is not currently passing Conflict Checks from both The Great Migration and Youth Bulge Estate Themes.
5. (F) Position is not currently passing Conflict Checks from both Starship Captains and The Great Migration Estate Themes.
6. (F) Position is not currently passing Conflict Checks from both Third Estate: Commoners and Producers: The Workers Estate Themes.
7. (F) Position is not currently passing Conflict Checks from both Fourth Estate: The Press and Intellectual Elite Estate Themes.
8. (F) Position is not currently passing Conflict Checks from both Planetary Governments and Youth Bulge Estate Themes.
9. (F) Position is not currently passing Conflict Checks from both Producers: Industrialist and Starship Captains Estate Themes.
10. (F) Position is not currently passing Conflict Checks from both Oligarchic Drift and Down Below Estate Themes.

(Themes: Legitimacy through pairings of Conflict Checks from Estate Themes that share similar goals, interests; the Conflict Checks could appear together on one or on separate Estate Titles)

**Emergent Government Titles**  
**Estate Government Title Themes 18 – Great Builders**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Construction Power has not been activated for the purpose of Colony Enhancement at the Capital Colony in the last turn.
2. (F) Construction Power has not been activated for the purpose of Colony Enhancement at any one Friendly or Naturalized colony for three consecutive turns.
3. (F) An Estate Title has become disrupted while this Title has been active (note, this is a permanent fail once breached).
4. (F) No alien ship has arrived in either the Capital Colony or the largest Friendly Colony system within the last three turns (note, the Capital Colony and largest Friendly Colony may or may not be the same and Census Power activation may affect this).
5. (F) No new Orbital Cities have been constructed at any sovereign colony in the last two turns (note, this can be done even if planet is not at or near Maximum Habitability).
6. (F) Alien population factors have not been Unloaded at any planet with a sovereign colony on the same turn the Construction Power was activated for the purpose of Colony Enhancement within the last two turns (note, the alien population factors are not required to be or become sovereign).
7. (F) Cargo Ships have not unloaded RPs at any planet with a sovereign colony on the same turn the Construction Power was activated for the purpose of Colony Enhancement within the last two turns (note, the Cargo Ship can be alien).
8. (F) Seventy-five percent of Ideological Constructural Elements were not active at sovereign colonies the last time the Construction Power was activated for the purpose of Colony Enhancement at any sovereign colony.
9. (F) There is not currently an Engineering and Urbanization Proficiency adjacent to each Friendly or Naturalized Colony on the Public Space.
10. (F) The position does not have an active, endowed Engineering College or Urbanization College *and* more Engineering and Urbanization Proficiencies combined than undisrupted Government Titles

(Themes: The architects, builders and planners of great works, considered as an estate when they have behind them the power of government and wealth, and the prestige of civilization and their era, e.g., the unknown planners of the Valley of Kings, the plans for rebuilding London after the Great Fire of 1666, Haussmann’s rebuilding of Paris during the Second French Empire, Speer in Berlin, the ancient Roman aqueduct system, Edison and Tesla’s power systems, etc.)

**Emergent Government Titles**  
**Estate Government Title Themes 19 – Youth Bulge**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position is currently not involved in any Ground Combats *or* has not fought a Pacification Combat within the last two turns.
2. (F) Position is not currently involved in more than one ongoing combat *and* has not fought combats at more than one system or planet within the last two turns.
3. (F) Position does not own three or more Friendly colonies with over 50 population factors.
4. (F) Position has not Raided or Looted any **alien colonies** within last two turns.
5. (F) Position has not activated the Census Power within the last two turns.
6. (F) Position currently does not have 50 Friendly population factors on Colony Ships.
7. (F) Position has not loaded 10 Friendly population factors to Colony Ships in the last turn.
8. (F) Position has not abandoned any disrupted Government Titles within the last three turns.
9. (F) Position does not have three or more Friendly Colonies currently at the planet’s Maximum Habitability
10. (F) Position does not have more Regeneration Proficiency pieces on the Public Space than undisrupted Government Titles.

(Themes: expansion, population pressure outward, conquest of aliens for elbow room, small colonies, population loading and population on colony ships, social revolution against the current regime)

**Emergent Government Titles**  
**Estate Government Title Themes 20 – Big Business**

“What condition or circumstances must have existed in order for this group to become a ruling Estate, what needs do they serve, and what conditions or circumstances must continue in order for the Estate to continue ruling?”

**Conflict Checks:** True or false statements, *if true, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are true, the Conflict Check has failed:

1. (F) Position is not currently a member of eight MegaCorporations containing membership from at least five other positions, *and* at least six of which are not hosted on a sovereign colony (note, both must be false for this Conflict Check to pass).
2. (F) Position does not currently have one Cargo Ship for every 50 sovereign population factors before or on Turn 10 or for every 30 sovereign population after Turn 10 (note, a Census Power activation can ‘blow this up’).
3. (F) Position has not Loaded or Unloaded RPs from alien Cargo Ships at five sovereign colonies in the last three turns.
4. (F) Position has not Loaded or Unloaded RPs from five sovereign Cargo Ships in the last three turns.
5. (F) Position does not have access to a total number of Diplomatic Spaces, excluding First Spaces, equal to the number of Major Races with which it has had First Contact squared (note, Diplomatic Spaces with Minor Races count for this purpose) if more than three or cubed if three or less (note, a new First Contact can make this fail).
6. (F) New stars added to Galactic Space since the beginning of the game do not equal the number of turns elapsed plus the number of Corporations and MegaCorporate memberships of the position (note, this is something that may be beyond the control of the position, easily can become untenable in the long term).
7. (F) Position does not have sovereign colonies equal to the number of undisrupted Government Titles cubed (note, the math is brutal).
8. (F) RPs received from the most recent activation of the Taxation Power were not double what was received from the immediately previous activation of the Taxation Power.
9. (F) Sovereign population has not doubled in the last five turns or tripled in the last eight turns.
10. (F) Position’s ship speed has not doubled in the last three turns.

(Themes: think big business, too big to fail, economy of scale, proto-galactic consumerism as the backbone of a growing pan-stellar culture, brutal math, exponential potential)

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 1 – Population**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Friendly colony population located on all Balkanized planets outnumber the total alien population present (applies to both sovereign and non-sovereign planets).
2. (T) Census Power has been activated in the last two turns.
3. (T) Census and Taxation Powers have both been activated in the last four turns.
4. (T) Friendly population has not been destroyed or lost in the last three turns, including loss due to Maximum Habitability, but excluding adverse News Events.
5. (T) Average friendly population per sovereign colony is 50 population factors.
6. (T) Average friendly population per sovereign colony is 80 population factors.
7. (T) Friendly population factors are not located on any planet with alien populations (Major or minor).
8. (T) Position controls all Friendly population factors in the game, excluding those of related Lost Colonist positions.
9. (T) Friendly population is not located on any Hostile or Unpleasant Class planets.
10. (T) Position has no Specialized or Low-Population colonies.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 2 – Power Activations**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) All ten Vital Powers have been activated within the last five turns.
2. (T) Ten Powers have been activated in the last three turns.
3. (T) A Government Title is associated with each Vital Power and at least 35% of Cultural Proficiencies on the Public Space are Power Proficiencies.
4. (T) At least five Scenes are on the Public Space currently.
5. (T) At least eight Acts are on the Power Strip currently.
6. (T) No Power is without at least one Act on the Powerstrip currently.
7. (T) Taxation Power has been activated within the last three turns.
8. (T) On one turn within the last three turns, all Power Activations have been used.
9. (T) No Power Activation has failed due to inactive Constructural Elements in the last two turns (failures due to lack of RPs, Acts or Scenes or legality do not count).
10. (T) No colony has failed Taxation in the last four turns.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 3 – Constructural Elements & Disruption**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) All Constructural Elements of one type (excluding Temporal) are active currently.
2. (T) Three-quarters or more of Epistemological Constructural Elements are currently active (incl. both colonies and ships).
3. (T) Three-quarters or more of Symbolic Constructural Elements are currently active (incl. both colonies and ships).
4. (T) Three-quarters or more of Ideological Constructural Elements are currently active (incl. both colonies and ships).
5. (T) The Culture Power has been activated for the purpose of Cohering within the last two turns.
6. (T) No Government Title has been Disrupted within the last five turns.
7. (T) No Friendly or Naturalized Colony has suffered a Disruption Event in the last three turns.
8. (T) The Capital Colony of the position has not suffered a Disruption Event in the last ten turns (even if this Government Title was not active at the time).
9. (T) All current Social or Estate Titles have never been Disrupted while this Title has been active.
10. (T) No College is currently inactive due to inactive Constructural Elements on the Host Colony.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 4 – Culture (incl. Writs)**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) The Culture Power has been activated for any purpose in the last two turns.
2. (T) The Culture Power has been activated for at least four different purposes in the last four turns.
3. (T) The position currently has at least one piece of 12 different Proficiencies on the Public Space.
4. (T) The position currently has at least 12 Aspect pieces on the Public Space.
5. (T) The position currently has more Proficiencies than Aspects on the Public Space.
6. (T) The position currently has more Aspects than Proficiencies on the Public Space.
7. (T) The position has at least two Fuzzy Groups on the Public Space currently.
8. (T) The position has actualized at least one Fuzzy Group in the last two turns.
9. (T) The position has had a successful Writ of Naturalization in the last six turns.
10. (T) The position currently has at least one other undisrupted Social Government Title.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 5 – Colleges**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Position has at least one Endowed College currently and has no unendowed or suspended Colleges currently.
2. (T) Position has at least three Endowed Colleges currently.
3. (T) Position has founded a new College within the last five turns.
4. (T) Position has at least two colonies hosting Colleges not including the Capital Colony, and all Colleges are active currently.
5. (T) Position has constructed an Institution within the last two turns.
6. (T) Position has not failed to operate any Institution in the last two turns.
7. (T) All Friendly Colonies with 30 or more population factors currently have at least one Institution.
8. (T) Position currently has no Colleges or Institute on colonies captured by or reverted to other positions.
9. (T) The Culture Power has been activated for a purpose relating to Colleges within the last three turns.
10. (T) No Faculties have been committed to Combat in the last two turns.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 6 – Order & Other Government Titles**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) The Order Power has been activated for any purpose in the last two turns.
2. (T) The Order Power has not been activated to Declare/Move Capital Colony in the last five turns.
3. (T) The position has successfully converted a colony (by any means) in the last three turns.
4. (T) The position has no Naturalized Colonies but has at least three Converted Colonies.
5. (T) The position has not activated the Order Power for the purpose of Government Formation in the last five turns.
6. (T) The position currently has an equal number of undisrupted Social and Estate Titles.
7. (T) The position currently has had no disrupted Government Titles in the last five turns.
8. (T) The position’s Structural Government Title has not been either Disrupted or changed in the last ten turns.
9. (T) All Friendly and Naturalized Colonies have Ground Units located at the colony.
10. (T) At least half of the Cultural Proficiencies on the Public Space are either Police or Security Proficiencies *or* the Order Power has been activated for the purpose of Maintenance in the last turn.

### Emergent Government Titles Tables Interstellar Civilization Themes 7 – Colonies

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Average Friendly Colony population is 20 or less factors currently.
2. (T) Average Friendly Colony population is 60 or greater factors currently.
3. (T) No colony has failed to grow during a Census in the last three turns (i.e. Maximum Habitability).
4. (T) All colonies have industry currently *and* all colonies over 30 population factors have a Shipyard currently.
5. (T) No sovereign Friendly or Naturalized Colony has lost either Maximum Habitability or Habitability Class in the last three turns.
6. (T) The position currently owns no Conquered or Converted colonies.
7. (T) All Friendly Colonies at 50% or greater Maximum Habitability currently have Orbital Cities.
8. (T) The Taxation Power has not been activated in the last five turns.
9. (T) All sovereign colonies are currently within Short Movement of another sovereign colony in Galactic Space.
10. (T) All Friendly and Naturalized Colonies are in a starsystem with at least one other colonized world currently (i.e. on another planet, can be **alien colony**).

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 8 – Homeworld & Capital Colony**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Capital Colony is at least twice as large as any other sovereign colony in Friendly Population Factors.
2. (T) Capital Colony is at least three times as large as any other sovereign colony in total population.
3. (T) Capital Colony has constructed a ship in the last turn turns (laying keel does not count).
4. (T) The starsystem where the Capital Colony is located has not been entered by any alien ship, of any type, while this Government Title has been active (note this is a permanent fail once breached).
5. (T) Cargo Ships have unloaded at least 10 RPs at the Capital Colony in the last two turns.
6. (T) All sovereign colonies are within two turns movement of the Capital Colony.
7. (T) Diplomatic Spaces are connected to the Public Space (fails if position does not currently have a Capital Colony or if the Capital Status is disrupted due to inactive Symbolic Constructural Elements)
8. (T) The Homeworld is in Galactic Space but has not been owned by the position for less than five turns (reroll on this table if position is not either Homeworld or Lost Colonist).
9. (T) The Homeworld is in Galactic Space and has suffered reduction in Habitability Class or Maximum Habitability within the last five turns (reroll on this table if position is not either Homeworld or Lost Colonist).
10. (T) The Homeworld has not been the Capital Colony for less than eight turns (reroll on this table if position is not either Homeworld or Lost Colonist).

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 9 – Conversion & Naturalization**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Position has Naturalized a Converted Colony within the last five turns.
2. (T) Total Naturalized Population exceeds the total Friendly Population.
3. (T) Total Conquered or Converted population exceeds total Friendly population controlled by the position.
4. (T) Position currently holds no Conquered Colonies (i.e. Converted or Naturalized Colonies do not count).
5. (T) No Friendly Population Factors have been Converted or Naturalized by another position while this title has been active (note this is a permanent fail once breached).
6. (T) No Naturalized Colony has been lost or reverted to another position while this title has been active (note this is a permanent fail once breached).
7. (T) Position has never conquered or looted an **alien colony**.
8. (T) Position has never initiated Orbital Bombardment or Pacification Combat.
9. (T) A Naturalized or Converted Colony is currently the Capital Colony.
10. (T) No Naturalized, Converted or Conquered Colonies owned by the position are within Short Movement of the Capital Colony at the current best ship movement speed.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 10 – Technology**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) The Technology Power has been activated for any purpose in the last two turns.
2. (T) The position has successfully prosecuted a new, non-existential Patent in the last four turns.
3. (T) Thirty-five percent or more of RPs spent during Power Activations in the last three turns have been spent on Technology Power activations.
4. (T) The position has an equal or greater number of undisrupted Research Groups on the Public Space than undisrupted Government Titles currently.
5. (T) The position has completed only Existential Patents.
6. (T) The position has an active, endowed Technology College on the Capital Colony.
7. (T) An Institution associated with an active Technology College operated last turn.
8. (T) The current Era Matrix has more than 50% of Applications completed (note this can fail due to Era Progression).
9. (T) More than half of the Cultural Proficiencies on the Public Space are either Engineering or Medical Proficiencies.
10. (T) The position had either a successful Research Attempt or Development Attempt last turn.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 11 – Ships (incl. Stardrive)**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Position has attempted Prosecution of a new Stardrive Patent in the last three turns (note that successful prosecution might eventually cause this Conflict Check to fail).
2. (T) Position has either laid keel or constructed a new Ship in the last two turns.
3. (T) Position has constructed a new Shipyard in the last three turns.
4. (T) Position has successfully increased maximum Ship Speed of any Stardrive in the last three turns.
5. (T) Position has increased either Operational Flight Limitations (OFL) or Operational Supply Limitations (OSL) in the last three turns.
6. (T) Position has more warships than non-warships currently (individual ships, not RP value).
7. (T) Position has more non-warships than warships currently (individual ships, not RP value).
8. (T) Position currently has any combination of three Ship or Stardrive Research Groups on the Public Space.
9. (T) Position has initiated interstellar movement in the last turn.
10. (T) No ship owned by the position, including Scouts, has been destroyed in the last three turns.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 12 – Exploration & Expansion**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Expansion Power has been activated for any purpose in the last two turns.
2. (T) Position has activated the Expansion Power for the purpose of Looking within the last three turns.
3. (T) Position has activated the Expansion Power for the purpose of Scouting within the last three turns.
4. (T) No Scout Ships owned by the position have been destroyed in the last three turns.
5. (T) Five factors of Friendly Population have either been Loaded to or Unloaded from Colony Ships owned by the position within the last two turns.
6. (T) Position has activated the Expansion Power for the purpose of Transporting Population within the last three turns.
7. (T) Position has Landed a new colony within the last three turns.
8. (T) Position has Landed a colony on a Hostile or Unpleasant Class Planet in the last three turns.
9. (T) Position does not have two Friendly colonies in the same starsystem.
10. (T) Position has more Low-Population colonies than non-Low Population colonies (see 4 Taxation & Census, p. 326).

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 13 – Combat & Conquest**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) The Combat Power has been activated to Initiate Combat within the last three turns.
2. (T) The Combat Power has been activated for either Combat Alert at a Friendly Colony or to Seize the Initiative in an ongoing combat in the last two turns.
3. (T) The position is currently engaged in at least one ongoing combat (i.e. engaged in a combat that carries over the Regular Turn) where at least one Combat Round was processed between the last Regular Turn and the current Regular Turn (i.e. not Sieges).
4. (T) The position has either won a combat (all enemy units destroyed or retreated) in the last two turns *or* has not lost a combat (all friendly units destroyed or retreated) in the last three turns (ongoing combats do not count, as they are neither won or lost).
5. (T) The position has either conquered an **alien colony** *or* destroyed an **alien colony** by Orbital Bombardment in the last three turns.
6. (T) Position has successfully Converted a colony by Pacification Combat in the last five turns.
7. (T) Position has not lost a Ship Combat while this title is active (note that this is a permanent fail upon being breached).
8. (T) Position has not lost a Colony Combat while this title is active (note that this is a permanent fail upon being breached).
9. (T) Position has built a new Warship in the last turn.
10. (T) Position has transferred Ship Missiles or Fighters to a Warship (incl. Carriers, see 1 Combat) in the last two turns (can be from either a colony or Logistical Ship).

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 14 – Colony Defenses**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) All Friendly, Naturalized and Converted Colonies have at least one Defense Base (of any type) *and* have defenses at the current Era of the position (new colonies, Era Progression can cause this to fail).
2. (T) Thirty-five percent of RPs spent in the last three turns were spent for Defense Bases, Ground Units, and Colony Defense Era Upgrades at Friendly or Naturalized Colonies.
3. (T) The position has not lost a Colony Combat at a sovereign colony while this title has been active (note this is a permanent fail upon being breached).
4. (T) The position has not lost a Ground Combat at a sovereign colony while this title has been active (note this is a permanent fail upon being breached).
5. (T) All sovereign colonies that have either a Shipyard or Orbital Cities also have at least three Orbital Defense Bases and one System Defense Base.
6. (T) All Friendly and Naturalized colonies have the maximum number of Fighters allowed.
7. (T) All sovereign colonies have a Ground Unit and at least three Ground Bases.
8. (T) All **alien colonies** on Balkanized Planets are owned by the position.
9. (T) At least one Warship is in each system with a sovereign colony.
10. (T) At least one friendly Warship is located in any starsystem that has a Cargo Ship or Logistical Ship at the end of the turn (Ships in interstellar flight at the time of the Regular Turn do not require a Warship).

### Emergent Government Titles Tables Interstellar Civilization Themes 15 – Population

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) No other **alien colonies** exist in systems where a Friendly Colony is located *or* all **alien colonies** in a starsystem with a Friendly Colony are owned by the position.
2. (T) Colonies containing the position’s Native Population Type (not counting those descended from related Lost Colonist positions) in the Galactic Space are equal to the number of turns elapsed in the game minus 25% (i.e. on Turn 20, there must be at least 15 colonies in Galactic Space of your Native Population Type), regardless of current ownership (i.e. they do not have to be Friendly Colonies).
3. (T) Position has eliminated a minor race within the last 20 turns.
4. (T) Position has at least one Friendly Colony at least three turns movement at best ship speed from the current Capital Colony.
5. (T) Position has at least 50 Friendly Population factors loaded on Colony Ships currently.
6. (T) No Friendly Populations (i.e. factors of the position’s Native Population Type) are located on Orbital Cities currently, regardless of sovereign ownership or political status.
7. (T) At least half of the Cultural Proficiencies pieces on the Public Space currently are either Security or Nationhood Proficiencies.
8. (T) The position currently has an active, endowed Census College and at least one Institution associated with the Census College operated last turn.
9. (T) At least 42% of Cultural Proficiencies on the Public Space currently are Regeneration Proficiency pieces.
10. (T) Position has at least two Life Research Groups currently on the Public Space.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 16 – Progress**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Position has at least one other undisrupted Social Title *and* no other active Social Title has any failed Conflict Checks.
2. (T) Position has more active, Endowed Colleges than undisrupted Government Titles.
3. (T) At least 75% of each Constructural Element is active.
4. (T) At least 50% of current Cultural Proficiencies on the Public Space are either Urbanization or Spirit Proficiencies.
5. (T) Construction Power has been activated for at least two Friendly or Naturalized Colonies in the last three turns, and Industry was built in the last three turns.
6. (T) All Friendly and Naturalized Colonies, except Low Population and Specialized Colonies, have at least 60% of the maximum allowed industry.
7. (T) Both the Technology and Construction Powers have been activated for any purposes in the last two turns.
8. (T) Position has at least three Fuzzy Groups and/or Zeitrice currently on the Public Space.
9. (T) Position has more active Corporations and/or membership in Megacorporations than undisrupted Government Titles.
10. (T) Position owns no Warships.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 17 – Diplomatic Spaces (incl. Meanings)**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

Note: Conflict Checks based on Diplomacy naturally depend more than usual on the actions of other positions

1. (T) Position has had First Contact with a Major or minor race in the last 5 turns (note, at some point this will fail).
2. (T) Position has at least one Friendly or Naturalized Colony located on each Diplomatic Space.
3. (T) Position has unloaded RPs from a Cargo Ship onto a non-sovereign **Alien Colony** in the last three turns.
4. (T) Over half of the Friendly population factors controlled by the position are located on Balkanized planets.
5. (T) Position currently has at least three Meanings *and* no Meanings have been destroyed in the last two turns.
6. (T) Total Diplomatic Spaces equal 40% of the Public Space.
7. (T) All Diplomatic Spaces are accessible by both parties (i.e. both parties currently have a Capital Colony).
8. (T) Position has at least two Shared Meanings with two different positions.
9. (T) Position owns the Host Worlds of three MegaCorporations; must be different worlds, but position does not need to have membership in the MegaCorporations it hosts.
10. (T) Position has not initiated any Combats while this Title has been active (note, permanent fail upon being breached).

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 18 – Commerce**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) The Commerce Power has been activated for any purpose in the last two turns.
2. (T) Position owns more Cargo Ships (including any that might be assigned to Corporations or MegaCorporations) than any other type of ship.
3. (T) Position has Loaded or Unloaded Resources at a non-sovereign **Alien Colony** in the last two turns.
4. (T) Position has Loaded and Unloaded Cargo Ships at a sovereign colony in the last turn (note, to do this, the position must own at least two Cargo Ships).
5. (T) No Cargo Ships have been destroyed in the last three turns.
6. (T) All Cargo Ships not currently in interstellar flight are located in systems with a friendly warship.
7. (T) No Cargo Ship has been located in the same system for more than two turns.
8. (T) No Cargo Ship has retreated from a Combat in the last five turns.
9. (T) No Cargo Ship has been attacked while this Title has been active (note, this is a permanent fail once breached).
10. (T) Position has more active Corporations than undisrupted Government Titles, each Corporation is hosted on a different world, *and* a new Corporation or MegaCorporation has been added to the position in the last three turns (all must be simultaneously true to pass the Conflict Check).

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 19 – Corporations & MegaCorporations**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Position has more active Corporations than memberships in MegaCorporations *and* owns the Host Colony of all MegaCorporations in which it is a member.
2. (T) Position has never established a Corporation or had membership in any MegaCorporation (note, this is a permanent fail once breached).
3. (T) Position has no Cargo Ships that are not committed to either a Corporation or MegaCorporation.
4. (T) More than half of the Cultural Proficiencies on the Public Space are either Finance or Resource Proficiency pieces.
5. (T) All other undisrupted Government Titles are either Structural or Estate Titles, which have not been disrupted while this Title has been active (note, this is a permanent fail if any of the Estate Titles or the Structural Title is disrupted).
6. (T) Position has Shared Meanings with all other members of MegaCorporations in which the position has membership (note this fails – is false – automatically if there are no Shared Meanings and/or the position is not a member of any MegaCorporations).
7. (T) Position is a member of at least one MegaCorporation *and* has never established a Corporation (note, this is a permanent fail if position has ever established a Corporation).
8. (T) Position has membership in more MegaCorporations than it has undisrupted Government Titles.
9. (T) All MegaCorporations in the game are hosted on colonies controlled by this position.
10. (T) Position is the clear majority shareholder in all MegaCorporations in the game.

**Emergent Government Titles Tables**  
**Interstellar Civilization Themes 20 – Little Secrets & Special Operations**

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

1. (T) Roll 1d10 each turn, on a 1 result, an embarrassing tragic fatal secret has been exposed and this conflict check fails permanently, cannot be restored (it’s only a matter of time...). Do not make additional rolls after failure.
2. (T) Position has activated the Special Operations Power in the last three turns.
3. (T) Position has at least five Missions currently Lodged (note the aging of missions problem).
4. (T) Position has at least seven targets under protection *and* no more than half of targets under protection are on the Capital Colony.
5. (T) Position has activated the Special Operations Power for the purpose of Counter Operations in the last turn.
6. (T) Position has Counter-Operations Missions on all Friendly and Naturalized Colonies.
7. (T) Position has activated the Special Operations Power for either Special Operations or Counter Operations on a Host World or Capital Colony in the last two turns.
8. (T) Position has activated the Special Operations Power for the purpose of Information in the last two turns.
9. (T) Position has ships currently located in at least six starsystems with an **Alien Colony** and no sovereign colonies.
10. (T) Position has attempted a Probe of an **Alien Colony** within the last five turns.

**Emergent Government Titles**  
**Social Government Title Themes 1 – Liberty, Equality, Fraternity**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has not conquered any colonies while this Title has been active *and* has allowed all previously Conquered and Converted Colonies (not Naturalized Colonies) to revert (note, the second part only applies if position had those colonies when Title became active; both parts must be true to pass).
2. (T) Position has had an undisrupted Confederation Structural Title *and* no undisrupted Estate Titles for less than eight consecutive turns (note, both must be true to pass).
3. (T) Position has had an undisrupted Dualistic Structural Title for less than ten turns *and* has never conquered a colony while this Title has been active (note, both must be true to pass, either condition is a permanent fail when breached).
4. (T) Position does not share Diplomatic Spaces, other than the First Space, with any position that controls colonies not of their Native Population Type.
5. (T) Position has had an equal number of undisrupted Social and Estate Titles for five or less turns without a change in Titles.
6. (T) Position has Naturalized all Converted Colonies, owns no Conquered Colonies, *and* the last successful Naturalization occurred within the last three turns (note, all parts must be true to pass, or else it is a false statement).
7. (T) Total population of non-sovereign colonies composed of the position’s Native Population Type (not counting related Lost Colonist population) is approximately equal (+/- 10%) to the total population of sovereign **alien colonies** (of any political status).
8. (T) Position has not damaged the population or installations of any **alien colony** planet *and* no alien power has damaged the population or industry of any sovereign colony while this Title has been active (note, both must be true to pass, permanent fail if breached).
9. (T) Position maintains sovereign colonies on at least three Balkanized Planets which are at 90% or more habitability *and* are equally occupied by all Native Population Types present (within +/- 5%) (note, both must be true to pass).
10. (T) Position has not Orbital Bombarded any colony and no Friendly or previously Naturalized colony (to this position) has been Orbital Bombarded while this title has been active (note, permanent fail once breached).

(Themes: late 18<sup>th</sup> and 19<sup>th</sup> Century revolutionary ideas often find their way into science-fiction literature, thus science-fiction genre has been called leftist, liberal; viva la République française!)

**Emergent Government Titles**  
**Social Government Title Themes 2 – Conservative & Reactionary Forces**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position currently has a disrupted Government Title that has been disrupted for three turns or less (note, this applies to any kind of Title).
2. (T) Position has Restored a disrupted Social or Estate Title in the last three turns.
3. (T) Position has not abandoned any disrupted Government Titles while this Title has been active (note, this is a permanent fail once breached).
4. (T) Position has not added two new Government Titles while this Title has been active (note, this is a permanent fail once breached).
5. (T) The last added Social or Estate Title has remained undisrupted for 3 or less consecutive turns.
6. (T) Position’s Capital Colony was moved within the last five turns.
7. (T) Position’s Capital Colony has been moved back to any previous location within the last five turns.
8. (T) Homeworld is the position’s Capital Colony (reroll if position is not either a Homeworld or Lost Colonist).
9. (T) Position does not currently have Stardrive Technology (i.e. a completed Stardrive Patent).
10. (T) Position has completed 80% or more of the Applications in the current Era have been completed (not counting connections) *and* the position has not either successfully developed any advanced Applications or prosecuted any Advanced Patents in the next Era, *and* has not developed any new Applications or Prosecuted any new Patents while this Title has been active (note, all three conditions must be true for this statement to be true, the last condition is permanently failed upon being breached).

