## Day Million

From an Atari 1040ST to a Windows 10 PC  
*A Holistic Intellectual Sandbox*  
Game of Interstellar Civilization

*An Adult Literary Game  
for the Deep Blue of Civilization*

***The most fundamental function of civilization  
is the creation and control of its own reality.  
Nothing is more important.***

By Charles W. Phillips (*Nemo/Necuno*)  
A Tendentious Pedant

## **Plato: Allegory of the Cave Book VII, Republic**

[Socrates:] And now, I said, let me show in a figure how far our nature is enlightened or unenlightened: --Behold! human beings living in a underground den, which has a mouth open towards the light and reaching all along the den; here they have been from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them, being prevented by the chains from turning round their heads. Above and behind them a fire is blazing at a distance, and between the fire and the prisoners there is a raised way; and you will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

**[Glaucou:] I see.**

And do you see, I said, men passing along the wall carrying all sorts of vessels, and statues and figures of animals made of wood and stone and various materials, which appear over the wall? Some of them are talking, others silent.

**You have shown me a strange image, and they are strange prisoners.**

Like ourselves, I replied; and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave?

**True, he said; how could they see anything but the shadows if they were never allowed to move their heads?**

And of the objects which are being carried in like manner they would only see the shadows?

**Yes, he said.**

And if they were able to converse with one another, would they not suppose that they were naming what was actually before them?

**Very true.**

And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy when one of the passers-by spoke that the voice which they heard came from the passing shadow?

**No question, he replied.**

To them, I said, the truth would be literally nothing but the shadows of the images.

**That is certain.**

## **Ten Aspects of GestaltGenesis-DayMillion**

On the immediate surface, GestaltGenesis-DayMillion (“GGDM”) is a big over-complicated internet-based science fiction space game – it’s a sandbox game.

GGDM is also a work of macrosociology, attempting to describe the large structures of civilization.

GGDM is also a conversation about human civilizations – like good literature, GGDM engages the participants in a conversation, rather than passing through or over them.

GGDM is also a peer-to-peer graduate course in the humanities.

GGDM is also an educational tool, providing a platform for people to follow up on the hundreds of subjects mentioned in the game.

GGDM is also a personal journey from the Cold War to the Post Millennial world.

GGDM is the adult table of civilization.

GGDM is a magnum opus by default, an obsession, a lifetime conversation.

GGDM is for the future, not about the here and exactly now, but living in the twilight zone between the present and where we need to go.

GGDM is emergent.

---

*“Well the one thing I would say – and I say this to people – I never realized how big it was. Everything’s so (unintelligible) like, you know the orders are so massive.... This is involving death and life and so many things. ... So it’s far more responsibility. (unintelligible) .... The financial cost of everything is so massive, every agency. This is thousands of times bigger, the United States, than the biggest company in the world. The second-largest company in the world is the Defense Department. The third-largest company in the world is Social Security. The fourth-largest – you know, you go down the list.... It’s massive. And every agency is, like, bigger than any company. So you know, I really just see the bigness of it all, but also the responsibility. And the human responsibility. You know, the human life that’s involved in some of the decisions.”*

– Transcript of AP Interview with President Donald Trump, April 23, 2017 <sup>1</sup>

---

**History:** Almost all of the major problems of early 21<sup>st</sup> Century United States trace back to the first half of the 20<sup>th</sup> Century. Although that should be obvious by now, it is always worth thinking about the ripple effects of history and unintended consequences.

The Prohibition on Alcohol in the United States, by way of the 18<sup>th</sup> Amendment to the Constitution passed on December 3, 1917 (taking effect on January 16, 1920, repealed December 5, 1933), came about as a result of a late 19<sup>th</sup> Century religious revival that developed into a very vocal and determined minority who democratically stormed the legislatures. The Prohibition (and the minority behind it) clashed with established and deeply rooted Western male traditions of cigarette smoking and alcohol consumption. The result was the development of the heavily armed gangsters of the Prohibition; the Prohibition created the modern form of organized crime in America. When alcohol was no longer prohibited, the illegal drug trade took over.<sup>2</sup>

The stock market crash on Black Monday (October 29, 1929), the result of irresponsible lending practices by the banks and run-away speculation in the stock market, led to two different effects which are still with us today. To prevent any further market crashes of the same type, the government determined to regulate Wall Street and created the SEC and the brokerage industry has been forced to create a trade organization as well, to self-regulate (i.e. NASD/FINRA). Banks also needed regulation by the government. Today, Wall Street and bank regulation, as well as financial abuses and scandals, continue to be regular news and a hot item for debate separating conservatives and liberals.

The other effect of Black Monday was the destroy the American myth of economic independence; millions of workers, living payday to payday, suddenly became unemployed and sunk to poverty as a result of actions and events of which they never knew and had no control. Charities, the traditional safety net, were overwhelmed. The government therefore, decided that it would henceforth provide social safety nets, taxpayer funded, and this is the origin of public welfare programs, Social Security Benefits, and most of the ‘entitlements’ that consume a large part of the Federal Budget. Once the safety nets were installed, they could not be removed even in prosperity, in fact, they were expanded by later politicians, and costs have spiraled upward. In early 21<sup>st</sup> Century, across the world, and especially in the United States, the social safety net, entitlements, remain one of the most contentious and paralyzing policy debates.

**Historical coincidences?:** In 1868 in Japan, the Meiji Restoration of the Emperor brought an end to the Shogunate and embraced Western technology after Commodore Perry's Expeditions (followed by the European powers) forced Japan to end two-and-a half centuries of isolation. In 1871, after defeating the French in the Franco-Prussian War, Wilhelm I declared himself Emperor of Germany, converting a federation of states into an Empire, creating the Second Reich. Both of these events, less than three years apart and half a globe away, were very important in the hindsight of WWII, and generally, of WWI and the early 20<sup>th</sup> Century. If China is (and should be) included, the defeat of China in the Second Opium War in 1860 (which was known in Japan) and the storming of Beijing is the third major 19<sup>th</sup> Century event of import to the early 20<sup>th</sup> Century.

The history of the first half of a century is set in motion in the middle-latter half of the previous century; what events of the late 20<sup>th</sup> Century will dictate the history of the millenniums? And so it will be in GGDM, every decision sets the history for many turns hence.

---

*“The path that leads to Truth is littered with the bodies of the ignorant.”*

– Miyamoto Musashi

---

---

<sup>1</sup> Citation: “Yet this style, if the underlying subject matter be not comprehended and mastered by the speaker, must inevitably be of no account or even become the sport of universal derision. For what so effectually proclaims the madman as the hollow thunder of words – be they never so choice and resplendent – which have no thought or knowledge behind them?” [Cicero reporting the words of Lucius Crassus as repeated to him by Gaius Cotta, meaning it might just as well be fiction, probably is, but the point is still worthy and well-made] – Marcus Tullius Cicero, *Of Oratory* (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, The Rhetorical Tradition (1990), p. 207.

<sup>2</sup> Commentary: See for example, references to this in the original 1972 Godfather movie to the new wave of organized crime.

## 2112 Absurd Words

---

*“The brain has evolved from the inside out. Deep inside is the oldest part, the so-called brain stem. It conducts many of the basic biological functions including the rhythms of life like heartbeat and respiration. The higher functions of the brain have evolved in three successive stages according to a provocative insight by the American biologist Paul MacLean. You see, capping the brain stem is the so-called R-complex, “R” for reptile. It’s the seat of aggression, ritual, territoriality and social hierarchies. It evolved some hundreds of millions of years ago in our reptilian ancestors....*

*Surrounding the R-complex is the limbic system or mammal brain. It evolved some tens of millions of years ago in ancestors who were mammals all right but not yet primates like monkeys or apes. It’s a major source of our moods and emotions, our concern and care for the young. And then, finally, on the outside of the brain **living in a kind of uneasy truce with the more primitive brains beneath, is the cerebral cortex** evolved millions of years ago in ancestors who were primates. This is the point of embarkation for all our cosmic journeys.*

*The cerebral cortex where matter is transformed into consciousness. Here, comprising more than two-thirds of the brain mass is the realm both of intuition and of critical analysis. It’s here that we have ideas and inspirations. Here that we read and write. Here that we do mathematics and music. The cortex regulates our conscious lives. It is the distinction of our species the seat of our humanity. Art and science live here. Civilization is a product of the cerebral cortex.” – Carl Sagan, Cosmos, Episode 11 (emphasis added)*

---

Having worked through a full final edit of the rules, I admit that reading the rules to GGDM might be a tedious exercise and the fullness of GGDM might be overwhelming. I even admit that I am tired of working on it, and mentally exhausted from the sustained push to the finish. It is not likely that anyone will actually ever play this game; in this at least, I have failed miserably as a game designer, if one assumes that games are made to be played. And this is one reason why I am charging for the game exactly what it is worth; nothing.<sup>1</sup> What, if anything, I have succeeded in doing here, remains to be seen. There may be something special here, but more likely, it is complete mediocrity and the project’s intellectual horizons, old news to the *avant garde*.<sup>2</sup>

I have to admit that what I am doing is massively complex. I sometimes forget that because I have been doing it for so long; the final edit process has revealed to me that even I have sometimes forgotten or misremembered details of procedures and parts of the rules, or where I put specific quotes, references or commentaries (thank goodness for word search!). The final edit process brought me back to the full, completeness, and holistic complexity of GGDM. I can only now imagine the hill that players must climb to play GGDM.

This is probably a good place to remember Thorngate’s Postulate of Consumerate Complexity: *“It is impossible for a theory of social behaviour to be simultaneously general, simple or parsimonious, and accurate.”* (Warren Thorngate, University of Alberta, Canada, 1976).

---

*“The existence of Evil is no perplexity to [Aristotle’s] soul; it is accepted as a simple fact. Instead of being troubled by it, saddened by it, he quietly explains it as the consequence of Nature not having correctly written her meaning. This mystery which has darkened so many sensitive meditative minds with anguish he considered to be only bad orthography.” – George Henry Lewes*

---

The final version of GGDM represents a youth of thinking and writing through evolving cycles of this project (but you get to read it in a few hours). It occurred to me in the last couple of years that if I were to lose the files, any or all, constituting GGDM before it is published in final form, I would not be able to start over again; it would be the end of my life, essentially.

There is a risk in taking a lifetime – whether or not I intended to do so – to complete an intellectual project; there were – and still are – many possibilities every day that could have sent or could send this entire work into the void. It is amazing that I was able to preserve the work from one computer file format to another unbroken for over a quarter century; in this, it is a point to ponder how many inchoate works (both potentially great or probably not so great) have been lost to humanity since the beginning. I have been very fortunate to live in the stability and wealth of the United States in this time and place; many others do not have the opportunity I have been given to write a work spanning a lifetime. As Yamamoto Tsunetomo stated regarding the famed Forty-seven Ronin (aka, the Ako Vendetta): “By thinking that you must complete the job you will run out of time.”

One of my main struggles over the years is deciding what sort of thing I am writing; what sort of thing is GGDM? Is it a game, a philosophical work, a work of macro-sociology, a theory of humanity, a metaphysics, a warning, a simulation, what is the point? It’s kind of vague, GGDM manages to be all of those sometimes, possibly intriguing, but probably convincing as nothing. The one sort of thing that I know that GGDM is not: GGDM is not a very good argument, does not make a very good argument in any formal or empirical sense. The best argument of GGDM is a weak, sort of fuzzy argument, a sort of metaphysical macro-social mush – on a sunny afternoon, there might be a few vaguely interesting ideas if it matters at all – and I have to avoid trying to make GGDM into a convincing argument or it will never finish.

The reader may feel that GGDM is engaged in a constant assault on their intellect. In this, I am unapologetic: Any education or experience is always an assault on our current and previous selves.

---

*“Where do we go from here, now that all of the children have grown up  
And how do we spend our time, know’n no one gives us a damn”*

– Alan Parsons Project, “Games People Play” (1981) <sup>3</sup>

---

Although I agree with Carl Sagan’s statements on most things – he is omnipresent in GGDM, and I admire his casual eloquence, he and I are very different creatures. Mr. Sagan viewed the universe with wide-eyed wonder, projected optimism, and was apparently very stung by the criticisms of his colleagues for his speculations and his popularity with the public. Mr. Sagan’s deep awe at cosmic evolution and optimism for humanity seem to me like the time of our youth when

we didn't know that our parents told us white lies, that history was sugar coated, and that the preacher at church really didn't know anything about God, or much else.

The one important point that Carl Sagan never seems to understand in all of his musings – or would never admit on television or in print if he did – is that the universe is not a wondrous playground for human intellect, rather it is a prison into which we are born without our consent (as are all other creatures on Earth, except that we happen to be – we think – more sapient than other species on Earth; that would be an amusing inquiry or absurdist bit of fiction to explore: Why would anyone consent to being born?). Some of our science now suggests that we live in a sort of hologram, which if true, is but a shadow of some other reality, thank you Plato! The universe is not our friend, if anything it simply annoys and alienates us; this is not to say that there is some higher being or malicious intent (sorry Descartes), very likely, it's just bad consequence.

Humans have always seemed to sense that there is something wrong with this universe, or that we are wrong for this universe, this sense has become more pronounced in modern times.<sup>4</sup> Can you feel it, the cognitive dissonance of our existence *hic et nunc*? Do you think it inconceivable that something should evolve or occur naturally that is hostile to or wrong for the environment in which it occurs?<sup>5</sup> What is cancer? Perhaps if you believe there must be a balance to things in the universe – and there is some circumstantial and anecdotal evidence to this point – then GGDM is part of the ontological balancing of Carl Sagan.

My relationship to the universe, and to humanity, is doubtless passive-aggressive – with a galactic negativity bias, and the more I work on GGDM, the less I care what anyone thinks of it. Thus, in the end, it appears that I am really writing GGDM for myself and that has always been the truth of it, probably for all writers. Burro Schmidt probably felt the same way. I won't have to worry about popularity. I have expressed my thoughts to the best of my ability, ground the arguments to the finest points, combed and curled the words, like any of the esteemed essayist and scholars of the past and time will tell in what sense, if any, they are correct, or useful, or they will be discarded and forgotten. Mr. Sagan would appreciate this idea at least. Most likely, "I have plowed the sea."<sup>6</sup>

This work isn't about today; I will pass, gladly so, into the nothing. My life is an absurdism, my youth gone, GGDM is all that remains to be finished. When the howling of today's critics abates, there will be the silence of centuries; the existential void.

---

*"How much science fiction is being published now that's set in worlds that are better than ours? Not that have bigger shopping malls or faster space ships, but where the characters are morally superior, where the society works better, is more just? Not many. It becomes difficult to do it, and that's a feedback relationship with what's happening in the culture, with science fiction being the minor note. People don't credit it anymore! Not just better gizmos and more virtual reality gear, but better societies. People don't believe the future will be a better place. And that is very scary."*

– Norman Spinrad, "Norman Spinrad: The Transformation Crisis," *Locus Magazine*, February 1999 <sup>7</sup>

---

<sup>1</sup> Commentary: I may be the Uwe Boll of game design: I make other game designers, bad or otherwise, feel better about themselves that at least they didn't design GGDM. My response to criticism will be much different, however.

<sup>2</sup> Commentary: Consider, for example, that I was not aware of Edward Soja until early 2018. Could there be a more compelling fact of my intellectual ignorance?

<sup>3</sup> Commentary: I was reminded of this song while watching the Pixar classic short, "Geri's Game." I was obsessed with this song as a young teen, in 1981-1982, I was reading Asimov's Foundation Trilogy, and this song remains associated in my mind with the Foundation books and Hari Seldon's psychohistory. I was in some sense, old, when I was young. But I am not young when I am old. It doesn't work that way, except for the Ancient One.

<sup>4</sup> Citation: See Aldiss discussion of Toynbee, 2 Patents.

<sup>5</sup> Commentary: For those who are wondering at this point about my mental health, I simply don't care; what matters only is that you understand this point. The college-educated reader will begin arguing about social supports and coping mechanisms to help the individual handle the petty annoyances of daily life. But all of that is irrelevant to this particular issue with the universe: Why would one need brakes if there is no need to stop? The need for brakes is indicative of the underlying problem – that is, that you need to stop, just as the fact that humans need social supports and coping mechanisms to deal with the daily stupidity quotient of the universe is indicative of the underlying problem – that our sapience has a metaphysical or cognitive dissonance with the universe in which we came to be.

<sup>6</sup> Citation: Simon Bolivar.

<sup>7</sup> Commentary: GGDM is not utopian – score one for understatement! Survival instinct of small furry mammals evolved into sapience magnifies to negativity bias, the defining mark of humanity. We wonder about the person who is smiling all the time. It seems logical that this would be true on any planet where life evolved to predators and sapience. One of the ideals of human utopian fiction is serene happiness from certainty of meaning.

## **EXODUS 20**

**AND GOD SPAKE ALL THESE WORDS, SAYING...**

***THOU SHALT NOT KILL.***

**AND MOSES SAID UNTO GOD, COULD YOU REPEAT THAT MORE SLOWLY, FOR I AM BUT A SQ  
+13?**

**AND GOD SAID UNTO MOSES,**

***THOU SHALT NOT COMMIT ADULTERY.***

**AND MOSES SAID UNTO GOD, I THINK YOU ARE BREAKING UP, YOU ARE LOSING ME,  
CAN YOU REPEAT MORE SLOWLY FOR I AM BUT A SQ +13...<sup>1</sup>**

**AND GOD SAID UNTO MOSES,**

***THOU SHALT NOT STEAL...***

**AND THE PEOPLE STOOD AFAR OFF, AND MOSES DREW NEAR UNTO THE  
THICK DARKNESS WHERE GOD WAS.**

<sup>1</sup> Commentary: For human purposes, God does not need to be “a SQ +50 Superbeing,” rather, as Robert Freitas points out, “messages transmitted across an SQ gap of 10 points or more cannot be very meaningful.”

## SHARD: I. Prime Mover

\*\*\*

Jupiter, Neptune, Minerva, and Momus

ACCORDING to an ancient legend, the first man was made by Jupiter, the first bull by Neptune, and the first house by Minerva. On the completion of their labors, a dispute arose as to which had made the most perfect work. They agreed to appoint Momus as judge, and to abide by his decision. Momus, however, being very envious of the handicraft of each, found fault with all. He first blamed the work of Neptune because he had not made the horns of the bull below his eyes, so he might better see where to strike. He then condemned the work of Jupiter, because he had not placed the heart of man on the outside, that everyone might read the thoughts of the evil disposed and take precautions against the intended mischief. And, lastly, he inveighed against Minerva because she had not contrived iron wheels in the foundation of her house, so its inhabitants might more easily remove if a neighbor proved unpleasant. Jupiter, indignant at such inveterate faultfinding, drove him from his office of judge, and expelled him from the mansions of Olympus.

Translated by George Fyler Townsend. Aesop's Fables (p. 71). Amazon Digital Services, Inc..

The Miser

A MISER sold all that he had and bought a lump of gold, which he buried in a hole in the ground by the side of an old wall and went to look at daily. One of his workmen observed his frequent visits to the spot and decided to watch his movements. He soon discovered the secret of the hidden treasure, and digging down, came to the lump of gold, and stole it. The Miser, on his next visit, found the hole empty and began to tear his hair and to make loud lamentations. A neighbor, seeing him overcome with grief and learning the cause, said, "Pray do not grieve so; but go and take a stone, and place it in the hole, and fancy that the gold is still lying there. It will do you quite the same service; for when the gold was there, you had it not, as you did not make the slightest use of it."

Translated by George Fyler Townsend. Aesop's Fables (p. 23). Amazon Digital Services, Inc.

The Lion and the Bull

A LION, greatly desiring to capture a Bull, and yet afraid to attack him on account of his great size, resorted to a trick to ensure his destruction. He approached the Bull and said, "I have slain a fine sheep, my friend; and if you will come home and partake of him with me, I shall be delighted to have your company." The Lion said this in the hope that, as the Bull was in the act of reclining to eat, he might attack him to advantage, and make his meal on him. The Bull, on approaching the Lion's den, saw the huge spits and giant caldrons, and no sign whatever of the sheep, and, without saying a word, quietly took his departure. The Lion inquired why he went off so abruptly without a word of salutation to his host, who had not given him any cause for offense. "I have reasons enough," said the Bull. "I see no indication whatever of your having slaughtered a sheep, while I do see very plainly every preparation for your dining on a bull."

Translated by George Fyler Townsend. Aesop's Fables (pp. 62-63). Amazon Digital Services, Inc.

The Charcoal-Burner and the Fuller

A CHARCOAL-BURNER carried on his trade in his own house. One day he met a friend, a Fuller, and entreated him to come and live with him, saying that they should be far better neighbors and that their housekeeping expenses would be lessened. The Fuller replied, "The arrangement is impossible as far as I am concerned, for whatever I should whiten, you would immediately blacken again with your charcoal." Like will draw like.

Translated by George Fyler Townsend. Aesop's Fables (p. 16). Amazon Digital Services, Inc.

**Excerpts from Joseph P. Laycock, Dangerous Games: What the Moral Panic over Role-Playing Games Says about Play, Religion, and Imagined Worlds (2015), pp. 218-219, 220-221, 239-240**

As [Brandon] Cooke points out, any model or symbolic order by which one might make sense of the world – including language – begins with the imagination. There can be no mental concept of evil unless it is first imagined. This is a problem for authors like Larson, Brown, and Schnoebele whose theology and politics are firmly located in “the religion of fear.” Religious literature attacking role-playing games is often festooned with pentagrams and descriptions of human sacrifice. By the theology these critics employ, the artist who created the comic strip *Dark Dungeons* was actively engaged in Satanic occultism. An artist could draw the evil Ms. Frost – the teacher, dungeon master, and priestess of Diana – only if he encountered a demonic force in the spiritual realm, visualizing it well enough to give it material form through his art.

For this reason, more mainstream Christian critics of D&D concede that it is acceptable to imagine evil in at least some circumstances. In a more nuanced Christian critique of D&D, Presbyterian theologians Peter Leithart and George Grant ask whether a Christian actor can play Iago or Mephistopheles. Much like Plato, they conclude that mimicking evil is acceptable for educational purposes, but discourage fictional narratives that appear to celebrate corruption. This leads to a more sensible discussion of what kinds of fantastic narratives might be acceptable. Most, but not all, Christians who oppose fantasy role-playing games approve of Lewis, Tolkien, and even traditional fairy tales. The original version of Jack Chick’s tract *Dark Dungeons* contained a footnote to the text in which the preacher urges the congregation to go home and burn D&D books and any other occult books. The footnote read: “Including C.S. Lewis and Tolkien, both of which can be found in occult bookstores.” However, current versions of the tract contain no such reference. It is easy to see how a conservative evangelical like Jack Chick would assume that if D&D is Satanic, then Lewis and Tolkien must be Satanic as well. And yet most anti-D&D crusaders praise these writers. Leithart and Grant urge their readers to fill their homes with Lewis and Tolkien as well as Shakespeare, Milton and Chaucer. The arguments of moderates, who advocate Tolkien and Lewis while condemning fantasy role playing games, are more revealing than those of religious critics who condemn all fantasy as demonic. Moderate religious critics struggle to articulate why wizards, magic and demonic antagonist are acceptable in some fantasy narratives but not in others. The reasons they cite are inconsistent, suggesting the presence of hidden fears and desires underlying their suspicion of the imagination.

\*\*\*

The erotics of fear are apparent in these critiques. Leithart and Grant as well as Abanes clearly *enjoy* fantasy. In fact, all of these critics must be drawn to fantasy at some level or they would direct their energy toward other issues. And yet fantasy is somehow inherently threatening. The real threat of fantasy is not that it depicts evil as triumphant or that slight variations in the portrayal of magic will lure audiences into demonic occultism. Fantasy is threatening because it provides a means of “beyonding.” The imaginary worlds of fantasy novels and role playing games allow audiences to mentally step outside their own worldview and look back on it. Not only does this kind of agency threaten the power of hegemonic movements; it also inspires doubts in the moral entrepreneurs themselves. As Jason Bivins wrote, “The religion of fear’s most pressing concern is that the monster may lurk within as well as without.” For these reasons, the door to fantasy can be safely opened only if it is certain that the other side is still thoroughly Christian. However, to simply state that fantasy is dangerous because it leads to critical thinking would reveal the presence of hegemony and thereby undermine it. The arguments presented by Ankerberg, Weldon, Leithart, Grant, and Abanes serve as cover to conceal the mechanisms of hegemony as well as their own doubts about how indulging in their love of fantasy might challenge their faith.

To truly prevent the beyonding effect of fiction, it is necessary to claim that the imaginary worlds are not, in fact, imaginary but another part of reality. The moral panic over role-playing games employed a hermeneutic of fantasy that framed imaginary worlds not only as real but as part of a demonic threat. This a hermeneutic has a long genealogy in the West dating back to at least the Puritans.

\*\*\*

Christian critics have sometimes taken the position that the imagination is inherently heretical because “reality” is an expression of God’s will, and therefore imagining any alternative reality is an attempt to rebel against God’s plan. In the 1980s, moral entrepreneurs were fond of quoting “John,” the gamer interviewed for an article in *New West*. John was quoted as saying: “The more I play D&D, the more I want to get away from this world. The whole thing is getting very bad.” Leithart and Grant commented on this quote: “In a very dramatic way, D&D reinforced John’s hatred for life as ordered and given by God.” This is a peculiar comment for Christian theologians to make. Longing for a better world is arguably the essence of Christianity. Traditionally, Christianity has regarded the world as fallen to sin and fundamentally flawed. What is really at stake here is not proper reverence for God but control. Or rather, submission to the hegemony has become synonymous with submission to god.

Leithart and Grant go on to write:

In summary, Scripture encourages leisure, play and even role-playing though always within the limits of moral Law. In the context of these standards, however, our imaginations find true freedom. Like the sheep to which the Scripture so often compares us, our freest play is within the fold. Outside, there is only bondage of fear that allows for no real leisure.

For all of their condemnation of modernity, the claim that reality is ipso facto God’s plan for us is a modernist theology. It has far more in common with the Enlightenment philosophy of Gottfried Leibniz, who argued that this must be the “best of all possible worlds,” than with the theodicy of Augustine, who believed that evil exists because while God is incorruptible, his creation is not. The strange theology suggested here appears to be simply a means of attacking the autonomy that role-playing provides. Here role-playing is condemned precisely because it entails a kind of freedom that Leithart and Grant regard as heretical. Anyone who has read George Orwell’s *1984* will recognize their claim that freedom is actually bondage. Hegemonic rhetoric often presents propositions that are logical contradictions.

Others who have analyzed the panic over role-playing games have reached similar conclusions. Daniel Mackay, drawing on the work of Roland Barthes, notes that role-playing games are potentially threatening to the social order:

Perhaps this is why much of the hostility and aggression against role-playing games in the United States has come from the religious right, which accuses role-playing games of being avenues to satanic worship and occult practices. The religious right is really at war with an alternative social world in which “men give meaning to things.”

Isaac Bonewitz in the preface to *Authentic Thaumaturgy*, his book on realistic occultism in fantasy role-playing games, identifies role-playing as a dire threat to hegemony and the religious right:

Obviously, a hobby that teaches young people how “reality” is a socially constructed concept, that many people have had different religious and magical ideas over millennia, that one faith’s demons are another faith’s deities, and that anyone can easily invent their own religion (complete with “infallible” scriptures), is going to be a direct threat to wealthy and powerful men who would rather not let such “dangerous” knowledge spread.

The preacher's kids and their friends will, of course, continue to read and play fantasy games whenever their parents aren't looking. Perhaps when enough young people have learned the tolerance, flexibility and creativity that becoming a good game player requires, the Greyfaces who've built their empires of anger, hatred and fear, will finally fall – and the real Illuminati will be able to rejoice!

Bonewitz' tone is gleeful and almost messianic. However, his advocacy of playing role-playing games as a form of resistance to hegemony is not very different from Gramsci's advocacy of learning Latin.

As the font of new possibilities, the imagination is inherently threatening to those who seek to preserve order and the status quo – whether they are kindergarten teachers, Victorian pedagogues, the religious right, or a Fascist government. However, maintaining order by closing off the secondary worlds of fiction and fantasy comes at a terrible price. Cognitive scientist now know that the imagination does not weaken children's grasp on the real world but is actually a mechanism through which the world is rendered sensible. If we abandon our capacity to create new worlds, other capacities are diminished as well. Our facilities for reason, art, and abstract thought of all kinds begin with our ability to step outside the world as it is given to us and discover it anew. A Christian like Tolkien would argue this is not a heretical faculty but our divine right as subcreators.

- **Commentary:** It seems *almost* beyond imagination now that there was such a public brouhaha over fantasy role-playing games in the 1980s and into the early 1990s (but no fundamentalist objection apparently to military miniatures games, board wargames, and games like Monopoly, Easy Money, etc.). According to the pundits, Dungeons & Dragons (“D&D”) was the end of American youth, an existential threat to the future of the country, and/or a sign of the end of times. I had a subscription to Dragon Magazine for a couple of years starting in 1990 and also bought some older issues to add to my collection; all together, I have about 50+ hard copies stretching from #113 to #213, plus a few others. Additionally, all of the issues of Dragon Magazine are available for free in PDF on [annarchive.com](http://annarchive.com). In those days, Dragon Magazine regularly included arguments about “Christian gaming,” and especially the controversy over TSR's poor decision to remove demons, devils and angels (or rather, to rename them) from AD&D 2<sup>nd</sup> Edition. Oddly, there are two specific situations that I remember from Dragon Magazine that I cannot now locate:
  - ✓ An editorial or article where TSR belatedly admitted “we caved in” to pressure from religious fundamentalist who would never buy or read D&D books and that they had betrayed the paying customers who bought their books, who have no problem with demons, devils and angels in the game, and who constitute the player base of D&D.
  - ✓ A public response to a letter allegedly sent by religious high school students asking the editors questions about D&D as if D&D were a religion. The ruse was transparent; they were trying to bait the editors of Dragon Magazine (an organ of TSR) to say things in response that could be used against D&D (or construed as satanic or occult). The editors saw through it and took the high road, pointing out the purposes of education and encouraging the students to do research.

I spent a couple of days looking for these articles, but it seems as if they occurred in an alternate reality. But in the process, I located the text excerpted above, which excellently reprises the situation; noting however, that the outline or form of the arguments offered by Mr. Laycock are the same as those previously used against religious injunction or repression of sexual activities and carnal desires (even within a marital relationship): conspiratorially suggesting that the clergy or “moral entrepreneurs” were secretly terrified of their own sexuality and carnal desires, and desired to deprive everyone else of the same, and that doing so was a means of establishing socio-moral control and hegemony over society, gaining for them political power and wealth. Such arguments are difficult either to prove or to dismiss entirely, and so remain, especially in light of the Church's recent (and long history of) scandals.

On the other hand, the religious right didn't do themselves any favors arguing over D&D, they came out looking like fools. If Nick Spencer's assertions are correct, the brouhaha over D&D played significantly into the cause of modern atheism rather than bringing more people, especially youth, to the church. The religious right does not seem to have learned from the experience, they just find another boogiemán.

---

*“To bake an apple pie, you must first invent the universe.” – Carl Sagan*

---

*“The Cosmos is all that is or ever was or ever will be. Our feeblest contemplations of the Cosmos stir us – there is a tingling in the spine, a catch in the voice, a faint sensation as if a distant memory, of falling from a height. We know we are approaching the greatest of mysteries... The size and age of the Cosmos are beyond ordinary human understanding. Lost somewhere between immensity and eternity is our tiny planetary home. In a cosmic perspective, most human concerns seem insignificant, even petty. And yet our species is young and curious and brave and shows much promise. In the last few millennia we have made the most astonishing and unexpected discoveries about the Cosmos and our place within it, explorations that are exhilarating to consider. They remind us that humans have evolved to wonder, that understanding is a joy, that knowledge is prerequisite to survival. I believe our future depends powerfully on how well we understand this Cosmos in which we float like a mote of dust in the morning sky.” – Carl Sagan, Cosmos, p. 4*

---

Page | 1

**Humbug:** I don’t know anything about “*there is a tingling in the spine, a catch in the voice, a faint sensation as if a distant memory, of falling from a height*” – maybe when I was young – but when I think about the Cosmos now, I usually get angry, sad, depressed, disgusted, alienated. Mr. Sagan must be living in another cosmos as noted in 2112 Absurd Words, *supra*.

**Smokos and Nag-a-Ram:** Merriam-Webster online dictionary Editor’s Note to Definition of *cosmos*: “*Cosmos* often simply means ‘universe.’ But the word is generally used to suggest an orderly or harmonious universe, as it was originally used by Pythagoras in the 6th century B.C. Thus, a religious mystic may help put us in touch with the cosmos, and so may a physicist. The same is often true of the adjective *cosmic*: Cosmic rays (really particles rather than rays) bombard us from outer space, but cosmic questions come from human attempts to find order in the universe.” Thus are there any cosmic questions except the ones humans ask? Can there be a concept of objective, inherent cosmic questions?

- ✓ “The universe – a vast expanse of space and matter. It includes all that we see, and all that we know. Since the beginning of time, we have wondered how it came to be? A gloriously orchestrated plan? A chance series of events? Or something much, much dumber?” – Opening Narration, “Ice Age: Scrat Spaced Out” (animated short, 2016).

**Six Pieces of Parchment:** Moses and his brother were in a cave on Mt. Sinai; Moses, having just received the Word of God, was tasked with writing down the story of creation he had received from God. Moses began reciting, “Approximately fourteen billion years ago, there was a big bang...” His brother interrupted, “Moses, we only have six small pieces of parchment! Can we shorten this?” Moses sighed, “Oh, very well. Write this down then. In the beginning God created the heavens and the earth. Now the earth was formless and empty, darkness was over the surface of the deep, and the ....”

- ✓ I do not believe I invented this story. I think I read it long ago, I have it associated in my mind with Isaac Asimov, possibly it was in *Microcosmic Tales*. But I cannot seem to find the source now. Biblical text was adapted from an online Bible.

*“Did you know Voltaire was the first to suggest that the universe was created by a gigantic explosion? ... And then Goethe was the first to suggest that spiral nebulae were swirling masses of stars. We now call them galaxies. It’s kind of funny how often new concepts of science find their first tentative forms of expression in the arts.” – John, The Man from Earth (2007) <sup>1</sup>*

**Crack in the Door:** The only Voltaire work I have read was Candide (1759), in college long ago (after 1759). But considering that Aristarchus of Samos suggested that the Earth went around the sun (heliocentrism), it is not beyond possibility that Voltaire might have suggested the explosive origin of the universe. Carl Sagan discusses Aristarchus in Cosmos, Episode 7.

**Big Bang Theory:** In the beginning of our current universe was the Big Bang. At the moment of the Big Bang, the old universe was destroyed by the contradiction of its truths and falsities, and the new universe was created; at the moment of the Big Bang, the truths and falsities of the new universe were defined in the form of the physical laws of the universe. In the moments following the Big Bang, the truths were absolutely true, and the falsities were absolutely false; however, as the universe expands outward at greater than the speed of light over eons, the truths become a little less true and the falsities become a little less false.

In the first moments of the new universe, it was absolutely true that all things in the universe had a physical form, and nothing more or less, and that nothing could travel faster than the speed of light. Except that the universe itself may have been expanding at faster than light speed.

As the universe expanded, the physical laws changed slowly so that more and more complex molecular structures developed until eventually, structures developed which were ‘more’ than mere physical forms. These we call Life, and over time, greater structures developed which were more than just feeding and reproductive drives, these we call Intelligent Life.

In the first moments of the new universe, it was absolutely true that nothing could travel faster than the speed of light (except apparently the expansion of the universe), and nothing new could exist which did not previously exist in another form in the universe at the time of the Big Bang. As the universe expands and the laws weaken, Intelligent Life bends the local universe to its own reality, and it becomes possible to travel faster than light. At first, the first scientists to begin to understand the universe in a technological-scientific manner, noticed that apparently information travels faster than light in certain limited circumstances, but later, it is found to be possible for Life and Matter to travel faster than light if you just know the right ‘tricks,’ i.e. Faster Than Light (FTL) technology develops. And interstellar culture, the mixture of Intelligent Life Forms that should never have met, becomes possible, then becomes Real.

- ✓ “We live in a universe that is, by some estimations, too good to be true. The fundamental constants of nature and the cosmological constant, which drives the accelerating expansion of the universe, seem ‘fine-tuned’ to allow galaxies and stars to form. ... Why do these numbers, which are essential features of the universe and cannot be derived from more fundamental quantities, appear to conspire for our comfort? One answer goes: If they were different, we wouldn’t be here to ask the question. This is called the ‘anthropic principle,’ and if you think it feels like a cosmic punt, you’re not alone. Researchers have been trying to underpin our apparent stroke of luck with

hard science for decades. String theory suggests a solution: It predicts that our universe is just one among a multitude of universes, each with its own fundamental constants. If the cosmic lottery has played out billions of times, it isn't so remarkable that the winning numbers for life should come up at least once." – Kate Becker, "Does Science Need Falsifiability?" NOVA, February 11, 2015.

- ✓ "I think the real interest in arguing Boltzmann Brains is as a lesson in caution – caution in arguing probabilities before really understanding the prior assumptions. In this case, there is no evidence that the Big Bang arose from a random fluctuation." – Matt O'Dowd (City University of New York), "Are You a Boltzmann Brain," PBS Space-Time Channel, April 26, 2017.
- Or Just a Blown Lightbulb: Entertain for a moment the idea that the universe is a holographic projection of sorts; an idea that has gained traction and the fascination of physicists and philosophers. See e.g., Michelle Starr, "Is the universe a 2D hologram? Fermilab intends to find out," August 26, 2014, CNET, and Nick Bostrom, "Are You Living in a Computer Simulation," *Philosophical Quarterly* (2003), Vol. 53, No. 211, pp. 243-255, both quoted in 1 Information, p. 1327, *infra*. Philosophers will talk about what it means, regardless of whether it is objectively true or otherwise, while physicist will attempt to find out if it is objectively true, and leave the 'meaning' to everyone else. Thus the divide of modernity:
  - ✓ "Where religion addresses ontology, science is concerned with ontic description." – Michael Robbins, "Atheists Used to Take the Idea of God Seriously. That's Why They Mattered." *Slate Magazine*, July 8, 2014.

If the universe is expanding, are 'pixels' being added to the hypersphere or whatever to compensate, and if so, how? Think of a television screen, envision how the picture loses definition if you either get too close, or if an old movie is projected on a screen that is too large. If 'pixels' are not being added to the universe, then it will lose cohesion as it expands?

- ✓ "In recent years, the search for the fundamental laws of nature has forced us to think about the Big Bang much more deeply. According to our best theories – string theory and M theory – all of the details of the laws of physics are actually determined by the structure of the universe; specifically, by the arrangement of tiny, curled-up extra dimensions of space. This is a very beautiful picture: particle physics itself is now just another aspect of cosmology. But if you want to understand why the extra dimensions are arranged as they are, you have to understand the Big Bang because that's where everything came from." – Neil Turok, "The Cyclic Universe," *Edge* (edge.org), May 16, 2007.
- Moonwalking to the Stars: Most people assume, without thinking, that the laws of the universe have always been the same since inception. It's a model that makes things simple, just simply rewind the universe clock using current knowledge of physics, and the movements of the stars, back to the beginning. It gets several orders more complicated if we discovered that the universe hasn't always had exactly the same physical laws – that there is a kip in the clock – because it would be very difficult to determine, experimentally, what changed, what was before. We have stuck with the model because, for the most part, it is correct, but not exactly correct, we have not been able to explain everything.
  - ✓ People think we walk by pushing against the Earth. Science tells us that we walk by pushing against the Earth, which then pushes back against us propelling us forward.

This is one of the reasons why walking on concrete is faster than walking on grass; the push-pushback is more efficient. This seemingly trivial difference is a critical shift in frames from a human-centric view of walking to a view of walking that is part of a more complex interaction with the environment. Think for a moment the effect of this simple, yet not simple, cognitive difference? Likewise, it seems that human existence requires us to push against the universe so that the universe pushes back.

*“Query: what are the three parts of wisdom according to philosophy? To be wise one must know what is real, what is good, and how to think. These three parts of wisdom correspond to the three parts of philosophy, namely Metaphysics, Ethics, and Logic.”*

– Robert Wesley Angelo, “The Origins and Branches of Philosophy,” captured July 29, 2018 from <https://www.roangelo.net/logwitt/philosophy-origin.html>

**Fourth Question:** In the early 20<sup>th</sup> Century, Albert Camus added a fourth question:

- ✓ “‘There is only one really serious philosophical problem,’ Camus says, ‘and that is suicide. Deciding whether or not life is worth living is to answer the fundamental question in philosophy. All other questions follow from that’ (MS, 3). One might object that suicide is neither a ‘problem’ nor a ‘question,’ but an act.” – Stanford Encyclopedia of Philosophy article, “Albert Camus.”

It is not clear to me into which of the three traditional questions or areas of philosophy the question of suicide belongs to the exclusion of the others. One could stuff part of it into each, but the whole discussion will never fit correctly under any of the three questions. I do therefore, believe it is a fourth question, and in that sense, Albert Camus accomplished something extraordinary in the history of philosophy. I believe that Albert Camus did state a problem because it must be decided whether or not to act (i.e. commit suicide) and how does one go about that?

*“...since philosophy is divided into three branches, which respectively deal with the mysteries of nature, with subjects of dialectic, and with human life and conduct...”*

– Marcus Tullius Cicero, *Of Oratory* (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, *The Rhetorical Tradition* (1990), p. 209

## Endnotes.

<sup>1</sup> **Commentary & Citation:** I have not found any direct evidence to support this movie dialogue’s assertions, but this *might* be close: What better cure for a mechanist view of the universe than a big frakk’n explosion to start things?

- ✓ “In the last fourteen years of his life, Voltaire ... showed a keen interest in biological subjects, especially those having to do with the nature of generation. He supported the doctrine of preformation, the popular eighteenth-century view that all organisms had preexisted before the Creation... The belief that the clockwork universe had been created by an intelligent and all-powerful God demanded that God’s involvement in the creation of living creatures play a fundamental role in explanations of their generation. For there was always the danger in the mechanist world view that God as Creator might be a superfluous entity and *that matter and motion themselves might be responsible for all of the phenomena of the universe*, including creation of life and the existence of the human soul.” – Shirley A. Roe, “Voltaire Versus Needham: Atheism, Materialism, and the Generation of Life,” *Journal of the History of Ideas*, Vol. 46, No. 1, Jan. - Mar. 1985, pp. 65-87 (emphasis added) (preview page on <https://www.jstor.org/stable/2709776?seq=1>).

*“Let me say quite categorically that there is no such thing as a fuzzy concept... We do talk about fuzzy things but they are not scientific concepts. Some people in the past have discovered certain interesting things, formulated their findings in a non-fuzzy way, and therefore we have progressed in science.”*

– Rudolf E. Kálmán

**The Fuzzy Game Engine:** The core concept of the GestaltGenesis-DayMillion (GGDM) game rules is the ability of players to collectively change the game, to shape the game universe, and the emergent playing experience. Unlike most other game systems, particularly those of computer moderated games or most high-end manufactured board and card games, the rules of this game are not eternally absolute in any sense and the system is not ‘closed’ or ‘contained.’ Even victory is negotiable. Such a system requires a different approach to playing this game, and perhaps greater effort than many players are used to putting forth in systems where the rules are absolute and externally defined (i.e. the printed rule book or computer game program).

GGDM is a space opera wargame, with a strong Nomic element introduced and interwoven into the game. Or perhaps it’s a Nomic in the form of a space opera wargame; either could be true. The vehicle for the Nomic element of the game is the Interpretations by which players manipulate the game reality and change the rules. Other players may not like the way the rules or game reality are being manipulated or changed, and try to change the game in another way. So, in the end, GGDM is also a wargame, of sorts.

- ✓ Although Merriam-Webster online dictionary uses the word “fantasy” in the definition of *space opera* – fantasy settings have certainly tried space opera, e.g., D&D and Magic the Gathering – *space opera* in GGDM is treated as a sub-genre of *science-fiction literature*.
- ✓ “The two essays that make up the fourth section of the book, ‘Psychopolitics’ and ‘Science Fiction,’ address an issue that has long concerned Spinrad in his fiction as well as his criticism: the militaristic power fantasies that seem inherent in SF’s most basic narrative structures. He tells the story of how he nearly bludgeoned readers with irony in The Iron Dream – only to find the novel placed on the American Nazi Party’s recommended reading list.” – Gary K. Wolfe, “Writers as Critics,” reviewing Norman Spinrad’s Science Fiction in the Real World, *Science Fiction Studies*, Vol. 17, November 1990.
  - It would be an interesting dynamic if some players/positions in GGDM wanted to play it as a vast interstellar wargame while a majority of the players/positions did not (call them the *Spinrad faction*) desire a wargame. But it would be hard to say no to the wargamers once the shooting starts! See additional discussion in *The Come As You Are Party*, 1 Combat, p. 932, *infra*.<sup>1</sup>
- Fuzzy Logic: Fuzzy Logic is defined as “a system of logic in which statements can be true, false, or any continuum of values in between.”<sup>2</sup> Fuzzy logic represents the way humans think as opposed to the way computers ‘think’ or operate. The classic example of fuzzy logic is the traffic light, which has red, amber and green signal lights. The red light clearly means stop, so in binary terms, it is assigned a “0” value. The green light means go, so in binary terms, it is assigned a “1” value. What then does the amber light mean? Slow down because the light is going to change to red in the near future. But it is neither a stop nor a go, neither “0” nor “1.” Modern traffic control systems are built on fuzzy logic.

Alternatively, imagine you had a bucket full of red and blue balls. Not all red balls are exactly red, or the same color of red, or the same hue or texture red. The same is true of the blue balls. A computer asked to sort the balls would not be able to do it, because not all balls are “true red” as define in the computer’s operating parameters, nor are all of the balls “true blue” as define in the computer’s operating parameters. A human would have little problem in sorting the balls, because a human is not strictly logical or strictly limited, a human can recognize ‘sort of red-ish,’ pink and ‘sort of blu-ish,’ powder-blue balls and sort them appropriately. A more complex computer program might accomplish the same, eventually, but in doing so, the operational definitions of red and blue have to be widened for the computer to do this, so that red is less ‘true’ and blue is less ‘true,’ and thus the computer acquires a sort of ‘fuzzy logic’ through human intervention, the computer becomes ‘more intelligent.’

- ✓ What is blue is both objectively true in terms of light frequencies and true also as a matter of subjective judgment or even social consensus in terms of range, shade, hue, etc. deviance that is still considered “blue.” That we called certain light frequencies blue is purely arbitrary, we might instead have called them  and it would have been just as well, if unpronounceable. What you consider blue is to you absolutely true, while others might violate your absolute truth (or even social consensus) of what is blue by what they proclaim as blue or not blue.<sup>3</sup>
- Things that are True, Things that are False: The game rules are considered to be absolutely True, and things that directly contradict the game rules are absolutely False. For example, if there were a rule, ‘Starships may not travel at a speed of greater than 2,’ that would be absolutely True. Any other statement, such as ‘Starships may travel at a speed of 3’ would be absolutely False. The concept of pairs of absolutely True and absolutely False statements is the touchstone of the Interpretations that players create during the game; each Interpretation will require absolutely True and absolutely False statements that define the Interpretation, within the rules governing creation and operation of that kind of Interpretation. The absolutely True and absolutely False statement of any Interpretation may not directly contradict any game rule or previous Interpretation, but obviously, they don’t have to completely agree with the game rule or previous Interpretation either. But they do have to be reasonably close, and not in complete contradiction. It is thus that slow change occurs.
  - ✓ Generally, these rules, especially as applied to News Events later, are intended to curb or prevent retcon (retroactive continuity) in the game. History in the game should not flow from the future into the past. It is necessary and desirable in the long-term play of a game that participants generally avoid turning the game into a comic book serial or pulp fiction, where the past is changed to fit the current scheme. However, it’s all a bit fuzzy.
- Matters by Degrees: The game rules are each considered an absolute Truth (“each” being a complete rule or sentence, as necessary), and each Interpretation is defined by absolute True and absolute False statements but they are not the ‘whole truth’ of anything, rather, they serve as a structure from which the fuzzy logic of the game players works. Absolutely True or False statements cannot be directly contradicted by other statements (otherwise they are not “absolute”) but they can be modified by other Absolutely True or False statements. Players must take care when issuing Absolutely True or False statements as truths and falsities cannot be simply discarded or ignored when no longer convenient.

*‘No absolutes. There are exceptions in varying degrees to any rule.’*

– Steve Blass (Pirates Broadcaster), May 8, 2019, talking about baseball pitching and hitting

**A priori Truth Function:** There is little or no relationship between the amount of ‘truth’ in anything and its value toward human understanding; patently false things can be useful as well.

- ✓ Often the converse of something is more useful in understanding the something; e.g., compatibilism is perhaps best understood by reading the criticisms of the anti-compatibilist. The same is true of fallibilism/infallibilism and probably also criticism of the Theory of Relativity. Perhaps this is the refuge of a lesser mind, since others must have understood it initially in order to criticize or oppose it?

GGDM may still be useful covering the bottom of the bird cage.

- ✓ I have written in GGDM what I think. You may of course, disagree with me – I am not Jesus, Muad’Dib, or Buddha – but only if you have read what I have written. Even if you disagree, there may still be value in what has been written here.

**Absolutely True Mechanics:** The concept of absolute True and absolute False statements is merely a game mechanic. I, the game designer, personally tend to regard ideas, statements, and such as more or less probable, creditable, believable, or useful. Belief in absolutely True or absolutely False statements, principles, and such are simply not useful outside of very limited contexts. Most statements, ideas, or beliefs contain some element of truth, or at least enough truth to be useful toward an understanding of the subject or issues they address.

- **Judgment:** Understanding the truth or falsity of anything is an act of judgment, that is, sapience, even when the matter is purely empirical. Animals, especially cats and dogs, seem to be able to sense in some immediate situations when you are attempting to deceive them; whether this is a judgment on what we are trying to show them, or a clue from our body language is debatable. But in any event, sapience is not something confined to higher cognition, rather, it appears to be an evolutionary development, an adaptive and enhanced survival trait (related possibly to group problem solving). Now, the ability to handle truth and falsity as an abstraction, as an object onto itself, is another matter entirely confined to humans and their machines, a level of sapience akin to understanding zero as a numerical operator.
- **Relatively Absolute:** The 2018 board game Cryptid has an interesting take on the concept of absolute truths. The object of the game is to find the location (lair or habitat) of a creature on a hexagonal map with different types of terrain, to which is added one colored pair of one standing stone and one abandoned shack (to act as additional terrain features) for each player, in different map locations. Each player is given one statement about the location of the creature’s habitat that is *absolutely true*, e.g., the habitat is within 2 spaces of a standing stone or the habitat is not in a woods or swamp, or the habitat is within 1 space of water. Each player does not know the statements of the other players. Players ask questions of each other about whether the creature could be in a particular hex and the other player answers yes or no based on their ‘absolutely true’ statement.

Because the players do not know the statements of the other players, another player may answer yes or no to a location that would be different than your answer (based on your statement) if you had been asked; that is, the answers of other players to the question might well violate your absolutely true statement because it is unknown to them. Absolute truth in this is peculiarly both relative and universal, because in the end, there is only one space on the board – the actual habitat – that collectively satisfies all of the absolutely true statements individually known by the players.

---

*“I would like to comment briefly on Professor Zadeh’s presentation. His proposals could be severely, ferociously, even brutally criticized from a technical point of view. This would be out of place here. But a blunt question remains: Is professor Zadeh presenting important ideas or is he indulging in wishful thinking? No doubt Professor Zadeh’s enthusiasm for fuzziness has been reinforced by the prevailing climate in the U.S. – one of unprecedented permissiveness. Fuzzification, is a kind of scientific permissiveness; it tends to result in socially appealing slogans unaccompanied by the discipline of hard scientific work and patient observation.” – Rudolf E. Kálmán*

---

## Endnotes.

<sup>1</sup> Commentary & Citation: Imagine this: You are hired to write a Christian spirituality/‘faith-based’ movie or a movie suitable to be shown on Hallmark channel or for some holiday special. To do so, you must create drama without violence, destruction, explosions, or introducing anything weird (all of which was normal in Saturday morning cartoons I watched growing up; there is a Looney Toons video on YouTube of Wile E. Coyote, 80 explosions in 11 minutes). It is difficult to create drama, let alone an adventure film, without violent conflict, mishaps, gadgets. Violence is adventure and gives a visceral edge to dramatic situations in between explosions and gunshots. Yet it is apparently done regularly, because the categories of films described above do exist, there is a Hallmark channel, there are holiday movies, and there are Christian spirituality/motivational movies. *Viewed in this light*, the typical militant sci-fi, fantasy, old Western movie, post-apoc movie, big screen space opera, or badass cop/special forces/espionage movie seems a lesser grade of writing. As Clint Eastwood said of Westerns, “The morality is in the gun play.”

- ✓ Now, could a game of GGDM be played without interstellar wars, revolutions, extinction? Without an arms race? Would such a game be boring, would players drop from the game, or go back on their pregame agreement and start a big war? Is there anything in GGDM that is interesting other than big space battles?
- ✓ Babylon 5, for all of its fine attributes, was about big space wars, there was one before the series, there were many during the series, and there are hints of still more after the series. Just about all of the big space movies and sci-fi movie franchises required war and violence; e.g., Star Wars, The Matrix, Battlestar Galactica, the Aliens and Predator movies, Star Trek in all its incarnations, Star Gate in all its spinoffs to keep the audience engaged and punctuate the drama. Some, like Independence Day or Ender’s Game are unapologetically all in on the battles, explosions, sometimes in a not-to-be-taken-too-seriously sense and others with a profound message embedded. However, there are some different creatures out there, following the example of Close Encounters, Powder, etc. but even Arrival and Contact had to have at least one explosion each.

<sup>2</sup> Citation: Merriam-Webster’s Collegiate Dictionary 11<sup>th</sup> Ed.

<sup>3</sup> Commentary: Personal experience: I complimented a young lady attorney many years ago (um, about 20+) on the striking color of her pink dress. She responded in a very offended manner, “It’s fuchsia!” Well, ok then, it’s fuchsia! I wasn’t getting anywhere there, obviously, so I left and did something else. *Whatever*, I really don’t care.

- ✓ In 2020, I encountered a design website article whose title is, “What color is fuchsia?” See previous discussion of the colored balls.

*“On the contrary, he made it clear that the business of the philosopher was to make ideas available, and not to impose them on people.”*

– T.H. White, The Once and Future King (1958) <sup>1</sup>

**Philosopher:** A man who is convinced that the universe doesn't give a damn what he thinks or wants, and who expects to be ridiculed or ignored by his own, is a philosopher, free to speak what seems true. For whom does he write?

Any honest philosopher knows that the world (or even their own people) would not be better off being ruled by them. The distinction is notable; the aggressors of World War II were not seeking to make the world better by ruling it, but rather, to benefit themselves and their peoples by domination of the world. This is true of almost all aggressors in history; few have the good of the world in mind. It is thus that conquest is usually considered incompatible with the philosopher, who should not be confused with radical ideologues or imperialists.

*“For decades, biologists spurned emotion and feeling as uninteresting. But Antonio Damasio [Prof. of Neuroscience, University of Southern California] demonstrated that they were central to the life-regulating processes of almost all living creatures. Damasio’s essential insight is that feelings are ‘mental experiences of body states,’ which arise as the brain interprets emotions, themselves physical states arising from the body’s responses to external stimuli. (The order of such events is: I am threatened, experience fear, and feel horror.)*

*He has suggested that consciousness, whether the primitive ‘core consciousness’ of animals or the ‘extended’ self-conception of humans, requiring **autobiographical memory, emerges from emotions and feelings**. His insight, dating back to the early 1990s, stemmed from the clinical study of brain lesions in patients unable to make good decisions because their emotions were impaired, but whose reason was otherwise unaffected – research made possible by the neuroanatomical studies of his wife and frequent coauthor, Hanna Damasio. Their work has always depended on advances in technology. More recently, tools such as functional neuroimaging, which measures the relationship between mental processes and activity in parts of the brain, have complemented the Damasios’ use of neuroanatomy.”*

– Jason Pontin, “The Importance of Feelings,” MIT Technology Review, June 17, 2014 (emphasis added)

**The Work of the Mind:** Thinking and feeling have long been a subject of discussion in lay epistemology and behavioral sciences (e.g., “Do we think feeling or feel thinking?” August-September 2016 thread on Quora), can you think something is wrong without feeling something is wrong? Can you feel love without an object of affection? Can you think badly of or have a bad opinion of something you love?

- ✓ “Thinking and Feeling are one of the preferences used in the Jungian Type Inventory. The naming is unfortunately a bit archaic as thinking is more than thought, and feeling is not about being overemotional or fluffy. They are about how we decide: through logic or through considering people.

**Thinking:** Thinkers decide based primarily on logic, and when they do so, they consider a decision to be made. They tend to see the world in black and white and dislike *fuzziness*. Perhaps because people are so variable, they focus on tangible things, seeking truth and use of clear rules. At work, they are task-oriented, seek to create clear value. Interacting with them tends to be brief [sic] and businesslike. They may be seen as cold and heartless by Feelers.

**Feeling:** Feelers decide based primarily through social considerations, listening to their heart and considering the feelings of others. They see life as a human existence and material things as being subservient to this. They value harmony and use tact in their interactions with others. At work, they are sociable and people-oriented and make many decisions based on values (more than value). They may be seen as unreliable and emotional by Thinkers.” – “Thinking vs. Feeling,” [changingminds.org](http://changingminds.org) (emphasis added).

- ✓ “The distinction between thinking and feeling (cognition and emotion) is obviously a fundamental one in relation to what the mind does. One of the themes that I’ll develop in ‘What Is a Mind?’ is the notion that feelings present problems. That is, they represent needs; they represent demands upon the mind to perform work. Feelings make us aware that something unexpected (or something unpredicted or something uncertain) is occurring. When I say that feelings represent demands upon the mind to perform work, what I mean is that they represent demands on thinking.

The work of the mind is thinking. Thoughts are ways of dealing with feelings. In the primary case, in the standard situation, feelings come first. Thoughts are ways of dealing with feelings – ways of, as it were, thinking our way out of feelings – ways of finding solutions that meets the needs that lie behind the feelings. The feelings come first in both a hierarchical and a chronological sense. A little neonate (newborn mammal) has no thoughts to speak of, to begin with; it is a little bundle of feelings. Thinking derives from learning, that is, from experience. The apparatus for thinking then works on the material we have internalised, from the solutions we’ve experienced, as to how our needs can be met in the world. These solutions are, of course, initially provided by caregivers. (That is why parenting is important.) On this basis, thinking gradually develops and teaches us how to manage our feelings – how to solve the problems that feelings represent.” – Prof. Mark Solms, Dept. of Psychology, University of Cape Town, South Africa.

---

*“Julie Smith, director of the European Centre in the politics and international studies department at Cambridge University, says she told a lecture full of graduates about Heaton-Harris’s letter last week. ‘I told the students what my personal views were and emphasised that they were personal views. I voted to remain, but as an academic, my job is to impart knowledge, encourage debate and develop skills of analytical argument, not to impose doctrine.’”*

– Anna Fazackerley, “Universities deplore ‘McCarthyism’ as MP demands list of tutors lecturing on Brexit,” *The Guardian*, October 24, 2017

---

**The One Absolute Truth:** Throughout the process of designing GGDM, I have written only what I consider to be true, and have represented civilization in a way that I believe is most accurate (with noted concessions to human playability and game mechanical limitations). I am not speaking through the voice of a character in literary fiction as an author would – one should never assume the opinions of fictional characters represent the author, and they never should in good writing – but rather I am speaking directly to you, person to person, adult to adult. If you think-feel that I am wrong, you are free to try to prove me wrong, to do something about it, *in a constructive way*. If you think-feel that I am correct, you are free to do something about it, *in a constructive way*.

- ✓ In Job: A Comedy of Justice (1984) is Robert Heinlein speaking through Lucifer or St. Alex? Which one represents his personal views? Likely neither but they may represent time periods of his intellectual life, all while he is lampooning evangelical Christianity.

GGDM is a game that is intended to demonstrate, educate, inspire, and engage the players in discussions relating to the game and to human civilization in general. Monetization of the game would be counterproductive to those goals.<sup>2</sup> Playing and running a GGDM game is an act of civil society and will not; is not to be monetized in any way<sup>3</sup> by any player or any person tasked with running the game: No one should receive any tangible physical benefit from running or playing in this game, with the possible exception of benefitting charity.

Suppose you set out to create a work of entertainment that people would pay to see and enjoy. At some point, likely, entertainment and profit will come into conflict and choices must be made.

Further, there are no plans or intentions to ‘hype,’ ‘blast’ or otherwise advertise the game in any way, especially on social media. It’s not that sort of thing to be hyped; expectations and excitement should not be created in a group of people who ultimately will not be suitable participants of the game. The ‘publication plan’ (as a friend termed it) is to place the game on a publically available website, one of my web domains, and maybe in 25 years, someone will stumble upon it, maybe they’ll find the language of the game useful, and perhaps that they’d like to play it (very few will read past this point<sup>4</sup>). If it matters, GGDM will emerge, if it does not matter, then it’s just another silly stupid space game. Do important things unimportantly.

- ✓ “I do believe that to keep what you got, you’ve got to give it away.” – James Hetfield (Metallica); I highly recommend watching the “Metallica’s James Hetfield At Guitar Center” (2014) interview video on YouTube. James Hetfield was 50 years old at the time of the reflective and introspective interview. He says much about GGDM. 😊

Like the technological singularity, I cannot see over the event horizon of the day when GGDM is released into the wild (I am not the *Kwisatz Haderach!*).

People will play GGDM when it is useful to them. Or maybe never. GGDM is my generativity.

- Timewaster: Why would anyone spend time reading these rules if the game will never be played? See 2112 Absurd Words, *supra*. The hard (sad) truth is that very few will find GGDM exciting or interesting, and I am the only one who will ever be obsessed with it. GGDM is a game for people who would read the rules ‘just because’ then think, wow, this is a game I’d love to play. GGDM is not a game for the fickle, those who don’t care, or the video game crowd. The rest will spend their time playing Flappy Bird.

- ✓ GGDM is a wholistic work. Everything is part of the argument (like the anime Boogiepop Phantom (2000)), the holistic argument is the fabric of GGDM. The rules structure is part of the argument. The End Notes are part of the argument. The Feature Quotes (aka epigraphs) are part of the argument. The Commentaries are part of the argument. The digressions, asides, rants, editorializing and tirades are part of the argument. This is one that will take awhile to unwrap, if anyone thinks it matters.<sup>5</sup> It is, perhaps, as if Victor Hugo had designed *Les Miserables* (1862) into a civilization game, maybe with some help from Tolstoy and Dostoyevsky.

It is widely noted that even the colors in Boogiepop Phantom are part of the story; the muted brown color of the world in all episodes except the last, which was in full color, demonstrate the mental disease of the world (dark or oddly pale red is also the way the world looks when you are extremely angry or in shock from physical trauma – I accidentally hit my left thumb with an axe when I was 11 years old and still have the scar 40 years later). Also noted was the lack of outlandish dress and hair styles, or even odd manners, all intended to present a façade of normality, most of the characters appear normal people. Boogiepop Phantom is thought to have many references to Western music such as songs by Pink Floyd and Prince, and also to Western musicals. It is thus a cross-cultural product providing a continuity of humanity. Boogiepop Phantom (2000) is related to Serial Experiments Lain (1998) in both themes and the same artists and creators, and is thought to be an artistic continuum.

- ✓ GGDM is 55% game rules, 90% commentary and 5% humor:  $55\% + 90\% + 5\% = 100\%$  because everyone knows that nothing can be more whole than whole.
- Andragogy: GGDM has – perhaps somewhat inadvertently – become an exercise in andragogy. I chose GGDM as my classroom and writing as my form of instruction for the same reasons as thousands of other nerds;<sup>6</sup> if you want to learn what I have to say, you must read what I wrote. You cannot simply pretend to be listening and nod your head occasionally – like my former girlfriends, like a former female co-worker told me she does to her boyfriend regularly, or like most attorneys warming a seat at required CLE courses – *while tuning me out*; to read and learn what I have to say in GGDM, it must *matter* to you.
  - ✓ “Apathy is one psychological barrier to communication. An apathetic listener creates a communication barrier by not caring or paying attention to what they are being told. An apathetic speaker, on the other hand, tends to not relate information well and, in their lack of interest, may leave out key pieces of information that need to be communicated. Within groups, an apathetic communicator can be detrimental. Their lack of interest or passion can inhibit the other group members in what they are trying to accomplish. Within interpersonal communication, an apathetic listener can make the other feel that they are not cared for or about. Overall, apathy is a dangerous barrier to successful communication. Apathetic speakers and listeners are individuals that have no care for what they are trying to communicate, or what is being communicated to them.” – from Wikipedia article, “Apathy,” captured May 12, 2019.
- Material World: So I wrote this thing, GGDM. I cannot cite to one fact that would give any reason or evidence that anything – good or bad or not – will ‘happen’ as a result. There is nothing in the history of the world, and nothing in modern times either, that suggests anyone will care about GGDM unless there is something material to be gained. The value of ideas is

always tied to potential for gain in power and material wealth. Do you think early Christianity was an ‘innocent’ religion? Are Buddhist monks as pure as they’d like us to believe?

I have never been concerned about anyone ‘stealing’ my work: it is very difficult to give away what no one would steal or steal what is being given away freely. I have always been more concerned about loss of my work to stupid entropy of the universe, of which humanity is its agent. If you feel like trying to prove me wrong on this, go ahead, ‘knock yourself out.’

- ✓ “Activist David Meslin argues that people often care, and that apathy is often the result of social systems actively obstructing engagement and involvement. He describes various obstacles that prevent people from knowing how or why they might get involved in something. Meslin focuses on design choices that unintentionally or intentionally exclude people. These include: *capitalistic media systems that have no provisions for ideas that are not immediately (monetarily) profitable*, government and political media ... that make it difficult for potentially interested individuals to find relevant information, and *media portrayals of heroes as ‘chosen’ by outside forces rather than self-motivated*. He moves that we redefine social apathy to think of it, not as a population that is stupid or lazy, but as a result of poorly designed systems that fail to invite others to participate.” – *Id.* (emphasis added).

GGDM has no value in our society unless someone can make money, GGDM is just a useless idea otherwise. It has value if someone is paid to run it, paid to write about it, paid to write a computer assistant for the game, paid to print copies – there is nothing else to manufacture, package, ship or sell in relation to GGDM. Some entities may tangentially profit from GGDM, e.g., domain registration, internet usage, but you can be sure they don’t give a damn about GGDM. But GGDM does invite participation and self-motivation as well as any other game that someone was paid to write, design, print, package, ship, advertise, and sell.

- ✓ “In fact, he was often prevented from following his frequent creative urges by the pressure of meeting payrolls and deadlines. Yet although he could easily have sold out for the comfort of a stable job, he believed that his independence was a prerequisite for pursuing his work. Besides, he was not really interested in making money; what he really wanted was recognition of the validity of his theories about the historical analysis of combat. For over 30 years he persevered in this cause despite indifference, opposition and lack of reward, hoping to advance the use of history to protect both national and global security.” – Susan Rich, biography page for Trevor N. Dupuy at The Dupuy Institute website (<http://www.dupuyinstitute.org/tndupuy.htm>).
- ✓ Your investment in GGDM is the time you spend reading it, thinking and learning from it (and maybe playing it someday), there is no pecuniary cost to GGDM.

---

**Elric:** *As I look at you, Ambassador Mollari, I see a great hand reaching out of the stars. The hand is your hand. And I hear sounds, the sounds of billions of people calling your name.*

**Londo:** *My followers?*

**Elric:** *Your victims.*

– Babylon 5, “The Geometry of Shadows” (1994)

---

**Hand Reaching Out of the Stars:** The Concierge is the human ‘warden’ or ‘gatekeeper’ who runs the game, in other genres of gaming, the Concierge would be called the game master (GM), referee, or Evil Overlord if you like.<sup>7</sup> The term Concierge, in both its obsolete, historical and current meanings, better serves the idea of the game. A game of GGDM must always be run by a human Concierge (or team); while a program could be written to help with data and bookkeeping tasks, and to provide a three-dimensional view, GGDM will never be a ‘computer game.’ GGDM is intended to be the opposite of a computer game.

- ✓ A key to intellectual clarity starts with a definition. Look up the definitions of words we use, learn them, turn them around in your mind. Definitions become springboards for thoughts.

GGDM was designed originally in the PBEM (Play-by-email) format. Nearly all PBEM games are turn-based and computer moderated (not to be confused with a MMOG), basically, turn-based board games run by computer and email. GGDM started a lifetime ago (in 1992, before the internet) as an advanced expansion to the Avalon Hill edition of Stellar Conquest board game (memorable for having the worst box cover art ever), and evolved into the PBEM format; it is possible that GGDM may be better run using some of the newer technologies and internet platform capabilities, but in any format, it must have a forum for posting and discussion.

- ✓ Fortunately, no one is waiting in breathless anticipation for the release of GGDM or to receive any other thoughts from me, no one, except those who want money and my cats when they want milk, food, or to be petted, waits in anticipation of receiving anything from me. Nor did anyone else write a single word of GGDM (all other authors are correctly attributed). Thus, like Henry Darger’s epic Vivian Girls adventures, GGDM remains an identity only in my mind, in the form of the millions of *its and bits* stored here and there in my neurons and on various computers and drives.
- **Concierge Decorum:** The Concierge should not lecture the players and should avoid heavy-handed imposition of his or her particular point of view on civilizations or any other subject in the game; that behavior destroys the purpose of this game (see Julie Smith quote, *ut supra*). The Concierge has actions within the game, called Interventions (see Interventions, 1 Entropy, p. 227, and Acts of Intervention, 2 Entropy, p. 235, *infra*), that can be used to guide the game, but in the end, they should be used mainly to keep the game interesting and to enhance the epic story of early interstellar civilizations being told by the play of the game.

---

*“In most societies, there’s the adults’ table and there’s the kids’ table... The jesters, the holy fools ... are at the kids’ table. They’re not granted complete respectability, but they are heard because in their unguided missile manner, they sometimes say necessary things that no one else is saying. Healthy societies, in other words, don’t suppress speech, but they do grant different standing to different sorts of people. Wise and considerate scholars are heard with high respect. Satirists are heard with bemused semi-respect. Racists and anti-Semites are heard through a filter of opprobrium and disrespect. People who want to be heard attentively have to earn it through their conduct... And it should remind us to be legally tolerant toward offensive voices, even as we are socially discriminating.”*

– David Brooks, “I am not Charlie Hebdo,” New York Times, January 8, 2015

---

**Christian Numerologist:** Some who sit at the kids table don't realize that they are transparent to the adults in the world; like an infant who covers their eyes and thinks that you cannot see them. Their motives and schemes are petty and self-serving and obvious.

A good recent example of the relationship between the media and the kid's table is the "Christian numerologist" huckster who predicted the end of the world on September 23, 2017 (one of these guys comes along every year or two). Christian commentators and scholars quoted in the article objected that there was no such thing as a "Christian numerologist" and that it was a made up expertise and a false claim. The huckster either didn't realize that the media was laughing at him, or didn't care, while they were writing clickbait headlines about his claims. September 23, 2017 came and the world didn't end, so he postponed the end of the world to another date in October 2017. Did anyone expect or really want him to be correct? The farce having played out, he was dismissed back to the kid's table and the world moved on.<sup>8</sup>

**Encounter Suit:** This game is not easy to play, its story is an ongoing cooperative work by the Concierge and the players.<sup>9</sup> The game is a launch pad for intellectual discussion of everything human and of human civilizations; GGDM is the "adult table" discussion of humanity.<sup>10</sup> An intuitive understanding is helpful; each player will bring to the game knowledge of their favorite intellectual subjects and pursuits, and their education, profession, and expertise in some areas.<sup>11</sup>

- **The Adult Table:** Being President of the United States, a celebrity, stock broker, or a big corporation CEO does not automatically mean you sit at the adult table, rather, it exposes that fact to all. An adult table discussion of civilization does not in any way immediately equate with sexual or pornographic material. If you think they do, you are sitting at the wrong table.

Further, the nature of GGDM is such that it is highly unlikely that any person who is under-age will read much further than this point in the text; those who read all or most or much of the GGDM text are those who are old enough for realistic, profound discussion of humanity and civilization, *in an interstellar game setting*, and have the education and mental ability to handle the material.

- **Intuitive Understanding:** As Dr. Steven Griffith at Lycoming College (Philosophy Department) once explained, an intuitive understanding is like putting on an old favorite jacket the first time you encounter the subject, you just know it almost without being told, it just fits you. Intuitive understanding is not, however, an excuse to slack, you still have to do the work of reading and understanding the subject beyond the surface; it just makes the work easier and more enjoyable. Conversely, lack of intuitive understanding is like pushing a boulder up a hill. The latter describes perfectly my experience in college pre-calculus; that boulder never reached the top of that hill and I had to switch majors. And I am so much the poorer for it; lacking an important sense of the universe, always just beyond my intellect, relying on summaries written by those who understand.<sup>12</sup>
  - ✓ "In the philosophy of Immanuel Kant, genius is the ability to independently arrive at and understand concepts that would normally have to be taught by another person. For Kant, originality was the essential character of genius." – from Wikipedia article, "Genius," captured January 14, 2019.

*“Let’s return to the word ‘hobby.’ I define the word as ‘an activity that one takes part in for pleasure and that engages skills or faculties one enjoys using.’ This definition separates some relaxation activities from actual hobbies. Some forms of relaxation, such as zoning out in front of the TV, do not engage skills or faculties. They are effortless. Even if you aren’t paying attention, the TV drones merrily on without you.*

*Reading, on the other hand, requires effort.*

*Reading engages skills and faculties: the intellectual skill of assembling symbols on paper into coherent ideas (which, by the way, you are doing right now), and the imaginative faculty of filling in the details of the ideas you just intellectualized. If you look up from what you’re reading, those processes come to a screeching halt. Reading requires conscious effort.*

*Okay, hobbies require effort. Recreational sports, playing guitar, reading, painting, writing poetry, and playing RPGs all require exertion. The exertion takes different forms, but it’s there nevertheless. Since we enjoy the activity, we don’t mind the exertion. To (very broadly) borrow a physics concept, hobbies are ‘negative work.’ In theory, walking a staircase requires the same amount of exertion regardless of whether you’re going up or down the stairs. But, gravity helps you go down the stairs by constantly pulling you in that direction. Climbing stairs is work, descending them is negative work. The enjoyment of a hobby activity is like gravity helping you down the stairs.”*

– Dale Donovan, Editor, “Why we play,” Dragon Magazine #206, June 1994

**Hobby Lobby:** Hobbies, of course, are a ‘different strokes for different folks’ thing. My hobby is not tying flies for fishing, or woodworking, or pranking people or stealing women’s underwear. Intuitive understanding makes intellectual work feel like a hobby. Studies that are enjoyable can seem game-like (see Desiderius Erasmus feature quote, 1 Beginnings, p. 30, *infra*). Hobbies that become occupations, business interests, or employment quickly lose their joy for many people, but some people prosper in such situations. GGDM is a hobby that many will soon think of as work, struggle, while some others – perhaps those with fiction-writing genes – will find a joyous sandbox, a break from their job slinging fries, selling used cars or unusable insurance, editing hack, or managing rooms of other people’s screaming kids.

- ✓ When I used to play free PBEM games around the turn of the millennia, I believe that I gladly put much more effort and time into each game and took much more joy from playing those games than the average player. In addition to playing in multiple games concurrently, I organized groups, formed long-term alliances, created web pages, helped improve the game design and rules text, and wrote background and fiction related to the games. As such, I did rather well at the games – but less so on the game forums – in both cases probably because my overenthusiasm for the game and playing PBEMs was unmatched. I am sure that my recreational efforts have annoyed many other gamers in many genres who were either unable or unwilling to similarly immerse themselves in the recreation.<sup>13</sup> This perhaps informs my – probably unrealistic – vision of future, ideal GGDM players and lifetime efforts designing GGDM.

If you want to learn what I have to say, you have to read it. Part of the final process of editing GGDM was to have MS Word’s audio function read the documents out to me. It was good for finding occasional word errors or for hearing sentences that didn’t sound well when read out

loud, but it wasn't best for comprehension of what was being communicated in the text. As Mr. Donovan indicated, when I start typing and correcting, the audio reading would drone on and on whether I was paying full attention or not.

- ✓ This, I think, is one of the reasons why audio books have only had limited success. They are good for anyone with disabilities, but readers want to read, and it is likely that comprehension from audiobooks (especially when driving or minding kids) is not as good as reading. Audio books are thus best for general fiction and not for anything requiring concentration (or visual aids) to comprehend.
  - ✓ This also points to a problem with school courses involving mostly lecture. It is true that a professor's lecture is more interactive with the audience than an audiobook reading. But there are public school teachers and professors who need to cover a certain amount of material each class and will do so whether the audience understands or is paying attention or not (e.g., me in any math course during and after 8<sup>th</sup> grade). Thus, some professor's lectures are more like audiobooks than educational courses.
- What is a Literary Game: Literary fiction is that which engages us in a conversation with the work. GGDM is intended to do the same as a 'literary game' as stated on the cover.
- ✓ "...Here we come close to one of the definitions of literary fiction. Even the best kind of popular novel just comes straight at you; you have no conversation with a popular novel. Whereas you do have a conversation (you have an intense argument) with [literary fiction]." – Martin Amis, Experience: A Memoir (2000).

'Literary' or 'treatise' games are a solution to the 'tacked on theme' problem in current hobby gaming. Exploding Kittens game is, for example, a dead man's draw game onto which was tacked kittens as a theme (a gross thought but brilliant marketing angle), but any number of themes could have been devised from aliens to hangmen for the same game mechanic. Some tacked-on themes work better than others such that they are barely noticeable.

In other games, the game develops organically from the original theme. No one, I believe, would think the space-opera theme of GGDM is 'tacked on'; I think the game mechanics rather grew from the theme, instead of the other way around; space-opera settings allow exploration of the macrosocial and macro-historical concepts without being inconveniently roped to Earth histories and realities. Literary game design is about a lifetime of understanding. Literary games are not easy to make, though I suspect that any graduate student could do in half the time what I have done. Patience is the key on the part of the designer, having a job and a career helps greatly. It takes an active, intellectual lifetime to design a literary game, but with luck, in a few decades, there may be a half dozen more of such games.

- Macrosocial Simulation: Inherent in the idea of a literary game is the concept that GGDM is more a simulation than it is what most would call a game. As the late wargame designer Richard Berg<sup>14</sup> stated on the Board Game Geek (BGG) forums on January 18, 2007:
- ✓ "In designing games that are simulations, the key is the FOCUS ... what the Designer wants the players to concentrate on and use. If that designer wants the players to focus on how to 'win' without giving him a great deal of detail, then you tend to have what you folks call 'games.' This is a time-honored approach to this ... after all, they are ALL games, not theses or white papers (although some have attempted to attain

that level).” – from BGG forum thread “What does simulation mean in wargaming?” (CAPS in original).<sup>15</sup>

Mr. Berg must have been thinking of GGDM when he wrote the last part... or must have met me in a previous life ... because GGDM is a macrosocial simulation intended to spur conversation and introspection.<sup>16</sup> It is loaded with “detail,” it is intended that the players focus on details and dynamics, and as a result, ‘winning’ in the traditional sense is deprecated.

Page | 18

- ✓ “ALL games that purport to show history are simulations. Simulations – which are a common and key tool in many industries – allow the players to recreate what happened by providing as many of the factors that were present as possible (or as the designers desire) and, even more important, what COULD have happened, given different uses of those factors.” *Id.*

GGDM is, of course, not a ‘historical simulation’ from our current temporal position – just as we would not be history to the Roman Empire or to Warring States period China – but being set in science-fiction, focuses more on what *could* happen. While most simulations are historical (GGDM does include many historical references), it is not required that a simulation be historical – e.g., those Punnett square diagrams that you learned in high school biology project *possible outcomes* as do many market, political, military and industry simulations.

But there is an inherent limit in simulation: One cannot imagine any simulation that would have allowed ancient Europe or ancient China to even remotely predict the current world.

- ✓ “No one game, or simulation, is ‘better’ than another ... It’s what the player wants to play that makes that game ‘good’ (or bad) for him/her. ... Ultimately, what is important – perhaps overridingly so – is what YOU, as gamer/consumer want to play. If it works for you, then you are having fun ... and that game is good ... regardless how much detail is included, and how much of a simulation it is.” *Id.*

---

*“It is amazing what you can accomplish if you do not care who gets the credit.” – Pres. Harry S. Truman*

---

**Dis-Claim-UR:** Unfortunately, this issue must be addressed; no claim is made to any ideas or intellectual property (IP) made for or created while playing this game or inspired by this game.

Generally, this game should be considered open source, but if you think it’s your idea or IP and you want to own it, no one should get into a fight over it. At the very least, however, it is implied that for any ideas or IP created and used while playing the game, consent is given to use it within the game. Otherwise, you shouldn’t be playing.

It is also hoped that people refrain from printing copies of this work, for environmental reasons. Additionally, no permission is given to sell print or electronic copies of this work. And why would anyone want to? There is nothing here of value; just second-rate college freshman writing. Not one world problem was solved, nothing new was invented. I have only given ideas; I am not poorer for it, but you are richer already for having received them. Even if they are junk.

- ✓ I am reminded of the crisis meeting scene from Ghost Busters (1984), the meeting at the mayor’s office stops when the local bishop enters the room, the mayor prostates himself before the bishop, but the bishop, a slick politician type, has nothing constructive to add.

Finally, any modifications of this game should be taken with due consideration for the existing complexity of the game and the intent of the original author, and this work should not be profaned, misappropriated or misused.

- ✓ Merriam-Webster Dictionary at *profane* (v): **2:** to debase by wrong, unworthy or vulgar use.
  - Profane is also the opposite of sacred in religious and mythology studies, profane is earthly (e.g., Mircea Eliade).<sup>17</sup>
- ✓ Readers, players and participants otherwise will find that GGDM does not “need more cowbell.” (from the famous Saturday Night Live skit involving the band Blue Oyster Cult).
- ✓ IP litigation or any other kind of litigation would be counterproductive to the purpose of this game. Please show some respect for the purpose of the game.

**All In:** This game does not have ‘levels’; there are no basic, intermediate and advanced rules. Prior to 2001, the game was structured in three levels, but after 2001, the game developed in a way that cannot be subdivided. Nor could this game be converted to a board or card game. When playing GGDM, the players are ‘all in’ from start to finish, all rules apply. Don’t worry, *you know this stuff already*, even if you don’t yet know that you know it.

- ✓ My convoluted path to a college degree began at Lycoming College in 1989. Lycoming College is a private 4-year liberal arts college and in my first semester, I was required to take an intro philosophy course. I approached it with dread, I did not have a good attitude about it going in, but when I started listening to the lectures and reading the book, I discovered to my profound surprise that philosophy was in fact what I had been thinking about all my life, but I didn’t know what it was called. I somehow thought philosophy was something else, something alien, strange, complicated. In fact, it fit so naturally, I eventually became, for a short time, a philosophy major.
- Intellectual Stream: Unless a point of distinction or illustration is made or the instant work is one of journalism, quoting from the works of others is generally an act of admiration and joinder in the thoughts of another on a particular point, they are part of the ‘intellectual stream’ in the public space. The speaker featured in the quote is a ‘guest speaker,’ invited into the (our) conversation to make a particular point. Quotes can also easily mislead, misrepresent, and distort, as they are taken out of their original context. Most readers also assume that the author is personally familiar with the works quoted, which, nowadays, is not usually true (which is to say, you know what assume means, right?).
  - ✓ “No doubt one may quote history to support any cause, as the devil quotes scripture.” – Judge Learned Hand.
- No Conspiracy Here: This work was created entirely outside of academia, was not subject to peer review (I am not sure who could or would even) or the pressures of producing (publish or perish) to make a living. There were no corroborators, no conspiracy.<sup>18</sup> GGDM is purely a work of recreational thought by a living definition of the modern deep thinker; part of the Deep Blue function of civilization. The author of this work is a classic emotionally unavailable, unselected male, isolated intellectual: an aging, pudding brain, self-absorbed, self-deprecating, sun-downing, awake shot addicted, unhealthy perfectionist without peer group. Struggling against time to hold forth the flash light and running out of fresh batteries.

- ✓ “Interestingly, the OED cites a comment from the journal Nature in 1977 that ‘publishing a book is a way of avoiding peer review’, as though monograph writers were draft dodgers.” – Willy Maley, Prof. of Renaissance Studies, University of Glasgow, contributor to, “The worst piece of peer review I’ve ever received,” Times Higher Education, August 6, 2015.

---

*“You’ve got to think about big things while you’re doing small things, so that all the small things go in the right direction.” – Alvin Toffler*

---

***Please resist the urge to abridge this work.  
It really is mostly harmless.***

### Endnotes.

<sup>1</sup> Commentary: Perhaps the best examples of this are the Khmer Rouge of Cambodia followed closely by the Islamic State. The French Revolution also tried to eliminate or secularize religion and rename the months of the year.

<sup>2</sup> Commentary: A barrier already exists to playing the game in that participants will be required – of necessity – to own a computer with a reliable internet connection, to be an educated adult, and to have the time, will and interest to play this game. This is a set of unfortunate fundamental realities of our time. GGDM would not work as a pen and paper game, or a board or card game. It was designed as a computer game, an internet game, by someone who has had the fortune of owning a PC continuously since 1989. The digital divide is real, it has reached the point in 2018 where those who are not ‘connected’ (TV, PC, internet, smart phone, tablet) are on the outside in jobs and culture.

<sup>3</sup> Commentary: A friend once offered that whenever I am finished with what I am working on (he meant, GGDM), we’d find a way to “get it into a block chain” with the intent of making money on it. I’d heard various versions of this before, but that day that he said it directly, I had to shut him down. I simply said, no, it doesn’t work that way. The upshot here is that I am not going into the business of selling people nothingness. That’s not what I worked for.

- ✓ I have had the misfortune of being exposed to timeshares; first from salesmen when I was a teen, then in real estate class, and then finally, early in my professional career, I worked on a huge lawsuit involving a failed timeshare development. I was of the opinion at that time that the entire timeshare industry was a scam and should be outlawed. But, generally only people with some money buy timeshares and it’s not an issue that generates a lot of public sympathy. So it’s left to the courts to handle the litigation.

<sup>4</sup> Citation: For satirical amusement regarding the Muller Report, see Alexandria Petri, “It is increasingly clear that none of you read my report,” Washington Post, May 29, 2019.

<sup>5</sup> Commentary: It is interesting reading the blurbs about the people who run sites like Aeon (<https://aeon.co/people>) – everyone is listed as ‘specializing’ in something along with a group of other academic interests; this is probably necessary for credibility, but it is sad too. I certainly know more about some things than others – for example, I know little about basket-weaving and hope I never have extended ‘arts and crafts time’ like in Happy Gilmore (1996) – but I don’t think I have ‘specialized’ in anything. In that sense only, I think of myself as a ‘pure intellectual’ in that I just read whatever, think about whatever, and comment on whatever in relation to the GGDM project – and maybe this is what is really meant by a ‘New York intellectual.’

- ✓ It is probable that GGDM is an intellectual center, vehicle and structure for me in the same way that the Lutheran concept of God was the intellectual center, vehicle and concept for someone like Dietrich Bonhoeffer. In this, I am not comparing myself to someone such, but instead considering a necessity of a center or anchor for a lifelong human cognitive process; the examination of every intellectual in history probably starts with finding the center point from which all of their works spring. And what is the cognitive center from which you spring? Do you know?

<sup>6</sup> Citation: Merriam-Webster online dictionary article, “Of Nerds, Geeks, Dorks”: “Dork, when used to refer to a socially awkward or inept person, is a relatively recent word: our records indicate that it first appeared in writing in the 1960s. Two of its synonyms in this sense are likewise of fairly recent vintage. Nerd (typically used of a studious species of dork) dates from the 1950s; it was coined by Dr. Seuss in his 1950 book If I Ran the Zoo, although

not in the sense that we use today. Geek became synonymous with nerd in the 1950s. Prior to this, the word referred to, among other things, a carnival performer who would bite the head off a live chicken, or other small animal, as part of an act.” Ozzy Osbourne is a geek then! Note also the adolescent voiced nerd line from Heavy Metal (1981), “There was no way I was going to walk around this place with my dork hanging out!”

<sup>7</sup> Commentary: Babylon 5 fans may eventually refer to me as Concierge One (or maybe the less-than-Great Maker or >GM). Some may call me Deep Blue. Others may provide me with less flattering titles. My ex-boss’ wife sometimes humorously called me “Professor.”

<sup>8</sup> Citation & Commentary: “You have better usages of your time and better usages of your money than giving them to someone who plays hopscotch with the Bible and makes wild conclusions from flimsy evidence. Of course, Cain could answer that I’m just part of the church involved in the cover-up. (Because, you know, the church secretly has conversations with Putin regularly on how he’s going to use an EMP.) But my serious advice is to please ignore people like Cain who are in my opinion ends times hucksters. We’ve seen it all before folks. It’s always been wrong before. How many times do these people have to be wrong before we finally stop taking them seriously?” – Nick Peters, “A Brief Look At Alexander Cain,” May 6, 2015 (forum post, TheologyWeb, [www.theologyweb.com](http://www.theologyweb.com)).

- ✓ “(Odd that Cain needs so much money when it’s going to be useless soon supposedly and isn’t that part of the sorcery of Babylon?) It’s unknown at this point if Cain is willing to refund everyone who buys a copy of his book and everyone who goes out and buys the supplies much like the Y2K scare tactics people did. Oh wait. It’s not really unknown. Even though the answer hasn’t been stated publicly, I think we all know the answer to that question.” *Id.*
- ✓ Alexander Cain is the author of a Biblical interpretation book, Alive After the Fall. According to Mr. Peter’s May 2015 forum post, Alexander Cain predicted, on Biblical interpretation, that President Obama would be the last President of the United States. Fast forward, on March 30, 2020, I received an “Alive After the Fall” spam email with the subject line, “Exposed: The Darkest Secret of the Trump Presidency.”

<sup>9</sup> Commentary: GGDM is also not a ‘4x game’ (eXplore, eXpand, eXploit, eXterminate), though it retains some of those elements from its great ancestor, Stellar Conquest (1975). Some positions could play GGDM in the 4x style.

<sup>10</sup> Commentary: Or you can go sit at the kiddie table and watch Dukes of Hazzard reruns.

<sup>11</sup> Commentary: This game is rated MIA for Mature Intellectual Adult, warning: extreme profundity!

<sup>12</sup> Citation: See further, A SECONDARY PERSON, 1 Fallen to Earth, p. 1499, *infra*.

<sup>13</sup> Commentary: The same thing happened in military intelligence school, it was a dream vacation for me, it wasn’t drudgery; military intelligence was basically a living extension of my hobbies and intellectual interests. One Major described me as a “fireball.” And I was in the habit of studying and learning at that time because I was in college (which also, generally, was not drudgery to me, and which I usually enjoyed). Thus, I did well at both. I really hoped back then to be able to enter the MS of Strategic Intelligence (MSSI) program at Georgetown University, but my chances were very slim to none. The MSSI program is now listed on the National Intelligence University site.

<sup>14</sup> Commentary: Old wargame designers never die, they just go full tactical.☺

<sup>15</sup> Citation: [https://boardgamegeek.com/thread/146488/what-does-simulation-mean-wargaming#objcontainer\\_article1282718](https://boardgamegeek.com/thread/146488/what-does-simulation-mean-wargaming#objcontainer_article1282718).

<sup>16</sup> Commentary: It’s intended as humor: I did not know Mr. Berg and he would never have heard of GGDM.

<sup>17</sup> Citation: “AB [Anne Billson]: Did you see Bartertown as intrinsically evil?”

GM [George Miller]: No, just as profane. Just concerned with everyday getting on, making-a-buck type world, which we are all part of. And in a sense, because it’s not very broad in its vision, ultimately evil in its function. Without people consciously trying to be evil. It’s just the way we conceive everyday life as being ultimately corrupt and cynical, but there’s no room for the broader issues. Mainly because they’re so limited, only evil in that sense. And the people in it don’t really see it as evil.” – George Miller as quoted by Anne Billson, “George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview,” previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015.

<sup>18</sup> Commentary: My cats may have helped telepathically, there may be a cat conspiracy in GGDM, but cats are not considered persons and have no legal rights, so they will have to be contented with a food dish, toys and a warm lap.

## Weird Circle Fixation

*“Why do mathematicians care so much about pi? Is it some kind of weird circle fixation?”*

*Hardly. The beauty of pi, in part, is that it puts infinity within reach. Even young children get this. The digits of pi never end and never show a pattern. They go on forever, seemingly at random — except that they can’t possibly be random, because they embody the order inherent in a perfect circle. This tension between order and randomness is one of the most tantalizing aspects of pi.*

*Pi touches infinity in other ways. For example, there are astonishing formulas in which an endless procession of smaller and smaller numbers adds up to pi. One of the earliest such infinite series to be discovered says that pi equals four times the sum  $1 - 1/3 + 1/5 - 1/7 + 1/9 - 1/11 + \dots$ . The appearance of this formula alone is cause for celebration. It connects all odd numbers to pi, thereby also linking number theory to circles and geometry. In this way, pi joins two seemingly separate mathematical universes, like a cosmic wormhole.”*

– Steven Strogatz, “Why Pi Matters,” The New Yorker, March 13, 2015

*“Since it seems obvious to us that time runs forward, and that causes precede effects, it is a very curious thing that many of the laws of physics as described by scientists would be equally valid whichever way time ran. In other words, the direction of time, sometimes called the ‘arrow of time’, could be reversed without conflicting the laws of nature. The only scientific principle that seems to show that time must run in the direction in which we all intuitively perceive it to run is the so-called Second Law of Thermodynamics. This is the principle that says, to put it simply, that as time runs forward, hot things get cooler and energy tends to become evenly distributed in the universe. This is true of our Sun, and of a cup of coffee in exactly the same way.*

*It is not reversible...But there is a loophole even here. The Second Law is not the same kind as most laws of nature. It is a statistical principle that works on probabilities of what billions of atomic and subatomic particles will do...Individual particles are not subject to statistics. On a submicroscopic level, it is quite possible that actual reversals in time do take place, and that individual particles move backwards in time. The cosmologist Thomas Gold has seriously suggested that the present direction of time is a temporary phenomenon and a consequence of the way our universe is currently expanding.”*

— Peter Nicholls, The Science in Science Fiction

**Excerpt of “The Existential Void of the Pop-Up ‘Experience’”**By Amanda Hess, *New York Times* (Critic’s Notebook), September 26, 2018

One evening this summer, I left work around 6, ducked into a storefront in Midtown Manhattan and stood at the back of a line, waiting to become myself. I was at the threshold of the Rosé Mansion, a pop-up “experience” that is themed around pink wine but promises much more. I had been beckoned there by an Instagram ad featuring a woman with heart-shaped glasses on her face and a plastic cup in her hand. “Be fiercely and uniquely yourself at Rosé Mansion,” it said.

What I am at the Rosé Mansion is, mostly, standing around. Though a friend and I had \$45 tickets to enter the manse at 6:30 p.m., we were moored in its sweaty lobby for another half an hour, left to stare at the “ROOFTOPS AND ROSÉ” pink tanks on display in the gift shop until a Rosé Mansion “ambassador” unhooked the velvet rope to unleash us and dozens of other patrons into the space.

This was a familiar feeling. I’ve spent the past few months going to as many temporary “experiences” as I could find in New York, to explore every broadly themed “mansion” and “factory” and “museum” possible before they all shutter and reconvert into the empty storefronts of high-rent blight. They included Color Factory, stocked with “participatory installations of colors”; Candytopia, an “outrageously interactive candy wonderland”; 29Rooms, a “groundbreaking art experience” dedicated to “expanding your reality”; and the Museum of Ice Cream’s spinoff space, featuring a “Pint Shop” and “tasting room” created in collaboration with Target that “re-visions the grocery store, enabling a hyper-sensory experience.”

\*\*\*

And yet, the “experience” has emerged as among the defining fads of my generation. There have been New York experiences centered on tea, dreams, eggs, illusions and cereal. Soon the Museum of Pizza, “the world’s first and only immersive art experience celebrating pizza,” will open. There’s one for dogs now, too: Human’s Best Friend, which offers 20 “photo moments” for your pet to endure.

By classifying these places as experiences, their creators seem to imply that something happens there. But what? Most human experiences don’t have to announce themselves as such. They just do what they do. A film tells a story. A museum facilitates meaning between the viewer and a work of art. Even a basic carnival ride produces pleasing physical sensations.

The central experience delivered at all these places is one of waiting. At the Color Factory, I first waited for half an hour past my ticket time, outside in the 90-degree heat. Then I waited inside the lobby, just outside a roped-off area. After being allowed inside the roped-off area, I was offered mochi ice cream while I waited. Then I was shown an orientation video and ushered into a rainbow-painted hallway, which turned out to be another line in disguise.

What are we waiting for? Places that are themselves reminiscent of lines. At 29Rooms, a pop-up from the women’s site Refinery29, I waited outside big white tents to get into makeshift rooms like “Star Matter,” a space curated in collaboration with Nicole Richie, which features big fake rocks, little fake stars and a hanging red orb. The aesthetic recalls the line for Disneyland’s Splash Mountain, except in here, Fleetwood Mac was playing. One of the features of the Rosé Mansion is a fake gold throne that you can sit on while wearing a fake gold crown, an event akin to hanging out in the lobby of the New Jersey Medieval Times. Each of these experiences culminates in a ball pit — filled with “marshmallows” at Candytopia, “champagne bubbles” at the Rosé Mansion, and blue-colored balls at Color Factory — a feature pioneered by the McDonald’s Play-Place.

Yet these line-adjacent experiences are pitched as somehow transformative. In a plaque outside the “Star Matter” room, the experience was teased as “a cosmic pilgrimage of love, music, and connectedness into the California night sky and back in time to the 1970s, a decade defined by progressive group thinking.” The Color Factory says it’s designed to “invite curiosity, discovery and play.” The Museum of Ice Cream’s Pint Shop is said to “inspire and empower audiences to be their most creative selves.” Mostly, we’re expected to have the time of our lives. A Candytopia employee announced: “The first rule is to be happy and always smile! Frowns make other people sad!”

The most that these spaces can offer is the facsimile of traditional pleasures. They take nature and art and knowledge seeking, flatten them into sight gags and stick them to every stray surface. At a preview party for the Museum of Pizza — held inside a real museum, the New Museum — items like a slice-shaped guitar donated by the musician Andrew W.K. were displayed in glass boxes, as if to conjure an air of significance. The Museum of Ice Cream’s Pint Shop offshoot (now closed) was only “creative” insofar as taking photographs inside a store creates a kind of content. And the “discovery” offered by the Color Factory mainly involves following directions: Trace a flow chart on the floor to find your “secret color,” which corresponds with a random dance move — “air guitar like you’ve never air guitared before” — you’re instructed to complete on the light-up floor in the next room.

\*\*\*

Even the loose themes of these places often aren’t enough to sustain full “experiences.” Candytopia’s main attraction is its candy statues — a fox made from candy corn and gummy bears, a dragon of Swedish fish and licorice strings — but it also contains inexplicable items like a punching bag labeled “Candytopia” and a wax figure of Katy Perry. The Rosé Mansion is designed through very, very free association: There are two Cialis-esque bathtubs filled with rose petals, because “rose” sounds like “rosé,” and a room plastered with pink flamingos because rosé is also pink. Occasionally, this approach revealed irreverent charms: At the Color Factory, a rainbow conveyor belt served macarons; at Candytopia, a candy pig spewed confetti. More often it’s just confusing, as when the Rosé Mansion styles more than one “experience” around fake landline telephones.

\*\*\*

There aren’t characters in these spaces. Instead there are young temp workers dressed in uniforms who are tasked with wiping down surfaces, chasing down balls that have escaped the pit and fostering cults of personality around the museum creators themselves. At the Museum of Ice Cream’s Pint Shop, an employee in a sprinkle crown, pink feathered leg warmers and a lab coat calling himself “Slush” told an assembled crowd about how Ms. Bunn “experimented with 7,000 different combinations of vanilla” to perfect one of the museum’s flavors.

There is one way these experiences are better than real life. Standing on the lip of the Grand Canyon, taking in the Mona Lisa at the Louvre or witnessing a seal pup shimmy onto a rock, we might pull out our phone to take a picture, only to find that what we experienced as grand feels dinky through the lens. But these experiences often look cheap and grimy in person. They’re made to pop on camera.

These places are often described as “Instagram Museums,” and the real experience plays out only after we post photographic evidence on social media. The internet is an increasingly visual space, and these museums, with their enormous pools of candy and gargantuan emoji props, are designed to fit the shrunken-down Instagram grid. What’s the point of anything else?

Walter Benjamin’s “The Work of Art in the Age of Mechanical Reproduction” suggested that the technology to endlessly replicate images had compromised the aura of art, the unique presence of an original piece. These spaces offer a canny, if cynical, response: The guests supply the aura.

That logic has so permeated the culture that these “experiences” need to offer little to activate that impulse. The now-closed Museum of Ice Cream’s Pint Shop was, essentially, a store, stocked with racks of \$25 “Vanillionaire” hats and \$10 churro clothes patches. And yet on an afternoon in July, it was filled with people taking their photos in front of the shelves.

The central disappointment of these spaces is not that they are so narcissistic, but rather that they seem to have such a low view of the people who visit them. Observing a work of art or climbing a mountain actually invites us to create meaning in our lives. But in these spaces, the idea of “interacting” with the world is made so slickly transactional that our role is hugely diminished. Stalking through the colorful hallways of New York’s “experiences,” I felt like a shell of a person. It was as if I was witnessing the total erosion of meaning itself. And when I posted a selfie from the Rosé Mansion saying as much, all of my friends liked it.

– Princess Irulan, “Dune” opening narration (1984)

**The Key to the Singularity:** The existential void is the key to the Singularity.

Page | 22

No one of our species can see the whole existential void but we know it’s there and we name and define shades and glimpses of the void; what we do in defining the void determines who we are.

The existential void stretches before us. We can now see space, galaxies, the universe, for what it is, devoid of fancies, the inherent despair of meaninglessness of our existence. The existential void is the curse of intelligence; the more intelligent, the more, longer and deeper we stare into the void, parting the curtains, seeking a higher meaning. The ability to fill and stretch across this void will determine our future evolution and failures.

Math as most of us know it, consists of progressions and equations; in which there can be nothing there that wasn’t there to begin with, so math is insufficient to describe what is greater than its parts, for which we need a new way of thinking.

The Gestalt Structure is the balance and answer to the void. Life and living intelligence knows without speaking that the void can only be filled when the whole is greater than the sum of its parts.<sup>1</sup> Civilization – which is everything we do and what we are – is our own peculiar Gestalt Structure and catalyst for or to trans-evolution. Trans-human evolution began the first time that a human ancestor who should have died of any natural cause, did not die, and in fact survived and prospered enough to successfully propagate the species.

- Does the Existential Void Actually Exist?: It does now. In your head.<sup>2[Definition]</sup>
  - ✓ “By an ‘appearance’ is meant any existent which impinges on consciousness, anything cognized, irrespective of any judgment as to whether it be ‘real’ or ‘illusory.’ ... Knowledge develops from appearances, which may be: (a) objects of perception, i.e. concrete phenomena in the physical or mental domains; (b) objects of intuition, i.e. one’s subjective self, cognitions, volitions and valuations (non-phenomenal concretes); and/or (c) objects of conception, i.e. simple or complex abstracts of preceding appearances” – Avi Sion, abstract of Phenomenology (2005).

Did the Existential Void exist before someone gave it a name? It doesn’t matter unless you are one who insists that either reality is completely objective (i.e. the only reality is the objective reality), or that objective reality is superior to subjective reality.

- ✓ See Aspects of Sociology, 2 Culture, p. 371, *infra*.
- Fembots: Can an intelligence exist that is not also sapient? Can humans recognize intelligence that is not sapient? These are questions that have bedeviled literature, philosophy and technology since Western culture first realized the possibility of artificial intelligence (and collective intelligence of eusocial insects).
  - ✓ Isn’t it interesting, this fascination we have with female human-looking robots? Studies show that the more human a robot appears, the more uncomfortable we are with it. Yet we continue making human looking robots, for example, the Chinese fembot Yangyang (who looks eerily like Sarah Palin) or Olivia (modeled after Scarlett Johansson), made in Hong Kong. And the technology will likely only improve, adding

facial expressions (the Professor Einstein Robot is really creepy), voice inflections, and intelligence to a machine with a human face. Sharon, dear, where are you?

- ✓ In October 2017, *in a move that is as strange as it is stupid*, the Kingdom of Saudi Arabia made the fembot Sophia (modeled after Audrey Hepburn), who has facial expressions, and had said she wanted to destroy humans (look up the inane video interview), the first robot with full citizenship in any country; immediately this provoked a backlash as Saudi women's rights campaigners noted that the fembot Sophia would have more rights than Saudi women.

---

*“The Swiss psychologist Carl Jung once remarked that human beings could withstand almost any amount [of] suffering so long as they felt the suffering possessed meaning. And this need for meaning is as fundamental as the need for shelter, food, and companionship.”*

– Mark Goddard, “The Human Need for Meaning,” Health Guidance, October 27, 2018

---

*“As human beings, we need to make meaning of our existence. Meaning gives definition to our life and our life path. This search for meaning is often challenging. How do we make sense of who we are within a world that seems out of balance with poverty, war, and famine on the one hand and tremendous privilege on the other? Religions and philosophies have pondered the question of meaning as a core tenet for their framework of beliefs. There are as many answers, from materialism to community to spirituality, as there are humans to think of them. A key aim of the Existential-Humanistic perspective is to discover what your authentic meaning is.”*

– Bob Edelstein, L.M.F.T., M.F.T., “The Need for Authentic Meaning,” Psychology Today, October 15, 2012 (emphasis in original)

---

**Humans Need Meaning:** *A priori.* Suppose I offer as an axiom ‘Humans need meaning.’ The wording of this is careful, I could have said ‘Humans create meaning’ – which I believe is true – but that has long been an issue in science and philosophy – most famously Plato’s essences and the positivists. So the most that can be said, reflectively and without controversy is that ‘Humans need meaning’ avoiding the issue of whether the universe has objective meaning or whether we can know what action is without having seen action.

- ✓ “It is through work that human beings realize the self, through work that we become fully human. We differ from all other life on earth in that we realize our imaginations in action on the external world. For humans, the work process is a unity of imagination and action.” – Frank Elwell, Macro Social Theory (2009), Kindle Edition, p. 36.
  - This succinctly describes my struggle with GGDM – to give my imagination effect on the external world. The struggle of every parent, teacher.

Actually, the original ancient argument was about whether truth, wisdom was objective, e.g., Plato’s Gorgias (380 B.C.) which charges that a skilled orator who is not a philosopher can create false knowledge in the minds of the listeners – and that argument is still going on today but has been quite muddled by observer relativity and collapsing wave functions. However, the argument about whether knowledge is objective (as in the physical laws of the universe and absolute morality) becomes muddled with the argument about whether meaning is also objective, because the modern concept of God includes everything – creation, objective knowledge, objective meaning in the form of its very existence, absolute good, benevolence, moral right, truth.

Even in ‘truth’ one has to be careful as the word has many meanings depending on context, sometimes literal factual truth (vs. lying or distortions), sometimes truth is also metaphysical, textual, religious, esoteric, self-aware, allegorical, satirical, or comedic. So what truth was Plato talking about? His own view of things naturally; all else was falsehood. To hold that Plato was talking about truth absolutely objectively is nonsense; no, Gorgias was an ideological document, but the discussion has value, and that is why it is still required reading in many studies.

Can you deny my offered axiom, can it be refuted? What irreconcilable intellectual contradiction is created by the denial, what is the consequence? To refute it, you’d have to say that ‘Humans don’t need meaning.’ Now, you are not going to be struck by lightning for saying that but what can be offered as an alternative to explain the entirety of human civilization, or at least, music, literature, language, religion, ideology, worldview? Is worldview not a meaning imposed?

- ✓ In order to even understand the axiom and to refute it, you need meanings, for example, you must be able to read and comprehend the symbols, and groupings of symbols (i.e. written words), of my language to which we have arbitrarily and systematically assigned meanings. You must share some worldview with me.
  - This is similar to Descartes’s existence; to know I exist, I must have thought of it, therefore I must exist, because if I didn’t exist, I’d have no thoughts. Famously, “I think therefore I am.”
- ✓ The fact that we argue from definitions, that we need definitions to make sense strongly implies both that humans need meanings and that meanings and worldviews are imposed. If they were not, the universe would be self-evident, *a priori* – it is only us who are confused and in need of definitions.

So in this case, the alternative to the offered axiom is nothingness, the Existential Void, the vacuum. *Reductio ad absurdum*. This is not new, it is not rocket science, any more than “humans act” was new in Ludwig von Mises’ time; the acts of men (especially purposeful acts) had long been a concern of philosophy, religion, history, criminal law, politics, war, and rhetoric.

- ✓ The *a priori* process within GGDM at least consists of offering an allegedly irrefutable deductive structure of civilizations and then defending it to conclusion and corollaries. An *a priori* science (e.g., Austrian School Economics) is the process of building corollaries and hierarchical relationships from initial *a priori* propositions.

The axiom of ‘humans need meaning’ may even tag along with Ludwig von Mises human action axiom like a pesky, unwanted little brother. The human meaning axiom sheds light on the primal ends and the motivations of human action, though strictly speaking, the Austrian School does not care about the motives or values of concrete ends sought, so as to avoid non-mathematical, non-logical discussions of morality, philosophy and psychology. Human meaning is the pesky little brother to human action because it answers a different question than the Austrian School asks.

- ✓ I maintain that this is not a strawman that I am beating here; as the remainder of GGDM will demonstrate, I regard this as the core issue of humanity and it needs examination every generation, just as we teach children to count, read, write, get along.
- We Hold These Truths to be Self-Evident: *A priori* is closely connected with ‘self-evident’ (which everyone remembers from the Declaration of Independence in primary school); Merriam-Webster online dictionary defines *self-evident* as “evident without proof or reasoning” and in the classic definitions of *a priori*, ‘proof’ would include observation and evidence.<sup>3</sup>

So in this sense, some definitions can make terms *a priori*, for example, in baseball, awarding a Run Batted In requires (drumroll please) ... the run to be batted in! Thus, no RBI is awarded if the runner on third scores on a wild pitch, passed ball, balk, or steals home. The run, of course, still counts. Similarly, on a sac fly, the batter still gets a RBI without getting a hit, which is a different thing as well. It thus would create an insoluble intellectual contradiction to award a RBI when the run was not batted in, or to not award a RBI just because it is an unearned run due to a previous error.<sup>4</sup> After 120 years of professional baseball, Run Batted In remains self-evident even in modern baseball; it can be described as one of the *a priori* terms of baseball.

- ✓ So back to the old Declaration of Independence... is it an ideological document or a set of *a priori* statements? Everyone has heard the opening lines, “We hold these truths to be self-evident that all men are created equal...” Is that *a priori*? What are the consequences of disagreeing, of *refuting* the offered axiom or Kantian synthetic *a priori* proposition? What insoluble intellectual contradiction is caused by *refuting* the statement? Now, to brush silliness aside, it is generally interpreted that the writers did not mean literally created equal in any sense, they meant created equal before the law (even though African slavery existed in all of the colonies at that time, and they had displaced the Native Americans, neither of whom were equal before the law, ever) of God and man – but that is not what the statement says, they could have added a couple of words... They then support this assertion with some mythopoeic ramble about being endowed by the Creator also offered as *a priori* – something of which they couldn’t possibly know or deduce anything about....

---

*“When Ludwig von Mises began to establish a systematic theory of economics, he insisted on what he called the principle of methodological dualism: the scientific methods of the hard sciences are great to study rocks, stars, atoms, and molecules, but they should not be applied to the study of human beings. In stating this principle, he was voicing opposition to the introduction into economics of concepts such as ‘market equilibrium,’ which were largely inspired by the physical sciences, and were perhaps motivated by a desire on the part of some economists to establish their field as a science on par with physics.*

*Mises remarked that human beings distinguish themselves from other natural things by making intentional (and usually rational) choices when they act, which is not the case for stones falling to the ground or animals acting on instinct. The sciences of human affairs therefore deserve their own methods and should not be tempted to apply the tools of the physical sciences willy-nilly. In that respect, Mises agreed with Aristotle’s famous dictum that ‘It is the mark of an educated man to look for precision in each class of things just so far as the nature of the subject admits.’”*

 alertandoriented.com (blog), April 13, 2016

---

**People Aren’t Little Stones:** The structure of GGDM is inherently deductive rather than inductive, which makes it more philosophy than science. GGDM takes this thing, this phenomenon called humanity, civilization, human civilization, and reduces it to its necessary parts in the form of a game.

- ✓ Ludwig von Mises was in the cohort with Prof. Clarence Marsh Case on this issue, and their threads meet in Aspects of Sociology, *et seq.*, 2 Culture, pp. 371-373, *infra*.

GGDM is not inductive in the sense that it takes a group of observable, empirical phenomenon and tries to find a ‘natural law’ governing their behavior which can be tested repeatedly for confirmation.

Humans don’t work that way:

- ✓ “People are not little stones, or keys in someone’s pocket, that can be moved from one place to another just like that...” – Colonel-General Ratko Mladić, 1992 (see full quote, 4 Expansion, EN 4, pp. 929-930, *infra*).

Page | 26

---

*“From that premise, and from a few other empirical and essentially self-evident propositions (e.g., that there is a diversity of ends that human beings choose for themselves, that there is a diversity of means in nature, and other basic notions such as these), Austrian economists develop an economic theory and identify ‘economic law’ that include the laws of utility and laws of returns. They then go on to develop an elaborate theory of money, of interest, and of the business cycle.”*

– Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” [alertandoriented.com](http://alertandoriented.com) (blog), April 13, 2016

---

**Logotherapy:** The praxeology of GGDM might be summarized thus:

- ✓ That due to human awareness, our sapience, an existential void either exists subjectively, collectively for humans or if objective, it is that we can see it better than other creatures who are less sapient (and even better than our own children, part of ‘growing up’ is this realization); that this would be true of any sapient intelligence.
- ✓ That human acts, behavior, conduct, and our entire civilization is predicated to avoid the existential void, even to avoid contemplating it; economic acts<sup>5</sup> are as related to this void as religion, social etiquette, music and literature.
- ✓ That the sum total of human actions against the existential void is emergent; emergence is not empirically testable (for the most part, that seems to be the consensus issue in recognizing it) yet the phenomenon is clearly there before us, every day: Life, Human civilization, possibly even the universe is emergent from something else.
- ✓ The players in GGDM, within the game, will naturally demonstrate all of these points; emergent narrative naturally forms as part of any gaming experience.

Praxeology specifies only that humans act with purpose or purposefully and thus express preferences and choices, but that says nothing about whether the acts are either rational or moral or their opposites, it is just as valid either way in the considerations of both Praxeology and Logotherapy (sort of like an absolute value in math or physics that works both ways temporally, see also *Homo economicus*, Big Endian, Little Endian, 6 Diplomacy, p. 1174, *infra*). It is true that GGDM’s praxeology might be stung by the same ‘amoral’ criticism against logotherapy:

- ✓ “In 1982 the highly cited scholar and holocaust analyst Lawrence L. Langer, who while also critical of Frankl’s distortions on the true experience of those at Auschwitz, and Frankl’s amoral focus on ‘meaning’ that could just as equally be applied to Nazis ‘finding meaning in making the world free from Jews,’ would go on to write ‘if this [logo-therapy] doctrine had been more succinctly worded, the Nazis might have

substituted it for the cruel mockery of Arbeit Macht Frei [‘work sets free,’ read by those entering Auschwitz].” – from Wikipedia article, “Viktor Frankl,” citing to Thomas Szasz, Suicide Prohibition: The Shame of Medicine (2011), pp. 60-62 and Lawrence Langer, Versions of Survival: The Holocaust and the Human Spirit (1982), p. 24.

However meaning and the existential void should not be confused, in any direct sense, with morality – which is exactly what I believe happened due to Frankl’s unfortunate association with the Göring Institute (f/k/a Berlin Psychoanalytic Institute<sup>6</sup>) in 1937-1938 and later confused claims that his theory originated in the concentration camp at Auschwitz. Moralities aside, not all meanings are equal and some create a clearly self-destructive course under certain circumstances – if you were a gladiator and your meaning in life were measured by how many opponents you killed in the arena, then you must keep fighting and someday, probably sooner rather than later, you will die of your own meanings. And it will be all for nothing. Just like Nazi Germany.

If, as in Langer’s criticism, one found meaning in killing all the Jews in Europe – well, we know what happened at Nuremberg.<sup>7</sup> So, I believe the morality aspect of it takes care of itself eventually in finding meanings, but the two should not be confused even as they are kissing cousins.

---

*“Consider the proposition: ‘If George V reigned at least four days, then he reigned more than three days.’ This is something that one knows a priori, because it expresses a statement that one can derive by reason alone.”*

*– from Wikipedia article, “A priori and a posteriori,” July 24, 2019*

---

**Crack in the Temple:** *A priori* statements, propositions, have long been the bedrock of human knowledge. *A priori* is by definition, unassailable, inarguable, indisputable, and thus the only things we can be certain are absolutely true; even history, which is empirical and rhetorical can be a lie in the facts recorded by our ancestors. *A priori* was as unmovable as the Earth to our ancient ancestors, though we have since noted that the Earth moves constantly, that it is a non-Euclidian surface, and that fact is relative to the observer.

This ancient temple bedrock has some cracks and conditions that few expect. For example, the feature quote *a priori* proposition seems extremely simple to us, but not to the tribesmen in the Clan of the Cave Bear (1986) – except for the shaman, they couldn’t count to four. What if the recipient of the proposition had to lay out stones in parallel lines to see that it is true? From this, there are a number of corollaries that follow:

- **Empirically Provable:** An *a priori* statement must ultimately be empirically provable, and if that is necessary, then there is no distinction between an *a priori* statement and an *a posteriori* statement:<sup>8</sup>
  - ✓ Cf. “Compare this with the proposition expressed by the sentence: ‘George V reigned from 1910 to 1936.’ This is something that (if true) one must come to know *a posteriori*, because it expresses an empirical fact unknowable by reason alone.” *Id.*

For most people the truth of the first proposition is evident because of memorization of our counting system, that is, because of our counting system, where 4 comes before 5. It’s a shortcut to *a priori*. That is, we don’t count stones or make tick marks in the sand or even in our heads to figure out that four days is less than five and thus the statement is true by side by

side comparison. The smaller amount is always part of the larger amount, by definition; thus we count time passage.

- ✓ If you knew that our counting system represented amounts and that each number is larger than the previous, larger than all previous numbers, but not what the numbers actually represented, you could arrive at the truth of the proposition by simply following the order of the numbers, where 4 comes before 5, therefore the latter is larger.

Having to count stones and compare lines renders *a priori* moot (but not non-existent).

- ✓ “The word ‘calculus’ comes from ‘rock,’ and also means a stone formed in a body. People in ancient times did arithmetic with piles of stones, so a particular method of computation in mathematics came to be known as calculus.” – Jon Davidson, “What is Calculus,” Southern State Community College (Ohio), undated article.

Just because the truth of an *a priori* proposition can be seen by reasoning alone and does not require empirical evidence does not mean that the *a priori* proposition cannot be empirically proven or does not rely on empirical proof, even if that reasoning is in the form of counting stones in your head instead of on the ground. I think this point is often overlooked in attempting to clearly explain the difference between *a priori* and not *a priori* and the omission is deceptive about the nature of *a priori* statements and of human cognition: It suggests that there is such a thing as deduction alone, as if thought can exist *per se* in a vacuum.

- Sapience: This then suggests that what we consider *a priori* is a function of what we call sapience, and that *a priori* is dependent on intelligence; thus, what is *a priori* to creatures with higher SQ (Sentience Quotient), advanced alien intelligences, or to God if you like, is *a posteriori* to us. This is important to keep in mind when dealing with pets, animals, people, and probably with the development of artificial intelligences: Is there any way for us to determine what, if anything, a deep learning AI sees as *a priori*? Can a computer ‘see’ or understand that the shortest distance between two points on a flat surface is a straight line? Or does the computer need to measure it, or be told to ignore the problem by the coders? Does something become *a priori* to a person by expert training? In fact, that is why we rely on experts, not just for their knowledge, but for their insights; what is *a priori* to a medical doctor is news to me. I don’t (or reasonably shouldn’t) rely on my caddie for a medical opinion!
  - ✓ I do not believe that my cats know that if I have fed them four times today, I have fed them three times today. Or even that I have fed them already today. What is *a priori* to me never impinges on their conscience.

There are implications to this in Abrahamic religion: That it is likely that God is damning us for transgressions that it considers *a priori* but that we cannot comprehend, even *a posteriori*. The same way that we scold children with the exception that we have a direct parental relationship with our children who will soon grow up to be adults with the same comprehension that we possess. So God’s relationship to humanity is more akin to humans scolding pets, who will never comprehend the reasons, will barely comprehend the immediate cause, but conform to avoid pain and reproach and value our affection and companionship.