(Themes: Restoration of previous government titles, return to past glories, back to the old ways, *status quo* preservation, Napoleon III of France, counter-revolution, majesty of the past, Londo Mollari, Avignon Papacy, Rassilon, execution of Mary I Queen of Scots, holding back change in times or worldviews)

**Emergent Government Titles**  
**Social Government Title Themes 3 – Temperance**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) This Title has been active for three or less turns (note, this is a permanent fail after the third turn).
2. (T) Position has one more Police Proficiency piece on the Public Space than last turn **and** this Title has been active for four or less turns (note, both must be true to pass).
3. (T) Position currently has less Aspects on the Public Space than undisrupted Government Titles.
4. (T) Position currently has less than half as many Aspects on the Public Space as Proficiency pieces on the Public Space.
5. (T) This Title replaced an Estate Title **and** has been active for three or less turns (note, this is a permanent fail after the third turn).
6. (T) A Social Title has not been replaced by an Estate Title while this Title has been active **and** this Title has been active for four or less turns.
7. (T) Position currently has twice as many Maintenance Shields as undisrupted Government Titles **and** no Government Title (of any kind) has become disrupted while this Title has been active (note, both must be true to pass, the latter is a permanent fail).
8. (T) Position has activated the Culture Power for the purpose of Cohering, the Order Power for the purpose of Maintenance **and** has not activated the Combat or Technology Power in the last turn (note, all must be true to pass).
9. (T) Position has not generated an Intervention Potential Plus and a Thesis has not be lodged against the position in the last two turns.
10. (T) Position has more Spirit Proficiency pieces and more Rhetoric Proficiency pieces (both individually) than Aspects or undisrupted Government Titles (whichever is greater) on the Public Space **and** the Combat Power has not been activated for any purpose in the last two turns.

(Themes: moderation in action, thought, indulgence and passions, note that Conflict Checks from this Social Title Theme imply that the position’s population is capable of excess and extremes, moderation can be an extremism, Mr. Spock)

**Emergent Government Titles**  
**Social Government Title Themes 4 – Militarism**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has conquered a colony in the last turn *and* has not lost a Combat since while this title has been active (note, both must be true, the last is a permanent fail).
2. (T) All **alien colonies** within two turn’s movement of the Capital Colony at best ship speed have been Conquered, Converted, or Naturalized, *and* Ship Speed has increased in the last two turns (note, both must be true).
3. (T) Position has only Police, Rhetoric and Spirit Cultural Proficiency pieces on the Public Space, the Police Proficiencies outnumber the other two combined, and the Combat Power has been activated in the last turn (note, all three must be true to pass).
4. (T) Position has no other undisrupted Social Titles *and* has not lost a Combat while this title has been active (note, both must be true, the latter is a permanent fail if breached).
5. (T) Position has less Thesis statements lodged against it than undisrupted Government Titles *and* this title has not been active longer than any other undisrupted Social Title.
6. (T) Position is currently engaged in three or more ongoing combats, *and* has activated the Combat Power every turn this Title has been active.
7. (T) At least a third of the population of every Friendly colony is in Ground Units *and* no Native Population Factors of the position are under alien control.
8. (T) Position is engaged in Combat with three different positions currently *and* has activated a Writ related to the Combat Power in the last two turns.
9. (T) The Endowment of the Combat College is currently at least twice that of any other College.
10. (T) The Construction Power has been activated at a Friendly Colony for the purpose of Colony Defense Upgrade and the Census Power has been activated, both within the last turn.

(Themes: Sparta, Assyria, militant nationalism, Fascism, take instead of producing, aggressive society, ultra-nationalism, bootcamp at Parris Island, willingness to sacrifice, generational war, great crusade – but rather than an estate, it is a sociopolitical movement)

### Emergent Government Titles

#### Social Government Title Themes 5 – Imperialism & Colonialism

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has had an undisrupted Unitarian Structural Government Title *and* two or more undisrupted Estate Titles while this Title has been active (note, permanent failure if either of these conditions is breached).
2. (T) Position has fought either a Pacification Combat or loaded RPs to a Cargo Ship at a sovereign colony (either alien or friendly) every turn this Title has been active (note, permanent failure if breached)
3. (T) All RPs unloaded from Cargo Ships while this Title has been active have been unloaded at the Capital Colony or largest Friendly Colony (they may not be the same).
4. (T) All Symbolic and Ideological Constructural Elements are active at Friendly Colonies and on all Ships, *and* this Conflict Check has never failed (i.e. self-sealing).
5. (T) During the last activation of the Taxation Power, at least half of the RPs were collected from sovereign **alien colonies** or Friendly colonies of 20 population or less.
6. (T) Capital Colony is the largest Friendly Colony in population *and* no **alien colony**, whether sovereign or not, within two turns ship movement at best speed, is more than half as populous (note, both must be true to pass).
7. (T) No sovereign **alien colony** has reverted *and* no sovereign colony has been conquered or destroyed while this Title has been active (note, permanent failure once breached).
8. (T) All sovereign colonies have at least one Counter-Operations mission *and* one Police Cultural Proficiency adjacent on the Public Space (note, both must be true to pass).
9. (T) All sovereign **alien colonies** are Balkanized with a Friendly Colony that has a Ground Unit.
10. (T) No Social or Estate Titles have failed any Conflict Checks currently *or* this Title has been active for less than six turns (note, if either is false, the statement is not true).

(Themes: popular support for imperialism and colonialism,<sup>1</sup> pacification theory, material gain, emigration to colonies, conquest of colonies, right to survival and comfort above all others, extension of power, return to the stars, sphere of control, authoritarian government<sup>2</sup>)

<sup>1</sup> Commentary: Note that there are two types of “colonialism” depicted in science-fiction: 1) Seeding Space, which is primarily the colonization of unoccupied worlds for resources and living space and 2) Imperial Colonialism, which the world knows well as foundation of colonies in areas occupied by indigenous peoples (e.g., minor races in GGDM) and/or establishment of military and cultural hegemony over other peoples for commercial exploitation.

<sup>2</sup> Commentary & Citation: The term Imperialism is used mainly in the classic sense of governmental and military domination, less so the modern cultural-economic sense. See Merriam-Webster online dictionary at *imperialism*.

**Emergent Government Titles**  
**Social Government Title Themes 6 – Mysticism**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has successfully prosecuted a new Stardrive Patent or increased Ship Speed in the last three turns, *but* has not yet obtained the fifth Stardrive Patent (note, both must be true to pass, the Generic Stardrive counts as a Stardrive).
2. (T) Position has successfully created a Research Group on the Public Space for Matter, Energy, Life, Information (in that order only, one per turn), each turn this Title has been active (note, this is a permanent fail once breached).
3. (T) Position has exactly as many Aspects on the Public Space as Proficiency pieces.
4. (T) Position has successfully reverse engineered an alien stardrive in the last ten turns.
5. (T) Position has activated the Expansion Power for the purpose of Scouting for five consecutive turns.
6. (T) Position has had a First Contact in the last three turns.
7. (T) Position *either* has exactly three undisrupted Government Titles (any kind) and no disrupted Titles *or* all Social and Estate Titles have exactly three Conflict Checks that are currently passing (note, if either is true, the Conflict Check passes).
8. (T) Position has suffered a Disruption Event each turn for the last six consecutive turns.
9. (T) Each Research Group on the Public Space is currently adjacent to a Spirit Proficiency piece *and* the position has five undisrupted Government Titles currently (note, both must be true to pass).
10. (T) Each Aspect on the Public Space is adjacent to a Spirit Proficiency.

(Themes: mysticism has been a frequent dinner guest at science-fiction tables in the form of exotic technologies, FTL travel, exploration of the universe, alien first contact, enlightened alien civilizations, but not generally as a Social Title (ideally, a union of the species or civilization with ultimate reality, divinity, “pilot of the storm that leaves no trace,” etc.), but rather as the historically continuous human thing that refuses to be banished by reason or lack of evidence)

**Emergent Government Titles**  
**Social Government Title Themes 7 – Isolationism**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has had an undisrupted Unitarian Structural Title *and* no Thesis have been lodged against the position while this Title has been active (note, both must be true to pass, failure is permanent).
2. (T) All alien Cargo Ships have unloaded at a single Friendly Colony *and* the position has no membership in MegaCorporations while this Title has been active (note, both must be true to pass, failure is permanent).
3. (T) Position has not activated the Expansion Power for any purpose and has had no First Contacts in the last three turns.
4. (T) The number of Thesis lodged against the position is not more than twice the number of undisrupted Government Titles.
5. (T) No Reformation has occurred while this Title has been active (note, this is a permanent fail once breached).
6. (T) Position has no colonies on Balkanized Planets *and* owns no colonies of alien population (note, both must be true to pass).
7. (T) Position has had either one or no First Contact with other Major Races (note, this is a permanent fail once breached).
8. (T) Position has Landed 50 or less Native Population Factors (not counting subsequent Census activations) during the game (note, this is a permanent fail once breached).
9. (T) No ship owned by the position currently is in *apostasy* (i.e. inactive Constructural Elements) due to contact with an *alien colony* (see Aliency Apostasy, 3 Disruption, p. 283), and no ship or colony owned by the position has ever been in *apostasy* as a result of contact with an alien position experiencing a Kairotic Moment while this title has been active (note both must be true to pass, failure of the second is permanent once breached).
10. (T) No Aspects have been converted due to contact with an alien position experiencing a Kairotic Moment (Aspects eliminated as a result do not count), while this Title has been active (note, this is a permanent fail once breached).

(Themes: isolationism as a form of widespread sociopolitical- and cultural-xenophobia, extremism in self-determination, *Sakoku*, Closed Country Edict of 1635, Exclusion of the Portuguese Edict of 1639, hands-off, long-term stability, The Galaxy Being)

**Emergent Government Titles**  
**Social Government Title Themes 8 – Proselytism**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position currently has two or more conquered colonies *and* every colony conquered by this position while this Title has been active has been Naturalized within 5 turns or less of the conquest turn (note, both must be true to pass).
2. (T) The position has not failed a Naturalization attempt while this Title has been active *and* a Naturalization attempt has been made in the last turn (note, both must be true).
3. (T) Position has used faculties from either a Naturalization College or Conversion College in a Combat in the last two turns.
4. (T) Position has lost a sovereign colony *and* conquered an **alien colony** in the last three turns (both must be true to pass).
5. (T) An Institution has been either constructed or operated on every sovereign **alien colony** each turn this Title has been active (note, permanent fail once breached).
6. (T) A Colony Ship has Loaded, Unloaded, Transported or Landed alien population factors each turn this Title has been active (note, permanent fail once breached).
7. (T) A Cargo Ship has Loaded or Unloaded at an **alien colony** (whether sovereign or not) each turn this Title has been active (note, permanent fail once breached).
8. (T) One or more **alien ships** or **colonies** are currently in *apostasy* (i.e. inactive Constructural Elements) due to contact with colonies owned by this position (see 3 Disruption and 2 Kairotic Moments).
9. (T) No alien population colonies controlled by this position have failed to obey a Power Activation in the last three turns.
10. (T) Position has issued at least one Thesis Statement that has been accepted by the Concierge, in the last two turns against another position (that is, issuing against your own position does not count).

(Themes: militant interstellar proselytism, missionary position, stirring the pot, cultural hegemony, our culture is superior, we possess the one truth, smugness in dogma; proselytism frequently appears in science-fiction stories, usually to tragicomic effect and/or for criticism)

**Emergent Government Titles**  
**Social Government Title Themes 9 – Modernity – Prosperity**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has RPs in the Treasury equal or greater than the number of passing Conflict Checks times the number of sovereign colonies.
2. (T) More than half of the position’s population (friendly and alien) live on colonies that have maximum possible industry.
3. (T) All sovereign colonies have obeyed the Taxation Power for the last five consecutive times it has been activated.
4. (T) During a Taxation Power activation in the last three turns, the position produced at least twice as many RPs from Industry as the position’s total population at that time (note, this has a time limit requiring regular activation of the Taxation Power).
5. (T) RPs received from Taxation were greater than those received from the previous Taxation for the last three consecutive activations of the Taxation Power (note, failure to obey Taxation Power activations can cause this to fail).
6. (T) During the last activation of the Taxation Power, every sovereign colony had more industry than it did during the previous activation of the Taxation Power *and* every Friendly Colony also had more population than during the previous activation of the Taxation Power (note, both must be true to pass).
7. (T) The Census Power has been activated in the last two turns.
8. (T) Position has Landed a new Friendly Colony in the last three turns.
9. (T) Position owns more ships (including those in Corporations or MegaCorporation) than any other position (e.g., the three car garage syndrome).<sup>1</sup>
10. (T) Position owns a number of ships greater than the number of Government Titles (incl. disrupted) times the number of sovereign colonies doubled.

(Themes: four pillars of the modern Western state: *prosperity*, technology, nationalism and acceptance of remote authority)

<sup>1</sup> Admittedly, as long as this Conflict Check passes, it constitutes a bit of free – but marginal utility – intelligence. And it can be affected by other positions and can fail due to combat losses. It’s also a small risk in taking it initially because a position almost can never be sure the Conflict Check won’t fail instantly.

**Emergent Government Titles**  
**Social Government Title Themes 10 – Modernity – Technology**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has activated the Technology Power for any purpose for five consecutive turns.
2. (T) Position has successfully prosecuted a number of Patents in the last ten turns equal to the current number of undisrupted Government Titles (note, oddly, having disrupted Titles can cause this Conflict Check to pass...maybe discouraging restoration).
3. (T) Position has not encountered a ship of a higher Era (than the position’s current Era) or has not had to defend a colony in combat while this Title has been active (note, permanent fail once breached).
4. (T) A sovereign colony has not been attacked by ships of a higher Era than the colony’s defenses while this Title has been active (note, permanent fail once breached).
5. (T) Position has not encountered **alien colony** defenses of a higher Era (than the position’s current Era) in the last three turns.
6. (T) Position has improved Ship Speed, Operational Flight Limitation and Operational Supply Limitation within the last five turns.
7. (T) Position has improved Industrial Technology within the last three turns.
8. (T) Position has constructed a Technological Device in the last five turns.
9. (T) Position has either improved the Maximum Habitability of a planet (e.g., terraforming) or constructed Orbital Cities at a Friendly Colony in the last three turns.
10. (T) Position has an active, endowed Technology College *and* has operated a related Institution in the last turn.

(Themes: four pillars of the modern Western state: prosperity, *technology*, nationalism and acceptance of remote authority, Dr. Who, “I just walked into the highest security office in the United States [Oval Office], parked a big blue box on the rug, you think you can just shoot me?”)

**Emergent Government Titles**  
**Social Government Title Themes 11 – Modernity – Nationalism**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has Landed a new colony or Naturalized a Converted **alien colony** each turn for three consecutive turns.
2. (T) Position has added a Nationhood and Rhetoric or Urbanization Proficiency piece to the Public Space each turn for the last three consecutive turns.
3. (T) Position has not encountered a ship of a higher Era (than the position’s current Era) **or** has not had to defend a colony in combat while this Title has been active (note, permanent fail once breached).
4. (T) No Friendly population factors reside on Balkanized Planet surfaces **and** 75% of Symbolic and Ideological Constructural Elements are active on colonies and ships (note, both must be true to pass).
5. (T) At least 40% of the position’s Friendly Population Factors live on Optimal Habitability Class planets (watch out for pollution and entropy!).
6. (T) No Friendly Population Factors (except those belonging to related Lost Colony positions) are controlled by alien governments and no Friendly Colony has failed to obey a Power Activation in the last three turns (note, both must be true to pass).
7. (T) Total Friendly Population Factors owned by the position have grown for three or more consecutive Census Power activations **and** the Census Power has been activated within the last two turns (note, both must be true to pass).
8. (T) There are currently no failing Conflict Checks (note, if there are, this one fails too!).
9. (T) The Capital Colony has always been located on a Friendly Colony, and not on a Balkanized Planet, **and** the Capital Colony is the largest colony by population in the game (note, all must be true to pass, “Say, could you please remove some Vulcans from Vulcan?”).
10. (T) Position has more active, endowed Colleges than any other position in the game (note, this could be expensive, like an arms race, or maybe you just get lucky?).

(Themes: four pillars of the modern Western state: prosperity, technology, **nationalism** and acceptance of remote authority, nationalism vs. globalism, 19<sup>th</sup> and 20<sup>th</sup> Century history, identity, self-determination, solidarity)

**Emergent Government Titles**  
**Social Government Title Themes 12 – Modernity – Remote Authority**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has had eight or more consecutive successful Power Activations requiring a Scene or Scenes; i.e. no failure due to Constructural Elements or any other purpose.
2. (T) All Ships have obeyed all actions issued during the last ten Regular Turns.
3. (T) All sovereign colonies have obeyed the Taxation Power for the last five consecutive times it has been activated.
4. (T) No warship has failed to obey an order to initiate combat (including Combat Movement) while this Title has been active (note, permanent failure once breached).
5. (T) The position’s current Structural Title has never been disrupted **and** has at least two undisrupted and no disrupted Estate Titles (note, all must be true to pass, the first can cause immediate, permanent failure).
6. (T) The position’s Structural Title has never been disrupted while this Title has been active **and** neither the Capital Colony nor any ships or units located at the Capital Colony have failed to obey any Power Activation in the last five turns (note, both must be true to pass, permanent failure once the first part breached).
7. (T) Position has activated the Expansion Power for the purpose of Loading Population in the last two turns, **and** has not failed before Loading at least one population in any such activation while this Title has been active (note, both must be true to pass, failure of the second is permanent).
8. (T) Position has activated the Expansion Power for the purpose of Unloading Population in the last two turns, **and** has not failed before Unloading at least one population or for any other reason, in any such activation while this Title has been active (note, both must be true to pass, failure of the second is permanent).
9. (T) The Capital Status of the Capital Colony has never been disrupted while this Title has been active **and** the position has used at least nine Power Activations in the last three turns (note, both must be true to pass, the first is a permanent fail if breached).
10. (T) Position has a Unitary Structural Title and no Social Titles, and everything is just peachy ... no, that’s not it ... **and** the position has activated a Writ in the last two turns (note, both must be true to pass).

(Themes: four pillars of the modern Western state: prosperity, technology, nationalism and *acceptance of remote authority*, Congo Crisis 1960-1965, herding cats, Treaty of Athis-sur-Orge)

### Emergent Government Titles Social Government Title Themes 13 – History

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) This Conflict Check is part of a Title which has been restored, has more than one Conflict Check, **and** which is passing all other Conflict Checks currently (note, all must be true to pass, this could cause a chain reaction failure disruption).
2. (T) This Conflict Check is part of a Title which was previously *abandoned* **and** all other Conflict Checks on this Title and other Titles, are currently passing.
3. (T) Position has suffered three Disruption Events or is involved in two ongoing combats in the last turn (note, when nothing happens, there is no history).
4. (T) Position currently has Restored a disrupted Government Title in the last three turns.
5. (T) Position has an active, endowed History College and at least two non-suspended Writs associated with it, **and** have activated one of the associated Writs in the last three turns (note, all must be true to pass).
6. (T) Position has an active, endowed History College **and** has operated related Institutions on at least three Friendly Colonies with adjacent Customs Proficiency piece on the Public Space within the last three turns (note, both must be true to pass).
7. (T) Position has two unrestored (but not abandoned) Government Titles currently (note, this requires the position to have two disrupted Social or Estate Titles at the end of the turn...).
8. (T) Position has published an Expose’ **or** has posted modifications to *every adverse News Event* in the last three turns (including their own, which can only be done after some other position posts a modification).
9. (T) All Epistemological Constructural Elements on ships and Friendly or Naturalized Colonies are currently active **and** there is at least one Information Research Group currently on the Public Space (note, both must be true to pass).
10. (T) Position currently holds all of its original pre-game Government Titles, even if currently disrupted (i.e. no Titles have been replaced or abandoned during the game) **and** at least fifteen Regular Turns have been processed by the position in the game.

(Themes: all peoples have kept some history; history provides context, relationship, instruction; where there is no history there is Void; the Renaissance was driven by rediscovery of historical writings lost to the West; oral pre-empirical history was part of history and legitimacy of rulers; history has been embraced, rejected, rewritten, distorted; history is one of the ancient humanities)

**Emergent Government Titles**  
**Social Government Title Themes 14 – Music**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has had a First Contact in the last two turns *and* it occurred while this Title has been active and undisrupted (note, both must be true to pass).
2. (T) Position has posted one poetic or lyrical (non-adversarial) News Event each turn this Title has been active *and* both Aspects and Expression Proficiencies on the Public Space outnumber currently undisrupted Government Titles (note, both must be true).
3. (T) Position has a Type 4 Fundamental Reality *and* Aspects outnumber Proficiency Pieces on the Public Space by at least two to one (note, both must be true to pass).
4. (T) Position has Exposed Aspects every turn this Title has been active (even if disrupted).
5. (T) Position has activated two Writs that require Expression Proficiencies in the last three turns.
6. (T) The Culture Power has been activated for the purpose of Exposing Aspects twice as many times as the Census Power has been activated while this Title has been active (note, no expiration, but does limit activation of the Census Power).
7. (T) Each activation of the Census Power has occurred on the same turn that Express and Regeneration Proficiencies (one or more of each) have been placed on the Public Space while this Title has been active.
8. (T) The position has experienced a Kairotic Moment in the last five turns whose Key Aspect was on the Public Space on the turn cycle when the Kairotic Moment was triggered (see 3 Kairotic Moments).
9. (T) Position has undergone a Reformation and experienced a Kairotic Moment within the last eight turns (note, both must be true to pass).
10. (T) “Hail to the Chief” plays every time you walk into a room with President Nixon (add one to your die roll, and move onto the next Conflict Check, you have 5 minutes).
11. (T) Position has repeated in exact order, the previous five Power Activations (for any purpose, Solfège scale hand gestures are optional).

(Themes: prehistoric humans made flutes; Close Encounters; music expresses emotion and meaning that sapient mind craves but of which our physical form is incapable; music is part of a creative and symbolic continuum; babies recognized music played to them while in the womb)

**Emergent Government Titles**  
**Social Government Title Themes 15 – Social Complexity**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has activated five or more Writs in the last three turns.
2. (T) All endowed, active Colleges operated at least one Institution last turn *and* the position had at least five endowed, active Colleges (note, both must be true to pass).
3. (T) Position has used 90% of RPs in the Treasury over each of the last three turns *and* has not added any new colonies (i.e. the system is near peak efficiency).
4. (T) Total of all College per turn endowments equals or exceeds RPs in Treasury at the end of the turn.
5. (T) Position currently owns 30 or more colonies *and* initiated movement of 15 or more starships last turn.
6. (T) Position has owned 20 or more colonies *and* 50 or more starships for the last three turns.
7. (T) Position has initiated interstellar movement of starships to at least ten different destinations in the last turn (note that a single Power Activation can move multiple starships from one origin to a number of different destinations).
8. (T) Position has at least one Shared Meaning with every species with which it has had First Contact (note, Shared Meanings depend on both parties to act accordingly).
9. (T) Position currently has five undisrupted Government Titles with a total of more than 12 Conflict Checks (note, this fails if any of the titles becomes disrupted).
10. (T) Position currently owns colonies of six or more different Native Population Types *and* has at least three Naturalized colonies, each of a different Native Population Type *and* has added a new Native Population Type to the position’s population in the last ten turns (note, all must be true to pass).

(Themes: Joseph Tainter, societies add complexity and specializations to solve problems; collapse occurs due to diminishing returns on investment in complexity; interstellar civilization is a complexity added to solve Homeworld problems; all human civilizations have evolved toward complexity; complexity is life, evolution and civilization, “It’s ... um ... complicated”)

**Emergent Government Titles**  
**Social Government Title Themes 16 – Urbanization**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has activated the Construction Power for the purpose of Colony Enhancement for three consecutive turns at sovereign colonies each representing less than 10% of the position’s total population.
2. (T) More than half of the position’s sovereign population lives on colonies of 50 or more population factors.
3. (T) All RPs Unloaded from Cargo Ships while this Title has been active, have been Unloaded at sovereign colonies with less than 30 population factors (note, this is a permanent fail once breached).
4. (T) Position’s current Capital Colony was Landed less than ten turns ago, or if the colony is pre-game, the game has processed less than 10 turns (note, at some point this statement cannot be true unless the Capital Colony is moved regularly).
5. (T) Position has Unloaded population of a different Native Population Type onto the surface of a planet that already has a colony within the last three turns (i.e. created or added new aliens to a Balkanized Planet).
6. (T) Position has Loaded or Unloaded, in any combination, 20 population factors of any Native Population Type from established colonies in the last two turns.
7. (T) Position has over half of its colony planets (by number, rounded down) with any Native Population Types (including Balkanized Planets) at 80% or greater Maximum Habitability *and* the position has lost no sovereign population growth to exceeding Maximum Habitability while this Title has been active (note, both must be true to pass, permanent fail if second condition is breached).
8. (T) Capital Colony planet is at 95% Maximum Habitability or more, *and* has not lost any population growth due to exceeding Maximum Habitability while this Title has been active (note, both must be true to pass, permanent fail if second condition is breached).
9. (T) At least one non-Capital Colony planet is at 90% Maximum Habitability or more, *and* has not lost any population growth due to exceeding Maximum Habitability in the last three turns (note, both must be true to pass).
10. (T) Industry installations have been added to colonies comprising of at least half of the position’s sovereign population in the last three turns.

(Themes: all post-hunter gatherer civilizations have tended toward urbanization; agriculture & population explosion propelled urbanization; urbanization produced complexity, specialization & emergence in ripples through history; to be urban is to be political, cultured & urbane)

**Emergent Government Titles**  
**Social Government Title Themes 17 – Remorse**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position initiated Orbital Bombardment Combat at any prior time in the game, *and* has not initiated Orbital Bombardment Combat while this Title has been active (note, both must be true to pass, permanent failure if breached, crocodile tears).
2. (T) Position has violated a Shared Meaning in the past, *and* has not violated a Shared Meaning in the last ten turns (note, both must be true to pass).
3. (T) Position has initiated Combat during a First Contact Situation in the past *and* has not done so again while this Title has been active (note, both must be true to pass, permanent failure if breached, crocodile tears).
4. (T) Position destroyed Colony Ships in Combat in the past *and* has not done so again while this Title has been active (note, both must be true to pass, permanent failure if breached, crocodile tears).
5. (T) A Conflict Check containing the word Combat is currently failing on another Government Title *and* its Title is not currently disrupted (note, both must be true to pass)
6. (T) An Estate Title has been replaced by a Social Title or a Social Title has been replaced by an Estate Title in the last three turns (note, this title can be counted in the Title change to make this statement true, but you only have three turns of passing).
7. (T) Position lost a Combat in the last two turns that lasted two or more Combat Rounds *and* did not use any Faculties during the Combat (note, both must be true to pass).
8. (T) A colony of the position’s Native Population Type was attacked by Orbital Bombardment in the last three turns (note, destruction of the colony is not required)
9. (T) The position holding this Title has been Politically Extinct for eight or less turns (note, this mandate will expire eventually...).
10. (T) A Major or Minor Race has become extinct within the last five turns (note, either political or total extinction will make this statement true).

(Themes: collective guilt or regrets as a social movement, generational remorse, post war apologies, memorials; Angela Merkel’s immigration decision; lingering suspicions of false remorse; literary people love remorse, but the dead are still dead; the main argument of pacifism is remorse; note: bad things happened to make this Theme and this is gonna be weird)

**Emergent Government Titles****Social Government Title Themes 18 – Cultural Narcissism**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) All of the position’s Colleges are Hosted on the Homeworld or Capital Colony *and* are active and endowed for five turns minimum (note, both must be true to pass).
2. (T) Position has an active, endowed College named after the position’s name (e.g., the Humanities), *and* it is the largest College in terms of current endowment and per turn endowment (note, both must be true to pass).
3. (T) No active, endowed alien College is located within two turns’ ship movement at maximum speed from the Capital Colony or Homeworld of the position (note, “I am going to have to ask you to move that College...”).
4. (T) Position’s Homeworld or Capital Colony is the largest colony (in terms of population factors, including Orbital Cities) within the original area of the Galactic Space (note, “I am going to have to ask you to move that colony...”).
5. (T) Position controls over half of the total population factors (friendly and alien) within the original area of the Galactic Space *or* has not either lost a Combat or had a colony revert within the last ten turns (note, one must be true to pass).
6. (T) Position has never had any Shared Meanings or memberships in MegaCorporations during the game, *and* no College has become inactive and no Government Title has become disrupted while this Title has been active (note, both must be true to pass, permanent failure upon breach of the second condition).
7. (T) Position has been the target of two or more Diplomatic Protests in the last three turns.
8. (T) Either no Thesis Statements are currently lodged against the position *or* one or more Thesis Statements were lodged against the position within the last turn (note that if either is true, the Conflict Check passes).
9. (T) No alien races have experienced a Kairotic Moment during this game (note, permanent fail if breached, it is not required that this position experience one).
10. (T) Position is currently undergoing a Reformation or experiencing a Kairotic Moment (if either is true, the Conflict Check passes).

(Themes: clinical diagnosis; all civilizations must love their own culture first and foremost or that culture must change; Existential Void; Caravaggio, dark triad, collective narcissism<sup>1</sup>)

<sup>1</sup> Commentary: Note that there is a sense in which this Social Title Theme resembles a Type 4 Fundamental Reality.

**Emergent Government Titles**  
**Social Government Title Themes 19 – Conformity**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has at least three Friendly and/or Naturalized Colonies and the smallest Friendly Colony is no more than 10% less population than the largest Friendly and/or Naturalized Colony.
2. (T) Position has 90% or more of the Ideological and Symbolic Constructural Elements active on colonies and ships.
3. (T) Position has 90% of Epistemological Constructural Elements active on colonies and ships, *and* less Thesis lodged against the position than it has active Colleges (note, both must be true to pass).
4. (T) Position has more Maintenance Shields than undisrupted Government Titles and Colleges combined *and* has activated the Order Power for the purpose of Maintenance in the last two turns (note, both must be true to pass).
5. (T) All Friendly and/or Naturalized Colonies have Defense Bases and all are of the same Era, *and* the position progressed to a new Era less than eight turns ago (note, all must be true to pass, the latter condition will eventually expire).
6. (T) Position has not activated the Technology Power for any purpose for three or more turns (note, standardization is easiest to achieve when the situation is static).
7. (T) Position has more Proficiency Pieces on the Public Space than Aspects and Government Titles combined *and* half or more of those Proficiencies are Customs Proficiency pieces (note, both must be true to pass).
8. (T) Position has had no changes in Government Titles in ten or more turns.
9. (T) Position owns three or more **alien colonies** *and* all are of the same political status (note, both must be true to pass).
10. (T) Position has lodged a Thesis against itself for every Thesis lodged against it by another position *and* has not been the target of any adverse News Events or issued any Expose´ News Events in the last turn (note, all must be true to pass).