- ✓ “We must question the story logic of having an all-knowing all-powerful God, who creates faulty Humans, and then blames them for his own mistakes.” – Gene Roddenberry, quoted by Michael Guillen, Can A Smart Person Believe in God? (2004), p. 90.

- The fundamental rift problem of all Abrahamic religion is the imperfect attempt to mash two stories together; the first being the creation story of how man and everything came to be, and the second being a set of spiritualized ethics for social control of behavior, tied together by concepts of eternal justice and reward in the afterlife.

➤ Symbols & Abstractions: To what extent does *a priori* depend on symbols and abstractions? There is nothing in the Arabic numeral symbol **4** that would inherently suggest that it is more than **3**, they are just two unrelated figures someone drew and could be placed in any order.

- ✓ In the Roman numerals system, an extended tally system, one might actually get confused because III has more figures in it than IV and thus it might be considered as *a priori* that III is more than IV – I mean, it's obvious that III sticks are more than II sticks or maybe the V counts as II sticks and thus III and IV are the same number?<sup>9</sup>
- ✓ Why would X sets of X, or X times X = C? Why does X times V = L? What is intuitive about that? Yet  $10 \times 5 = 50$  and  $10 \times 10 = 100$  are intuitive, and further, from zeros, we get the concept of *orders of magnitude*. How did the Romans describe that?

Thus, the symbol **4** (or four) represents an amount one greater than **3** (or three) *simply because* our ancestors agreed on the ordering of symbols at some point corresponding to a number of stones in creating the position notation system we use now. You know *a priori* that 4 days is greater than 3 days, without having to lay out stones in lines, simply because of that shortcut. Computer scientists and mathematicians early on discovered the value of shortcuts and symbols in processing information, and *a priori* without having to resort to empirical testing (making it *a posteriori*) is a result of symbols, shortcuts (in many cases this shortcut is memory, such as memorized place notation multiplication tables), and abstractions.

➤ A Posteriori: From time immemorial, or at least since ancient times (and what is the difference, practically?) human knowledge has been divided between *a priori* and *a posteriori*; that which was not *a priori* (i.e. could be deduced, tested with predictability) was necessarily *a posteriori* (i.e. observed, experienced, recorded). Those seemed to learned men the only two ways, but was there a third? We only ask the question of a third when the two are not always sufficient to explain the entirety of our experiences.

- ✓ For example, dreams while sleeping; one cannot deduce a dream, they are not *a priori*, so one must experience a dream, but in the *a posteriori* of a dream, it cannot be proven outside of your own head, and even you may doubt it or forget it. Thus, is a dream really empirical? Not in the strictest sense.
- ✓ While we can observe the moment of conception now, our ancestors could not. Life was not *a priori*, one could not logically deduce their way to conception. Eventually, they got the idea generally of what was going on, we now call it reproductive consciousness, but again, the cycle of life, birth, is *a posteriori* except that no one remembers the experience of being alive – either during conception or because they are dead, in between you know nothing else but being alive and have no comparable contrast to the sensation, you have no experience at not being alive. No one does.

These two examples alone seem a reasonable explanation for the development of divinity and mystic thought in ancient civilizations (not to be confused with mythopoeic explanations).

*“A constant element of enjoyment must be mingled with our studies, so that we think of learning as a game rather than a form of drudgery, for no activity can be continued for long if it does not to some extent afford pleasure to the participant.”*

– Desiderius Erasmus

**Expected Ice Cream, Waiter Brought Sorbet:** You probably expected to be reading game rules? I once saw a comic about, basically, how to be a total jerk on a dinner date at a fancy dining experience restaurant. The waiter brought sorbet ‘to cleanse the palette’ and the guy went off on a rant, caused a scene, embarrassing his date, because they didn’t serve ice cream.

- ✓ Most intellectuals have viewed or understood gaming as an important intellectual tool, alongside and sharing values with literary storytelling (or religious histories and parables), hypotheticals, and hypothesis. This seems to be truer in the later centuries, and the ‘rise’ of gaming in war, economics, histories, and such probably results from the print revolution almost five centuries ago. Over the last two centuries, our games have increased in complexity corresponding with our developing intellectual abilities, widespread education, and our increased material and technological prowess. The days of my youth when I was informed that grown men should not be paid money to play a child’s game (e.g., baseball) or that games were child’s things that a man puts away (while apparently mythopoeic religion isn’t), have quickly faded.
- ✓ Without having played a single turn of GGDM (since 1997 when it was a vastly different game), GGDM’s evolution has been my personal *intellectual vehicle* for structure, understanding and education, designing GGDM has been a form of solitaire ‘play’ for me which allowed thinking and learning to continue to be ‘fun’ (though the ontological quality of that ‘play’ and ‘fun’ has changed over time) into midlife.
  - “The different subtitles given to The Navigator (1988) since its release suggests the problem in classifying this film as belonging to any particular genre or, indeed, any genre at all. Its original subtitle – A Medieval Odyssey – was replaced with An Odyssey Across Time for the American release, then changed again to A Time-Travel Adventure for the DVD release. The original subtitle holds no suggestion of science fiction and it is clear that, for the American market, the generic undertones in the form of time-travel needed to be played up. The Navigator is certainly a time-travel adventure – of sorts. Director Vincent Ward’s talent for creating haunting visual poetry is on full display in this film about the healing power of dreamers.” – Nigel Honeybone, “Film Review: The Navigator: A Medieval Odyssey (1988),” HNN, March 8, 2019.

Like Navigator: A Medieval Odyssey, one of my favorite time-travel movies, GGDM’s cover page has gone through a number of subtitles over the years – even the game title went through half a dozen changes as it evolved up to 2006 – as I tried to figure out what exactly I was doing: Writing a game? Writing a social theory? Writing a treatise on human civilizations? Writing a doctoral dissertation? In 2019, I finally settled on the fact that I had created a ‘literary game.’ But it is important to remember when reading GGDM that *the game always came first*; the game was the frame .... work

on which has been built the enlightening commentary, educational quotes, and profound arguments that evolved, drifted, into a ‘literary game.’

- “Sometimes young writers are worried they have to develop their own prose style, but that’s not true. Whatever you write will turn into you.” – Annie Dillard quoted by Lawrence Malcolm, “Lunch with Annie Dillard,” April 30, 1982 (free online).

**GGDM** will be all that is left of me when I am finished, like Plato’s works. It is the capsule of my mental existence.

- ✓ “I think any life experience does – that’s the way you happen, unconsciously or consciously, to use a lot of experience to inform your work. But I’d say the two most obvious ways – studying medicine gave me all the sixties, while I was at university, to indulge the things I was interested in. I was very interested in art, I was very interested in the movies, I used to do a lot of painting and drawing and cartooning, and stuff like that.” – George Miller as quoted by Anne Billson, “George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview,” previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015.

Most people like their recreational games to be escapist fantasy. Whether GGDM is an escapist fantasy depends on the personality of each participant, each reader of these rules. On one hand, you do have godlike control of a nascent interstellar civilization surrounded by potentially hostile aliens. But as you can tell from reading just this far, GGDM has in it a reflection of our current world, futures, and much history. For some, that is not escapist. You might sense there is something here that is more than a game; raise your hand if you are an overachiever. That is the personality of GGDM.

- ✓ “Even when created to critique or raise awareness, entertainment is escapism, allowing us to explore new worlds and experiences...letting us take the roles of soldiers, fantasy warriors, and goats.” – Max Eddy & Matthew Buzzi, “The Most Niche Simulation PC Games We Could Find,” PC Magazine, March 15, 2019.

Soup and sherry have been served, the dishes removed. The relevés – the rules – begin on the next page accompanied by lively adult table conversation; later, entremêts will be served with fresh glasses of chilled wine. Then gaming will commence.

---

*“For a small child there is no division between playing and learning; between the things he or she does ‘just for fun’ and things that are ‘educational.’ The child learns while living and any part of living that is enjoyable is also play.”*

– Penelope Leach (child developmental psychologist)

## Endnotes.

<sup>1</sup> Commentary: Rhetorical Question: What is the difference between a Gestalt Structure and an Emergence?

<sup>2</sup> Commentary: The Existential Void is a philosophical term meaning the inherent meaningless of the universe/life from the human perspective. It should not be confused with the astronomy term or that we live in the KBC Void.

<sup>3</sup> Commentary & Citation: Self-evident is insulting when it is not, cf. “[Alexander] Cain tosses this kind of statement out as if it was self-evident. It’s not. It needs to be argued for, but this will be par for the course for Cain.” – Nick Peters, “A Brief Look At Alexander Cain,” May 6, 2015 (forum post, TheologyWeb, [www.theologyweb.com](http://www.theologyweb.com)).

<sup>4</sup> **Commentary:** Big errors and little errors are the same, they are both errors. Just the same way that winning by an overwhelming score is the same as winning by one point, it's still a W, or in the reverse case, an L. In baseball, they tell the players that a win in April is the same as a win in September, they all count the same (though it doesn't *feel* that way); this is so in any regular season team sport, hockey, football, basketball, etc. Then someone decided to introduce 'tiebreakers,' 'scoring differentials,' and 'strength of schedule'...

<sup>5</sup> **Citation:** "Ludwig von Mises (1881–1973) reconstructed economics as an axiomatic science, which he called praxeology: the science of the logic of human action. The central element of praxeology is the *axiom of human action*."

The axiom of human action basically says that human beings act. This may sound trivial at first glance. However, at second glance it becomes obvious that Mises's axiom of human action and its implications are far from being trivial:

To start with, an *axiom* is a (set of) proposition(s) presumed to be *true* on the basis of logical necessity; it serves as presenting different subject matters as formal and coherent theories, all of which are propositions which can be deduced from the axiom. For instance, Pythagoras's theorem is deducible from the axioms of Euclidian geometry.

The axiom of human action is of a special nature: It represents a synthetic a priori proposition, to use the terminology of Immanuel Kant (1724–1804). A synthetic a priori proposition is knowledge that (1) cannot be denied without running into an intellectual contradiction, and (2) is derived from *reflection* rather than observation.

The axiom of human action cannot be denied without running into an insoluble contradiction. This is because denying the axiom of human action implies human action – that is the human act of denying. Arguing that humans cannot act is thus a contradiction in itself, an absurdity.

Further, the axiom of action is derived from human reflection: it is independent of experience. This is because one cannot observe humans making an action per se. In order to know what 'action' means, one has to know what action is – which implies that knowledge about action exists prior to action.

That said, the axiom of human action fulfills both of Immanuel Kant's requirements for qualifying as an a priori synthetic proposition: it is self-evidently true, and it is derived from reflection. That said, logical deductions from the axiom of human action must be also absolutely, or *apodictically*, true as well.

By developing praxeology, Mises showed that economic theory is the formal logic of the irrefutably true axiom of human action. According to Mises, economic theory is not concerned with psychology, but with the implications of the axiom of human action." – Thorsten Polleit, "What Can the Law of Diminishing Marginal Utility Teach Us?" Mises Institute, February 11, 2011 (emphasis in original).

<sup>6</sup> **Citation:** "In 1925, Eitingon became chair of the new International Training Committee of the International Psychoanalytic Association. The Eitingon model remains standard today. The Berlin Psychoanalytic Institute itself was founded in 1923. Ernst Simmel, Hanns Sachs, Franz Alexander, Sándor Radó, Karen Horney, Siegfried Bernfeld, Otto Fenichel, Theodor Reik, Wilhelm Reich and Melanie Klein were among the many psychoanalysts who worked at the Institute. As a Jew, Eitingon's position became precarious after the Nazi ascent to power in 1933. Freud's books were burned in Berlin. By then some members had already left Berlin for the USA. Eitingon resigned in August 1933; he later moved to Palestine and founded the Palestine Psychoanalytic Association in 1934 in Jerusalem. The Palestine Association saw itself as the heir of the Berlin Institute; even the furniture from the Berlin Institute ended up in Jerusalem.

On 23 August 1933, Sigmund Freud wrote to Ernest Jones, 'Berlin is lost.' Edith Jacobson was arrested by the Nazis in 1935; one of her patients was a known Communist. Felix Boehm [de], who with fellow non-Jew Carl Müller-Braunschweig [de] had taken control of the Institute after Eitingon's departure, refused to intervene on Jacobson's behalf, on the grounds that by associating herself with Communism she had endangered the Institute's survival. In 1936 the Institute was annexed to the *Deutsches Institut für psychologische Forschung und Psychotherapie e.v.* (the so-called Göring Institute). Its director Matthias Göring was a cousin of Field Marshal Hermann Göring. Göring, Boehm and Müller-Braunschweig collaborated for a number of years; fourteen non-Jewish German psychoanalysts continued to operate within the new Institute. The one remaining copy of Freud's works was kept in a locked cupboard referred to as the 'poison cabinet.' John Rittmeister [de], a physician and psychoanalyst associated with the Institute, as well as resistance fighter against Nazism, was sentenced to death and executed in May 1943." – from Wikipedia article, "Berlin Psychoanalytic Institute," captured July 10, 2019.

<sup>7</sup> **Commentary & Citation:** And this is not to make light of the entire Holocaust tragedy, I do not deny or diminish their unjust suffering in any sense (and with this clear statement, I don't expect to be the target of any silly accusations of Holocaust denial – you don't know the stupidity I witnessed with my own young eyes). Rather, the macro- and holistic-approach taken by GGDM entails a bit of what is called 'pragmatic ethics':

- ✓ "Pragmatic ethics is a theory of normative philosophical ethics. Ethical pragmatists such as John Dewey believe that some societies have progressed morally in much the way they have attained progress in science. Scientists can pursue inquiry into the truth of a hypothesis and accept the hypothesis, in the sense that they act as though the hypothesis were true; nonetheless, they think that future generations can advance science, and thus future generations can refine or replace (at least some of) their accepted hypotheses. Similarly, ethical pragmatists think that norms, principles, and moral criteria are likely to be improved as a result of inquiry. ... ethical pragmatists acknowledge that it can be appropriate to practice a variety of other normative approaches (e.g., consequentialism, deontological ethics, and virtue ethics), yet acknowledge the need for mechanisms which allow society to advance beyond such approaches, a freedom for discourse which does not take any such theory as assumed. Thus, aimed at social innovation, the practice of pragmatic ethics supplements the practice of other normative approaches with what John Stuart Mill called 'experiments of living.'" – from Wikipedia article, "Pragmatic ethics," July 10, 2019.

<sup>8</sup> **Commentary:** Is this an *a priori* statement? I think that one can deduce it to be true without having to check every possible *a priori* statement (an impossible task). Or is it more of a Kantian synthetic *a priori* proposition in that from one or two cases, reflectively we can offer *a priori* that it is true of all *a priori* statements?

- ✓ It is possible that this will set some logicians' minds running, and I am nothing of the caliber of Saul Kripke (and that is *a priori*), so if I missed something and there are *a priori* statements that are not empirically provable ... my examples are sufficient for the point of the argument I am making here.
- ✓ Nor do I believe any of my arguments in this section are probably new to the science (nor is much of anything else in GGDM new under the sun), but as I have not read them anywhere else – and there are a million vital works I should have read but have not – they are new to me when I am thinking of them independently while considering the issues in GGDM's context. Thus, there may already be well-developed, famous, and even forgotten arguments written on this issue from millennia past.

<sup>9</sup> **Commentary:** As I worked through the end of the final edit of GGDM, I had the opportunity to become acquainted with the Roman tally counting system. As I forced myself to relearn Roman counting, it became apparent that there were certain things that would have been intuitive to literate Romans that are not to us, for example, two Vs make an X, and I would guess that is how X came to represent 10. In many cases, simple math involved just inserting a V or I in the previous Roman numeral, in the appropriate place to add or subtract, for example, XV minus I is XIV or XI plus V is XVI. Just as any educated person in the *place notation* system knows that 9 plus 5 = 14 and 9 minus 5 = 4. We don't have to think too hard about it; through practice and neural plasticity, we just know it.

- ✓ "Much of the world, including Europe, also lacked an efficient numbering system such as that developed in the Hindu and Arabic cultures. (Try long division, for example, using Roman numerals.)" – Jon Davidson, "What is Calculus," Southern State Community College (Ohio), undated article.

The phenomenological progression of additive Roman digits is cyclic: Starting with nothing, add (I), add (II), add (III), pinch (IV), subtract/slide left (V), add (VI), add (VII), add (VIII), crash (IX), subtract/slide left (X), start over. I wonder if this is how they taught their young to count to ten, which is always the hardest part of learning to count? It works at least up to five on one hand, finger, finger, finger, pinch thumb and finger, then V with thumb and fingers sideways. This also mirrors the appearance of consecutive Roman numbers down the page, a wavy pattern of ballooning and deflating; grow, grow, grow, shrink, grow, grow, grow, shrink, grow, grow, crash, grow, etc.; a sub-rhythm, a thumbs rhythm of 4s and 9s exists in Roman Numerals. Difficult to say, but this may have some bearing on the Roman worldview; one could make some satirical case for it in social and historical cycles. It may even mirror the 'progress' or evolution of the GGDM design over the years.

I wonder how different the world looked to someone with an educated Roman cognition? With a counting system that was an extension of the tally system compared to our place notation? Was it a function of a priest-like class to be able to perform the more complex arithmetic (i.e. multiplication and division as opposed to adding and subtracting) in Roman numerals? The Romans are famous for engineering, which they did with Roman numerals. In the end process of numbering the Appendix sections, I usually took a shortcut through Arabic-Hindu math when using Roman Numerals. Would I be a math genius among Romans because I memorized the *place notation multiplication* tables when I was in grade school and would simply have to translate the results to Roman numerals for them?

  - Tom, Jerry & Friends .....34
  - Mo-Jo .....34
  - Special Positions.....35
- Baby Steps** .....35
- Endnotes .....36

*“Our posturings, our imagined self-importance, the delusion that we have some privileged position in the Universe, are challenged by this point of pale light. Our planet is a lonely speck in the great enveloping cosmic dark. In our obscurity, in all this vastness, there is no hint that help will come from elsewhere to save us from ourselves.*

*The Earth is the only world known so far to harbor life. There is nowhere else, at least in the near future, to which our species could migrate. Visit, yes. Settle, not yet. Like it or not, for the moment the Earth is where we make our stand.”*

– Carl Sagan, [Pale Blue Dot: A Vision of the Human Future in Space](#) (1994)

**Positions:** Each position in the game is a star-faring civilization represented generally, as a single modern nation-state. Two positions may share the same Native Population type (*ut infra*), however, the majority of the time, each game position will represent a physiologically distinct intelligent life form. The game should play with at least three, and a maximum of ten positions.

- ✓ Like most civilization games, the position players collectively represent (in a godlike way) the highest level of organization in their civilization, and operate with full sovereignty. It may be possible to construct a game where the positions are merely the local ‘on the other side of the wormhole’ part of a larger pan-galactic civilization, for an interesting example of this, see the classic GDW game *Imperium* (1977), where the *Imperium* player is a sector governor who may appeal to the Emperor for help and permissions.
- **Players and Positions:** ‘Players’ and ‘positions’ are not exactly the same in GGDM. In the vast majority of all games that have ever been designed and/or published or played, the assumption is that each position is played by one player, who has exclusive control over their ‘player position.’ While it is possible that positions in GGDM could be played by one player, the complexity and creativity of this game lends itself to better play by teams of players playing each position as long as only one set of Regular Turn Actions is submitted each Regular Turn period for each position by the designated team member.
- **Tom, Jerry & Friends:** Because this is not a ‘game of conquest’ *per se*, there is no reason why a player cannot be members of two or more player team-positions. No two positions should be run by exactly the same player team, nor should two position-teams share more than half of their membership. For example, Position A might be the team of Tom & Jerry while Position B is played by Jerry, Curley & Mo, and Position C is played by Mo and Jo.
- **Mo-Jo:** It is possible for a single player to play a position without a team. Such player may or may not be at a disadvantage against other team positions, depending on circumstances and how coherent and responsive the opposing teams are during the game. No player (or team in a third position) will be allowed to control two single player positions, nor will a player who is on a team also be allowed to play a single player position.
  - ✓ “When Mr. Rogers told viewers of his beloved children’s TV show to ‘look for the helpers,’ bonobos clearly weren’t paying attention.... ‘A preference for helpers over hinderers,’ the study authors wrote, may have ‘played a central role in the evolution of human development and cooperation.’... So do bonobos value cooperative, pro-

social behaviors in the way humans do? In humans, that preference starts young: babies as young as 3 months old have been shown to favor people who they witness helping others.” – Amina Khan, “Humans may look for helpers, but bonobos prefer the troublemakers,” Los Angeles Times, January 4, 2018.

- ✓ Group problem solving is an adaptive evolutionary strategy of early human ancestors; it works best for solving determinative problems. Groups test ideas, provide perspectives, and grasp complexities faster. By extension, this applies to *written and permanent works* of civilization: The ‘group’ is the individual thinker, intellectual, or student plus the authors of written and artistic works from *past generations* and distant places who share their opinions through writing, music and visuals. This ability to create infinite groupings from across the temporal and spatial spectrum of humanity is the *emergent quality* of civilization. The print revolution and communications technology (diminishment of time and distance) has simply accelerated this process.
  - ✓ Neutral group problem solving, which is discussed in greater detail in one of the final sections of this work, 1 Wheel in the Sky, *infra*, offers a fascinating alternative to traditional competitive gaming.
- **Special Positions:** Special positions are possible in the game and will be allowed to the extent that they provide an interesting story arc or angle in the game. Special Positions will exist in the game solely at the discretion of the Concierge, and may or may not be known to players at the beginning of the game, as circumstances dictate. Special Positions may be run by one or more players, but will usually be controlled by one player, with necessary oversight by the Concierge. Special Positions may be provided with special, unexplainable abilities and/or advanced or different technologies for whatever purpose they serve in the game.

---

*“The players met, on the great, timeless board of space. The glittering dots that were the pieces swam in their separate patterns. In that configuration at the beginning, even before the first move was made, the outcome of the game was determined. Both players saw, and knew which had won. But they played on. Because the game had to be played out.”*

– Robert Sheckley, “Fool’s Mate” (1953), opening paragraphs <sup>1</sup>

---

**Baby Steps:** The five-step GGDM game position setup process is a highly interactive process that will require multiple communications between the players and the Concierge, and may take several days or a week or more to complete. Set up is accomplished in the following five steps:

1. Draw and choose Fundamental Realities,
2. Determine Public Space for each position,
3. Choose and place Government Titles,
4. Choose Primal State,
5. Receive and spend Inheritance Points.

In addition to the players’ part in the setup, the Concierge will have considerable work to do in setting up the player pages, answering questions, setting the calendar, and all of the other little

administrative details required for the game to begin. The process may be akin to detailed character creation in most role playing games.

---

*“It is well to fetter the wings of our fancy and restrain its flights. It is quite possible we may have formed entirely erroneous ideas of what we actually see. The greenish gray patches may not be seas at all, nor the ruddy continents, solid land. Neither may the obscuring patches be clouds of vapor. Man is too quick at forming conclusions. Let him but indistinctly see a thing, or even be undecided as to whether he does actually see it and he will then and there set himself to theorizing, and build immense castles of conjecture on a foundation, of whose existence he is by no means certain”*

– Edward Emerson Barnard, Mars: His Moons and His Heavens (1880), an unpublished manuscript in the Vanderbilt University Archives

---

#### Endnotes.

---

<sup>1</sup> Commentary: It was taught in my college literature class that the answer to a short story is in the first paragraph, but you don't know until the end of the story. That is, short stories are classically written backwards.

- ✓ “‘Mate!’ Ellsner shouted. ‘Lack of pattern. I gave their CPC something it couldn’t handle. An attack with no apparent pattern. Meaningless configurations.’ ‘But what are they doing?’ Branch asked, gesturing at the dwindling enemy dots. ‘Still relying on their chess player’ Ellsner said. ‘Still waiting for him to dope out the attack pattern in this madman’s mind. Too much faith in machines, general. This man [Lt. Nielson] doesn’t even know he’s participating in an attack.’” *Id.*, ending paragraphs.

*See Appendix FR – The Fundamental Realities*  
*See Appendix WA – The Wanderers*

*“When asked what was the greatest political fact of modern times, [Otto von] Bismarck is reported to have responded, that it was ‘the inherited and permanent fact that North America speaks English.’ Whether the saying be authentic or not, the remark is certainly worthy of its reputed author’s keen insight into political fundamentals.”*

– George Louis Beer, The English-Speaking Peoples, Their Future Relations and Joint International Obligations (1917), p. 186

**Fundamental Realities:** Fundamental Realities are a preexisting set of ‘cards’; the Concierge and players do not create or design Fundamental Realities used in a particular game. Fundamental Realities represent the cosmic luck of the draw, the grand joke of the gods (or whomever you want to blame for this mess); they are the ‘existential element’ of the game.

Fundamental Realities affect a position globally, and are the deep-seated historical, physiological, cultural, evolutionary, primal, and environmental imperatives that cannot be easily overcome and that shape the star-faring race coming into the game. For example, as a player, you were born on Earth (theoretically speaking) in a certain place and time, you walk on two legs and wear clothing (most of us do, anyway), you can see certain spectrums of light, hear certain sounds, require oxygen (unless you are a plant), and speak a language, dress and act in certain ways, and conform, or refuse to conform to standards that were all chosen long before any of us were born. This is part of your inheritance.

- ✓ What is language? Language is a massively complex system of arbitrary, agreed upon and inherited assignment of symbols and sounds to objects, actions, existence and concepts. There is no reason at all why the sound we make when we say “tree” should correspond to the object that we know is a tree, except that some group in our distant past agreed to that particular correspondence of sound with the object and everyone thereafter used it. The same can be said for every word in our language and even for the base-10 counting system that we call math. Non-objectivity of symbolic and linguistic representations is the reason why there are so many languages across the Earth. The Tower of Babel story is a recognition by ancients of this inherit non-objectivity in human constructs and an origin myth attempting to link it to the objective truth of God in their religion.

Fundamental Realities are inherited *absolute truths* (in the form of position-specific circumstances) which cannot be directly contradicted or ignored. Fundamental Realities function as axioms for game purposes – that is, they act as uncontroverted starting points for the story and all arguments relating to their position during the game.<sup>1</sup> Fundamental Realities are what happened BEFORE the game that affect the game.

- ✓ “For a creature to act out its own minor part, the rules under which it acts must be either known to it or be such that the rules can become known through trial and error – with error not always fatal. In short the creature must be able to learn and to benefit by its experience.” – Robert Heinlein, Job: A Comedy of Justice (1984).

To the extent that it matters, Fundamental Realities are, by definition, morally neutral and individually blameless on those affected or afflicted by them. Being born of a certain race, class, ethnicity, or species, or in a certain time and place or planet, are no more blameworthy than

speaking English or wearing a shirt, pants and shoes rather than speaking Greek or Latin and wearing a toga and sandals. Now, it is possible that some blame may be attached for certain types of Fundamental Realities to individuals or to the current generation, *by the next generation* who inherits; but in most cases, what does it gain to blame previous generations for parts of our world we dislike or with which we disagree?

- Clothed in our Fundamental Realities: While trying to avoid frostbite on your butt in the northern latitudes, remember the benefits of cold weather on human civilization. Because of cold weather and that humans evolved hairless on a warm continent, people started wearing clothing; there were people in various parts of the world who had never invented clothing before European contact, because they didn't need it.
  - ✓ Once clothing was invented and spread through most of the world, people discovered they had to take a bath and put on clean clothes when available because of illness and vermin.
  - ✓ Clothing also led to fashion, invention of better materials, and a whole economy, displays of wealth, and industry specializations.
  - ✓ Clothing also led to armor, protective cover, and space suits. Science-fiction trope – especially the television and movie kind (even Deanna Troi wore clothes) – almost always portrays sapient aliens wearing clothing. The audience never notices because that's what they expect to see, but there is no reason – other than climate – to assume that aliens would invent clothing prior to space travel. Clothing might come quite late in history, as all biological beings would require at least space or vacuum suits, and protection against environments on any planets they might explore or colonize.
- The Drawing of Thee: During the first step of the setup process, the Concierge will randomly draw for each position ten Fundamental Realities. Positions may not receive duplicates of the same Fundamental Reality, but two or more positions may receive the same Fundamental Reality. Players will be able to view and read only the Fundamental Realities for *their* position during the course of the game.
  - ✓ If a position cannot receive duplicate Fundamental Realities then it would be impossible for a position to have duplicate Fundamental Realities, like a poker game where you are not allowed to hold two or more Aces. GGDM thrives on diversity.
- Casting Out: After examining the Fundamental Realities drawn, each position may choose to discard any of them, but must keep at least four of the Realities drawn and may keep up to seven Fundamental Realities (mulligans and/or re-deals are discouraged). The choice of which are being kept or discarded should be communicated to the Concierge only, within one day of notification that the Fundamental Realities have been drawn. Positions may choose to keep seemingly contradictory Fundamental Realities. There are many possible reasons upon which to decide to keep or discard Fundamental Realities; some might be kept because they might be interesting to play, some might be kept because they are the lesser of two evils compared to what is being discarded, and some will be kept because they (erroneously) appear to provide some strategic or game advantage. The Fundamental Realities chosen by each position are permanent, cannot be substantially changed or discarded during the game, and will be part of and affect the position through the entire game. Positions that keep more Fundamental Realities will receive larger initial Public Spaces and larger Inheritances.

✓ “Sometimes the only choices you have are bad ones. But you still have to choose.” – Dr. Who, “Mummy on the Orient Express” (2014).

- **Major and Minor Realities:** Most Fundamental Realities will have a Major and/or Minor effect described. Each position must have at least three Major Fundamental Realities, and can have up to five Major Fundamental Realities. The effect of each Fundamental Reality is a set of special circumstances affecting the position holding the Fundamental Reality. The effects of the Major and Minor versions of the same Fundamental Reality are separate and cannot be combined. Each position must communicate to the Concierge, where applicable, which chosen Fundamental Realities are desired to be Major Fundamental Realities. Not all Fundamental Realities have both Major and Minor forms, sometimes, a position will be ‘stuck’ with a Major or Minor.
- **Reality Space:** Fundamental Realities do not exist in the Public Space, they do not occupy any part of the Public Space. They are considered to be ‘outside’ the Public Space, but still there nonetheless, and their effects, unless otherwise stated, apply equally to every Monad in the Public Space, if applicable.<sup>2</sup> It is thus that Fundamental Realities cannot be disrupted or affected by anything that occurs in the Public Space (or in the Galactic Space).
- **The Concierge Cometh:** Major and Minor Fundamental Realities cannot be altered once the game begins. Fundamental Realities will be displayed throughout the game in each position’s non-public information and the Concierge will – and must – be the final interpretive authority on the meaning of the Fundamental Realities during the game. The Concierge may refuse to process Regular Turn Actions or Combat Orders that violate the position’s Fundamental Realities.

---

*“Julio Cabrera, David Benatar ... and Karim Akerma all argue that procreation is contrary to Immanuel Kant’s practical imperative (according to Kant, a man should never be used as a means to an end, but always be an end in himself). They argue that a person can be created for the sake of his parents or other people, but that it is impossible to create someone for his own good; and that therefore, following Kant’s recommendation, we should not create new people. Heiko Puls argues that Kant’s considerations regarding parental duties and human procreation in general imply arguments for an ethically justified antinatalism. Kant, however, according to Puls, rejects this position in his teleology for meta-ethical reasons. ...*

*Julio Cabrera argues that procreation is a violation of autonomy because we are not able to obtain a human’s consent when we act on this human’s behalf through procreation, and that a rational agent, having reliable information about the human situation and the ability to speak about its possible coming into existence, might not want to be born and experience the harms associated with existence (this is a reference to a thought experiment proposed by Richard Hare, who claims that birth would be undoubtedly chosen).”*

– from Wikipedia article, “Antinatalism,” July 31, 2019

---

**Long Distance Voyager:** Do you see Immanuel Kant behind Battlestar Galactica and Frankenstein?

Certain existentials are beyond the scope of this game and cannot be simulated. For example, since the concept of zero as a number is so important to computers, modern science and technology, and our understanding of the universe, it would not be possible to have a species that comes into this game lacking the concept of zero. Similarly, it would probably not be possible for a position to enter the game with a Fundamental Reality indicating that the population believes the world is flat and is at the center of the universe, which revolves around their Homeworld. Nor would the game be able to simulate directly the fundamental monogamy-polygamy tension that is the main and usual subject of our love songs.

- **Uranium on the Cranium:** Imagine a species that evolved on a planet that has no surface uranium deposits. Likely, they would not discover nuclear power generation until well after they went into space (with luck). This might eventually doom them to extinction when other fuels ran out, or if nuclear power or understanding is required for Stardrive technology.
  - ✓ Nuclear power has not been required for humanity to go into space, of course, but has been helpful as a power source for our probes. But we also have not been successful yet in bringing back large quantities of minerals from anywhere, we have a few moon rocks. Thus, if there were no surface uranium on Earth, we would still be much in the dark about the Sun and the universe; it is really the scientific model that our mineral abundance and diversity provided to the last centuries that is of the greatest value.
  - ✓ It is far less likely though that a planet exists that doesn't have surface deposits of malleable metals, e.g., copper, tin, gold, iron, silver. But if the planet were completely covered in liquid, or had no 'wood' or 'coal' (e.g., fossil fuels) to provide portable heat... well, you get it by now.

Now, suppose that FTL travel (by any means, ships, stargates, witch's broom, psychic projection, spice, etc.) requires some element, either as part of the structure or as fuel, that is not available in our system? How would we ever know? How would we obtain it? Even if we could theorize its existence, it would be "unobtainium" unless it could be manufactured (something like plutonium). Thus, to leave Sol, humanity would depend on generation ships, seed ships, etc. that have already been hypothesized in science-fiction imagination, if not science fact and maybe our descendants will end up in some place where the element exists and they have the knowledge and ability to use it. Would they come back for the rest of us?<sup>3</sup>

We would only be slightly better off than the species on a planet with no uranium, fuels or malleable metals near the surface.

- ✓ See fuel discussion, Unobtainium, 3 Movement, p. 857, *infra*.

---

*"It is a pity that there are no big creatures to prey on humanity. If there were enough Dragons and Rocs, perhaps mankind would turn its might against them. Unfortunately man is preyed upon by microbes, which are too small to be appreciated."*

– T.H. White, [The Book of Merlyn: The Unpublished Conclusion to The Once & Future King \(1977\)](#)

---

**Fundamental Hierarchies:** Fundamental Realities are at the top of the logical hierarchy of game rules and concepts in GGDM.<sup>4</sup> Fundamental Realities drawn during set up generally cannot be changed or contravened during the game; positions are ‘locked into’ the choices made before the game, and the luck of the draw. Changing Fundamental Realities is not impossible within the scale of the game (both time and space), but will be undertaken only with due care for the story arc (the process must include a story arc) and balance of the game.

- ✓ Lasting Peace on Earth. A problem that consumed intellectuals and generated great literature in the 19<sup>th</sup> and 20<sup>th</sup> Centuries. Imagine the fundamental changes that would have to occur to human society, economics, and/or biology to achieve lasting peace on Earth. Remove sovereignty, ownership, money, ambition, nationalism, aggression, science, technology, creativity, weapons, politics, government, education, gender and sexuality, natural birth, evolution, remove humanity from humanity.
  - “To avoid war, Man had to specialize in nonentity.” – William Tenn, “Null-P” (1950).

Many solutions have been dreamt, all of which tend to be radical, over-simplistic, utopian or dystopian. All would change our Fundamental Realities; none have happened or seem likely to happen.

- Through Rose Colored Shades: The Fundamental Realities in combination change and shape the ‘flavor,’ ‘color,’ ‘feel’ of the game for each position, they give positions ‘character.’<sup>5</sup> There are 170 Fundamental Realities<sup>6</sup> divided into five types described below plus five Truly Alien Fundamental Realities for the Truly Alien Primal State.<sup>7</sup>
  - ✓ By taking a Fundamental Reality, the players of a position are signaling that they intend to play within its constraints in good faith, just as, by voluntarily participating in the game, they are commonly and impliedly signaling that they will play the game in good faith. The prevalence of computer-controlled gaming has made this less obvious to modern gamers but it is important in a sandbox game like GGDM. Most Fundamental Realities require some level of Concierge manipulation and Intervention on the part of the ‘game universe’ and players should not object or accuse the Concierge of being unfair (which is like accusing the universe of being unfair, I do so regularly).
  - ✓ It is an interesting question whether Fundamental Realities are imperative or declarative on the position. See Imperative Game discussion, 1 Reformation, p. 1382, *infra*. On the one hand, most Fundamental Realities are not like ‘giving orders’ to the position players which they must follow – to the extent that there is a choice of how to play the Fundamental Reality, like an actor makes choices of how to play their role, but still has a script – Fundamental Realities in GGDM are probably more declarative than imperative. However, that varies with the type and strength of the Fundamental Reality – Major Fundamental Realities are more imperative, more of a strict script – and with the amount of manipulation and Intervention required of the Concierge. Some might see Concierge Intervention as making the Fundamental Reality imperative, sort of ‘railroading’ the position into a specific course of action.

Players should willingly and enthusiastically embrace and play their chosen positions; the Concierge should not be the big stick forcing positions to conform to their chosen Fundamental Realities. Let’s all just have fun with it.

- Type 1: ‘Type 1’ Fundamental Realities are the usual sort of historical, evolutionary and cosmic events and situations that tend to limit each position operationally.<sup>8</sup> They affect how the position ‘plays’ or ‘acts’ during the game (i.e. the operation of the position). Type 1s tend to be ‘negative’; the bargain is the acceptance of operational limitations in the game for Inheritance Points (IPs) during set up and Public Space during the game.

*Type 1s are inherently negative, satirical.* The implication of a Type 1 Fundamental Reality is that the position is accepting some operational hindrance for the duration of the game. This is not always necessary; rather, it is sufficient that the Type 1 make the position operationally different without granting special or bonus abilities (which would be a double gain).

- Type 2: ‘Type 2’ Fundamental Realities are the ‘positive’ sort, and opposite of Type 1, in that Type 2 Fundamental Realities do not grant IPs during set up, but grant some special operational characteristic to the position during the game. Type 2 Fundamental Realities do not have Major or Minor forms, however, beyond the benefit, positions are governed by the description (in both positive and negative implications) during the course of the game. Positions may only have one Type 2 Fundamental Reality and players should remember that each position must have sufficient IPs necessary to satisfy the Primal State requirements to begin the game (which is the purpose of IPs).
- Type 3: ‘Type 3’ Fundamental Realities grant normal Major/Minor IPs during set up but impose a pregame drive or need that acts as a ‘Supra-Legitimacy’ requirement for whatever government the position chooses. This requirement exists above normal Conflict Checks for Government Titles, and is solely at the discretion of the Concierge when a violation occurs. During the course of the game, the Concierge may receive an Intervention Potential Plus (see Interventions Plus, 1 Disruption, p. 259, *infra*) for each failure to satisfy the drive, need or directive of the Type 3 Fundamental Reality. Positions agree to this by choosing a Type 3.
  - ✓ Type 3 Fundamental Realities differ from Conflict Checks in Government Titles (see Starch & Parchment, 3 Government Titles, p. 613, *infra*) in that they are not objective, fact-of-the-moment checks (despite how the wording may sometimes seem) but rather should be monitored by the Concierge on an ‘overall impression’ of the position’s conformity to the *sine qua non* of the Fundamental Reality – rather like the ‘artistic presentation’ score in competitive figure skating (which always causes controversy) as opposed to the technical elements of whether the skater did a triple-triple axel while eating a peanut butter & pickle sandwich. Additionally, no ‘disruptions’ result directly from the assessment of an Intervention Potential Plus against the position, but rather, the Interventions create or advance the position’s game ‘story.’
- Type 4: ‘Type 4’ Fundamental Realities provide an outward ‘persona’ for the position during the game that should be reflected in News Events and in-game diplomacy and communications (i.e. role playing the position<sup>9</sup>). Occasionally, the position may also find it necessary to do specific in-game actions to maintain the persona.<sup>10</sup> Type 4 Fundamental Realities have neither Major nor Minor forms, but instead grant a fixed IP value during setup. Positions may have one Type 4 Fundamental Reality, even if dealt several possibilities.

A position with a Type 4 Fundamental Reality is expected to be ‘in character’ as much as possible during the game (as long as it does not impair vital communications in the game). This does bar other non-Type 4 positions from developing a persona as well.

Perhaps participants might regard Type 4 Fundamental Realities as archetypes; both in the Platonic sense “that all things have ideal forms (aka archetypes) of which real things are merely shadows or copies” and/or the Jungian sense of “an inherited idea or mode of thought that is present in the unconscious of the individual” (from Wikipedia article, “Archetype”).

- ✓ I had an undergrad college course in abnormal psychology with a memorable professor. The course was divided into three parts, with a blue book test at the end of each section; it was both lecture and book (a companion volume to the DSM IV). The first section was about Sigmund Freud and the Vienna Circle and during this part the professor was very Freudian in demeanor, speech, appearance. No one noticed because it was consistent with the general image of a psychologist and a professor. We took the test, came back the next week and I noticed his demeanor and speech had changed slightly as we began the next section on Carl Jung and Jungian psychology. The professor also never took attendance during the course, but when he handed back the tests, he handed each person their test as he went around the room. He explained that when we handed in the test, he looked at our name and our face. After the Jungian psychology section blue book test, he returned, and his demeanor changed again (by this time, he wasn't wearing a suit and tie) as we began the final section on Viktor Frankel's existential theories.
  - And then, 13 years later, Heath Ledger was the Joker.
- **Type 5:** ‘Type 5’ Fundamental Realities represent alternate realities or alternate histories from before the game that can ‘leak’ or ‘ripple’ into the present, overwriting parts of the current position. How or why this can happen will never be known or understood, but it is theorized that perhaps it is caused by the invention of FTL travel (i.e. ‘stardrive’ in GGDM terms) that marks the beginning of the game. There is a 5% chance, plus 1% per Regular Turn processed that an alternate reality ‘leak’ will occur, instantly overwriting some of the position's data at the end of the Regular Turn. When this occurs, there is a 50% chance that *each* Ripple in the Type 5 Fundamental Reality will be applied; the results can range from very bad to very good. The Ripples in each Type 5 are probably somehow connected.
 

The ‘leak’ event *paradoxically* does not affect the prior in-game history – GGDM is not designed for retroactive or retconning effects – it only affects the current and future state of the position and game. The Concierge may adjust the percentages before the game to create stronger, more chaotic effects; it is suggested that only one ‘leak’ be allowed in each 10-turn period. By taking a Type 5 Fundamental Reality, the position is accepting a ticking time-bomb (like committing a crime) and should not complain when it goes off unexpectedly.

All Type 5 Fundamental Realities are considered Major for counting purposes, and each position may only have one Type 5 Fundamental Reality, even if dealt several possibilities.

  - ✓ **Doctor Who:** Oh, yes, I am. Very clever. But what use is clever against trees? They don't listen to reason. You can't plead with them. You can't lie to them. They have no moving parts, no circuits. – Dr. Who, “In the Forest of the Night” (2014).
    - Saruman the White had the same problem. He was a very clever guy too.
- **Creator:** Participants may design new Fundamental Realities. The key to designing a Fundamental Reality is that the idea must be expressible within the rules structure of the game (that is, ‘operational’). Fundamental Realities should not be designed like additional, special or

new rules or grant benefits; rather, they are guidelines to be interpreted by the Concierge and applied to the position. Types 1, 3, and 5 Fundamental Realities must be existential (not a temporary condition), must have a concrete operational effect on the position, and should, hopefully, be profound. Type 4 Fundamental Realities are easiest because they have no effect on or interaction with the rules of the game.

---

*“Come on a voyage with us  
Our quest is callin’  
All hear the oceans howlin’  
Voices of the Fallen  
Too long we’ve roamed these waters  
We’ve blown our hearts down  
Our homeland we’ve forgotten  
All we know is gone now.”*

– Xandria, “Voyage of the Fallen” (2015)

---

**Asteres Planetai**: The Wanderers are a special set of Fundamental Realities that affect *all positions*. Prior to drawing Fundamental Realities for each position, the Concierge will randomly draw between zero and three Wanderers for the game, and all positions will be informed of the Wanderers drawn prior to choosing their Fundamental Realities. The Wanderers slightly change the way the game plays for *all positions* by imposing universal physical laws and/or changing the underlying assumptions and/or processes of the game rules. The Wanderers are considered Fundamental Realities, but do not count against the number of Fundamental Realities held by each position and do not generate any Inheritance Points (The Wanderers do not have Major and Minor forms). The Wanderers are colored red (‘redshifted’), as they are moving away from the established game rules and procedures.

- ✓ In current board-gaming terms, The Wanderers would be called ‘environments’ which are usually controlled and changed by card draws before and during the game.
- ✓ There should be a 50% chance of zero Wanderers in the game, and if there are, then the number of Wanderers drawn is 1 to 3.

---

*“The past needs to be recognized. But it is an imperfect guide for the future.”*

– Daniel W. Drezner, Washington Post, November 3, 2016 <sup>11</sup>

---

## Endnotes.

---

<sup>1</sup> **Commentary**: The “self-evident” truths of the Declaration of Independence are merely statements that our founding fathers considered axiomatic (see Self-Evident discussion, 1 Beginnings, p. 24, *supra*). Students of humanity might consider it self-evident that war is a product of civilization. Many of the most famous statements of intellectuals and leaders are merely axioms recast in memorable language that makes them so quotable. For example, Max Weber’s observations regarding the necessary state monopoly on the legitimate use of physical force is an axiom of sovereignty; it is certain that others have known and expressed the same long before Mr. Weber, but Mr. Weber’s statement stands out as quotable and teachable because of who he is, and how and when it was articulated.

<sup>2</sup> **Commentary**: In the first versions of the idea of Fundamental Realities they were ‘outside the game space’ – I originally envisioned them (back around 1999-2000) as being placed around the outside and projecting chess-like

‘lines of force’ across the board – anything in the lines of force of a Fundamental Reality would be affected by it. I went to Homestead and bought a used electric typewriter to make the Fundamental Realities and a paper cutter board, but the idea fizzled and morphed with the game into the current form. I eventually donated the typewriter to a charity, I don’t know what happened to the paper cutter board.

<sup>3</sup> Citation: “Oh, I see. The old geranium to the cranium!” – Sassy the cat (voice of Sally Fields), *Homeward Bound 2* (1996), as she knocks a flower pot off the ledge and hits a dog on the head.

<sup>4</sup> Citation: Professor Peter Suber’s “Nomic,” a game about self-amending systems, was an influence on GGDM.

<sup>5</sup> Commentary: I was fascinated for awhile by *Cosmic Encounter* and its predecessor, *Eon*. I learned to play *Cosmic Encounter* at GenCon 2001, and spent much of the weekend playing and talking with grey-haired Peter Olatka, the designer, and the *Cosmic Encounter* web design crew. Although there was no conscious effort to imitate *Cosmic Encounter*, *Fundamental Realities* probably owe some debt to that weekend of playing *Cosmic Encounter*. *Cosmic Encounter* was later, retroactively cited as an early example of intentional emergent game play in tabletop gaming.

<sup>6</sup> Commentary: “Michel-angel-oh, was give’in a one man show...” – Dr. Hook, “*Michelangelo*” (1978).

<sup>7</sup> Commentary: The number of possible combinations of *Fundamental Realities* is probably mindboggling.

<sup>8</sup> Commentary: When I created the first 100 *Fundamental Realities* in 2007, there were three types, Historical, Evolutionary and Cosmic. The original types were vague and general with no other meaning in the game and many *Fundamental Realities* had overlapping types. Each original *Fundamental Reality* was written as a special rules subset for the position that held them; rather than the current ‘guidelines format.’ Most of the original *Fundamental Realities* rolled into Type 1 and Type 3 categories, with some few going into Type 2 and 4.

<sup>9</sup> Commentary: The majority of any role-playing game is the interpretation of die roll results within the context of the characters, circumstances, and rules. A lot of fudging goes on behind the GM screen. If a RPG session is nothing but a bunch of interpretations and group storytelling, then what is the purpose of the dice? The dice are used to eliminate a large number of possible interpretations (e.g., a miss or a failed task or failed saving throw) or to create the opportunity for extraordinary results (e.g., three consecutive ‘20’ results on a d20), so that the story can move along. Some RPGs have tried other methods, being diceless, using cards and drama points, but generally all to the same effect. Thus, role playing game design is very much a matter of die rolls and numbers crunching (or other systems), and RPG characters are – as agents of heroic storytelling – endowed with greater abilities than normals (i.e. ‘blips,’ NPCs).

<sup>10</sup> Commentary & Citation: Participants who are really into their positions may sometimes do or say unsavory or morally repulsive things *within the game* as part of playing their part in the story arc or position advancement. This should not be automatically taken as a moral indictment against the position’s players, ***and the position’s players should not have to break the fourth wall to explain.*** Like an actor who makes a career playing memorable and/or anonymous bad guys (e.g., Alan Rickman, Jack Palance, Lord Humungus). Although she was commenting broadly on writing fictional character dialogue, Ms. Beth Hill’s comments can also apply to playing positions in GGDM:

- ✓ “Putting your pet theory or your political, religious, or social beliefs into the mouth of a character and letting the character pontificate on and on is a sure way to keep readers from coming back to your books... But fiction is not the place for preaching the party line. If your character has a position to defend, *let him do it*. And make him convincing. Remember, however, that *your* position has no place in his mouth. This isn’t ventriloquist school. This is fiction, where truth is revealed, not force fed. Write your treatises if you want to, if you need to. But let characters be characters, not your ideal Mini-Me. Some of your characters, some of the solid ones who defeat the bad guys, won’t be just like you. They won’t hold the same positions. They won’t have the same values. They might never choose you for a trusted friend. But they can still be the perfect character for your tale. And you’ll have to be the one to make them believable. And solid. And good. Yeah. Sometimes you’ll have to make them good, those characters who don’t agree with your positions. Are you writer enough to create them?” (emphasis in original).

- From “Bad Dialogue – Bad, Bad Dialogue,” November 3, 2011, at <http://theeditorsblog.net/2011/11/03/bad-dialogue-bad-bad-dialogue/>.

*See Appendix FR – The Fundamental Realities*

*“Space: The final frontier. These are the voyages of the Starship Enterprise. Its five-year mission, to explore strange new worlds, to seek out new life and new civilizations, to boldly go where no man has gone before”*

– Captain James T. Kirk, opening narration, *Star Trek* <sup>1</sup>

**Spaces:** Reality can be best characterized as the congruence point of three spaces, the outer space of the physical universe, the shared public space of the civilization, and the inner space of the mind. Consider that there are words that specifically distinguish between literal or graphic meanings and culturally-assigned meanings for any object or event; compare *denotation* to *connotation*.

- ✓ “I’ve come to realize that there are three categories of truth – personal truth, political truths, and the objective truths that shape our understanding of the universe. The interesting thing about an objective truth is that it’s true no matter what. Imagine that.” – Neil deGrasse Tyson, “Class Trailer” to Master Class program.<sup>2</sup>
  - Notice that Mr. Tyson gave all three equal billing as ‘truth’ where others would say, ‘personal beliefs’ or ‘political spin’ for example.

All three spaces are in play in GGDM: The Galactic Space and the Public Space; all in the mind, connected by a ‘unity of opposites’ (see 5 Fallen to Earth, p. 1570, *infra*).<sup>3</sup>

- ✓ This concept may be similar to or vaguely reminiscent of Edward Soja’s *thirdspace* concept – of which I have only a very general understanding (I have not read the book) and did not encounter it until early 2018.<sup>4</sup> Within the development timeline of GGDM, the congruence of reality concept dates probably from around 2002, and the concepts of objective and subjective spaces, the Galactic Space and Public Space are the base on which the game is built throughout. While I do not recall any specific external source of inspiration for the congruence of realities idea, it is perhaps indicative of a developing aspect of the cultural milieu of the United States at the turn of the millennia; and of the way in which ideas occur originally or semi-independently in differing shades over time.
  - ✓ “John P. Newport, in his study of the impact of New Age beliefs, described the central focus of the *Seth Material* as the idea that each individual creates his or her own reality, a foundational concept of the New Age movement first articulated in the *Seth Material*.” – from Wikipedia article, “Seth Material,” October 29, 2018, citing to John P. Newport, *The New Age Movement and the Biblical Worldview: Conflict and Dialogue* (1998), p. 165.
    - Although GGDM is not a work of ‘New Age’ philosophy – whatever that even means, no one is certain – once ideas get out into the public space, there is a certain process of enculturation. Thus, if it can be considered New Age in any way, it is accidental; I have never read any of the Seth Material books or anything similar.
- The Galactic Space: The physical universe playing area of the game is an unexplored piece of three-dimensional galactic space starting with thirty stars with any number of planets, and whatever else might be found in a ‘typical’ section of galactic space. All positions begin in

this unexplored area – a cradle of future interstellar civilization.<sup>5</sup> The Galactic Space expands during the game as positions explore beyond the initial cluster by adding new stars. All stars in the Galactic Space of the game are assumed to be part of the same galaxy.

- ✓ The stars in the Galactic Space do not move during the game, human fiction does not generally engage with such meaningful time scales; alternatively, fixed coordinates are a game mechanical convenience regardless of how much time passes.
- **Celestial Cartography:** The Starlog initially lists the names of thirty stars that form the Galactic Space playing area, with a set of three-dimensional Cartesian coordinates for each star in x, y, z format, the Stellar Class of the star. The details of what the information on the Starlog means will be explained in later sections. The Starlog will be chosen by the Concierge during the game setup. Through exploration, the positions may expand the Galactic Space as necessary (the Galactic Space gets crowded quickly!). The Starlog will be displayed to each position and will also contain planetary information known currently by the position.
  - ✓ In Mike Resnick’s Birthright: The Book of Man (1982), the human government had built a huge cartography building that housed an enormous three dimensional galactic map. Perhaps it might be envisioned as something like the Engineers orrery scene in *Prometheus* (2012). Something similar on a tiny scale – the map of the multiverse room – appeared in Amazon’s *Man in the High Castle* series (“Every Door Out” 2019).
  - ✓ “I see only one advantage in providing our army with out-of-date maps: If they fall into the hands of the enemy, they mislead them too.” – Prince Rudolf (Omar Sharif), *Mayerling* (1968).
- **The Public Space:** The Public Space is the other playing area of the game. The Public Space is where civilization defines its version of what is real and what it all means. Each position has only one Public Space, which is secret, and serves as the main part of each position’s civilization. The Public Space is a two-dimensional, abstract, usually irregularly-shaped representation of an interstellar civilization’s reality. Coordinates in the Public Space are described in A and B coordinates to differentiate them from the standard Cartesian coordinates used for Galactic Space. Public Space coordinates have no correlation whatsoever to the Galactic Space coordinates depicted in the Starlog.

In this sense, the Public Space is very much like Slipstream in the *Andromeda* television series (which appears to be based on neuroplasticity):

- ✓ “One interesting thing about moving through the slipstream is that travel time between points has very little to do with the distance actually traveled. If a pilot is lucky, and the stream unfolds just right, the ship could transit between galaxies in minutes. But put an unlucky pilot at the helm and the same trip could take weeks or even months. Luckily for the cause of interstellar commerce and communication, the more frequently a certain path is traveled, the faster, easier and more predictable the journey becomes. As a result, frequently-traveled routes between major Systems Commonwealth worlds, Tarn-Vedra to San-Ska-Re, are safe and convenient.” – The *Andromeda* Wiki article, “Slipstream,” captured May 28, 2018.

Distance on Public Space has nothing to do with any measure in Galactic Space, things far apart in Galactic Space may be placed adjacent on the Public Space.

- ✓ See related Buzzing Lightyears discussion in 4 The Streams of Time, p. 101, *infra*.
- **Integers and Monads:** For game convenience, coordinates in the Public Space and Galactic Space are always expressed as integers (i.e. whole numbers). Any intersection of the A and B integer coordinates in the Public Space is called a Monad. Each Monad can only be occupied by one object at a time. Similarly, each integer intersection of X, Y, and Z coordinates in the Galactic Space can only be occupied by one ‘star system’ or nothing at all (with the exception of any unique, special objects the Concierge may insert).
  - ✓ One of my favorite fantasy short stories is “Palimpsest” by Tais Tang published in Dragon Magazine, p. 62, Issue 123, July 1987. The story begins in a fantasy feudal world where Elves lord over Men, who are simple farmers and villagers. Iron is illegal because it counters the magic of the Elves and the Elves are also vulnerable in the two hours of bright sunlight of each day; most of the rest of the day being twilight. The humans rebel against the Elves, kill an Earl, but are subdued by the Elven retaliation. One of the young humans is taken to live with the Elves. Then he discovered the truth: the world was a dream, writing over the ugly reality of a post-apocalyptic Earth, a second-choice reality filling the void when the Earth was rendered lifeless by World War III. In this story, reality (or god if you will) is presented with Aristotelian *horror vacui*.

---

*“Critical spatial thinking today hinges around three principles:*

*a) The ontological spatiality of being (we are all spatial as well as social and temporal beings).*

*b) The social production of spatiality (space is socially produced and can therefore be socially changed).*

*c) The socio-spatial dialectic (the spatial shapes the social as much as the social shapes the spatial).”*

– Edward Soja, “The City and Spatial Justice,” JSSJ, January 2009

---

**The Shape of Reality:** Every creature, group, nation or civilization has a phenomenological space, the place of concepts, connections, meanings, and memories, where objects don’t necessarily correspond to literal space relationships or objective reality (a ‘twilight zone’ if you like). This is the Public Space. The Public Space represents the ‘shape of reality’ as experienced by that race. Each position’s Public Space will be of a different size and shape, and may change during the course of the game.

- **The Illusion of Choice:** After positions choose their Fundamental Realities, the Concierge will randomly generate the position’s Public Space. The size of the Public Space will depend on the number of Fundamental Realities chosen, as mentioned previously, but all Public Spaces must at least be large enough for the position to begin with five Government Titles in their Public Space and some extra room for colonies, pieces, pathways, etc. (all described later). Public Spaces exist on a regular plane, and may form a regular shape, but probably will not. Public Spaces are finite, and therefore, may become overcrowded.
  - ✓ The ‘illusion of choice’ is a close cousin of ‘managed democracy.’ The set up process – and play of GGDM – resembles a managed or guided democracy in every way, the Concierge is a *de facto* autocrat!

*“Talking with a Martian is something like talking with an echo. You don’t get any argument, but you don’t get any results either.” – Robert Heinlein*

## Endnotes.

<sup>1</sup> Citation: “What’s the mission of this vessel, Doctor? To seek out and contact alien life, and an opportunity to demonstrate what our high-sounding words mean. Any questions?” – Captain Kirk, “The Corbomite Maneuver” (ST:OS 1966).

<sup>2</sup> Citation: “The truth is incontrovertible. Malice may attack it, ignorance may deride it, but in the end, there it is.” – Winston Churchill.

<sup>3</sup> Citation: [*post-apocalyptic and fantasy world scenes*] “Reality is a strange and curious thing. Most see it as something singular and solitary. I know it is infinite. Yet with a multitude of realities to move among, to explore... any single one, no matter how satisfying... grows more and more difficult to maintain.”

- ✓ [*modern large mechanical draftsman shop scene*] “Of course, that hasn’t always been true. There was a time when the reality I knew was just as set and solitary as that of anyone else.”
- ✓ [*upscale suburbia scene*] “Too set. Too solitary. I felt there had to be something more... and I began to search for it in even odder and stranger places.”
- ✓ [*public library scene*] “That search was long and all consuming... but it led eventually to knowledge; mostly ancient, often ridiculed, sometimes forbidden.”
- ✓ [*dark home study, worried family looks on*] “Reality was a matter of perception. Alter perception and new universes were born; endless, infinite, where any reality imagined could actually exist. I had but to master phasing from the reality in which I felt so entrapped into whatever one I most desired. That mastery escaped me, frustrated me... Yet drove me on to the exclusion of everything else. Then, even as the demands of my reality became too pressing, too overwhelming to continue to postpone and ignore... I suddenly experienced success. Not total. Merely a brushing of one reality with another...”
- ✓ [*Fantasy, sci-fi, post-apocalyptic scenes*] “...but it was the breakthrough I needed, the hint that what I was trying to achieve was not a crackpot dream but entirely possible. Soon enough, I was locking out one limited existence and setting my mind... to phase into another far more amazing and wonderful. And having discovered such an ability, it was difficult not to test it, to continually explore the infinite realities, the limitless lives that might have been mine... and in these alternative universes, were! But the more I played with the phasing, the more I found I had trouble sustaining my stay in any one reality. As the excitement, the intensity of the experience began to fade, so did my control. I now find myself continually phasing, vanishing suddenly from one reality to appear in another. Sometimes magnificent... but more often of late, chillingly grim.”
- ✓ [*He is apprehended by force and put in a padded cell with a straight jacket*] “Reality is a strange and curious thing. Most see it as something singular and solitary. I know it is infinite.”
- ✓ [*he fades out of existence wearing the straight jacket*] – Archie Goodman (story) and Al Williamson (artwork), “Out of Phase,” *Epic Illustrated*, Vol. 1, No. 34, February 1986.

<sup>4</sup> Commentary & Citation: Thirdspace is not a common internet subject, references to Soja’s Thirdspace are somewhat difficult to find (especially as Babylon 5 had a movie of the same name). The No Space Like Home blog page was very helpful (the blog appears to be inactive since mid-2012, which is a shame):

- ✓ “His spatial theory called ‘Thirdspace’ is largely an extension of the work of Henri Lefebvre and is focused within the field of cultural geography. Soja employs a triad of space where space is spatiality, sociality and history. This is the space, Soja contends, where everything comes together. For Soja, modernism emphasized history at the expense of geography. Thirdspace according to Soja is a way of ‘thinking about and interpreting socially produced space,’ where the spatiality of our lives, our human geography, has the same scope and significance as the social and historical dimensions.” – Soja page at No Space Like Home (WordPress Blog), unattributed and undated, <https://2113humtheresnospacelikehome.wordpress.com/soja/>.

<sup>5</sup> Commentary: Because in this universe, everyone has to be somewhere? *A priori*. Like saying that two objects cannot occupy the same space at the same time, such statements simultaneously sound stupid (like, duh, really?) and somehow profound. And the closer you examine the statement, the less certain you are of the “stupid” truth of such statements.

*“Ah, arrogance and stupidity all in the same package. How efficient of you!”*  
– Londo Mollari, Babylon 5, “In the Beginning” (1998)

---

**Luc:** *Are you really Emperor?*

**Londo:** *I sometimes ask myself the same question. Yes, I’m the Emperor. Here, you see? This is the seal of the Centauri Republic. Only the Emperor can wear it. So either I am the Emperor, or I am in a great deal of trouble. Or both.*

– Babylon 5, “In the Beginning” (1998)

---

**Those Who Stand Looking:** All positions must begin with at least three Government Titles and cannot have more than five Government Titles.<sup>1</sup> Government Titles represent some combination of the central authorities of a civilization, the groups and interests who hold power over those central authorities, and the identities and visions of the people over whom those far reaching authorities govern. Positions must begin the game with a central government.

- **The Power to Choose:** Each position chooses starting Government Titles after the Public Space is set.
  - ✓ All positions must choose one (and only one) Structural Government Title and may choose, from a pool of ten randomly generated Estate and Social Titles called The Foresight, any combination of two or more additional Estate and Social Government Titles up to a maximum of five total Titles (incl. Structural Title).
  - ✓ The number of Government Titles also determines the number of Powers a position may activate each turn and how many Acts and Scenes are received each turn during the game. Government Titles are a complex subject that is described in greater detail later in these rules, but like Fundamental Realities, more Government Titles tend to restrict the options available to a position, even as the position receives the ability to do more from having more Titles (five Titles really is a practical game limit).
  - ✓ Unlike Fundamental Realities, Government Titles can be changed during the game, but it is a disruptive and sometimes difficult process that should be undertaken with care. Therefore, the initial choice of Government Titles is important. The Foresight will remain after setup as a pool of Titles from which a position may choose during the game when changing Titles. The Concierge will not alter Government Titles choices submitted by the positions.
  - ✓ See further discussion of The Foresight in Pool of the Abyss, 4 Government Titles, p. 630, *infra*.

Positions should choose Titles which they can probably maintain in the near-term and plan their early game based on what will keep the Titles from failing all Conflict Checks and becoming disrupted (see Foreclosure of a Dream, 3 Government Titles, p. 615, *infra*). Some are more difficult than others. As a concession to the early game situation, Conflict Checks will not be checked until the end of the third or fourth turn. Happy honeymoon.

- **The Place of Government:** All Government Titles consist of two parts, the large Government Title ‘piece’ which is placed on the Public Space and a corresponding Magna Carta describing the legitimacy requirements of the Government Title. Government Titles must be legally placed on the Public Space during the setup, as described in the Government Titles section. Once placed, the Government Titles cannot be moved, but can be removed during the course of the game if the Government Title is disrupted or changed.

---

*“They didn’t listen of course. Arrogant men never do. Sadly, arrogance has never been exclusively a Human trait. It travels between the stars like solar winds.” – Londo Mollari, Babylon 5, “In The Beginning” (1998)*

---

**Native Population Type:** A Native Population Type is a unique intelligent species that has its own subjective and objective physiological and psychological identity as a distinct sapient species. In short, a Native Population Type is your biologically and/or mechanically distinct species: Your starting population and all population factors descended from them during the game.

- **Galactic Shelf:** Native population types are all assumed to be sapient, possess existential free will, possess a Sentience Quotient (SQ) of approximately +13 (human = SQ+13) and are assumed to be at the top of the food chain on their homeworld. They are not assumed to be necessarily humanoid, human or possess any specific body size or shape. Dr. Who is perhaps the best example of an intelligence in excess of SQ+13 in video science-fiction; his main, consistently demonstrated, ability is to process and analyze vast amounts of information, subtle observations and clues (his awareness) in short amounts of time, on a higher order than the human form he takes.
  - ✓ Prof. Antonio Damasio (Dept. of Neuroscience, University of Southern California), “has suggested that consciousness, whether the primitive ‘core consciousness’ of animals or the ‘extended’ self-conception of humans, requiring autobiographical memory, emerges from emotions and feelings” (Jason Pontin, “The Importance of Feelings,” MIT Technology Review, June 17, 2014).<sup>2</sup> Thus, to the extent that sapience is congruent with humans, it must contain “extended self-conception” and “autobiographical memory.” See full feature quote in The Work of the Mind discussion, 3 The Big Bang, p. 9, *supra*.
- **Major Natives:** Each position represents a Major Native Population Type; two or more positions may represent different factions of the same Major Native Population Type, with related, but different sets of Fundamental Realities and Government Titles. Major Native Population Types are those that have achieved at least a significant in-system travel and colonization capability, and in most cases, have achieved interstellar flight capabilities or will soon, i.e. technologically-advanced races. The Native Population Type of each position begins with the initial populations and extends through all population factors grown from the original populations. All population factors of each position’s Native Population Type are affected, as appropriate, by the Fundamental Realities and the Primal State chosen before the game, the current Government Titles, all technologies completed, and share the Public Space belonging to their position while they are part of their Native Population Type’s position.
  - ✓ The concept of major races as presented here comes directly from my experience playing Traveller RPG in my youth; Major Race is a very specific and defined term in

Traveller's Third Imperium setting. However, Traveller's scheme of Major and Minor races simply codified a long-running thematic division in science-fiction literature: races, civilizations and/or populations that have achieved technology and interstellar travel capabilities, and those that did not. This in turn is assuredly an echo of the era of European global exploration, colonization and dominance, where the stark difference existed between those cultures that had oceangoing ships and accurate navigation and those that did not (e.g., see the *United States v The Amistad*, 1841). In this sense, GGDM is an echo of European colonialism, as is science-fiction trope.

- Minor Races: In addition to the Native Population Types of the positions (i.e. the Major Races), there may be a number of Minor Races located in the Galactic Space. Minor Races are discussed in 4 Diplomacy, p. 1140, *infra*. These Minor Races are civilizations distinguished from the Major Races in that they have not yet achieved either Stardrive or significant in-system colonization (and probably won't anytime soon). The Concierge controls all Minor Races and determines their placement. Players will generally not know the location of Minor Races until they discover them.
  - ✓ The core definition of the term "species" is the ability to reproduce offspring who can in turn reproduce. Two creatures belong to the same species – despite outward differences in size and appearance (e.g., sexual dimorphism, sexual dichromatism) – if they can produce offspring who can, if they survive, produce offspring of like kind. Species is continuity of life.
- Race and Ethnicity: Whether a Native Population Type has distinct races and ethnicities is up to the players and the Concierge. **Race** is more genetic (in the current use) while **ethnicity** is based more on common ancestry, culture, language, and dress. Both are a result more or less of random assortment of genes, genetic drift and genetic isolation – one of the primary drivers of mutation and evolution – in large populations spread over the surface of a sizable planet. It is more likely than not, then, that any species that comes into the game as a result of evolution (which implies an ability to change and a process of change, probably biological change), will have some sort of racial and/or ethnically distinct groupings. Diaspora to colonies would tend to continue the process and/or create new 'races' and 'ethnic' groups based on colonial ancestry and affiliation. This does not automatically equate to the presence of racism or ethnic hostility.
  - ✓ When I was young, I read S is for Space (1966), R is for Rocket (1960), Dandelion Wine (1957), The Martian Chronicles (1950) and maybe the Illustrated Man (1951) by Ray Bradbury. One story I remembered 35+ years later was "Way in the Middle of the Air" (1950) (I confess I had to go look up the title, but I remembered the gist of the story) about an Exodus of African Americans ("blacks") from the old Jim Crow South aboard rocket ships going to Mars colonies. It was in The Martian Chronicles, but I think it was excluded from the TV mini-series (1979) and was excluded from post-Cold War reprints. The base question of the story was what would Southern white men do without a daily target for their racism? It was published before the Civil Rights Movement. The Exodus is never mentioned elsewhere, and therefore is a discontinuity to the stitched-together story of The Martian Chronicles. It was one of Bradbury's few timely and overtly political stories, and critics (e.g., Sparknotes) believe it is one of his weakest.

*“...absurdities like aliens who lusted after Earthwomen (about as logical as a man lusting after female though not male lobsters) and human/alien cross-breeding (genetically impossible) were once a firm part of the science fiction tradition.”* – [The Science in Science Fiction](#), Ed. by Peter Nicholls (1982)

**Pan-Galactic Pornography:** What is sexy to an alien? The game assumes generally, that cross-breeding between Native Population Types (whether Major or Minor) *will not* occur. Interstellar interspecies crossbreeding should be viewed with extreme skepticism across the board, even if the species involved are both humanoid.<sup>3</sup> With the necessary caveat – and this is where science-fiction writers find a loophole for interspecies crossbreeding – that modern humans have Neanderthal and Denisovan DNA indicating crossbreeding of premodern (or archaic) and *now extinct* hominid subspecies (e.g., a first-generation Neanderthal-Denisovian offspring was found<sup>4</sup>). This also indicates that premodern human ancestors had spread to Asia and had the ability to traverse short distances over water *before* the famous “out of Africa” migration of early modern humans.

- ✓ “The prehistoric world of multiple human species co-existing has often been compared to Middle Earth or other fantasy worlds, where dwarfs, elves and others all share the lands ... however ... the world of multiple human species was more like Star Trek with introgression between species being pretty common...” – Ben G. Thomas, “Who Were The Denisovan Humans?” YouTube, April 12, 2020.

Science-fiction literature rarely invokes or discusses the subject as it leads to uncomfortable discussions – whereas apparently faster-than-light travel is sexier and not considered as problematic technologically or philosophically for science-fiction writers and fandom. Fantasy, freed from inconvenient science, takes a more permissive, romantic and liberal “love conquers all” view (e.g., Arwen in *Lord of the Rings*). On Earth, we have had limited success in crossbreeding animal species, and the parents must share the same genus, for example, the mule (a male mule is called a horse mule, a rare female mule is called a Molly, but Mollys very rarely have offspring).

- ✓ In the *Babylon 5* Crusade episode “The Needs of Earth” (1999) a stolen data crystal had a pornographic scene involving humans and aliens. There was no implication of reproduction, however. Surgical alteration was implied so that aliens could interact with humans in that way.
- ✓ In “Love Doesn’t Last Forever,” by Alan Moore (writer) and Rich Vietch (illustrator) in *Epic Illustrated* #34 (February 1986), pp. 16-23, a man has an affair with an alien and catches a horrific disease. He then killed his wife, her loverboy, and himself to make sure the disease didn’t spread, but the loverboy’s widow boarded a transport with the infection.
- ✓ In another old science-fiction short story (and I apologize that I do not have the title), an interstellar explorer discovers a lush green planet where a certain species of plant produces elaborate flowers that look like a seductive young human female lounging on a couch, along with hallucinogenic scents that cause male sexual desire. The females of the planet’s indigenous humanoid population destroy the plants whenever they find them, but the humans turn the planet into a sex tourist attraction.

- ✓ BSG featured crossbreeding between human model Cylons and humans and Hera became the mitochondrial Eve of modern humanity... that was mostly the point of the whole story about epochal cycles.

Note however, that the Lost Colonist Position (see 6 Beginnings, p. 63, *infra*) shares a *biological* Native Population Type with another position in the game – and thus are of the same species or close anyway – and mixing and crossbreeding (but not in the truest sense) *might* be possible between those two positions.

- ✓ Technically, Delenn in Babylon 5 was a Minbari that became a Human to close the circle of the prophecy (Captain Sinclair became a male Minbari). As a member of the Grey Council (until she broke it) and a leader of the religious caste, Delenn was still considered a Minbari ... but it is clearly indicated that she had a post-marital sexual relationship with Capt. Sheridan, that she had normal human ‘female problems’ (she consulted with Susan Ivonova who became her human female mentor), and they had a son, David. Whether Humans and Minbari constitute a Lost Colonist Primal State (see 6 Beginnings, p. 63, *infra*) relationship in Babylon 5 depends on whether you share the Minbari beliefs about the cycling and migration of souls. They certainly evolved independently on two planets, unless you believe outside agencies, e.g., the First Ones or the Great Machine, intervened, and thus are very different humanoid biologies. There is no indication that other Human and Minbari pairings could reproduce or even that they were sexually compatible, only that Delenn changed species.
  - See also Prophecy discussion, 2 Wheels in the Sky generally, *infra*.

But the situation might also be like that of Chimps and Bonobos or Old World and New World Monkeys, cases where populations separated by geography drifted apart into separate species.

➤ Courtly Love: Whether ‘courtly love’ or ‘platonic love’ could exist between alien species is a much more interesting question.

- ✓ “According to the autobiographic *La Vita Nuova*, Beatrice and Dante met only twice during their lives. ... It is more likely that the encounters with Beatrice that Dante writes of are the two that fulfill his poetic vision, and Beatrice, like Petrarch’s Laura, seem to blur the line between an actual love interest and a means employed by the poet in his creations.

Following their first meeting, Dante was so enthralled by Beatrice that he later wrote in *La Vita Nuova: Ecce Deus fortior me, qui veniens dominabitur michi* (‘Behold, a deity stronger than I; who coming, shall rule over me’). Indeed, Dante frequented parts of Florence, his home city, where he thought he might catch even a glimpse of her. As he did so, he made great efforts to ensure his thoughts of Beatrice remained private, even writing poetry for another lady, so as to use her as a ‘screen for the truth.’

Dante’s courtly love for Beatrice continued for nine years, before the pair finally met again. This meeting occurred in a street of Florence, which she walked along dressed in white and accompanied by two older women. She turned and greeted him, her salutation filling him with such joy that he retreated to his room to think about her. In doing so, he fell asleep, and had a dream which would become the subject of the first sonnet in *La Vita Nuova*.” – from Wikipedia article, “Beatrice Portinari.”

- ✓ “Upon her death in 1348, the poet found that his grief was as difficult to live with as was his former despair. ... While it is possible she was an idealized or pseudonymous character – particularly since the name ‘Laura’ has a linguistic connection to the poetic ‘laurels’ Petrarch coveted – Petrarch himself always denied it. His frequent use of *l’aura* is also remarkable....

There is psychological realism in the description of Laura, although Petrarch draws heavily on conventionalised descriptions of love and lovers from troubadour songs and other literature of courtly love. Her presence causes him unspeakable joy, but his unrequited love creates unendurable desires, inner conflicts between the ardent lover and the mystic Christian, making it impossible to reconcile the two. Petrarch’s quest for love leads to hopelessness and irreconcilable anguish, as he expresses in the series of paradoxes in Rima 134 ‘Pace non trovo, et non ò da far guerra;/e temo, et spero; et ardo, et son un ghiaccio’: ‘I find no peace, and yet I make no war:/and fear, and hope: and burn, and I am ice.’ Laura is unreachable – the few physical descriptions of her are vague, almost impalpable as the love he pines for...” – from Wikipedia article, “Petrarch,” captured October 31, 2019.

Nowadays, Dante and Petrarch would be called pervs and stalkers, and someone would call the police. They would be fired from their jobs or sued for harassment. Or their female love interest would say something rude like “Take a picture, it will last longer,” and some frat boy would want to start a fistfight. Our thoughts now always go instantly to the carnal; a complete historical turn from the poetic and literary ideals of five centuries ago, by the standards of centuries past, modernity has devolved us to the base and vulgar version of humanity.

Courtly or platonic love is beyond the reach of the current milieu where sexual gratification is idealized, and because of this, science-fiction literature has rarely attempted it (it requires considerable buildup to get to the concept currently). In Star Wars, the love between Luke Skywalker and Princess Leia must remain platonic because they are siblings, while the baser Han Solo character is free to indulge in his carnal desires. But they are all humans.

Perhaps the best screen version of science-fiction courtly or platonic love is in Babylon 5:

- ✓ “As part of the rebirth ceremony, I am required to tell someone that which I have never told anyone before. I love her [Deleenn]. ... My love for Deleenn is not quite what you might think. It is not romantic love as you consider it, it’s something higher, and nobler. A pure, perfect love if you will. I know that Deleenn is fated for another and I’ve accepted that in my heart. But I have vowed to stay at her side through all things for as long as I live. ... Since I can never tell her, I tell you as part of the ritual.” – Lennier, Babylon 5, “Ceremonies of Light and Dark” (1996).

Later, Lennier says to Deleenn in “Rising Star” (1997), “All love is unrequited.” He was repeating what Ivonova allegedly said, but he was really saying what he meant. Later in “Objects at Rest” (1998), Lennier finally gives into his jealousy and abandons Capt. Sheridan (now Deleenn’s husband) instead of rescuing him from an accident. Lennier fled into the unknown and broke his vow to stay by her side for as long as he lived.

- ✓ See also discussion of Shared Meanings in *The Commonality*, 3 Diplomacy, p. 1131, *infra*.

- **Special People:** There may also be other Major Races or ‘special races’ that are not Minor Races, which are introduced, defined and controlled by the Concierge for game purposes (e.g., the ‘Sea Peoples’ who plagued the late Bronze Age Mediterranean).

*“Long before you were born a man decided that there could be a very simple test to determine if a machine was intelligent. Not only intelligent, but aware, possessed of a psychology. The test had only one question. Can a machine converse with a human with enough facility that the human could not tell that she was talking to a machine? I always thought this was cruel – the test depends entirely upon a human judge and human feelings, whether the machine feels intelligent to the observer. It privileges the observer, the human, to a crippling degree. It seeks only believably human responses. It wants perfect mimicry, not a new thing. It’s a mirror in which men wish only to see themselves.” – Catherynne M. Valente, Silently and Very Fast (2011)*

**Sentience vs. Sapience:** Science-fiction writers have regularly misused the word “sentient” for decades when they mean “sapient” and “sapience” and it has spread to other writers and media. It always starts with definitions (tendentious pedant time!<sup>5</sup>):

- ✓ Merriam-Webster online dictionary at **sentient**: **1:** responsive to or conscious of sense impressions; **2:** AWARE; **3:** finely sensitive in perception or feeling.
- ✓ Merriam-Webster online dictionary at **sentience**: **1:** a sentient quality or state; **2 :** feeling or sensation *as distinguished from perception and thought* (emphasis added).
- ✓ Merriam-Webster online dictionary at **sapient**: possessing or expressing great sagacity.
- ✓ Merriam-Webster online dictionary at **sagacity**: the quality of being sagacious.
- ✓ Merriam-Webster online dictionary at **sagacious**: **1 obsolete: keen in sense perception; 2 a: of keen and farsighted penetration and judgment : DISCERNING, b:** caused by or indicating acute discernment (emphasis added).
- ✓ Merriam-Webster online dictionary at **sapience**: wisdom, sagacity.

So sentient/sentience cannot be the same as sapient/sapience, *ut infra*. The terms will be used correctly here as the distinction is vitally important, that is, in GGDM text, “sapient/sapience” will often be used where others would use “sentient/sentience.” Sentience Quotient and sapience are entirely different measures of *looking* (discussed later), and should not be confused – for example, it is probably possible to have a SQ +20 computer that is not sapient – though it is likely there is some as yet unarticulated relationship between SQ and sapience. Sentience was congruent with life until the information age, sapience was congruent with biological personhood until the possibility of artificial intelligence was first recognized (have you hugged a T-800 today?).

- ✓ “The Turing Test was invented in 1950 by British mathematician Alan Turing, one of the fathers of the computer age. Turing was also a gay man in a period when homosexuality was illegal in Britain. In 1952 he was convicted of committing homosexual acts and forced to undergo chemical castration. Two years later he committed suicide. *The Turing Test is simply a replication of a mundane test every gay man had to undergo in the 1950s Britain: can you pass for a straight man?* Turing knew from personal experience

that it didn't matter who you really were – it mattered only what others thought of you. According to Turing, in the future computers would be just like gay men in the 1950s. It won't matter whether computers will actually be conscious or not. It will matter only what people think about it.” – Yuval Noah Harari, Homo Deus: A History of Tomorrow (2016) (emphasis added).

- ✓ “I’ll tell you what, for every cyborg that isn’t human, I’ll show you a person that’s less than human.” – Cpt. Walker, Nydenion (2010).<sup>6</sup>
- ✓ See discussion of sophonts in *Alien Persons and Sophantistry*, 2 *Diplomacy*, pp. 1110, 1113, *infra*.

---

*“We’ve never observed the Neanderthal Y chromosome DNA in any human sample ever tested,’ Carlos Bustamante, professor of biomedical data science and of genetics at Stanford’s School of Medicine said in a news release. ‘That doesn’t prove it’s totally extinct, but it likely is.’ Researchers aren’t sure if the absence happened by chance or can be explained by evolutionary circumstances. It may be, Bustamante said, that genes in the Neanderthal’s Y chromosome were incompatible with human genes. ‘The functional nature of the mutations we found, suggests to us that Neanderthal Y chromosome sequences may have played a role in barriers to gene flow, but we need to do experiments to demonstrate this and are working to plan these now,’ Bustamante said.”*

– Brooks Hayes, “Modern male DNA without Y chromosome genes from Neanderthals,” *United Press International (UPI.com)*, April 7, 2016

---

**Dating Man:** Despite what females think, there is no Neanderthal Y Chromosomes in modern males (*ut supra*).

- ✓ See also Assortative Mating discussion, 5 *Taxation & Census*, p. 344, *infra*.

There have been many people who have claimed to ‘disprove’ the ‘theory of evolution.’<sup>7</sup> None have been convincing and the idea of evolution of life on Earth, if not elsewhere, remains a bedrock of science, and a crumbling bedrock of opposition by religious conservatives.<sup>8</sup> In the 1980s, however, evolution was not taught in high schools, no school board politicians would touch it, unless they could appease the religious conservatives by also teaching ‘creation science,’ a farce that was shot down by the courts (e.g., *McLean v. Arkansas* (1982), *Edwards v. Aguillard* (1987), and *Kitzmiller v. Dover Area School District* (2005) re: neo-creationist “intelligent design,” opinions are available in free PDF online), and mocked by the media.

- ✓ “Evolution pervades all biological phenomena. To ignore that it occurred or to classify it as a form of dogma is to deprive the student of the most fundamental organizational concept in the biological sciences. No other biological concept has been more extensively tested and more thoroughly corroborated than the evolutionary history of organisms.” – National Academy of Sciences (1984) as cited in Eugenie C. Scott, “Antievolution and Creationism in the United States,” *Annual Review of Anthropology* (1997), PDF is available for free at [http://bio.classes.ucsc.edu/bio175/Other/Scott\\_1997.pdf](http://bio.classes.ucsc.edu/bio175/Other/Scott_1997.pdf).

Evolution is not properly a ‘theory’ but more or less accepted empirical fact; any confusion of this point is a willful lack of understanding of the scientific process: There is no shortage of scientific media on this subject refuting religious fundamentalists. Any success in ‘disproving’ evolution would essentially *destroy modern science as it is currently* as every branch of science – physics, chemistry, biology, psychology, zoology, geology, every one – has contributed something to the study of evolution of life on Earth. This is, of course, exactly what some people want, they want to somehow shove the genie back into the bottle, claw the world back to some religiously idealized time and condition in the past, to recede technology, undo history since 1780 A.D.

- ✓ This should not be confused, however, with the anarcho- or green-primitivism movements, who want a similar result but for different reasons and don’t seem to care much about evolution or science, but oppose the current technological civilization.
- **Omega Point:** Alternatively, ‘theistic evolution’ does not present itself as a theory and thus is not ‘creation science,’ but rather an attempt to harmonize creation mythology, supreme being (or God if you like), mysticism, with biological evolution and abiogenesis. To the extent that theistic evolution is so presented, most people listen politely, then shrug their shoulders and keep their own opinions. The problem with ‘theistic evolution’ is that it is primarily Christian (or by a stretch Abrahamic) and to be fully colorable as an argument, it should treat all creation myths as equally valid (a problem in itself) and seek to harmonize all of them consistently with each other and with biological evolution, cosmology’s age of the universe, geology’s age of the Earth – and you can be sure that other religions are not going to agree to this at all, and I do not think such efforts have been made in any case. Further, it suffers from the same “*a priori* metaphysical assumptions” as creation science, “that there exists a creator of the life whose origin is being examined” (from Wikipedia article, “Creation Science,” February 2, 2019), that is, that ‘theistic evolution’ – though not presenting itself as a theory (and avoiding testability) – begins with the assumptions both that creation stories are valid (in some non-literal sense) and a stated acceptance of biological evolution as valid, and then tries to harmonize them. That’s the problem in a nutshell.

Theistic evolution probably traces in part back to Pierre Teilhard de Chardin’s (1881–1955) Omega Point:

- ✓ “Teilhard’s theory was a personal attempt in creating a new Christianity in which science and theology coexist. The outcome was that his theory of the Omega Point was not perfectly scientific as examined by physicists, and not perfectly Christian either” – from Wikipedia article, “Omega Point,” February 6, 2019.

Omega Point, like the Rapture, or the once posited Big Crunch or opposite, Heat Death of the Universe, is so far removed into the uncertain future from the lives of humanity that it’s really meaningless, and so most people politely listen, shrug their shoulders and keep their own opinions. See discussion of Empirical Mythology, 1 Technology, p. 691, *infra*.

- ✓ “Young Earth creationists ... criticise theistic evolution on theological grounds, finding it hard to reconcile the nature of a loving God with the process of evolution, in particular, the existence of death and suffering before the Fall of Man. They consider that it undermines central biblical teachings by regarding the creation account as a myth, a parable, or an allegory, instead of treating it as historical. They also fear that a capitulation to what they call ‘atheistic’ naturalism will confine God to the gaps in

scientific explanations, undermining biblical doctrines, such as God’s incarnation through Christ.” – from Wikipedia article, “Theistic Evolution,” February 3, 2019.

- **Boorish Behavior:** Notably, the time that ‘creation science’ was being challenged in the courts coincides generally with the time that Christian Fundamentalist were also fiercely (and futilely) attacking Dungeons & Dragons (and Ozzy Osbourne, AC/DC, comic books, movies, and anything else they didn’t like) as ‘satanic’ or a cult that leads to suicide.

- ✓ See Excerpt – Dangerous Games, Prime Mover, *supra*.

Fundamental Christianity lost both battles and looked very foolish, boorish in the process, then the world moved on, the Berlin Wall came down in 1989. Clearly this outlines as a fight for *worldview* by – when the population could not be convinced otherwise – attempting to suppress disagreeable or distasteful ideas from general publication and from teaching in public schools. It failed on all counts.

- ✓ See Tyranny in the Nursery discussion, 3 Colleges, p. 491, *infra*.

- ✓ “The Bible as we have it contains elements that are scientifically incorrect or even morally repugnant. No amount of ‘explaining away’ can convince us that such passages are the product of Divine Wisdom.” – Rabbi Bernard J. Bamberger.

It is not the religion that is objectionable. And that is a distinction to be made; someone like reformist Rabbi Bamberger who recognizes that there are problems with the biblical record, both morally and scientifically, but still keeps the faith and spirit of the ancient religion, is the complete opposite of Biblical literalist and fundamentalist who insist that their book is right, divine, and the only truth and arrive at preordained conclusions, regardless of the mounting evidence, analysis, commentary and belief of the population to the contrary.<sup>9</sup>

The screaming and fanatical ranting of the religious fundamentalist and literalist is an alternate reality and a *prolonged shout into the void*, barrowing phrases from Sam Brodey, “The Chronicles of Nunes: How His Impeachment Speeches Created an Alternate Reality for GOP,” The Daily Beast, November 26, 2019 (emphasis added) (see full quote, 2 Constructural Elements, EN 5, p. 201, *infra*).

---

*“The ideology of the old Commonwealth seems to grow more aristocratic the more we learn about it, so I’m a bit ambivalent about the return of the great and mighty Vedrans. It’s nice to see a fictional universe where a human being is not the greatest thing anyone can be, but the reverential tone Dylan gets when he talks about Vedrans makes me uncomfortable. And I really dislike the concept of alien Warders for a noble species – hopefully that’s the exception rather than the rule. Right now the old Commonwealth seems almost as hierarchical as Nietzschean society. When sentient ships are programmed to think as servants that dote and depend on captain-masters, one suspects an ideology of patronage and privilege exists elsewhere in the social order.”*

– Michelle Erica Green, review of Andromeda episode, “The Fair Unknown,” [littlereview.com](http://littlereview.com), April 14, 2002

---

Endnotes.

<sup>1</sup> Commentary & Citation: Having only three Government Titles might be interpreted as an ideology of small government:

- ✓ “In any case it may be too little too late. The lack of police staff is a major issue, but not at the root of the problem, a lack of government commitment is. There are just too few civil servants securing the checks and balances of the state. If, for instance, there are no border police checking the cargo and no civil servants doing background checks on entrepreneurs, criminal elements can work with ease. It’s a tragic by-product of the years long political call for small government. Where small government rules, it turns out, criminal networks can flourish.” – Nadette De Visser, “The Dutch are Waking Up to Discover They Live in a ‘Narco State’” The Daily Beast, November 26, 2019.

<sup>2</sup> Citation: “Oh, the arrogance. I was recently talking to one of my friends, a former Bill Clinton operative, about the unique properties a special category of people have in common. The category is Humans Who Run for President of the United States. The unique properties are, in a word, an outsized sense of self. A level of arrogance is, by definition, required. Imagine believing you can solve unwieldy, complex, centuries-old, systemic problems that others heretofore have not, that your singular genetic and experiential alchemy makes you the best person to lead a nation, that you can in fact defeat dozens of other capable and qualified candidates to be the last man or woman standing.” – S.E. Cupp, “Hillary Clinton, get real,” CNN, November 14, 2019.

<sup>3</sup> Citation: “Dogs and foxes cannot interbreed, because they have vastly differing chromosome counts. The red fox (*Vulpes vulpes*) has 34; the dog (*Canis lupus familiaris*) has 70. Gametes from each animal (sex cells) would have 17 chromosomes for the fox, and 35 for the dog. Assuming they could even figure out what each other wanted enough to mate, you’d have gametes with 17 and 35 chromosomes meeting, and a zygote of 34 complete chromosome pairs with 18 unpaired chromosomes hanging out in each cell. This is not compatible with life.” – Lorri Robinson in response to “Can a dog and fox breed? What would the mix be called?” Quora Forums, August 20, 2015.

<sup>4</sup> Citation: Matthew Warren, “Mum’s a Neanderthal, Dad’s a Denisovan: First discovery of an ancient-human hybrid,” Nature, August 22, 2018.

<sup>5</sup> Commentary: Throughout GGDM, definitions are important due to the nature of the game and the nature of the conversation. GGDM uses abundant dictionary definitions and definitions from other sources, and also provides definitions of terms as used within the game.

- ✓ GGDM is in some ways like Dune (1965). I read a review of the 2000 SyFy Channel remake of the Dune movie that commented that the mini-series explained and over-explained throughout so that ‘no one would be left behind.’ The strange terminology was one of the complaints of viewers of the 1984 David Lynch Dune movie. For GGDM to have any value, no one who makes the effort should be left behind.

<sup>6</sup> Commentary: This is from the English subtitles, it made more sense than what the actor actually said at that moment, which is why I turned on the subtitles. ☺ I have encountered two movies recently where the English close captioned subtitles didn’t fully match the audio dialogue.

<sup>7</sup> Commentary: *Blitzkrieg* was once a theory too, a military theory to overcome the limitations and problems of WWI industrial warfare (what Napoleon might have called ‘Grand Tactics’). The campaigns of 1939-1940 made it no longer a theory. The results of WWII did not disprove blitzkrieg as a theory, in fact, had no impact at all on the argument; the Germans lost WWII for other reasons, reasons other than the execution of Blitzkrieg. Technology changed the environment and Germany’s enemies learned their system; the principles of blitzkrieg are still at the heart of armored tactics even today.

- ✓ Thus, it is unlikely that the ‘Theory of Evolution’ can be disproven, rather, it may likely be superseded later as technology advances provide new tools for understanding, or our view of the universe changes. But it will still be true within the scope in which it was first conceived.

<sup>8</sup> Commentary: Calling the ‘evolutionary biology’ a theory is the same as calling climate change a hoax or theory while the polar ice caps are melting and collapsing. Or like calling global civilization a dream ideology cooked up by Hollywood liberals.

<sup>9</sup> Citation: “[Alexander] Cain wants to know why America isn’t mentioned [in the Bible], and then he centers in on Babylon. Because, you know, that’s never before been done in the history of [Biblical] interpretation....

[quoting from Cain’s book] “Babylon will reach space as it ‘mounts up to heaven’ (Jeremiah 51:53) and ‘raises its throne above the stars of God’ (Isaiah 14:14).”

Cain like many futurists is indeed a literalist, but this seems quite bizarre. This is really supposed to be about the space program? It’s hard to believe that anyone will take this seriously. Still, many will. This language is used to refer to pride and not to a literal action that is taking place.” – Nick Peters, “A Brief Look At Alexander Cain,” May 6, 2015 (forum post, TheologyWeb).

*“It is clear that we cannot distinguish the sane from the insane in psychiatric hospitals. The hospital itself imposes a special environment in which the meaning of behavior can easily be misunderstood. The consequences to patients hospitalized in such an environment – the powerlessness, depersonalization, segregation, mortification, and self-labeling – seem undoubtedly counter-therapeutic.”*

– David L. Rosenhan, “On Being Sane in Insane Places,” *Science*, Vol. 179 (Jan. 1973), p. 250-258 (from The Wayback Machine) <sup>1</sup>

*“I doubt if a single individual could be found from the whole of mankind free from some form of insanity. The only difference is one of degree. A man who sees a gourd and takes it for his wife is called insane because this happens to very few people.”* – Attributed to Desiderius Erasmus (b. 1466, d. 1536)

**Primal States:** At the beginning of play, all races represented by the positions exist in the Galactic Space (i.e. within the area represented by the initial Star Log) in some original state. The Primal State is a frozen moment in time just before the game begins in which the circumstance of each Major Native Population Type are determined, for which there are only two major options: Either the Major race is established in Galactic Space prior to the game (i.e. Home Positions: Homeworld, Lost Colony and Outposter Primal States), or they just arrived (i.e. Invader Positions: Expedition Leader, Nomadic Warfleet and Truly Alien Primal States).

- ✓ “But this doesn’t mean that there are lots of intelligent aliens out there, just waiting to be contacted, the researchers stressed. ‘The universe is more than 13 billion years old,’ [Woodruff] Sullivan [University of Washington] said.... ‘That means that even if there have been 1,000 civilizations in our own galaxy, if they live only as long as we have been around – roughly 10,000 years – then all of them are likely already extinct. And others won’t evolve until we are long gone. For us to have much chance of success in finding another ‘contemporary’ active technological civilization, on average they must last much longer than our present lifetime.’ (The 10,000-year figure cited by Sullivan refers to humanity’s development of agriculture and other ‘rudimentary’ technologies...)” – Mike Wall, “The Universe Has Probably Hosted Many Alien Civilizations: Study,” *Space.com*, May 5, 2016 referring to A. Frank, W.T. Sullivan III, “A New Empirical Constraint on the Prevalence of Technological Species in the Universe,” *Astrobiology*, Vol. 16, No. 5, May 2016.<sup>2</sup>

Thus Galactic Space is an interstellar Mesopotamia if you like. As utterly specious as it seems, for game purposes only, the origin or pregame colonies of the non-Homeworld or invader positions will never be found in Galactic Space during play of the game. The invader positions are assumed to be entirely cut off from their ancestors and come as they are to the gathering.<sup>3</sup>

- ✓ “As men tied to the Earth, we dream of visiting the stars. As men tied to the stars, we will dream of returning home.” – ending narration of the short environmental sci-fi film *Telescope* (2016) by Collin Davis & Matt Litwiller (DUST YouTube Channel).
- ✓ See also *Interstellar Paleolithic Culture* discussion, 6 Diplomacy, p. 1172, *infra*.

- **Start It Up:** Primal States are only determined and applied during the set up. All positions must choose their Primal State before the set up can proceed to the last step. During the last step of the setup process, positions must satisfy the requirements of their chosen Primal State by ‘purchasing’ the required population, technologies, and ships with their ‘inheritance’ (i.e. IPs) and informing the Concierge of their desired placements. Once all positions have submitted their Primal State choices, the Concierge will determine the starting location(s) of each position and make the necessary announcements. Only one position will start in any starsystem, and the Concierge will attempt to evenly distribute the starting positions throughout the initial Galactic Space. There are six possible Primal States, the first three representing those who were already there, and the last three represent ‘invaders.’
  - ✓ “‘To have a mother in prison is like a primal wound,’ said Brittany Barnett, founder of Girls Embracing Mothers, the organization that takes Lila for the monthly prison visits. The program, which started six years ago, has worked with 52 incarcerated women, all but two of them single mothers. ‘Once the mom goes to prison, it really devastates the home and family,’ said Ms. Barnett, whose mother spent time in prison.” – Dan Levin, “As More Mothers Fill Prisons, Children Suffer ‘A Primal Wound’” The New York Times, December 28, 2019.<sup>4</sup>
- **Homeworld Position:** Homeworld Positions begin on the Homeworld from which their species evolved. Because of the way in which technological cultures spew electromagnetic spectrum into space (see also Human-Made VLF Bubble feature quote *ut infra*), the Galactic Space locations of all Homeworlds are announced at the beginning of the game. The Homeworld Position must obtain the Industry Existential Patent and must begin with at least 100 native population factors and 20 industry. The Homeworld Position is free to distribute populations and industry to all available planets in the home starsystem, which is already explored, up to legal limits. Some planets may require Controlled Environment Technology (CET) to colonize, but Colony Ships are not required. It is assumed that efficient in-system travel has been established, so no starship or stardrive technologies are required for the Homeworld Position to establish colonies in the home starsystem. A Homeworld Position may be severely hampered in the beginning of the game for the lack of a Stardrive due to having to satisfy population and industry requirements. Should obtain Orbital Shipyard.
  - ✓ **Minimum Requirement:** 205 IPs, 305 IPs with Generic Stardrive Existential Patent, plus 1 other Existential Patent and 1 Application on the 1<sup>st</sup> Era Matrix.
  - ✓ An intriguing possibility is the EmDrive (formally, the “radio frequency (RF) resonant cavity thruster”) proposed by Roger Shawyer in 1999, who built a couple of models in the early 2000s. The science community thought the idea was preposterous, a violation of the laws of physics, and his test results were in error. In August 2014, there were several news articles published on the EmDrive; the Chinese had built one in 2009 and claimed it worked, and NASA’s Eagleworks Laboratory undertook the task and published a paper saying it works. The catch is, nobody knows why, it is a violation of the laws of physics. The EmDrive does not require propellant, it does not ‘push’ against anything, it is not like a conventional rocket. In November 2016, NASA published a peer-reviewed paper (with less news fanfare) detailing tests and results of the EmDrive at Eagleworks. NASA was impressed enough that they want to try it in space soon. The thrust from the EmDrive is very low, about

twice that of a solar sail, but freed of the need to use expendable propellants, it might be the key to regular reliable in-system travel.

- See EM Drive and Alcubierre Warp Drive excerpts, Movement, *infra*.

➤ Lost Colonist: Sometime in the dimmest distantttt-est past, a starship containing a small crew crash-landed on a remote planet.<sup>5</sup> The crew survived and prospered, but reverted to a more primitive state and ‘evolved’ a new civilization, with little or no memory of how they got there (e.g., “Probe 7, Over and Out,” Twilight Zone, 1963<sup>6</sup>). The Lost Colonist is ‘related’ to one of the other Major Races (but will not know which one until First Contact) but now considers itself sovereign and independent through untold eons of cultural drift and survival. The Concierge determines the other Major Race to whom the Lost Colonist are related (however, the Lost Colonist will never be related to a Truly Alien position). Lost Colonist can be ‘ancestors’ of other Lost Colonist. For convenience, the starting world of the Lost Colonist position is called the Homeworld, even though it is not literally the evolutionary ‘home-world’ of the species. The Lost Colonist starting coordinates are announced before the game.

- ✓ Relation is always relative *and involuntary*. All life on Earth is theoretically related to some single-cell organism a billion years ago, see also Mitochondrial Eve concept.

The Lost Colonist must follow the same set up requirements as the Homeworld Position; the only difference is that the Lost Colonist shares a Native Population Type with another position. Because two positions share the same Native Population Type, certain Fundamental Realities, especially those of the evolutionary kind, if chosen by one position will affect both positions, and count as Fundamental Realities for both positions (at the Concierge’s judgment). The first and primary effect is to add Fundamental Realities to the other position, however neither position will be allowed to exceed the maximum number of Fundamental Realities as a result of ‘discovered’ Fundamental Realities, rather, the Concierge will adjust (i.e. discard) some Fundamental Realities to accommodate the shared Fundamental Realities of the Native Population Type after deciding which Fundamental Realities are such that they must apply to both positions. The subtleties of this Primal State may require some experience to appreciate.

- ✓ Minimum Requirement: 205 IPs, 305 IPs with Generic Stardrive Existential Patent, plus 1 other Existential Patent and 1 Application on the 1<sup>st</sup> Era Matrix.
  - ✓ It is possible for participants to create a ‘fallen civilization’ game with all Lost Colonist Primal States (or many Lost Colonist with one Homeworld Primal State), in which case, barring divergent bio-evolution or manipulation, the primary differences between Native Population Types would be *ethnic*, not biological and participants should take this into account during the game. Possibilities exist for other sorts of games dominated by, for example, Nomadic Warfleet or Homeworld Primal States as well, that do not diverge from the basic rules for Native Population Types.
- Outposter: The Outposter represents a set of previously-established but now isolated and forgotten ‘outpost’ colonies from a race that originated far outside the Galactic Space of the game. The significant advantage of the Outposter is dispersion in the starting Galactic Space because the Outposter will begin in five starsystems with at least one colonizable planet each. The Outposter must begin with at least 10 populations at one planet of their choice in each of the five starting systems (i.e. 50 population factors).

The Outposter may not purchase any warships during set up, but may purchase the 1<sup>st</sup> Era Warship Existential Patent, and **must** purchase the Generic Stardrive Existential Patent, Ship Systems, Scout Ship, and the Colony Transport Existential Patents during setup. The Outposter's Primal State, but not Galactic Space coordinates for the starting colonies, are announced to all before the beginning of the game. Should try to buy Industry Existential Patent and lots of starting Industry & population, and an Orbital Shipyard if possible.

- ✓ Minimum Requirement: 345 IPs, must begin with Generic Stardrive Existential Patent, plus 3 other Existential Patents and 5 Applications on the 1<sup>st</sup> Era Matrix.
- Expedition Leader: Expedition Leaders have just arrived with a fleet of Colony Transports to begin colonization. Thus, the Expedition Leader is required to purchase at the minimum, Existential Patents for Generic Stardrive, Ship Systems, Colony Transport, Scout Ship, Industry, and Controlled Environment Technology (CET), and must begin with *at least* 24 population factors and 8 Colony Transports to hold all of the population. The starting Galactic Space coordinates and Primal State of the Expedition Leader, are not announced. The Expedition Leader must place all of his ships in one starting system where they have just arrived. Obviously, colonies will need to be established immediately and the starting system **must** contain at least one colonizable planet. Should probably purchase extra Colony Transports, empty or with population, and a Scout Ship.
  - ✓ Minimum Requirement: 473 IPs, must begin with Generic Stardrive Existential Patent, plus 5 other Existential Patents and 7 Applications on the 1<sup>st</sup> Era Matrix.
- Nomadic Warfleet: There is nothing like throwing a big bang in the middle of an empty universe, in fact, it only took one to get things boiling! The Nomadic Warfleet position must begin the game with the Generic Stardrive, Ship Systems, and Colony Transport Existential Patents, and either 1<sup>st</sup> Era Warship and Ship Missile or 1<sup>st</sup> Era Carrier and Fighter Existential Patents, and at least 10 population factors on Colony Transports. After purchasing the required Existential Patents, population and Colony Transports, the remainder of the Inheritance must be spent on warships, Fighters, military enhancements, and military related Patents. The Nomadic Warfleet begins in a single starsystem, having just arrived. The starting Galactic Space coordinates and Primal State of the Nomadic Warfleet are not announced. This Primal State may be more attractive in 'crowded' games (8 to 10 positions, you know, 'two is company, three is a...'); it may also quickly insure someone's early extinction.
  - ✓ Minimum Requirement: 414 or 429 IPs, must begin with Generic Stardrive Existential Patent, plus 4 other Existential Patents and either 6 or 7 Applications on the 1<sup>st</sup> Era Matrix.
- Truly Alien: In a galaxy filled with weird, disgusting, and otherwise incompatible sentient races, yours stands out as being strange by any standards. Especially since yours seem to have appeared out of a space rift called the Crack of Dawn. Actually, your species has just completed one-way dimensional travel into the Galactic Space. Prior to the beginning of the game, your species was peeping on the area from another dimension. As a result, the Truly Alien position *receives system information* for every star on the initial Star Log (however, no colony or position information will be provided with the system information, thus they are not 'peeping toms'☺).

- ✓ When H.G. Wells, in the opening monologue to *War of the Worlds* (1898), referred to the peeping Martians as “intelligences greater than man’s,” it seems likely (given the outcome of the story) that he was referring to their technology (i.e. the ability to spy on us and to invade our planet) and not to their intellect. This is consistent with the European colonialism of the day; whereas, our concept of intelligence has noticeably separated from (but remains intertwined with) technology so that intelligence now implies foresight, planning, processing and creative ability, wisdom and insight – all of which generally relate to technology but are not on the same plane.
  - See excerpt Opening/Closing Narration, *War of the Worlds*, Expansion, *infra*.

The Truly Alien position must begin with Generic Stardrive, Ship Systems, Colony Transport, and Scout Ship Existential Patents and 24 population factors on Colony Transports equipped with Controlled Environment Technology.

- ✓ The Truly Alien position must then evenly divide its population into three fleets, which may be accompanied by other ships.
- ✓ On the first turn of the game, four to six new stars will appear on the edge of the Galactic Space, and three of them will contain one of the Truly Alien starting fleets. The newly appeared systems will begin fully explored for the Truly Alien position.
- ✓ The starting Galactic coordinates of the Truly Alien position will not be announced, but the sudden appearance of new stars will likely be shortly noticed.

Truly Alien is the *alterity* position of the game. They may make other races feel weak and tired in their presence, like the Klicks in the Star\*Drive setting of the *Alternity* RPG (who seem to be modeled after the Shadows in *Babylon 5* television series), or make other races feel like crawling under a rock, like the Shadows in *Babylon 5* or be disturbingly difficult to look at, like the Shadows’ minion race, the Drakh (*Babylon 5*, “Lines of Communication” (1997)). There’s always going to be something *wrong* and instantly recognizable about the Truly Alien race as it developed in another universe.

- ✓ Minimum Requirement: 591 IPs, must begin with Generic Stardrive Existential Patent, plus 3 other Existential Patents and 5 Applications on the 1<sup>st</sup> Era Matrix.
  - ✓ By operation of the ‘looking rules’ (see 2 Expansion, *infra*), arguably a Truly Alien position creates the existence of ‘alternate’ and ‘parallel’ universes to the game universe, accessible from the Galactic Space. For the shrewdest reasons of game sanity (i.e. manageability) it is not likely that the Concierge will permit regular, easy, or meaningful access to ‘alternate’ and ‘parallel’ universes. The Truly Alien position should be considered ‘cut off’ (a one way trip) like the other invader Primal States.
- Blue Shift: The Truly Alien position also receives one special Truly Alien Fundamental Reality (colored blue, ‘blue-shifted’ – as in bug-eyed aliens are coming to get you! ☺), which may not be discarded, and which counts as a Major Fundamental Reality against the number of Fundamental Realities taken by the position. It also counts against the number of Fundamental Realities Drawn, i.e. it is not an ‘extra card,’ no ‘advantage’ is gained in this sense.

Unlike regular Fundamental Realities, however, Truly Alien Fundamental Realities do introduce significant deviations or variations from (i.e. ‘break’) the regular rules of GGDM in

some way. It is what makes them Truly Alien to the game universe, like Stephen R. Donaldson’s character, Thomas Covenant and his white gold wedding ring. See guidelines vs. special rules discussions, Type 1 and Creator, 3 Beginnings, pp. 42-43, *supra*).

- ✓ The rule-breaking in Truly Alien Fundamental Realities imposes some difficulties and some advantages on the Truly Alien position or just something different, which is intended to approximately even out, granting no ‘special advantages’ overall, or just to make an interesting *alternate* position.
- Laying It Down: Planets and stars in Galactic Space that are currently in view of a position and occupied in any way are part of that position’s current ‘reality’ and must occupy some portion of the position’s Public Space. Each star and planet must occupy a separate Monad in the Public Space, and all planets (whether colonized or not) must be adjacent on the Public Space to either their star or another planet that is part of the same starsystem. Thus, the qualifying stars and planets in the position’s initial view must all be legally placed in the Public Space during setup, after the placement of Government Titles.
- ✓ Generally, whatever you currently see, hear, smell, or sense in any way forces itself into part of your consciousness of the moment; it’s called sentience. During WWII, from news reports, the names of places most people never heard of forced themselves into our collective consciousness, some became etched there as part of history and lore, others faded away to obscurity again. Some sights, sounds, smells may remain in memory, related to some event in your life, while 99.9% of sensory input vanishes quickly from our consciousness once it passes or ceases.

---

*“VLF signals are transmitted from ground stations at huge powers to communicate with submarines deep in the ocean. While these waves are intended for communications below the surface, they also extend out beyond our atmosphere, shrouding Earth in a VLF bubble. This bubble is even seen by spacecraft high above Earth’s surface, such as NASA’s Van Allen Probes, which study electrons and ions in the near-Earth environment. The probes have noticed an interesting coincidence – the outward extent of the VLF bubble corresponds almost exactly to the inner edge of the Van Allen radiation belts, a layer of charged particles held in place by Earth’s magnetic fields. Dan Baker, director of the University of Colorado’s Laboratory for Atmospheric and Space Physics in Boulder, coined this lower limit the ‘impenetrable barrier’ and speculates that if there were no human VLF transmissions, the boundary would likely stretch closer to Earth. Indeed, comparisons of the modern extent of the radiation belts from Van Allen Probe data show the inner boundary to be much farther away than its recorded position in satellite data from the 1960s, when VLF transmissions were more limited. With further study, VLF transmissions may serve as a way to remove excess radiation from the near-Earth environment.”*

– NASA Press Release, “NASA’s Van Allen Probes Spots Man Made Barrier Shrouding the Earth,” May 17, 2017

---

## Endnotes.

<sup>1</sup> Commentary: Substitute “universe” for “hospital” in the Rosenhan quote; a perverse view might hold that the universe is a giant psychiatric hospital. Or at least the Earth is in regards to humanity...

<sup>2</sup> Citation: Abstract of Astrobiology article: “In this article, we address the cosmic frequency of technological species. Recent advances in exoplanet studies provide strong constraints on all astrophysical terms in the Drake equation. Using these and modifying the form and intent of the Drake equation, we set a firm lower bound on the probability that one or more technological species have evolved anywhere and at any time in the history of the observable Universe. We find that as long as the probability that a habitable zone planet develops a technological species is larger than  $\sim 10^{-24}$ , humanity is not the only time technological intelligence has evolved. This constraint has important scientific and philosophical consequences.” *Id.*

<sup>3</sup> Commentary & Citation: In some far future science fiction settings, the Earth and its fate are myth. The homeworlds of invader/non-homeworld Primal States may take on this status during the game.

- ✓ [Narrator] “For 3,000 years, most people viewed the Iliad as fiction and believed the city of Troy never existed. Then, in 1870, German archeologist Heinrich Schliemann uncovered the ruins of Troy, exactly where Homer said it was. In 1876, Schliemann also unearthed the ancient city of Mycenae, in his effort to prove that Homer’s writings were more than mere poems; they included actual history. That is, except for the parts of the Iliad that tell of how the Greek gods of Mt. Olympus took sides and participated in the war, a poetic blending of history and mythology.” – *Timelines of Ancient Civilizations, Episode 3.*
  - Heinrich Schliemann was a savage amateur by modern standards and may have destroyed with dynamite and careless digging more of Troy during the excavations than the Greeks did in the capture of Troy or in the earthquakes. The arguments continue to this day, in combination with his mislabeling and wishful misinterpretation of what he found. Still, he is notable for being a pioneer and for shaping, with Sir Arthur Evans, the emerging understanding of Bronze Age Greece.
  - Oddly, this puts Heinrich Schliemann in the shadow of the same disdain that has rained on the Spanish Conquistadors, though there is a vast difference in the order of magnitude of what they did (Schliemann was digging in long dead ruins) and disdain for Schliemann is limited to professional circles because so few know of him.

<sup>4</sup> Commentary: A mother incarcerated (or civilly committed) is worse than a deceased mother: You know she may come back. She’s not really gone. And not here.

<sup>5</sup> Commentary: I dislike ‘desert island’ and ‘lifeboat’ type questions because in one sense, they are hypotheticals that I have a difficult time taking seriously (in addition to having read *Queen v. Dudley* (1884) 14 QBD 273 DC in criminal law class), and yet, on the other, one cannot help but to take them seriously because they are phrased such that the answer will reveal your inner person and can often strain relationships and stain your soul. I am sure that is exactly what is intended by such questions and may regard the asker as suspect.

<sup>6</sup> Citation & Commentary: Of Adam Cook and Eve Norda, two adult humans, from different planets, stranded together on an empty optimally habitable planet she called “Eart-th,” Rod Sterling offers this closing narration:

- ✓ “Do you know these people? Names familiar, are they? They lived a long time ago. Perhaps they’re part fable, perhaps they’re part fantasy. And perhaps the place they’re walking to now is not really called ‘Eden.’ We offer it only as a presumption. This has been the Twilight Zone.” – “Probe 7, Over and Out.”
  - In the third part of the pilot episode of *Stargate Universe* (“Air” (2009)), some members of the expedition to the desert planet dialed one of the four Stargate addresses that were marked as locked out by Ancients starship *Destiny*. Foreshadowing, Dr. Rush had previously warned that one could not determine that a planet was safe for humans by a cursory remote scan (even though that is exactly what they did before they went to the desert planet). They sent through a remote sensor and camera device, saw a habitable planet with vegetation, breathable air and decent temperatures. Two members of the expedition – Amanda and Curtis – go through to the locked-out planet, quickly lose contact, and are stranded there when the expedition must return to the *Destiny* and the *Destiny* jumps to FTL. The immediate lesson was that there was a good reason why the address was locked out by the Ancients ship. But in the end, I half-expected to see Rod Sterling coming out of the desert delivering a lesson about rushing into the Garden of Eden....

Note that the writers, producers, network executives, and advertisers were not concerned in 1963 about offending Christian Biblical Literalists, whose frustration at the increasing marginalization of their beliefs perhaps impelled them to the various boorish absurdities and positions in the 1980s, discussed in the Excerpt of *Dangerous Games*, Primal States, *supra*, and in other places throughout GGDM.

*“Science fiction is held in low regard as a branch of literature, and perhaps it deserves this critical contempt. But if we view it as a kind of sociology of the future, rather than as literature, science fiction has immense value as a mind-stretching force for the creation of the habit of anticipation. Our children should be studying Arthur C. Clarke, William Tenn, Robert Heinlein, Ray Bradbury and Robert Sheckley, not because these writers can tell them about rocket ships and time machines but, more important, because they can lead young minds through an imaginative exploration of the jungle of political, social, psychological, and ethical issues that will confront these children as adults.” – Alvin Toffler<sup>1</sup>*

**Toffler Radar:** Toffler’s argument has become the futurist theme, to wit:

- ✓ “Science fiction is the bridge between what we envision for the far future and what we see in practice today. By showing us the possible dream worlds or living hells, such works of art touch upon the most relevant moral, ethical, social or political issues linked to technological progress. One of the most pressing questions of mankind has been for millennia what the future is about to bring upon us. What will it look like? How can we prepare for it? Before the industrial revolution and the age of Enlightenment, the Gods and Goddesses and their mouthpieces such as prophets and oracles had all the answers. In the latest centuries of rapid technological progress, instead of the Gods, technology is interrogated constantly about the future – for example in the form of science fiction.

Science fiction is a form of conversation between technology and society about the future. It is a vivid conversation. It makes us think, debate and learn. And it’s not a one-way street, but rather a strong interaction – while science fiction feeds on the ground that technology offers, it also gives ideas about how to build a better world for our children. Science and science fiction walk forward hand in hand.” – The Medical Futurist (authorship unattributed), “Science Fiction Prepares You For Dream Worlds And Ethical Apocalypses,” September 24, 2016.

- **Futurology:** The origin of Isaac Asimov’s psychohistory in the Foundation novels, is an area of study called “futurology” as it was defined at the time the novels were being written.
  - ✓ “Foresight was the original term and was first used in this sense by H.G. Wells in 1932. ‘Futurology’ is a term common in encyclopedias, though it is used almost exclusively by non-practitioners today, at least in the English-speaking world. ‘Futurology’ is defined as the ‘study of the future.’ The term was coined by German professor Ossip K. Flechtheim in the mid-1940s, who proposed it as a new branch of knowledge that would include a new *science of probability*. This term has fallen from favor in recent decades because modern practitioners stress the importance of alternative and plural futures, rather than one monolithic future, and the limitations of prediction and probability, versus the creation of possible and preferable futures.” – from Wikipedia article, “Future Studies,” captured August 24, 2019 (emphasis added).

That is, psychohistory is dressed up futurology; the fictional inventor is Hari Seldon, a mathematician and professor, the result of Hari Seldon's analysis is *a set of probabilities* that suggest inevitably that the Galactic Empire is doomed (i.e. a future prediction), that a Long Night (i.e. dark ages) will follow, after which, a new galactic empire will arise. Asimov's psychohistory is Flechtheim's futurology, with prediction power.

- Toffler dealt in probabilities and trends, not predictions, e.g., “No serious futurist deals in prediction. These are left for television oracles and newspaper astrologers.” – Alvin Toffler as quoted in BBC article by Courtney Subramanian, “Alvin Toffler: What he got right – and wrong,” (July 1, 2016) following his passing in June 2016. *Prediction is the 'psychohistory' difference.*

**The Future is Coming:** With the advent of CGI sufficient to be entertaining, 3D realistic (not obviously animated drawings) and convincing, the question was asked whether in the future there would be any need for actors to make movies? That question is still hovering quietly in the background, no one really wants to discuss it, but from there, I heard a follow-up question asked: *If child pornography could be produced in CGI, without any actual children exploited, would it be illegal or immoral?*<sup>2</sup> The subject is such that you cannot read this without having a visceral reaction and I don't propose to even address the issue here. The point is that the future is coming and changes have forced us to reevaluate – usually uncomfortably – what was moral, ethical, and taboo in the past. Only science-fiction authors might have (and I don't know if it did) imagined or anticipated a time when non-cartoon movies could be made without human actors (even voice actors) – if science-fiction-dom did so imagine (before *Max Headroom* (1987) which wasn't CGI), it was probably with human androids (a remake of *Blade Runner* with Replicant actors?) rather than CGI. Movie making has carefully tread in that direction, for example, the motion-capture used in *Beowulf* (2007).<sup>3</sup> Even Retrospecting requires live actors.