(Themes: standardization, homogenization, “right thinking” peopl, fall into line, *Homo abnegus*, customs and social behavior, oppression, thought police, The Wall, self-censorship, greater good, don’t rock the boat, “Earth doesn’t have homeless people”)

**Emergent Government Titles**  
**Social Government Title Themes 20 – Radicals, Revolution, Reformation**

“What ideals or concepts prevail in this society to which standards the government will be held in the test of legitimacy, and what sorts of conditions and circumstances would ideally represent the beliefs of the people?”

**Conflict Checks:** True or false statements, *if false, Conflict Check fails*. Conflict Checks generally relate to fluid in-game (not post game) legitimacy, sovereignty, security, survival, and forward expectations. For playability, any Conflict Check must be capable of failing; for example, “position has stardrive technology” is not capable of failing at any point after the position obtains stardrive technology and the GT could never be disrupted.

If the following statements are false, the Conflict Check has failed:

1. (T) Position has abandoned two Social or Estate Titles in the last four turns (note, this has a natural time limit unless the position is churning Titles).
2. (T) Position has more disrupted Government Titles than undisrupted Government Titles (ironically, this Conflict Check being true may prevent total loss of government power).
3. (T) Position has issued three Expose’ News Events in the last five turns.
4. (T) Position has more than twice as many Thesis lodged against it as undisrupted Government Titles plus sovereign colonies (note, a position may lodge Thesis against itself).
5. (T) Position has had a Reformation in the last five turns (note, this has a natural expiration unless the position is constantly Reforming).
6. (T) Position has had three colonies either revert to or from the position in the last five turns.
7. (T) Position has changed Structural Title from either Unitarian to Dualistic or Dualistic to Confederation within the last five turns.
8. (T) Position has experienced (triggered) a Kairotic Moment within the last three turns, or has a ship or colony currently in *apostasy* from contact with an alien Kairotic Moment (if either is true, the conflict check passes).
9. (T) Position has successfully Converted three Conquered Colonies by Orbital Bombardment in the last eight turns.
10. (T) All alien populations within two turns’ ship movement at best speed of the Capital Colony have been destroyed in the last eight turns (note, increases in Ship Speed can cause this to fail).

(Themes: crack in the Wall, factionalization, fragmentation, rapid change, We Won’t Get Fooled Again, note, these Conflict Checks are not sustainable unless you thrive on chaos)

**Appendix IMT – Interstellar Movement Table**

- There are four ways to initiate interstellar movement in GGDM: By activation of the Movement, Expansion, Combat, or Commerce Powers.<sup>1</sup>
- All interstellar movement has conditions precedent which must be met at the moment that movement is initiated.

Moving Unit	Origin System	Destination System	Power Activation
<b>REGULAR MOVEMENT ACTION</b>			
Any ship not transporting population <sup>2</sup>	Any star, <i>Scene</i> on origin star	To any system colonized <sup>3</sup> by ship’s owner where there is no intent to initiate combat upon arrival. <sup>4</sup>	Movement
<b>SPECIAL MOVEMENT ACTIONS</b>			
Scout <sup>5</sup>	Any star, no <i>Scene</i> required	To any system <i>not colonized</i> (does not have a Supporting Colony) by Scout’s owner.	Expansion (Scouting)
Colony Ship <sup>6</sup>	Any star	To any system currently on the Public Space that currently has a <i>Scene</i> on the destination star; irrelevant whether the destination system is colonized or uncolonized.	Expansion (Transporting Population)
Warship <sup>7</sup>	Any star, <i>Scene</i> on origin star	To any system without a Supporting colony <sup>8</sup> <b>or</b> to any system where the warship’s owner wants to initiate combat upon arrival.	Combat (Combat Movement)
Cargo Ship <sup>9</sup>	Any star, <i>Scene</i> on origin star	To any system where there is a known <b>alien colony</b> ; Native Population Type is irrelevant.	Commerce (Trade Mission)

**Interplanetary Movement:** In-system movement is considered to instantaneous within the scale of GGDM Regular Turns (see Interplanetary Movement, 2 Movement, p. 844) and does not require a Power Activation. This occurs before any Regular Turn action.

**Short Movement:** Ships arriving at their destination star by ‘short movement’ arrive at the end of the same Regular Turn they left the origin star, which is frequently important for Power Activations. See Space Hop and Heroic Movement, 2 Movement, both p. 850.

<sup>1</sup> See Engage!, 1 Movement, p. 838.

<sup>2</sup> See Engage!, 1 Movement, p. 838.

<sup>3</sup> In this context, “colonized” means having a colony in the system, regardless of colony political status (except Conquered Colonies) or native population type. See Supporting Colony, 1 Movement, p. 840.

<sup>4</sup> Warships may use the Movement Power Activation to move between systems controlled by the warship’s owner but they will not be able to automatically initiate combat upon arrival. To do that requires movement by activation of the Combat Power. See Ad Astra, 1 Movement, p. 839.

<sup>5</sup> See Through the Never, 3 Expansion, p. 907.

<sup>6</sup> See Canned Food, 3 Expansion, p. 913.

<sup>7</sup> See The Combat Power and Move Out!, 1 Combat, pp. 941-942.

<sup>8</sup> This, of necessity, means that the Combat Power may/must be used in lieu of the Expansion Power where warships are being sent to an unexplored system. See Send the Enterprise!, 3 Expansion, p. 909.

<sup>9</sup> See Green Goods, 1 Commerce, p. 1188.

**Appendix IP – Interventions Reference Sheet**

The Concierge ‘position’ in the game	<i>See 3 The Big Bang, p. 14</i>
An Intervention is the only explanation needed	<i>See 5 Combat, p. 1012</i>
Interventions are ‘official interpretations’ in the game	<i>See 1 Dreamtime, p. 130</i>
<b>Generation of Intervention Potentials:</b>	
<ul style="list-style-type: none"> <li>• Basic generation of Intervention Potentials each turn</li> </ul>	<i>See 1 Entropy, p. 228</i>
<ul style="list-style-type: none"> <li>• Reason why Intervention Potentials are generated each turn</li> </ul>	<i>See 1 Government Titles, p. 579</i>
<ul style="list-style-type: none"> <li>• Potentials generated from population [Disruption Events]</li> </ul>	<i>See 2 Disruption, pp. 270, 271-272, 276-277-278</i>
<ul style="list-style-type: none"> <li>• Potentials generated from violation of Fundamental Realities violations [Interpretation]</li> </ul>	<i>See 3 Beginnings, p. 42</i>
<ul style="list-style-type: none"> <li>• Potentials generated from violation of Reformation Collage [Interpretation]</li> </ul>	<i>See 3 Reformation, p. 1401</i>
<ul style="list-style-type: none"> <li>• Potentials generated from Diplomatic Protest to News Events [Interpretation]</li> </ul>	<i>See 2 Dreamtime, p. 148</i>

<ul style="list-style-type: none"> <li>• Intervention simulates the universe beyond our control (e.g., xenomicrobes)</li> </ul>	<i>See 4 Expansion, p. 924</i>
<ul style="list-style-type: none"> <li>• Divine Intervention</li> </ul>	<i>See 3 Movement, p. 856</i>
Interventions vs. Maintenance Shields	<i>See 4 Order, pp. 566</i>

**Appendix IPT1 – Inheritance & Primal State Tables**

- IP = Inheritance Point, RP = Resource Point.
- For Flat Rate Costs of Existential Patents, see Appendix IPT2. The items on this table are not Patent costs, a position must have the patent to purchase most items on this table.
- See Appendix EPAT2 for basic, quick unit information from Existential Patents.

**Inheritance Cost Table**

<b>Inheritance</b>	<b>Inheritance Cost</b>
Population <sup>1</sup>	1 IP per pop. factor
Scout Ships <sup>2</sup>	5 IPs each
Colony Transports <sup>4</sup>	8 IPs each
<i>All Other Ships</i> <sup>5</sup>	IPs = RPs cost
Acts & Scenes <sup>6</sup>	3 IP first Act/Scene Cost increases by +3 IPs for each subsequent
Proficiency Pieces <sup>8</sup>	5 IPs each
Aspect Pieces	2 IPs each
Treasury <sup>10</sup>	1 IP per RP
Industry <sup>12</sup>	3 IPs each

<b>Inheritance</b>	<b>Inheritance Cost</b>
Orbital Shipyard	30 IPs each
Orbital City	35 IPs each <sup>3</sup>
Ground Def. Base	5 IPs each
Orbital Def. Base	15 IPs each
System Def. Base	45 IPs each
Ship Missiles <sup>7</sup>	2 IPs per 3 RP
Fighters	2 IPs per 3 RP
Log Ship Supplies <sup>9</sup>	2 IPs each
Research Pieces <sup>11</sup>	4 IPs per Res. Piece
Extra <i>unconnected</i> Applications <sup>13</sup>	25 IPs per Application

<sup>1</sup> Population Factors may only be purchased during set up using IPs. A position may only ‘purchase’ population of their own Native Population Type. Population may not be purchased at any other time.

<sup>2</sup> A position must obtain the Scout Ship Existential Patent during set up to purchase Scouts during set-up. Scouts do not require the position to obtain an Orbital Shipyard or Ship Systems to build them during the set up.

<sup>3</sup> Includes cost of starting the game with populations living on the Orbital City!

<sup>4</sup> A position must obtain the Colony Transport Existential Patent during set up to purchase Colony Transports. If the position does not start on a planet, population must start on Colony Transports.

<sup>5</sup> A position must obtain the proper ship Existential Patents during set up to purchase each kind of ship.

<sup>6</sup> All Acts and Scenes purchased during set up must be properly placed before the game. A position receives Acts and Scenes from Government Titles *at the end of* each turn. You will need Acts/Scenes to do anything the first turn.

<sup>7</sup> All Ship Missiles and Fighters purchased before the game must be properly placed on ships or colonies before the game begins. You must have the 1<sup>st</sup> Era Ship Missile and Fighter Existential Patents, respectively, to purchase.

<sup>8</sup> All Cultural Traits Pieces must be properly placed on the Public Space before the game begins.

<sup>9</sup> All Log Ship Supplies purchased during set up must be placed on Log Ships before the beginning of the game, which means that you must have a Log Ship to start, and must have the Logistical Ship Existential Patent as well.

<sup>10</sup> All RPs purchased before the game either go into the Treasury or are placed on Cargo Ships if the position begins with Cargo Ships and wants the RPs placed there. Most Treasuries will be low or empty to start the game, and most positions will be forced to activate the Taxation Power early. Some positions, however, may prefer to have a large Treasury early. There is always a trade-off dynamic, as they will have less of some other things to start the game.

<sup>11</sup> All Research Pieces purchased during set up must be legally placed on the Public Spaces Mat before the game begins. They do not have to be placed in Research Groups however.

<sup>12</sup> To purchase Industry, Orbital Shipyard, Orbital City, Ground, Orbital and System Defense Bases, the position must first have a colony to put them on (i.e. Home Positions), and second, have obtained the necessary Existential Patents during set up. All of these items must be legally assigned to a colony before the game starts.

<sup>13</sup> Extra Applications purchased during set-up are placed on the 1<sup>st</sup> Era Matrix. Additionally, the position will also receive some Applications and a few connections on the Matrix from Existential Patents purchased during set-up.

**Appendix IPT2 – Inheritance & Primal States Tables**

**Flat Rate Existential Patent Cost Table**

- These ‘flat rate costs’ are only for purchasing Existential Patents with Inheritance Points during the set-up. Afterward, they must be obtained through normal Research, Development and Patent Prosecution.
- When two Applications are received, they must be placed on the Matrix and are automatically connected.
- Generic Stardrive Existential Patent must be purchased prior to any ship Patents.
- Ship Systems Existential Patent must be purchased prior to purchasing or building any ships.

<b>Existential Patents</b>	<b>IPs Cost</b>	<b># Applications Received</b>
Industry	45 IPs	1
Orbital Shipyard	60 IPs	1
Orbital City	75 IPs	2
Generic Star Drive (GSD)	100 IPs	None
Ship Systems	45 IPs	1
Logistical Support Ship	75 IPs	2
Scout Ship	75 IPs	2
Cargo Ship	60 IPs	1
Colony Transport	75 IPs	2
Controlled Environment Technology (CET)	45 IPs	1
Ground Defense Base	60 IPs	1
Orbital Defense Base	75 IPs	2
System Defense Base	90 IPs	2
1 <sup>st</sup> Era Warship	90 IPs	2
1 <sup>st</sup> Era Carrier	90 IPs	2
1 <sup>st</sup> Era Fighters	75 IPs	1
1 <sup>st</sup> Era Ship Missiles	60 IPs	1

**Appendix IPT3 – Inheritance & Primal State Tables**

**Primal States Table**

- Each position must begin with at least four Fundamental Realities
- Each position must have at least 3 Major Fundamental Realities (min. 350 IPs).
- All ‘invader positions’ require more than 400 IPs.

PRIMAL STATE	SET UP REQUIREMENTS
<p><b>Homeworld</b> (Home Position)</p>	<ul style="list-style-type: none"> <li>➤ Begins on a Homeworld, Optimal Class Planet with 100 Maximum Habitability for the position’s Native Population Type.</li> <li>➤ Concierge chooses starting location.</li> <li>➤ Homeworld locations and Primal States are announced to all prior to game.</li> <li>➤ Automatically exploration and colonization of the home starsystem.</li> <li>➤ Must obtain Industry Existential Patent (45 IPs).</li> <li>➤ Must begin with (‘buy’) at least 100 population (100 IPs).</li> <li>➤ Must begin with (‘buy’) at least 20 industry (60 IPs).</li> <li>➤ May distribute populations to any inhabitable planet in the home starsystem.</li> <li>➤ <u>Minimum Requirement:</u> 205 IPs, 305 IPs with Generic Stardrive Existential Patent, plus 1 other Existential Patent and 1 Application on the 1<sup>st</sup> Era Matrix.</li> </ul>
<p><b>Lost Colony</b> (Home Position)</p>	<ul style="list-style-type: none"> <li>➤ Native Population Type of the Lost Colonist is “related” to another Native Population Type in the game.</li> <li>➤ In all other respects, Lost Colonist position is the same as the Homeworld position.</li> <li>➤ <u>Minimum Requirement:</u> 205 IPs, 305 IPs with Generic Stardrive Existential Patent, plus 1 other Existential Patent and 1 Application on the 1<sup>st</sup> Era Matrix.</li> </ul>
<p><b>Outposter</b> (Home Position)</p>	<ul style="list-style-type: none"> <li>➤ Must begin with colonies in five systems, each system will have at least one colonizable planet.</li> <li>➤ Concierge chooses starting locations.</li> <li>➤ All starting systems will be explored and inhabitable.</li> <li>➤ Starting locations are secret but Primal State is announced.</li> <li>➤ Must begin with at least 10 population factors on a colony in each of the five starting systems, 50 populations minimum (50 IPs).</li> <li>➤ Must purchase the Generic Stardrive Existential Patent (100 IPs), Ship Systems (45 IPs), Scout Ship (75 IPs), and the Colony Transport (75 IPs) Existential Patents.</li> <li>➤ May not purchase warships, but may purchase 1<sup>st</sup> Era Warship Existential Patent if desired during the set up.</li> <li>➤ <u>Minimum Requirement:</u> 345 IPs, must begin with Generic Stardrive Existential Patent, plus 3 other Existential Patents and 5 Applications on the 1<sup>st</sup> Era Matrix.</li> </ul>

PRIMAL STATE	SET UP REQUIREMENTS
<p><b>Expedition Leader</b> (Invader Position)</p>	<ul style="list-style-type: none"> <li>➤ All population begins on colony ships, and all ships begin in one previously explored starting system.</li> <li>➤ Concierge chooses starting location.</li> <li>➤ Starting system must have at least one colonizable planet.</li> <li>➤ Starting location and Primal State are not announced.</li> <li>➤ Must purchase Generic Stardrive (100 IPs), Ship Systems (45 IPs), Colony Transport (75 IPs), Scout Ship (75 IPs), Industry (45 IPs), and Controlled Environment Technology (45 IPs) Existential Patents.</li> <li>➤ Must begin with at least 24 population factors (24 IPs) and 8 Colony Transports (64 IPs).</li> <li>➤ May purchase as many other ships as desired, with remaining IPs.</li> <li>➤ May purchase Orbital Shipyard Patent, but cannot purchase an Orbital Shipyard prior to the game (no place to put it!).</li> <li>➤ <u>Minimum Requirement</u>: 473 IPs, must begin with Generic Stardrive Existential Patent, plus 5 other Existential Patents and 7 Applications on the 1<sup>st</sup> Era Matrix.</li> </ul>
<p><b>Nomadic Warfleet</b> (Invader Position)</p>	<ul style="list-style-type: none"> <li>➤ Nomadic Warfleet position chooses its starting location, but starting location cannot contain a Homeworld or Lost Colonist position.</li> <li>➤ Starting location and Primal State are not announced.</li> <li>➤ All population begins on colony ships and all ships begin in starting system location.</li> <li>➤ Starting system begins already explored.</li> <li>➤ Must begin with the Generic Stardrive (100 IPs), Ship Systems (45 IPs), and Colony Transport (75 IPs) Existential Patents, and either 1<sup>st</sup> Era Warship (90 IPs) and Ship Missile (60 IPs) or 1<sup>st</sup> Era Carrier (90 IPs) and Fighter (75 IPs) Existential Patents.</li> <li>➤ Must begin with at least 12 population factors (12 IPs) on 4 Colony Transports (32 IPs).</li> <li>➤ Majority (&gt;50%) of remaining inheritance must be spent on warships, Carriers, Fighters, and Missiles as applicable. Position must have enough remaining IPs to buy at least 1 Carrier or Warship (if not, must take a random Fundamental Reality until enough IPs are gained).</li> <li>➤ May purchase Orbital Shipyard Patent, but cannot purchase an Orbital Shipyard prior to the game (no place to put it!).</li> <li>➤ <u>Minimum Requirement</u>: 414 or 429 IPs, must begin with Generic Stardrive Existential Patent, plus 4 other Existential Patents and either 6 or 7 Applications on the 1<sup>st</sup> Era Matrix.</li> </ul>
<p><b>Truly Alien</b> (Invader Position)</p>	<ul style="list-style-type: none"> <li>➤ Galactic Space is completely explored prior to the game, but does not receive any information on colonies or Homeworlds.</li> <li>➤ Four to six new stars appear on the edge of the Galactic Space on the first turn.</li> </ul>

PRIMAL STATE	SET UP REQUIREMENTS
	<ul style="list-style-type: none"> <li>➤ Truly Alien position must choose three newly appeared systems where their Colony Transports begin.</li> <li>➤ Must begin with Generic Stardrive (100 IPs), Ship Systems (45 IPs), Colony Transport (75 IPs), and Scout Ship (75 IPs) Existential Patents.</li> <li>➤ Must begin with 24 population (24 IPs) on 8 Colony Transports (64 IPs) in each system where the Truly Alien position chooses to start (total 72 population (72 IPs) and 24 Colony Transports (192 IPs)).</li> <li>➤ May purchase Orbital Shipyard Patent, but cannot purchase an Orbital Shipyard prior to the game (no place to put it!).</li> <li>➤ Starting locations are not announced, but Primal State is announced.</li> <li>➤ Receives a special Truly Alien Fundamental Reality Card which counts as a Major Fundamental Reality for all purposes and cannot be discarded.</li> <li>➤ Minimum Requirement: 591 IPs, must begin with Generic Stardrive Existential Patent, plus 3 other Existential Patents and 5 Applications on the 1<sup>st</sup> Era Matrix.</li> </ul>

**Appendix KM – Kairotic Moment Example:**

We have fed our sea for a thousand years  
 And she calls us, still unfed,  
 Though there's never a wave of all her waves  
 But marks our English dead:  
 We have strawed our best to the weed's unrest  
 To the shark and the sheering gull.  
 If blood be the price of admiralty,  
 Lord God, we ha' paid in full!

There's never a flood goes shoreward now  
 But lifts a keel we manned;  
 There's never an ebb goes seaward now  
 But drops our dead on the sand—  
 But slinks our dead on the sands forlore,  
 From the Ducies to the Swin.  
 If blood be the price of admiralty,  
 If blood be the price of admiralty,  
 Lord God, we ha' paid it in!

We must feed our sea for a thousand years,  
 For that is our doom and pride,  
 As it was when they sailed with the Golden Hind,  
 Or the wreck that struck last tide—  
 Or the wreck that lies on the spouting reef  
 Where the ghastly blue-lights flare.  
 If blood be the price of admiralty,  
 If blood be the price of admiralty,  
 If blood be the price of admiralty,  
 Lord God, we ha' bought it fair!

- Runyard Kipling, “The Song of the Dead” (1893)<sup>1</sup>

On the 21<sup>st</sup> Turn Cycle of a crazy game, a Kairotic Moment was triggered by five Turn Cycle ‘wins’ of the Aspect ‘sacrifice.’ Two positions, The Lesser Evil and The Greater Good, who had done much sacrificing to their own egos in their mutual hostility had exposed the Aspect repeatedly fueling Writs powered by Fuzzy Group activations. See Critical Mass, 3 Kairotic Moments, p. 1438. Thus, both positions will simultaneously experience a Kairotic Moment.

The obvious *Terra Sancta* for each Kairotic Moment is the starsystem where both long have native colonies and both of which, conveniently, have Sacrifice Aspects in an adjacent Monad on

---

<sup>1</sup> “The Enemy Stars was originally published in Astounding Science Fiction under the title We Have Fed Our Sea. That title refers to the first stanza of the second part of Rudyard Kipling's poem ‘The Song of the Dead,’ which Anderson quoted at the end of his story. The poem refers to the British sailors who have died at sea in their efforts to give England mastery of Earth's oceans, and [Poul] Anderson discerned an analogous sacrifice that will be made by Terrans in their efforts to reach the stars.” – from Wikipedia article, “The Enemy Stars,” January 3, 2020.

✓ Stanley Kubrick, speaking about the title of 2001: A Space Odyssey said, “[i]t occurred to us that for the Greeks the vast stretches of the sea must have had the same sort of mystery and remoteness that space has for our generation.” – Jerome Agel, The Making of Kubrick's 2001.

their respective owner’s Public Spaces. Thus, the opposing frontier colonies both become permanent *Terra Sancta* for the rest of the game, which might be important in many other matters in the game, e.g., *Terra Sancta* planets are the first tiebreaker for Objective Victory (see Lords Spiritual, 2 Resolution, p. 1474) or some Truly Alien player might find them truly interesting (see the Crack Up Truly Alien Fundamental Reality). They may also be the subject of News Events, Writs, Colleges, and other developments in the game. They are certainly part of the story arc of the game.

The Kairotic Moment cannot fail due to inactive Constructural Elements at each colony (which have both suffered many Disruption Events) because it is not a Power Activation. See Terra Sancta, 1 Kairotic Moments, p. 1420.

The Concierge, perhaps short on anything creative to say in the moment, issues a Special Bulletin using an Intervention Potential, providing the Key Aspect (‘sacrifice’) and perhaps a stanza from the final part of Runyard Kipling’s “Song of the Dead.” See Biblical Blurbs, 1 Kairotic Moments, p. 1421.

---

*“She said ‘I’ll turn you on sonny to something strong,  
play the song with the funky break!’”*

– Manfred Mann’s Earth Band, “Blinded by the Light” (1976)

---

As soon as the *Terra Sancta* are designated, a blue dot appears on each Terra Sancta, and a red dot appears on the Capital colony of each position. The ‘color dots’ have no ‘effect’ and simply act as a timing mechanism for the Kairotic Moment (like a rhythmic drum beat). See Sojourn, 2 Kairotic Moments, p. 1429. However, there is dismay at the Capital of the Greater Good when a large red dot appears in the sky with no explanation, while consternation is experienced in the Lesser Evil’s capital when a large red dot appears there with equally no explanation.

The color dots in each of the four locations will proceed, as subsequent Regular Turns are processed by each position, along the Monads forming the Pathway connecting each Terra Sancta and Capital Colony to a Government Title on the Public Spaces, passing through the Government Title as if it were one Monad. *Id.* After passing through the Government Title, the red dot from the Capital Colony will move up the Pathway toward the Terra Sancta, and the blue dot from the Terra Sancta will move up the Pathway toward the Capital Colony. *Id.*

The speed at which the dots proceed is determined by the current Intensity Level of the Kairotic Moment, which is set and controlled by the Concierge. In this case, the Concierge decided that The Greater Good would start at a high intensity level of 3 and slowly wind down to 1, while the Lesser Evil does the opposite. See Intenseit, 2 Kairotic Moments, p. 1430.

After reaching the Capital Colony, the dot passes into each First Space adjacent to the Capital Colony and thence, directly to the opposing First Space, then to each alien Capital Colony where it will remain for one more Regular Turn before disappearing. This has no effect, but symbolically represents the final stages of the timing mechanism about which point the intensity level of the Kairotic Moment should have reached its final stages, either ending in a crescendo or whimper. See Convictions, 2 Kairotic Moments, p. 1430. The Concierge should be able to count the Monads and time the intensity changes so that the ends occur roughly even.

*“Mama always told me not to look into the eyes of the sun  
But mama, that’s where the fun is!”*

– Manfred Mann’s Earth Band, “Blinded by the Light” (1976)

At the end of each Regular Turn during the Kairotic Moment, one of three types of Constructural Elements are chosen (Epistemological, Ideological, Symbolic) and a check is made to see if it becomes inactive as a result of the Kairotic Moment. The check will be made at 5% for Intensity Level 1, 10% for 2, and 15% for Intensity 3. If positions have not Cohered well, have a large number of inactive Constructural Elements, the process will be quick: When a Constructural Element is 25% active or less after testing, all of that Constructural Element will be made active, and cannot be made inactive by *any means* (including testing) for one Regular Turn. See Undecidabilities, *et seq.*, 2 Kairotic Moments, p. 1431.

This process ends when all three of the Constructural Elements (the Temporal Constructural Element is never tested) have passed through the fire. An unlucky Constructural Element that previously passed the ordeal by fire may be subjected to testing again after its immunity expires.

*Fight or flight* is the choice for the authorities before a Kairotic Moment, inactive Constructural Elements can be restored by normal Cohering (see 5 Culture, p. 421), which prolongs the process, but also may be necessary to avoid ‘blackout’ Power Activation failures or getting pounded by hostile positions. *And the rock cried out...*

*“Some brimstone baritone anticyclone rolling stone preacher from the east  
Says, ‘Dethrone the dictaphone  
Hit it in its funny bone, that’s where they expect it least’”*

– Manfred Mann’s Earth Band, “Blinded by the Light” (1976)

*Water leak or tsunami?* The current Intensity Level of the Kairotic Moment is added to the normal chance of *apostasy* (see Alieneity Apostasy, 3 Disruption, p. 283 and Wave Motion, 2 Kairotic Moments, p. 1433) for alien ships interacting with any Friendly or Naturalized colony undergoing a Kairotic Moment. Further, the Kairotic Moment position’s ships carry the message to the stars (the stars are not listening, but aliens might be...) possibly bringing *apostasy* to **alien colonies** with which they interact (the colonies are treated as ships for this *apostasy* purpose), turning the Constructural Elements of entire colony worlds inactive. See A Total ‘Gurgler,’ 2 Kairotic Moments, p. 1433.

It may be that the ships were already *en route* when the Kairotic Moment was triggered. It may be they went there out of ignorance. In any event, the glowing green radioactive inactive Constructural Elements cannot be returned to active status (via normal Cohering, see 5 Culture, p. 421), until the Census Power has been activated by their owner (see The Apostasy, 3 Disruption, p. 284). The Census Power *cannot fail* due to inactive Constructural Elements (see Tax Revolt and Revolting Taxes, 1 Taxation & Census, p. 297), but there are losses incurred in the form of Cultural Proficiencies (see And the Cradle Will Rock, 3 Culture, p. 382) for example. See also Don’t Hand Me No Lines & Keep Your Hands to Yourself!, 3 Disruption, p. 284.

*Apostasy* is ecstasy!<sup>1</sup>

*“And some new-mown chaperone  
Was standin’ in the corner, watching the young girls dance  
And some fresh-sown moonstone  
Was messin’ with his frozen zone, reminding him of romance”*  
– Manfred Mann’s Earth Band, “Blinded by the Light” (1976)

*The calliope crashed to the ground!* In addition to the Constructural Elements tests and apostasies, Aspects can be affected by a Kairotic Moment. Aspects on the Public Space belonging to the position undergoing a Kairotic Moment are checked, there is a 25% chance that they will be immediately replaced on their Monad by the Key Aspect of the Kairotic Moment. See *Nine Landings*, 3 Kairotic Moments, p. 1442. This check is made only once immediately when the Kairotic Moment is triggered, so it is probably the only truly momentary part of this mechanic.

Afterward, while the Kairotic Moment is in force, there is a chance (Intensity level x 10%) that newly Exposed Aspects will be the Key Aspect instead of what was intended (see *A Bustle in Your Hedgerow*, 2 Culture, pp. 365-366, and *Rose of the Winds*, 3 Kairotic Moments, p. 1442).

Further ... wait for it ... other position’s Aspects may also be affected if they share a Balkanized colony planet, share the same colony system, are members of the same MegaCorporations, or ships returning with *apostasy* from contact with another position’s Kairotic Moment! Oh, this is gonna be fun like making waves on a full waterbed! The Greater Good and the Lesser Evil share the same starsystem and can affect each other, and potentially, many other positions.

The effects occur both during the initial trigger and during subsequent Regular Turns, the same as for the position undergoing the Kairotic Moment, but at lesser strength. There is a 15% chance that any Aspect next to a Balkanized colony or shared colony system on their owner’s Public Space may be converted to the Key Aspect of the alien Kairotic Moment, or randomly changed to something else or eliminated. And newly Exposed Aspects may also be affected if placed in Monads adjacent to those locations (Intensity Level x 5%) may also fail or convert. And if the alien location is the *Terra Sancta* of the Kairotic Moment, 20% is added ... both *Terra Sancta* of The Greater Good and The Lesser Evil are in the same starsystem! See *Frontier Outpost of Syene*, 3 Kairotic Moments, p. 1443.