➤ **Good Vibrations:** Are adult pornographic performers prostitutes (quite aside from the fact that many of them were adult sex entertainment workers before film) or are they actors? Up to the 1980s, pandering laws designed to prosecute pimps and madams were used famously to prosecute agents who recruited performers for pornographic films, though it is improbable that there would currently be support for such prosecution legally, in the media, or by public juries. *Prostitution and pandering, of course existed long before film, and thus, film performances were not included in the development of the terminology.* But there is no doubt that pornographic performers are paid for intimate sex acts with other performers (with a lot of hyperacting and faking), and there must be some individual gratification involved to complete the scene. So are they actors?

- ✓ “I'm always gonna pull myself apart and dissect [the work]. I mean, there's no such thing as perfection in what [actors] do. Pornos are more perfect than we are, because they're actually fucking.” – Heath Ledger interview by David Lipsky, “Heath Ledger's Lonesome Trail: The Rolling Stone Interview,” *Rolling Stone*, March 23, 2006 (available free online).

- See continued discussion, *Reproductive Consciousness and What Is, Is, 5 Taxation & Census*, pp. 335, 338, *infra*. Note also that there is a long-running debate on Wikipedia whether porn performers meet the notability guidelines for biographical articles on Wikipedia, all the while, Wikipedia has articles on every mass-murderer jagoff who makes the evening news.<sup>4</sup>

Even before technology, the definitions were being stretched somewhat by nude models who posed for paintings (e.g., Sandro Botticelli’s early Renaissance paintings “The Birth of Venus” and “Primavera” or Raphael’s painting of his mistress titled, “La Fornarina”), and of course, by exotic dancers and other similar performers (e.g., the Banquet of Chestnuts, 1501); nudity in paintings is a feature of humanism, which was the driving force of the Renaissance. And there were religious protestations, later, during the Counter-Reformations and religious wars, many of the nude paintings of humanist artists were banned, stored away, effaced, or covered over but the trend resurfaced in the later Baroque period (e.g., François Boucher, noting that noble or respectable women sat nude for his paintings, for example, the nude, very suggestive “Portrait of Marie-Louise O’Murphy” who was King Louis XV’s mistress). Do you think the artist didn’t take some gratification from painting his subjects nude?

At the bottom of this then is a change in worldviews of a population, of which technology is just the latest challenge. Change of worldview is always a threat to the current *status quo* (e.g., the Church) and the inheritance of our children; it is truly what they inherit.

- ✓ In the Forever Knight episode, “Dead Issue” (1992), a nude model in the Renaissance is raped by the master artist who is painting her. She believes that her beauty caused him to rape her (her sinfulness in her view) and felt so guilty that she committed suicide. Nick Knight (a vampire), the master’s pupil at the art studio, then killed the artist (the old ‘an eye for an eye.’.. in literary style).

---

*“I don’t believe in inheriting money,’ he said. ‘I think it’s an initiative sucker, I think it’s a curse. Who’s inherited a lot of money that has gone on to do things in their life? From the time I was growing up, if I felt like there was some pot of gold waiting for me, I don’t know if I would have been so motivated.’”*

– Anderson Cooper quoted by Antoinette Bueno, “Why Gloria Vanderbilt Did Not Leave an Inheritance for Son Anderson Cooper,” Entertainment Tonight, June 18, 2019

---

**Must be Funny in the Rich Man’s World:** Hmm...that’s an interesting question. I am sure he is overstating the case a bit, I am sure there are many who inherited a lot of money and went on to do things (whatever he means exactly by that) in life. But the general idea does exist that multi-generational money corrupts and degrades, this idea perhaps traces to the increasing prideful ‘uselessness’ of European nobility, who possessed a sense of entitlement, in the 18<sup>th</sup> and 19<sup>th</sup> Centuries as opposed to inventors, explorers, and business entrepreneurs who were lionized as innovators.

**The Inheritance:** The Inheritance represents the sum of what a civilization brings to the game from its pregame ancestry. After completing all of the previous setup steps, each position receives a one-time only ‘inheritance,’ in the form of Inheritance Points (‘IPs’), which are spent to obtain starting technologies, populations, ships, and industry and other items.

The amount of each position’s inheritance is determined by the number of Fundamental Reality Cards the position kept. For each Type 1 and Type 3 Major Fundamental Reality, 100 Inheritance Points are received and for each Minor Type 1 and Type 3 Fundamental Reality, 50 Inheritance Points are received. Type 4 Fundamental Realities receive 75 Inheritance Points, Type 2 Fundamental Realities receive no Inheritance Points, and Type 5 Fundamental Realities receive 75 Inheritance Points per ‘Ripple,’ so they receive either 75, 150 or 225 Inheritance Points.

- ✓ The questions that must be asked regarding a proposed Type 2 Fundamental Reality are: 1) Do we have enough Inheritance Points, 2) What is gained by the Type 2 in lieu of the Inheritance Points, and 3) does it look fun to play?

The Inheritance Points must first be used to satisfy the requirements of the chosen Primal State, then second must be spent to satisfy the legitimacy requirements, if possible, of the Government Titles chosen by the position. It is not required that all Government Titles pass all Conflict Checks before the game, but if the Primal State cannot be satisfied by the Inheritance, the Concierge will choose a suitable new Primal State and/or new Fundamental Realities for the position.

- ✓ “‘That name Vanderbilt has such baggage with it, such history, and I’m very glad I don’t have that name, and my mom never felt much connection to the Vanderbilt family and I certainly didn’t,’ [Anderson] Cooper said, noting that he always identified more with his late father, writer Wyatt Emory Cooper’s, more down-to-earth roots in Mississippi. ‘One of the happiest days for my mom, she called me and said, ‘Somebody just referred to me as Anderson Cooper’s mom.’ Very happy that she’s reached that stage of life.’” *Id.*
  - There doesn’t seem to be a cardinal rule here; I have personally known people who had an important family name, made a lot of money and then inherited more, and they were still miserable beings.
- Inheritance Table: Inheritance Points (IPs) are spent to purchase the items listed on the Inheritance & Primal States Tables prior to the start of the game. The prices listed on the Tables are only used for purposes of setting up the game and once the game is in progress, these Tables are not used for any purpose; you cannot ‘buy’ things from the Inheritance Table during the game. Inheritance Points cannot be ‘created’ or used during the game.
  - ✓ No pressure here... The Inheritance Point purchases are critical to the early game, not only in terms of material items in the short term, but also in savings in Acts, Scenes, and Power Activations, which will become much clearer later. Choose wisely.
- Primal Inheritance: The minimum possible inheritance is 350 Inheritance Points (3 Major and 1 Minor Fundamental Reality). The minimum requirements of the Homeworld, Lost Colony, and Outposter Primal States (home positions) can all be met with the minimum inheritance. The minimum requirements of the Expedition Leader, Nomadic Warfleet and Truly Alien Primal States (invader positions) require more than the minimum inheritance.
- Nothing New Under the Sun Today: Players may not introduce anything new to the game during the set up process; there is no mechanic for the introduction of new Patents, Writs, Doctrinal Templates, or foundation of Colleges during the set up process; positions are limited to ‘purchasing’ only the items listed on the Inheritance & Primal States Tables.
- Purchasing Populations: The setup process is the only time when a position may ‘buy’ populations, which is a mechanic designed solely to give positions flexibility in their starting positions; all subsequent populations must be ‘grown’ from the original starting populations of that position’s unique Native Population Type. Positions may only purchase populations of their own Native Population Type during set up.

- **Patents for Sale:** All Existential Patents may be ‘purchased’ during set up at a flat rate, but a position is only required to purchase those listed in its Primal State Requirements. For each Existential Patent purchased during set up costing 60 IPs or less, the position’s choice of one Application listed in the Theory of the Patent is placed on the 1<sup>st</sup> Era Matrix, for Existential Patents costing more than 60 IPs, two Applications are received (as above), placed adjacent on the 1<sup>st</sup> Era Matrix and are connected automatically. The Applications are placed on the 1<sup>st</sup> Era Matrix wherever designated by the position, but must have been adjacent on the Theory of the Existential Patent.

✓ See generally 1 Patents, 2 Technology, and 1 Eras sections, *infra*.

Obtaining Existential Patents is easier during set up then after the game begins. If it comes to a choice of extra Existential Patents, positions are advised to obtain Industry, Stardrive, Ship Systems, and/or Orbital Shipyard Existential Patents first, followed closely by Scout Ship and Colony Transport Existential Patents if possible.

- **Star-Driven:** Prior to purchasing any starship Existential Patents, a position must first purchase the Generic Stardrive Existential Patent (GSD) *and* the Ship Systems Existential Patent (not required for Scouts). The GSD Patent is available for a flat rate of 100 RPs, the Inheritance Points from a Major Fundamental Reality while Ship Systems costs 45 IPs. *All* positions should try to begin with GSD, right after satisfying their Primal State requirements.
- **Shipyard Blues:** Positions which begin with the Homeworld, Lost Colony or Outposter Primal States *may not begin the game with ships, except Scout Ships*, unless the position has obtained the Orbital Shipyard Existential Patent and bought at least one Orbital Shipyard.

Invader positions (Expedition Leader, Nomadic Warfleet and Truly Alien) must begin the game with the required ships and may buy any ships they can legally obtain, but will need to *first* find a place to colonize and *then* build an Orbital Shipyard (if they have the Existential Patent) to build more ships in the game. They will be unable to build new ships until then.

- **Social Fiction:** Only during the set up may ‘Home’ positions ‘purchase’ Cultural Traits Pieces (Proficiencies and Aspects) and Research Pieces, which must be legally placed in the Public Space. Research is not required to be initially placed to form Research Groups.<sup>5</sup>

Invader positions are at a disadvantage in this respect, because Cultural Traits Pieces and Research Pieces are keyed to colonies on the Public Space, which the Invaders do not have to begin the game, but the Home positions do. The attraction of Invaders is early freedom.

- ✓ The terms used in the inheritance/setup sections are explained throughout the remainder of the rules. However, as the game is set on the premise that each position is a mature, starfaring technologically-advanced species, before the game begins, these items must be addressed during the setup. It is advisable then to have read and understood the entirety of the rules, then re-read the set up rules prior to trying to setup a position in the game for the first time.
- **Launch Pad:** All ships purchased during the set up must begin in an initial starsystem drawn as the starting position for the ship’s owner; ships purchased during the set up may not simply be placed anywhere in the Galactic Space. All population ‘purchased’ during the set up must either be on a planet or Colony Transport as required by the Primal State. All Industry, orbital platforms, and colony defenses purchased must be on/at a colony before the game.

- **Lift Off:** Acts and Scenes may be purchased by Inheritance Points (IPs) and placed on the Public Space and Powerstrip to start the game. A position isn't doing anything on the first turn without Acts at least, and possibly a Scene; it is highly recommended that positions start with Acts and possibly a Scene on a starting world or star, or the first turn will be a sit and spin. See 2 and 3 The Sidereal Stage, generally, *infra*. It might even be advisable as a strategy to 'load-up' with Acts at least for early game action after all Primal State requirements have been met. Get up and get out there! And don't forget the Tang!

---

*“What they [critics of Lessing’s switch to science fiction] didn’t realize was that in science fiction is some of the best social fiction of our time.”*  
 – Doris Lessing, as quoted from an interview by Harvey Blume, Boston Book Review, February 1998

---

### Endnotes.

<sup>1</sup> **Commentary:** I am one who takes science fiction seriously as a genre for technological and social commentary. Conversely, I believe that anything that associates itself with the WWE is degraded by the association; e.g., Cindi Lauper had great potential as a both a serious and pop artist, but I feel she ruined her career by associating herself with the WWE. It was thus the ultimate insult when I turned on Sci-Fi (or was it SyFy by that time?) Channel and saw WWE. I was already dismayed by the 'reality-television' rubbish that had come to dominate the channel.

<sup>2</sup> **Commentary:** What about family incest sex simulation 'games' online that potentially might feature slightly underage (depending on your interpretation) – if cartoonish – characters? They already exist. Are you outraged? Scandalized, incensed, shocked?

<sup>3</sup> **Commentary & Citation:** The increasing quality of photocopiers provided a technical challenge to paper money and I recall a fellow who was arrested at the FedEx on Grant Street in Pittsburgh for photocopying Port Authority bus passes. On the other end of the spectrum, the Traveller RPG imagined that the leader of the Vargr race (a Major Race descended from genetically-manipulated Earth dogs) was a completely artificial computer personality designed to inspire loyalty and a personality cult based on clinically-analyzed Vargr psychology.

<sup>4</sup> **Commentary:** For anyone who might think of creating Wikipedia articles related to GGDM, see Wikipedia's notability guidelines. A mass murderer jagoff who checks out of Hotel Earth or a summer movie that few will watch after it is not in the theatres is notable for Wikipedia articles because they are instantly famous or famous for 15 minutes due to the celebrities involved; GGDM is not until it reaches the status of The Prince (1532), The Wealth of Nations (1776), War and Peace (1869), or Sophie's Choice (1979). No one will make a movie out of GGDM.

- ✓ The notability guidelines on Wikipedia are not without controversy and are not evenly applied. There are arguments, for example, on whether porn actresses (i.e. 'adult performers') are 'notable' enough to have Wikipedia pages as opposed to mainstream actresses, and whether they are even actresses or should be classed instead as adult entertainers; e.g., see the Talk page for "Aja (actress)" article on Wikipedia where some want to remove the 'actress' claiming in part that it is confusing (among other arguments). The outlines of this sort of 'notability' argument cross over into *redeeming social value* and subjective *moral worth* of the person or work in question and their contributions; it is hard to see, if that is the argument or an argument for notability, why every mass murderer or serial killer (or even St. Cyril of Alexandria) is notable for the purposes of Wikipedia articles? Yet, we cannot pretend they didn't exist and we cannot make them non-persons in the tradition of the late Soviet Union (b. December 20, 1922, d. December 26, 1991), or even Orwell's most famous book, 1984 (1948).

- The U.S. Copyright Office, for example, avoids these issues; *a copyright is not certification or judgment of redeeming social, intellectual, or moral value*, or literary value, of a work, it is simply a registration of claim of original authorship. This is necessary as part of the separation of church and state. It is true that the U.S. Copyright office serves a very different function from Wikipedia, but many people confuse the issue, they think the copyright means something that it does not.

<sup>5</sup> **Commentary:** Aspect pieces will 'age-out' in the first couple of Regular Turns, so it is not entirely advisable to purchase them during setup unless required by a Fundamental Reality or Government Title.

**Excerpt from Battle Report #17: Vienna 1683 – Last Ottoman Tide**

Posted by user AUSTERLITZ on the Pakistan Defense Forum on July 20, 2015

Retrieved March 14, 2018 (<https://defence.pk/pdf/threads/battle-report-17-vienna-1683.386899/>)<sup>1</sup>

## CAUSES OF STAGNATION &amp; MILITARY TRANSFORMATION

Before looking into the changing Ottoman army we look at the factors that caused this transformation:

*Political:* The seeds of political weakness were sown during the rule of Ahmed I (1603-1617). The sultan was the centre of the Ottoman state – sultans oversaw governmental meetings, hired and fired officials, and personally led military campaigns. But the question of succession remained vague and often led to destructive internal wars. Seeking to solve this problem, Sultan Ahmed I instituted a new system for choosing sultans. Instead of a sultan's sons being governors within the empire until their father died, they would stay at the palace in Istanbul until their time came. In most cases, they actually were not even allowed to leave the palace. This essentially made them prisoners until they became sultans. The effects of his policy were disastrous. Instead of sultans coming to the throne with experience in governance and policy, they were usually ignorant of anything but the pleasures of palace life. The result was a series of weak and incompetent rulers under the influence of the Janissaries and the harem. The slide was partly arrested by the rise of the Grand Viziers as the power behind the throne, but still this divided the centralized authority of the Ottoman state. Only one sultan led his armies in person after Ahmed I's rule (Murad IV in 1638).

This political instability also led to increasing decentralization of power to the provincial officials – a trend the first Grand Viziers slowed but couldn't eradicate. Also, since experience and talent were no longer seen as necessary by the Ottoman sultan himself, those hoping to advance in civil service were not promoted based on skill. Instead, bribery and favoritism wreaked havoc on the Ottoman government.

*Economic:* Three main factors caused the economic crisis of the Ottomans – the loss of trade, inflation and population pressure. These would result in the collapse of the Timariot system. The primary sources of revenue for the Ottoman state were land revenue, taxation on trade and riches from conquest.

The Portuguese circumnavigation around Africa to India had opened a new spice route to Asia. Therefore, the Turks lost their monopoly on the spice trade going to Europe. By the late 16th century, the Dutch and British completely closed the old international trade routes through the Middle East. As a result, the prosperity of the Middle Eastern provinces declined.

The cause of inflation was the influx of silver from the New World to Europe and the Middle East. The Ottoman economy was based on silver. Coins were minted in silver, taxes collected in silver, and salaries to government officials paid in silver. The huge influx of silver coming from America drastically devalued the Ottoman currency according to the economic laws of supply and demand. The devaluation of silver devastated the Ottoman economy. In 1580, 1 gold coin could be bought for 60 silver ones. In 1640 it required 250!

A result of central unity, stability and prolonged peace during the 16th century led to a population boom. The eastern Mediterranean under Ottoman rule from 1530-1580 saw a 60% average increase in population. Inflation and rising prices hurt the common people badly. There was little scope to release the pressure with new conquests. The empire had reached its logistical limits and stabilized its frontiers by 1560s. So booty from war had also dried up. Loss of revenue from war and trade, made the central treasury heavily dependent on land revenue which was now under a triple vise grip of more people to support, corruption of decentralized provincial officials and rising prices due to inflation.

Internal trade also suffered due to shortsighted policy. The Ottoman sultans allowed European merchants of friendly nations trade privileges under a series of treaties called capitulations, starting with the French in 1535 by Suleiman I for example. Europe was in a state of transition to a capitalist proto industrial society, and flush with wealth from the new world. Functioning under strict price regulations, the Ottoman

guilds were unable to provide quality goods at prices low enough to compete with the cheap European manufactured goods that entered the empire without restriction because of the capitulations agreements. In consequence, traditional Ottoman industry fell into rapid decline though this process was still at a modest stage in 1683 and would reach its climax in the next two centuries as more capitulation treaties were signed.

*Technological:* While the technology of the printing press was known to the Ottomans since 1493, it would not be adopted until 1726. Meanwhile the European nations had spread their technological ideas amongst the populations via this medium. In the military field the Europeans since the start of the 17th century were re-employing Roman tactical systems and a lively debate went on about military doctrine and battle employment. The Ottoman military thinkers had no such scope even if an enlightened captain did make an effort, his ideas didn't generally spread beyond his immediate unit. And any reform efforts generally died out with him. Long-term structural changes needed exchange of ideas, which the printing press enabled. The Ottoman army operated largely on oral tradition and older military texts.

Another technological change brought on by warfare were massed gunpowder based armies. This led to a revival of infantry on the battlefield. Also to resist firepower, newer and stronger designs of fortresses came into being. The warfare of the day devolved from field battles to siege and countersieges with rare occasional field encounters. The siege warfare led to decline in importance of cavalry.

#### EFFECTS OF STAGNATION ON THE OTTOMAN MILITARY

*Breakdown of the Timariot System:* The most important consequence of these technological and financial changes was the slow collapse of the Timariot system. The number of recipients increased but with the empire's boundaries having stopped expanding, land was becoming limited. The government resorted to joint holdings which limited the financial independence of the individual Sipahis. Moreover, sons of holders hereditarily received a part of their father's holdings. The system began to crumble with concurrent massive inflation – with rising prices and smaller and smaller individual holdings the Timarli Sipahis could no longer financially support themselves out of their land grants. They overtaxed the peasantry leading to unrest and engaged in corruption. Moreover the central government itself suffering from a financial crisis due to above factors and long wars with Iran and Austria in the late 16<sup>th</sup> century, began to seize Timariot holdings after the death of owners and convert them into profitable tax farms.

Turkish cavalry that had been the backbone of the army in the mobile wars of conquest were less useful to the sultans who now needed professional garrisons to run the frontier forts. The Sipahis were also increasingly vulnerable to massed firearms of European infantry on the battlefield and useless in sieges. The Sipahis were also unwilling to take part in long campaigns away from home as they had to return to govern their provinces. The government expanded the numbers of gunpowder infantry at the expense of the Sipahi cavalry – infantry being much cheaper than horsemen. As a consequence we see whereas in 1574 the empire had 40,000 Timarli Sipahis and another 50,000 light cavalry retainers (Cebeli) and 15,000 Akincis. In 1670s we see number of Timarli Sipahis dwindle to 20,000 and the Cebelis to 30,000. Akincis had been disbanded.

*Rise of the Janissaries:* The Janissaries, as musket-bearing light infantry with long established regimental structures and built-in combat support arms, were an ideal corps for the new battle environment. The government understandably increased their personnel strength and tasked them with additional duties. More and more Janissaries were trained and sent to provinces for policing due to the increased unreliability and ineffectiveness of the Sipahis as well as to frontier regions because of the changing nature of wars from those of pitched battles to those of siege and countersiege operations. In 1685, there were 13,793 Janissaries. This figure would rise to 40,000 by 1683.

Concurrent with the expansion of the Janissary numbers came other changes. From the late 16<sup>th</sup> century the norm of not having children was removed and the children of Janissaries were permitted to enter the

corps. By 1620 it had become a hereditary system. Moreover taking advantage of weak sultans and collapse of Timariots, the Janissaries dominated political life in Istanbul and also rewarded themselves with several large estates.

The training standards had also begun fall off. The deviserme graduation system was stopped in 1648, which was a serious decline in discipline. The Janissaries were slowly transforming themselves into a line infantry force rather than an elite corps. Meanwhile the Kapikulu light cavalry suffered cutbacks, to accommodate financial pressures. The Kapikulu Sipahis however remained a disciplined heavy mounted elite.

*Mass Recruitment of Mercenaries:* One development of the financial crunch of the Ottoman government and need for mass gunpowder troops was large scale recruitment of mercenaries. Mercenaries had always been part of the Ottoman system, but their numbers exploded during the 1590s war with the Habsburgs. Mercenaries were cheap to recruit, paid occasionally and could be laid off once the campaign was over. They could be recruited quickly and needed no training. They served as excellent cannon fodder and were brave, as gallant service could be rewarded with a permanent posting in the army. On the bad side they were not as disciplined as regulars, had second-rate equipment and resorted to banditry roaming the countryside in between campaigns.

Provincial governors were encouraged by the central government to hire ever larger number of mercenary warbands (largely from peasant backgrounds from Syria, Anatolia, Balkans). By the early 17th century mercenaries called by various names – largely musket armed militia like *Levants* or *Sekebans* (not Janissary Sekebans) had replaced the earlier Azaps. By 1683 perhaps half of the provincial military forces comprised of mercenaries.

Thus Ottoman forces by first decade of the 17<sup>th</sup> century (end of long war with Austria 1593-1606) had undergone a drastic transformation from its classical structure, from a cavalry-dominated force of largely provincial horse archers and heavy cavalry supported by small elite band of Janissaries and large numbers of irregulars to a more infantry oriented force – a standing army supported by lower numbers of provincial cavalry, but large numbers of provincial mercenaries.

---

<sup>1</sup> Commentary & Citation: It was incredibly difficult to find a good tactical or hour-by-hour description of the 1683 Battle of Vienna on the internet. I am thankful to have found user Austerlitz' holistic and complete treatment of the campaign and battle on the Pakistan Defense Forums. The only movie, *Day of the Siege* (2012), whose video clips are popular on YouTube and in music videos, such as Sabaton's 2016 song "Winged Hussars," is a poorly-rated film that – while it does have some interesting social milieu elements and shows parts of the siege – focuses on the logistically impossible story of an Italian monk and entirely short-circuits any decent depiction of the battle.

*“...not only do we measure change by time, but time by change, because they are defined by one another.”*

*(time is) “a number of change in respect of the before and after”*

– Aristotle, Physics, Book IV

---

---

*“Aristotle’s essay on time is the first detailed Interpretation of this phenomenon [time] which has come down to us. Every subsequent account of time, including Henri Bergson’s, has been essentially determined by it.”*

– Martin Heidegger, Being in Time (1927)

---

---

*“Without a doubt, Aristotle thinks of time on the basis of ousia as parousia, on the basis of the now, the point, etc. And yet an entire reading could be organized that would repeat in Aristotle’s text both this limitation and its opposite.” – Jacques Derrida*

---

**De Re:** Aristotle could not discuss time as a thing onto itself (*de re*); he could only discuss it in relation to the common experience of observation of change. Similarly, Aristotle could not have described gravity as a thing onto itself, being limited to the observation that everything falls to the ground. We have reached or nearly reached the point where we can discuss gravity as a thing (e.g., gravitational waves), but time is still observed as “a number of change with respect of the before and after.” Gravity, and our perception of it, is still a slave to time. Time-travel fiction, however, implies without explicitly stating usually, that we must be able to discuss time *de re*.

- ✓ “Ironically, as a student, Jacques Derrida submitted a paper on the topic of ‘time’ to his director of studies, Louis Althusser, who passed the essay to his colleague, Michel Foucault, saying, ‘I can’t grade this.’ Foucault’s response was, ‘Well, it’s either an F or an A+’” – Willy Maley, Prof. of Renaissance Studies, University of Glasgow, contributor to, “The worst piece of peer review I’ve ever received,” Times Higher Education, August 6, 2015.
- Metaphysics of Presence: Heidegger and Derrida collectively held that Western philosophy privileges presence, what is, what appears (i.e. phenomenology), over examination of the condition that made the presence possible or impossible:
  - ✓ “Derrida’s enduring references to the metaphysics of presence borrows heavily from the work of Heidegger. Heidegger insists that Western philosophy has consistently privileged that which is, or that which appears, and has forgotten to pay any attention to the condition for that appearance. In other words, presence itself is privileged, rather than that which allows presence to be possible at all – and also impossible, for Derrida. All of these terms of denigration, however, are united under the broad rubric of the term ‘metaphysics.’” – Jack Reynolds (La Trobe University), “Jacques Derrida (1930 – 2004),” The Internet Encyclopedia.

- See full feature quote, bottom of 2 Constructural Elements, p. 200, *infra*.

This examination begins with the fact that our entire concept of time is the now, our language is naturally built on the now. This moment, this thing, this point in time. Because we are mortal, and time flows in one direction. Without special indicators in the sentence structure or without knowledge of the situation, the listener assumes we are talking about the present, present events, instead of something that happened or may happen. Our language *does not* begin with the past or future as the natural tense, and then needs to add modifiers to indicate we are speaking of the present.

- ✓ Verb tenses in English are past, present, future. Happen, happened, happening, will happen, may happen, may have happened.
- ✓ Heidegger and Derrida were not trying to change our language or time sense, and neither is GGDM. We are all mortal and short-lived. They were simply making the point that the privilege given to presence is overwhelming and intellectually crippling. They were pointing to a blind spot in our Public Space.

---

*“Unfortunately, the clock is ticking, the hours are going by. The past increases, the future recedes. Possibilities decreasing, regrets mounting.”*

– Haruki Murakami, Dance Dance Dance (1988)

---

**Clock Speed:** Most of humanity has undoubtedly assumed that time moves at the same speed for everyone (except for the gods, if we had a reason to think of it in this way). What modern science has added is the possibility that time passes at different rates relative to different observers. But, while special relativity is taught and accepted as nearly unquestionable fact by the current generations, the fact remains that no one has actually tried the famed relativistic experiment of the twins because we cannot.

- ✓ The NASA Twins Study in 2018 (identical twins Scott and Mark Kelly) measured biological changes from a year in space vs. staying on Earth. It was not a relativistic experiment with twins.
- ✓ In 1963, during troubled Mercury-Atlas 9 flight, it was detected that astronaut Gordon Cooper’s watch slowed by 1/20,000<sup>th</sup> of a second during a day in orbit. Life Magazine, May 24, 1963 trumpeted that he landed 22/1,000,000<sup>th</sup> of a second younger than if he had stayed on Earth for the day he was in orbit (Albert Rosenfeld, “A 3,000,000-year Trip in Only 55 Years,” pp. 28-34). Most of the article wasn’t about Cooper’s flight, he was just the lead hook; most of it was about explaining space-time theory (with pictures of Albert Einstein, Rudolf Mössbauer, and a young Carl Sagan). Curiously, the internet seems to have forgotten the Cooper flight’s confirmation of relativistic effects; a search on Google for “Gordon Cooper relativity” turns up no relevant hits (October 15, 2019), which shows the limit of the internet as a human knowledge base. None of the articles and secondary sources about him mentions it either (e.g., Wikipedia). I just happen to have a collector’s copy of the Life Magazine issue featuring Gordon Cooper on the cover that a friend bought for me.

Much of cutting edge science remains without direct empirical basis and is arguably closer to philosophy. Many will object to this characterization and dismiss me to the kid’s table.

Our concept of time has not changed. This is the origin of the analog clock, on which time is measured by the steady movement of hands across the numbers and marks on the face (i.e. change in distance). Any sentient being can perceive change, therefore any sentient being can perceive time. How they perceive time is often asked about cats and dogs.

Sentience Quotient (SQ) seems to be really a measure of the rate at which a creature experiences the passage of time (change); and if so, then the hypothetical SQ+50 creature must live in near relativistic time dilation. You can imagine this like the old computer commercial with the glass falling in slow motion off a table; the computer can do millions of calculations before the glass hits the floor. For a computer, a minute is an eternity.

➤ **There is a Season:** The problem with this entire poorly designed universe is that everything takes time. *Non sequitur:* GGDM is a turn-based strategy game that is designed to run continuously. Each position submits Actions which are regularly batch processed in the order they were received, as long as the Actions were submitted in the time period allocated to each position for submitting their Actions. The Actions must, of course, be submitted by a representative of the position (i.e. a known team member).

✓ “[Professor Dame Linda] Partridge admits there’s definitely a limit to how long humans can live. ‘It’s not biologically feasible to live to 3,000 years. There’s constraints on how fast we run, speeds at which we can see. So without any further interventions, bodies can only last a certain amount of time,’ she says.” – Bianca Britton, “Humans Have Reached Their Lifespan Limit, Researchers Say,” The CNN Wire, October 6, 2016.

▪ “Old ladies die all the time. It’s practically their job description.” – Dr. Who, “Mummy on the Orient Express” (2014).

---

*“The local situation quickly escalated before commanders on either side, still several weeks away from the front, could control the situation.... Because of the distance to the Capital, Emperor Strephon could do little else than simply accept the Armistice. Through clever public relations, Strephon was able to turn the affair to his advantage, creating the image of himself as an effective war leader. The years following the war marked a transition of Strephon’s rule, from quiet management to a more proactive leadership role.”*

– Traveller RPG Wiki, “Fourth Frontier War,” captured July 27, 2018

---

**Communications Breakdown:** There are two underlying assumptions that must be understood with regard to issuing orders to far-flung fleets and colony worlds separated by interstellar distances, lightyears from each other or from command and control centers. The first underlying assumption must be that each fleet and world contains command elements (officers and staff) who have the intelligence, initiative and authority to operate independently within a commonly understood framework of missions, ideals, and operating procedures, when out of communication range of headquarters. Even in the modern age of instant communications, it is not necessary for military or corporate leaders to issue orders to each individual in the organization; organizations have a certain inbuilt intelligence, local initiative and momentum of purpose.<sup>1</sup>

✓ See also Transatlantic Cable, 1 Movement, p. 837 and EN 2, p. 843, *infra*.

- FTL Communications: The second underlying assumption is that, if ships can travel faster than light, why wouldn't an interstellar society be able to communicate at faster than light as well? This may seem to be a specious leap of logic, except that modern physics already has determined that information apparently does travel faster than light.
  - ✓ For example, the famous polarized screen experiment with two photons traveling in opposite directions at the speed of light from a single light source; one photon seems to 'know' what happens to the other, but any information exchange between them would have to occur at least faster than light. This is called quantum entanglement.

Whether justified by current science or not,<sup>2</sup> instantaneous interstellar communications is a common assumption of modern television and movie science-fiction.

- ✓ For example, in 2017 the first successful 'hack proof' communications were sent from a quantum ~~\*~~ to the Earth using the concept of quantum entanglement. Scientist and serious intellectuals of past decades have always assumed that technologically advanced alien civilizations would not communicate using radio waves; quantum communications gives us the first peek at how they may actually communicate.<sup>3</sup> That doesn't mean that there might not be mysterious radio waves out there from early technological civilizations; for example, the fifteen high frequency radio repeater bursts from a galaxy 3 billion lightyears away in 2017 may, but probably don't, represent an early technological civilization – that existed three billion years ago.

*Game Actions represent some combination of orders from higher up, and individual initiative and actions 'on the ground' within the framework of mission, operational procedures, training, intelligence, and command hierarchy; i.e. a Scout Ship fired at by alien warships does not need to be ordered to retreat by HQ although the position must inform the Concierge of the intent to retreat. If players like, the game could be tailored to assume no FTL communications, relying entirely upon the initiatives of the people present, but when the game is based on either or both assumptions being true, it would not make that much difference.<sup>4</sup>*

- Really?: There seems to be some dispute and some doubt in the professional science world about whether quantum entanglement means that FTL communication is possible. The consensus seems to reject the idea. But for game purposes, we must assume that the problem may have been solved already by a civilization capable of faster than light travel.
  - ✓ "One suggested FTL communicator is outrageously simple. It consists of a perfectly rigid rod, as many light years long as required. Since the rod is rigid, its whole length will move when we push the near end. ...

Another suggestion: take two of these lightyears long rods, hanging side by side in space. Near Earth, the rods touch; they are at a very small angle to each other so that their far ends are centimeters apart. If one rod is moved sideways it will slide over the other until, after a short time, the Earth ends of the rods are a few centimeters apart while the far ends are touching. In that short time, without any mass or energy being sent faster than light, *something* has traveled light years along the rods: the point at which they touch has moved all the way from the Earth to the far end. Could this be used to transmit information? In fact, the answer is 'no.'...

The flaw is that the entire length of the sideways-moving rod must already be moving before the rods' point of contact can travel faster than light; those at the far end would

already know the ‘signal’ was coming and receive absolutely no more information from it. Physicist call this a ‘non-meaningful superlight signal.’ We can aim a laser at the Moon and swivel it so that the bright spot moves across the Moon’s surface with FTL speed – but the spot carries no information from one part of the moon to another.” – Peter Nichols, The Science in Science Fiction (1982), p. 74.

[Interview in French translated by English subtitles]

*“Villeneuve’s campaign started well. He linked up with the Spanish at Cadiz and reached Fort du France. Nelson was completely fooled. He wasted precious time in the Mediterranean and passed Gibraltar a month behind Villeneuve. But the rest of the plan didn’t run so smoothly. Missiessy was not contacted in time and he returned to Europe. Ganteaume was blockaded in port and could not emerge without a battle. So the plan had to be modified. Napoleon, in Italy, issued new orders. ...*

*But how could Napoleon’s orders reach Villeneuve? Remember, Napoleon wasn’t in Paris. He was constantly moving between Lyon and Milan. His orders first had to reach Paris – that took ten days – and then get to a port, in this case Rochefort. Then went out on several frigates, in case one was captured because the French navy weren’t masters of the sea. So two or three ships were sent to contact Villeneuve’s fleet somewhere in the Caribbean, they had no idea where. They had to find them first. There were so many variables. Communications were unreliable and very slow.”*

– Contre-amiral Rémi Monaque, *Trafalgar: The Greatest Battle in Naval History* (documentary, 2007) <sup>5</sup>

**Creaky Communications:** The creaky, feudalistic Third Imperium setting for the Traveller RPG is an example of a large, complex interstellar civilization that does not possess direct or instantaneous FTL communications. News, orders and information from the Capital required two months to reach the frontiers; communication travelled outward at the fastest available FTL jump ship speed (about 15 to 18 lightyears per week, jumping only from starport to starport). Supplies, trade and reinforcements took even longer. As a result, important decisions were made locally by military commanders, bureaucrats, and nobility. Most building, education and recruiting was also localized. This was an important element in the Imperium Civil War.<sup>6</sup>

- ✓ Conversely, the BattleTech universe featured a form of near instantaneous FTL communication to a range of 50 lightyears, which was monopolized by the semi-mystical ComStar Corporation. ComStar, with its own military assets and a proto-religion to augment the monopoly on FTL communications, was able to exert some control over the Great Houses. When the system collapsed after 500 years, the Houses resorted to messenger ships *à la* Traveller RPG.
- ✓ In the Stargate Universe series (2009-2011) the characters used Ancient “communications stones,” which allow communication over any distance by taking over another person’s body at the target location. *Yeah, you read that right.* Characters on the Destiny often swapped bodies both ways with personnel at SGC, it was a bit confusing at times during the series because sometimes they showed the actual person who was there, and sometimes they showed the body of the person who was there (*got that?*). Of course it created drama opportunities, and comedy moments, and the writers love that stuff to fill screen time.

And of course they glossed over the massive implications – personal, metaphysical, social – and legal. The program showed the ‘visitors’ to SGC being driven around in government vehicles while occupying someone else’s body, to visit family, etc. (‘hi honey, it’s me, ignore what you see’). Can you see where this is going? Imagine the lawsuit and witness testimony if something happened to the body while occupied by another’s consciousness – a car accident, a shooting, a rape, or if crimes were committed by the occupier of someone else’s body. I chuckle imagining reading that complaint, what legal theories would apply? The fact section – if declassified – would be head spinning hilarity like the complaint in *United States ex rel. Gerald Mayo v. Satan and His Staff*, 54 F.R.D. 282 (W.D. Pa. 1971) (no kidding, *Google it*).

- The blasé treatment of the Ancients communications stoness technology in SGU is emblematic of the major problem with the entire Stargate franchise (as well as much of television science-fiction): It is the attitude that if the ancient technologically advanced races figured it out, it’s safe, easy and totally ok for humans to use without regard to any possible dangers.<sup>7</sup> Only once in the entire franchise do I recall a point being made about the dangers of assuming alien technologies; that was the episode where the U.S. Air Force was trying to fly Goa’uld Death Gliders (fighters) they had captured. Alien technology in GGDM should never receive blasé treatment, it should be edgy, dangerous, unknown with potential.

---

*“According to the [Continuity Hypothesis], babbling is a direct forerunner to language. At first, infants produce universal sounds that exist in all areas of the world and in all languages. Reduplicated canonical babbling produces a number of sounds but only some of them (‘ma ma’ and ‘da da,’ turning into ‘mommy’ and ‘daddy,’ respectively) are recognized as meaningful and thus reinforced by caregivers and parents, while the others are abandoned as meaningless.... This hypothesis agrees with the claim that the anatomical changes of the vocal tract are very important, but suggests that the social environment in which an infant is raised has a greater influence on the development of language. Infants pay close attention to their caregivers’ reactions and use their feedback as approval for the sounds that they are making. This reinforcement through feedback helps infants to focus their attention on specific features of sound. Social feedback facilitates faster learning and earlier production of a variety of advanced words.*

*There is evidence that babbling varies depending on the linguistic environment in which a baby is raised. Current babbling research supports The Continuity Hypothesis. For example, it has been noted that infants raised in French-speaking environments display greater amounts of rising intonation in comparison to infants raised in English-speaking environments. This is likely due to the differences between French and English intonations while speaking. The ordering of consonants and vowels in the babbling of English, French, Swedish and Japanese infants also appears to resemble that of their native language. These findings support another hypothesis, the ‘babbling drift hypothesis’ in which infant babbling resembles the phonetic characteristics of a child’s native language through exposure to speech.... The babbling drift hypothesis provides further support for The Continuity Hypothesis.”*

– from Wikipedia article, “Babbling,” captured November 2, 2019

---

**Drifting in Babble:** How infants learn to speak borders on the sublime. Language is a habitual repetition; this is why political correctness is objectionable to some – it interferes with habitual use of words and concepts.

From my recollection of a lecture on language learning (apparently on the ‘language drift hypothesis,’ *ut supra*), various recordings were made of babies from across the world, across many different language groups, at an age before they begin learning language. A baby will make every sound used in every language before they are six months old. You cannot tell a Chinese baby from a French baby from the sounds they make at less than a few months old.

Page | 80

The International Phonetic Alphabet (IPA) represents every sound used in every spoken language in the world today. Using the IPA one could transcribe into symbols any conversation without needing to understand the language.<sup>8</sup> They would simply record what they hear, meaning and content are not necessary. Every language uses a range of possible sounds, but not all; every language has a natural repetition of sounds that is pleasing to the native speakers of that language.

After about six months old, babies begin repeating the sounds they hear from adults speaking around them. As time goes on, repetition of the sounds they hear spoken becomes stronger, regular, and they begin less and less to make the sounds not used in their native language. Thus our brains are conditioned from infancy to certain language sounds and patterns, onto which are added concepts, ideals, meanings, and abstractions through our childhood into adulthood.

This is why learning a foreign language is difficult, especially one that is in a different language group and/or uses a non-Romantic alphabet. The origin of the Romani was traced both genetically and linguistically to a certain tribal group near northern India who migrated about 500 A.D. This also has a profound effect on children in multilingual families or environments, such as the border regions in Europe, where they grow up speaking several languages – I also recall a headline somewhere that multilingual speakers were found less susceptible to dementia in old age, but I don’t know on what studies or data that was based.

- ✓ Folk etymology might suggest that ‘babble’ comes from ‘Babel’ and looking at the definitions in Merriam-Webster, one could see some similarity in meaning. But according to Merriam-Webster online dictionary, ‘babble’ was in use a century before ‘Babel’ entered the English language (the 13<sup>th</sup> and 14<sup>th</sup> centuries, respectively) and thus ‘babble’ could not have come from ‘Babel’ by simple math. And Babel is, of course, connected to the Biblical origin myth of ‘folly.’ Merriam-Webster offers no connection between them, instead stating that ‘babble’ is probably imitative; the Wikipedia article has a 15-second video of a baby in a crib repeatedly uttering ‘ba-ba.’

---

*“The examiner nodded. ‘When you see much of this, you have a tendency to speculate. Now, we regularly add to our stock of fighting men and ships, and our ability to control the effects of time enables us to operate, from the observers’ viewpoint, either very slowly, or very fast. How is not in my department, and this knowledge is not handed out to satisfy curiosity. But – it’s natural to speculate. The only way we know to slow time, from the observer’s viewpoint, is to accelerate, and increase velocity to near the speed of light. A great ancient named Einstein said there is no way, without outside references, to distinguish the force of gravity from acceleration. So, I think some wizardry with gravitors is behind this.’*

---

*He looked thoughtfully at Lance Phillips. ‘The main thing is, you see what you have to know to be one of our apprentice strategists. We accumulate strength slowly, take the toughest, most generally uncivilizable of each generation, provided they have certain redeeming qualities. These are our fighting men. We take a few standard types of ships, improve them as time goes on, and when we are attacked, we accelerate our response, to strike with such speed that the enemy cannot react. We obliterate him. He, mortified, blames the defeat on something else. His fleet was caught in a nova, the gravitors got in resonating synchrony, something happened, but it didn’t have anything to do with us. Nevertheless, he leaves us alone.’*

\*\*\*

*‘After we get out – then what happens?’*

*‘It depends on circumstances. However, fighting men are in demand. If, say, a properly keyed signal cut power to the engines, and after some days of drifting, the warrior were offered the opportunity to enlist in some outfit that meets our standards...’*

– From “The Claw and the Clock,” by Christopher Anvil (1971)

## Endnotes.

<sup>1</sup> **Commentary:** Communications delay to the Mars rover is 4 to 24 minutes; it self-drives across the Martian terrain.

<sup>2</sup> **Commentary:** See Quantum Computing, for example. In September 2017, articles appeared discussing a quantum computing toolkit (a proto-programming language for as yet non-existent quantum computers) built from MS VS; one article included code samples. Engineers have worked the last few years on harnessing quantum teleportation for use in computers and communications. But we still don’t know the data transfer speed of quantum entanglement; any such computers would be slowed by our electronics.

<sup>3</sup> **Commentary:** Note that the movie Magellan, also released in 2017 specifically depended on the idea that quantum entanglement could be used to communicate instantly and simultaneously across galactic distances and the obviously very old and advanced intelligences were communicating in DNA sequences.

<sup>4</sup> **Commentary:** The Concierge should consider that communications may not allow far-flung colonies to be aware of the current situation at any moment. I watched a sci-fi series episode where the remaining handful of humans were imprisoned in a work camp with high walls guarded by alien robots. As the story began, there had not been an alien supply ship for over two centuries and the alien android guards were failing due to lack of replacement... The aliens had never begun exploiting or colonizing the planet after conquest, but had moved on, leaving the Earth with centuries to recover to be inherited by the human prisoners when they finally broke out.

<sup>5</sup> **Citation & Commentary:** This beautiful French-produced English language (except where French speakers are interviewed) CGI/live-action documentary provides an alternative and refreshing French point-of-view on the Trafalgar campaign through the letters of Admiral Pierre-Charles Villeneuve, the commander of the Franco-Spanish fleet at Trafalgar. Notable threads in the documentary include Napoleon’s dislike of naval officers, the lack of local initiative by the French naval commanders, and confusion of orders and counter-orders and poor logistics. Conversely, Admiral Nelson disobeyed the orders of the Lords Admiralty to chase down Villeneuve after being initially fooled and displayed great tactical independence in battle.

<sup>6</sup> **Commentary:** Star-spanning civilizations without FTL communications may suffer an interstellar version of the *Two Generals Problem and/or a Byzantine Fault*. Participants and the Concierge should understand what these are.

<sup>7</sup> **Commentary:** The relationship that developed between the Ancients and the Humans of Earth in the Stargate universe was a parental or mentoring one. The Ancients passed their technology to humanity when they were facing extinction and could not ascend – the changes they made to themselves to achieve near immortality in this universe meant that they could not ascend. Still, we have all heard stories of pre-teen children trying to drive cars or, worse, playing with guns, paint cans, or other dangerous adult-world items. Imagine your dog trying to use the electric can opener to get his food? This especially is an apt analogy when minor races are involved.

<sup>8</sup> **Commentary:** When I was first introduced to the IPA, I immediately noted the similarities to the Speed Writing shorthand system I had learned in junior business college.

*See Appendix CTC – Continuous Turn Cycle Example*

---

*“The fellowship was a brief beginning, a fair time that cannot be forgotten.  
And because it will not be forgotten, that fair time may come again.”*

– King Arthur, *Excalibur* (1981)

---

*“Time does not exist. Only the illusion of memories exist.”*

– Seiichi Kirima, *Boogiepop Phantom* (2000)

---

**Time Unwind:** There is a line of thought – possibly related to Avicenna’s Floating Man argument – that absent external stimuli and references, time does not exist in the human mind, that is, humans do not possess ‘time sense,’ we cannot ‘feel’ time (see Just Don’t Call Me Late for Dinner and Timesense discussion, 3 Reformation, pp. 1403, 1406, *infra*); this is not a denial that time exists objectively in the universe, but that organic existence (and memories) – from which the mind emerges, is also the only thing tying the mind to the universe.

Effectively within the mind, the mind has always existed and will always exist, it does not recall coming into existence and does not anticipate not existing always (e.g., Isaac Asimov’s “The Last Answer” (1980), see excerpt in Information, *infra*). It is the dividing line between the mind and the brain (which is of the body) and a reason why mind is associated with divinity that is commonly envisioned as timeless. Sit in an absolutely quiet, sealed dark room with no windows for awhile and try to figure out how much time has passed as you think, daydream, or sleep. Many such experiments have been done, and it has been used as a form of disorientation torture or interrogation technique called sensory deprivation.

- ✓ “For modern man one of the most troubling aspects of eternity lies in getting used to the slippery quality of time. With no clocks and no calendars and lacking even the alternation of day and night, or the phases of the moon, or the pageant of seasons, duration becomes subjective and ‘What time is it?’ is a matter of opinion, not of fact.” – Robert Heinlein, *Job: A Comedy of Justice* (1984).
- **Time Passages:** The ability to be elsewhere – in memories, or anticipated futures, or literary construction of places and times that have never existed and never will – of suspension of disbelief – is a key element of sapience. One of the primary mental abilities of humans is to be somewhere else without moving. This is the basis of *Dune*’s (1965) navigator guild, the ultimate form of moving without moving.
  - ✓ “Imagination will often carry us to worlds that never were. But without it, we go nowhere.” – Carl Sagan.
    - “You reach out your hand but you are all alone in those time passages...” – Al Stewart, “Time Passages” (1978).

*I have squandered my resistance  
For a pocket full of mumbles, such are promises  
All lies and jests  
Still a man hears what he wants to hear  
And disregards the rest*

– Simon & Garfunkel, “The Boxer” (1982)

**Peering Over the Dish:** In primary school, one gets the impression that history is infallible, that is, that we know everything about every historical person. Everyone has a place and date of birth, and of death, and a blurb of historical accomplishments and why they are important to history. This is history and this is what is going to be on the test. John Taylor Gatto might opine (and I don’t specifically know if he has commented on this) that it is all part of the design to impose the idea that everyone is being watched all the time, that everyone is accounted for, and maybe I might add that it is also part of our religious ideals that everyone will be remembered after they die, and that an important few will be immortalized in history lessons. Most people never go beyond that, the lid having been put on the dish so that they learn to not jump so high.

When you peer beyond the dish in later life, you will discover that we know the names of one hundredth of one percent of the billions of humans and human ancestors that lived. Many, we know little about but their names (e.g., Simonides of Ceos, famous ancient lyricist, or Ptolemy Philadelphus, Cleopatra’s youngest son by Mark Anthony) and/or of others who simply disappear from historical records (e.g., the embezzling Spartan commander Gylippus who fled, or the infamous sister of Emperor Venetian III, Justa Grata Honoria who may have died or been murdered, or the last Western Roman Emperor, Romulus Augustulus who may have simply walked away) – all of these people vanish into the masses once they flee outside the sphere and time in which they were important people.

### Kepler’s Laws

*Johannes Kepler, working with data painstakingly collected by Tycho Brahe without the aid of a telescope, developed three laws which described the motion of the planets across the sky.*

1. The Law of Orbits: *All planets move in elliptical orbits, with the sun at one focus.*
2. The Law of Areas: *A line that connects a planet to the sun sweeps out equal areas in equal times.*
3. The Law of Periods: *The square of the period of any planet is proportional to the cube of the semimajor axis of its orbit.*

*Kepler’s laws were derived for orbits around the sun, but they apply to satellite orbits as well.*

– From <http://hyperphysics.phy-astr.gsu.edu/hbase/kepler.html>, captured October 6, 2017

**The Law of Periods:** Each position will have a set time period within which to submit their Actions. Each position may only submit Actions once during that period, to avoid the confusion of multiple partial and complete sets of Actions and various amendments. Actions may not be amended once submitted; the Actions received by the Concierge within the turn period are final for each position. Actions received outside the allowed period are void, and will not be considered by the Concierge. Because of the manual effort required to process Regular Turn Actions and the continuous streaming nature of the game, these rules must be strictly enforced.

- **Three Daze:** The period for submission of Regular Turn Actions will be based on the calendar system and time zone used by the Concierge. Each position will have a period of specific days to submit one set of Actions. For example, Position A might have the period of Monday, Tuesday, and Wednesday to submit their Actions. Actions for Position A would not be accepted before 12:00 a.m. on Monday and after 11:59 p.m. on Wednesday, based on the time zone where the Concierge resides.
  - ✓ While three-day turn periods would be optimal for the flow of the game, it is unlikely that the game will run on a three-day cycle as ‘real-world’ (whatever that is...) tasks pull players away. This is one of the many good reasons why each position should be run by a player team. While three-day turn periods may not be practical, the game should not be allowed to drag.
- **Forward Fumble:** Because of the continuous action principle, all days of the week will be used for running the game to keep it continuous; that is, there are no ‘off days’ or weekends off when the game is not running. Any position that fails to submit their Regular Turn Actions within the time period will have no Actions run in the Turn Cycle, however, ships that are in transit will continue moving toward their destination (law of conservation of momentum) until they arrive and the position will be subject to the effects of the Actions submitted by all of the other positions.

This game operates optimally with ten positions playing (not only in terms of the rotation of turn submission periods, but also in the level of creativity of the players and complexity of the game), on which basis, each position should have to submit Actions approximately twice to three times per month. Less positions may mean longer turn periods (or, alternatively, greater frequency of Regular Turn Actions if a faster-moving game is desired) for each position. To the extent that processing requires manual handling by the Concierge, the Concierge’s schedule will also become a factor in determining the length of turn periods.

- **Lapping Effect:** While each position has a specific period during which it may submit Actions, the periods during which positions may submit Actions will overlap.
  - ✓ For example, Position A might be allowed to submit Regular Turn Actions on Monday, Tuesday, and Wednesday; while Position B may submit Actions on Tuesday, Wednesday or Thursday, and Position C will be allowed to submit Actions on Wednesday, Thursday, or Friday, and so on continuously, until all of the positions have had one opportunity to submit Actions, and then the cycle returns to Position A.

Note that Regular Turn Actions will be processed in the order they are received, therefore, if, in the above scenario, Position B submitted their Actions on Tuesday, and Position A submitted theirs on Wednesday, Position B’s Regular Turn Actions would be processed before Position A’s Actions. Some players may find this advantageous.

*“Arvast Nade, just turning from the screen, jerked back to take another look. Between his fleet and the planet, a swarm of blurs had materialized.*

*The things were visibly growing large on the screen, testifying to an incredible velocity.*

*Abruptly the blurred effect vanished, and he could see what appeared to be medium-sized scout ships, all bearing some kind of angular symbol that apparently served as a unit identification.*

*Now again they blurred.*

*Nade activated his suit communicator.*

*‘Secondary batteries open fi—’*

*The deck jumped underfoot. A siren howled, changed pitch, then faded out. Across the control room, a pressure-monitor needle wound down around its dial, then the plastic cover of the instrument blew off.*

*The whole ship jumped.*

*A tinny voice spoke in Nade’s ear. ‘Admiral, we are being attacked by small ships of the Storehouses!’*

*‘Fire back!’ shouted Nade. [funny that they have to be told to return fire!]*

*‘They’re too fast, sir! Fire control can’t keep up with them! Look out! HERE COMES—’*

*Nade raised his battle pincers.*

*Before him, the whole scene burst into one white-hot incandescence.*

– From “The Claw and the Clock,” by Christopher Anvil (1971)

**The Claw and The Clock:** Combat is fought in rounds, with each side submitting Combat Actions for each Combat Round. Combat Rounds are run at any time that the Concierge receives sufficient Combat Actions based on the type of combat being fought (see Combat Categories, 2 Combat, p. 959, *infra*). Several Combat Rounds may be processed in one day, or a combat may continue indefinitely (as long as there are combatants) with nothing happening. Players are never required to submit Combat Actions, other than during the first round of a combat.

- ✓ In a dilatory combat, it is quite likely that one or both sides will exceed their Operational Supply Limitations and be forced to retreat to a supporting colony for resupply. Maintaining a siege or combat over several Regular Turns at an **alien colony**, or in an un-colonized starsystem, requires a significant logistical effort. See Supporting Colonies, 1 Movement, p. 840, and extended logistics discussions 3 Movement, *infra*.
- **Relativity:** Combat Rounds are run independently of, and concurrently with the Regular Turn cycling of the game. The rest of the game does not stop for the resolution of combats. While a combat is in progress, it will or may be affected by events associated with player positions taking their Regular Turn, including, but not limited to, diplomacy, news events, the arrival of additional forces, shipbuilding, and supply and other logistical issues. Units involved in combat may not move away or execute any other Regular Turn Actions until they are either victorious or successfully withdraw from the combat.
  - ✓ The Battle of Pork Chop Hill (a militarily useless piece of terrain) in 1953 during the Korean Armistice negotiations (the first part of which was depicted semi-fictionally

in the 1957 movie) is an example of how ‘other things’ are going on (that is, how the rest of the game moves on as scheduled) during an ongoing combat. In GGDM terms, this would reflect a combination of player communication-negotiation between the sides while concurrently submitting Regular Turn actions and Combat Actions.

- **Bells Rung:** Combat Actions will only be accepted for one Combat Round at a time. The Concierge will process each position’s Combat Actions and resolve the Combat Round. Random die rolls will be handled by a random die roller, with the results being emailed to all combatants (out of fairness). Once the results are received and applied, the combatants may submit the next Combat Actions. In this way, it would be possible, with everyone online, to process four or five Combat Rounds in one evening, if desired (most combats will be over in less than five Combat Rounds). The Concierge will never divulge to anyone not involved in the combat the results of the combat or any Combat Round; that is a matter for player diplomacy and intelligence.

Page | 86

---

**Clara:** *How can you have a grave?!*

**Dr. Who:** *Because we all do, somewhere out there in the future, waiting for us. The trouble with time-travel is you could actually end up visiting it.*

– Dr. Who, “The Name of the Doctor” (2013)

---

**X-Factor:** When Dr. Who began in 1962, the world was divided by the Cold War and recovering from the social-psychological shock of WWII. It is entirely fitting that Dr. Who is a BBC production as Great Britain was the closest to and most traumatically affected country of the Anglo-sphere by the massive conflict of WWII (it is possible that Perry Rhodan served the same purpose in German culture). Dr. Who was a reaction to the creeping, palpable dread overtaking civilization at that time, and it was and is still most successful when it fills that role. To this day, Dr. Who studiously avoids anything controversial or relevant in the Real World – it is pure escapist fantasy – Dr. Who will never appear in China during the Great Chinese Famine, or in Southeastern North America during slavery,<sup>1</sup> or in South Africa during the Zulu uprising, or touch upon the events of the Opium Wars.<sup>2</sup> Or anything that would reflect badly on the Anglo-sphere or Eurocentric culture generally. GGDM is quite the opposite.

- ✓ “Gilles Deleuze famously argued in his books on cinema that the feeling that time, and the world with it, was ‘out of joint’ began in the aftermath of World War II, and clearly Akira Kurosawa’s *Rashomon* (1949) stands out as a film which uses flash-backs to present multiple possible versions of the past which don’t align, which couldn’t all be possible, and without providing resolution. Since the film’s attempt to place guilt in relation to a horrible act of violence can be read as an allegory of the attempt to deal with the guilt and horror of memory in relation to the atrocities of the war, it doesn’t seem unlikely that the form of the film is an attempt to deal with the trauma of its contents, allegorical and otherwise.

And as psychoanalytic critics have long argued, fragmentation is one of the primary responses to a trauma which remains difficult to process and integrate. Deleuze nevertheless aims to get beyond the limitations of psychoanalysis, and his argument about time and film is wide-ranging and goes beyond trauma, unless the trauma is seen as more than the war, but the generalized condition of living in our postmodern age. And so, in his cinema books, he traces the shift in the depiction of time in avant-

garde films in the post-war period, by means of cinematic authors such as Fellini, Resnais, Tarkovsky, and beyond.” – Christopher Vitale, “Collapsing the Fuzzy Wave: Rian Johnson’s ‘Looper’ (2012), Quantum Logics, and the Structures of Time Travel Films,” networkologies (blog), written in 2012, updated and reposted, October 31, 2014.<sup>3</sup>

Looking back at my youth, I feel like we were just sitting around resigned and waiting for the end; reading Loren Eiseley’s book, *The Modern Dilemma* (1956), gave me emotional flashbacks to the fear, the book is dripping with Cold War fear. It has been difficult for those born after 1990 to understand the world of my cohort (note how the meaning of ‘ground zero’ has changed post-9/11); and the new Dr. Who series, bereft of the background milieu of the Cold War, has had to find a new way to continue to represent hope, escapism, and a kind of higher meaning.<sup>4</sup>

- ✓ “Why do I write all this? Especially when I risk days of online wrath from Doctor Who fans? (Last time, I was called a c\*\*\* and a t\*\*\*, among other things.) Because it’s not the scheduling. The problem is the show. People don’t like it, they can’t understand it, their kids can’t understand it. It’s overblown, sometimes nonsensical, and Capaldi hasn’t closed the deal with viewers as the lead.” – Neil Midgley, “Dr. Who Ratings Fall to a Record Low (Again),” *Forbes Magazine*, November 30, 2015.

Like the anti-hero Thomas Covenant the Unbeliever and *The Matrix*, Dr. Who seems to be something that you either love or hate, you either get it or you don’t. The new series particularly, has seemed to have its own superlative logic – sometimes staying just this side of ludibrium – reminiscent of the “X-factor” thinking introduced in Lewis Padgett’s (aka Henry Kuttner and C. L. Moore) short story, “Mimsy were the Borogoves” (1943).

---

*“Today was tomorrow, yesterday  
It’s funny how time can slip away...”*

– Ozzy Osborne, “Thank God for the Bomb” (1986)

---

## Endnotes.

<sup>1</sup> Commentary: Earlier Dr. Who was a little more adventurous, the First Doctor visited the Aztecs just before the arrival of the Spanish. Those episodes were slightly controversial in the early 1960s.

<sup>2</sup> Commentary: The newer series has just barely touched WWI and WWII and the Doctor went to a charity event for veterans of the Crimean War, 30 years after the war.

<sup>3</sup> Citation: “While film seems to be particular suited to, as Deleuze argues, function as a ‘time machine,’ it is not the only medium which can do this. Literature can imagine multiple time lines as well, for example, but it only began to truly do this at around the same time as film began to do this, with perhaps Jorge Luis Borges ‘Garden of Forked [sic] Paths’ (1941) as one of the earliest examples. Of course, language and images of all sorts were always virtual realities of sorts, but only after World War II did time seem to truly ‘go out of joint.’ While the fissures can be seen as early as experiments with painting, such as that of Picasso or the Italian Futurists, it is only retroactively that the true potential import of these devices become clear.” *Id.*

<sup>4</sup> Commentary: When I was young, I used to enjoy watching Star Trek TNG episodes, I admit it was highlight of my day when I got to watch TNG on television. Over 20 years later, when I can still watch it on the internet and DVD any time I want (and I suppose it is still re-airing on television somewhere in my way-too-many-channels line up), I find I like it far less: Star Trek TNG is too slick, too glossy, too cutesy, too utopian for me now, it makes a mockery of seriousness and it’s formulaic and mostly episodic. There are still some episodes I like to re-watch, but if I am not in the mood, I feel like turning it off 10 minutes into the program. I didn’t initially like DS9 very much, but came to appreciate it after the fact, especially the Dominion War arc. I guess this indicates a shift in worldview.

*See Appendix CTC – Continuous Turn Cycle Example*

*See Appendix PAT2 – Power Activations Tables 2 – Normal Sequence of Power Activations*

*“The view that machines cannot give rise to surprises is due, I believe, to a fallacy to which philosophers and mathematicians are particularly subject. This is the assumption that as soon as a fact is presented to a mind all consequences of that fact spring into the mind simultaneously with it. It is a very useful assumption under many circumstances, but one too easily forgets that it is false. A natural consequence of doing so is that one then assumes that there is no virtue in the mere working out of consequences from data and general principles.” – Alan Turing, Computing Machinery and Intelligence (1950)*

**New York City, 150,000 Years Later:** Sixty years apart, or 150,000 years apart, they are both talking about emergences.

- ✓ cf. “Mathematics, law of averages. Let a complex system repeat itself long enough, eventually something surprising might occur.” – Inner Number 6, Battlestar Galactica, “Day Break” (epilogue in New York City, 2010).

**Rhetorical Questions:** Is ‘surprising’ inherent in or necessary to the concept and/or definition of emergences? Is the surprise simply a matter of our (very) limited intelligence; would the universe be clockwork to a higher intelligence? Or at least a set of known and closed probabilities? Is something emergent simply because of our current framework? E.g., has emergence simply replaced mythopoeic thinking in the modern age (see Mythopoeic Thinking discussion, 1 Temporal Technology, p. 809, *infra*)? Is emergence a category error? To wit:

- ✓ “Unlike classical physical processes, some quantum mechanical processes (such as quantum teleportation arising from quantum entanglement) cannot be simultaneously ‘local,’ ‘causal,’ and ‘real,’ but it is not obvious which of these properties must be sacrificed, or if an attempt to describe quantum mechanical processes in these senses is a category error such that a proper understanding of quantum mechanics would render the question meaningless.” – from Wikipedia article, “List of unsolved problems in physics,” captured April 7, 2019.

Can something not surprising be an emergence? Can emergences be useful if they are unpredictable? Is our only option to recognize that emergences happen, and that the concept is the best explanation for the observed phenomenon, but beyond our current understanding and ability to predict?

**White Moves First:** When a computer plays against a human opponent, any move the computer makes, one can assume that the computer has worked out all consequences several moves out because of the processing differential between the computer player and the human player. Given the time periods (years, decades, centuries) that are likely represented by a turn in GGDM, the players and Concierge can assume on a certain level that all of the consequences of an act or fact have already been played out, determined, and are known to the populations in the game. That is the processing levels are the same, given time. This may be partially represented by use of Enlightenment rerolls (see ‘do over’ discussions in Foresight and Vampire Suicide, 2 Colleges, pp. 472, 478, *infra*). However, at the same moment, the game is really about the *human players* who may not see all of the possible consequences of a move, and who, through game play, work it out from the data presented to them by the game.<sup>1</sup>

- ✓ “As we know, the main problem of all chess programs is the very large number of continuations involved. The number of all potential positions is in the order of  $10^{128}$  ... which is vastly larger than the number of atoms in the known universe (a pitiful  $10^{80}$ ). It is clear that no computer or any other machine can solve the game by looking at all possible continuations. ...

For the computer, it is only a question of what depth of search is required to match human strategic skill. The machine Deep Blue, which Kasparov played in Philadelphia and New York, consisted of an IBM SP/2 server equipped with a large number of special purpose chips, which do the fast calculations. Each chip is capable of processing two to three million positions per second. By using more than 200 of these chips, the overall speed of the program could be raised to 200 million positions per second. ... Today’s top PC programs ... run at up to 1,000,000 positions per second on the fastest available hardware, and realistically have a playing strength in classical chess of over 2600. They are a match for all but the top 100 players in the world; in rapid forms of chess only the top dozen or so humans can compete.

The extensive opening books that are used play an important role in the strength of computers. The collective knowledge and experience of many generations of human masters can easily be stored on a hard disk and accessed during the opening phase of the game. Even the micros know tens of millions of opening positions, and have access to full statistics for each of them.... Very often a program will play fifteen or more moves of a game before it starts calculating moves for the first time. Without the benefit of this human knowledge in the openings, the programs would be considerably weaker. While computers are gaining a substantial advantage from the vast amount of opening knowledge that has accumulated in the history of chess, they also profit from research at the other end of the game.” – Grand Master Boris Alterman, “How to Beat your Chess Computer,” undated blog article.<sup>2</sup>

Even the best human players do not and **cannot process the number of continuations** that a computer must process to match the best human players. So how does a computer lose to a human? Do humans have some asymmetrical advantage against a computer opponent with raw processing power? Additionally, note that the current strength of computers is largely due to the accumulated experience of humanity at the game of chess, e.g., opening moves, five-piece end-games. And of course, there is the classic religious quandary (not confined to Abrahamic religions): If our creations can defeat us, then might we not defeat the entities who created us?<sup>3</sup>

---

*“To everything (turn, turn, turn)  
There is a season (turn, turn, turn)  
And a time to every purpose, under heaven  
A time to be born, a time to die  
A time to plant, a time to reap  
A time to kill, a time to heal  
A time to laugh, a time to weep”*

– The Byrds, “Turn! Turn! Turn!” (1965)

---

**Turn, Turn, Turn:** All Actions received by the Concierge within a day will be processed the next day if possible. For example, the Regular Turn Actions received between 12:00 a.m. and 11:59 p.m. on Wednesday, will be processed sometime on Thursday (as the Concierge's schedule allows). Ideally, the schedule should be set such as to avoid a backlog or piling up of unprocessed Actions, which disadvantages the positions whose Turn Periods come after, because of results they could not possibly know when submitting their own Actions.

- ✓ The following section is the first mention of the game-critical triumvirate of Acts, Scenes and Power Activations. These will be introduced at length over the next several sections.
- **Clockwork Universe:** All turns received in a day period will be processed together, not consecutively, based on the order they were received, as follows: All Power Activations requiring one Act, *will process first*, then all Power Activations requiring two Acts and/or an Act and a Scene will process second, and so forth until all Actions are processed (see also Managing Act, 3 The Sidereal Stage, p. 123, *infra*). Power Activations also requiring a Scene will process after other Power Activations requiring the same number of Acts without a Scene, Scenes act as tiebreakers in the processing sequence. If two Power Activations are tied in Acts without any Scenes, or require the same number of Acts and Scenes, they will be processed in the order of Powers listed in 2 The Sidereal Stage, Table of Contents, *infra*.
  - ✓ For example, Players A and B both submit Actions on Tuesday, and Player B's Actions arrive first. Player B's Power Activations requiring one Act will process before Player A's Power Activations requiring one Act. However, if Player B has a Power Activation requiring an Act and a Scene, it will process after Player A's Power Activation requiring one Act and no Scenes.
  - ✓ Actions costing *no Acts and one Scene* will process before those costing one Act.
  - ✓ One Act is **added to** the cost of Power Activations that are not associated with an uninterrupted Government Title, if those are used in the game, see Associates & Acquaintances, 1 Government Titles, p. 580, *infra*. This is an *optional rule* in the game that can change the processing sequence of a position's Power Activations with any disruption or change in Government Titles, representing differing priorities of a succession of governments. It could be really fascinating and really annoying.
    - It is strongly suggested that any computer assistant for the game provide the position players with a current list of Power Activation processing sequence by purpose, updated for current Government Title associations.
    - The order should be the same whether Regular Turns are being processed individually or batch processed by a computer assistant in a way that all Regular Turn actions of positions submitted in a day are intermingled. In the latter situation, there may occasionally be a competition between positions as to whose order is processed first, affecting the other position's orders that are processed second. It depends on how the program is written.
  - ✓ Finally, a special 'exception' has been created (of game mechanical necessity) when Unloading RPs at a colony from Cargo Ships shares a Scene with a Construction Power Activation at the colony on the same Regular Turn: Normally, the Construction Power which requires an Act and a Scene will process before the Commerce Power activation for the purpose of Unload RPs which also requires an Act and a

Scene by virtue of the order in which the powers are listed in 2 The Sidereal Stage, Table of Contents, *infra*. However, as they are sharing a Scene (see Material Handling, 1 Construction, p. 664, *infra*), and the unloaded RPs must be used that turn or are lost, the Unload RPs action is processed before the Construction Power so that they may be used that Regular Turn.

- The gist of it is that the process is preplanned as one overall continuous action at the colony by the arrival of the Cargo Ships with RPs and the activation of the Construction Power at the colony with Unload RPs activation of the Commerce Power. It still costs two Power Activations, two Acts and one Scene total.
- **The Mouse in the Clock:** Each Power Activation requires an Interpretation. The default Interpretation is a News Event for most Power Activations. Players submitting Actions for their positions are required to provide the Interpretation (including the text of a News Event, if necessary) to go with each Power Activation and to make it clear to the Concierge exactly what the players desire to do. Any Power Activation without an Interpretation will not be processed. Players will not post News Events to the forums (though players are free to make other appropriate posts to the forums), rather, the Concierge will post all News Events to the forums when the turns are processed. Note that there are other kinds of Interpretations which may be used sometimes to accompany a Power Activation.
- ✓ The News Events section of the forums that is part of the game will be closed to posting or modification by anyone except the Concierge and players. There may be general topic discussion sections of the forums for player and/or public discussion, *depending on how much time the Concierge wants to spend moderating forums*. Posting in discussion sections may be restricted to only players in the game.

---

*“In the context of comments posted to online news sites, the presence of a recognizable journalist engaging with commenters has been found to be associated with improved quality of deliberation with reduced incivility and increased evidence-based discourse, as compared with when no one engages with commenters or when an unidentified staff member from the news organization engages with commenters. Discussions surrounding news of health or abortion topics are more relevant but with fewer genuine questions posed than news of topics on education, crimes or guns, and economy. News of education topics has less uncivil and more relevant comments than the other news topics. People provide less evidence in their discourse when discussing news of economy topics as compared to the other news topics.”*

– from Wikipedia article, “Online Deliberation,” citing to Natalie Jomini Stroud, Joshua M. Scacco, et al, “Changing Deliberative Norms on News Organizations’ Facebook Sites,” *Journal of Computer-Mediated Communication*, Volume 20, Issue 2, March 1, 2015, Pages 188–203 (available free online)

---

**Online Deliberation:** “The term online deliberation describes the emerging field of practice and research related to the design, implementation and study of deliberative processes that rely on the use of electronic information and communications technologies (ICT). Online deliberation is a relatively new field.” *Id.*

While the internet at first held forth great promise for public discourse, many news organizations have closed the comments sections for their editorials and news stories because they were overwhelmed with racist, sexist, myopic, narcissistic (and all synonyms), unintelligible, ignorant, un-informed, uneducated, insulting or trolling, politically incorrect, phobic, spam and unwanted advertisements, sometimes pornographic, and otherwise inappropriate public postings. In other words, humanity at its usual.<sup>4</sup>

- ✓ “Researchers have questioned the utility of online deliberation as an extension of the public sphere, declining the idea that online deliberation is no less beneficial than face-to-face interaction. *Computer-mediated discourse is deemed impersonal, and is found to encourage online incivility.* Furthermore, users who participate in online discussions about politics are found to make comments only in groups that agree with their own views, indicating the possibility that online deliberation mainly promotes motivated reasoning and reinforces preexisting attitudes.” – from Wikipedia article, “Online Deliberation,” captured October 23, 2019 (emphasis added).

**Intermissions:** The Concierge is the doorkeeper and the janitor of the universe. Please do not contact the Concierge and ask if another position has submitted Regular Actions or Combat Orders (if you are not a combatant). Please do not contact the Concierge and ask the status of a combat or any information that might be construed as ‘free intelligence’ on other positions. The Concierge will give very limited information about other positions, and will always first consider tossing you out an airlock and slamming the door in response to such questions, out of fairness.

- **Emergency Halts:** While the game is designed to run continuously, the game is nothing without the players, and consideration will always be given to halting the game for genuine emergencies. However, the established turn period for each position to submit Regular Turn Actions, and the possibility of multiple players playing each position, should be sufficient to work around most real-world emergencies that might interrupt the game. Therefore, an emergency in this game would be something that cannot be fixed or resolved shortly by reasonable efforts, which might then prevent a position from entering Regular Turn Actions (this is not the same as simply not entering Actions without explanation). Emergency halts will be considered on a case by case basis and will be granted sparingly.
- **Time Stop:** This game is not a computer program, GGDM will always require regular manual processing by the Concierge (with the hope that automated aids might be developed later).<sup>5</sup> This includes tracking all of the turn data, updating the position information, responding to emails, and monitoring the forums decorum. Running the game will be a daily activity for the Concierge. The Concierge will do their best to keep up the daily activities of the game in a timely manner, however, should it become necessary, the Concierge may from time to time call a halt to the game (for example, when the Concierge is on vacation, putting in overtime, on trial for treason, or off saving the world, or during the Holidays). Whenever any halt to the game is called (i.e. the game is placed in ‘temporal stasis’), the turn calendar will be adjusted accordingly and the players will be informed of when the game restarts.
  - ✓ “Yahweh has claimed it, yes – he has pronounced Time Stop and torn it down.” – The Chairman speaking to Lucifer about the Rapture in Robert Heinlein’s Job: A Comedy of Justice (1984).
- **Then The Bomb Drops:** It is (sadly) possible that a halted game will never restart, that the halt is tantamount to ending the game, see End of History, 1 Resolution, p. 1456, *infra*, for

discussion on ending the game. Even with automated aids to help with the bookkeeping functions and/or a game manager-client system, the game will still always be run manually by the Concierge. This game can never be a fully-automated, human-free game program.

- ✓ “Then the bomb drops. Your game master fails to show up (‘I know it’s inconvenient, but I really should be at the birth of my baby’) or shows up but is burnt out from work stress (‘. . . then my office caught fire and we missed deadline.’). Contrary to popular opinion, GMing is not a paying profession (if it is, please let me know where to send my resume). Most GMs also have another life, one that pays the bills, feeds the children, or provides themselves with an education. Sometimes, the last thing a GM wants to face is a group of excited role-players. In these situations, a stoic GM might adopt a ‘the show must go on’ attitude and push on regardless, often with disastrous results, there is nothing more depressing to a group of players than spoiling what has been, at until this point, a long and enjoyable campaign. A far more sensible solution is for the GM to admit that tonight would not be a good time to continue this particular campaign (‘but watch out next week gang!’); he or she should take a break.” – Lee Sheppard, “In Praise of One-Night (gaming) Stands,” *Dragon Magazine* #192, April 1993.

---

*“Avoid sarcasm and facetious remarks. Without the voice inflection and body language of personal communication these are easily misinterpreted. A sideways smile, :-), has become widely accepted on the net as an indication that ‘I’m only kidding.’ If you submit a satiric item without this symbol, no matter how obvious the satire is to you, do not be surprised if people take it seriously.”* – Jerry Schwarz, *Usenet Post*, 1983

---

### **Godwin, Poe and the Laws:** Why do we use emoticons?

- ✓ “Without a winking smiley or other blatant display of humor, it is utterly impossible to parody a Creationist in such a way that *someone* won’t mistake for the genuine article.” – Nathan Poe, christianforums post, 2005.

This has come down as *Poe’s Law* and has been generally expanded to any subject.

- ✓ Both the preceding citation and the feature quote above are from the Wikipedia article on “Poe’s Law,” retrieved September 15, 2017, and were linked back to the original source material.

Godwin’s Law:

- ✓ “As an online discussion grows longer, the probability of a comparison involving Hitler approaches one” (see also, *Reductio ad Hitlerum* fallacy).

Further, “If you mention Adolf Hitler or Nazis within a discussion thread, you’ve automatically ended whatever discussion you were taking part in and lost the debate.” *Reductio ad Hitlerum*.

- **Rhetorical Rules:** “The first renowned salon in France was the Hôtel de Rambouillet not far from the Palais du Louvre in Paris, which its hostess, Roman-born Catherine de Vivonne, marquise de Rambouillet (1588–1665), ran from 1607 until her death. She established the rules of etiquette of the salon which resembled the earlier codes of Italian chivalry.” – from Wikipedia article, “Salon,” captured October 23, 2019.

- ✓ “To be considered deliberative discussion, argue scholars, the communication and the involved interactants’ behavior has to meet criteria established by the principles of political equality and egalitarian reciprocity.” – from Wikipedia article, “Online De-liberation,” captured October 23, 2019.

In addition to Godwin’s Law and Poe’s Law, there remain basic rules of rhetoric that apply to any serious discussion or argument, e.g., the following from the movie *Fantastic Four: Rise of the Silver Surfer* (2007):

**General Hager:** Let me make this clear for you and your pack of freaks. I’m the quarterback, you’re on my team. But I guess you didn’t play football in high school, did you, Richards? [Hager starts to walk away]

**Reed Richards:** You’re right. I didn’t. I stayed in and studied like a good little nerd. And fifteen years later, I’m one of the greatest minds of the 21<sup>st</sup> century. I’m engaged to the hottest girl on the planet. And the big jock who played football in high school, he’s standing right in front of me asking me for my help, and I say he’s not going to get a damn thing, unless he does exactly what I say and starts treating me and my friends with some respect.

This movie dialogue is, of course, every nerdy teen boy’s dream (precisely the audience that comic books have always catered to). The computer industry reminds us that back in the mid- to late-20<sup>th</sup> Century, they were the nerdy, dorky kids who built the technology for an industry that now runs the world (pretty much, an Estate Government Title of sorts).

- ✓ I watched the movie for Galactus and the Silver Surfer, whom I remembered from the days I read *Epic Illustrated*, it wasn’t an awful movie, but not one I’d watch again.

The comeback response is set up by a classic rhetorical mistake – the same one allegedly made by Bishop Samuel Wilberforce (aka “Soapy Sam”) against Thomas Huxley (aka “Darwin’s Bulldog”) at the British Science Association meeting in 1860 – of personally insulting an opponent to end the argument.

This makes General Hager a poorly-written character and sacrifices credibility in the movie as it is very unlikely that any General-grade (i.e. flag) officer (or any officer) would make that mistake (cf. General Hammond in the *Stargate SG-1* series). Flag officers are usually calculating and tactful, if forceful, with their choice of words and are aware of rhetorical rules. If General Hager had perhaps been a sergeant instead, and tossed a few cuss words, the dialogue would have been more believable.

- ✓ Players in GGDM should endeavor to be General-grade officers and not Sergeants in the game and on the forums. Don’t be Soapy Sam either.

The writers get away with this shoddy dialogue not only because it appeals psychologically to the needs of the target audience, but also because insults and putdowns are the common level of argument – as demonstrated by social media – in our society, it’s the feel good, slam-dunk moment that does not prove any point; it is the argument fallacy of giving into doing what feels good instead of doing what is constructive and right for the argument.

*“‘Damned gravitor,’ said Squadron A’s 2nd-Flight leader over the communicator, ‘cut out just as we finished off the lobster fleet. I was signaling for assembly on my ship, and aimed to cut a little swath through crab-land before going home. Instead, we’ve been streaking off on our own for the last week, and provisions are slim on these little boats, I’ll tell you that! What outfit did you say you are?’*

*The strange, roughly minnow-shaped ship, not a great deal bigger than the scout answered promptly:*

*‘Interstellar Patrol. We have a few openings for recruits who can qualify. Plenty of chance for adventure, special training, top-grade weapons, good food, the pay’s O.K., no bureaucrats to tangle things up. If you can qualify, it’s a good outfit.’*

*‘Interstellar Patrol, huh? Never heard of it. I was thinking of the Space Force.’*

*‘Well, you could come in that way. We get quite a few men from the Space Force. It’s a fair outfit, but they have to kowtow to Planetary Development. Their weapons aren’t up to ours; but their training isn’t so tough, either. They’d be sure to let you in, where we’re a little more selective. You’ve got a point, all right. It would be a lot easier – if you want things easy.’*

*‘Well, I didn’t mean—’*

*‘We could shoot you supplies to last a couple of weeks, and maybe a Space Force ship will pick you up. If not, we could help – if we’re still in the region. Of course, if not— The flight leader began to perspire.*

*‘Listen, tell me a little more about this Interstellar Patrol.’*

– From “The Claw and the Clock,” by Christopher Anvil (1971)

## Endnotes.

<sup>1</sup> Commentary: “White Moves First” is just a tradition in chess. In the hundreds of thousands of recorded chess games, white has a slight advantage, but that advantage would accrue to whomever moved first. I have always wondered if there was some racist undertone to ‘white moves first’ but whatever the case, no racism is intended here.

<sup>2</sup> Commentary: The article mentions both Deep Fritz and Deep Junior so it may be reasonably dated sometime after 2003. According to the Wikipedia article on Deep Junior, Boris Alterman was involved with the openings book for the program. Thus, he was part of the “GM team supporting the machine.” *Id.*

<sup>3</sup> Citation: “When you have a match between such different opponents as humans and computers, you have to look at the different strengths and weaknesses of both sides during the competition. Playing against a chess computer means facing something that doesn’t have any nerves – similar to sitting across the table from an IRS agent during a tax audit. It’s quite clear what the weaknesses of a human being are – primarily our vulnerability to outside interference. We could catch a cold, be easily distracted, and so on. Obviously, we are not in the position to calculate as deeply as the machine, but we can compensate for that. It’s less clear what the weaknesses of the machine are, but a computer specialist or a chess specialist can point them out.

At the top of any evaluation by a computer, we always see the material. It always tries to translate quality and time factors into numbers that represent the mathematical balance of material. As for the opening strategy, this is quite a dangerous part of the game now, since there is a huge amount of theory on specific openings and many lines that can be exploited further by the GM-team supporting the machine. My first principles in games against computers [is] to avoid the main lines and to accept an inferior position after the opening, hoping that outside of the theoretical routes the machine will lose its horizons and will start making positional mistakes. The negative side of such a setup is that such a strategy dramatically limits your active opportunities; nonetheless, this decision has worked perfectly well many times. Computers often overestimate their chances and make positional mistakes, giving me a serious positional advantage. For example, [Deep] Fritz may weaken its king without much hesitation, simply destroying the pawn protection of the king and not paying much attention to the king’s safety before it becomes too late.” – Grand Master Boris Alterman, “How to Beat your Chess Computer,” undated blog article.

- ✓ “California’s surreal 1960s truly began one Los Angeles morning in ‘63, when pioneering dadaist Marcel Duchamp met stark naked Eve Babitz. Duchamp had by then semiretired from art to play chess. Babitz was just beginning her career as a cultural provocateur.” – Eve Babitz [Editor’s Introduction], “The Chess Player Stripped Bare,” *Esquire Classic* (free article), April 1, 2018.
  - The resulting image, which has been copied hundreds of times by others, is a classic of chess distraction. There is also the ‘chess and cleavage’ dress code debate at chess tournaments, which many feel is *sexist and unnecessary*: Would a woman who has no cleavage issue be banned from playing in a chess tournament because she is very pretty? Should she cover her face?

<sup>4</sup> Citation: “Football’s an amazing sport to watch from the comfort of your own home or bar stool. Football’s a lot less fun to watch in person because of the high risk that you’ll encounter fans like the ones at Heinz Field who started a stumbling, sloppy fight just a few rows back from the field on Sunday night. It’s moronic, pointless aggression caught on a cell phone, which makes it the perfect metaphor for America in 2018. ... This is like an internet comment section come to life. What’s got these fools so riled up? Who cares? These gents don’t exactly look like they’re discussing, say, climate change policy or the opioid crisis, topics worthy of real full-throated passion.... There’s an actual play going on in the background! Which is, of course, the best time to start an idiotic flopping-fists semi-riot. ... You know these types of people, even if you’re not physically brawling with them: the get-in-your-face guy, the cheap-shot artist, the clamoring crowd, all that free-floating rage just looking for a target. Let’s break down our cast of characters [note, he references player names on the backs of jerseys worn by fans in the video]:

- ✓ **Hoodie Headbutter**: Just about the only person in the frame not wearing a team jersey. H.H. reps the team, son, not just one player. He also apparently favors ridiculous, premeditated (see: removing his lid) overreaction over reasoned discussion. [note, the fight started when this guy headbutted the next guy]
- ✓ **Not-Troy Polamalu**: He brought a plastic spoon to a gunfight. Totally unprepared for the savagery that comes his way, he’s knocked to the concrete before he’s even ready. He gets back up and wades back into the fight – an achievement in foolish determination – only to take a right to the face and drop again. And then, indignity of indignities, he’s the one getting blamed for the brawl! A reminder: in-stadium fights, as in internet fights, there are no winners.
- ✓ **Not-Antonio Brown**: Not-Polamalu’s apparent companion, her first instinct is to go right at H.H. rather than check on N-P. It’s always all about keeping the fight going.
- ✓ **Not-Casey Hampton, Not-Maurkice Pouncey, Not-Lawrence Timmons**: The Greek chorus here, trying and largely failing to restrain H.H. Lots of volume, very little actual effect. These guys are every clown who adds a ‘what about’ comment or injects political subtext into every single conversation. These guys may in fact be you....

So you know who’s the real hero in this whole absurd mess? Look a few rows down and to the right. At the 41-second mark, you can see a cat in another Pouncey jersey with a gray hoodie underneath. He takes a look up at the fight, sees the idiocy unfolding, and turns back to what’s really important here: the game. He probably spent a lot of money for those seats, and he’s not going to let a horde of brawling dimwits spoil it for him. That’s the role model we ought to emulate. Pretty much everyone else here is a total embarrassment. America in 2018, everybody!” – Jay Bushee, “How a Pittsburgh Steelers fan fight explains America,” *Yahoo Sports*, December 3, 2018.

- ✓ [Note, at about the one minute mark in the video, a Pittsburgh City Police officer arrives and the fight stops. If you think that officer’s salary isn’t a miniscule part of the high ticket price, I have a bridge in San Francisco that I’d like to sell you.]
- ✓ Personal Experience: I won the first World Championship of the World of Kaomaris (WOK) PBEM back around 1999. The game hosted the top ten players and I was a new player with a couple of WOK games’ worth experience, but was invited in because three of the top ten were unable to participate; so the last three spots were made invitational. I played the Championship game in a way that was opposite of what was expected (i.e. devised a different strategy), of what was the norm in the WOK community. This was noted on the forums during the six months the game ran, I was criticized, unflattering comments were directed at me for how I was playing the Championship game because I wasn’t going along with the way everyone else was playing the game. As the end approached, and I won, a great hostility grew on the forums, my victory was demeaned as being somehow improper (it was a game program, I didn’t violate any rules) or that I had not really won the Championship Game because of this or that ... In the end, being 20 years younger than I am now, I was left feeling not like a victor, but like a creep who did something wrong, my victory was

taken away by the ‘yeah but’ snipers or ‘what about’ rabble rousers. This is the only time I was ever champion of anything – no matter how meaningless and trivial it may seem (an international community of about 50 players) – and thus it remains in my memory, but the guttersniping is the primary memory.

<sup>5</sup> Commentary & Citation: Amazon is notorious for using automations or bots to control its listings while it equally notoriously fails to keep out counterfeit sellers from China, dishonest sellers, and many other problems. They suffer a commercial version of the Scunthorpe Problem, *but should do better*. For example, I received the following notification email from Amazon on March 8, 2019 (well over a year after I stopped selling): “We are writing to let you know that the following detail pages have been removed from our catalog: ASIN: 1601252420, SKU: 13-YCWD-G9K0, Title: ‘GameMastery Campaign Coins: Gold (10,50,100)’ This product has been identified as a nonmonetized or monetized bullion, or a gold, silver, palladium, platinum, or bronze coin. Amazon prohibits the listing and sale of these products, except monetized bullion, which is allowed in the Collectible Coins section of Amazon.”

Basically, the morons at Amazon (Amazon workers pride themselves on being called Amabots) used a program to find all listings with ‘gold’ and ‘coin’ in them and then delisted all those that were not in the “collectible coins” category. In fact, the item they delisted refers to a toy coin for role-playing games, that has not a trace of actual gold in it; they were heavy I recall, but they were not gold. The iAmamorons assume that because their program identified that it has ‘gold’ and ‘coin’ in the description, it must be bullion? Rather than having a *human* check before sending out mass emails to sellers? If I were still selling on Amazon, I might spend a week arguing with iAmamorons in seller support, or I might not because I have not had these in inventory for many years. Another example:

- ✓ A couple of years ago, I received a similar notification of removal email for a WWII military miniatures set I was selling. The morons at Amazon had used a bot to search all the listings in toys & games for “rifle” and delisted every entry it found (like Google in 2018). Their intent apparently was aimed at toy guns being sold on Amazon (and why is that a problem exactly that requires all that effort to fix?), but they only use sledgehammers to crack walnuts at Amazon and thus, because the listing included “riflemen” (as in miniature riflemen, metal or plastic WWII soldier figures), the catalog listing (which I did not even create) was delisted. It took a week of aggravation and emails to Amazon before their “legal department” (imagine needing a lawyer to figure out that a listing for WWII miniature soldiers doesn’t have anything to do with toy guns being sold on Amazon) cleared the item to be relisted. Amazon makes marginal profits each year, why do they pay their “legal department” every time we have to go around their Amabot nonsense?
- ✓ This is but a couple of the dozen or so instances where I was victimized as a seller by the Amabot stupidity of Amazon; other instances included being delisted and accused of trademark violations or disputes that were factually wrong or that I had nothing at all to do with because no one at Amazon (that is, the people who push the actual buttons) understands a bit about trademarks but they are scared out of their shoes of litigation (isn’t that a nice contradiction) but are not scared of victimizing dozens of innocent sellers because sellers on Amazon are ignorant, disorganized and plentiful and there will always be more due to Amazon’s success as a platform. Everyone who sells on Amazon knows what are the problems (including using foreign call centers for customer support who use templates to solve problems instead of thinking and understanding), but Amazon either does not know how to solve the problems, or refuses to implement effective solutions due to costs and inability to admit (*ever*) that they are wrong and clueless.
- ✓ On April 8, 2019, I received the following email (in part) from Amazon: “As part of our ongoing efforts to protect our customers and enhance the customer experience, we are updating the requirements to offer products that qualify as pesticides or pesticide devices. Pesticides and pesticide devices include a broad set of products, and it can be hard to identify which products qualify and why. You are offering, or have previously offered, products that are affected ... To continue your current offers on affected products after June 7, 2019, you will need to complete a brief online training and pass the associated test. You will not be able to create new offers on any affected products until you receive approval. You are required to take the training and pass the test only once, even if you have offers on multiple products. This training will help you understand your obligations under EPA regulations as a seller of pesticides and pesticide devices.”
  - I have never sold pesticides, I sold games. The item in question from my inventory was a Q-workshop Spider Web dice bag in linen. Apparently, that is “a pesticide or pesticide device” by Amazon’s standards because it has the word ‘spider’ in the title. It is not hard to see why these guys are incompetent and ineffective at resolving issues that *actually matter*, like preventing counterfeit sellers and scam artists. I wonder if Amazon employees must undergo this online training and pass the associated test to handle linen dice bags with the image of a spider web on them?

*“The Nile was always there. Long before Cairo, long before the tombs of kings... it was the reason for everything. It’s a little hard to grasp how far this river’s been flowing. This is the rain that fell on Abyssinia. These are the waters drained from central African lakes... that have flowed 4,000 miles to make Egypt green. The Nile has its memories. The story of Khartoum is a recent one... less than a century old. That’s yesterday in this part of the world. But however far back you may go... all the Nile’s recollections have several things in common. There’s always God, for instance. Or, if you prefer, the gods.*

*It seems to have been quite impossible... to live beside this river... and not to have visions of eternity. And there’s always mystery. You never quite know. You wind up with a few questions that no one can answer. One more thing. Why is it that everything was always so big... oversized, larger-than-life? Vanity? Perhaps. Or visions. Vanity was always mixed up with vision. And that’s part of this story, too. But it’s the Nile that remains the original fact. The Nile and, of course, the desert. Move up, up the Nile. Leave Egypt behind and the green land. Enter the Sudan. A million square miles of desert and scrub.”*

– Opening Narration to the film Khartoum (1966)

*“We are like butterflies who flutter for a day and think it is forever.”*

– Carl Sagan, Cosmos

**Scale Creep:** One of the important intellectual struggles of the last three centuries has been against human spatial and time scale.<sup>1</sup> Based on human living experience, a century seems like a long time and a mile or kilometer a long way, especially to the mind of a child learning history.<sup>2</sup> The universe and just about everything outside of humanity, is immensely old and vast, murky creation myths and stories of the gods, celestial spheres and faraway heavens have been replaced now with mind-numbing numbers of distance in light years, but it’s all still the same really.

- ✓ “Yu Huan (the author) observes: It is commonly believed that a fish living in a little stream does not know the size of the Qiang (Yangtze River) and the sea. The mayfly, for that matter, does not know of the changing of the four seasons. Why is this so? Because one lives in a small place, and the other’s life is short.” – from the Weilue 魏略 by Yu Huan 魚豢, Section 30, translated by John E. Hill, September 2004, from University of Washington website.

Rarely does television or movie science-fiction go beyond human time scale and spatial scale is distorted by FTL travel; Darwin’s Origin of Species came as a shock, in part, because the scale of time required was much more than the commonly accepted age of the Earth – approximately 5,000 years since Creation (from the Masoretic Text) – as calculated by biblical scholars.

A century or two earlier, Europe had been somewhat troubled to learn that the Chinese had continuous historical records reaching back at least 6,000 years and the Chinese had no record of any worldwide biblical Deluge (the actual historical deluge was a Sumarian flood about 2900 B.C.).

- ✓ “For many the most disturbing immediate problem posed by the discovery of China was its impact on the historical veracity of the Bible. According to the calculations of

the Jesuit scholar Martini, the Celestial Empire had been founded 660 years before the accepted date of the biblical deluge. However, Chinese annals contained no reference to the Flood. Could it therefore have been merely a local episode, important only to Jews and their immediate neighbors? Some scholars estimated that East Asian civilizations were flourishing even before the accepted date of Adam's Fall. Was it possible then that Adam was the ancestor of the Jews alone, and not of humanity at large? China past and present either was calling to question the universal character of Christianity, or else it was placing doubt on the accuracy of biblical chronology." – Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648 to 1789 (2<sup>nd</sup> Ed., 1992), p. 169.

Most other ancient religions – Egyptians, Romans, Greeks, Chinese, Hindus – had placed the creation of the world much older (39,000 years was common) or even unknowable (Latin: *ádelon*). Geologist had, more than a century earlier (Leclerc in 1749, claimed the Earth was 75,000 years old), suspected the Earth to be hundreds of thousands of years old.

✓ Information taken from Wikipedia articles, "Dating Creation" and "History of Geology," October 4, 2017.<sup>3</sup>

➤ Military Miniatures: 'Scale Creep' is a phenomenon in the military miniatures hobby. Miniatures are measured in millimeter scales, that is, 10mm, 25mm, 28mm miniatures, where the standard for the scale is supposed to be the normal human height. So, for example, in 28mm miniatures, human figures should stand 28mm in that scale, and everything else – monsters, cars, buildings, ranges on the tabletop, are set to that scale. But the problem has always been where to measure; originally, 28mm was from the base to the top of the hat, but not all hats are made equally, a Napoleonic shako is different than a revolutionary tri-corner. Because of hats and helmets, some began to measure from the base to the eyebrows, ignoring the head under the hat, helmet, thus warping the scale.

Much of the industry has tossed scale casually out the window, creating discontinuity between models in their own systems and disconnecting miniatures scale from tabletop range scale (e.g., Axis & Allies War at Sea game). The hobby also discovered that larger miniatures allow better detailing and that larger miniatures demand better details, so there has been this long-running dispute in the industry between miniatures scale traditionalists and artists, but the overall trend has been a creep toward larger and larger miniatures.

✓ In some very strained sense, **both** military miniatures and pinball/video game scale creep is not dissimilar to human scale creep of the last several centuries, as our understanding of details has expanded, so has our sense of scale, or our expanding sense of scale has demanded minute details.

➤ Pinball Phenomenon: Military miniatures are not alone in this, before scale creep crept into military miniatures, it was already in process in inflation of pinball machine scoring. And pinball machine scoring simply carried over into arcade video games.

✓ "Pinball machine scores are just like personal finance in that it's just one person against the system trying to maximize a score. As a result, people are going to do whatever they can to get higher and higher scores. For finance, it's to feel more comfortable. For pinball, it is to make the people feel like their game has been a success.

...

What on earth do those extra zeroes do? Getting a billion points doesn't mean much anymore if all of the other machines give you a billion points. Just like in the financial world, multiplying your income (and costs of living) by 10 doesn't make you any richer than your neighbors or better off." – Andrew (acgoldis.blogspot.com), "Inflation of pinball machine scores," April 25, 2007.

Production of RPs and costs in GGDM (the 'finances' of GGDM) are expressed in simple numbers, if you have 100 RPs in the Treasury to start the Regular Turn, you feel rich. To make the game seem more 'realistic' to some, several zeros could be appended to the end of RP production and cost in GGDM so that a ship that costs 24 RPs will cost 24 MRPs (Mega RPs, 24,000,000 RPs). I frequented arcades in the early 80s and sometime around 1990 or so, I became aware of the pinball scoring phenomenon; I specifically rejected the idea in early GGDM design. A RP in GGDM is like a koku or gold piece to a peasant farmer.

- ✓ "Some games are simply more generous with their scoring systems than others. Some games will give you 10 points for an action that would earn you 100 points in another. Zeros are particularly easy to append to scores, and many games (especially old ones) do exactly that: display extra trailing zeroes that are never counted internally. Yet in the end, the extra powers of 10 are meaningless and serve only to make one's performance look that much more impressive. ...

One reason these inflated point counts happen is due to a handful of natural human biases. We like big numbers, yet are also somewhat bad at them, especially in comparison on the fly. 10 is more than 1. 10,000 is basically the same as 1,000 (as far as a ratio goes), but it seems like a lot more at first glance. Even when we start to break it down, we can trigger various human faults over how much we're getting and how much there is actually. It's very likely that early pinball designers inflated scores purely for the ability to state that you can earn more points than a competitor's and thus players of said machine were better despite, as this trope points out, it being an arbitrary distinction. Of course, once we start doing this sort of inflation, we also tend to move our internal definition of 'average'; a pinball machine that gave you scores in the 10s would, at first glance, look and feel much less impressive without some sort of context to justify it." – TVTropes.com article, "Pinball Scoring."

When I first heard of the phenomenon in the 1990s, it was called the Pinball Effect or Pinball Machine Effect, and referred specifically to inflation of pinball machine scoring. In 2019, however, on Google, 'Pinball Effect' now refers to a 2006 book of the same name by James Burke, which refers to the emergent nature of human knowledge and advancement, e.g., "The pinball effect is a metaphor of the seemingly random routes a pinball traces." *Id.* To which is then added a connection to human advancement, "Human knowledge will unadvertedly unleash unexpected consequences: new inventions or discoveries now possible because someone shared an idea." *Id.* Back to the subject:

- ✓ "Scoring is quite unique in pinball; the game is notorious for being generous with 'points,' a unit of measurement analogous to the haypenny, the microsecond, and the nanometer – they are all units of measurement that are too utterly small to be of any use whatsoever. Therefore, scoring in pinball is primarily expressed in 'kilopoints' and 'megapoints,' one thousand and one million points respectively, abbreviated 'K' and 'M.'

For being sober enough to launch the ball correctly, you are typically awarded something on the order of one million (1M) points. You gain around two thousand (2K) points whenever the ball bonks into a bumper, even though it undoubtedly did so through no fault of your own. Falling in a sinkhole can award you anywhere from 100K to 10M points and doing so repetitively can earn you enough points so that, if each point were worth a nickel, you could purchase a major world power such as Japan or Russia or Microsoft. Some pinball tables award you, as a consolation prize, 50K for losing the ball via a drop lane as opposed to between your flippers. This is a nice gesture, but 50K, in a typical pinball game, is equivalent to one point in bowling, three points in bridge, or ‘first date’ in tennis. Basically it’s like treating Michael Eisner to a dinner at Wendy’s.” – Samuel Stoddard, “Lights & Noises,” rinkworks.com, 1995-1999.

Random reward is at the heart of pinball machine scoring. GGDM may contain some elements of ‘random reward’ in terms of exploration luck and Concierge Interventions, but is not primarily – and should never be – a mindless exercise in random reward.

---

*“‘What is off-putting about them,’ one political veteran told me, ‘is they do not grasp their essential irrelevance. They think they are special.’”*

– Sarah Ellison, “Exiles on Pennsylvania Avenue: How Jared and Ivanka Were Repelled by Washington’s Elite,” Vanity Fair Magazine, August 27, 2017

---

**Buzzing Lightyears:** Does this remind you of the members of any species you spoke to today? I can imagine in the Galactic Salon aliens saying the same about humans.<sup>4</sup>

Call this GGDM setting 101 (see page number). There is no correlation between a ‘turn’ or ‘Turn Cycle’ and ‘actual’ or ‘real’ time elapsed in the game universe. That is, a turn may represent a century, a decade, or a year, or months. Some Regular Turns (or even Combat Rounds) may not represent the same amount of time as others; it is entirely possible that a turn filled with crucial events may represent a year or two, and the following Regular Turn, the aftermath, may represent the following decade or century of peace or chaos. Thus, a Regular Turn (and/or Combat Round) represents whatever amount of real time is required for some task, process or event(s) to happen, run their course, and/or complete that is important to the game. The only ‘real’ measure of time in the game are Regular Turns and Turn Cycles.

- ✓ For example, the only measure of time in baseball is outs (and in the modern game, pitch counts). Each team has 27 outs. Minutes and hours don’t matter in baseball, except to the fans, advertisers, broadcasters and anyone who hasn’t eaten dinner yet, ate too many hot dogs, has stiff old knees, or needs a restroom break. Likewise in this game, the only time that matters is Regular Turns (and Combat Rounds).
- ✓ A **Turn Cycle** is defined as the game period from a position’s Regular Turn to its next Regular Turn, during which all other positions will have an opportunity to process a Regular Turn during their set time period (see The Law of Periods, 2 The Streams of Time, p. 84, *supra*). Turn Cycles are thus relative to positions.

Likewise, there is no actual distance assigned to the physical distances between stars in Galactic Space.

- ✓ For example, the game imagines that the Starlog represents a small cluster of ‘close’ (if you are not walking...) stars among the hundreds of millions of stars in the galaxy. Alternatively participants could imagine that the Starlog instead represents the stars of an entire ‘dark matter galaxy,’ such as Dragonfly 44, where dark matter forms 99.9% of the mass of the galaxy with only a few (as in tens of thousands) scattered lighted stars burning distantly from each other. The playing area could also be located in a globular cluster (or dwarf galaxy) looking down on the galactic plane.

The only measure of ‘distance’ in the game is the difference between coordinate locations in Galactic Space, and ship speed is measured solely in the turns required to transverse between them.

- A Story Without Characters: Unless Regular Turns represent short periods of time, or the players’ species are extremely long-lived, the story told in a GGDM game is a story without literary characters.<sup>5</sup> Little is known about individual Huns until they reached the Roman Empire, for example. Therefore, players should refrain from developing literary characters in their News Events and other communications. GGDM plays on a scale similar to Mike Resnick’s Birthright: The Book of Man (1982), which tells the story, in an anthology of short stories, of the rise and fall of human interstellar civilization over the period of 18,000 years.<sup>6</sup>
  - ✓ Instead, the position, the collective consciousness of a group of players,<sup>7</sup> acts – especially through Type 4 Fundamental Realities – as a vaguely immortal archetype character of their species in all the usual ways – by speech and action in the game.

Although a game of GGDM will more likely resemble a big-screen space-opera movie than anything else, the entire lives of the characters in Star Trek might represent less than a Regular Turn; the first three Alien franchise movies might represent a ‘short’ turn of GGDM.

- A Story That Goes the Distance: The Concierge can assign actual distances to any objects in the game if necessary for the story, such as if certain pregame distant astronomical events became visible during the game.
  - ✓ For example, the unusual and previously unseen dimming of KIC 8462852 (later dubbed Tabby’s Star during the Kickstarter Project, but formally called Boyajian’s Star), located 1,480 light years from Earth, observed in 2015, occurred in about 535 CE, about 55 years after the death of the last Roman Emperor (about which very few people cared at the time or even now). In space we study old news.

Distance is also a matter of human scale (*ut supra*) that we have struggled to overcome. This is no small matter; Napoleon had apparently little idea of the distances involved in his elaborate scheme to have Admiral Villeneuve elude the British ships in the Mediterranean, sail to the Caribbean, attack shipping there, and then hurry back to the English Channel ports to support the crossing of the French Army to invade England in 1805 (see Creaky Communications, 1 The Streams of Time, p. 78, *supra*). A century and a half later, Hitler, like Napoleon who also invaded Russia, seemed to have little vision or grasp of the distances inside Russia.<sup>8</sup>

- A Story in Unreal Time Scale: It is not likely, however much time the participants think a Regular Turn represents, that the game will ever actually witness a super nova, natural formation of a black hole, or the birth of new stars. Even if the participants think that a turn represents centuries, or a millennia, the entire game would not even be a ‘second’ in the cosmic scale where the lives of stars are measured in billions of years (e.g., Carl Sagan’s cosmic calendar, *Cosmos*, Ep. 1), such that our sun is but a third generation star since the Big Bang.

- ✓ “After the establishment of the Roman Republic, years began to be dated by consulships and control over intercalation was granted to the pontifices, who eventually abused their power by lengthening years controlled by their political allies and shortening the years in their rivals’ terms of office. Having won his war with Pompey, Caesar used his position as Rome’s chief pontiff to enact a calendar reform in 46 BC, coincidentally making the year of his third consulship last for 446 days.

In order to avoid interfering with Rome’s religious ceremonies, the reform added all its days towards the ends of months and did not adjust any nones or ides, even in months which came to have 31 days. The Julian calendar was supposed to have a single leap day on 24 February (a doubled VI Kal. Mart.) every fourth year but following Caesar’s assassination the priests figured this using inclusive counting and mistakenly added the bissextile day every three years. In order to bring the calendar back to its proper place, Augustus was obliged to suspend intercalation for one or two decades. The revised calendar remaining slightly longer than the solar year, the date of Easter shifted far enough away from the vernal equinox that Pope Gregory XIII ordered its adjustment in the 16<sup>th</sup> century.” – from Wikipedia article, “Roman calendar,” April 17, 2019.

- ✓ “The Pontifices were in charge of the Roman calendar and determined when intercalary months needed to be added to synchronize the calendar to the seasons. Since the Pontifices were often politicians, and because a Roman magistrate’s term of office corresponded with a calendar year, this power was prone to abuse: a Pontifex could lengthen a year in which he or one of his political allies was in office, or refuse to lengthen one in which his opponents were in power. This caused the calendar to become out of step with the seasons; for example, Caesar’s crossing of the Rubicon in January 49 BCE actually took place in mid-autumn.” – from Wikipedia article, “Pontifex maximus,” April 17, 2019.

The Concierge in GGDM is *Pontifex Maximus*. Given the choice, the Pontifex Maximus chose political convenience over astronomy. Not much has changed there.

- ✓ Even science-fiction, in order to remain relevant to humans as literature, rarely violates human time scale in telling a story, or does so very carefully. I suspect that the preceding concept will be most difficult for the participants, who will naturally refer to time in the scales that they know; most games will more likely resemble Star Wars, Battlestar Galactica, Babylon 5, or Aliens than Dune or any of the various science fiction short stories that have truly epochal time scales, e.g., R.A. Lafferty, “Been a Long Long Time” (1969) or Isaac Asimov’s Robots-Empire-Foundation continuum. Probably the Concierge should not enforce this issue too much.

---

*“I would love to believe that when I die I will live again, that some thinking, feeling, remembering part of me will continue. But as much as I want to believe that, and despite the ancient and worldwide cultural traditions that assert an afterlife, I know of nothing to suggest that it is more than wishful thinking.”*

– Carl Sagan, [Billions and Billions: Thoughts on Life and Death at the Brink of the Millennium](#) (1997)

---

**The Why Not of the Afterlife:** The main question of the afterlife that must be answered for us to continue is, if there is no afterlife, what does it matter what I do on Earth, during my lifetime?

The answer to this form of the Why Not question (see 2 Disruption, p. 269, *infra*) will be discovered in the same way that a child discovers the answer to the question: If I am not going to get into trouble for doing something wrong (mom and dad aren't here), what does it matter if I do whatever I want to do? As we well know, there is a significant portion of the population who grow into adulthood without answering that question.

- ✓ Imagine that we found out that only two of the three were present in the afterlife? What would you choose if you could? Thought and feeling, but no memory? Thought and memory without feeling? Or would you spend eternity in memories and feeling with no thought? Ghost lore rarely credits their apparitions with all three, mostly ghost stories focus on memory and feeling in the afterlife; rarely are ghosts given thought.
- ✓ What if human technology evolved where we could create our own 'afterlife' to replace the imaginary one created by our ancestors? Science-fiction authors have toyed with the idea, usually without stating directly so as to not offend certain parts of the audience. For example, stories where someone's consciousness is preserved in a computer core, or transferred to a new younger body (e.g., Dr. Who's regeneration or the Cylons Resurrection Ship in *Battlestar Galactica* or the Doctor Who Missy story arc ending in "Death in Heaven" (2014)). But in most cases in science-fiction stories present it as an accidental human occurrence or as vastly superior alien technology; that is, rarely has it been explored as an intentional human-crafted technology and that sociopolitical considerations, for example, wealth disparity, economics, race, ethnicity or political connections may determine in who gets an 'afterlife' (e.g., the movie *Elysium* (2013) did not feature afterlife, but did feature huge wealth disparity in healthcare). Would this require a new class of priests or judges to determine who gets in? Would criminals be denied entry, or given entry just for the purpose of serving out multiple life sentences, before being extinguished?

**The Mahjongg Metaphor – A tribute to Sandy the Storm Kitten:** After thousands of years of talking about it, we don't know anything more about death than our ancient ancestors. Not really. We don't know if death is the end of the 'stream of time' for that entity, or even whether conception is the beginning of the 'stream of time' of a being.

Ultimately, it is not the playing off of pieces that we object to, as all pieces must be played off in order to solve the problem; rather, it is the order or manner in which the pieces are played off that matters to the players in ultimately solving the problem. So it is with death as well, we all die, everything dies, everything turns to dust, and we know it well, both abstractly and eventually personally; the question is, what is accomplished with each death, whether it is meaningful and revealing, or whether it is careless and senseless in the larger picture; meaningless, and whether there is, in fact, a larger puzzle at all and whether we are solving it.

---

*“For me, it is far better to grasp the Universe as it really is than to persist in delusion, however satisfying and reassuring.”*

– Carl Sagan, [The Demon Haunted World: Science as a Candle in the Dark](#)<sup>9</sup>

---

## Endnotes.

<sup>1</sup> Citation & Commentary: How much water do you think is required for 1 inch of rain over a square mile area? According to the U.S. Geological Survey, one inch of rain over a square mile area requires 17.38 million gallons of water! Seventy percent of the water evaporates quickly back into the air. The flooding problem in urban areas is caused when the other 30% runs into streams quickly because it is prevented by concrete, roads and buildings from being absorbed into the ground properly (<http://water.usgs.gov/edu/earthrain.html>).

- ✓ For a simple experience in scale, play computer FreeCell until you are very good at it, then play double deck FreeCell, then go back to playing regular FreeCell. You will discover they are different games.

<sup>2</sup> Commentary: One day when I was 10 or 11 years old, I asked my mother's BFF how old she was. She replied that she was 34 years old. I remember that my immediate verbal response was, "Wow, that's old!" as it was instantly obvious that she was 3 times my age. My mother's jaw hit the floor and I was quickly scolded out of the room. I also remember in my 6<sup>th</sup> grade year, when we were very cold, I actually thought and said out loud to my mother that a new Ice Age was beginning; I had not understood conceptually the time scales of the last Ice Age.

<sup>3</sup> Commentary: How old am I the little girl asked? Well, let's see, let's go back. Before the internet? Before Space Invaders? Before handheld electronic calculators, I had one of the original Texas Instruments and also one of the first electronic watches, with the red display, you had to push a tiny button on the side to see the time. Before humans colonized landed on the moon? So is this just an exercise in narcissistic curmudgeondry? No, it is a demonstration of both the limited human concept of time and what is considered modernity and the apparent acceleration of history in the 20<sup>th</sup> Century. Actually, the last two or three generations have been able to make such claims.

<sup>4</sup> Commentary: It's a funny thing that back in 1999, I was determined to keep this project to 100 pages. You are now on Page 101. Keep reading!

- ✓ If you took just a single edition of Dungeons & Dragons, let's say Advanced Dungeons & Dragons from the 1980s (with which I am most familiar) plus all of the material for just one setting (Dragonlance, Ravenloft, etc.) plus all of the Dragon Magazine articles on general AD&D play, GMing, map and dungeon building, world building, weapons and armor, variant classes, magic and deities, planes etc. and describing play in the chosen setting – how many pages would that be? I'd bet it would equal or exceed the 1,591 pages of GGDM. Not many players complained, though they joked about the weight of the AD&D books they hauled around. There is always the game rules and fantasy world setting, and there are layers of dissertations, explanations, angles, arguments, analysis, details, backstories, spin-offs. A decade or two hence, I will not be around to clarify, expound, comment on GGDM, or to defend it, thus I have sought to both educate the reader and provide tone, commentary, analysis and clarity to GGDM to my mortal limits.

<sup>5</sup> Commentary & Citation: On December 12, 2018 when Amazon Prime finally reached my cable box, I inaugurated it by watching the 2009 Star Trek movie, which believe it or not, I had never seen. I am notoriously uncritical of movies, as many of my other comments on movies reveal, I tend to accept the movie for what it is, let the escapism overtake me, unless I see something that is so idiotic or dumb that I disengage from the movie. After watching Star Trek 2009, I felt like I had watched a kids program mashed with one of those 1980s teen movies mashed with a modern big-screen action flick with special effects, explosions, and superficiality. A cocky group of teens led by a brash, self-assured teen hero/idol, who knows everything, tosses all of the rules, puts all of the educated, career adults in their place, zero to hero, and just happens to be lucky and right and destined for greatness. Everything is good because it all turned out right in the end, and the future is in good hands with the next generation who proved their superiority. Not to mention that it copped a bit from the beginning of Star Wars: The Phantom Menace.

I wasn't impressed; the story felt shallow and hurried. If some people claimed that the old Star Trek took itself too seriously (and that is obviously a term I don't even comprehend), Star Trek 2009 was the opposite. Notably, the film received good reviews – mostly for being a fast and loud space-opera franchise movie (e.g., Roger Ebert) – a comment on the long decline of Hollywood and Western audience literary intelligence and expectations (e.g., cf. Paths of Glory (1957), Billy Budd (1962) or even Blade Runner (1982) to Star Trek 2009, I cannot comprehend how IMDB has all four of these movies rated about the same, 8.4, 7.9, 8.2 and 8.0, respectively, why does an intelligent movie like Time Lapse (2014) get less favorable reviews than Star Trek 2009 across many sites? Excalibur (1981), rated 7.4 on IMDB is a far better (and more adult) movie than Star Trek 2009).

- ✓ I have seen many lower-budget and even crowd-funded movies recently that were far better movies than Star Trek 2009; e.g., I would recommend watching *Anti Matter* (2017), *Magellan* (2017), and *5th Passenger* (2018). The sci-fi short, “FTL” on YouTube is far better than Star Trek 2009.
- ✓ Star Trek 2009 fits perfectly in every aspect Norman Spinrad’s description of the wank fantasy, pulp science fiction formula “The Emperor of Everything” plot (*Science Fiction in the Real World*, 1990, pp. 150-151), except that it does it in the worse possible way with a big screen budget. Compare Star Trek 2009 to Frank Herbert’s *Dune* (1965) or John Campbell’s *The Hero with a Thousand Faces* (1949) which Spinrad notes as literary works worthy of acclaim that use the same “Emperor of Everything” formula (*Id.* p. 151). Although the players in GGDM have godlike control over nascent interstellar civilizations, GGDM is not an “Emperor of Everything” game – for one thing, there are no characters and no hot interstellar Princess to win – and should not be played like a pulp wank fantasy written by “armies of hacks” who “pile up mile-high mountains of adolescent power fantasies.” *Id.*
  - See full Norman Spinrad quote, 3 Constructural Elements, p. 205, *infra*.

<sup>6</sup> Commentary: As an aside, when I read *Birthright* as a young teenager, I really didn’t see the main point of the book as being a reverse of the alien-invasion sci-fi trope (which I learned from reading reviews later); rather, what I remembered most and took from the book, at the age of 14, was the 18,000 year history arc, ending in extinction of humanity. I believe this was about the same time I read Brian Aldiss’ *Galactic Empires* anthologies.

<sup>7</sup> Citation & Commentary: In the story “Next Orbit” (story & art by Jean Bello), a master artist from the feelings section of the ship is called to the captain’s cavern to witness the ship’s approach to another star after a long journey. There, with the godlike presence of the captain, he witnesses with excitement and astonishment, other “planet ships” (i.e. bugs) flying around a lightbulb suspended from the ceiling. *Epic Illustrated*, Vol. 1, No. 6, June 1981.

<sup>8</sup> Commentary: Consider that if a similar war were fought in the United States, the frontline would run roughly from Portland, Oregon to Chicago, Illinois, a distance of about 3,400 km. If you think you have an idea of this distance, try walking across the state where you live and back again. According to one Quora forum response, the Eastern front was about 3,000 km long, though it is difficult to measure because it fluctuated much. The front stretched approximately from the Baltic Sea to the Caspian Sea, which according to Google, is about 1,200 miles.

- ✓ “The war on the Eastern Front, known to Russians as the ‘Great Patriotic War,’ was the scene of the largest military confrontation in history. Over the course of four years, more than 400 Red Army and German divisions clashed in a series of operations along a front that extended more than 1,000 miles.” – Alan Taylor, “World War II: The Eastern Front,” *The Atlantic*, September 18, 2011 (available free online).
- ✓ “According to Time magazine: ‘By measure of manpower, duration, territorial reach and casualties, the Eastern Front was as much as four times the scale of the conflict on the Western Front that opened with the Normandy invasion.’ Conversely, General George Marshall, the U.S. Army Chief of Staff, calculated that without the Eastern Front, the United States would have had to double the number of its soldiers on the Western Front.” – from Wikipedia article, “Eastern Front,” captured June 11, 2019.

<sup>9</sup> Commentary: I am nothing. I am but a transient bit who circles in the back current of our time. Eventually, I will die. The world won’t rejoice even, because it doesn’t matter and no one will notice. Death is the last refuge of the world in everything; tyrants die, our beloved dies, the wretched and criminals die, pets die, we all die, turn to dust. We are all part of some future generation’s history, to be memorized and forgotten by bored school kids, our words to be recited by children until they become meaningless rote. All are equal in death. The world moves on, always with the hope and refuge in the thought that certain unpopular people will die eventually.

- ✓ If you think that there are not people who rejoice at the death of others and imagine that they are now in a place receiving whatever punishment is thought proper and fitting, raise your hand. Then go read some of the articles about the death of Fred Phelps (another transient bit circling in the backwater of some forgotten time).