Ships returning in *apostasy*, may affect Aspects adjacent to their own colonies by interacting, regardless of location (see *Ship of Fools*, 3 Kairotic Moments, p. 1444), each adjacent Aspect having a 25% chance of changing or being eliminated. Note that the state of *apostasy* is based on inactive Constructural Elements, but the effect on the colony is against adjacent Aspects.

Though it is unlikely that The Greater Good and The Lesser Evil belong to the same MegaCorporation ... that would be funny ... any shared MegaCorporate relationship adds 10% to *any* chance of changing or eliminating Aspects due to contact with the alien Kairotic Moment. See *Diplomacy in the Hive of Scum & Villainy*, 3 Kairotic Moments, p. 1445.

In any event, the involuntary change of any Aspect could destroy Fuzzy Groups, could lead to disruption of Government Titles, but on the other hand, Aspects do ‘age-out’ quickly (see *Between the Candle and the Stars*, 2 Culture, p. 366) and are generally less troublesome than inactive Constructural Elements.

---

*“She got down but she never got tired, She’s gonna make it through the night”*

– Manfred Mann’s Earth Band, “Blinded by the Light” (1976)

---

Finally, weary of revolution, at the end of it all, after the Kairotic Moment has run its course, Aspect Lists of the position’s undergoing the Kairotic Moment (moment of insanity) may be changed, see *After the Fall*, 3 Kairotic Moments, p. 1445. Only positions that had the Key Aspect on their Aspect List are affected. No other position’s Aspect List is affected, regardless of how much of their population was ‘converted’ ... uh, how many Aspects and Constructural Elements suffered *apostasy* as a result of the alien Kairotic Moment.

The chance of change is related to the length of the Kairotic Moment measured in Regular Turn Cycles (3% per Regular Turn Cycle) and each Aspect on the Aspect List is checked to see if it changed to something else. This includes the Key Aspect whose repeated exposure started it all, so the ‘sacrifice’ Aspect for either or both The Greater Good and The Lesser Evil *may* disappear (or they may be at it again!). This change in Aspect Lists can have the effect of short-circuiting other possible Kairotic Moments or adding yet another position exposing an Aspect that is near the ‘critical mass’ to trigger another Kairotic Moment.

- ✓ The Kairotic Moment is the only direct mechanic in the game that can change Aspect Lists (it is possible for an Expose’ News Event to do this also, see *The Little Secret*, 4 Writs, p. 450).
- 

*“With a boulder on my shoulder, feelin’ kinda older,  
I tripped the merry-go-round.”*

– Manfred Mann’s Earth Band, “Blinded by the Light” (1976)

---

This appendix describes the step-by-step game-mechanical process of the Kairotic Moment trigger, resolution and effects in GGDM. It lacks specific references to die rolls, permutations, population factors, industry, defenses, named ships, etc. – only vaguely specifying how two hostile positions (both extremes of Graded Absolutism), who have colonies occupying the same system, unknowingly triggered the Kairotic Moment because they had the same Aspect on their secret Aspect Lists, which they repeatedly exposed. Also lacking is any description of the meaning of the Kairotic Moment to the players or to the populations on the ground, or to any characters who may have been involved.

All of this depends entirely on the story circumstances of the game, each game is unique in that regard. To have provided those details would have required creating an ever expanding sphere of game detail and game universe history. This is the color that is filled in by the players and by the story, to the extent they wish to look.

Many people might automatically assume that the end result of a Kairotic Moment whose Key Aspect is ‘sacrifice’ would be some compelling universal peace movement morphing into a religion. And that the two hostiles would stop fighting, maybe take the third alternative. Do you think that happened in this game?

---

<sup>1</sup> Commentary & Citation: This is a joke based on the title of paintings by Belli and Caravaggio of St. Francis.

**Appendix MSM – Meanings & Shared Meanings Examples**

- ✓ Meanings are singular interpretations, required to form Shared Meanings.<sup>1</sup>
- ✓ Shared Meanings expand the Diplomatic Spaces between two positions.<sup>2</sup>
- ✓ Shared Meanings can be altered by Special Writ after establishment.<sup>3</sup>

**Meaning of Tu Yu to De Fense**

**Author:** De Fense

**Meaning Toward:** Tu Yu

**Meaning:** Our prosperity is consistent with the prosperity of Tu Yu. We share two systems and a colony planet in another system with them, and engage in profitable trade of resources.

**Acts Inconsistent with Meaning:** Refusal to trade, and/or initiating combat against us.

**Meaning of De Fense to Tu Yu**

**Author:** Tu Yu

**Meaning Toward:** De Fense

**Meaning:** De Fense are our best friends, they allowed us to share two systems with them, and allowed our Colony Transports to land on their planet when the Transports arrived and found the target planet already colonized and had no where else to land. Our friendship with De Fense grows.

**Acts Inconsistent with Meaning:** Any act inconsistent with ‘friendship’; any act against the Tu Yu colonies in any place where they share with De Fense.

**Shared Meaning between De Fense and Tu Yu**

**Shared Meanings:** A general feeling of friendship and shared prosperity has developed between De Fense and Tu Yu over the past ten turns.

**Acts Inconsistent with Shared Meaning:** Combat between De Fense and Tu Yu, long term lapse in trade between the two races, failure to assist the other in defense with regard to shared systems and colony planets.

### Appendix NEWS – News Event & Modification Example

Modification of News Events is not as complicated as it may seem, a historical example may help: In 1936 (the year of the Berlin Olympics), German intelligence learned of a plot by a top-ranking Red Army officer to topple Stalin.

Reinhard Heydrich (of later Wanssee Conference fame), then the head of the Security Police, which included the Gestapo that he created, and head of Counterintelligence, presented a plan to Himmler and then to Hitler, to expose the plotter to Stalin so that Stalin would purge the Red Army and/or create an air of suspicion in the relationship between Stalin and the Red Army. Hitler approved the plan and Heydrich then had his services create forged documents implicating the officers alleged to be plotting the overthrow of Stalin. These documents were provided to the Soviets. *Heydrich was played by Stalin.* In fact, Stalin had ordered his NKVD agent General Nikolai Skoblin to pass the false information to Heydrich expecting the Germans to do exactly what they did, thus manufacturing evidence for the Red Army Purge of 1936-1938.<sup>1</sup>

- ✓ Information for this example was taken from Wikipedia articles, “Reinhard Heydrich” and “Great Purge,” September 27, 2018. Whatever reservations you may have about information from Wikipedia, please just accept these as absolutely true facts for the purpose of this example.

These events might play out as follows in terms of GGDM adverse News Events:

- ✓ *Initial News Event* issued by Red Blok states that the UNA have carried out a purge of their top officers after discovering a plot to overthrow their supreme leader. The effect of the News Event is that the UNA lose one half of the faculties from the Combat College.
  - It is possible that this News Event might have no effect; Red Blok may not actually know if the UNA has a Combat College, that is, many News Events might be ‘shooting in the dark.’ Red Blok and UNA may not have had First Contact. However, adverse News Events that have no effect may still cost the target a Maintenance Shield, see 4 Order, p. 566 *et seq.*, *infra*. Whether an adverse News Event has any effect is never revealed.
- ✓ *First modification* of the News Event issued the Therians, eternal scheming trouble makers, adds that the evidence used by UNA against the alleged plotters was entirely fabricated and passed to them by ONI Corporation (a position, not a GGDM Corporation or MegaCorporation), who is seeking business from Red Blok. The effect of this is that an Intervention Potential Plus (IP+) is assessed against UNA. This mod is not a contradiction of the initial News Event and is a News Event in its own right.
  - Whether IP or IP+ can be assessed in a News Event is unclear and up to the Concierge, but once the precedent is established, it must be followed consistently. It is in effect saying, there will be trouble later because of this (in the historical example, the Red Army lost many of their best officers to the Purge and suffered later in 1941). The Concierge is in no

---

<sup>1</sup> Commentary: Arguments have been advanced that the German fake documents made no difference, they were not used as evidence during the Moscow Trials. That is beside the point for the purposes of this example.

way required to use the IP+ in relation to the News Event, but can use it freely, emergent narrative can fill the linkage later if necessary.

- ✓ *Second modification* of the News Event issued by UNA states that the evidence against the plotters was solid and that the falsified evidence was irrelevant. The result is that the Intervention Potential Plus (IP+) is reduced to a regular Intervention Potential. Note that this does not directly contradict the Therians' News Event, which is still absolutely true (sort of...). It also does not contradict the initial News Event (which may be irrelevant if UNA doesn't have a Combat College).
  - Hair splitting time: The UNA News Event is not a direct contradiction to the initial News Event by Red Blok because it does not say that the purge never happened, or entirely abrogate the results. It also does not contradict the Therians News Event because it does not say the falsified documents don't exist and it does not abrogate the results. Neither event then is entirely erased by the Second Modification.
- ✓ Finally, the Karmans issue a *third modification* to the News Event stating that the Therians secretly control part of ONI Corporation and their plot has been discovered, causing the Therians to lose one Diplomatic Space with ONI Corporation.
  - Since ONI Corporation is a position in the game, it is not literally true that the Therians control ONI Corporation, here is an example of how the News Event is absolutely true, regardless of what the players in the game know or believe to be the truth. Additionally, the Karmans may not know if the Therians and ONI Corporation share Diplomatic Spaces or anything else, so again, there is possibly no effect. Like IP and IP+ assessments, the game participants will need to decide if Diplomatic Space can be created or lost by News Events, and once the precedent is set, must follow it consistently and try not to abuse it.
- ✓ At this point, it's all becoming kind of convoluted and conspiratorial and the situation has played itself out, UNA has possibly lost some faculties from the Combat College, an Intervention Potential has been added to the game, and the Therians may have lost a Diplomatic Space with ONI Corporation. Other News Events have posted, the players get distracted or move on, eventually posting to this News Event is closed by the end of the Turn Cycle, having become part of the Absolutely True history.
  - Yes, these faction names were all barrowed from the tabletop miniatures wargame, AT-43, solely for amusement purposes. Both AT-43 and its publisher, Rackham Entertainment, are defunct since 2010.

### Appendix ORD – Conversion & Pacification Example

The Free Peasant’s Republic of Dithmarschen, Friendly Colony of the Confederacy of the Holy Ramen Empire is finally conquered by the Denmarkate Unity in 1559 after several legendary successful Colony Defense and Ground Combats in 1319, 1403, and 1500. The colony suffers Disruption Events as a result (see *The Burning Sky and Downfall*, 2 Disruption, p. 275) and may lose active Constructural Elements, which will need to be reactivated by Cohering (see 5 Culture, p. 421) later if the colony is to be useful. The victorious warships however, do not suffer any *apostasy* because they were not forced to retreat from a combat (see *The B-Team*, 3 Disruption, p. 281).

The following Regular Turn, the Denmarkate makes a Conversion Attempt against the Dithmarschen Conquered Colony (see *Conversion*, 3 Order, p. 554). Conversion costs one Act and one Scene on the target colony, fortunately a Scene was captured with the colony. The Conversion Attempt cannot fail due to Inactive Constructural Elements at the colony as they are currently irrelevant. The colony has 46 population remaining, which, divided by 10, means that the Denmarkate must have a modified result of greater than 4 (truncating fractions) in the Conversion Attempt (see *Conversion*, 3 Order, p. 554). As nothing else has happened yet, there are no modifiers to apply, so the die is cast, and the result is a ‘1.’ As 1 is not greater than 4 – bad luck – the Conversion Attempt has failed and Dithmarschen remains a Conquered Colony. The Denmarkate did not commit any Enlightenment to the Conversion Attempt, so there is no reroll.

On the next Regular Turn, under pressure to be able to build defenses at Dithmarschen against possible counterattack, or perhaps the need to use it as a Supporting Colony (see 1 Movement, p. 840) because the warfleet is running out of supplies (OSL) (the Log Ships were either delayed or were destroyed in the combats), the Denmarkate orders an Orbital Bombardment of Dithmarschen with one 2<sup>nd</sup> Era Warship, killing 7 population factors and damaging the planet (see *In This Dust That Was a City*, 2 Combat, p. 961), but instantly Converting the colony (see *Conversion*, 3 Order, p. 554) by an activation of the Combat Power for the purpose of Initiate Combat.

However, there is a 10% chance per active Constructural Element of *apostasy* on the participating ships, and as a result, the only surviving 2<sup>nd</sup> Era Warship loses its active Epistemological Constructural Element which becomes inactive (see *Alieney Apostasy*, 3 Disruption, pp. 283-284). The choice of which ship did the deed may have been determined by the risk of losing an active Constructural Element. As a result, the 2<sup>nd</sup> Era Warship can no longer receive the benefits of Enlightenment (see *Skool Tyme*, 2 Constructural Elements, p. 190) and has a greater chance of not obeying future Power Activations (see *Power Off*, 2 Constructural Elements, p. 193). Further still, a Constructural Element inactivated due to *apostasy* cannot be reactivated until the Census Power is activated by the position (see *The Apostasy*, 3 Disruption, p. 284).

#### *Alternate Universe #1*

Instead of trying to Convert the Conquered Colony of Dithmarschen, the Denmarkate initiates Combat for the purpose of Pacification Combat using the battered 15 RP Landsknecht Ground Unit that is occupying the colony and supported by warships and fighters. The attacker gets only one chance at this because a colony can only be subjected to one Pacification Combat each time it is conquered (see *Peace in Our Time*, 6 Combat, p. 1021). So go all in for it.

The Suppression Value is calculated as 15 RPs (for the Ground Unit) plus 4 RPs value for the 2<sup>nd</sup> Era Warship, and half the value of the 20 RPs of supporting Fighters from the accompanying

Carrier (see Resistance is Futile, 6 Combat, p. 1022). The total Suppression Value is **29**. However, one Enlightenment is assigned to support the Pacification Combat because each die rolling situation can only be rerolled once (see Vampire Suicide, 2 Colleges, p. 478).

As mentioned previously, the Dithmarschen Conquered Colony has 46 population remaining, which divided by 10 is 5 (fractions rounded up). The colony also had 20 RPs of remaining Fighters when it was 100% occupied by the Landsknecht Ground Unit and surrendered (see Ground Combat Resolution, 4 Combat, p. 993) for a value of 10. All Ground Bases were destroyed, but two militia Ground Units remained at the time of surrender for .5 each. The Resistance Value of the colony is 4 for the population, plus 10 for the remaining fighters, plus .5 for each of the remaining Ground Units (all vets who may lead an insurgency), for a total of **16** (see You Will be Assimilated, 6 Combat, p. 1022).

To this the Concierge must add a number between 1 and 10 representing the perceived determination of the resistance. Based on cultural factors, such as that the Holy Ramen Empire is a Confederacy Structural Title and the Denmarkate Unity is a Unitary Structural Title (see 2 Government Titles, pp. 595-596), the presence of recent military veterans in the population, and the legendary fierce resistance of the colony, the Concierge assigns a value of 7 to the resistance, making a final Resistance Value of 23. So 29 vs. 23 is the starting point.

The Pacification Combat is a contest of hearts and minds, and policing and order. The Suppression Value of 29 and the Resistance Value of 23 are converted directly to Population Factors at the colony. To automatically Convert the colony, the attacker needs to suppress/convert 31 or more of the 46 population in the Pacification Combat. If the attacker suppresses/converts 15 or less of the 46 population in the final result, there is an insurgency at the colony which remains a Conquered Colony. Any result in between is a Suppression (see Fabrication of Order, 6 Combat, p. 1022), which aids in future Conversion Attempts as described above.

The attacker starts with 29, so they are just short of an automatic Conversion (at 31). The Concierge resolves the Pacification Combat by first rolling a die generating a number between 1 and the Suppression value of 29 (see Occupation of Haiti, 6 Combat, p. 1023). The die roll result is '1.' As this clearly would result in failure, the committed Enlightenment is used for a reroll (see Harsh Mistress, 2 Colleges, p. 478) noting also that unused Enlightenment committed to Combat are not returned at the end of the combat (see Vampire Suicide, 2 Colleges, p. 478). The second roll is a much more pleasing result of '11' which is added to the 29 for a total of **40**.

The resistance has a long uphill battle. A die is rolled for the resistance to generate a value between 1 and the Resistance Value of 23 (see Occupation of Haiti, 6 Combat, p. 1023). The Resistance cannot use Enlightenment as the former owner can no longer supply it (see See-Through Fabric, 6 Combat, p. 1024). The Resistance rolls a 10, almost undoing exactly the gains of the attackers. The 10 is added to the Resistance Value of 23, for a final Resistance Value of 33, and 33 subtracted from the Suppression Value of 40 (*ut supra*) for a final Suppression Value of 7. *Id.* The final value is less than the 31 needed to automatically Convert the colony, and less than 15 also, meaning that the colony has not been Converted and a widespread, determined, fierce Insurgency is active at the colony.<sup>1</sup>

---

<sup>1</sup> To have a reasonable chance of avoiding an Insurgency and possibly obtaining a good result, as a rule of thumb, the initial Suppression Value should be approximately equal to or greater than the current population. The final result is determined by Concierge judgment of the Resistance Level and die rolls.

- ✓ If the Resistance had rolled a '1' or '2' the result would have been a Suppression (final Suppression Value of 15 or 16).

As the Pacification Combat failed to automatically Convert the colony, one will be subtracted from all future Conversion Attempts at that colony (see Conversion, 3 Order, p. 554). Further, it will be difficult to Naturalize the colony in the future as long as there is a significant Insurgency.

### *Alternate Universe #2*

The battered 15 RP Landsknecht Ground Unit is the infamous and disreputable Black Guard commanded by Thomas Slentz, who Loot the Dithmarschen Conquered Colony and commit heinous acts against the population and destructive acts against the colony.

On the Regular Turn after the conquest of Dithmarschen Colony, an empty Denmarkate Unity 1<sup>st</sup> Era Cargo Ship arrives at the colony and both the Combat Power is activated for Pacification Combat and the Commerce Power is activated for Looting at the colony. Activation of the Combat Power to Initiate Combat costs one Act (see The Combat Power, 1 Combat, p. 941) and activation of the Commerce Power to Load RPs to a Cargo Ship costs one Act and one Scene on the colony (a Scene may have been on the colony before conquest, and would have been unaffected, a luck grab for the Denmarkate Unity). Since the Combat Power Activation costs less, it will be processed first, then the Commerce Power Activation will process (see Clockwork Universe, 3 The Streams of Time, p. 90), regardless of whether the colony is converted or not.

In this alternate universe, Denmarkate did not commit an Enlightenment to the combat, so is stuck with the '1' result (*ut supra*), for a Suppression Value of **30**. When the resistance rolls a 10, which is added to the 23, the total of 33 is subtracted from 30 for a truly epic failure of -3 final Suppression Value. This creates a huge Insurgency at the max end of whatever scale the Concierge is using for Insurgency values in the game, and is something notable enough to perhaps draw Intervention use as well in future turns and become a story arc point for the game (like the Warsaw Resistance in WWII in our world). The legend continues...

... Moving on. Since the Dithmarschen Colony is still a Conquered Colony when the Load RPs action executes, the Load automatically becomes Looting (see Looting, 3 Commerce, p. 1210). The Black Guard doesn't mind at all, in fact they have proudly been the source of woe, destruction and anguish wherever they have been employed. Thus, 15 RPs (enhanced value) are Loaded to the 1<sup>st</sup> Era Cargo Ship from the Dithmarschen Conquered Colony and a corresponding number of industry and other installations at the colony are destroyed (see Looting, 3 Commerce, p. 1210), additionally, some population may be killed (at the judgment of the Concierge) in the process with accompanying damage to the planet, *Id.*, p. 1212, resulting in additional Disruption Events at the colony (see Mars Bombing Run and Hagar's Faucet, 2 Disruption, pp. 274, 278 respectively). When added to the disruptions on the previous turn associated with conquest of the colony, this may be viewed as a collapse of the colony's civilization (though it will remain technically a Conquered Colony, unless abandoned by the Demarkate).

On the other side, the Ground Unit and all ships that participated the Pacification Combat and the Cargo Ship that participated in the Looting may suffer possible *apostasy* (see Alieny Apostasy, 3 Disruption, p. 283). Additionally, the Pacification Combat and the Looting will combine for a -2 modifier on all future Conversion Attempts at the colony (see Conversion, 3 Order, pp. 554-555), however, there may be somewhat less population to contend with...

*Alternate Universe #3*

On the Regular Turn following the conquest of Dithmarschen Colony, a Denmarkate Unity 1<sup>st</sup> Era Cargo Ship arrives at the colony with 15 RPs. The ship arrives at the beginning of the turn and can therefore Unload 15 RPs to the colony on the turn of arrival (see Long Jump, 2 Movement, p. 851 and Downloading, 2 Commerce, p. 1202) at normal, face value (see Conversion, 3 Order, pp. 554-555). The Construction Power is also activated at Dithmarschen Conquered Colony on that turn – sharing a Scene with the Unload RPs from the Cargo Ship in the same turn (see Material Handling, 1 Construction, p. 664) – however, construction is limited to the RPs unloaded in that turn (see Combat Engineers, 1 Construction, p. 664). Still, Construction wasn't exactly the main purpose...

Unload RPs activation of the Commerce Power costs one Act and one Scene on the colony (see Load & Unload Activations, 1 Commerce, p. 1185), fortunately a Scene was on the colony when it was conquered. Conversion activation of the Order Power also costs one Act and one Scene on the target colony, however, because they cost the same, if they happened on the same Regular Turn, the Conversion Attempt would occur first in the sequence of actions processing winning the tie because it Order is listed before Commerce in the Table of Contents of 2 The Sidereal Stage (see Clockwork Universe, 3 The Streams of Time, p. 90). Because the bribe (i.e. Unloaded RPs) must be delivered prior to the Conversion Attempt (see Conversion, 3 Order, pp. 554-555), the two cannot occur in the same turn.

Knowing then that a Conversion will be attempted on the next turn, the Denmarkate Unity places a Scene on the Dithmarschen Conquered Colony at the end of the turn. On the next Regular Turn, the turn *after* the Unload RPs, the Denmarkate Unity activates the Order Power at Dithmarschen for the purpose of Convert Colony. The Denmarkate does not commit any Enlightenment because there is an 80% chance of success.

The Dithmarschen Conquered Colony has 46 population, which divided by 10 and truncating fractions, becomes a 4. Additionally, the Denmarkate Unity receives a +2 modifier for the bribe that was unloaded.<sup>2</sup> The conversion attempt is successful on a 5 or better modified result, so the Denmarkate Unity only needs to roll a 3 or better... they rolled a '1.' Dithmarschen remains a Conquered Colony for the moment.

Fortunately with the expectation of doing something else there the next turn, Denmarkate placed yet another Scene on the colony, and so can try again to Convert the colony. Further, the bonus for Unloading RPs will remain active until the colony is Converted.

---

<sup>2</sup> Assume for the example that the 15 RPs Unloaded are greater than the Taxation Value of the colony, per Conversion, 3 Order, pp. 554-555. Per Resources from Population, 2 Taxation & Census, p. 306, the 46 population on Dithmarschen colony would naturally produce 9.2 RPs during taxation and they could have a maximum of 18 Industry (see Appendix EP – Existential Patents) producing 9 RPs during taxation (for a max of 18 RPs). But likely they didn't...

**Appendix PAT1 – Power Activations Tables 1**

**Each Regular Turn**, a position may potentially activate a number of Vital Powers equal to the number of currently undisrupted Government Titles (see Exercise in Vital Powers, 2 The Sidereal Stage, p. 114).

**Each Regular Turn**, a position receives Acts and Scenes of its choice equal to the number of currently undisrupted Government Titles (see On the Soapbox, 3 The Sidereal Stage, p. 122).

**Power Activation Costs**

Power Activation	Acts	Scenes	Cost RPs?
Taxation <sup>1</sup>	3 or 2	0 or 1	N
Census <sup>2</sup>	2	0	N
Culture <sup>3</sup>			
• Exposing Aspects	2	0	N
• Perfecting Proficiencies	2	0	Y
• Cohering	2	0	Y
• Introduce Writs <sup>4</sup>	2	0	N
• Found College <sup>5</sup>	3	1	Y
• Amend College Charter <sup>6</sup>	2	1	?
• Endow Colleges <sup>7</sup>	1	0	Y
• Develop Doctrinal Template <sup>8</sup>	1	0	N
Order <sup>9</sup>			
• Declare/Move Capital	1	1	Y
• Conversion/Naturalization	1	1	N
• Maintenance Shield	1-3	0	Y
• Government Formation <sup>10</sup>	2 or 3	1 or 0	N

<sup>1</sup> Taxation costs three Acts or two Acts and a Scene on the Capital Colony, see Life, Taxes, Death, and Taxes, 1 Taxation & Census, p. 296.

✓ “Failure of the Taxation Power activation at any colony does not count as a Power Activation failure for Government Title Conflict Checks ... unless all eligible sovereign colonies fail Taxation....” See Tax Revolt or Revolting Taxes, 1 Taxation & Census, p. 296.

<sup>2</sup> The Census Power activation can never fails. See Tax Revolt or Revolting Taxes, 1 Taxation & Census, p. 297.

<sup>3</sup> The Acts and Scenes costs for Exposing Aspects, Perfecting Proficiencies and Cohering are found in Gemini Dream, 1 Culture, p. 356.

<sup>4</sup> See Nothing Fuzzy About It, 1 Writs, p. 436.

<sup>5</sup> See Foundation, 1 Colleges, p. 457.

<sup>6</sup> See Amended Charter, 1 Colleges, p. 462.

<sup>7</sup> See Student Loans, 1 Colleges, p. 460.

<sup>8</sup> See Brain Trust, 4 Colleges, p. 504. Culture Power activation must be matched by Combat Power activation on the same Regular Turn.

<sup>9</sup> Acts and Scenes cost for Declare/Move Colony, Conversion/Naturalization, and Maintenance are found in To Insure the Domestic Tranquility, 1 Order, p. 517.

<sup>10</sup> Three Acts may only be used if the position does not have a Capital Colony on which to place a Scene. Positions are required to form the initial government during set-up, which costs nothing. See Forming a Government, 1 Government Titles, p. 582.

Construction <sup>11</sup>			
• Colony Enhancement	1	1	Y
• Colony Defense Era Upgrade	1	1	Y
• Laying Keel	1	1	Y
• Shipbuilding	1	1	Y
• Ship Supply <sup>12</sup>	1	1	Y
• Scrapping	1	1	N
Technology <sup>13</sup>			
• Basic Research	1	0	Y
• Develop Application <sup>14</sup>	2	0	Y
• Patent Prosecution <sup>15</sup>	2	0	N
• Reverse Engineering <sup>16</sup>	0	1	Y
Movement <sup>17</sup>	1	1	N
Expansion			
• Looking	1	1	N
• Scouting <sup>18</sup>	1	0	N
• Loading Population <sup>19</sup>	1	1	Y
• Transporting Population	1	1	N
• Unloading Population	1	1	Y
• Landing Population	1	1	N

<sup>11</sup> Activations of the Construction Power may share a Scene with activation of the Commerce Power in the same location on the same Regular Turn for the purpose of Unload RPs. In this case *only*, the Commerce Power activation will process *before* the Construction Power activation so that the RPs can be used in building. With the exception of Scrapping, the Construction Power may only be activated for one purpose at each location each Regular Turn. See Construction Zone and Material Handling, 1 Construction, pp. 661, 664.

<sup>12</sup> Supplies loaded to Logistical Ships and any *permanent* Enhancements to any ship are considered to be ‘built’ in the same Regular Turn and RPs are subtracted for the cost. *Expendable* Enhancements transferred from the colony to a ship must preexist the turn in which the transfer occurs (i.e. they must have previously been built). See Costly Resupply and Transfers, 3 Construction, pp. 679-680.

<sup>13</sup> See Technopower, 1 Technology, p. 689 for all Technology Power Activation costs.

<sup>14</sup> Activation of the Technology Power for the purpose of Development only occurs once for each Research Group, and will continue to process each Regular Turn until either successful or completely fails for the current Era. See The Kitty Incident, 2 Technology, p. 708.

<sup>15</sup> Normal, current Era Patent Prosecution does not cost RPs but may require multiple Power Activations. *Advanced Patents* (in the next Era before the current Era is finished) will cost RPs, see Advanced Patents, 1 Eras, p. 763.

<sup>16</sup> See De-conjunction Junction, 3 Technology, p. 713. This is the very first activation resolved in a turn.

<sup>17</sup> See Ad Astra, 1 Movement, p. 839. Scene must be on the star of the origin system.

<sup>18</sup> For Looking and Scouting activation costs, see Exploration, 1 Expansion, p. 876.

<sup>19</sup> For Load, Transport, Unload Populations and Landing activation costs, see Colonization, 1 Expansion, pp. 876-877. Moving population is an intensive three-turn process (two turns if Unloading to another planet in the same system), expensive in Power Activations, Acts, Scenes and RPs and is a Disruption Event. Once Loaded, population can only be Unloaded or Landed.

Combat <sup>20</sup>			
• Combat Movement	2	1	N
• Initiate Combat	1	1	N
• Combat Alert	1	1	N
• Seize the Initiative	0	1	N
Diplomacy <sup>21</sup>			
• Accept Treaty	1	1	N
• Articles of Incorporation <sup>22</sup>	1	1	Y
• Break Treaty	1	1	N
• Form Meanings	1	0	N
• Share Meanings	2	0	N
Commerce			
• Trade Mission <sup>23</sup>	1	1	N
• Load Cargo Ship <sup>24</sup>	1	1	Y
• Unload Cargo Ship	1	1	N
• Marketing <sup>25</sup>	1	0	N
• Articles of Incorporation <sup>26</sup>	1	1	Y
• Trucking Transaction <sup>27</sup>	1	1	Y
• Carting <sup>28</sup>	0	1	Y
Special Operations <sup>29</sup>			
• Reconnaissance	1*	*	N
• Recruit Missions (SOMs)	1*	*	Y
• Lodge Missions (SOMs)	1*	*	Y
• Information Operations	1*	*	Y
• Black-Ops	1*	*	Y
• Treason	1*	*	N
• Train Counter Operations (COMs)	1*	*	Y
• Counter-Operations	1*	*	N

<sup>20</sup> The cost for all Combat Power activations is found in The Combat Power, 1 Combat, p. 941.

<sup>21</sup> See Diplomacy Power, 1 Diplomacy, p. 1095 for activation costs. Unlike other powers, completion of the diplomatic purpose usually depends on the other position reciprocating on their next Regular Turn.

<sup>22</sup> For MegaCorporations only. See Commensurate Complexities, 2 Corporations, p. 1255.

<sup>23</sup> See Green Goods, 1 Commerce, p. 1188.

<sup>24</sup> See Load & Unload Activations, 1 Commerce, p. 1185. Loading from a Conquered Colony is Looting, see Looting, 3 Commerce, p. 1210. If a Load and Unload RPs occur at the same colony on the same Regular Turn, they may share a Scene. *Id.*

<sup>25</sup> See Marketing, 2 Commerce, p. 1193.

<sup>26</sup> For Domestic Corporations only. See Articles of Incorporation, 1 Corporations, p. 1246.

<sup>27</sup> For Trucking Transaction and Carting activation costs, see The Store of Worlds, 1 Commerce, p. 1186.

<sup>28</sup> Multiple Carting activations in the same system may share a Scene, see Donkey Cart, 4 Commerce, p. 1229.

<sup>29</sup> All Special Operations Power Activations cost one Act, except when they occur at a sovereign colony, in which case, the activation costs one Scene, an Act cannot be used when a Scene is required, see Acting Lessons, 1 Special Operations, p. 1274. When a sovereign ship is the target, either may be used.

**Appendix PAT2 – Power Activations Tables 2**

**Normal Sequence of Power Activations<sup>1</sup>**

<b>Power Activations Costing No Acts and One Scene</b>	
1	Reverse Engineering, <i>Technology Power</i>
2	Seize the Initiative, <i>Combat Power</i>
3	Carting, <i>Commerce Power</i>
4	Activations of the <i>Special Operations Power</i> where a Scene is used instead of an Act

<b>Power Activations Costing One Act and No Scene</b>	
5	Endow Colleges, <i>Culture Power</i>
6	Develop Doctrinal Template, <i>Culture Power</i>
7	Maintenance Shield, <i>Order Power</i> , if only one Act is used
8	Basic Research, <i>Technology Power</i>
9	Scouting, <i>Expansion Power</i>
10	Form Meanings, <i>Diplomacy Power</i>
11	Marketing, <i>Commerce Power</i>
12	Activations of the <i>Special Operations Power</i> that use an Act instead of a Scene

<b>Power Activations Costing One Act and One Scene</b>	
13	Declare/Move Capital, <i>Order Power</i>
14	Conversion/Naturalization, <i>Order Power</i>
15	Unload RPs, <i>Commerce Power</i> , in conjunction with any Construction Power activation at the same location, sharing a Scene (see Material Handling, 1 Construction, p. 664) <sup>2</sup>
16	All <i>Construction Power</i> Activations
17	<i>Movement Power</i> activation
18	Looking, Loading Population, Transporting Population, Unloading Population, Landing, <i>Expansion Power</i>
19	Initiate Combat and Combat Alert, <i>Combat Power</i>
20	Accept Treaty, Articles of Incorporation, Break Treaty, <i>Diplomacy Power</i>
21	Trade Mission, Load Cargo Ship, Unload Cargo Ship (not in conjunction with Construction Power activation), Articles of Incorporation, Trucking Transaction, <i>Commerce Power</i>

<b>Power Activations Costing Two Acts and No Scenes</b>	
22	<i>Census Power</i> activation
23	Exposing Aspects, Perfecting Proficiencies, Cohering, and Introduce Writs, <i>Culture Power</i>
24	Maintenance Shield costing two Acts, <i>Order Power</i>
25	Develop Application and Patent Prosecution, <i>Technology Power</i>
26	Share Meanings, <i>Diplomacy Power</i>

<sup>1</sup> See Clockwork Universe, 3 The Streams of Time, p. 90.

<sup>2</sup> The special exception for Unload RPs-Construction Activation processing is destroyed if one Act is added to the activation cost of the Commerce Power due to lack of association with an undisrupted Government Title.

<b>Power Activations Costing Two Acts and One Scene</b>	
27	<i>Taxation Power</i> activation using Scene on Capital Colony
28	Amend College Charter, <i>Culture Power</i>
29	Government Formation, using a Scene on the Capital Colony, <i>Order Power</i>
30	Combat Movement, <i>Combat Power</i>

<b>Power Activations Costing Three Acts and No Scenes</b>	
31	<i>Taxation Power</i> activation using no scenes
32	Maintenance Shield, using three Acts, <i>Order Power</i>
33	Government Formation, <i>Order Power</i> , if position does not have a Capital Colony

<b>Power Activations Costing Three Acts and One Scene</b>	
34	Found College, <i>Culture Power</i>

**Government Titles Vital Power Associations:** If the *optional rule* of Associations of Vital Powers with Government Titles is used, any activation of any Vital Power not associated with an undisrupted current Social or Estate Government Title costs one more Act than normal. See Associates & Acquaintances, 1 Government Titles, p. 580. The optional rule gives Social and Estate Titles more ‘personality.’

Such situations will always cost more Acts, and will usually change the sequence of processing for that Power Activation. For example, if a position had no undisrupted Government Title associated with the Census Power, activation of the Census Power would cost three Acts and no Scenes instead of two Acts and no Scenes. It would then process *after* any activation of the Taxation Power, even if the Taxation Power used the three Acts and no Scenes option. This could cost the position RPs in taxation.

Another example, Carting normally costs just one Scene, but if the Commerce Power has no associated undisrupted Government Title, Carting then costs an Act and a Scene. This makes it process after Construction Power Activations (because they are tied and Commerce is after Construction in the order of Vital Powers), thus the receiving colony would not be able to use the RPs received from Carting and they would possibly/probably be wasted.

But there are other situations where, other than the extra act cost, no change will be made in the processing sequence. For example, a position that does not have an undisrupted Government Title associated with the Taxation Power (shocking! I know) will pay one more Act to activate that power. However, if the option is taken to use a Scene on the Capital Colony for the activation, the cost will be three Acts and one Scene (instead of two Acts and one Scene). Taxation would in that case still process before the activation of the Culture Power to Found College (which costs three Acts and a Scene), because Taxation processes before Culture, with the tiebreaker (between activations that cost the same in Acts and Scenes) being the sequence in which Vital Powers are listed in the Table of Contents of 2 The Sidereal Stage. See Clockwork Universe, 3 The Streams of Time, p. 90. Thus, the position could still tax before founding the College.

In many situations, the change of processing sequence will make no difference.

### Appendix PAT3 – Scenes, Planets & Stars

- Some Power Activations require a pre-placed Scene on a star on the Public Space or on a colonized planet on the Public Space. There is a limit to the number of Scenes in a place.
- Scenes have no ownership and will be seen on the Public Space of any position that has presence in that location.<sup>1</sup>
- Scenes can be ‘snitched’ by other positions, permission is not required to use any Scene.
- Scenes that are used are removed *unless* the Power Activation fails due to inactive Constructural Elements.<sup>2</sup>

#### Scenes Placed on Stars:

- Movement Power: Scene must be on the star of the origin system to *initiate* normal interstellar movement.<sup>3</sup>
  - Normal interstellar movement allows any number of ships of the appropriate type to depart the origin system to any number of destination systems.
- Expansion Power: Looking requires a Scene on the star that is being used for Looking.<sup>4</sup>
- Expansion Power: Transporting Population activations require a Scene on the star of the *destination* system.<sup>5</sup>
  - This works the opposite of normal interstellar movement activations; it allows any number of Colony Ships to initiate interstellar movement from any number of origin stars to the destination star. Convergence instead of divergence.
- Expansion Power: Activations for the purpose of Landing requires a Scene on the star where the Landing occurs.<sup>6</sup>
- Combat Power: All Combat Power activations require a Scene on the star where the movement *originates* (Combat Movement) or the activity occurs (all others).<sup>7</sup>
- Commerce Power: Trade Mission requires a Scene on the star where the movement *originates*.<sup>8</sup>
- Commerce Power: Carting can use a Scene on one of the colonies involved or on the star of the system where it occurs.<sup>9</sup>

#### Scenes Placed on Planets:

- Taxation Power: Can be activated with a Scene on the Capital Colony.<sup>10</sup>
- Culture Power: Foundation of a College requires a Scene on the proposed Host Colony.<sup>11</sup>

<sup>4</sup> See Exploration, 1 Expansion, p. 876

<sup>5</sup> See Colonization, 1 Expansion, pp. 876-877.

<sup>6</sup> See Colonization, 1 Expansion, pp. 876-877.

<sup>7</sup> See The Combat Power, 1 Combat, p. 941.

<sup>8</sup> See Green Goods, 1 Commerce, p. 1188 and Donkey Cart, 4 Commerce, p. 1229.

<sup>9</sup> See The Store of Worlds, 1 Commerce, p. 1186.

<sup>10</sup> See Life, Taxes, Death, and Taxes, 1 Taxation & Census, p. 296.

<sup>11</sup> See Foundation, 1 Colleges, p. 457.

- Culture Power: Amending the Charter of a College requires a Scene on the Host Colony.<sup>12</sup>
- Order Power: A Scene is required on the proposed new Capital Colony to Declare/Move Capital Colony.<sup>13</sup>
- Order Power: Conversion/Naturalization of a colony requires a Scene on the colony.<sup>14</sup>
- Order Power: Any alteration of the Government (by activation for the purpose of Forming Government) requires a Scene on the Capital Colony if the position has one.<sup>15</sup>
- Construction Power: Every activation of the Construction Power requires a Scene on the target colony.<sup>16</sup>
  - Activations of the Commerce Power for the purpose of Load/Unload RPs at the same colony in the same turn can share a Scene with Construction Power Activations.<sup>17</sup>
- Technology Power: Reverse Engineering requires a Scene at the target location.
  - If the target alien junk is in system space, Scene must be on the star, otherwise, it will be on the target planet where the junk is located.<sup>18</sup>
- Expansion Power: Load and Unload Populations require a Scene on the target colony.<sup>19</sup>
- Diplomacy Power: Activations to Accept Treaty, Articles of Incorporation for MegaCorporations, or Break Treaty all require a Scene on the Capital Colony.<sup>20</sup>
- Commerce Power: All Load and Unload RPs activations require a Scene on the target colony (even if it is an **alien colony**).<sup>21</sup>
- Commerce Power: Trucking Transactions require a Scene on one of the two colonies involved. Carting can use a Scene on one of the colonies involved or on the Star.<sup>22</sup>
- Commerce Power: Initial formation of a Corporation (via Articles of Incorporation activation) requires a Scene on the proposed Host Colony.<sup>23</sup>
  - Renewal of existing Corporations does not require an Articles of Incorporation activation but can still fail at the Host Colony due to inactive Constructural Elements.<sup>24</sup>
- Special Operations Power: Special Operations Power activations require a Scene on the target colony only if the colony is a sovereign colony of the position. When a Special Operations Power Activation occurs on a sovereign ship, an Act or Scene may be used.<sup>25</sup>

## Appendix PAT4 – Power Activation Failure

- **Localized** Power Activations require a check at a ship or colony or both to see if the Power Activation fails due to *inactive* Constructural Elements.<sup>1</sup>
  - Power Activation checks *are only made during Regular Turns* (Power Activations are only processed during Regular Turns) and thus, do not apply to Orders during Combat Rounds (i.e. a unit will never fail to execute in a Combat Round due to Power Activation failure).<sup>2</sup>
  - There is always a 5% chance of Power Activation failure, plus 15% per inactive Constructural Element, to a maximum of 50% (Temporal Constructural Elements are not counted).<sup>3</sup>
  - Colonies *never fail* to obey the Census Power Activation (it comes naturally).<sup>4</sup>
  - Failure of a Taxation Power Activation cannot cause a Government Title to fail a related Conflict Check unless all colonies failed the Taxation Power Activation (bad when you have only one colony!) on the same Regular Turn.<sup>5</sup>
  - Failure of a Culture Power Activation to Found a College does not cost any RPs (no RPs are lost);<sup>6</sup> this is true generally of Power Activations costing RPs.
  - Colony Ships ordered to Land when they have expired OSL will *never fail* to obey the Power Activation as long as they can legally Land on the planet.<sup>7</sup>
  - No Power Activation is required to defend in Combat,<sup>8</sup> against a Probing attempt,<sup>9</sup> or Blockade Running,<sup>10</sup> or to explore an unexplored system upon arrival,<sup>11</sup> or to resupply at a supporting colony (i.e. reset OFL/OSL).<sup>12</sup> Ships in interstellar flight do not require additional activations to move each Regular Turn; they will also not obey new Power Activations until they arrive.<sup>13</sup>
  - When ordered to run a Blockade, ships are checked before the attempt to see if they obey the Power Activation (if they do not, no attempt is made) and if they make it to the colony, then the colony is checked to see if it obeys the Power Activation.<sup>14</sup>

<sup>13</sup> See The FTL Missile, 2 Movement, p. 849.

<sup>14</sup> See Blockade Running, 4 Commerce, p. 1233.

- If the Power Activation fails, the activity is not performed; the Power Activation is used for the Regular Turn, but Acts and Scenes (and RPs) are not removed for the failed activation.<sup>15</sup>
  - Colonies and Ships may fail to obey Culture Power Activations for Cohering which can cause a snowball effect.<sup>16</sup>
  - Units that fail a Combat Power Activation for the purpose of Initiate Combat may be joined (shooed into) to the combat in the second or later rounds, losing their first round attacks.<sup>17</sup>
  - No check is made for Combat Power Activation for the purpose of Combat Alert, but a check is made as if the activation was to Initiate Combat when the Combat Alert is used to Initiate Combat.<sup>18</sup>
  - Regular Turn Power Activations directed at units engaged in a Combat will fail as a unit cannot do anything else until the combat is won or they successfully retreat.<sup>19</sup>
  - Some Power Activations require a ship to be in the system at the beginning of the turn (meaning it must have been there at the end of the previous turn); if this condition is not met, the Power Activation cannot be completed, e.g., Load Cargo activation of the Commerce Power.<sup>20</sup>
  - Some Power Activations at colonies may fail if the colony is besieged, e.g. Trucking activations of the Commerce Power.<sup>21</sup> However, a siege has generally no effect on a colony's Constructural Elements or Power Activations.<sup>22</sup>
- In cases where an activation requires a check of both the Ship and Colony, if either fails, the activation fails (i.e. will not execute).<sup>23</sup>
  - Enlightenment may be applied to any failed Power Activation to cause a reroll if the Enlightenment was assigned to the Power Activation in the Regular Turn Orders. This can be a temporary fix for inactive Constructural Elements.<sup>24</sup>
- If the Power Activation is to initiate interstellar movement, i.e. Movement Power, Combat Power (Combat Movement), Expansion Power (Transport Population) or Commerce (Trade Mission to **alien colony** systems), and it fails, a second check is made if there is a supporting colony in the system, using the Supporting Colony's Constructural Elements.<sup>25</sup> If that does not fail, the movement will be initiated.

- Second checks are also applied to Initiate Combat (Combat Power) and Landing (Expansion Power) activations in the same system as a supporting colony.<sup>26</sup>
- Location-specific inter-position processes require both positions to execute Power Activations on their respective Regular Turns in succession and failure of either will cause the process to fail, e.g., Transferring RPs between Cargo Ships or at the Host Colony when forming MegaCorporations.<sup>27</sup>
  - Failure of a Power Activation may complicate Trucking Transactions, e.g., failure to reciprocate, or costing extra Scenes.<sup>28</sup>
- Game processes will continue regardless of whether a position submits Regular Turn actions during their Turn Period or whether all Power Activations or any Power Activations fail, e.g.:
  - Ships in Interstellar Flight will continue to move and/or arrive.<sup>29</sup>
  - Acts (not Scenes), RPs, Faculties, Special Operations, Counter Operations Missions will ‘age out.’<sup>30</sup>
  - Corporations will expire, that is, the clock will continue to run on Articles of Incorporation.<sup>31</sup>
  - Colleges will not operate, however, if the position does not submit Regular Turn Actions.<sup>32</sup>
  - Corporations will not operate if the position does not process Regular Turn Actions.<sup>33</sup>
- Activation of Writs must be on conjunction with the Power Activation listed on the Writ in the same Regular Turn and requires actualization of a Fuzzy Group matching the Writ.<sup>34</sup>
  - Failure of Power Activation means that the Writ was never activated and the Fuzzy Group is not removed from the Public Space.<sup>35</sup> Writs can also fail to activate by not meeting the Conditions Precedent of the Writ.<sup>36</sup>

### **Special Operations Are Special:**

- Special Operations Power Activations require either one Act or one Scene.<sup>80</sup>
- A Scene is required if the action takes place on a sovereign colony.<sup>81</sup> This is mainly the case when training Counter Operations Missions and Conducting Counter-Operations.
- There are some times when the position may choose to use either an Act or a Scene.<sup>82</sup> For example, Training Counter Operations Missions onboard a ship at the colony.<sup>83</sup>
- Whenever a Scene is used, whether required or voluntarily, the Power Activation is checked for failure based on the colony's or target unit's Constructural Elements.<sup>84</sup>
- Whenever an Act can be and is used, no Power Activation check is made. Thus, Special Operations outside of the sovereign colonies do not require checks for Power Activation failure. They never check using **alien colonies'** Constructural Elements, for example, or their own Constructural Elements while at an **alien colony**.<sup>85</sup>
- Because of this, the square format of Special Operations Power Activations doesn't fit into the round holes of the table format, above, or it would just be confusing.☺

### Appendix POQ – Patent Operational Qualities

- ✓ Patent Operational Qualities do not apply to Stardrive Patents.

**Physical Item Technologies (PITs):** Required for Patents that introduce new major units (game units, combat units) to the game, mainly starships.

- ✓ PIT Patents that create new starships in the game must have at least one Stardrive Application.
- ✓ PIT Patents must have two to seven Applications.
- ✓ PIT Patents have no assigned ‘base cost’ due to the nature of introducing new units.
- ✓ PIT Patents for starships cannot be prosecuted if the position does not have a Stardrive Patent.

**Continuous Operational Technologies (COTs):** COT Patents represent minor, non-expendable improvements to existing units, e.g., ship speed.

- ✓ COT Patents may not add new capabilities to existing units, only improvements in existing performance.
- ✓ All COT Patents must use only three Applications and must have two Effects.
- ✓ All COT Patents must specify another Patent to which it relates and cannot be prosecuted on the same turn as the Patent to which it relates.
- ✓ Implementation of the effect of the COT Patent on new and existing units may be free or negligible, but time delay may be required, and RP cost may be imposed in some cases.

**Enhancement Technologies (ETs):** Enhancement Technologies add new capabilities to existing units usually at an ‘upgrade’ cost.

- ✓ Some Enhancements may be expendable (e.g., Ship Missiles) while many others are permanent (e.g., Industry, Fighters).
- ✓ ET Patents must use at least two Applications, and up to four Applications, and has a base cost of 5 RPs times the number of Effects (not Applications).
- ✓ ET Patents for non-colony installations or that improve colony installations must list the PIT Patent on which it is based.
- ✓ ET Patent cannot be prosecuted the same turn as the PIT Patent on which it is based.

**Technological Devices (TDs):** Technological Devices are the big toys, the singular technological items (but not always monstrously big) of science-fiction imagination, not intended to be mass produced.

- ✓ Technological Devices can sometimes be game units, sometimes enhancements.
- ✓ TD Patents require five to nine Applications with a base cost of 50 RPs per Application (not Effect).
- ✓ There must be a logical game limit to the number of any Technological Device.
- ✓ TD Patents must specify whether it is a PIT-like or an ET-like device.

**Appendix PUBS – Expansion of Public Space Selected Summary**

*From 4 Writs, p. 452: [By Looking Inward]*

- **Edge of Reality:** After the Exposé´ is posted, there is a 5% chance that each Fact in the Exposé will add one Monad to the Public or Diplomatic Spaces (see Diplomatic Spaces, 2 Diplomacy, p. 1116, *infra*) of the issuing position and a 3% chance that each Fact will allow one Monad in the issuer’s Public or Diplomatic Spaces to be moved to a new location in the other space (that is, from Public to Diplomatic, *vice versa*).
  - ✓ A separate die roll is made for each fact for both possibilities. So one die roll is made for each Fact for the possibility of adding a new Monad, and one die roll is made for each Fact for the possibility of moving one Monad.
  - ✓ The chances are not added together, each roll to add a new Monad has a separate 5% chance and each roll to be allowed to move a Monad has a separate 3% chance of success. If you had 5 Facts in the Exposé´, the chances *would not be* 25% and 15% for each Fact; they would be 5% and 3% for each of the five rolls.
  - ✓ Adding or moving Monads allows the issuing position to slightly reshape their reality and/or slightly expand their reality that is represented by the Public Space. It is the choice of the issuing position where the Monads are moved or added and whether on the Public Space or on a Diplomatic Space.
  - ✓ New Monads can be placed adjacent to any Monad on any “edge” of the Public or Diplomatic Space and any Monads to be moved must currently be empty and maybe moved to any “edge” location on the Public or Diplomatic Space.

As the edges of the Public Space and Diplomatic Spaces wrap around to meet as discussed above, see also Over the Edge, 1 The Sidereal Stage, p. 108, *supra*, players should be cognizant that they are actually just inserting Monads into a circle at the locations that appear to be edges when seen in a flat top-down projection. Thus, they may inadvertently push things on the Public or Diplomatic Space out of adjacency.

- ✓ See discussions, Shared Spaces, 2 Diplomacy, p. 1118, and Mental Space, 3 Reformation, p. 1402, *infra*. Exposé´, colony Conversion and Naturalization (4 Order), Technological Era advancement (1 Eras), and Reformation (3 Reformation) are the only means to add Monads to the Public Space.

The chance of being able to receive new Monads is nominal in any case. Don’t bet your grocery money on those odds! Thus the possibility of adding or moving Monads should not enter into the Concierge’s judgment about the balance of the Exposé´. When it happens, it’s a bonus. Positions may use Enlightenment for rerolls in this case (see 2 Colleges generally, *infra*).

*From 4 Order, p. 574: [By Hegemony]*

**In Spite of Ourselves:** At the end of any Regular Turn in which a position Converted a Conquered Colony, there is a 1% chance, plus 2% per Converted Colony and 3% per Naturalized Colony owned by the position that a Monad will be added to the position’s Public Space adjacent to the location of the colony. A Monad may also be gained each time a colony is Naturalized as above, but the base chance increases to 3% plus modifiers. Additionally, 1% is added to either for every three units currently in *apostasy*. This is an intentional ‘snowballing’ mechanic.

As the edges of the Public Space wrap around to meet, see *Edge of Reality*, 4 Writs, p 452, *supra*, players should be cognizant that they are actually just inserting Monads into a circle rather than expanding a flat plane. Thus, they may inadvertently push things on the Public or Diplomatic Space out of adjacency; Pathways may need adjusted, pieces moved or removed. This is the cost of empire.

*From 1 Eras*, p. 760: [By Understanding]

- All Things Are in Motion: Upon advancing to the next Era, a roll is made for each Patent completed in the Era to see if a new Monad is added to the position's Public Space. There is a 10% chance x the level of the new Era for each Patent to result in an added Monad, e.g., there are 17 Existential Patents in the 1<sup>st</sup> Era, each of which has a 20% chance to add a Monad to the position's Public Space (average result would be 3-4 added Monads). The new Monads are randomly inserted into the Public Space. As described in *Over the Edge*, 1 The Sidereal Stage, p. 108 and *Edge of Reality*, 4 Writs, p. 452, *supra*, inserting Monads in the Public Space can push existing pieces out of adjacency and just generally mess things up.

*From 3 Reformation*, pp. 1401-1402: [By Living Outward]

- Built Spaces: The Reformation process, an Exposé' News Event (see *Edge of Reality*, 4 Writs, p. 451, *supra*), hegemony (see *In Spite of Ourselves*, 4 Order, p. 554, *supra*) and Era progression (see *All Things are in Motion*, 1 Eras, p. 760, *supra*) are the only means in the game to expand the Public Space *directly*; the Diplomatic Space (see *Fourth Direction*, 2 Diplomacy, p. 1117, *supra*) is also an expansion, but is shared with another and traces to the Public Space only through the Capital Colony. After the Reformation is resolved, in addition to the new restrictions of the Collage, the target position may receive additional Monads on the Public Space determined by a yes/no die roll (i.e. 50%) for each Intervention used in the Reformation resolution. Thus, the more Interventions used, the more Monads that can be gained (small consolation...). Enlightenment cannot be applied to this roll because there is no Power Activation involved.
- Mental Space: Because random insertion of new Monads into an active and full Public Space could destroy adjacencies and formations, and distances of colonies from Government Titles, it should/might/will probably be done manually by the Concierge; however, Reformations (Era Progressions and Exposé') do tend to upset existing arrangements and connections, therefore, random insertion by the computer assistant would not be entirely improper. The Concierge should decide initially how this will be handled and be consistent through the game, but knowing human predilections, it is likely that insertions will be done randomly by the computer assistant. As with Diplomatic Spaces (see *Shared Spaces*, 2 Diplomacy, p. 1118, *supra*), insertion of Monads will simply displace everything a space because the edges of the Public Space are considered to wrap around, such that things on the edge may be considered adjacent to things on the other edge.

*From 2 Diplomacy*, p. 1117: [By Expanding Possibilities]

- Fourth Direction: Diplomatic Spaces are the fifth way to expand the Public Space during the game, the other ways are by Era progression (see *All Things Are in Motion*, 1 Eras, p. 760, *supra*), Reformations (see *Built Spaces and Mental Spaces*, 3 Reformation, pp. 1401-1402, *infra*), hegemony (see *In Spite of Ourselves*, 4 Order, p. 554, *supra*) and an Exposé' News Event (see *Edge of Reality*, 4 Writs, p. 452, *supra*). As mentioned previously, the Public

Space of a position can become somewhat congested and crowded during the game. Diplomatic Spaces are the easiest way to expand the space available for pieces of civilization, but there's a catch....

✓ See also discussion of Monad Imperialism, 3 Order, p. 561, *supra*.

There is a sense in which the Diplomatic Space functions like the fourth direction in a hypercube; in the existence of the sort-of two-dimensional Public Space of civilization, the Diplomatic Space exists in the other direction to which we cannot point due to our limited dimensional existence. Very much like Edwin Abbott's Flatlanders and the interdimensional diplomat who wanted to say Hi! (*see* Carl Sagan's explanation, The Flatlanders excerpt, in Temporal Technology, *supra*). The point that destroys this rough analogy is the game necessary that the Diplomatic Space connect to the Public Space only through the Capital Colony – maybe like a black hole? – which, incidentally, makes the Capital Colony the densest center point of its civilization, which seems appropriate; it would be chaotic to the game to allow true congruity between all points of the Public and Diplomatic Spaces.

## Appendix R&D – Research & Development Example

### The Dynamics of Research

Position Cheapo Dynamics – consistently rated by Alsos Magazine as the ‘Cheesiest Better Mousetrap Operation in the Galaxy’ – decides to engage in Industrial Research (i.e. the position chose Industry as the Research Area for the attempt, see Research Areas and Research Action, 2 Technology, pp. 701-702). The Technology Power is activated for the purposes of Basic Research (see Technopower, 1 Technology, p. 689), and actions are submitted to the Concierge indicating that 10 RPs have been committed to the research (see Black Hole, 2 Technology, p. 703). Cheapo does not assign any Enlightenment, ‘cause, you know...

The first die roll is to determine if the research is overfunded or underfunded (see Schrödinger’s Cat, 2 Technology, p. 702). Since Cheapo put up 10 RPs for the Research, 10 RPs is divided by 3, with fractions rounded down, the result is three. Therefore, if the die roll (on one ten sided die) is three or less, the research is overfunded. If the die roll is between four and ten, the research is underfunded. *Id.*

The die roll is five, indicating that the research was underfunded. The second die roll, on one ten sided die x 5%, is to indicate by how much the research was underfunded. The result of the second die roll is a 4, indicating that the research was underfunded by 20%. *Id.*

The results of the second die roll then modify the base chance of successful research, reducing it by 20% (because of the underfunding). The adjusted base chance of success is 30% and a final die roll is made to determine the success or failure of the Research. The final die roll must be 30% or less for the research to be successful. See Cure for the Common Cold, 2 Technology, p. 703.

The final die roll, on two ten sided dice, is 45% so the Research failed and no Research Piece is received. *Id.* The final step is to determine the resources expended during the research. Since 10 RPs were committed and the research was determined to have been underfunded by 20%, 12 RPs are removed from the position’s Treasury. See Big Money, 2 Technology, p. 704. Cheapo Dynamics spent 12 RPs and received nothing.<sup>1</sup>

Note that by committing only 10 RPs of resources to the Research, Cheapo Dynamics limited their maximum cost (“exposure”) to 15 RPs, since the maximum underfunding percentage is 50%. However, the chance that the research would be underfunded was significant, and that in turn, meant a greatly reduced chance of success of the research because of the adjustment to the base chance, and a greater chance of paying 10 or more RPs for an unsuccessful research result. Conversely, on a couple of good die rolls, had the research been determined to have been overfunded by 50% and had it been successful too, Cheapo Dynamics would have obtained a Research Piece for 5 RPs.

---

<sup>1</sup> I often find myself wondering how many millions of dollars or man-hours Microsoft spent developing their Word program? I find myself wondering this because as I have worked through GGDM, I have discovered an annoying bunch of bugs and things that don’t work right in MS Word – often arbitrarily or inconsistently. Whatever staggering amount Microsoft spent in developing MS Word, it still doesn’t work right after three decades. I only trust MS Word to screw it up. This is what research is like in GGDM.