**Excerpt from The Russian Cosmists: The Esoteric Futurism of Nikolai Fedorov and His Followers, pp. 18-20 <sup>1</sup>**

By George M. Young, Oxford University Press, 2012

On the positive side of his thought, more consonant with later Cosmism, [Aleksandr Vasilyevich] Sukhovo-Kobylin posits three stages in the development of humanity: telluric, or earthbound man, confined to the planet we inhabit, solar man inhabiting our solar system; and sidereal man, inhabiting all worlds throughout the entire universe. Only the third, sidereal stage of humanity brings the absolute freedom that is the goal and perfection of all human movement and development. Human evolution operates between two extremes: from the lowest, herd-like, bestial state to the human angels fit to inhabit the infinite City of God: “From the horde or ‘mob of savages,’ from the human herd begins that sociological series of steps, i.e., the advance of human society, that advance which is the process of the spiritualization of mankind, and only in infinity does that spiritualization reach its conclusion in the supreme reality of divine reason, i.e. in the Kingdom of God, the *Civitas Dei*.”

Important steps in the process of turning ourselves from human animals into human angels include becoming vegetarians, developing lighter and smaller rather than more massive bodies, and gradually acquiring the ability to fly. And flight for Sukhovo-Kobylin does not mean merely the invention of flying machines but the growth of wings and attainment of birdlike, insectlike skill of aerial self-propulsion. He writes, “The entire theory of humanity and its infinite development, i.e., the philosophy of the history of mankind, is the process of freedom from spatial constraint, in other words, its passing to spirit; the result of spiritualization (or subjectivization) is perfection, pointedness [tocheschnost]. The history of spiritualization is the history of self-propulsion, the autokinesis of mankind.” The steam locomotive and the bicycle were, in his time, the most advanced mechanical expressions of the human wish to fly. The bicycle, especially, represented “horizontal flight.”

\*\*\*

Given the many millions of stars that recently had become visible through telescopes at this time, and given the astronomical evidence that the laws and natural processes apparent on earth were also apparent elsewhere in the universe, Sukhovo-Kobylin, writing at a time when the universe still seemed a single, unified field, reasons that our planet cannot be the only one that is habitable or inhabited: “In one word, if a sphere or planet, whose chemical composition of matter is identical with the composition of other planets, finds itself under the same forces, then their [the planets’] processes will also be identical, and their origins and development will be the same. In a word, reason is one and matter is one, and therefore their products will be identical.” But in order to inhabit the entire universe, we must evolve beyond our present, earthbound state. Sukhovo-Kobylin’s unique contribution to pre-Cosmist thought is his idea that the further we evolve, the smaller our bodies should become, and that, as we approach divinity we will also approach a vanishing point of spaceless invisibility. God is invisible, and we shall also become invisible, essentially bodiless, as we approach the goal of perfect, spiritualized, universal humanity.

These pre-Cosmist thinkers then, project several of the lines that Federov, Solovyov, Bulgakov, Vernadsky, Tsiolkovsky and others will extend further. Radishchev’s keen social concern and belief that evolution cannot have ended with man in his present state finds ultimate development in Cosmist projects to reconstitute and thus save all humanity. Odoevsky’s futuristic vision of an advanced technological world culture led by Russia finds its extensions in the scientific Cosmist speculations about control over nature and the reshaping of the universe. Sukhovo-Kobylin’s thoughts about the stages of human evolution and the changes needed in the human body and spirit point toward the Cosmist concepts of the noosphere and emergence of godman.

---

<sup>1</sup> Citation: This text from the book was found on Google Books, September 27, 2018 from the second page of results for a Google search for “sidereal stage.” It is also available in electronic form through various vendors. Russian Cosmist are considered [esoteric] predecessors to the Transhumanism philosophies of the late 20<sup>th</sup> Century.

*“There is no point in pretending to distinguish the galactic empire story as a genre. Generally speaking, such stories form part of what is known as ‘space opera’ ... The galactic empire is sort of a crystallization of space opera ... But it is the playful aspect of the galactic empire which mainly strikes the reader. This aspect led many readers, including a lot of sf fans, to despise space opera and the galactic scene... But to dismiss it just because it is playful is not good enough.” – Brian Aldiss, Galactic Empires Vol. 2 (1978) <sup>1</sup>*

**Stage Illusions:** World War I was called “The Great War” until after World War II. Most ‘galactic empires’ in science-fiction stories mention only a handful of worlds (with familiar star names), vaguely referring to the masses of other worlds with no galactic spatial sense. Likewise, the empires in this game will likely only consist of a few dozen planets in a tiny patch on a trailing galactic arm. The United States, Russia, or China are exponentially more powerful, larger and more populous than the Roman Empire was in its heyday. Eras beyond the end of this game will regard your ‘empire’ as a tiny lost ancient kingdom and believe that Arthur Pendragon was the first Emperor of the First Galactic Empire, and Merlin was his Minister.

- ✓ On the internet, there is a top-down 2D view of the galaxy onto which Owen E. Oulton projected the entire area represented – a tiny patch – by the civilizations known in the Traveller RPG universe correlated to known actual stars. And that’s being very generous for illustration purposes. Traveller represented 220 x 200 parsecs in 2D.

Most human sidereal stages are actually performed on small soapboxes in the park. Our imagination has always outrun our actual abilities; I have often wondered at the effectiveness of the original performance of Henry V on stage at the Globe Theatre: How could the audience even begin to imagine the magnitude of the battle of Agincourt with only a handful of actors on the stage? We can see it better now on film, but that still falls far short of *the thing itself*, which is necessary to understand the situation and the decisions made by the characters. That *thing* we can only hold tenuously in our minds after study and reflection. So now we are experimenting with 3D VR films (e.g., the movie *Interstellar* on the Oculus Rift), stop-motion acting, etc.

- ✓ “...it would be nice to thicken the published universe into a 3D space.... However, the Milky Way is some 300 parsecs thick, with a stellar density of about 0.14 stars per cubic parsec in the vicinity of the Sun. At that stellar density, the 11k worlds of the Third Imperium would fit into a cube 43 parsecs on a side, which doesn’t allow for nearly the communications lag we find in the published universe (which measures about 220×200 parsecs). Retaining the published universe history while expanding into a third dimension would vastly increase the number of worlds found in a region that’s a year across by Jump-4 xboat. A 200×200×200 parsec space with 0.14 stars per cubic parsec would be 1.12 million stars.... That’s not practical, even with software.” – user steve98052, Mongoose Publishing Forums, November 19, 2013.

Faster-than-light (FTL) travel in science-fiction literature represents both empowerment and the illusion of empowerment. It is the power to go out *there*, it also represents some power over *time* (see time-dilation effect discussions in *Starship Jefferson* and *Assumptions of Light*, 1 Stardrive, pp. 780-781 and *Thumbing Our Nose at Einstein*, 1 Temporal Technology, p. 802, *infra*). It is the power to go and get resources, to escape the bounds of the Earth that have imprisoned human

history, to force ourselves upon the local universe. It is the power to make new history, to be different (or more of the same, but much more dangerous), across immensities of space. It is also illusion, because we are still tiny beings who cannot, for all of our achievements, drama and grandstanding, even with FTL technology, *grok* for a moment the empty immensity of time (or our immense emptiness) and space or do much about it.

**The Stage is Set:** The Public Space is the main playing area of the game for each position. The Public Space is composed of a continuous set of points, called Monads, forming a finite, probably irregularly-shaped plane that is generated during set up. Each position's Public Space will not be seen by or viewable by other positions.

- ✓ The ancient term “monad” has seen many uses and religious connotations throughout history; here it is used in the most basic form as a single indivisible point.
- **Standing on Spots:** Each Monad is a single distinct point of reality within the civilization's Public Space. Monads are indivisible, the most basic ‘point’ of reality. Each Monad (for game purposes) is either occupied or unoccupied, used or not used, at any specific point in time. A Monad is occupied or being ‘used’ by things placed on that Monad in the Public Space, a Monad that is currently occupied cannot be used for another placement until it is vacated. Most things placed in the Public Space will occupy a single Monad. The game also calls for ‘formations’ and ‘arrangements’ of adjacent things in the Public Space. Formations and arrangements of any sort in the Public Space are not considered ‘solid objects’; if there are open Monads within their area, arrangements and formations can overlap or interlock in the Public Space as long as each Monad is being occupied or used by only one thing at a time. Interlocking formations are defined as two formations that share a common Monad, whereas overlapping formations are those that use Monads in each other's ‘space.’<sup>2</sup>
- **The Big Actors:** It is in the nature of civilizations that Governments become the largest part of our reality; the influence of our governing authorities and systems reaches invisibly into every aspect of our civilization, our daily lives, they define our reality. Government Titles will take up more than one Monad on the Public Space; Government Titles will fill a significant amount of the Public Space for the entire game. Government Titles must be legally placed in the Public Space prior to the game. The legal placement of Government Titles is explained fully in Structural Government Titles, *et seq.*, 2 Government Titles, p. 595, *infra*.
- **Over the Edge:** Normal Galactic Space appears ‘infinite’ (or the practical equivalent) and ever expanding; what happens if or when it stops expanding is the subject of serious controversy. Of necessity, however, our reality, our Public Space, is finite and self-contained, limited by perception and need, and filled with the things that ‘matter’ at any particular time. This is not to say that it is not capable of expansion or is of a rigid form. *The ability to be both finite and self-contained, yet expandable and mutable, is a key to the Gestalt Structure of civilizations.* For game purposes, this means that the axis of the Public Space ‘wrap around,’ such that the last Monad of an axis is considered to be adjacent to the first Monad of that same axis. Thus, if the A axis of the Public Space runs from A1 to A14, A14 would be considered adjacent to A1 (this effect does not occur in the Galactic Space; x1 is not adjacent to x14). Note then, that by expansion and mutability, things that were adjacent in the Public Space may lose their adjacency. When this occurs, adjacencies will be lost.
  - ✓ Wrapping from top to bottom and side to side on a flat surface does not create a globe, it creates a donut shape. Try it with a piece of paper, bring the top and bottom

together, making a tube, then try to or imagine connecting the other two sides. Think about it the next time you are eating a donut – you are eating someone’s Public Space!

- ✓ All edges of the Public Space must meet their opposite, regardless of whether it fits or not in terms of shape, it is just assumed to happen. Due to the probable irregular shape of the Public Space, the sour cream donut (Yum!) created from wrapping the Public Space will look like one that had a bad trip from the bakery to home!
- Turnover: Only one ‘thing’ can occupy each Monad at any time, i.e. there is no ‘stacking,’ and once something is placed in the Public Space (and its relationships established), it cannot be moved except by the Concierge. Rather, the changes to Public Spaces during the game occur by ‘turnover’ as things are added and removed from the Public Space, as things come and go from the current consciousness of civilization. A successful position will be able to manage the turnover or cycling of pieces and usually have enough room in the Public Space during the game (like managing the free cells in FreeCell). Management of the Public Spaces is an important aspect of play in this game. It is possible, through Expose’ News Events, Conversion and Naturalization of **alien colonies**, advancing Technology Eras, and Reformation, to obtain additional Public Space, but it will not occur often.
- Spatial Dissonance: The arrangement and the relationship of things in the Public Spaces represents exclusively the mental structure, consciousness, cultural schema, collective cognitive schema, or epistemology of the civilization that is the Public Space. The arrangement of stars and planets in the Public Spaces bears little or no relationship at all to the actual location of those stars, planets and ships in real space (that is, the X, Y, and Z coordinates, in Galactic Space) and therefore, the Public Spaces should never be used for calculating distances in Galactic Space. Most other things placed in the Public Spaces have little or no existence in ‘real space’; to the extent that they might be deemed to have a ‘real’ existence in space, they represent collective effects of possibly widely separated people, groups, and facilities, such as research facilities on different colony planets.
- Living in Public Space: It is entirely possible for two planets, a thousand light years apart, to share adjacent Monads in the Public Space indicating that in the consciousness of the civilization, those two places are thought to be closely related, interconnected, regardless of physical or temporal distances. It is also possible, and probable, that the same stars and planets will appear on the Public Spaces of different positions at the same time, for example, if two positions have colonies on the same planet, both would have that planet on their respective Public Spaces. Having a planet or star in your Public Space also does not mean you ‘own’ the planet or star, only that you are ‘present’ there and the planet or star currently has a ‘presence’ in the consciousness of your civilization.
- Lost Places: Whenever a position no longer has a colony or a ship at a star, the star is removed from the Public Space along with any associated planet(s). Whenever a colony is captured by another position, the previous owner of the colony must remove the colony’s planet from the Public Space, which may also cause the removal of the star. The new owner must immediately place the planet and/or star of the newly captured colony on their Public Space. If there is no legal place to put a new captured colony, or planet, or star or anything from the Galactic Space that must be placed on the Public Space, non-Galactic Space pieces will be removed by the Concierge to make room as required. Objective reality trumps all.

*“So all of this leads to one major question: What good reason does Uber have for developing a God View feature in the first place?”*

– Patrick McGuire, “Uber’s ‘God View’ Was Once Available to Drivers,” *Vice* (Motherboard), November 20, 2014

**Godhead and Pinhead:** Memory from college freshman literature class, there was a literary transition around the end of the 19<sup>th</sup> century from “pinhead” to “godhead” fiction that coincided with the development of medicalized psychology (by Freud and others). In pinhead stories (e.g., Hawthorne), the reader never sees inside the character’s or narrator’s head (they are small), they never ‘see’ thoughts and feelings (you are left to deduce it), the only action is outside the characters, in the objective world (as on a stage). With the enhancement of psychological awareness, authors (I remember, for example, Guy Maupassant) began to write stories including the thoughts and feelings of characters (‘Godhead,’ bigger on the inside); the ultimate form of the story is probably Ambrose Bierce’ “An Occurrence at Owl Creek Bridge” (pub. 1890, which Kurt Vonnegut called the greatest American story) in which the entire story takes place in the narrator’s head as he is being walked out to be hanged on the bridge. The Owl Creek Bridge story relies on the objective vs. subjective passage of time, the entire fantasy takes place in perhaps a minute or less walk to the middle of the bridge, but spans days or weeks in the narrator’s mind. Godhead literature should not be confused with ‘god view’ in video gaming.

In the golden age of comics, where thought bubbles were used to reveal inner thoughts, godhead in video fiction was more common, especially in afternoon soap operas, where the camera would focus on a character’s face, and you’d hear the inner thoughts in a hollow disembodied version of the character’s normal voice without movement of the mouth, indicating the ‘voice in the head’ we all hear when thinking. The scenes also usually involved some time distortion between moments in real time, especially in a setting like a meeting, party or illegal drug transaction.

The godhead has gone out of style in movies and television shows, e.g., there were dozens of instances where we could have heard the character’s thoughts in the first season of *The Man in the High Castle*, but we never did. It has been years since I watched a new movie where the inner voice is heard; the character’s thinking is instead expressed and signaled solely in external dialogue and actions. I think cinematographers and script writers have rejected the inner voice as clunky, instead the audience relies on what they intuitively believe the characters are thinking based on what is shown in action and dialogue, and the twists, shock, and cliffhangers occur when the scriptwriter had a different thought, and the characters do something unexpected.

- ✓ The Public Space in GGDM is the ‘godhead’ model blown up to the level of civilization, it is a discussion that could have not have likely occurred a couple of centuries ago, and rests upon concepts such as the relationship of Christianity and mental health professions (see *Dream Police*, 1 *Dreamtime*, p. 132, *infra*), emotions (2 *Culture* generally, *infra*) and even the related modern concept of evil (see *Modernity Machines*, 1 *Technology*, p. 696, *infra*). All of which I would never have thought of on my own while designing GGDM; the godhead discussion in freshman lit class in college (taught by a playwright) was probably critical to the development of GGDM.
- ✓ Another striking comparison is the image in the *Andromeda* television series (2000-2005) of ships travelling through ‘slipstream’ between stars, which looks like they are navigating through a giant brain; transit time has nothing to do with actual distance,

but rather with some luck and the frequency with which ships make the same transit, e.g., like learning and neuroplasticity.

- ✓ If you search Google for “Godhead characters vs. Pinhead characters in literature” or any similar search, no relevant results are found, of course (October 16, 2019). Instead, ‘godhead’ results include religious discussions against trying to know what is in God’s head (what a ridiculous idea in any case) and ‘pinhead’ results refer to some stupid horror movie character and potential crossover movies with Michael Meyers or Freddie. Because that’s what Google and the Internet are about: the shallow, the current, the popular. So in any event, it does not appear to be a current literary fiction theory, but was useful in framing and discussing GGDM.

---

*“For example, in 2006 the anthropologist Joseph Henrich and colleagues published a study in the journal Science based on their analysis of 15 different societies ranging from American college students to urban wage workers in Ghana to semi-nomadic foragers in the Bolivian rainforest. By having each group conduct a series of economic games, the researchers found that there was a positive correlation between how much people punished cheaters and the amount of altruistic behavior in the society as a whole.*

*What’s more, every society engaged in some form of costly punishment even though there was a great deal of variability between societies. The researchers’ conclusion was that altruistic punishment emerged in our species through a process of gene-culture coevolution. In other words, human psychology is biologically predisposed to enforce a system of fairness, but how much we do so depends on the culture we see reflected around us. This result was later supported by another study in 2010 that developed a model explaining how even ‘selfish genes’ could promote altruistic traits.”*

– Eric Michael Johnson, “Human Nature and the Moral Economy,” Scientific American (blogs), September 23, 2013

---

**Losing My Religion:** There are very few ways to cheat at GGDM, and no reason for anyone to do so, the game is largely self-policing and is additionally, overseen by the Concierge. And there is no tangible or valuable prize for ‘winning’ the game (but it’s also free to play). Like the Peter Davidson Dr. Who episodes, the only prize at the end of the race is Enlightenment, and it’s not the diamond, but the choices.<sup>3</sup> Obviously, any attempt to ‘hack’ another position’s game information would be considered cheating, with the predictable result that the offending players would be shamefully ejected from the game and banned. My views on potential cheating in GGDM, which I consider a minimal risk, were formed in large part by the experiences of playing two *free* turn-based online PBEM games.

- ✓ According to an interview with the band R.E.M. who had a hit song of the same name, ‘losing my religion’ is a Southern U.S. phrase meaning to lose one’s civility.
- ✓ **Judge Dredd:** Towing is for the first offense. This is your fourth violation, bar breath. You’re a menace. (1995)
- **Darkness of Silverfall:** I played in a turn-based *free* online PBEM game called Darkness of Silverfall around the turn of the millennia. I knew of the game from the pre-internet days of the early 90s when I played (and paid \$s to play) in actual PBM (Play-by-Mail or postal) games and was thrilled to find it still being run for free on the internet by the original designer. I never paid to play Darkness of Silverfall in pre-internet days. It was *free*, did I

mention that? – and there was nothing material to win by winning the game, there was no prize, you played just because it amused you. Like postal, telephone or email chess.

In the game there was a cabal of old players who had been at it for perhaps 15 to 20 years, many were probably originals from the play-to-pay PBM days. There were problems with the game design, firstly, and the game program was, secondly, buggy. This created a ‘hidden mechanics’ of the game for those who had discovered the bugs in the program and how to exploit them in addition to having mastered the strategy of the game from a hundred plays. The cabal of old players were in every game, and they usually won. While they competed with each other, they were more like old wargaming buddies (many of them may have known each other personally as well), and as a clique, they were obnoxious and abusive, and exploitive toward new players; if you played along, you could be their little buddy, but you would not be one of them.

It shortly became clear to me that they were exploiting the program bugs, and that they were not winning because they were great players, but because they knew a group of little secrets on how to exploit the bugs in the program and the illogic of the design. In the ensuing war between an alliance of new players I formed and the old guys, *I actually discovered, used and shared yet another bug exploit that they had never found* (I discovered it accidentally because I messed up entering my orders, but I figured it out), which proved my point. So, this cabal clique of old guys continued to play the game over and over, winning nothing, but racking up victories, dominating because they knew the bugs and exploits in the program? Thus, there were really two existential ‘shelves’ in the game, the old guys who could exploit the program and the new players who could never compete with them.

- ✓ Arguably, maybe they were great players. In professional sports, owners, players, coaches exploit the rules all of the time, push the envelope. But for these guys to be condescending and obnoxious to new players due to their obvious use of bug exploits and their cabal of buddies, removes any sense of greatness, of awe, for their large tally of wins (like athletes who use HGH). One of the cabal was winning each game, new players were just filler, the only real contest was between the bug exploiters. In the end, they could never see my argument on this, never admit what they were doing was wrong, I was just a loud-mouthed new player who needed to be taught a lesson.
- Empire Forge: About a year after Darkness of Silverfall, I played in another *free* turn-based PBEM game called Empire Forge. The game was young then, a few games had been completed, there were old players with a few games experience and a lot of new players, like me, coming in, quickly filling new games. Over time, I became very involved, became one of the old players. I helped improve and finish the game design’s magic system, I set up a ringer board to track every game result, a huge FAQ page, and I wrote fiction and a mythical back-story for the game. I was very open and helpful to new players and provided the FAQ page from play experience in large part because of my experience with Darkness of Silverfall.

After a couple of years, there was a game with an unusually large group of new players, I think six or seven of the ten positions were new players, with three or four older players. Early in the game, several of the new players, without warning, gang attacked my position from different directions; they had been largely uncommunicative with the older players, so I figured, ‘well, this sucks, but apparently the new players decided I was the major threat to

win the game and decided to take me out first, maybe they all go to the same high school?’ I had played in World of Kaomaris with young players who went to high school together.

I survived the onslaught with help from a couple of older allies, but finished in third or fourth place, and the game was won by one of the new players, on his very first game! The same player was simultaneously playing in two other games that I was not in, but that some of my (cabal, clique) of older players were in as well, and he won those games too, I think he won three of the first four games he completed and placed second in another. Everyone was asking who is this guy? It was a Napoleonic achievement to come in with no experience and rapidly win three games of four against experienced players with ten players in each game!

- ✓ Then the game designer/programmer who was still running the game (he wanted me to take over running the game, but I was still having fun playing and didn’t want to create a conflict of interest), discovered the ruse. Can you see this coming...? The player was registered under several different names and was using them to fill games with sock puppets, he would act as if the positions were being independently played early in the game, then allow his big main position to conquer the sock puppet positions and win the game. The designer discovered this because he was entering all of the orders from the same IP address at the same time. We were stunned that anyone would so cheat to win a *free* game with no prizes to win, other than winning. If he won any enlightenment from this it was a hard lesson. The player was banned from the game, his wins were transferred to a Hall of Shame on the ringer board.

---

*“The warning has already been given: take your Galactic Empire with a pinch of salt. It is a gaudy balloon launched for the hell of it. See how high it goes before it pops.” – Brian Aldiss, Galactic Empires Vol. 1 (1976)*

---

## Endnotes.

<sup>1</sup> Commentary: The Sidereal Stage section was originally called “Space Opera.” I found some remaining references to the Space Opera section in the Expansion section during the final edit in June 2018. I think I renamed this section to The Sidereal Stage at latest, sometime in 2015. I did not discover Sukhovo-Kobylin’s “sidereal stage” of human evolution (or Russian Cosmism) until late 2018, but when understood, I found it rather fitting with The Sidereal Stage in GGDM and themes of GGDM as a whole. My files show that I discovered the word “noosphere” in August 2016, but did not know its origin with the Russian Cosmist until 2018. I have lost count of the number of these odd, almost precognition like coincidences that have occurred in designing GGDM, and I wonder, since I am not part of any circle of creative people, whether this is just the normal process of any creative work?

<sup>2</sup> Commentary & Citation: Definitions are an important part of GGDM and it is important to be very careful and consistent in definitions throughout the game. Meticulously careful.

- ✓ For example, on YouTube there is a Watch Mojo video counting down their top ten space stations in sci-fi movies and television. At the beginning of the video there is a short commentary on what they do not include in their criteria. In the case of space stations, they excluded anything with a propulsion system. But perhaps halfway down the list, they violate their own definition and end up with the Death Star from Star Wars as their top space station! Yoi! The only savior of the whole video was that they placed Babylon 5 in the top three and the fans who feel that Babylon 5 is underrated and underappreciated chimed in in praise.

<sup>3</sup> Commentary: The MLB Hall of Fame always seems to involve a lot of hand-wringing, finger-wagging, fist-shaking debate, analysis, and oscillation; the NFL Hall of Fame has it too, but less so. Almost nothing is heard about the NHL Hall of Fame nominations.

*See Appendix PAT4 – Power Activations Tables 4 – Power Activation Failures*

*“Because it is not true federalism. It is a perversion of federalism. Under true federalism, there are things that the federal government does and there are things that the states do. Both are to be sovereign in their own realms. That is being lost, as states are being turned into mere administrative units of the national government. The federal government currently provides nearly \$700 billion in subventions to state and local governments. Arizona state government will receive more than \$15 billion in federal funds this year, roughly 40 percent of everything the state will spend from all sources.*

*This sending money to Washington to be returned with strings attached and a carrying fee deducted is wasteful and blurs political accountability. A truly federalist approach would return regulation of the individual health insurance market to the states. And let the federal government adopt a stand-alone safety net for the chronically and seriously sick.”*

– Robert Robb, “Attacks on the GOP health care bill are nonsense, but it’s still a bad idea,” The Arizona Republic Opinion, reprinted in USA Today, September 26, 2017 <sup>1</sup>

**Relative or Zero Sum?:** Sovereignty is generally defined as ‘freedom from external control.’ To the extent that anyone is dictating to you how or when to do things, under threat of force or other punishment for non-compliance, or a moral-social obligation to comply, you are not sovereign. It is the *a priori* of sovereignty. A post, privilege or place that is assigned or given to you can be revoked; hereditary nobility or title systems seek security against this. Thus, sovereignty is a relative matter, we each surrender parts of our personal sovereignty for the benefits of civilization. But it is also a zero-sum matter, the loss of sovereignty by one is an equal gain by another.

- ✓ See sovereignty discussion top of 2 Government Titles, p. 586 *et seq.*, *infra*.

*“You should never hand someone a gun unless you are sure where they will point it. Your mistake.”*

– Commander Sinclair, Babylon 5, “By Any Means Necessary” (1994) <sup>2</sup>

**Exercise in Vital Powers:** *The primary quality of any government is its authority and ability to act.* Consider a government that has the authority to act, but not the ability. Or a government that has the ability to act but not the legitimate authority. Effective government requires both and there is no substitute.

- ✓ **Rhetorical Questions:** Which comes first, does authority create legitimacy (as in a territory held by a warlord) or does legitimacy create authority (as in eras when the Church granted legitimacy)? And which one creates the ability to act?

The various areas of authority which governments traditionally exercise over their societies are divided in this game into twelve Vital Powers or hereafter, “Powers,” which collectively, can be considered the elements of sovereignty. Each position may, each Regular Turn, activate *one Power for each currently undisrupted Government Title*. A position may have up to five Government Titles, meaning that each position could potentially activate five of the twelve Powers (40% of the possible Powers) each Regular Turn.

- ✓ Placing Acts and Scenes to activate Powers represents *potentials*, like mobilization.
- ✓ Most positions will have five Government Titles, all positions must have three Government Titles. Experienced players will discover that there are some advantages to having less than five Government Titles, but that is for a later time.

Activating a Power allows the position to issue Regular Turn Actions for and do the purposes that are specific to that Power as described in later rules sections. The actions which may be taken by activating a Power are called “purposes”; some Powers have only one purpose while others have many purposes to the Power Activation. When activating a Power that has multiple possible purposes, the position must specify for which purpose the Power is being activated.

- ✓ *Except for Census and Taxation*, the same Power may be activated multiple times in a Regular Turn, for the same or different purposes.

Following is a brief description of the Vital Powers:

- **Taxation:** The Taxation Power represents the ability and need of societies to pool their resources in one or more centralized authorities in order to achieve their (greater) purposes (like building pyramids, maybe). In the game, the Taxation Power is used to collect Resource Points (RPs) from the colonies into the Treasury for use in other Power Activations. Taxation is a Power that has only one purpose.
- **Census:** The Census Power is to insure the survival of the species by protecting and nurturing the next generations. In the game, the Census Power, when activated, ‘causes’ population growth on all Friendly and Naturalized Colonies. It is not that it actually ‘causes’ population growth, which is really happening all of the time, but rather, that in taking the Census (like a real world census), ongoing population growth is realized and added to the colony’s population factors. The Census Power is a Power that has only one purpose.
  - ✓ Were our pets to become fully sapient – as in fantasy stories and in some science-fiction-imagined futures (e.g., the dog in Geneshaft who typed teletext messages on the PC) – don’t expect them to volunteer to be spayed/neutered, even if they can understand the overpopulation problem.
- **Culture:** The Culture Power of governments is to preserve, guide, and encourage cultural development and identities. This is an interactive process since the culture determines what kind of government it finds acceptable and the government, by its actions, affects the culture that created it. The Culture Power is activated for the purposes of Exposing Aspects, Perfecting Proficiencies, Cohering, Introducing Writs, Founding and Endowing Colleges, Amending Charters, and establishing Doctrinal Templates, all of which will be explained in detail later.
- **Order:** The Order Power is the responsibility of governments to prepare for and recover from disruptions, hold back entropy, and to maintain the internal order (boundaries), a combination of civil defense, social welfare, police, and security forces. The Order Power must be activated for the purposes of Declare/Move Capital Colony, Conversion/Naturalization of a conquered **alien colony**, Maintenance (against Entropy) and Government Formation.
- **Construction:** The Construction Power, as the name suggests, is the Power of a government to construct vessels (in this case, starships), build defenses, and encourage the development of industry. It is the authority and responsibility to create infrastructure; starships, as the primary means of maintaining contact between colony planets and imposing order, are part of

the infrastructure of interstellar civilization (like roads, horses, wagons, automobiles, aircraft on Earth). The Construction Power must be activated for the purposes of Colony Enhancement, Colony Defenses Upgrade, Laying Keel, Shipbuilding, Ship Supply, and Scrapping.

- **Technology:** The Technology Power is the prerogative to encourage or carry out technological research and insure that new generations of scientist, technicians, and inventors continue the endeavor. The active Technology Power is the mark of a modern technological society (modernity) more so than the traditional society, and since it is technology that makes the entire game setting possible, it becomes the essential power. The Technology Power is activated for the purposes of Research, Development of Applications, and Patent Prosecution.
  - ✓ The recognition of technology as a ‘thing’ (or phenomenon) onto itself in our civilization, is very recent. The word ‘technology’ wasn’t coined until 1859, arguably it relates to the beginning of the Industrial Revolution, the Age of Invention, and the modern scientific era (similar to the development of Geology). While we might use terms like “medieval technology,” it is not certain that the people of the Middle Ages (anywhere in the world) would have thought of themselves as possessing “technology” (they also didn’t think of themselves as ‘medieval,’ that they were living in the ‘Middle Ages,’ their system as ‘feudal,’ or their castles or love as ‘romantic,’ more on that later). It is an example of how civilization reorganizes concepts, prior to 1859, for example, Thomas Jefferson referred to them as “ingenious improvements” (see Thomas Jefferson feature quote, top of 1 Patents, p. 726, *infra*).
- **Movement:** The Movement Power is the authority to control movement within the Galactic Space controlled by the government. Since ships create and rule the interstellar civilization, the power of Movement is the power to send ships from star to star to keep interstellar civilization connected and controlled. The Movement Power has only one purpose, to begin the movement of starships between two starsystems colonized by the owner of the starships.
- **Expansion:** The Expansion Power is to explore, find resources and living spaces, and establish new colonies on suitable planets found there. The Expansion Power is activated for the purposes of ‘Looking’ for new stars (you will understand this later), Scouting (aka exploration), Loading Population, Transporting Population, Unloading Population (to existing colonies), and Landing Population (to establish new colonies).
- **Combat:** The Combat Power is the prerogative to use military force externally to attack and defend territories, and to prepare for military action. The defender in a combat is not required to activate the Combat Power to defend, local defense is automatic. The Combat Power is activated for the purposes of Combat Movement, Combat Alert, Initiate Combat, and Seize the Initiative. “It was uh, attitude adjustment...” – Hank Williams, Jr., 1984.
  - ✓ It is very important to pay attention to the number of Acts and Scenes required in advance of each Power Activation (as detailed in each section and on Appendix PAT1), poor planning and half-measures leaves a position flatfooted; e.g., after delaying, Norway finally sent out the national mobilization order by post on April 9, 1940 – equivalent to putting one Act on the Combat Power! The invasion started that day.
- **Diplomacy:** The Diplomacy Power represents the outward face of the civilization. The Diplomacy Power is activated for the purposes of making or breaking a Treaty, issuing Articles

of Incorporation to form a MegaCorporation with other positions, and to form and share Meanings (an Interpretation).

- Commerce: The Commerce Power represents the controls over the economic wellbeing of the civilization, and more specifically, domestic and foreign trade and the movement of resources. The Commerce Power is activated for the purposes of Marketing, Loading Resources and Unloading Resources from Cargo Ships, Trade Missions (departure of Cargo Ships to another starsystem), local Trucking and Carting (in-system) transactions, and issuing Articles of Incorporation to domestic Corporations.
- Special Operations: Well, this shouldn't need much explanation ... you know ... but just in case it does, Special Operations is the Power of governments to recruit and train secret forces to carry out double-double-super-secret missions (like the silly password you had to say to get into the boys-only treehouse club when you were in 3<sup>rd</sup> grade or like the silly passwords you use today to log into your computer and every place on the internet – the two are really the same game) for which governments maintain 'plausible deniability' should anything go wrong on the mission. The Special Operations Power will be activated for the purposes of Reconnaissance, Recruiting Missions, Lodging Missions, Black-ops, Treason, Training Counter-Operations, and Counter-Operations.
- Slice of the Pie: As mentioned many times in GGDM, it depends on how you choose to slice the pie. I chose to have twelve Vital Powers to represent sovereignty in the game, and the results were agreeable (to an English speaker) in that twelve was the number sufficient to cover all areas important to the game. A designer from a non-English speaking country may have chosen ten Vital Powers, as ten is a number natural to all humanity due primarily to the fact that nearly everyone is born with five digits (i.e. fingers and toes) at the end of each limb (it is the reason for our base-10 counting system).

---

*“The Bible teaches us how to go to heaven, not how the heavens go.”*

– Galileo Galilei

---

**Cardinal Baronius**: This was probably first said by Cardinal Caesar Baronius to Galileo Galilei in a conversation and the latter wrote it down later in a letter. It is thus that Galileo is popularly credited with the statement – it happens to all of us – but it is important that both of these eminent men shared a love for truth and facts, both within the Church (for the former) and ultimately, in contradiction to Church dogma (the latter). Caesar Baronius is credited with one of the best, early, and very honest attempts to write a history of the Church, *sans theology*.

So, I wondered recently, what do Christian Fundamentalist (or creationist at least) think of the discovery of exoplanets in the last few years? Does it trouble them, does it suggest evolution of life on other planets? I can see the pie being sliced either way; if creationist are narcissistic, old line dogmatic and such, they may believe that man is God's special creation and the purpose of the universe and as such, the existence of exoplanets is a threat to their beliefs. There were Jehovah's Witnesses who came to my grandmother's house telling her that we never landed on the moon and it was all a myth, a conspiracy.

- ✓ Exoplanets are the sidereal stages, they are where Scenes are placed!

It seems however, from a sampling of websites, that even Christian Fundamentalist have been pulled along with the times (with Christian literalist kicking, whining and screaming loudly):

- ✓ “For Christians, finding our future in the stars can appear misguided, but it is not – as long as Christians can separate eschatological fervor from practical science and understand God’s plan for creation. ...

Page | 118

When God created the world and saw that it was good, it wasn’t just the Middle East or the Old World, but all of creation – the entire universe. Exoplanets such as those in the TRAPPIST-1 system are really no different than Antarctica or the depths of our ocean – parts of creation that are still to be explored. Indeed, they are simply further into the horizon than humanity has yet traveled.

Even if our world is on the cusp of a technological singularity, travel to other planets is still a far off possibility for the immediate future. Exoplanets are on our horizon but are merely a tiny shadow in front of something much greater. If humanity gets to the TRAPPIST-1 system one day, as a natural extension of exploring the world that God created, it will be good. In the meantime, there is no shortage of creation to explore within our reach.” – Douglas Estes, “The Exoplanets Declare the Glory of God – TRAPPIST-1 is not our new home. The Creator declared it good anyway,” Christianity Today, March 14, 2017.

Of the three samples offered here, from 2014, 2017, and 2018, Mr. Estes’ 2017 comments (*ut supra*) are the most pragmatic and even optimistic assessment by a Christian writer. It is interesting that he mentioned the technological singularity, and he impliedly chastises certain Fundamentalist and Literalist elements (“as long as Christians can separate eschatological fervor from practical science”) for having their heads in the sand.

- ✓ “In my last three blogs I described the inevitable climate instabilities that occur on Earth as a result of subtle variations in Earth’s rotation axis tilt and shape of its orbit about the Sun. For the first time, astronomers are paying serious attention to how similar variations affect the possible habitability of planets beyond our solar system. These studies are revealing extraordinarily fine-tuned design features in the solar system – and Earth in particular – that make Earth habitable not only for life, but also for animals, human beings, and global human civilization. ...

[Russell] Deitrick [University of Washington] and his team do not discuss what their research implies about Earth’s habitability. Their excellent work shows that the fine-tuning designs that have made Earth continuously habitable for 3.8 billion years of abundant, diverse life, and has made possible the existence of a large population of human beings enjoying global, high-technology civilization, has been grossly underestimated by most scientists. Their research adds to the already overwhelming scientific evidence that a supernatural, superintendent Creator personally designed Earth for the specific benefit of life and of human beings in particular.” – Hugh Ross, “Exoplanets’ Climate Instabilities Reveal Earth’s Fine-Tuning,” Reasons to Believe (reasons.org), July 30, 2018.

Mr. Ross has fallen into the anthropic puddle. Douglas Adams told a story of a puddle at Digital Biota 2 that specifically refuted, and pointed out the danger of this smug sort of thinking. See the In Our Puddle discussion, 1 Entropy, p. 231, *infra*. In the words of Carl Sagan, Mr. Ross has

confused cause with effect. See also additional related Douglas Adams quote and Children & Puddles discussion, 3 Technology, p. 720, *infra*. It is probable that Mr. Ross is repeating an argument that was making the rounds at least in the 1960s, since both Sagan and Adams refuted it.

- ✓ “Other astronomers are reluctant to abandon the old nebular hypothesis, even though it has numerous problems of its own. For instance, particles in a dust disk less than a kilometre in diameter do not accrete; they disrupt. Any ‘planetesimals’ (small bodies thought to be growing into planets) must grow fast enough to clear out a path in their orbits before inward migration sets in. Both theories, therefore, require rapid formation of planets.

The ‘bottom-up’ theories of evolutionists have effectively been falsified. For this reason, creationists should defend a ‘top-down’ model of planet formation. Believers in God should not be surprised that God created stars with orbiting bodies from the beginning. The top-down model is supported by the principles underlying the Second Law of Thermodynamics, which reveal a relentless tendency for things to become more disordered over time. That is exactly what we see: stars and planets winding down and wearing out. Some stellar dust disks that were thought to be forming planets are now believed to be the ruins of destructive collisions. If it were not for God’s unique design and care for our earth, it would not long survive.

Because evolutionists desperately want to prove that the origin and evolution of life is common in the universe, the search for habitable planets has intensified. Once again, though, the observations point to earth-like planets being extremely rare. At this time, the Planetary Habitability Laboratory website lists only one earth-size planet candidate from Kepler data out of thousands. Another 48 are labelled ‘potentially habitable exoplanets,’ but these are all in the ‘super-earth’ category: much larger than earth, which creates additional habitability issues. ...

After 50 years of failure, some SETI people still scan the skies for alien radio messages. It’s highly doubtful, however, that any such indicator of intelligence will be received in the foreseeable future.

Let’s suppose that, against all odds, they do find life. What would it mean for biblical interpretation? It depends on the type of life discovered. Intelligent life is ruled out, because we know from Heb. 9:24–26 that Christ died for sins once, and only once – for the sins of humanity. He did not have to ‘suffer repeatedly since the foundation of the world’ (i.e., the universe). Nowhere in Scripture is there any hint that Christ became incarnate for the sins of any other beings. For this reason, it is highly unlikely that alien intelligence (as opposed to fallen angels impersonating aliens) will ever be found. But what about non-sentient, e.g. microbial, life? Though one cannot rule it out, it is highly unlikely that this exists, either. All of creation seems focused around mankind on earth, and the plants and animals are part of our life support system.

All life is intelligently designed. Only humans are made in the image of God, have fallen into sin, and are in need of salvation. Christ Jesus provided grace uniquely to humans by His death on the cross and His glorious Resurrection. Unverifiable speculation about life on other planets may be fun, but in the end, it is futile. We can know for sure what we need to know: that God has provided for our physical and spiritual

needs on our superbly designed planet.” – David F. Coppedge, “Extrasolar planets: a challenge to biblical cosmology?” *Creation* 36(3):42–44, July 2014 (creation.com).

In this review, I was only looking to the expressed or apparent attitude of the author toward exoplanets, and to some extent, intelligent life elsewhere. The first two authors quoted above, included extensive science to which was attached at the end a discussion of Christian implications. Mr. Coppedge, quoted above, also included science, but in a derisive way that probably is deceptive or could be challenged as misrepresentative; there were also a few other eye-rolling statements, but the author’s overall approach to possible exoplanets was not ‘negative,’ if guarded.

- ✓ Admittedly, I quoted more of Mr. Coppedge’s article than I originally intended. Perhaps as a demonstration, perhaps out of a misplaced sense of inclusiveness and fair representation. ‘N all dat.

---

*“It is not improbable, I must point out, that there are inhabitants not only on the moon but on Jupiter too, or (as was delightfully remarked at a recent gathering of certain philosophers) that those areas are now being unveiled for the first time. But as soon as somebody demonstrates the art of flying, settlers from our species of man will not be lacking. Who would once have thought that the crossing of the wide ocean was calmer and safer than of the narrow Adriatic Sea, Baltic Sea, or English Channel?”*

*Given ships or sails adapted to the breezes of heaven, there will be those who will not shrink from even that vast expanse. Therefore, for the sake of those who, as it were, will presently be on hand to attempt this voyage, let us establish the astronomy, Galileo, you of Jupiter, and me of the moon.”*

– Translated by Edward Rosen (1965), Kepler’s Conversation with Galileo’s Sidereal Messenger (1610), p. 39<sup>3</sup>

---

## Endnotes.

<sup>1</sup> Commentary: That is, state and local politicians can get the money they need from Big Brother without being held locally accountable for raising taxes to get the money. The big, distant Federal Government does the taxing, higher up politicians take the blame for raising taxes, and then the money is returned through subventions with strings attached. And local politicians can say, “Hey, it’s the rules, we didn’t make them, but we have to play by them.” This is the blurring of political accountability referenced by Mr. Robb.

- ✓ Sovereignty is ultimate responsibility and about taking ultimate responsibility to go with the power (i.e. “the buck stops here” – Pres. Harry Truman’s desk sign and U.S. Attorney General Janet Reno after Waco); the less responsibility you have, the more so your sovereignty is degraded.

<sup>2</sup> Commentary: Commander Sinclair was given authority by the Earth Senate to end the dock worker’s strike “by any means necessary.” It was expected that he would use force, but instead, he used the “by any means necessary” language to divert funds to improve safety and work hours for the workers. The Earth representative was ☹.

<sup>3</sup> Citation: “*(Galileo) Galileo, (Galileo) Galileo, Galileo figaro magnifico!*” (sing it in high falsetto!)

*“...Here we come close to one of the definitions of literary fiction. Even the best kind of popular novel just comes straight at you; you have no conversation with a popular novel. Whereas you do have a conversation (you have an intense argument) with [literary fiction].”*

– Martin Amis, Experience: A Memoir (2000)

**The Conversation:** GGDM is the result of a lifetime of conversations with myself and the human intellectual tradition. Or more probably just myself and the ringing in my ears. I once asked my mother when I was about five or six years old, why can't everyone be a scientist? I guess my life answered that question! I now invite the reader into this conversation.

- ✓ I always keep a copy of the current version of GGDM in my pants pocket, in case Scotty beams me up (like Eli in the Stargate Universe pilot). Scotty has never been known to beam anyone up without their pants and I hope he hasn't changed his mind.

As I have envisioned it, a game of GGDM can be a sort of modern salon (and not saloon), without the idle aristocracy (or six-shooters):

- ✓ “A whole world of social arrangements and attitude supported the existence of French salons: an idle aristocracy, an ambitious middle class, an active intellectual life, the social density of a major urban center, sociable traditions, and a certain aristocratic feminism. This world did not disappear in 1789.” – Steven Kale, French Salons: High Society and Political Sociability from the Old Regime to the Revolution of 1848 (2006), p. 9.

Jerome Bixby's *The Man from Earth* (2007) is a sort of impromptu salon.

*“Immature poets imitate; mature poets steal; bad poets deface what they take, and good poets make it into something better, or at least something different.”*

– T.S. Elliot

**Acts & Scenes:** “All the worlds are indeed a stage...”<sup>1</sup> While Vital Powers represent the authority of the government over its society, Acts and Scenes measure, in large part, the political will (and organization) of the government to act and to some extent, the popular support for government action. ‘Acts’ are markers which represent the ability to act, specifically, the ability to activate a particular Power to which they have been previously allocated by placement on the ‘Powerstrip’; while Scenes represent specific places where Actions take place.

- ✓ The Scene on the Public Space points to a place in the Galactic Space where the game looks for certain Power Activations.<sup>2</sup> It is a conduit that connects the three parts. There are other games that do this as well, regardless of how the designers may have thought of it; for example, in Queen Games' *Shogun* (2006), players lay province cards on an actions board, indicating that the action occurs in that province this turn.

Powers whose activations are location-specific require Acts and Scenes to activate the Power, whereas Powers whose activation is general throughout the civilization (such as Taxation, Re-

search, and Census) only require Acts to activate the Power. So, the activation of Powers is governed not only by the number of undisrupted Government Titles held by the position, but also by the allocation and placement of Acts and Scenes.

- ✓ “Human action is purposeful behavior. Or we may say: Action is will put into operation and transformed into an agency, is aiming at ends and goals, is the ego’s meaningful response to stimuli and to the conditions of its environment, is a person’s conscious adjustment to the state of the universe that determines his life. Such paraphrases may clarify the definition given and prevent possible misinterpretations. But the definition itself is adequate and does not need complement of commentary.” – Ludwig von Mises, Human Action (1949), p. 11.

Power Activations in GGDM should not in most cases be considered accidental, incidental or involuntary (even considering population growth *from* Census Power activations, the activation remains purposeful behavior in the game, that is, you could absurdly determine to never activate the Census Power during the game); rather, they should be considered purposeful will and agency to a desired end that is essentially, but not entirely, directed by the central authorities. GGDM Power Activations encompass fully the axiom of human action of the Austrian School.

- ✓ One view of the setup process considers that whatever is purchased with Inheritance Points (see 7 Beginnings, p. 70, *supra*) saves dozens of Acts, Scenes and Power Activations during the early game. Thoughtful players may maximize this benefit.
- On The Soapbox: The Powerstrip consists of two rows of squares, with one square labeled for each Power. The purpose of the Powerstrip is to keep a record of the Acts currently allocated to each Power. At the end of each Regular Turn, each position *receives a number of Acts and Scenes in any combination* desired equal to the number of currently undisrupted Government Titles held by the position. Acts received must immediately be allocated to a specific Power and are added to the Acts currently in that Power’s box; while Scenes must be immediately assigned to a Monad which must contain *a star or colonized planet* at the end of the turn (if not, the Scene is lost). Thus, during the Regular Turn, a position is operating with Acts and Scenes received previously, there is no ‘borrowing’ into the future in terms of Acts and Scenes. One cannot use political will, events, or opportunity that has not yet manifested.
  - ✓ Acts and Scenes can be *purchased* during setup with Inheritance Points and it is highly recommended that positions do so to be able to activate Vital Powers on the first turn of the game. Loading up for early game action might be a strategy. See Lift Off, 7 Beginnings, p. 73, *supra*. There is no provision for moving placed acts/scenes.

Power Activations require planning, and each position’s Actions sent to the Concierge must specify the allocation of Acts and Scenes expected to be received at the end of the turn. Acts and Scenes will be received in the order listed by the position, in case of a disrupted Government Title, the last Acts/Scenes listed may be lost. Thus a position can prioritize the list.

- Shoestring Production: The number of Acts and Scenes received per undisrupted Government Title may be increased with progression to the 2<sup>nd</sup> and 3<sup>rd</sup> Eras, see Player Piano, 2 Eras, p. 770, *infra*. This is not the same as receiving more Power Activations per turn. Power Activations, Acts and Scenes collectively represent the scarcity of means to ends:
  - ✓ “Action is replacing ‘a more satisfactory state of affairs for a less satisfactory,’ and man must make use of means to attain ends. Means, in turn, are always scarce with

regard to the attainment of ends. If means were not scarce, they wouldn't be subject to economizing, and so there couldn't be any action – and this is, of course, impossible to believe. It is in this sense that human action is purposeful action – that is, making use of means for attaining certain ends.” – Thorsten Polleit, “Human Action Is Purposeful Action,” Mises Institute, August 19, 2011 (available free online), quoting Ludwig von Mises, *Human Action* (1949), Ch. 1.

- ✓ See additional scarcity discussions, 1 Government Titles and 1 Corporations, *infra*.
- Managing Act: When a position activates a Power, a number of Acts will be removed from the Powerstrip and Scenes removed from the Public Space as the cost of the Power activation. The specific number of Acts and Scenes required are described in each of the sections detailing the Powers, however, no Power requires less than one Act to activate, and no Power requires more than three Acts and a Scene (i.e. Found College) in combination to activate. In case of error or other unforeseen events that cause a position to be short of Acts/Scenes for a Power Activation; the desired Power Activation will be cancelled and no Acts or Scenes will be removed (the Concierge will not interrupt Regular Turn processing to contact the players).  
  
A position with five Government Titles would receive five Acts and/or Scenes per Regular Turn and could activate Powers five times. There is a 15% chance at the end of each Regular Turn (or Turn Cycle if Regular Turn Actions are not submitted or processed), *before* new Acts are placed that each remaining Act on the Powerstrip will ‘age-out’ as political will dissipates, opportunities are lost and political theatre distraction sets in...
  - ✓ Remember that, *except for Census and Taxation*, a position may activate the same Power multiple times in a Regular Turn (but not multiple Construction Powers at the same location), if they have sufficient Acts and Scenes. Insufficient RPs will not prevent a Power Activation. Each Activation costs separately, depending on purpose.
- Box Office Receipts: Management of Acts and Scenes, planning, and balancing competing interests and pressures are an important part of the game, as is managing the turnover and placement of pieces on the Public Spaces. Many Power Activations may also require sufficient Resource Points (RPs) be in the Treasury at the time of activation, for example, building Starships. Resources are required in addition to will and organization.
  - ✓ It is an axiom of the universe that any time anything is done – even involuntary breathing – there is a cost in resources. If a school district has to do something, whether it is fulfilling its educational mission, busing students, or something not related, like litigation, it costs taxpayer dollars (e.g., *Kitzmiller vs. Dover Area School District*). In between involuntary biological processes and the social organic enterprises of civilization, whether private or public governmental, is administration.
  - ✓ Eating and drinking are figuratively putting money in your mouth.<sup>3</sup> Wealthy people and nations never think of it because it is trivial to them, but it occurs to any reasonable poor person at some point, and hangs in the back of their minds every day. Smoking tobacco is burning and inhaling money; this gets more figurative attention in the old political comics showing rich men smoking cigars wrapped in \$100 bills.
- Lost Scenes: Scenes do not occupy or use a Monad in the Public Space, but must be placed instead on stars and planets in the Public Space. Access to Scenes on a star or planet is lost if the star or planet is removed from the Public Space.

A star may have a number of Scenes equal to one *plus* the number of colonies currently in the star system maximum. A colonized planet may have one Scene *plus* one Scene for each colony on the planet. Scenes will be lost if they are attempted to be placed on a star or planet that is not added to the Public Space at the end of the Regular Turn in which they are generated. For example, if exploration of a starsystem fails due to the Scout being destroyed or failing to arrive, that star would not be placed in the Public Space as there is no ship there. Any Scenes that the position might assign to that star at the end of the Regular Turn, are lost. This is a risk a position might take to hurry development.

Scenes never ‘age-out.’ However, all Scenes on stars and planets will be lost if the star or planet is no longer on any position’s Public Space at the end of any Regular Turn.

- **Scene Snitching:** Scenes do not have owners, no one owns the Scene; *they are unaffected by capture of the colony* and simply pass with the sovereignty. Scenes are placed on planets and stars, not on colonies, *ut supra*. If a Scene is placed on a planet or star, all positions that have *presence* on the planet or in system will see it and may become the ‘scene stealer’ in theatre-speak. It thus is possible in a Balkanized colony planet situation for positions to snatch each other’s Scenes for activations at that location, e.g., see discussion in 1 Commerce, pp. 1186, 1189, *infra*. It is also possible for positions to help each other with Scenes at shared locations by placing Scenes there to be picked up later. The economy of Acts and Scenes in GGDM is such that this is a fairly major effort and an area for horse trading or allied cooperation.

- ✓ Some snitching attempts may go unnoticed: The Scene will not be used if the Power Activation fails, see *But Nobody is Home*, 2 Constructural Elements, p. 194, *infra*.

---

*“Most of such [science fiction writers], however, only extend the consequences of our present-day paradigms into the future. There are some who present futures in which new paradigms obviously prevail. Most of them do this unconsciously, but whenever a writer tosses out a reference to working telepathy, or working faster-than-light drive, he is talking about such a future – and of one thing we may be very sure: the future will offer us new paradigms. We may kick and scream and have to be dragged into them, but they will be there.”*

– James Blish, *The Tale that Wags the God* (1987) (Kindle Loc. 603-607) <sup>4</sup>

---

**Besieged Colonies:** A ‘besieged colony’ is a colony that is currently under attack and the only thing that is preventing the colony from being captured is the colony’s defenses and/or the attacker’s lack of will and/or insufficient combat power. A colony is besieged on Regular Turns only to the extent that the opposing warship(s) can enforce a blockade of normal space around the colony (see *Blockade Running*, 4 Commerce, p. 1233, *infra*). A Besieged Colony cannot act as a Supporting Colony for ships (see *Supporting Colony*, 1 Movement, p. 840, *infra*), thus a colony may be besieged to deprive the owner of a Supporting Colony. Otherwise, there is no other effect on a besieged colony, that is, blockading warships cannot cause a colony besieged to lose Constructural Elements or Scenes, and cannot directly prevent the colony from executing *most* Power Activations (see *Rousing the Rabble*, 2 Disruption, p. 271, *infra*).

- ✓ A colony which has enemy Ground Units on the surface of the planet, i.e. a potential ongoing Ground Combat situation, is not a besieged colony and can be a Supporting

Colony. Ground Combat is however a Disruption Event at the colony, see Downfall, 2 Disruption, p. 275, *infra*.

- ✓ Note, however, that a colony might suffer disruption of Constructural Elements on the Regular Turn it becomes besieged due to loss of a Ship Combat in the same starsystem. See The Burning Sky, 2 Disruption, p. 275, *infra*.

- Long Telegram: The Earth (or any colony) floating in space, is like living on a tiny island in the vastness of the ocean, or like living on a farm or in a village in the middle of a vast plain: Invaders, raiders and bandits can appear at any time from any quarter without warning and approach with great speed. Without walls and vigorous defenses, all of the advantages go to the invaders (e.g., Thulsa Doom's mounted raider attack on the plains village at the beginning of Conan the Barbarian (1982)). Thus, after reliable, repeatable FTL travel becomes reality (i.e. fact), paranoia may develop naturally in nascent interstellar civilizations, guiding their development. As noted by George Kennan in the Long Telegram, February 1946:
  - ✓ "At bottom of Kremlin's neurotic view of world affairs is traditional and instinctive Russian sense of insecurity. Originally, this was insecurity of a peaceful agricultural people trying to live on vast exposed plain in neighborhood of fierce nomadic peoples. To this was added, as Russia came into contact with economically advanced West, fear of more competent, more powerful, more highly organized societies in that area. But this latter type of insecurity was one which afflicted rather Russian rulers than Russian people..." *Id.*
- High Guard: A siege condition exists after the first round of a Colony Combat when:
  - 1) The attacker does not issue any further Combat Orders, *except* Raid/Strike orders (see World in Flames, 4 Carriers & Fighters, pp. 1083-1088, *infra*),
  - 2) The attacker has units present that can initiate combat,
  - 3) The colony defenders have not retreated or cannot retreat, and
  - 4) The defenders have not or cannot Seize the Initiative (see 3 Combat, p. 971, *infra*).<sup>5</sup>

For example, a Carrier with a Fighter Complement, accompanied by two Era Warships, attacks a Colony. In the first Combat Round, the defenders destroy the two Era Warships, leaving only the Carrier with Fighters. The colony still has Defense Bases, which cannot retreat. The Colony Combat has not ended because all units of a side have not either retreated or been destroyed. The attacker decides not to retreat the Carrier, instead letting the Colony Combat become a stalemate by not continuing the attack (except Raids); this stalemate is called a siege. The Colony Combat can drag on indefinitely until something changes.

- ✓ See generally Combat and Carriers & Fighters sections, *infra*.

- Passive Siegecraft: The siege condition described here is a passive siege, more of a blockade of the colony planet from space and perhaps on the ground as well. In a passive siege, the main strategy is to starve the defenders, inflict privations, affect their morale, and hope for faction infighting and a traitor who will open the gates. In GGDM, most colonies are considered to necessarily be self-sufficient in food, energy and material resources, with their own manufacturing and mining, *so that a passive siege generally will not work in that way* but there is plenty of room for Special Operations mayhem. Few sieges are completely passive, perhaps the main practitioners of passive siege warfare were the Assyrians.<sup>6</sup>

- ✓ “The economic attack was the most simple and obvious form of siegecraft. Cities were sometimes surrounded for years by encamped foemen who reared walls of their own to cut off trade and supplies. Assyria, whose appetite for war exceeded her ability, had a peculiar addiction to blockades which endured until a new generation grew up to manhood. But the defenders were at no great disadvantage in a contest of this sort, and often they could better supply themselves than an invading army subsisting on ravaged territory. Hence the threat of starvation usually had to be supplemented by a physical attack on the walls and a moral assault on the will, nerves and courage of the beleaguered.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 29.

Most sieges in history feature assaults on the walls and sallies by the defenders; the besiegers are often under the threat of relief forces arriving behind them and partisan warfare against their supply and communications (e.g., Siege of Vienna, 1683). If Besiegers in GGDM want to capture the colony, Ground Combat and/or Black-op Special Operations may be necessary.

- ✓ In many periods of history, such as those of the ancient city state monarchies, or impoverished and divided Medieval Europe, siege warfare was dominant. The side that lost or declined engagement in the field could surrender control of the countryside and retreat to their supplied castle or fortified city to hold out until the attacker either gave up or circumstances changed. The attacker then had to commit to the weary task of besieging the place, while watching his rear for attackers or partisan warfare against supply lines. Bribery and betrayal were potent weapons to open the gates.
- ✓ There is story potential for Concierge Intervention and Special Operations in sieges; e.g., the food stores of Jerusalem seem to have been *intentionally, preemptively destroyed* in an *act of faith* by Zealots during the epic Siege of Jerusalem in 70 A.D.
  - “Hope is not a strategy.” – Mike Sullivan, Pittsburgh Penguins Coach.

---

*“Not everyone is capable of writing junk fiction: It requires an authentic junk mind. Most creative-writing teachers have had the experience of occasionally helping to produce, by accident, a pornographer. The most elegant techniques in the world, filtered through a junk mind, become elegant junk techniques.”*

– John Gardner, The Art of Fiction: Notes on Craft for Young Writers (1991) <sup>7</sup>

---

## Endnotes.

<sup>1</sup> Commentary: Yes, I know that’s not quite what the original Bard said ... but it is what the 51<sup>st</sup> century clone said.

<sup>2</sup> Citation: “They are key locations in the drama that led to President Trump’s impeachment: the steakhouse table where Trump’s private lawyer set out a nameplate, ‘Rudolph W. Giuliani, Private Office.’ The upstairs hideaway, where Giuliani’s team planned its outreach to Ukraine. And the expensive bar, where Giuliani’s team met an odd figure: Robert F. Hyde, a big-talking ex-Marine who claimed to have the U.S. ambassador to Ukraine under surveillance. All three places are within 300 yards of each other, in the lobby of the Trump International Hotel.” – David Fahrenthold, Josh Dawsey, Jonathan O’Connell, “‘It was like a breeding ground’: Trump hotel’s mix of GOP insiders and hangers-on helped give rise to impeachment episodes,” The Washington Post, January 16, 2020.

<sup>3</sup> Commentary: Need a dieting mantra? Eat less, spend less, weigh less, shit less, waste less. Works for everyone.