Had Cheapo Dynamics committed 20 RPs to the research, they would have had a 60% chance that the research would be overfunded (by 10 to 50%), and a 40% chance that it would have been underfunded (by 10 to 50%). Their chance of successful research would have been greater (but not guaranteed), but their exposure would have been a minimum of 10 RPs (had the research been determined to have been overfunded by 50%) and a maximum of 30 RPs (had the research been determined to be underfunded by 50%). Although they would have a lesser chance of ‘wasting’ their resources, there still exists a significant chance that Cheapo Dynamics could ultimately have spent 30 RPs for nothing.

*“It reminds me of one of my husband’s favorite sayings: ‘All your problems have one thing in common: you.’”*

– Jan Dunlap, [Saved by Gracie](#) (2014)

---

### **Development Hell<sup>2</sup>**

After a Type 5 time ripple event (caused by industrial attempts to invent things before they were invented, but no one will likely remember), Cheapo Dynamics became Development Hell Productions, Inc. Having finally obtained an undisrupted Industrial Research Group on the Public Space, Development Hell attempts to Develop it into an Application on the 1<sup>st</sup> Era Matrix by activation of the Technology Power for the purpose of Development (see 2 Technology, p. 707).

Development Hell specifies three locations on the 1<sup>st</sup> Era Matrix which are still open (i.e. unoccupied) and the cost is 3 RPs from the Treasury, which is the current Era times the number of locations specified (see Development Fund, 2 Technology, p. 707). Development is thus, much cheaper than Research, but there are other hazards.

All three target spaces on the Matrix are adjacent to one Application only – essentially, Development Hell is attempting to add an Industry Application to the end of a line of Applications in preparation for a potential Patent Prosecution. The base chance of Development is 50% plus 5% for each adjacent Application, so the base chance is 55%. Development Hell does not assign any Enlightenment to the attempt and the die roll result is 65%, which is a failure – the roll needed to be 55% or less. See Short One Wingnut, 2 Technology, p. 708. The location on the Matrix that was tried in the Development Attempt is now permanently blocked for that Research Group type only.

On the next Regular Turn, the Development attempts continue *automatically* – no further activation of the Technology Power is required, as long as there are open untried spaces or the Research Group has not become disrupted, see The Kitty Incident, 2 Technology, p. 708. Because there is no new Power Activation, there is no opportunity then to assign Enlightenment.

On the second turn development attempt, the die roll is 79%, another failure (you saw that coming, right?) and the second of three spaces is blocked out for all future attempts by any Industry Research Group. See The Kitty Incident, 2 Technology, p. 708.

---

<sup>2</sup> “Development Hell” is a film-industry term for a potential, promising, intriguing movie idea that is stuck in development, often times being continuously re-scripted, re-cast, kicked around from one producer or director to another, or languishing for years without progress toward the end-goal.

Alternate Universe #1:

The third location designated was in the meantime, taken by another Research Group that Developed into an application at that location, and thus, the ongoing Industry Application Development attempt automatically fails on the third Regular Turn. Or alternately to the alternately, something happened that caused the Industry Research Group to become disrupted, thus ending the Development attempt. See *The Kitty Incident, 2 Technology*, p. 708.

- ✓ “If it weren’t for bad luck, I’d have no luck at all.” – Buck Owens & Roy Clark, “Gloom, Despair & Agony on Me,” Hee-Haw television show, 1969.

It is possible that multiple Development attempts may be concurrently ongoing directed to the same open Matrix location and with the risk that when one is successful, the others will automatically fail. If the Application that filled the last location was from another Industry Research Group, then Development Hell obtained the desired result; however, if the new Application belongs to another Research Area (e.g., Defense, Stardrive, etc.) then Development Hell may have stepped on its own toes or the player group changed their mind and allowed the ongoing Industry Application Development to fail.

Alternate Universe #2:

How can we fail a third time? On the third turn of continuing Development Attempts – for the last unblocked location, the die roll is 91%, a third failure. At that point, having exhausted all of the designated Matrix locations, the Development attempts cease. The last remaining designated space is permanently blocked from becoming an Industry Application.

Ripples:

The result of this failure (either one) is that the Industry Research Group remains on the Public Space, continuing to occupy two Monads next to a colony. That may or may not be important depending on whether those Monads are needed for something else. The Research Group could become disrupted or could be lost in some situations but there is no provision to remove it voluntarily, other than Development into an Application, see *The Better Mousetrap, 2 Technology*, p. 709.

Further attempts may be made to Develop it into an Industry Application at unblocked, open locations on the Matrix, costing additional Technology Power Activations and some RPs. If all remaining locations become blocked to Industry Applications, the Research Group will remain on the Public Space until it can be Developed in the next Era Matrix (see *The Kitty Incident, 2 Technology*, p. 708).

### Appendix REF – A Reformation Example

*“I do not like broccoli and I haven’t liked it since I was a little kid and my mother made me eat it. And I’m President of the United States and I’m not going to eat any more broccoli. Now look, this is the last statement I’m going to have on broccoli. There are truckloads of broccoli at this very minute descending on Washington. My family is divided. For the broccoli vote out there: Barbara loves broccoli. She has tried to make me eat it. She eats it all the time herself. So she can go out and meet the caravan of broccoli that’s coming in.” – President George H.W. Bush, March 22, 1990*

On the third Regular Turn, the Cauliflower Lover’s Guild made First Contact (see Bump in the Night, 1 Diplomacy, p. 1099) with the Broccoli Grower’s Association when their Scout Ships encountered each other while exploring the Floret starsystem (a Green Stellar Class starsystem, see Looking Through, 2 Expansion, p. 900). Thus, a Diplomatic Space is created (see First Space, 2 Diplomacy, p. 1116) between the positions, which creates the opportunity for issuance of Thesis Statements (see Dialectic Diplomacy, 2 Reformation, p. 1391).

On the fourth Regular Turn of the game, the Broccoli Grower’s Association received a Thesis Statement: “I don’t like broccoli! – signed George H.W. Bush.” Authorship of Thesis Statements is secret, but the Thesis Statement text can be seen by the Broccoli Grower’s Association (see Conspiracies & Counter-reformations, 2 Reformation, p. 1391). If the Broccoli Grower’s Association has not had First Contact with anyone else by turn three, the authorship will be obvious, if they have Diplomatic Spaces with other positions as well, they still may guess that the Cauliflower Lover’s Guild lodged it.

- ✓ This Thesis Statement would have been issued by *someone* before the Broccoli Grower’s Association’s fourth Regular Turn was processed, but *after* the third Regular Turn. In any event, the Thesis Statement is not ‘caused’ by the issuer (see Dissonance, 2 Reformation, p. 1392), but are natural, neutral forces in the game, and thus there should be no in-game retaliation.

The Concierge had decided on an Ontic Scale of 1-10 for the game (see 2 Reformation, p. 1394). In grading the Thesis Statement – that is, assigning an Ontic Number – the Concierge decided that it meets a minimum criteria of expressing vague general dissent in a civilization, but nothing more specific to the game position. Thus, the Thesis Statement is assigned an Ontic Number (‘weight’) of 1. The weights assigned by the Concierge are secret and cannot be seen by the Broccoli Grower’s Association (see Ontic Numbers, 2 Reformation, p. 1394).

- ✓ By deciding on an Ontic Scale of 1-10, the Concierge has abdicated the option of giving a Thesis Statement a ‘weight’ of 0. This is a matter of taste and how frequently Reformations are desired in the game; any properly-issued Thesis Statement will receive a value of at least 1, advancing the chances of Coalescing a Reformation as no dissent will be given zero value.

Everyone is too busy building, exploring, loading, and landing for the next several turns to lob bombs, so at the end of the second and each subsequent Regular Turn processed by the Broccoli Grower’s Association, there is a 10% chance that the Reformation will Coalesce (see Pontic Event, 2 Reformations, p. 1395) as 1 is 10% of the top number 10 on the Ontic Scale of 1-10.

Although something *could happen*, nothing does happen much to the relief of the Concierge who is busy Poking, Pulling, and Pushing the early game along (see Acts of Intervention, *et seq.*, 2 Entropy, p. 235).

On the tenth turn, after establishing Diplomatic Space with multiple players (and fighting a short combat with The Cauliflower Lover’s Guild in Floret system) the Broccoli Grower’s Association received the following Thesis Statement lodged against it: “Ignorant and wicked are the doings of those Broccoli Growers who, in the case of the dying, reserve canonical penances for purgatory.” Recognizing this as a parody of Disputation No.10 of Martin Luther’s 95 Thesis, the Concierge decides that this represents at least a deeper resistance than the first statement, possibly implying tyranny of the Broccoli Growers over the worker population, even after death.

- ✓ Likely, this is a complete ‘shot in the dark’ from a position that knows little or nothing about the target, but it might also relate to News Events (but not in retaliation), e.g., the Broccoli Growers may have activated their Taxation and Order Powers frequently in the first ten turns of the game, constituting an appearance of tyranny. See discussion, Dialectic Diplomacy, 2 Reformation, p. 1391.

Hmmmm.... the Concierge gives it an Ontic Number weight of 2 after some internal debate. There is little to work with in interpreting the two Thesis Statements should the Reformation Coalesce, which will likely happen in a few turns. The total value of Thesis Statements lodged against the Broccoli Grower’s Association is 3, which is 30% of the top value of the Ontic Scale of 1-10. At the end of the Regular Turn, and each subsequent Regular Turn, there will now be a 30% chance that a Reformation will Coalesce against the Broccoli Grower’s Association.

Up to this point, the Broccoli Grower’s Association has been vegetative about the situation, neither forcing other positions to eat broccoli nor spraying water to keep from being wilted. On Turn 11, the Broccoli Grower’s Association, with an unused Power Activation for the turn, finally lodges a counter-reformation Thesis (i.e. a Thesis against itself) which reads, “Eating Broccoli builds character; George H.W. Bush became president.” This follows a defeat of the Cauliflower Lover’s Guild attack on a Broccoli Grower’s Association colony in Floret system.

The Concierge interprets the counter-reformation Thesis as being an argument directly against the one issued by the Cauliflower Lover’s Guild on Turn 4 and thus assigns it an Ontic Number (‘weight’) of -1 so that the two cancel out. See Conspiracies & Counter-Reformations, 2 Reformation, p. 1394. Although they are clearly at war, since the Thesis was issued as a counter-reformation, the Concierge does not interpret it as ‘retaliation’ against the Cauliflower Lover’s Guild for in-game events (see Dialectic Diplomacy, 2 Reformation, p. 1391).

The -1 value assigned to the counter-reformation Thesis Statement reduces the total value of Thesis Statements to 2 ( $-1 + 1 + 2 = 2$ ) giving a 20% chance for a Reformation to Coalesce each Regular Turn. The Broccoli Grower’s Association continues to avoid the boiling pot; no Reformation coalesces in the eleventh or twelfth turns of the game.

Then the head of broccoli hits the hot water! Between the twelfth and thirteenth turns, a Thesis Statement is issued against the Broccoli Grower’s Association which reads: “The Ester Broccoli Project is symbolic of government corruption and is attempting to manipulate the genetics of the Broccoli-head population without their consent to make them more plastic.” This is a Thesis Statement written by a position that has some knowledge of the Broccoli Grower’s Association position; the Ester Broccoli Project is a Corporation operated by the position with the goal of

maximizing RPs from Taxation Power Activations. The issuer may have learned the name of the Corporation and may have some details of the articles from an Information Operation (see I Spy, 2 Information, p. 1348) or maybe it was mentioned in some informal communication (see Greys Diplomacy, 1 Diplomacy, p. 1097) or in a News Event.

- ✓ With a little tweaking, this last Thesis might have been issued as an adverse News Event, but the issuer cared enough to make sure it got through without being modified or blocked... (see Dissonance, 2 Reformation, p. 1392). When you care, send chocolates!

In any case, this is much different, much more specific than the two previous Thesis Statements that were lodged, so the Concierge issues a ‘weight’ (Ontic Number) value of 3 for this one. Combined with the previous three Thesis Statements, the chance of Coalescing a Reformation is now 50% per Regular Turn ( $-1 + 1 + 2 + 3 = 5$ ). Drumroll please ... A Reformation Coalesces on Turn 13.

- ✓ Counter-reformations are always a step behind because there must first be a reformation to counter – by definition, like move and countermove, otherwise, it’s shadow boxing. In the case of counter-reformation Thesis, there must have been a Thesis Statement lodged, even if not directly being countered. See Conspiracies & Counter-Reformations, 2 Reformation, p. 1391.

Turn the page.

Now that a Reformation has Coalesced, the Concierge has a task to perform. The task of the Concierge is in two parts: First the Concierge must determine how many Interventions to use and fashion a ‘program’ to happen in the next few turns representing chaos of the Reformation. Afterward, the Concierge will need to make a Collage out of the Thesis Statements and otherwise determine the long term outcome of the Reformation on the position.

- ✓ The Concierge is not required to inform the target position that a Reformation is occurring until the end, see The Ink Had Scarcely Dried, 3 Reformation, p. 1399.

A total of four Thesis Statements are lodged before the Reformation Coalesced; three by Cauliflower worshipping aliens (or their purple colored friends) and one counter-reformation thesis issued by the Broccoli Grower’s Association. The values of the Thesis Statements are irrelevant now. This suggests that at least four Interventions be used to ‘resolve’ the Reformation in short order, *Id.*, with priority being given to Intervention Potentials Plus (IP+) against the position which each count as two Interventions.

As it turns out, the Broccoli-heads have two unused Intervention Potentials Plus against their position from two Social or Estate Titles that were disrupted in the last two turns, one each Regular Turn (see Changing of the Gardner, 2 Disruption, p. 271). This is possibly a reason why more aggressive counter-Thesis were not issued, a disrupted Government Title provides no Power Activations (see Foreclosure of a Dream, 3 Government Titles, p. 615) and they needed all of the ones they had to do other things in the game. Or maybe they were just vegetables...

The Concierge decides on a two turn, four Intervention Program. On the first turn of the Reformation, a Pull Intervention is used with a Special Bulletin indicating the continued presence of a secret pre-game *cultivar group* that promised to bring Enlightenment to the Broccoli-head population, and that was thought to have vanished.<sup>1</sup> This is possibly in relation to an IP+ that was

---

<sup>1</sup> Perhaps similar to another vegetative organization, the Rosicrucian. ☺

caused by the failure of a Government Title that has some relation to the Special Operations Power, police or security. The effect of this Pull Intervention on the position is the inactivation of a Constructural Element on the Homeworld (this is a Homeworld Primal State position). On the same Regular Turn, a Poke Intervention is used as well, inactivating a Constructural Element on the only warship currently protecting the Homeworld system. Maybe a purge occurred, changing the soil?

- ✓ Although only two Constructural Elements have been inactivated, there could be significant ramifications and ripples from this, the least being the necessity of activating the Culture Power for the purpose of Cohering (see 5 Culture, p. 421). If the Homeworld is the Capital Colony, it could lose Capital status with an inactive Symbolic Constructural Element (see Waving the Flag, 2 Constructural Elements, p. 190) or it could fail to pay taxes if the Taxation Power is activated (see Tax Revolt or Revolting Taxes, 1 Taxation & Census, p. 297). The ship could fail to move (even after a second check, see Engines Offline, 1 Movement, p. 839), or be unable to receive Enlightenment (see Skool Tyme, 2 Constructural Elements, p. 190). There are many possible long-term ripples including slowed technological research, sparse College Endowment, disruption of Government Titles. All of which are *irrelevant to the Concierge* in resolving the Reformation...

On the second Regular Turn of the Reformation, the Concierge issues a Push Intervention Special Bulletin suggesting that the pre-game history of the Major Races are not entirely accurate (in the Reformation resolution, this relates generally to the secret pregame cultivar group), giving the game a gentle nudge to develop this as a story-line or a nod to the players (with a sardonic smile) that the Concierge intends to pursue this more broadly. The second Intervention of the second turn of the Reformation is another Poke Intervention causing the loss of two Resource Proficiencies (possibly in relation to the ester) from the Broccoli Grower's Association Public Space.

- ✓ Assuming the Proficiencies were placed there for a purpose, because it costs RPs and a Power Activation of the Culture Power and takes up Monads on the Public Space, this will also likely adversely affect the position down the row a ways.

Now, what actually happened ... the plot of the historical drama that led to these four Interventions, is up to the participants to play or figure out if they choose. GGDM is a game of events without literary characters, see Buzzing Lightyears, *et seq.*, 4 The Streams of Time, p. 101.

Turn the page.

After or during the time that the Reformation is occurring, the Concierge must take the Thesis Statements behind the Reformation and make them into a Collage that will guide the position for the remainder of the game. See Here I Sit, 3 Reformation, p. 1399. The four Thesis Statements are:

1. "I don't like broccoli! – signed George H.W. Bush."
2. "Ignorant and wicked are the doings of those Broccoli Growers who, in the case of the dying, reserve canonical penances for purgatory."
3. "Eating Broccoli builds character; George H.W. Bush became president."
4. "The Ester Broccoli Project is symbolic of government corruption and is attempting to manipulate the genetics of the Broccoli-head population without their consent to make them more plastic."

Hmmm... This is an art, not a science. The Concierge is allowed to consider the Thesis Statements in all parts, and is not required to disregard 1 and 3 because they canceled out. There may also be some in-game history and the overall story arc to consider (which without detailing the entire game, cannot really be addressed here). The central theme of this seems to be a failure of supra-legitimacy, i.e. a failure of security in the form of the government being infiltrated by the Ester Broccoli *cultivar group*, the attempted alteration of the species without consent, and added to this is perhaps a touch of religious indignation over a possible form of slavery or bondage of the population through spiritual means.

Not all issues need to be ‘resolved’ (see Here I Sit, 3 Reformation, p. 1399). The Collage issued by the Concierge reads: “Be on your guard; stand firm in the faith; be Broccoli-heads of courage; be strong. Hath always before you on your Public Space Police and Integrity Proficiencies.”<sup>2</sup> The Collage is a new rule for the position to which it applies (see A Soul From Purgatory Springs, 3 Reformation, p. 1401), violations of which may lead to assessment of an Intervention Potential Plus (IP+) against the position. In this case, it seems to require diligence (that is, not being a vegetable) and at the least, maintaining one each of Police and Integrity Proficiencies on the Public Space. This occupies two Monads permanently on the Public Space and prevents the position from using all of those Proficiencies at any time (or having them all in Fuzzy Groups), which is kind of a pain in the butt, all to keep the public perception of diligence.

- ✓ News Events are not considered violations of the Collage. *Id.*

Last page...

Finally, along with the Collage, the Broccoli-heads also have an opportunity to gain Monads on the Public Space as a result of the Reformation (see Built Spaces, 3 Reformation, p. 1401). There is a 50% chance for each Interpretation used in resolving the Reformation that a new space will be gained. Luckily, the Broccoli Grower’s Association gained three new Monads from four Interventions used (take that Cauliflower Lover’s Guild!). This can be viewed as a ‘net gain’ of one over the two Monads that now must be permanently occupied by Proficiencies.

The new Monads must be inserted randomly, which will cause movement of pieces already on the Public Space (see Mental Space, 3 Reformation, p. 1402), possibly disrupting Research Groups, Fuzzy Groups, Pathways (which will automatically be re-established even if things have to be moved, see The Claaaw is Our Master, *et seq.*, 2 Government Titles, p. 597). Three Monads being inserted can move a lot of pieces, the earthquake isn’t over until the dishes stop rattling.

At this point, the Thesis Statements that led to the Reformation are ‘expended’ and set aside, they will not count toward the next Reformation (in terms of Ontic Numbers), it’s a clean dinner plate (see A Soul from Purgatory Springs, 3 Reformation, p. 1401).

\*\*\*

**Broccoli #2:** Wear some cheese.

---

<sup>2</sup> For anyone who is curious, this is a parody of 1 Corinthians 16:13.

### Appendix S&P – Surveillance & Probing Example

Headknockers' Reconnaissance Fleet 1 consisting of three Scout Ships arrived in an unexplored system that is the known location of the Crowd-Funded Civilization's Capital Colony (see Capital Colony and Capitol Declaration, 2 Order, pp. 532-533). They are 'looking' for Longcount Colony Transports that 'escaped.' One Scout Ship has an expendable PROD enhancement, a technology developed in-game by Headknockers.<sup>1</sup>

Each Scout is required to make a Hazard Roll separately upon entering an unexplored system. The die rolls are 1, 5 and 3, two Scouts are destroyed. However, in anticipation of this danger, Headknockers committed one Enlightenment to the Expansion Power Activation for the purpose of Scouting that initiated the Scouts' movement to the Capital System, so one failed die roll is rerolled, and the result is a 6. Thus, only one Scout is destroyed exploring the system, and two survive. As at least one survived, the system is automatically explored (see Then Never Comes, 3 Expansion, p. 907).

#### Observation (automatic)

Observation by the Scouts shows two colonies in the system, one is the obvious Capital Colony owned by Crowd-Funded Civilization (probably the clue was the giant flag with the green K) and a colony on another planet owned by Longcount. Ownership shown is not always the same as the Native Population on the planet. Further, the Scouts observe, as expected, ten orbital installations around the Capital Colony, two Orbital installations around the Longcount colony (numbers, but not types), and surprisingly, the only other ship in the system is a Cargo Ship belonging to Crowd-Funded Civilization. See ABBA Arrival, 2 Information, p. 1340.

- ✓ All of this information will be shown on Headknocker's turn results, and of course, Longcount and Crowd-Funded Civilization will see the Headknocker Scouts (and possibly drifting debris) when they receive their next turn results. *Id.*, p. 1341.

#### Surveillance

No warships protecting the system! Since there is no one to chase us off, Headknockers decides to do a peaceful Surveillance with two Scouts in the system on the next turn, using an activation of the Special Operations Power for the purpose of Reconnaissance with one Act (see Pistols & Posies, Patience, 2 Information, p. 1342). No check is made for Power Activation failure because a Scene was not required or used, see Acting Lessons and Making a Scene, 1 Special Operations, p. 1274.

Both Scouts are eligible to participate in the Surveillance, see Private Eyes, 2 Information, p. 1342, as they are not currently "fighting, running, cowering, cargo, landing or leaving." *Id.* No immediate report will be obtained on the turn of the Surveillance activation, but on the next Regular Turn after results for Headknockers, the report will be available as a snapshot of what happened between Regular Turns (see Taking It All Down, 2 Information, p. 1343). Headknockers also decides that this is very important and activates a Writ related to the Reconnaissance in the same turn, giving all units double chances at Surveillance that turn.

---

<sup>1</sup> PROD – Probing Residuals of the Dead.

- ✓ The Writ represents a non-technological specialization of Headknockers in Reconnaissance action that is paid for by the actualization and removal of a Fuzzy Group. Headknockers may be doing Surveillance elsewhere in the same Regular Turn; it may also be necessary to free up Monads on the Public Space. All of these could be a factor.
- ✓ Further, activation of the Writ satisfies the Interpretation requirement for the Special Operations Power activation on the same Regular Turn, meaning that no News Event must be published (but one must be provided, just in case), see Writ of Extent, 3 Writs, p. 444. This might be especially useful in this case of snooping on someone...

On the third turn in the system, the two Scouts report that the Cargo Ship departed and another was launched by Crowd-Funded Civilization – Surveillance first reports changes in what is seen by regular Observation and this would have been noted by *regular Observation*. Obviously, Crowd-Funded Civilization constructed a new Cargo Ship at their Capital Colony, which is nothing especially surprising. There are still no other ships in the system.

Normally, each ship involved in Surveillance has a 10% chance to obtain information not available by normal Observation; the more ships involved, the better. Because of the Writ however, each Scout will have two chances at 10% on the turn the Writ was activated with the Power Activation. Probably because of the Writ, one Scout confirms that the Longcount colony has 30 RPs of Fighters, 10 Industry and a 10 RPs Ground Unit, see Field Reports, 2 Information, p. 1343.

- ✓ Information on the Native Population Type of the Longcount colony is still not known, but is highly likely to be Longcount Native Population Type. It is certain however, from basic Observation, that the planet is not Balkanized.
- ✓ The Longcount colony is obviously old; it is much larger than a colony that would have recently been established by the escaped Colony Transports. Thirty RPs of Fighters alone indicates a colony that must be at least 30 population (see *How Big is Your Flight Stick*, 1 Carriers & Fighters, p. 1050). Further, the Colony Transports are not in the system; had they simply Unloaded Population to the colony, they would still exist (see *Opening the Can Of...*, 3 Expansion, pp. 914-915).

On the fourth turn in the system, normal early game Scouts with the Ship Systems Existential Patent would be running out of Operational Supply Limitation (OSL) (see *Imperial Interstellar Scout Service*, 3 Movement, p. 855). Whether or not Headknockers has improved their Ship Systems Existential Patent, they decide to send one Scout to Probe each colony. You know, since nobody seems to mind...

### **Probing**

The Special Operations Power is again activated in the system using one Act for the purpose of Reconnaissance and both Scouts are assigned to Probing (see *Private Eyes*, 2 Information, p. 1342). One Scout is targeted to each colony in the system for a ‘closer’ look, see *Flyby*, 2 Information, p. 1346. Additionally, two Enlightenment are also assigned. Which should we do first?

On the approach to the Longcount colony, there is a 50% chance that each defending unit will be able to execute one normal fire against the Probing unit, see *Bloody Noses*, 2 Information, p. 1346. So the first determination is what is available in defense, and can they fire? The Longcount colony has two orbital facilities (this is known from Observation, see previous), one of which is an Orbital Shipyard and the other is an Orbital Defense Base. It is also known from the previous Surveillance that the colony has 30 RPs of Fighters. The colony has no other defenses

(though it could have unknown defenses) so there is a 50% chance that each of those will be able to fire at the approaching Scout.

The Orbital Defense base is unable to fire (the crafty Scout stayed on the other side of the planet on approach) but the 30 RPs of Fighters catch up. Enlightenment cannot be used here as it cannot be used to affect opposing position's rolls. Further, no Combat Power activation is necessary for the defenders to fire at a Probing ship (see *Bloody Noses*, 2 Information, p. 1346).

Normal Fighter combat ensues with two Sorties attacking the Probing Scout. As two Sorties are attacking one target (a 'concentrated attack'), each Sortie counts at 75% of the 30 RPs strength, so each attacks at 22 RPs (see *Blacksheep*, 2 Carriers & Fighters, p. 1054). The Effectiveness Die roll for each Sortie, however, is horrible, a 1 and a 2 are rolled, converting to .1 and .2 Effectiveness which is multiplied by the RP value and the resulting number is converted directly into a chance to hit expressed in percentages (see *Fighter Combat*, 2 Carriers & Fighters, p. 1054). The first Sortie thus attacks at 2.2 % (22 RPs x .1 = 2.2 converted directly to a hit percentage) and the second at 4.4 %. They are 1<sup>st</sup> Era Fighters so the chance to hit is multiplied by 1.5 to 3.3% for the first Sortie and 6.6% for the second Sortie. Fractions are truncated, giving the Fighters a 3% and 6% chance to hit the Scout. The Scout has a natural one Defensive Shift in any combat, which subtracts 10% from the chance to hit by the Fighters... neither of them hit.

- ✓ As this was a Probing defense, there was no Power Activation and Enlightenment cannot be used to re-roll the Effectiveness Rolls (see *Bloody Noses*, 2 Information, p. 1346).

The Scout Probing the Longcount colony escaped without a scratch on the Headknockers logo, so has a 15% chance of obtaining information in *each category* of the seven found in *Field Reports*, 2 Information, pp. 1343-1344. As such, the Enlightenment assigned to the Probing action will easily be used to reroll the first two failed category die rolls; there are seven categories to check at 15% chance each. See *The S-2*, 2 Information, p. 1347.

The Probe of the Longcount colony is successful in learning information in two categories: It is confirmed to be a Friendly colony (for Longcount) with an Orbital Shipyard and Orbital Defense Base. This latter information would not have been clear from the defensive fire against the Probing Scout as the Scout would only learn normally the units that fired at it. Taken with the Surveillance information obtained previously, Headknockers has a decent read on the Longcount colony.

- ✓ The Probing does not cause a Disruption Event at either target colony, see *The Burning Sky*, 2 Disruption, p. 275 and *Alien Probes*, 2 Information, p. 1346).

The Scout with the expendable PROD enhancement runs into a fusillade of flak at the Crowd-Funded Civilization Capital Colony. All three 2<sup>nd</sup> Era Orbital Bases fire at the Probing 1<sup>st</sup> Era Scout (which has one Defensive Shift against each to offset the Era differential shift, see *Combat Shifts and Civilian Targets*, 3 Combat, both p. 978) and one scores a 'Hit' on the Scout forcing it to turn away (Probing defense is not 'combat,' see *Bloody Noses* and *Results Rolling In*, 2 Information, pp. 1346-1347).

- ✓ Either Crowd-Funded Civilization got lucky or based on average results at 50%, there were three others (Orbital and System Bases, Fighter Complements) which couldn't fire at the Probing Scout.

The PROD Scout which is turned away still has a 5% chance of gaining information on each of the seven categories (see The S-2, 2 Information, p. 1347); however, the PROD expendable enhancement doubles the chances of any Probe discovering information by reading the mental residuals of the recently deceased at the colony. As a result, Headknockers learns that the Crowd-Funded Civilization Capital Colony has currently 193 population factors, including 23 on a 1<sup>st</sup> Era Orbital City!

- ✓ Wow! How is that possible?

### **Taking Selfies**

Both colony owners, Longcount and Crowd-Funded Civilization, will be informed of the Probing attempt (see Bloody Noses, 2 Information, p. 1346) on their respective colonies (and probably will inform each other) but not what was learned, with a 50% chance of properly identifying the offender. Between the two, it is likely that blame will be properly pinned (if it is not obvious, regardless of the die rolls as Headknockers' Scouts were the only other ships in the system) and what happens subsequently is the game...

- ✓ In addition to the huge – impossible – population of the colony, Headknockers also learned that the Capital Colony has at least three 2<sup>nd</sup> Era Orbital Defense Bases, an Orbital City, and an Orbital Shipyard (required to build the other orbitals), accounting for five of the ten known orbital installations observed initially at the Capital Colony.

Both Scouts survived the Probing action, but the PROD enhancement is expended. The ostensible purpose of the mission – finding the escaped Colony Transports – has failed here, but a large amount of information has been gleaned and a pair of anthills kicked over. Is it time to leave now? What will Headknockers do with the Scouts next turn? Fly before the cops arrive?

- ✓ Did you bring the selfie-stick?

### Appendix SO & IO – Special Operations & Information Operations Example

Zager and Evans are both Lost Colonist positions related to Zooty, thus they share the same Native Population Type biologically, with significant pregame cultural drift (see Lost Colonist, 6 Beginnings, p. 63). The backstory of their ancient pre-game connection has not been much explored in the game, but Zager has First Contact with Zooty (see Bump in the Night, 1 Diplomacy, p. 1099), who is executing a sit-n-spin game (see 2 Taxation & Census, p. 309) and is slightly xenophobic; Evans has not had contact with Zooty, but hasn't gone looking either.

Despite Zager's initial suspicions, the relationship with Evans has been good throughout the game and when the game turned 21, they both had long-established native Friendly colonies in the same system on different planets, and had formed a two-position MegaCorporation (see 2 Corporations, generally) for the purpose of Trucking Transactions (see 4 Commerce, p. 1125) between the colonies using Zagers' Cargo System Boat with Evans' colony Hosting the MegaCorporation.

#### Recruiting (Turn 21)

On Turn 21, Zager attempts to Recruit ten Special Operations Missions, using one Act and committing 5 RPs per Mission (see Jobs for Jackals, 2 Special Operations, pp. 1290-1291), costing 50 RPs total (that's a serious amount of RPs!). Zager thus has a 45% chance of recruiting each Mission and does not commit any Enlightenment, but luckily, recruits seven SOMs (Special Operations Missions). These SOMs are non-specific, non-locational until Lodged. *Id.*

- ✓ RPs may be committed to each Recruiting attempt, thus the minimum is 1 RPs per attempt, with the minimum chance of success at 37%. There is no, 'let's see what we can get for free' in Recruiting SOMs in GGDM.

#### Bridge to Nowhere

Having successfully Recruited SOMs on Turn 21, Zager is committed to attempting to Lodge them on Turn 22. Newly recruited SOMs do not 'age-out' on the turn they are Recruited, but will possibly age-out afterward, and thus should attempt to be Lodged immediately in order to obtain a second turn of aging-immunity due to being newly Lodged (see Ralph Wolf & Sam Sheepdog and Punching Time Cards, 2 Special Operations, both p. 1296).

There are two options for 'bridging the gap' from potentials to placement of the Recruited SOMs on the Evans colony: Zager could use the MegaCorp's Cargo Boat, requiring a second turn to re-lodge them on the Evans colony (see Shipping & Freight, 2 Special Operations, p. 1295) or Zager could just try to Lodge them directly at the target colony. There must be a conceptual path to Lodging, see Walking to the Moon, 2 Special Operations, p. 1294.

Any attempt made to Lodge the seven SOMs on the Cargo System Boat (a 'friendly unit') is effectively automatic (perhaps a crew change on the Cargo Boat...), the Concierge does not see any reason to use an Intervention (see French Vanilla, 2 Special Operations, pp. 1292-1293).

- ✓ Zager was able to use an Act for each Special Operations Power Activation, thus avoiding any potential Power Activation failure. The first activation for Recruiting is inherently non-location specific and thus did not require a Scene instead of an Act.
- ✓ *If* the second activation attempted to Lodge the Missions on a Cargo System Boat belonging to a MegaCorporation of which Zager is the other member and the Cargo System

Boat was Zager's sovereign ship and is 'at' his sovereign colony, thus an Act can be used here as well. See Acting Lessons, 1 Special Operations, p. 1274.

### **Lodging (Turn 22)**

Perhaps because time is pressing (not to mention the cost of another Power Activation), Zager decides to try to Lodge the SOMs directly to the Evans colony. The Concierge sees nothing extraordinary about a position that shares a starsystem and MegaCorporation with another trying to Lodge SOMs on the opposing colony, and decides that the situation can be handled by normal Lodging rules and percentages.

The base chance is determined first by the number of Diplomatic Spaces shared by the two positions, which is currently eight, thus the base chance is 24% at 3% per Monad. The two colonies share the same Native Population Type (because they are related as Lost Colonist), thus 6% is added to the chance, making a 30% chance of each SOM being successfully Lodged on the Evans colony. To this, Zager adds 1 RP for each Mission Lodging attempt (costing 7 more RPs, total cost now 57 RPs, plus 2 Power Activations), raising the chance to 45% for each Mission to successfully Lodge. Finally, as the Evans colony also Hosts the Zager & Evans MegaCorporation, 10% is added, for a final of 55% chance for each SOM to Lodge at the Evans colony. See French Vanilla, 2 Special Operations, pp. 1292-1293. Zager also adds 3 Enlightenment to the Lodging operation.

The die rolls for each Mission Lodging attempt are made, the results are 30, 64, 51, 9, 45, 92, and 42. Thus, five of the seven SOMs have successfully Lodged on the Evans colony. There is a 50% chance for each failure that an Enlightenment may be applied to re-roll (see Jobs for Jackals and French Vanilla, 2 Special Operations, pp. 1290, 1292). In this case, both Enlightenment were able to be used, and both re-rolls succeeded in Lodging their Missions, so all seven SOMs were Lodged on the Evans colony on Turn 22.

- ✓ Any Mission that had failed to Lodge would have been lost, see Punching Time Cards, 2 Special Operations, p. 1296.
- ✓ The third Enlightenment is not lost for being unused and is returned to its College, see Jobs for Jackals, 2 Special Operations, pp. 1290-1291, but the two that were used are removed.

### **Femme Fatales**

In between turns, the Concierge exercises an Intervention Potential at the Evans colony, posting a Poke Intervention Special Bulletin telling a story of a sordid affair between femmes fatales at the Evans colony that results in the elimination of a Counter-Operation Mission and two alien Special Operations Mission at the colony (see Acts of Intervention, 2 Entropy, pp. 235-236). Since Zager is sure that theirs are the only SOMs on the target, Zager assumes (which will be confirmed in the subsequent Regular Turn results) that two of their SOMs was eliminated. The good news is, a COM was also eliminated.

- ✓ The Intervention was not 'caused' by the Concierge, it is a neutral event.

Because the SOMs were Lodged this turn, they are still 'immune' from 'aging-out,' e.g. the usual: the guy with the cigar with the encrypted messages inside got stuck in an elevator that happened to free fall 70 floors on a planet whose gravity is 1.2x that of Earth... the other guy got

involved with youth protesters and was shot by police. See *Punching Time Cards*, 2 Special Operations, p. 1296. Anyway...

### **Information Operation (Turn 23)**

With five remaining SOMs Lodged on the Evans colony on Turn 23, Zager decides to look around and see what all the hubbub is about. The Special Operations Power is activated for the purpose of Information Operation using all seven SOMs on the Evans colony (though Zager suspects that there are only five). The question asked is, “Is there a technological device on the Evans colony?” This satisfies the requirements of being a specific question that lists a specific area or location, see *Reliability Rating*, 2 Information, p. 1350.

- ✓ Why would Zager ask this question? Who knows? Maybe it was hinted at by some game event, maybe some birdie whispered in their ear, or maybe one of the position players had a strange dream about the game.

As it turns out, Evans has three Counter-Operations Missions assigned to protect the Technological Device on the colony. Each of these has a 50% chance of ‘soaking off’ (i.e. blocking) one of the Zager SOMs during the Information Operation (see *Secret Services*, 3 Special Operations, p. 1323). Zager was unable to assign Enlightenment to the Information Operation because they are automatically successful unless blocked (see *Information Operations*, 2 Information, p. 1349). Evans is likewise unable to assign Enlightenment because the Target Protection blocking is not a Power Activation, as the assignments had already been previously made during Evans’ Regular Turn.

As a result, three of the five SOMs execute their mission, unblocked. Had only one or two SOMs been used, all would have been blocked. It only takes one unblocked SOM to be automatically successful in an Information Operation. The Concierge looks at the question being asked (a single question, single location) and the number of unblocked SOMs, and decides that it has a high reliability rating of 8. The Turn 23 Information Operation results inform Zager that a Technological Device called *The 2525* exists on the colony, it is complete and operational, and it is rumored to be immensely powerful. Zager assumes it is probably a weapon.

- ✓ The COMs are not affected by the blocking (see *Police Pensions*, 3 Special Operations, p. 1322).

At the end of Turn 23, both sides may age-out (see *Ralph Wolf & Sam Sheepdog*, 2 Special Operations, p. 1296 and *Police Pensions*, 3 Special Operations, p. 1322), and as a result, one COM is lost and two SOMs were lost, leaving three SOMs (probably the children of resistance families carrying on) and 2 COMs Target Protecting *The 2525*.

Information Operations are also subject to Plausible Deniability, see *Information Operations*, 2 Information, p. 1349. As an initial threshold matter, the Concierge determines that there is no reason it would have been automatically noticed, despite two SOMs being blocked by Target Protecting COMs (i.e. no dead bodies). Thus it is left to a 50-50 die roll to see if the operation was noticed and in fact, it was noticed. The SOMs that avoided the blockers weren’t as clever as they thought they were! See *Plausible Deniability*, 3 Special Operations, p. 1314. Although Evans is aware that something happened, the die roll (50% chance) indicates that they are unable to officially blame anyone (though the position players certainly suspect Zager, as the one with the greatest opportunity). See *The Blame Game*, 3 Special Operations, p. 1315.

- ✓ This may result in some informal diplomacy, does Evans contact Zager and ask what WTF pal? Does Zager respond or cut the channel? Maybe Evans pings some other positions, perhaps starts lining up allies?

### **Black Op (Turn 24)**

*Much to ponder here on both sides* for Turn 24. For reasons not clear, Zager decides to launch a warfleet toward the system using Combat Movement (arriving on Turn 25) and to attempt a Black-Op on the Evans colony on Turn 24. Perhaps the players of the Zager position think there is something important about Turn 25 from the name of the Technological Device, perhaps some are familiar with the song. Perhaps a Government Title change has occurred and the new Title has Conflict Checks that compel Zager to go to war with Evans (because other checks are failing automatically in the short term); perhaps all of the peaceful options in the Zager Foresight (the pool of potential Government Titles) has been exhausted (see Pool of the Abyss, 4 Government Titles, p. 630). Or perhaps the Zager position players are engaging in *groupthink*.

For the Evans position players, it is clear that they must at least perform a Counter-Operation at their colony and fortunately, in anticipation of COMs aging-out, some new COMs were recruited at the colony. The decisions beyond that are what else can or should be done, based on what they think might be the danger, or if there is any danger at all, to *The 2525*. Unable to come to a consensus, and running out of time in their Turn Period (see The Law of Periods, 2 The Streams of Time, p. 84), they submit actions only activating the Special Operations Power at the colony for the purpose of Counter-Operations. And wait to see what happens next.

- ✓ If actions are being *batch processed* by a computer assistant in a way that actions of all positions submitted on the same day or days, are being grouped by sequence of Power Activations (see Clockwork Universe, 3 The Streams of Time, p. 90), Zager's Black-op requiring just one Act will process before Evans Counter-Operation requiring just one Scene. This example will pretend that the Regular Turns of Zager and Evans are being processed at separate times, with Evans going first, without further detail.

On Evans Turn 24, a Counter-Operation at the colony attempts to sweep away all SOMs. Because this is a Special Operation Power activation at a sovereign colony, a Scene must be used instead of an Act, and thus, there is a chance of Power Activation failure (see Acting Lessons and Making a Scene, 1 Special Operations, p. 1274 and Power Off, 2 Constructural Elements, p. 193). The Epistemological Constructural Element is currently the only inactive at the colony, giving a 20% chance of a local Power Activation failure, and Enlightenment cannot be used due to the failed Epistemological Constructural Element (see Skool Tyme, 2 Constructural Elements, p. 190). Evans ducked the problem on Turn 23 and was successful in recruiting new Counter-Operations Missions (COMs), but this time, it bites. There is no Counter-Operation on Evans Regular Turn, and thus, the numbers of COMs don't matter. Turn 24 just fell flat for Evans.

- ✓ Had the Counter-Operation Special Operations Power activation been successful, each Counter-Operations Mission would have had a 50% chance of eliminating one of the three SOMs (not to mention the long-lived and undetected SOM of one other position currently on the planet). See Spy vs. Spy, 3 Special Operations, p. 1323.

On Turn 24, Zager uses two activations of the Special Operations Power at the target colony, fueled by two Acts, for the purposes of Black-Ops. The first Black-Op is an attempt to steal the

Technological Device Patent for *The 2525* using two of the three SOMs on the colony. This information is included in the Profile of the Operation submitted to the Concierge, additionally, 5 RPs is added to enhance the possibility of success, however, no Enlightenment is spared (as that will be needed shortly for other tasks). See Profile in Perfidy, 2 Special Operations, p. 1300. The SOMs used will be lost regardless of the outcome of the Black-Op.

- ✓ Because a Black-Op has been instituted against the Evans colony, regardless of the outcome, an Intervention Potential (not IP+) is attached to the colony. No player entropy was generated for Zager's previous benign Information Operation. Because Evans Counter Operation failed as a Power Activation, no Counter-Operation occurred and thus no Intervention Potential was attached to the Evans colony as a result. See Vortex Manipulator, 1 Special Operations, pp. 1271-1272.

Evans still has two Counter-Operations Missions Target-Protecting *The 2525* on the colony. The first move belongs to the defenders who will each have a 50% chance to block the attacking SOMs (see Secret Services, 3 Special Operations, p. 1323). An average result, one SOM is blocked by the COMs protecting the target, while the other attempts to steal *The 2525* Patent. The base chance of a successful Black-Op is 30% (the second SOM, if not blocked, would have added 5%), and 10% is added due to the 5 RPs committed (see A Heartless Woman's .38, 2 Special Operations, p. 1301) for a total of one 40% chance to steal the TD Patent.

The first resolution roll failed and no Enlightenment was committed, there is no chance of a re-roll (reroll is not automatic, see Murder By Numbers, 2 Special Operations, p. 1302). The Patent was not stolen. However, a second roll is used in resolving the 'degree of success' of a Black-Op regardless of success or failure of the first roll. The Concierge rolls a 1d10 and the result is a 1; when the results are merged together, the operation is a dismal, catastrophic failure that even cyanide pills couldn't save. The Concierge reports to Zager that the operation was totally compromised, and concludes that there is no Plausible Deniability here, Evans automatically noticed (see Plausible Deniability, 3 Special Operations, p. 1314).

- ✓ The two attacking SOMs were eliminated, regardless of the result, see Profile in Perfidy, 2 Special Operations, p. 1300.

Further, the Concierge determines that there is a 50% chance (instead of 25% chance) that Evans will blame officially Zager, thus, there is a 50% chance of not being able to officially blame anyone, but if anyone is blamed, it will be Zager. The die roll is made, the result is 79%, and Evans is informed that their police believe that Zager attempted to steal the Patent.

### **Treason** (Turn 25)

Mmmm, but Zager probably doesn't care at this point, because the warfleet is due to arrive on Turn 25. The second Zager Black-Op for Turn 24 is an activation for the purpose of Treason (see Treason, 3 Special Operations, p. 1310) using the last remaining SOM on the Evans Colony and 5 more RPs. At the end of Turn 24, there is a 50% chance that the SOM will 'age-out' (see Ralph Wolf & Sam Sheepdog, 2 Special Operations, p. 1296) but the SOM survives for another turn (probably down to the grandchildren by now!).

The Evans colony has a single System Defense Base (see Orbital Defense Base, 2 Construction, p. 668, and Colony Defense Bases and Something Here from Somewhere Else, 2 Combat, pp.

954, 960), a fully-loaded behemoth that could hold up the Zager attack fleet. The Profile submitted by Zager is simple: The SOM will seek to blow up the System Defense Base in the beginning of the first Combat Round. No Enlightenment was committed, it was all saved for Combat.

On Turn 25, the Zager attack fleet arrives and initiates combat against the Evans colony. If Evans took their Turn 25 first, they did nothing more in regards to Special Operations, but it is possible that if their Turn Periods overlap, Zager may have got their Turn 25 in first (see Lapping Effect, 2 The Streams of Time, p. 84). Colony Combat is timely initiated after arrival of the warfleet by Combat Movement when Zager submits their Combat Orders within 24 hours (see Run Away!, 1 Combat, p. 944) and a note that the Treason Black-Op should be resolved first.

The base chance of the Black-op against the System Base to succeed is 30%, there is only one SOM attacking, and Evans did not assign any COMs to Target Protect the colony Defense Bases. The additional 5 RPs committed add 10%, bringing the possibility to 40% (see A Heartless Woman's .38, 2 Special Operations, p. 1301).

- ✓ Because of the possibility of destroying the System Base by Black-Op from the target colony, Zager's commander decided on a straight Colony Combat rather than trying to isolate and defeat the System Defense Base in detail (see Rule 20 Permissive Joinder, 3 Combat, p. 973); if successful, there will be nothing to fire at in the first Combat Round and no return fire, other than possibly Colony Fighters (see Something Here from Somewhere Else, 2 Combat, p. 960). Which is a good result on any day.

The Black-Op is resolved in two rolls (see Murder by Numbers, 2 Special Operations, p. 1302) and again, the Black-Op failed (i.e. the System Defense Base was not destroyed). Still, there is a 'degree of success' second roll on a 1d10 and the result is a 9 this time. Putting the two together, the Concierge determines that while the attempt to destroy the System Defense Base failed, the lunatic who got to the command center with a gun and a million flying nanobots caused a lot of damage and distraction in the first Combat Round, preventing the System Defense Base from firing (both normal fire and Ship Missiles, see First Fire, 4 Carriers & Fighters, p. 1079).

- ✓ The System Defense Base will be back online and fully operational in the second Combat Round, but this absence may change the outcome of the entire combat.

In any event the remaining SOM is eliminated by performing the Black-Op (see Profile in Perfidy, 2 Special Operations, p. 1300), though Evans may not know that no enemy SOMs remain and may waste Counter-Operations looking for them.

### **Sordid Tales**

So what exactly was *The 2525 Technological Device*, what was the big to-do? Nobody, except the Evans position players, knows; Zager may never figure it out, and it was not necessary to look or determine for this example. The Evans-Zager Special Operations war cost a lot of time and resources, amounted to almost nothing, and the slapping and hand-fighting led to a Colony Combat crisis. Perhaps that is not an encouraging sort of example for the game (see 'thief in the night' and Alsos Mission in Mission Critical, 2 Special Operations, pp. 1300-1301), but it was sufficient to cover the mechanics and motives.

### Appendix T&C – Taxation & Census Example

On the Balkanized planet of PEACE are three unarmed colonies. The original colony was established by the Nation of Nadine for whom the planet is Optimal Habitability with 60 Maximum Habitability for the Nadine Native Population Type (planet habitability information is relative to Native Population Type, see Alien Agenda, 3 Taxation & Census, p. 317). The Nation of Nadine invited The Jenny Jovereignty to Land a trading post colony, which they did, the planet being Optimal Habitability with 40 Maximum Habitability for the Jenny Native Population Type. The Nation of Nadine was responsible for defense of the planet.

- ✓ The Landing of the Jenny Jovereignty colony on the surface of planet PEACE is a Disruption Event to the Nation of Nadine colony, with a 4% base chance plus modifiers (see Interesting Times, 2 Disruption, p. 272) of inactivating each active Constructural Element because permission was communicated to the Concierge before the Landing, see Forced Balkanization, 2 Disruption, p. 273.<sup>1</sup>

Unfortunately, Helga Harmony attacked the Nation of Nadine colony and conquered it. But Helga then fell into dis-chord elsewhere with The Butt Sisterhood and had to withdraw all warships, allowing the Conquered Colony to revert to Nation of Nadine (see Conquered Colony, 2 Order, p. 539), Helga never met Gen. Tarkin. The colony was afterward declared a free interstellar trading post (sovereign to Nadine) and the defenses were not rebuilt, but several locals pledged to liberate it if it were attacked (that and \$1.50 will get you a cup of coffee in New York City). Shortly afterwards, a non-guarantor, Tina's Taco Empire Landed on planet PEACE without permission (no one could stop it, no defenses or warships in system), adding a third colony (see Survival & Ethical Dilemmas, 4 Expansion, p. 923). To the Native Population Type of Tina's Taco Empire the planet is Habitable Habitability with 20 Maximum Habitability.

- ✓ Tina's Taco Empire's Colony Transport was out of OSL and had to Land *somewhere*. A Colony Transport out of OSL will never refuse to Land (never fail the Expansion Power Activation for the purpose of Landing). See The Landing, 4 Expansion, p. 920.
- ✓ In order to move to the system via the Transport Population purpose of the Expansion Power Activation, Tina's Taco Empire needed a Scene on the star of the starsystem (see Colonization, 1 Expansion, p. 876) which means that the system must have been on the Tina position's Public Space at the end of a Regular Turn – a sovereign ship (probably a Scout Ship) or colony must have been in the system to place and hold the Scene there while the Colony Ships jumped to the system (see Canned Food, 3 Expansion, p. 913).
- ✓ The rude Landing of Tina's Colony Transport on the surface of planet PEACE was a Disruption Event to both the Nadine and Jenny Colonies, with a base chance of 8% plus modifiers (see Interesting Times, 2 Disruption, p. 272) of inactivating each active Constructural Element because permission was not communicated to the Concierge before the Landing, see Forced Balkanization, 2 Disruption, p. 273. As a result, a Constructural Element at the Jenny colony became inactive.

---

<sup>1</sup> The Disruption Event may assume xeno-microbes or may not, the game may assume that their medical knowledge is sufficient to overcome the problem (unlike our current knowledge), or the Concierge may choose to make it an issue by use of Intervention Potentials on the PEACE colonies. See Bad Exchanges, 4 Expansion, p. 924.

Time passes... On the Regular Turn that the Jenny Joverignty activates both the Census Power and the Taxation Power, the planet has 28 population factors of the Nation of Nadine, 3 population factors of Tina's Taco Empire (from the Colony Transport). Nadine has occupied 46% of the planet's Maximum Habitability (28/60) and Tina has occupied 15% of the planet's Maximum Habitability (3/20) pro-rated, together they occupy 61% of the planet's Maximum Habitability.

The Jenny Joverignty has a colony of 27 population at the planet, 12 of which are on the ground and 15 more are in an Orbital City (see Orbital City, 2 Construction, p. 667). The Jenny Joverignty brought in enough RPs on Cargo Ships to build an Orbital Shipyard (and had the minimum required population, see Orbital Shipyard, 2 Construction, p. 667) and the Orbital Shipyard constructed from additional Cargo Ship RPs an Orbital City, onto which was Loaded population from the colony (see Sardine Tins, 3 Expansion, p. 911) or Unloaded population from Colony Ships (see Opening the Can of..., 3 Expansion, p. 914). The 15 Jenny population factors on the ground take up 38% of the planet's Maximum Habitability (15/40) and the population on the Orbital City is not more than half of the planet's Maximum Habitability (see Dayworld, 3 Taxation & Census, p. 315), so only 1% of the Maximum Habitability remains for population growth...

- ✓ The Jenny Joverignty has undisrupted Government Titles associated with both Census and Taxation, so the Census Power will occur before the Taxation Power in the normal Regular Turn action processing sequence (see Life, Taxes, Death, and Taxes, 1 Taxation & Census, p. 296). The Jenny Joverignty is required by a Government Title with a single Conflict Check<sup>2</sup> to activate the Census Power or the Government Title will fail (e.g., ICT1 #2 or #3), so it has to happen regardless of consequences. See Foreclosure of a Dream, 3 Government Titles, p. 615.

Jenny's Census Power Activation processes first. Normally, 15 population on an Optimal Class Planet would grow 3 population factors with each Census Power Activation (see Optimal Planets, 4 Taxation & Census, p. 325), however, there is not room for even one more population on the surface, so population growth fails due to Maximum Habitability limits (Tina has got to go!..., see Dayworld, 3 Taxation & Census, p. 315). Failure to grow population during Census due to Maximum Habitability limits is a Disruption Event at the colony (see Peaches for Mad Molly, 2 Disruption, p. 273) with a 3% base chance of losing each active Constructural Element to inactive status.

- ✓ To this base chance might be added various other modifiers, specifically, 3% is added if the Jenny Joverignty has four Government Titles, and 6% if five Government Titles. Five percent would be added if any Government Title is disrupted, while 2% would be added if the position had a Disruption Event anywhere on the previous Regular Turn, and is 8% added if the PEACE colony suffered a Disruption Event the previous turn. See Interesting Times, 2 Disruption, p. 272.

The two active Constructural Elements at the colony pass the Disruption Check and remain active; the Jenny population is currently in agreement with the local zero-population growth policy, despite the imperatives of the interstellar government.

- ✓ Population on the Orbital City does not grow during the Census, see Cabin Fever, 4 Taxation & Census, p. 326.

---

<sup>2</sup> It is possible for a Government Title to have a single Conflict Check, see Foreclosure of a Dream, 3 Government Titles, pp. 615-616.

Unlike the Census Power, the Taxation Power has a chance to fail at the colony (see Tax Revolt or Revolting Taxes, 1 Taxation & Census, p. 297). The chance of a tax revolt (i.e. failure of the Taxation Power activation at Jenny’s PEACE colony) is 20%, which is the normal 5% plus 15% for the one inactive Constructural Element (see Power Off, 2 Constructural Elements, p. 193); it doesn’t matter which one in this case.

- ✓ In this case, activation of the Census Power before the Taxation Power could have been harmful: Taxation was not increased by population growth at the colony because it was at the Maximum Habitability already, and it suffered a Disruption Event which might have inactivated one or both of the other Constructural Elements, increasing the chance of failure of the Taxation Power activation at PEACE colony.

The Taxation Power activation did not fail. These are very PEACEful people. The total population of Jenny’s PEACE colony is 27, including the 15 in the Orbital City – all population of the same type on a planet surface and in Orbital Cities is considered one colony for game purposes (see Lebensraum, 3 Taxation & Census, p. 321). One RP is produced for every 5 population factors, thus, the population produces 5 RPs (fractions truncated). See Resources from Population, 2 Taxation & Census, p. 306. The maximum allowed is 1 Industry installation (a permanent colony enhancement) per 2.5 population factors at the colony (see Industry, 2 Construction, pp. 665-666), thus the PEACE colony could have a maximum of 10 Industry, but not quite enough population for an eleventh Industry.

The PEACE colony has 8 Industry currently which produces 4 more RPs. Industry produces .5 RPs per Industry installation, and the total Industry of a position is pooled during Taxation for maximum benefit (see Resources from Industry, 2 Taxation & Census, p. 306), however, for local purposes, we can say that 8 Industry produces 4 RPs during Taxation, for a total of 9 RPs taxation received by Jenny from the PEACE colony ( $5 + 4 = 9$ ).

- ✓ These RPs from Taxation flow into the position’s Treasury (see 2 Taxation & Census, p. 303), however, theoretical RPs from Taxation also form the local Gross Domestic Product (see 1 Construction, p. 662), which is the limit of what a colony can build during an activation of the Construction Power at the colony, unless RPs are received from other sources prior to the Construction Power activation (e.g., Unloaded from Cargo Ships, see Material Handling, 1 Construction, p. 664, or from Carting Commerce Power activations, see Carting, 4 Commerce, p. 1229).
- ✓ Because the Jenny PEACE colony has industry, the planet received two Pollution Potentials as a result of the dual activation of the Census and Taxation Power. See Pollution Potentials, 3 Taxation & Census, p. 320.

It is important to understand that, while this example focuses only on the PEACE Colony, the Census and Taxation Power activations occur globally for the position (see Tax Revolt or Revolting Taxes, 1 Taxation & Census, p. 297), thus the Census Power activation might have been beneficial in other places owned by the Jenny Jovereignty and RPs from other places may flow into the Treasury (barring tax revolts) for greater effect on the position’s future development.

- ✓ As a result of the Jenny Jovereignty Census and Taxation Power activations at the PEACE colony, the Concierge exercises an Intervention Potential to publish a Push Intervention Special Bulletin (see 2 Entropy, p. 235) suggesting that miners at the PEACE colony found something unusual, alien, ancient and unsettling in a sealed cavern....

**Appendix TECH – Technology Progress**

**General Technology Process in GGDM:**

- ✓ Technology is advanced only by activation of the Technology Power. The Technology Power is non-location specific and generally cannot fail Power Activation.
- ✓ Technology advances through three stages in GGDM: Research, Development and Patent Prosecution.
- ✓ Technology advancement in GGDM should be thought of generally as leaps and bounds (e.g., from Babbage’s Analytical Machine to the Quantum Computer) and not as simply developing a new flavor of Kool-Aid to market next summer.
- ✓ Technology in all stages is subject to being stolen or copied by others.

**Research Groups:**

- ✓ Successful Research results in receiving a Research Piece that is placed on the Public space.<sup>1</sup>
- ✓ Research is conducted into one of ten areas:

Energy	Stardrive
Matter	Ships
Information	Weapons
Life	Defenses
Planets	Industry

- ✓ Two adjacent Research Pieces of the same type are required to form a Research Group which is required for Development. Research Groups can overlap and be adjacent.
- ✓ Research Pieces and Groups occupy Monads on the Public Space until advanced or lost. There is generally no way to remove Research Pieces or Groups until they are successfully Developed; though they may sometimes fall victim to shifting Pathways or Concierge Interventions. Thus, placing a Research Piece on the Public Space is a commitment to follow-through to Development.
- ✓ One Research Piece of a Group must be adjacent to a Friendly or Naturalized Colony that has an active Epistemological Constructural Element. If that is not the case, the Research Group is disrupted and not eligible for Development.
- ✓ Research is RP intensive, and may exceed the current Treasury. Research Pieces are not received until fully funded, this may compromise future research.
- ✓ Research is also the most chance-dependent part of the technology progress in GGDM.

**Developing Applications:**

- ✓ Successful Development results in removing a Research Group from the Public Space and placing a new Application of the same type on the current Era Matrix in a currently open location.<sup>2</sup>

---

<sup>1</sup> See generally 2 Technology.

<sup>2</sup> See generally 2 Technology.

- ✓ By Development, technology is removed from the dangers of disruption or loss on the Public Space to the current Era Matrix where no disruptions or losses occur.
- ✓ One activation of the Technology Power for the purpose of Development is sufficient to develop a Research Group into an Application until such time as it is either successful, or it runs out of open spaces on the current Era Matrix or the Research Group becomes disrupted or lost on the Public Space by other means.
- ✓ Each Development failure permanently blocks the Research Group from being placed in that location on the current Era Matrix, thus unfortunate development chances may block out a Research Group from the current Era Matrix.
- ✓ RP cost of the Development is the number of locations specified times the current Era squared, which is fully deducted from the Treasury on the first turn of Development.
- ✓ Overall, Research is more RP and chance intensive, whereas Development is more time consuming, but probably costs less RPs.

### Normal Patent Prosecution:

- ✓ Patents must follow a form and are official Interpretations that create both the physical laws of the game universe for all and a playable technology in the game.<sup>3</sup>
- ✓ GGDM Patents are different from real-world Patents, they must work because they impose technology and physical laws on the game. One does not have to prove a real-world patent works as long as it does not violate known natural laws; GGDM Patents almost always violate known natural laws as they are currently known.
- ✓ The governor of the Patent is the Operational Quality which describes what the Patent is supposed to do, and the constraints on the Patent.<sup>4</sup> There are four Operational Qualities: Physical Item Technologies (PITs), Continuous Operational Technologies (COTs), Enhancement Technologies (ETs) and Technological Devices (TD).
  - See Appendix POQ – Patent Operational Qualities.
- ✓ Prospective Patents are subject to Concierge approval for game purposes; the Concierge is both advisory and adversarial to the Patent process, just like the USPTO.<sup>5</sup>
- ✓ Patent Prosecution requires that all of the Applications listed on the Patent be connected on the current Era Matrix and that they appear in the exact order shown on the Patent.<sup>6</sup> Unconnected Applications will be tested; a Patent could be created solely from already connected Applications or begin with some connected and some not.
- ✓ Connections made are permanent, but a Patent will fail prosecution if any two of its Applications remain unconnected.
- ✓ Patent Prosecution costs no RPs; failed Patents may be altered and/or resubmitted by subsequent Technology Power Activations. A successful Patent is locked however, cannot be changed. Patents cannot be disrupted either.

---

<sup>3</sup> See generally, 1 Patents.

<sup>4</sup> See generally, 2 Patents.

<sup>5</sup> See generally, 2 Patents.

<sup>6</sup> See generally, 3 Patents.

**Stardrive Patents:**

- ✓ Faster than light travel – Stardrive Technology – is the singular entry point for the game’s civilizations, it is the essential of the setting and the mark of entry to the 1<sup>st</sup> Era of inter-stellar technology. Generic Stardrive Existential Patent is required for most of the Primal States during game set-up<sup>7</sup> and no ships may be purchased or constructed without a Stardrive Patent.<sup>8</sup>
- ✓ GGDM allows multiple, competing FTL systems to co-exist in the universe.
- ✓ Stardrive Patent prosecution is different from normal Patent Prosecution in that it depends on the average of the percent of Applications completed and the percent of Application connections on the current Era Matrix.<sup>9</sup> Stardrive Patent Prosecution is thus has a better chance or is more efficient, late in an Era.
- ✓ Stardrive Patents must describe a formula for how the ship moves.<sup>10</sup>
- ✓ Ship speed may be increased in increments of one by use of COT Patents.<sup>11</sup>
- ✓ Successful Stardrive Patent Prosecution is required to exit the 1<sup>st</sup> Era for which the Generic Stardrive Patent may serve.<sup>12</sup>
- ✓ Positions are limited to one successful Stardrive Patent prosecution per Era (except in the 1<sup>st</sup> Era for positions that did not begin with the Generic Stardrive (GSD) Existential Patent) and each ship may have only one type of Stardrive.<sup>13</sup>

**Advanced Research & Development:**

- ✓ The normal technology progress rules assume Research, Development, and Patent Prosecution are being conducted in the current Era. Era advancement occurs periodically when conditions for advancement are fulfilled, mainly, having filled all locations on the current Era Matrix and connected all Applications at least once.<sup>14</sup>
- ✓ It is possible to conduct Advanced Development and Advanced Patent Prosecution in the next Era, which is very expensive and depends highly upon the number of Applications in the current Era.<sup>15</sup> Stardrive Patents can never be prosecuted as Advanced Patents. Further, unless the game will have a 4<sup>th</sup> Era (which is optional), advanced research is not possible after reaching the 3<sup>rd</sup> Era; advance research is not possible in whatever is the final Era of the game.
- ✓ Upon advancing properly to the 2<sup>nd</sup> and 3<sup>rd</sup> Eras, the position will receive the benefits of the Uber Alles for the position and other possible benefits,<sup>16</sup> but cannot receive them by Advanced Development and Advanced Patent Prosecution.

<sup>15</sup> See Advanced Technology, 1 Eras, pp. 761-763.

<sup>16</sup> See generally, 3 Eras.

### Appendix TREX – Treaties Examples

#### Sample Treaty #1 – Between two positions cohabiting a planet:

This **Treaty** is between the Martian Empire and the Venus Protectorate. The parties hereby agree to share the planet known as Ceron III, which is currently colonized by both Mars and Venus, and no others, equally, such that each population type shall not exceed more than 50% of the planet's Maximum Habitability. If an activation of the Census Power occurs whereby either population would grow to more than 50% of Planet Ceron III's Maximum Habitability, the planet will be exempted from the Census and the populations there will not increase. Additionally, each side agrees not to Unload Populations onto the planet in violation of the sharing agreement, and any such actions will be cancelled by the Concierge with no refund of the Power activation costs.

*Concierge Note: This does not prevent Disruption Events as populations are restrained from reproducing by a Treaty between their governments. Some resentments may arise.*<sup>1</sup>

**Example Note:** This is a Treaty because it requires the Concierge to perform special acts; the parties could simply have agreed without the need for a Treaty, but either side could have simply ignored the agreement when convenient.

#### Sample Treaty #2 – Between a position and a MegaCorporation:

This **Treaty** between the Crom Empire and Sky Harbor, Inc., a MegaCorporation, is for the safe passage of Sky Harbor, Inc. Cargo Ships through Crom Empire territory for a period of ten turn cycles from the date of delivery of one Cargo Ship load of RPs to the Crom Empire's capital. Upon Unloading RPs at the Crom Empire's capital by one Cargo Ship from Sky Harbor, Inc., the Concierge the Concierge will cancel any attempt to fire at Sky Harbor, Inc. Cargo Ships by units belonging to the Crom Empire.

**Example Note:** This is a treaty because it requires the Concierge to do something special, and unusual in the game – ignore all orders to fire at Sky Harbor, Inc., owned Cargo Ships by the Crom Empire. Sky Harbor, Inc. doesn't have to do anything if they wish to not honor the treaty, but once Sky Harbor, Inc. has paid, the Crom Empire would have to Break Treaty in order to be able to fire at Sky Harbor, Inc. Cargo Ships in the next ten turns. It would be up to the players to determine when the time has expired and inform the Concierge. Again, the players could simply have made an agreement without a Treaty, but there is no assurance unless there is a Treaty, which requires consecutive activation of the Diplomacy Power by both parties for that purpose.

Is this a good deal? It depends a lot on the game circumstances ... but it certainly is bribery!

---

<sup>1</sup> See Peaches for Mad Molly, 2 Disruption, p. 273.

### Appendix UA – Uber Alles

- An Uber Alles is generated for the 2<sup>nd</sup> and 3<sup>rd</sup> Eras each when the first position progresses to the Era of technology. They may also be pre-generated during setup and kept secret.
- Positions are officially informed of and granted access to the Uber Alles for the Era when they progress, not through advanced research or advanced patent prosecution.
- Uber Alles for the Era apply to all positions that reach the Era, they are not subjective, they are objective, though each position may find unique applications for it by prosecuting Patents in the new Era to take advantage of the abilities.
- An Uber Alles is generated by choosing (randomly or consciously, intentionally) one item each from the Technology Uber Alles and the Cultural Uber Alles, forming a pair. There are 100 possible combinations.
- Uber Alles are intended explicitly to create an advantage, to reward technological advance and progress in the game; they are thus unlike Fundamental Realities and Titles.

#### Technology Uber Alles

1. Information research pieces can be substituted for one Matter or Energy research piece to form Matter and Energy Research Groups, but during Patent Prosecution, each Matter or Energy Application must be paired with and connected to an Information application.
  - This represents the ultimate triumph of information as the underlying ‘constructural element’ of the physical universe.
2. All Patents in this Era may be successful with one unconnected application (does not provide an automatic connection) on the Matrix. No advanced research or development into the next Era is allowed.
  - This is the level at which the physical laws and technology become intuitive to the species, that Patents can be prosecuted without firm knowledge of all of the facts (remember that GGDM Patents are different than real-world patents). It is the intuitive leap, the quantum tunneling. It does not, however, allow automatic Era progression by connecting unconnected dots on the Matrix, you still have to do the work.
3. Interstellar and interplanetary movement of population, cargo, supplies and enhancements is possible without a starship.
  - To the sci-fi fan, this suggests stargates, wormhole travel and beaming. But only if we insist on physical movement, only if we insist that the thing arriving at the other end isn’t some advance virtual copy of what was sent. What if your mind could travel the stars while your body remains on Earth? Be creative with this in new Era Patents and see how the game develops.
4. The rule of physical exclusivity of space (i.e. that two things cannot occupy the same space at the same time) is not quite the rule it used to be.
  - ‘Crowding’ technology; the Fundamental Reality that uses this naturally is only one of many possible ideas. Science-fiction stories have suggested that two things can occupy the same space if they are in parallel universes and the universes overlap at a point. Participants will need to decide how literally to apply this Uber Alles, are we

- casually creating parallel pocket universes to have this effect, or is something different at work in our own singular universe that allows exceptions to the classic rule?
5. Death is not what it was thought to be...sort of, kind of, not exactly.
    - This is one to use if participants want the game to take an occult turn; it does not automatically imply and is not meant to imply zombies or other undead in the game. Be a little more creative, toss the clichés.
  6. An extra Monad is added to all current Diplomatic Spaces next to the First Space upon progression to this Era and can never be lost.
    - This is a one-time effect, and likely will not be useable in Patents in the new Era. The effect depends directly upon the number of First Contacts a position has at the time of progression. It only affects current Diplomatic Spaces. It represents expansion of common reality through increasing knowledge of the universe.
  7. It is physically possible to be in two places at once, regardless of distance.
    - Have fun with this one, everyone has experienced the need to be in two places at once. There are some possible ways to develop these technologies in the game, it might be an Enhancement (permanent or expendable), in any event there should be a cost to obtain and use this ability in advanced Eras. The main question is what happens to one if the other is damaged or destroyed (are they quantum entangled)?
  8. In limited circumstances, something can be made from nothing, but something cannot be made into nothing.
    - The likely application of this, overall, is to resources and manufacturing. It might solve a host of problems, for example, ship supply. It will be a question of cost-benefit analysis and how far it can be pushed with new Era Patent prosecution. It does not, however, allow things to just disappear from the game, like being born, once you are in this universe, you are stuck here until dismissed.
  9. If a position is of a higher current Era than the other in a combat, they execute a second round of combat between the first and second rounds of combat by the other side(s). That is, the highest Era participants will execute the extra round of combat before the combat proceeds to what would normally be the second round; if the two sides are the same current Era, there is no effect. This *includes* Orbital Bombardment and Raid/Strike.
    - Being able to execute twice before the other side gets their second execution is ... Trafalgar. Much of civilization owes to empires founded by military might. The technological reasons for this Uber Alles have already been explored in sci-fi – it could range from local time control to faster power cycling to gravitational control.
  10. Resources received from population during Taxation Power activations increases to 1 per 4 population factors on sovereign native colonies that are currently at 90% or more Maximum Habitability. This also improves the planet's GDP.
    - Perhaps technology of this Era has moved the native population type up just a tick on the Galactic Shelf? Strictly as a technology, this is probably genetic modification, the classic making of a new race from children superior to their parents in attributes. Or maybe quantum mechanics became intuitive?

## Culture Uber Alles

1. Activation of the Census Power also includes activation of the Taxation Power at any location that does not currently have a starship in the system, and activation of the Taxation Power also includes an activation of the Census Power in any system where there is not currently a starship. Ownership of the starship is irrelevant, only the presence of a star-drive is important.
  - This is admittedly strange. It makes the presence of any starship a sort of siege condition without combat, but only affecting Census & Taxation. Whatever it is, must have something to do with stardrive, but is not solvable by technological progress during the game. If this occurs in the 2<sup>nd</sup> Era, however, the Concierge may decide that progression to the 3<sup>rd</sup> Era negates this effect. There are some interesting twists to this regarding warships guarding colonies and colonies at Maximum Habitability.
2. There is a cumulative 7% chance for each ship in the 2<sup>nd</sup> Era and an 3% chance for each ship in the 3<sup>rd</sup> Era at the end of each prime number Regular Turn (i.e. 1, 2, 3, 5, 7, 11, 13, 17, 19, 23, etc.) that something catastrophic will happen in a system where the ships are located. Destroyed ships have a 10% chance of continuing to exert an influence infinitely after their destruction. Only one check is made per prime numbered Regular Turn per system occupied by starships (keels do not count) and the Concierge must decide the nature of the catastrophic event.
  - This is sort of a Luddite ‘Godsfire event’ from stardrives mentioned in 2 Patents, EN 8, p. 745. It is intended to effect mainly the middle part of the game, but the effect may be even if the number of ships in the game continues to increase into the 3<sup>rd</sup> Era. The potential for catastrophe is great due to the likely number of ships in the game, the check is for each ship. Participants could try to mitigate the effect by having ships in interstellar flight on the turns when the event might happen, but that changes the game just as much by causing positions to do what they would not normally.
3. During each Regular Turn, there is a 50% chance that either the Census Power or Taxation Power will be automatically and randomly activated at no cost in Acts or Scenes and no Power Activation, however, the position cannot now willfully activate either Power.
  - This represents a sort of self-actualizing civilization. Giving up control of Taxation and Census Power activations for a potential gift in extra Power Activations. And of course, this could lead to Disruption Events and other consequences as much as it could be advantageous. It certainly will change how the game is played.
4. Each time the Commerce Power is attempted to be activated, 1-3 RPs are added to the position’s Treasury.
  - This occurs even if the Power Activation fails; the Commerce Power is capable of being activated multiple times in a Regular Turn. This Uber Alles is intended to represent, generally, an exponential generativity from ‘removal of distance’ which should be occurring by the 2<sup>nd</sup> and 3<sup>rd</sup> Eras of the game. The effect could also possibly be construed to represent other processes, such as AI-aided human activity or things we cannot yet imagine.
5. ‘Cosmic Music’ is added to the Aspect List and can never be removed.

- This one is less mechanical, it is what the participants make of it in the game.
6. Each Regular Turn, activation of the Culture Power for Exposing Aspects allows an Aspect to be removed and replaced on the Aspect List instead of the normal exposing new Aspects.
    - This mimics somewhat the effect of Kairotic Moments in GGDM, and may become bound up with them if participants use it to cause or avoid triggering Kairotic Moments. But using this Uber Alles also places yet another burden on the Culture Power activations.
  7. Social and Estate Government Titles only fail if two Government Titles are failing at the same time.
    - This represents increased stability as interstellar civilization settles into an established period or plateau, however, ironically, it does not apply to Structural Titles. As noted in *It was the End of History*, 1 Resolution, pp. 1456-1457, stability of Government Titles may eventually signal the end of the game.
  8. A sixth Government Title may be added if no Government Titles have failed for six consecutive turns, a seventh Title may be added after that if no Government Titles have failed for seven consecutive turns.
    - This represents increasing complexity of interstellar civilization, in a Joseph Tainter sort of way. The more Social and Estate Titles a position has, however, the more difficult it will be to satisfy the Conflict Checks. On the other side of it are the added Power Activations and possibly more Acts and Scenes (see *Player Piano*, 2 Eras, p. 770).
  9. A ‘pocket space’ of 3 Monads becomes available adjacent to certain large colonies of the Native Population Type as long as they are controlled by the sovereign position of their Native Population Type.
    - The Concierge will need to determine the threshold for which colonies receive this benefit and when. The threshold may be population, installations, institutes, Colleges, Corporations, or some combination. The pocket space functions exactly as the Diplomatic Space as a ‘table for one,’ the pocket space traces through the colony to the regular Public Space.
  10. An Enlightenment attaches to each Power Activation where applicable; it does not require a College, does not come from a College, does not return to a College if not used.
    - The logical and ultimate end of the print, knowledge and information revolutions. Since rerolls from Enlightenment are mostly localized (i.e. at colonies or specific ships), this might be envisioned by the participants to mean AI computer assistance, global mind networks, or something else from science-fiction trope. However, it also implies a bit of autocratic, coercive, conformity-laden society when the rerolls are applied to Power Activation failure due to inactive Constructural Elements.

**Appendix WA – *Asteres Planetai*  
Wanderers Fundamental Realities**

The Wanderers are global Fundamental Realities that act as environmental cards for the game. They primarily affect the physical universe for all positions; Wanderers change the baseline play of the game from the beginning and are revealed to the players when the game begins.

1. The Cold Equations: (planets) The probability of finding Optimal Class Planets is halved and the probability of finding Hospitable Class planets is reduced by one third.
  - Note that this does not need to be a negative, the chances could run the opposite direction, at the discretion of the Concierge.
2. Small Worlds: (planets) The Maximum Habitability of all planets, except Homeworlds, is reduced by 30%.
  - Note that this could also be an increase in Maximum Habitability, at the Concierge's discretion.
3. That's Special: (planets) The probability of Special Planets is increased by 10%.
  - Note, this can also be a 10% decrease in the likelihood of Special Planets at the Concierge's discretion.
4. Blue Shift: (stars) The frequency of Blue Stars is changed significantly.
  - Note that because Blue Stars are rarer than mainline stars, probably this should not become a decrease in Blue Stars.
5. Red Shift: (stars) The frequency of Red Stars is increased by 20 to 50%.
  - Note that because Red Stars are rarer than mainline stars, probably this should not become a decrease in Red Stars.
6. Stellar Neighborhood: (stars) Two is subtracted from the d10 roll to see how many new stars are found when using the Looking purpose of the Expansion Power Activation.
  - Note that, for a more abundant game, the percentage can be increased instead of decreased at the Concierge's discretion.
7. Stop Sign: (stardrive) Generic Stardrive (GSD) does not work until the third to fifth Regular Turn of the game, even if positions begin with the GSD patent and ships (or build new ships).
  - Note, there is no way to reverse this, GSD patents cannot be made to work before time has elapsed! This will slow down the early game expansion, causing positions to focus on development for the first few Regular Turns, instead of exploration and expansion; but that might not be bad because they will explode off the launch pad on T minus zero. This is a one-time only effect.
8. One Way: (stardrive) Generic Stardrive is the only means of FTL travel in this universe. Instead, positions must increase current maximum Speed to 8 and succeed in a Stardrive Patent prosecution attempt to exit the 1<sup>st</sup> Era and must succeed in a Stardrive Patent prosecution attempt to exit the 2<sup>nd</sup> Era.

- Note, only the Patent prosecution attempt is necessary (requiring a Technology Power Activation), positions do not submit a proposed Stardrive Patent.
9. Rubber Band: (stardrive) FTL travel is not really possible, it's just an illusion we use. Whenever a ship departs a system, the (ghost) image of the ship remains in the system. Each Regular Turn, there is a 10% chance that each ship will be yanked back to its last point of departure, with an equal chance that if it is occurs, the ship will be destroyed. This occurs whether the ship is in interstellar flight or in a system as long as the image remains in the departure system. There is a 25% chance each turn that each (ghost) image in a departure system will dissipate, freeing the outbound ship from the yank-back risk until it departs again from wherever it is located.
    - Note, think about instantaneous FTL acceleration: the ship is gone, but you are still seeing light that reflected off the ship before it moved. The “rubber band” effect takes this a little further, creating a paradox by enforcing the standard of Einsteinian physics that FTL travel is (literally) impossible. This was an idea I had for a science-fiction role-playing setting many years ago.
  10. Wrinkles in Time: (stardrive/galactic space) All Disturbance Modifiers are temporal.
    - Note, this will slow ships in the game, as ship speed is ineffective against temporal Disturbance Modifiers. The Concierge could decide that all Disturbance Modifiers are spatial instead, allowing ship speed development to triumph.
  11. SlowGo: (galactic space) All ships exploring a new starsystem (including warships) must pass two consecutive Hazard Rolls to succeed, if either roll fails, the ship is destroyed.
    - Note, this universe is one with lots of leftover debris and other unknown hazards, making exploration slower and more costly. There is no way to reverse this effect, that is, the Concierge should not eliminate Hazard Rolls from the game to make exploration painless and fast.
  12. The Centre: (galactic space) At the center of the starting Galactic Space is a super system containing a large number of very nice high Maximum Habitability and Special Planets. Everyone knows the location at the beginning of the game, and obviously, this location will not be occupied initially.
    - Note, this is the Firefly set-up. The Homeworld, Lost Colonist, and Outposter positions will need to be arranged approximately equidistant from the center, and at least three turns distant at the starting Ship Speed, pushing them closer to the edges where the invader Primal States will begin.
  13. Eye of the Void: (galactic space) The center of the starting Galactic Space is a supermassive black hole. ‘Nuff said.
    - Note that there is no ‘center’ in this game, the 30 starting stars are arranged around this black hole, and positions will be Looking outward early. The coordinates of the black hole effect are defined and known to all positions. Any ship that enters the area perishes, there is no other effect, no pull.
  14. With a Bang: (population) All positions receive a free Census and Taxation Power activation (no Acts, Scenes or Power Activations) on the third turn of the game. The

Taxation and Census Powers cannot be voluntarily activated on that turn to create a double effect, so do something else useful.

- Note, this is a one-time only effect – an early game kick in the pants.
15. Franca Lingua: (population) All Major Race positions, except Truly Alien positions – oddly – speak the same language (probably English) and this does not change during the game.
    - Note, this is something difficult to quantify directly in game terms, but it should affect Conversion, Naturalization, Commerce, and all sorts of spying and special operations (think of, for example, a civil war situation). The base game assumes that each species has its own communication forms. Alternatively, participants can imagine or assume that universal language translation is a widespread, unobtrusive pre-game technology (without an Existential Patent) that allowed unification of their species and that works just as well on all species. Or even that some form of universal linguistic psychic talent develops with FTL.
  16. Denial is not a river in Egypt: (population) There is a plentiful or easy to manufacture, universal recreational substance that affects all species in the game powerfully. Each time a Regular Turn is processed, an Intervention Potential Plus is generated against the position instead of an Intervention Potential.
    - Note, this is not Melange from the Dune series, there is benefit to this substance and only harm (Melange extended life and consciousness and was also highly addictive).
  17. Countdown to Extinction: (population) The universe is changing, starting on Turn Cycle 40, there is a 5% chance each Regular Turn that Major Race will simply vanish from the universe.
    - Note, this effectively creates a time limit for the game. Players can choose to end the game before then.
  18. Stupidity Quotient: (population) Enlightenment rerolls do not occur 50% of the time, if they do not occur, the Enlightenment is not used.
    - Note, can you tell me this is not true? This will make the wheels turn a little slower in the game. There is no way really to reverse this one.
  19. Love of Life: (population) Population growth is increased by 30% each Census Power Activation. There is a 30% chance the Census Power will activate automatically each Regular Turn, at no cost, but during the game, the Census Power cannot be voluntarily activated by positions.
    - Note, this one has two parts; the net effect will be to create population pressure. It is possible for the Concierge to decide that population growth will be decreased by 30% instead, making the game slower and more difficult in the opposite way. It is also possible that the Concierge may decide that the Census Power activation fails 30% of the time, though Census Power is the only Power Activation that cannot fail normally. The two parts could also be split for chaotic results, allowing perhaps 30% less growth per activation, but a 30% chance that the Census Power will activate automatically.

20. Chosen Ones: (positions) Each Regular Turn one position will become the “chosen ones” and on the next Regular Turn, they will have one extra Power Activation. Only the “chosen ones” position players will be informed of the extra activation, thus it is secret.
- Note, this event is completely fickle; it will occur whether the position is able to activate an extra power or not, it may occur to the same position on consecutive turns, or the same position may be chosen several times in ten turns or not at all.

**Appendix WR – Writ Examples****WRIT**

Issuer: The People of Calvin

Power: Cultural

Aspect: Medical<sup>1</sup>

History: Poor hygiene and poor living habits have plagued the People of Calvin for generations (Fundamental Reality) slowing their population growth, draining the talent pool, and costing resources.

Body: The People of Calvin are clean, healthy, productive people (True).

Directive: When activated, each Calvin colony gains 1 extra population factor and each population factor produces .30 RPs the next time the Taxation and Census Powers are activated.

Condition Precedent: Any News Event targeting the People of Calvin in the last turn cycle regarding poor hygiene, disease, or loss of productivity.

**Land Grant WRIT  
(Institute)**

Issuer: The People of Calvin

Power: Cultural

Aspect: Medical

History: Poor hygiene and poor living habits have plagued the People of Calvin for generations (Fundamental Reality) slowing their population growth, draining the talent pool, and costing resources.

Body: The People of Calvin are clean, healthy, productive people (True).

Directive: When activated, one Calvin colony may construct Hospital Institutes for 5 RPs. The Hospital Institute reduces any loss of population by 10-50% (except during Orbital Bombardment) on the planet where it is located.

Condition Precedent: Any News Event targeting the People of Calvin in the last turn cycle regarding poor hygiene, disease, or loss of productivity.

---

<sup>1</sup> An Aspect can have the same name as a Proficiency, see 3 Culture, p. 383.

**Militias (Land Grant Writ)****Power:** Combat**Fuzzy Group:**

Proficiencies: Nationhood

Aspect: Xenophobia

**College Faculties:** Order College (Power College)**Institution:** Upon activation of the Militias Land Grant Writ (by actualization of the Fuzzy Group), a Militia unit may be constructed on any Friendly colony for 5 RPs. Only one Militia Unit may be constructed on each colony.**Maintenance:** Militia units each require one Faculty per turn from the Order College (this necessarily limits the number of militias the position might have, so they are likely only going to be on “frontier colonies”). Militias not supported by Faculties by the Order College for two consecutive turns, are lost. Militias consist of armed population, caches of arms hidden in urban locations, and population trained to use them, and trained in resisting pacification and conversion attempts at all costs. Some might call them terrorist, underground, heroes, or extremist.**Effect:** The purpose of Militia units is to resist pacification and conversion attempts after the colony is conquered. The Militia provides the basis for an armed insurgency. Militias “add” 30 population to the colony for the purposes of Pacification and 15 population to the colony for purposes of conversion. Upon successful conversion or pacification of the colony, the Militia unit is “destroyed”; however, the effect of the Militia unit may provide the basis for future Special Operations.

**Hospitals (Land Grant Writ)****Power:** Census**Fuzzy Group:**

Proficiencies: Medical

Aspect: Care

**College Faculties:** Medical College (Proficiency College)**Institution:** A Hospital may be constructed at any Friendly, Naturalized, or Converted Colony upon activation of the Census and Construction Powers and actualization of the Fuzzy Group to activate this Writ. Hospitals cost 10 RPs each, and each serves up to 50 population Colonies may have multiple hospitals, but not more than needed by the population.**Maintenance:** Each Hospital must be supported by one Faculty each turn from the Medical College. Multiple Hospitals on a colony require multiple Faculties.**Effect:** Hospitals reduce the death rate, and generally improve the health of the population. Whenever the Census Power is activated, for each Hospital on a colony, a unit of 50 population factors grows by an extra 10%, regardless of Habitability Class. Additionally, the loss from each instance of Orbital Bombardment is reduced by 10% if there is a Hospital on the colony.**Historical Society (Land Grant Writ)****Power:** Culture**Fuzzy Group:**

Proficiencies: Education

Aspect: Reverence

**College Faculties:** Temporal College (Constructural Element College)**Institution:** Historical societies may be placed on any Friendly, Naturalized, or Converted colony for 1 RP each by activation of the Culture and Construction Powers and activation of this Writ by actualization of the Fuzzy Group.**Maintenance:** Every five Historical Societies requires one Faculty each turn from the Temporal College. Historical Societies not supported in any turn are lost.**Effect:** Each turn, one free Temporal Constructural Element is received for each new piece laid, for every five Historical Societies located on Friendly or Naturalized colonies. Historical Societies located on Converted Colonies, add one to all Naturalization die rolls if they were not constructed in the same turn as the Naturalization attempt.

## **WRIT of NATURALIZATION**

Issuer: Mégapole de France

Power: Order

Aspect: Surety

History: Aragorn Colony having converted peacefully to Mégapole de France (no insurgency) three Regular Turns ago, who has since cause the colony to prosper without further incident is now desirous of no other cultural sovereign.

Body: The population of Aragorn Colony wish to fully join Mégapole de France (True)

Directive: On the 11<sup>th</sup> hour of the 11<sup>th</sup> day of the 11<sup>th</sup> month of the year of our lord 1918 (insert flowery language) Aragorn Colony and all populations dwelling thereon, become Naturalized to Mégapole de France.

Condition Precedent: Activation of this Writ by actualization of the appropriate Fuzzy Group on Mégapole de France's Public Space after acceptance by the Concierge.