<sup>4</sup> Commentary: The title, The Tale that Wags the God, is a rich, convoluted writer’s joke based on the common phrase, ‘the tail wags the dog.’ “Wag the dog” became somewhat popular after the 1997 movie of the same name. As Stephen King pointed out in Eye of the Dragon (written long after Blish), “God” is “dog” spelled backwards.

- ✓ “We wanted to call our show God Talk, after the famous Tappet Brothers of Car Talk fame, but the name was already taken, so we settled on The God Whisperers – ‘god’ and ‘dog’ being anagrams.” – Rev. Craig Donofrio and Rev. Bill Cwirla (“The Manly Doctors of Divinity”), from godwhisperers.org

<sup>5</sup> Commentary & Citation: In Babylon 5, the EarthGov sent six destroyers to besiege the Proxima III colony (Proxima Centauri). The destroyers did not bombard the colony and did not probably have enough troops to capture the colony, instead besieging it on the ground (in GGDM terms, probably a Ground Combat where the attacker is not prosecuting) while blockading in space. The colony does not appear to have had any orbital defenses. Therefore, a siege condition occurred. During the siege, one of the destroyers intercepted and destroyed a civilian transport loaded with 10,000 people trying to escape (in GGDM terms, Blockade Running). The news of this was a major event that caused the Battle of Proxima III (Babylon 5, “No Surrender, No Retreat”), beginning the Earth Civil War.

<sup>6</sup> Citation: “Encircled by walls of masonry rising abruptly from the water’s edge, and easily provisioned by the ships in its two harbors, this island city had already withstood an Assyrian siege of thirteen years.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 28 (referring to the ancient city of Tyre on Lebanon’s coast).

<sup>7</sup> Citation & Commentary: Likewise, it takes a different sort of mind to write Young Adult fiction. After reading a summary of Paolo Bacigalupi’s young adult novel, Ship Breaker (2010), I thought it seems like it could be made into a movie if they didn’t get too juvenile. I began wondering about the definition of Young Adult fiction as a genre and I found a helpful article on Writer’s Edit, “3 Key Differences Between YA Fiction and Adult Fiction”:

- ✓ “Bearing in mind that YA [Young Adult] fiction will almost always be authored by adults, well-written YA stories nonetheless have an authentic voice that rings true to the young adult experience. This voice establishes itself in a few ways: primarily through the concerns, motivations and inner thoughts of the protagonist/s, and through the style in which the story is written or told. A teenager has different priorities, worries and thoughts than an adult, and this comes across in YA fiction. This goes some way towards explaining the prominence of certain tropes (e.g., love triangles) and the prevalence of certain themes (e.g., self-discovery and friendship) in YA. These are all typically young adult experiences, things teenagers tend to focus on more than adults. YA and adult fiction explore different sets of concerns, neither one of which is more or less important than the other.” *Id.*
- ✓ “In YA fiction, for example, a sense of immediacy and ‘in-the-moment’ storytelling is favoured, often delivered through close third person/first person point of view and/or present tense prose. Adult fiction is more likely to be told in the style of a reflection on the past, mostly using third person narration, sometimes presenting an omniscient perspective. Reflective, more ‘lyrical’ prose is often favoured over the more action/plot-focused style of many YA books. ... Let’s consider two examples, both hugely popular fantasy series, one classified as YA fiction and the other as adult: J.K. Rowling’s *Harry Potter* series and Patrick Rothfuss’ *The Kingkiller Chronicle*. Each series has a single main protagonist and a story that spans multiple years of that protagonist’s life, but there are key differences between the two that mark out their categories. Perhaps the key defining difference between the two is the voice and the way the story is told.” *Id.*
- ✓ “Our final key difference between YA and adult fiction is found in the themes of the story, and how they are explored. This can be a tricky one. Many people have made the mistake of assuming the themes explored in young adult fiction are more trivial than those of adult fiction, or that themes explored in adult fiction are off-limits in YA. This simply isn’t true. Some themes are definitely more specific to one category or the other – coming of age in YA, for example, or existential musings in adult fiction.” *Id.*

I obviously haven’t the mind to write YA fiction; my youth wasn’t that great, and I don’t want to remember it in that way: I think that writing good YA fiction probably depends on having a good youth. GGDM is *conscientiously adult* – whether you consider it fiction or not – the needle redlines on every facet described above as adult fiction.

- ✓ The best example between adult and young adult fiction is the difference between Jerome Bixby’s *The Man from Earth* (2007) and the sequel (2017). Mr. Bixby thought about and wrote the story over 30 years, there is very little action, but when there is, it is necessary. The entire work is an existential conversation wide ranging over all topics of humanity, but which remains in touch with the lives of normal people. Whereas the sequel, written in less than ten years by his son, is an ‘action adventure’ with existential musings which is the young adult or ‘new adult’ equivalent in film, and was criticized as being a pilot for a TV series (Neil Young, film review, *The Hollywood Reporter*, October 12, 2017). The sequel was underwhelming in comparison such that it was hard to review on its own merits (Anthony Ray Bench, film review, *Film Threat*, October 12, 2017). The creators uploaded the sequel to Pirate Bay in January 2018 for free distribution.

**The Universe Doesn't Care About Your 'Purpose'**  
**Excerpt from Article by Joseph Paul Carter,**  
**Ph.D. Candidate, UGA**  
**Published in the New York Times, July 31, 2017**

Purpose is a universal human need. Without it, we feel bereft of meaning and happiness.

A recent ethnographic study draws a strong correlation between purposefulness and happiness. Purpose seems beneficial to overcoming substance abuse, healing from tragedy and loss, and achieving economic success. Businesses and organizations champion goals as ways to unify employees and customers under the banners of brand strategy, community, and well-being. America, in fact, is founded on the idea of purpose: life, liberty and the pursuit of happiness. One election cycle after another, Americans rally around candidates personifying deeply rooted ideals of what our country is supposed to be.

But, where does purpose come from? What is it? For over two millennia, discerning our purpose in the universe has been a primary task of philosophers.

Aristotle believed that the universe is saturated with it, that everything has an intrinsic drive. Our word purpose comes from the Greek *telos*, a goal that stipulates what and how something needs to be. For Aristotle, the universe and everything in it has an essential directive. Any deviation from it belies truth and reality. Teleology concerns order, stability and accomplishment. The goal of my grandfather's T-Bird, for example, is to function successfully as a form of transportation. From cars, trees, animals, all the way to the cosmos itself, Aristotle argued, each thing has an inherent principle that guides the course of its existence.

What about human beings? In his *Nicomachean Ethics*, Aristotle tells us that our purpose is happiness or *eudaemonia*, "well-spiritedness." Happiness is an ordered and prudent life. Good habits, a sound mind and a virtuous disposition are some of the steps that lead us there. For Aristotle, nothing is more fundamental for us.

In many ways, we still think like Aristotle. Most everyone strives for happiness. Today, the standing dogma is that purposelessness and disorder are nihilistic. Whether you're mulling a major life change or healing from trauma, being told that there's no purpose in life might be particularly devastating. The chances are better that you're looking for an ultimate explanation. Or you could simply be searching for that something or someone meant for you — God, a soul mate or a calling of sorts.

I'm certainly no Aristotelian. Not because I reject happiness. Rather, as a materialist, I think there's nothing intrinsic about the goals and purposes we seek to achieve it. Modern science explicitly jettisons this sort of teleological thinking from our knowledge of the universe. From particle physics to cosmology, we see that the universe operates well without purpose.

The laws of physics are inherently mechanistic. The second law of thermodynamics, for instance, states that entropy is always increasing. Entropy is the degree of disorder in a system, for example our universe. Physical disorder is all about equilibrium — everything resting randomly and uniformly. Leave your hot coffee on the desk and it

will cool to ambient temperature. The coffee molecules are more organized because they are moving faster and working harder to sustain a higher temperature than the surrounding air. But heat transfer results as the coffee molecules expend more energy. As energy is expended, the temperature of the coffee drops and equalizes with the air. Entropy increases since the molecules in the system are now less organized as the overall temperature becomes more uniform.

Now, imagine this on the cosmic scale. Just as the temperature of the coffee and air equalizes, the Earth, our solar system, galaxies and even supermassive black holes will break down to the quantum level, where everything cools to a uniform state. This process is known as the arrow of time. Eventually everything ends in heat death. The universe certainly started with a bang, but it likely ends with a fizzle.

What's the purpose in that, though?

There isn't one. At least not fundamentally. Entropy is antagonistic to intrinsic purpose. It's about disorder. Aristotle's world and pretty much the dominant understanding of the physical universe until the Copernican Revolution is all about inherent order and permanence. But the universe as we understand it tells us nothing about the goal or meaning of existence, let alone our own. In the grand scheme of things, you and I are enormously insignificant.

But not entirely insignificant.

For starters, we are important to each other. Meaning begins and ends with how we talk about our own lives, such as our myths and stories. Sean Carroll, a prominent cosmologist and theoretical physicist at the California Institute of Technology, makes this case in his recent book "The Big Picture." Fashioning himself the "poetic naturalist," Carroll argues that meaning and purpose "aren't built into the architecture of the universe; they emerge as ways of talking about our human-scale environment." Even materialists can't deny the fact that purposes somehow exist to give us meaning and happiness.

Anthropologists like Dean Falk recently suggested that goal-directed behavior is also evolutionarily advantageous. This doesn't imply that evolution itself has a purpose, of course. (Though some have argued otherwise.) What it does suggest is that as purposeless as human evolution is, we generally benefit as a species from a belief in it.

The 20th-century German philosopher and intellectualist Hans Blumenberg, in "Work on Myth," provides a way to explain this curious concomitance of teleology and evolution with what he calls the "phantom body" of the development of civilization: "The organic system resulting from the mechanism of evolution becomes 'man' by evading the pressure of that mechanism by setting against it something like a phantom body. This is the sphere of his culture, his institutions – and also his myths."

Purpose springs from our longing for permanence in an ever-changing universe. It is a reaction to the universe's indifference to us. We create stories about the world and ourselves as contours, "phantom bodies," of the inevitability of loss and change. Myths appear timeless; they have what Blumenberg calls an iconic constancy. Stories pass through generations, often becoming traditions, customs, even laws and institutions that order and give meaning to our lives. Purpose grows out of the durability of human lore. Our stories serve as directives for the ways we need the world to exist.

An indifferent universe also offers us a powerful and compelling case for living justly and contentedly because it allows us to anchor our attention here. It teaches us that this life matters and that we alone are responsible for it. Love, friendship and forgiveness are for our benefit. Oppression, war and conflict are self-inflicted. When we ask what's the purpose of the recent gassing of Syrian children in the Idlib Province or the torture and killings of Chechnyan homosexual men, we ought not simply look to God or the universe for explanations but to ourselves, to the entrenched mythologies that drive such actions – then reject them when the institutions they inform amount to acts of horror.

The purposes and goals we create are phantom bodies – vestiges of and memorials to the people, places and things we stand to lose and strive to keep. Purpose indexes the world's impermanence, namely our own. Sure, my grandfather's T-Bird will function well as transportation once I'm finished. But, that goal only makes sense as an enduring reminder of the stories and memories of him. Purpose is about loss, or at least the circumvention of it. And there's nothing wrong with that. We create purposes to establish happy endings in a universe where endings are simply that – endings.

**The problem isn't that life is unfair  
– it's your broken idea of fairness**

**Excerpt from blog by Oliver Emberton, [oliveremberton.com](http://oliveremberton.com)  
(2014)**

Unless you're winning, most of life will seem hideously unfair to you.

The truth is, life is just playing by different rules.

The real rules are there. They actually make sense. But they're a bit more complicated, and a *lot* less comfortable, which is why most people never manage to learn them.

\*\*\*

Well-meaning intentions don't matter. An internal sense of honour and love and duty count for squat. What exactly can you and have you done for the world?

Abilities are not prized by their virtue. Whatever admiration society awards us, comes from the selfish perspectives of others. A hard working janitor is less rewarded by society than a ruthless stockbroker. A cancer researcher is rewarded less than a supermodel. Why? Because those abilities are rarer and impact more people.

We like to think that society rewards those who do the best work.

But in reality, social reward is just a network effect. Reward comes down mostly to the number of people you impact.

Write an unpublished book, you're nobody. Write Harry Potter and the world wants to know you. Save a life, you're a small-town hero, but cure cancer and you're a legend. Unfortunately, the same rule applies to *all* talents, even unsavoury ones: get naked for one person and you might just make them smile, get naked for fifty million people and you might just be Kim Kardashian.

You may hate this. It may make you sick. Reality doesn't care. You're judged by what you have the ability to do, and the volume of people you can impact. If you don't accept this, then the judgement of the world will seem very unfair indeed.

\*\*\*

People like to invent moral authority. It's why we have referees in sports games and judges in courtrooms: we have an innate sense of right and wrong, and we expect the world to comply. Our parents tell us this. Our teachers teach us this. Be a good boy, and have some candy.

But reality is indifferent. You studied hard, but you failed the exam. You worked hard, but you didn't get promoted. You love her, but she won't return your calls.

The problem isn't that life is unfair; it's your broken idea of fairness.

Take a proper look at that person you fancy but didn't fancy you back. That's a complete person. A person with years of experience being someone completely different to you. A real person who interacts with hundreds or thousands of other people every year.

Now what are the odds that among all that, you're automatically their first pick for love-of-their-life? Because – what – you exist? Because you feel something for them? That might matter to you, but their decision is not about you.

\*\*\*

Our idea of fairness isn't actually obtainable. It's really just a cloak for wishful thinking.

Can you imagine how insane life would be if it actually was 'fair' to everyone? No-one could fancy anyone who wasn't the love of their life, for fear of breaking a heart.

Companies would only fail if everyone who worked for them was evil. Relationships would only end when both partners died simultaneously. Raindrops would only fall on bad people.

Most of us get so hung up on how we think the world should work that we can't see how it does. But facing that reality might just be the key to unlocking your understanding of the world, and with it, all of your potential.

**William Barr: Death is inevitable, legacies are meaningless,  
Article by Alexandria Petri, Washington Post, May 31, 2019**

(Note to GGDM readers, the following is fiction and satire;  
it's just what the lady does, but can you deny it?<sup>1</sup>)

*"Everyone dies and I am not, you know, I don't believe in the Homeric idea that you know, immortality comes by, you know, having odes sung about you over the centuries, you know?" – William P. Barr, asked about his legacy as attorney general*

Everyone dies. This much is known.

I am a meat puppet wrapped for a brief time around a ghost, dragged from one point to another by forces beyond my control.

Afterward? I do not care what Homer says, that songs bring immortality. We are, when we are gone, only imperfectly recollected dust. One must not dwell on this.

Even before death, we die many times, little unmarked farewells, things that will simply never be seen or done by us again, words that will never be linked with our names another time, though we do not notice their departing until after they are absent: reverence, duty, honor. Our bodies grow lighter and heavier than we were accustomed. Our names carry a different weight in the public mouth. They echo at a different angle.

Imperceptibly we bid farewell to all that we are. Our faces become unrecognizable. The words we speak lose their meaning. We become our own ghosts.

The body is replaced many times before it is entirely gone. By the final replacement, we have ceased to notice. The atoms we would miss have not been there for years. We are a walking vacancy in place of a person. At first the replacement is a replenishment, and then it becomes a sapping – of our strength, our beauty, our wisdom, everything we are. But there is no way to direct it not to happen. So it does not do to mark or measure these changes. You are, and then you cease to satisfy, and then you die. There is no room for regret. Let the dead past bury its dead.

Ultimately, does anything we say or do echo even for a moment? Is any legacy more than a collection of imperfect sketches of an object already fled too far to grasp? Memory is an act that must take place in time, but the living are too greedy to remember. There is no legacy. There can be no legacy.

I have been to the desert. I have seen the ruin that is all that remains of the works of men.

The wrack is coming for us. The great oblivion encroaches daily. It will sweep away all our petty fortifications against time and make mockery of all our noblest works. We are dust. Only the cockroaches will remain. And to them our memorials will be illegible.

They will remember nothing of all these monuments of meat.

That is why I have been proud to serve as Donald Trump's attorney general.

---

<sup>1</sup> Citation & Commentary: “Wade A. Carpenter, associate professor of education at Berry College, has called his books ‘scathing’ and ‘one-sided and hyperbolic, [but] not inaccurate’ and describes himself as in agreement with [John Taylor] Gatto.” – from Wikipedia article, “John Taylor Gatto,” (citing to two Educational Horizons articles by Professor Carpenter, available free in PDF online).

- ✓ Though it is satire – and satire is necessarily hyperbolic and one-sided by nature – Ms. Petri's article may be taken as axiomatically true in the above sense, even if not agreeable to most people.
- ✓ It is quite likely that the same is true of or the same accusations might be leveled against GGDM at this point. *Nolo contendere*.

**Doctor Who:** *Dreams. They’re funny. Ha, ha, ha. They’re disjointed. They’re, they’re silly. They’re full of gaps. But you don’t notice, because the dream protects itself. Stops you asking the right questions.*

– Dr. Who, “Last Christmas” (2014)

---

**Jury Verdict:** During the Age of Reason/Enlightenment and early Scientific Age, the term “interpretation” acquired a slightly negative sense of human fallibility, superstition, irrationality as science, empiricism, and rationality pushed against religion, astrology, numerology, and local superstitions. Yet, despite scientific utopian dreams of a completely rational, logical, empirical, scientific civilization (e.g., Mr. Spock), interpretation remains very much a part of our daily lives, our humanity, our civilization.

Interpretation exists where humans must make decisions or conclusions about things which are not empirically certain, of which we do not have full and complete knowledge, or to which empiricism does not apply. X-rays and radiological films, and other diagnostic tests, are *interpreted* by medical professionals. A *jury verdict* (verdict: to speak the truth) is the conclusion reached from the jury’s interpretation of the direct and circumstantial evidence presented to them during trial and their common background of beliefs, life experiences, memories, and ideals.

- ✓ Science-fiction writers love this stuff; for example, RoboCop’s memory being admissible as evidence, or Philip K. Dick’s short story “The Minority Report” (1956).  
Someday, juries may travel in time to witness the actual events and decide.

The standard of a jury verdict is not absolute certainty, it is either *beyond a reasonable doubt*, or *by clear and convincing evidence*, depending on the matter. And there is not clear evidence that juries adhere to or understand either one, which is why there are appellate procedures. There is no appeal from an erroneous medical interpretation or failure to diagnose, but you can sue them.

---

*“When scientists attempt to formalize the principles of the empirical sciences, they use an interpretation to model reality, in the same way logicians axiomatize the principles of logic. The aim of these attempts is to construct a formal system that will serve as a conceptual model of reality. Predictions or other statements drawn from such a formal system mirror or map the real world only insofar as these scientific models are true.”*

– from Wikipedia article, “Interpretation (philosophy),” captured  
November 30, 2015

---

**An Interpretation:** Interpretations are the means by which life, and particularly intelligent star faring life forms, impose their reality on the local universe.<sup>1</sup> Interpretations are the ‘crack in the door’ through which intelligent life muddles the less than absolute truth of the expanding universe. Interpretations are the labels written in the sand in the sandbox.<sup>2</sup>

The core definition of “interpretation” is the assignment or determination of meanings in relation to something that is under consideration. Daily interpretations are based on intuition and judgment from experience within our cognitive and cultural schemas. Intuition and interpretation intertwine, nearly inseparable, in human intelligence. Interpretation is a primary act of sapience.

- ✓ “The ‘*Biological Brain*’ is a nonlinear tool that has been designed by millions of years of evolution to navigate an external world full of incompressible nonlinear dynamics. The ‘*Emergent Mind*’ is simply a reflection of how the brain is wired up. The brain tries to understand the external world by trying to build abstract nonlinear models; and it does this by trying to best fit the models to the available data (as we say in model speak)... In the real world, we used [sic] abstract models all the time to give us a qualitative understanding of something. A map of the London Underground is a perfect example. [Image of London subway map omitted, but you know what it looks like if you have ever seen an abstract subway, light rail or bus route schedule with a map.] This map is obviously not an exact representation of locations in physical space, but it is nonetheless a good enough model to give us a good understanding of the nature of the underground network. Similarly, at the subconscious level the mind attempts to build a qualitative, or ‘*intuitive*,’ understanding of everything in the external world. And it is the ‘*integration*’ of all this intuitive understanding that results in the ‘*Emergent Conscious Mind*.’...” – Kieran D. Kelly, “The Emergent Mind,” Incompressible Dynamics (blog) (<http://www.kierandkelly.com/>), captured February 16, 2019 (emphasis in original).<sup>3</sup>

- While ‘designed’ is a poor choice of words in the preceding quote, it was not offered here for that purpose. Writers really should not use ‘designed’ and ‘evolution’ in the same sentence in that way. And “wired up” – ugh! I recently mentally kicked myself for using “framed up,” gotta lose the up, keep it level. “Up” has long plagued the English language, Dean Inge used “peopling up” in 1919 in *Outspoken Essays*, “The Future of the English Race.”

GGDM is perhaps such an “abstract nonlinear model” that was necessarily flattened out and made as linear as necessary for the ‘real world’ as a simulation game.

- **Interpretation of History:** The caution with interpretations is the same as the caution with emergences – do not assume that it is always a favorable outcome for humanity either in the given moment or in the long term. History (and the current news) has shown that people will read a page and make it into whatever meaning suits them (unless it is highly technical writing), or as is commonly said, people hear what they want to hear and ignore all else (e.g., Simon & Garfunkel, “The Boxer” (1982)). This will happen in GGDM Interpretations (and even in the rules reading) as much as in the real world. In terms of blame, in each case, would it have made any difference if the writer or speaker were better at their craft, had been clearer in their writing or speaking, or is the blame on the audience? Or on the education system? Or on political ideologies? Or on human selfishness? This is a long debate reaching to all spheres of human civilization; sometimes it is tragicomic.

- ✓ “Like other Presidents, perhaps even more so, Mr. Trump tends to hear what he wants to hear at settings like this, either tuning out contrary voices or disregarding them. Through hard experience, other leaders have concluded that direct confrontation can backfire, so they have taken to soft-pedaling disagreements. Even Trump favorites like Boris Johnson, the populist new Prime Minister of Britain, tread carefully. On Sunday, Mr. Johnson expressed qualms about Mr. Trump’s trade war with China, but appeared to take pains not to offend the easily offended president. ... While the president relishes confrontation, he tends to avoid conflict in person, saving his vitriol for long-distance social media blasts.” – Peter Baker, “Rule 1 at the G7 meeting? Don’t get you-know-who mad,” New York Times, August 26, 2019.
- **Official Interpretation:** This entire game is an interpretation (a vision I offer), just as your life might be someone else’s bad dream. That goes nowhere, so let’s leave it over in the corner for now. Within this game, there are six (or seven, it’s a bit fuzzy) ‘game mechanics’ or ‘game devices’ that are officially considered Interpretations: Fundamental Realities, News Events (including Expose’ special News Events), Writs, Patents, Interventions, Meanings (including Shared Meanings), Collage.<sup>4</sup> An Interpretation must accompany each Power Activation and the default Interpretation is the News Event, for example, if Patent Prosecution fails.
  - ✓ A Thesis Statement issued by one position against another (see Disputation, 2 Reformation, p. 1391, *infra*) is not an official Interpretation. A Collage issued in resolution of a Reformation (see Here I Sit and A Soul from Purgatory Springs, 3 Reformation, pp. 1399, 1401, *infra*) is an Interpretation by the Concierge of Thesis Statements.
  - ✓ The Concierge does not have ‘Power Activations’ and uses Interpretations to guide.
- **Technodreams:** A Patent is only an Interpretation on the turn in which the Patent is successfully prosecuted. Thereafter, the Patent becomes part of the reality of the game. Thus, a position may not cite the use of the Patent on any subsequent turn to fulfill the requirement of having an Interpretation paired with each Power Activation.
  - ✓ For example, a new ship Patent is introduced into the game. On the turn the new ship Patent is introduced, it is an Interpretation and may be used to fulfill the requirements of an Interpretation accompanying the Technology Power Activation for that purpose. However, subsequently, the new ship Patent may not be used as the Interpretation accompanying each Construction Power Activation used to build the new ship type.

---

*“The history of sex-difference research is rife with innumeracy, misinterpretation, publication bias, weak statistical power, inadequate controls and worse. Rippon, a leading voice against the bad neuroscience of sex differences, uncovers so many examples in this ambitious book that she uses a whack-a-mole metaphor to evoke the eternal cycle. A brain study purports to discover a difference between men and women; it is publicized as, ‘At last, the truth!’, taunting political correctness; other researchers expose some hyped extrapolation or fatal design flaw; and, with luck, the faulty claim fades away – until the next post hoc analysis produces another ‘Aha!’ moment and the cycle repeats. As Rippon shows, this hunt for brain differences ‘has been vigorously pursued down the ages with all the techniques that science could muster.’ And it has exploded in the past three decades, since MRI research joined the fray.”*

– Lise Eliot, “Neurosexism: the myth that men and women have different brains,”  
Nature, February 27, 2019

---

*“[David] Rosenhan’s experiment shows how psychiatric and medical diagnoses are related to the labeling theory. This theory states that deviance is a product of external judgements, or labels, that modify the individual’s self-identity and change the way others respond to the labeled person.*

*By negatively labeling those seen as deviant from standard cultural norms, the behavior of individuals may be adjusted to coincide with the terms used to describe them. People actively label certain acts as deviant and others as normal, creating distinct stereotypes. In this article, Rosenhan uses hard labeling to argue that mental illnesses are manifested solely as a result of societal influence.”*

– from Wikipedia article, “David Rosenhan,” captured April 17, 2019 <sup>5</sup>

**Pseudo-patients:** In order to be released, the pseudopatients were required to sign papers agreeing with their psychiatric diagnosis and take anti-psychotic medications, e.g.:

- ✓ “All told, the pseudo-patients were administered nearly 2100 pills ... Only two were swallowed. The rest were either pocketed or deposited in the toilet. The pseudo-patients were not alone in this.” *Id.*

The absurdity of being required to agree with your psychiatric diagnosis is astounding and offensive: Has a cancer patient ever needed to sign a paper agreeing with their diagnosis (though cancer patients can be labeled ‘in remission’) to then be in remission? What if society decided you could be civilly committed or admitted for being an atheist, Luddite,<sup>6</sup> Protestant, Catholic, Jewish, Republican, Platonic, Gnostic, Nazi, environmentalist, skeptic, punk-rocker or just being opposed to the government and your own culture (see Soviet diagnosis of “Sluggish schizophrenia” and U.S. DSM-5 “Oppositional Defiant Disorder”), then had to sign a paper admitting to the diagnosis to be ‘in remission’ to be released? THX 1138 anyone?

- ✓ “Despite their public ‘show’ of sanity, the pseudo-patients were never detected. Admitted, except in one case, with a diagnosis of schizophrenia, each was discharged with a diagnosis of schizophrenia ‘in remission.’ The label ‘in remission’ should in no way be dismissed as a formality, for at no time during any hospitalization had any question been raised about any pseudopatient’s simulation. Nor are there any indications in the hospital records that the pseudopatient’s status was suspect. Rather, the evidence is strong that, once labeled schizophrenic, the pseudopatient was stuck with that label. If the pseudopatient was to be discharged, he must naturally be ‘in remission’; but he was not sane, nor, in the institution’s view, had he ever been sane.” – David L. Rosenhan, “On Being Sane in Insane Places,” *Science*, Vol. 179 (Jan. 1973), pp. 250-258.
- ✓ “In a sermon at Tehran’s Mosalla Mosque on January 17, Khamenei – the highest authority in Iran – said those who took to the streets had been victims of deception by foreign media and would not change the opinion of most Iranians.” – “Iran’s Khamenei Defends Military Amid Anger Over Downed Plane,” Radio Free Europe, January 20, 2020.

- This is only about one step away from the Soviet Union, one step away from classifying disagreement with the government as a form of mental illness: Those who are deceived by foreigner media are infirm of mind.

---

*“Since the time of Constantine, in fact, Western history has been plagued by the impossibility of policing belief rather than practice. After all, how do you decide what someone **really** believes, or does not believe?”*

– Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” Aeon, January 30, 2017 (emphasis in original)

---

**Dream Police:** Interpretations are very powerful things to individual humans as well as the masses. I spent a hot May afternoon working on a community garden with a religiously perfer-vid lady who interpreted everything moment by moment as a personal message from God and shouted it to the world. Frankly, she was driving me nuts, but I held my cool and started thinking about Karl Marx’ famous quote, “Religion is the opium of the masses.” It certainly seemed to apply at that moment. Later, based on circumstance I will not relate, I decided that she is really terrified of dying, despite what she says, and that her behavior was *bravado*.

Most of the time in our society today (in the ‘democratic West’), people are allowed to keep their interpretations – it is impossible to see inside someone’s mind (it drives control freaks nuts) and we can only guess from their actions, behavior, conversations and writings what they *truly believe* (and most people are not clear with themselves about even that point) – and we only try to alter another’s personal interpretations (or civilly commit them) when they are perceived as dangerous to themselves or others. The same problem that occurs in God, treason, romantic love.<sup>7</sup>

The current version of the Western preoccupation (obsession) with what people actually think rather than do – that lead to modern psychological (mental health) sciences as a medical practice and sprawling theory – originates with Christianity, to wit:

- ✓ “Some of these theological works focus on detailing heresies – wrong beliefs – of which there was already a rich variety. Because Christianity centred so much on beliefs rather than ritual behaviours, the policing of what did and did not constitute true and acceptable belief has always preoccupied Christian theologians and been a central dynamic in Christian politics.” *Id.*
- ✓ “Such disputes mattered, not least because Christians who believed the wrong thing would forfeit eternal life – or worse, ensure their own eternal damnation. Right belief, by contrast, opened the path to eternal salvation.” *Id.*
- ✓ “In the divisions of Anabaptism Luther sees a sign of its ungodliness. The Anabaptist limitation of baptism to the believer he considers entirely impossible, since the baptizer cannot look into the heart of a man to see whether he really believes. Such a baptism is a ‘baptism upon adventure’ (Mark 16:16), even if there is talk of ‘the sure faith;’ for the confession of the one to be baptized proves nothing, since he too is not ‘sure’ of his faith since he is of course not free of temptation. (One is impressed with Luther’s rejection of all anchoring of the grace of baptism in a human or emotional

activity such as ‘trusting and building upon oneself and not upon the word of God alone.’)” – from GAMEO<sup>8</sup> wiki article, “Martin Luther,” May 6, 2020.

Or, putting it another way, would modern mental sciences exist in their current form without the triumph of Christianity in the West? Up to about 1300 A.D. medical doctors were required to have clerical training and clergy and medicine, until the age of science, has long been intertwined. Is it then surprising that eventually mental states of humanity (e.g., psychology) – long the obsession of Christianity – became a medical science in the late 19<sup>th</sup> Century? Sanity or normality in modern psychological sciences is nothing more than ‘right belief’ with a new tag, and insanity is another incarnation of “damnation.”

- ✓ “Contrarian Theodore Dalrymple ... has frequently described modern psychology as a modern religion, or pseudo-religion. The medical establishment is the brave new priest class, while the anxious therapy patient replaces the penitent sinner. If so, then Dalrymple must be a heretic of the first order. On March 24, Encounter Books will release his latest ... in which he contends that psychology has done more to impede human self-understanding than to advance it. Moreover, deference to psychology has led to a culture of self-obsession and diminution of personal responsibility.” – Spencer Case, “Doubting Psychology,” [Review of Dalrymple’s Admirable Evasions: How Psychology Undermines Morality (2015)], National Review, March 21, 2015.

- ✓ See discussion of emotions, 2 Culture generally, *infra*. See also development of modern concepts of evil and emotions, Modernity Machines, 1 Technology, p. 696, *infra*.

---

*“For example, the fact described by the true statement ‘Paris is the capital city of France’ implies that there is such a place as Paris, there is such a place as France, there are such things as capital cities, as well as that France has a government, that the government of France has the power to define its capital city, and that the French government has chosen Paris to be the capital, that there is such a thing as a place or a government, and so on. The verifiable accuracy of all of these assertions, if facts themselves, may coincide to create the fact that Paris is the capital of France.”*

– from Wikipedia article, “Fact,” captured February 3, 2017

---

**Citing Wikipedia:** There is a general aversion in academia and professional circles to citing to Wikipedia articles, many or most schools and teachers and professional journals will/may not allow Wikipedia citations. Issues with citing to Wikipedia include amateur writing, editorial bias, editorial wars, the fact that the article may be changed later, and oftentimes, lack of verification and sometimes incorrect information. This is understandable, however, the majority of Wikipedia articles are written by unpaid people who are knowledgeable of the subject, and who genuinely care about the subject of their article and producing a good product. Other than hot button political topics, articles about celebrities and living political figures, or about specific products and trademarks, most Wikipedia articles are stable, informative, and generally well written.<sup>9</sup>

Additionally, regardless of your view of Wikipedia, you can look at the quote independent of the source, and see that the quote stands on its own merits for the purpose for which it was offered;

just because it came from Wikipedia doesn't make it incorrect, unusable, or a bad citation. Note also that the Washington Post and other media outlets have been occasionally citing to *Wikipedia articles* in the last few years, see discussion, 1 Diplomacy, EN 2, p. 1107, *infra*.

*“I realize that I’m only one person, telling one person’s story. And I realize that the plural of anecdote is not data. My experiences are largely supported by the data, but they aren’t universal.”*

– Greta Christina, “Puritan Pundits Should Chill Out – Here Are 5 Reasons I’m Happy I’ve Had Lots of Casual Sex,” *Alternet*, August 28, 2011 (emphasis added)

**Flavors of Fact:** Official interpretations should generally be regarded as facts within the current game in the same way that events in a story become facts to the characters in that story and to the audience even though they know or believe it is a work of fiction. Interpretations become ‘official’ by the process of:

- 1) Fitting within the definition and format of a particular interpretation type in the game,
  - 2) Being accepted by the Concierge (a liberal judgment call),
  - 3) And, *if necessary*, by also being ‘published’ in some form within the game.
- **Accepting the Diagnosis:** Oddly, it seems in the Rosenhan experiment, *ut supra*, that the psychiatric diagnosis only became ‘real’ when the patient accepted it by signing a paper agreeing to the diagnosis (so that they could be released). But medically, it was ‘real’ enough for the hospital to administer medications regardless of whether the patient agreed or not, or even took the medications. This is consistent with the way that mental phenomenon, including dreams, have been treated in the West throughout history, and consistent with the initial basis for the medicalization of mental treatments – they only become ‘real’ when they manifest themselves in either psychosomatic symptoms<sup>10</sup> or socially-criminally deviant behavior, or a threat of injury to self or others. The rest of the time, they are just æther.
- ✓ The acceptance requirement of ‘official interpretations’ by the Concierge is similar to the situation described by Rosenhan in his famous experiment, where the players are the psychiatrists and the Concierge the patient. However, the question has been raised in Skinner Box experiments with pigeons whether the student is training the pigeon or the pigeon is training the student? In GGDM, the position players accept Fundamental Realities dealt by the Concierge (as the psychiatrist must accept as factual in some manner what is being reported by the patient who is being diagnosed) and News Events are ‘accepted’ both when posted by the Concierge and when they can no longer be modified by the players (see 2 Dreamtime generally, *infra*).
- **A Thing Done:** A fact is a thing which is done, something that has actual existence or occurrence, the quality of being actual, or information that has objective reality.<sup>11</sup>
- Objectivist, positivists, and empiricism insist that facts are independent of humanity (e.g., gravity), however, it is axiomatic that appreciation of facts and application of facts in any way meaningful to us, cannot be independent of human perception and interpretation.<sup>12</sup>
- ✓ Another alternate definition of Fact: “Event, item of information, or state of affairs existing, observed, or known to have happened, and which is confirmed or validated

to such an extent that it is considered ‘reality.’” – Business Dictionary, [businessdictionary.com](http://businessdictionary.com).

This latter part of the definition is particularly relevant to Holocaust deniers, moon landing deniers, and those who think that millions of people voted illegally for the Democrat candidate in the 2016 Presidential election. My only response to these types is a suggestion that they acquaint themselves with the dictionary definition of “fact.”

- **Loud Barking:** Dogmatism is not fact, but is a ubiquitous part of our discourse (that’s a fact).
- ✓ Oxford Living English Dictionary at *dogmatic*: **1:** Inclined to lay down principles as undeniably true.
    - Raise your hand if you are guilty! (\*raises hand\*)
  - ✓ Merriam-Webster online dictionary at *dogmatic*, **1:** characterized by or given to the expression of opinions very strongly or positively as if they were facts.
    - E.g., “Only humans are made in the image of God, have fallen into sin, and are in need of salvation.” – David F. Coppedge, “Extrasolar planets: a challenge to biblical cosmology?” *Creation* 36(3):42–44, July 2014 ([creation.com](http://creation.com)). ☹ Really????
      - See Cardinal Baronius, 2 *The Sidereal Stage*, p. 117, 119, *supra*, for full quote.

Now ... that said, to what extent are my arguments and assertions in GGDM dogmatic? There is always a certain risk in trying to advance an argument or new possibilities, *to argue, one must very strongly express opinions*. In one of my worst arbitrations, we had a client who turned out to be a wet noodle on the stand; the case had to settle. Additionally, I think there is a fuzzy line between dogmatism and *a priori*; if a statement or assertion is generally accepted as *a priori*, then it is not dogma to those who accept it. Thus to the intelligent design believer and creationist, Mr. Coppedge’s statements may be considered *a priori*, and certainly not dogma. Yet, there are clearly statements and positions that are dogmatic, and a word needed to be invented long ago to describe them as a category of fallacy.

- ✓ Ted Koppel to Sean Hannity on CBS Sunday Morning: “You have attracted people who are determined that ideology is more important than facts.”

---

*“But, if you make opinion and fact synonymous you can do or say whatever you want because, in the immortal words of Jeffrey Lebowski, ‘yeah, well, that’s just like your opinion, man.’ ... Opinions, of course, aren’t facts.”*

– Chris Cillizza, CNN Editor-at-Large, CNN Politics, May 1, 2017 (referring to *The Big Lebowski* (1998))

---

*“Opinion has to earn the status of strict knowledge.”*

– Avi Sion, from abstract for his book *Phenomenology* (2005)

---

**Five Types of Facts:** Facts are not what they seem at first glance, they come in different flavors and shades. Judgment is the process of determining what sorts of facts are being presented and what they mean in the context of what is being decided; what weight or value alleged facts should be given to the matter under consideration.

There are approximately five classes or types of facts: There are Sensory Facts, Repeatable Facts, Accepted Facts, Deduced Facts and Uttered-Disputed Facts.

- ✓ Facts that appear currently in front of you, that is, sensory facts. Whether or not you are dreaming, awake or hallucinating or misapprehending sensory input is irrelevant to you, as, of necessity, what you sense at any moment is accepted as fact, normally without question. Your memory is fact to you, until disproven.
  - Consider this in the context of a broad range of situations such as magician and illusionist performances, movies, storytelling, video games, virtual reality, religion, ventriloquism, alcohol and recreational drug consumption.
    - **Doctor Who:** You know what the big problem is in telling fantasy and reality apart? ... They're both ridiculous. – Dr. Who, “Last Christmas” (2014).
  - I cannot imagine or credit that I wrote every single bit of this preposterous mimicry of intellectual endeavor. Yet, though I do not remember every single thought or keystroke, I know that I wrote and edited every version of GGDM all the way to this Final Version; the temporal continuity (i.e. Temporal Constructural Element) of memories over decades is fact *to me* until disproven. How would my design memory be disproven? Descartes come forth!
- ✓ Facts that can be proven by repeated and repeatable demonstration, such as physical laws, measurements, astronomical observations, and performance specifications.
  - For example, that the Earth is not flat. NASA has checked this out pretty thoroughly and most everyone is satisfied that the Earth is generally spherical.
  - In the dream-like movie Navigator: A Medieval Odyssey (1989), the characters who thought the Earth was flat reasoned that if evil were on one side of the Earth, good must be on the other side (envisioning the Earth like a coin, heads or tails).
- ✓ Things that are accepted as fact (having been actual at the time) due to the weight of other evidence deemed credible such as writings, photographs, artifacts, witness accounts, official papers, oral traditions, and so forth (i.e. history).
  - For example, the ‘fact’ that you were born. It is certain, from the common experience, that you do not remember being born. It is also certain from the common experience that you were born.
  - Here is the peculiar thing: The passage of time quickly renders many factual claims or narratives unfalsifiable. Contemporaneous records are lost, memories are lost, the rains come, people become tombstones. What we have then are narratives that cannot be disproven by any direct means and often compete with or are not quite in synch with other narratives. This is

what keeps historians up at night. We can only decide overall what seems more or less credible and given enough weight, those become ‘historical facts’ by general acceptance.

- ✓ Facts that can be deduced from other facts, or are necessary and fit within the framework of other accepted facts.
  - At law, there are certain claims which do not require direct evidence to prove; circumstantial evidence is sufficient. Courts are not required to be purblind or willfully ignorant when faced with lack of direct evidence. Similarly, early modern physics engaged in much of the same, the existence of subatomic particles was circumstantial.
- ✓ Facts that others uttered a factual claim (sort of meta-facts); where, while the claim may be disputed, that it was uttered or published by a particular actor or author at a particular time and place, is a fact,<sup>13</sup> e.g.:

- “It’s only true that the president said it, not that it was the truth.”<sup>14</sup>

It can also be a fact that someone has or has offered an opinion, but an opinion is not fact and is subject to dispute.<sup>15</sup>

- Those who wish to dispute that certain historical events happened, often resort to this type of argument, the admission that everyone says it happened, that it is “officially” accepted as history, that it is widely believed to have happened, but that it’s all distorted or, worse, made up (usually claimed to be a collusion between the Government and Hollywood). And so on.

There is a very short line at which this would be considered sophistry, for example, the Stanford Encyclopedia of Philosophy article “The Analysis of Knowledge” begins:

- “What does it take to know something? It’s not enough just to believe it – we don’t know the things we’re wrong about.”

I could contend however, that I know the things I believe, and I am not wrong about that.

Of necessity, official Interpretations are ‘facts’ or ‘laws’ in the game universe, they are not just another position’s *opinion*. They must be respected as facts. They are dreamfacts. That is, what are called interpretations and opinions in the ‘real world’ are facts to the speaker and more generally, to civilization, *opinions are fact in the third and fourth orders of natural phenomenon*.

- ✓ “Dreams of war, dreams of liars, dreams of dragon’s fire, and of things that will bite.” – Metallica, “Enter Sandman” (1991).

---

*“Known widely as Nazi chic, it’s different from the skinhead or punk swag you find in the West. The trend stretches beyond Korea – in China it was fashionable to dress up like Nazi officers in wedding photos, and a Hong Kong store once hung Nazi banners throughout their shop. In India, a Hitler boutique (with a swastika dotting the i) opened in Ahmedabad in 2012. In Indonesia, Soldatenkaffee, a bar named after a Parisian Nazi hangout and decked out with Hitler quotes and Third Reich flags, has (despite a temporary closure due to outrage) operated in Bandung since 2011; the Indonesia pop star Ahmad Dhani recently performed at a rally for 2014 presidential candidate Prabowo Subianto in Nazi regalia.*

---

*But the worst offender in Asia is Thailand. In 2007, some Thai students had a Nazi-themed parade, and in 2012 a school held an SS sports rally. Some Thai language books that use Hitler in their exercises [sic], and a Bangkok KFC knockoff briefly called itself Hitler and used the Führer's face in place of Colonel Sanders's. In 2013, the country's top university had to apologize when students painted a giant mural of superheroes that included Hitler, with which they posed **Sieg Heil-ing**. And naturally they have Nazi-themed pop groups as well."*

– Mark Hay, "Nazi Chic: The Asian Fashion Craze That Just Won't Die," *Vice*, February 12, 2015 (emphasis in original)

**Grinding Chic Fact:** *Facts* have a great pull on the human worldview and the ability to suspend disbelief. The two-decade run of grindhouse Nazi-exploitation films demonstrates the matter perfectly; had anyone before 1945 proposed making or actually made such a film, they would have been rejected on the basis of sick insanity, and would have failed in the market due to moral outrage and the inability of the viewers to suspend disbelief because no one would ever do those things, or even want to see them portrayed on film, even knowing it is all fake. But after the second World War, the Nazi-exploitation films of the 1960s and 1970s were still sick, morally outrageous, extremely gross – but there was one important difference: they were based (very loosely) on recent historical facts, the climb to audience suspension of disbelief was much shallower, and there was a fascination in a certain part of the population with portrayal of the sadistic and masochistic acts in pseudohistorical Nazi chic.

- ✓ Compare the foregoing to stories that were written about travel to the moon before any living creature from Earth had experienced the zero-G of low Earth orbit. In 1611, Johannes Kepler wrote a story called *Somnium* which presented a trip to the moon in a dreamlike sequence – because, how else would you get to the moon other than by consulting a demon and having a dream? The unpublished *Somnium* may have led to Kepler's mother – a disrespectful, cantankerous old woman according to Carl Sagan – being charged with witchcraft.
- ✓ By 1898 however, when HG Wells published *War of the Worlds*, the readership had no difficulty suspending disbelief of life on other planets, advanced non-human intelligences, aliens travelling from Mars to Earth, and the existence of microbes. As the story was not morally outrageous (even considering the destruction of cities...and millions of dead...), and a basis of facts, systematic knowledge, and accepted conjecture (e.g., Christiaan Huygens book in 1690 arguing the probability of intelligent life on other planets) existed that made the story acceptable within the worldview of the time, if at the same moment, still quite *avant-garde*.
- ✓ "Last November, the all-girl Korean band Pritz took a ton of flak for performing in provocative outfits. ... But the criticism about these new outfits was different from the normal questions about purity or branding. It was about how much they looked like Nazi uniforms. Pritz's outfits featured sleek-yet-heavy black dresses, high collars, and red armbands with a black cross in the center of a white circle – four short lines away from swastikas. Amid the inevitable castigation from South Koreans and foreigners alike for their insensitivity, the band's managers claimed that no one on their creative team had any idea the getups would be construed as Nazi-esque." *Id.*

*“The Dreaming... provides a moral authority lying outside the individual will and outside human creation... although the Dreaming as an ordering of the cosmos is presumably a product of historical events, such an origin is denied. These human creations are objectified – thrust out – into principles or precedents for the immediate world... Consequently, current action is not understood as the result of human alliances, creations, and choices, but is seen as imposed by an embracing, cosmic order.” – Myers, E. (1986)<sup>16</sup>*

## Endnotes.

<sup>1</sup> Commentary: What letters make up the word cat? Oh? Are you sure about that? When asked the question, “What letters make up the word cat,” many, if not most, literate English speakers will answer c-a-t with a certain indignation. But isn’t the answer really k-a-t? No? Who said so? Or perhaps I could answer t-a-c? Or c-a-a-t would not be more correct or incorrect than c-a-t as they contain the same letters. This goes to the essence of language, which is merely an agreed upon set of interpretations (in written form it is rules, grammar, punctuation, structure, and pronunciation – i.e. orthography of the language), and most of what passes for knowledge is merely language, while language struggles to express the most basic knowledge.

<sup>2</sup> Commentary: I am aware that either I may be accused of promoting “doublethink” or stating that “two plus two equals five” or that this game system might suggest the existence of a supreme being. None of this *matters* in the game.

<sup>3</sup> Commentary: The ability to identify truly emergent minds *in our civilization* is something that humanity is very terrible at currently (IQ tests are woefully inept); we are always caught by surprise (we have enough difficulty understanding the mind as emergent *ipso facto*). Many who are considered gifted, extraordinarily talented, prodigal and are pampered in their youth add nothing remarkable to our society as adults (in fact, the high intelligence of famous serial killers has been a study in fascination, *Google it*), while others who are overlooked, tip the apple carts over later in life, even if just once, when circumstances permit. We attribute this to some mystical wonder of the human mind, by various mechanisms, but in the end, we are lost because we don’t even know where we are. Perhaps there is a hidden boon in this though, because the ability to detect true emergent talents would entail all sorts of risks of oppression, misdirection, and engineering (e.g., *Brave New World* (1932), *Ender’s Game* (1985)) for political, religious and establishment purposes of the moment; no establishment-supported paradigm, organization, business model or arrangement wants its apple cart tipped by some unheard of emergent upstart.

- ✓ “The brain is one of the [most] complex structures we’ve ever tried to understand. It consists of 86 billion interconnected neurons that somehow conspire to bring about our mental lives. They do so by forming networks at various scales: local neural networks are themselves part of larger constellations that in turn form interconnected regions that constitute the brain. The result is a complex, dynamic system that has global properties which cannot be reduced to the properties of its building blocks.” – “Social Cognition and the Brain/The Emergent Mind,” U21 (universitas21.com), captured February 16, 2019.
- ✓ “Over the last 400 years Physics has become the science that we have come to rely on to explain the behaviour of the universe, but in reality the universe has a range of behaviour from simple to complex. And although mathematical physics is good at explaining the obvious linear dynamics of cause and effect, it turns out that it fails quite miserably when it comes to explaining the not-so-obvious nonlinear dynamics of ‘*Natural Evolution and Emergent Complexity*.’.. Physics is, in a sense, a science of linear dynamics, a science of ‘*dynamics without feedback*’; such dynamics are indeed easily compressible, but the real world is a world that abounds with feedback, a ‘*nonlinear*’ world full of ‘*incompressible dynamics*.’.. Fortunately for us Mother Nature long ago figured this out, and evolution set to work designing a biological tool to model complex nonlinear dynamics. [Note: In the simplest possible terms, linear dynamics are dynamics where the effect is proportional to the cause, and nonlinear dynamics are where the effect can be disproportional to the cause.]” – Kieran D. Kelly, “The Emergent Mind,” *Incompressible Dynamics* (blog), (<http://www.kierandkelly.com/>), captured February 16, 2019 (emphasis and note in original).

- While ‘designed’ is perhaps a poor choice of words in the preceding quote, it was not offered here for that purpose. Writers really should not use ‘designed’ and ‘evolution’ in the same sentence in that way.
- ✓ “My purpose in this article is to discuss the bearing of the new theories of mind upon the old and tantalizing mind-body problem. Recent writers do not seem to appreciate how the problem has been shifted, nor how completely the old classical solutions have been superseded. I think that in the future we shall not continue to hear much about interactionism, parallelism, epiphenomenalism, double-aspectism, etc., except as interesting historical theories. It remains, however, to inquire much more carefully and thoroughly than I can in this brief paper, whether the emergent theory will be adequate to cover the facts.

It is my belief that more progress has been made in the past fifteen years in coming to an understanding of the real nature of mind than in all the centuries since Aristotle. We are, indeed, coming back somewhat to his view, which was that the mind is the use, perfection, entelechy of the body. We are accustomed to hear about the points of difference between the Neo-Realists, the Pragmatists, the Freudians, and the Behaviorists, but the points of agreement are more significant. These schools pretty well agree in regarding mind as adaptive behavior, as specific response, as selective control; more exactly, as that integration of vital processes which enables an organism to respond as a unit to a new situation in such a way as to conserve and enhance its well-being....

In defining the mind as that organization of vital processes which makes adaptive behavior possible, it is mind that I am speaking of and not consciousness. Endless confusion and misunderstanding would have been avoided, if psychologists and philosophers had steadfastly used the word ‘mind’ to denote this kind of behavior, this sum of capacities, and not the word ‘consciousness.’ It was most unfortunate that in the last decades of the last century, when suspicion began to attach to the words ‘soul’ and ‘mind,’ psychologists fixed upon the word ‘consciousness’ to stand for the psychological life in general. ... In recent years this relation is becoming clear. I shall refer presently to consciousness in its relation to the body, but at present I am speaking not of consciousness but of mind.

It is, therefore, with a decided feeling of relief or even of emancipation that we discover that the new conception of mind sets us free from all the old so-called ‘solutions’ of the mind-body problem, from interactionism, from parallelism, from epiphenomenalism, from the double-aspect theory, from subjectivism, and from materialism. I believe these ‘isms’ have been superseded. So also probably has the expression theory, the transmission theory, and the instrument theory. The brain is not the instrument of the mind. Rather the brain is the instrument by means of which nature achieves the mind. Mind and body do not interact, as interactionism and dualism teach. The mind is not a form of the mechanical interplay of atoms, as materialism teaches. The body is not a phenomenon or appearance or externalization of mind, as idealism teaches. Mind and body are not parallel as psychophysical parallelism teaches. Neither are they two sides or aspects of the same reality, as the double-aspect theory teaches. You cannot represent the relation of mind and body by any system of parallel lines, whether merely parallel, interconnected, or correlated with a third line, nor by two lines one of which is the shadow of the other. Mind is something which the body achieves, or which nature achieves by means of the body. If you must have a diagram, the ladder will be better than the parallel bars. When nature achieves the molecule, the atom ceases to be the thing of primary importance, worth, or even of reality. When nature achieves the cell, the molecule is eclipsed. When the organism is achieved, the cell is eclipsed. When mind is achieved, the body is eclipsed. Mind is a new reality, gained, achieved, won. It is, in Aristotelian phrase, the form of the body.

Evidently, if we want a name for this new notion of the relation of mind to body, we may call it the emergent theory. Mind emerges from the body. The theory of levels has taken the place of parallelism, interactionism, and the double-aspect view. It is hard to say which of these theories was the most unsatisfactory and the escape from them is wholesome. All the dualistic theories were unconvincing. There is no magic about the number two. Nature having achieved two, goes on to three and four. The monistic theories were little better, although, if mind be the supreme reality, there is a sense of the word ‘reality,’ which admits of a monistic interpretation, a monism of value perhaps. But the pluralistic view of reality is most satisfactory. Mind is real, consciousness is real, body is real, and so are many other things.” – G.T.W. Patrick (George Thomas White Patrick), “The Emergent Theory of the Mind,” *The Journal of Philosophy*, Vol. 19, No. 26 (Dec. 21, 1922), pp. 701-708 (available for free on JSTOR).

- ✓ “Metaphysics, said the late nineteenth-century idealist philosopher Bradley, is the finding of bad reasons for what we believe on instinct; but metaphysics has changed in the meantime, and is now the finding of bad reasons for what we cannot possibly believe however hard we try. All I can say is that the disbelief in the reality of consciousness or personal identity has never prevented anyone from copyrighting his book in which that unreality is argued; and I very much doubt that any author of such a book has ever been completely indifferent as to the bank account into which its royalties were paid.” – Theodore Dalrymple, Admirable Evasions: How Psychology Undermines Morality (2015).

<sup>4</sup> Commentary: Thus, this game is the opposite of a ‘math exercise.’ It is also not a ‘language syntax exercise.’

<sup>5</sup> Commentary: This summary is a fair reading of the original article which I retrieved from the Wayback Machine some years ago.

<sup>6</sup> Commentary & Citation: Soviet Marshal Grigory Kulik is described in Wikipedia as a conservative officer, incompetent, Stalin-sycophant, “murderous buffoon,” who interfered with the modernization of Soviet forces, resisted mechanization and opposed tank production. In a Ranker article, he is described as a “military Luddite” linking to Roger Moorhouse’s The Devil’s Alliance: Hitler’s Pact with Stalin, 1939-1941 (2014) on Google Books where Moorhouse describes him as a “buffoonish liability,” “bullying incompetent,” possessed of “startling incompetence” and “antediluvian attitudes,” and that he “seemingly yearned for the simplicity of an earlier soldiering age.”

- ✓ I worked at a law firm once beginning in 2008 that did not have direct deposit for paychecks, despite years of promises. Their excuse was that it was very difficult to set up and their accountants didn’t know how. I called them out on their nonsense excuses by pointing out that the U.S. Marines instituted mandatory direct deposit when I was in Okinawa, Japan in **1986**. By 2008, 22 years later, direct deposit wasn’t new, or any great mystery and the firm was either lying or incompetent in the most basic, routine administrative tasks.

<sup>7</sup> Commentary: This discussion is continued in Pieces of April and The Happy Hurtle, *et seq.*, 4 Culture, pp. 408-409, *infra*.

<sup>8</sup> Citation: GAMEO – Global Anabaptist Mennonite Encyclopedia Online.

<sup>9</sup> Commentary: It is unlikely that the low brains who spend their valuable free time vandalizing and editing certain Wikipedia pages to fit their current political, conspiratorial, sexist, or racist fantasy – instead of reading actual intellectual and educational books – will have heard of topics such as the Taiping Rebellion, metaphysics, the Laws of Logic, Kepler’s Three Laws, or the Dragonfly 44 Galaxy. Thus, those types of pages are probably safe.

<sup>10</sup> Citation: e.g., “One night when Gubara was almost eighty years old, he was woken by a knock on his door. It was a pair of policemen, there to inform him that his studio had been confiscated by the government. Gubara was incredulous; but they’d brought proof. He looked at the letter they showed him, then looked up to the ceiling where moments before a neon lamp had been. Now there was only a thin line of light. The news had caused a psychosomatic reaction referred to as hysterical blindness.” – Nadja Kornith, “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun (bidoun.org), Issue 20, Spring 2010.

<sup>11</sup> Citation: Merriam-Webster online dictionary at **1: a & b, 2:, 3:, and 4:**

<sup>12</sup> Commentary: Phenomenology then, appears to be the study of when and how facts occur or the generation of facts, and in what flavors they come. What sets phenomenology apart from what came before is its acceptance of looking and appearance as a *basis of fact*, and thus, fact is embraced in all of the orders of natural phenomenon (see Aspects of Sociology, 2 Culture, p. 371, *et seq.*, *infra*) *equally* to the extent that they can appear to us in some form. Within GGD, official interpretations are the axis of looking and appearance of facts in the game.

- ✓ The problem with third order facts from a medical point of view is that they only appear to the patient. Medicine was made to treat second order phenomena (“the vital organic”) and is not equally suited to the treatment of third order phenomena (“the mental organic”), and is completely unsuitable to address either of the other two orders (“the inorganic” and “the super-organic, or social”). Thus, third order ‘disease’ or ‘disorder’ is only known when it manifests itself in unusual behavior and criminality and has not been accepted as factual otherwise.
  - This second-third order (or in the old sense, perhaps the mind-body division) dichotomy, incidentally, is why mental health treatment has divided into two distinct groups: the medical doctors (i.e. psychiatrist and neurologist) who can prescribe medications render medical opinions, and the non-doctors (i.e. psychologist, therapist, and counselors).

- ✓ I woke up this morning and immediately as I got up started thinking of this (and I have no idea why; was I dreaming it, is the origin external? Almost as if by external prodding?) and it shortly manifested itself in this writing; this is not unusual behavior for me, but may be for much of the rest of humanity, and it's not criminal in most nations unless the thoughts manifesting themselves are against the government, cultural prohibitions or the domestic tranquility and good public order: As James Baldwin pointed out, "A reasonably sensible man is satisfied with thinking."

- Has this phenomenon always been there? In the not too distant past, such 'external prodding' would have been taken as supernatural, divine or satanic, depending on how presented; e.g., Saint Francis of Assisi or St. Ignatius of Loyola, both of whom would likely be placed in a psychiatric hospital now, many Biblical figures (who would be in the same hospital with them), or even people executed for being seers, oracles, witches. Nowadays, it is ancient alien spirits and various other inventions channeled to explain such phenomenon for some individuals or groups, e.g., The Urantia Book.

<sup>13</sup> Commentary: At an arbitration in Manhattan where I was working one day, a witness was shown an excerpt of a Congressional Investigative Report, which was read into the record. The witness did not agree with or like the conclusions of the report, but was forced finally to admit that, yes, those were the words printed on the page and that they had been read correctly, and that it did appear to be a legitimate Congressional report.

<sup>14</sup> Citation: Aaron Blake quoting unnamed source familiar with Sondland's expected testimony, "Gordon Sondland is about to blow a hole in Trump's Ukraine defense," Washington Post, October 13, 2019.

<sup>15</sup> Commentary & Citation: I was fortunate when I asked my Clarence Marsh Case question on the Philosophy Forums in February 2019 (see 2 Culture, EN 9, p. 375-376, *infra*), to find someone who was actually interested in philosophy of social sciences. Over the course of a few days, the thread basically became a conversation between myself and user Galuchat, who is an academic in the south of England and didn't seem to mind my posts quoting from original materials or carefully written arguments. Within a short time after that conversation concluded, I discovered the basic flaw of the Philosophy Forums: The regular posters rarely refer to or quote original material and often don't seem to grasp exactly the issue they are arguing (they also don't fully read what is written before jumping in with knives in each hand, just like regular people, just like I've done in my youth); and they are offended or don't know how to respond when someone quotes source material in making arguments on the forums. Perhaps it was because I was new on the forums arguing in threads with the old boys club (which would also be a problem of human nature), but I am sure that my posts quoting source materials were ignored (or that they offended) because the people arguing there don't know how to respond to well-written posts, they have no source materials of their own to quote and my posts were not in accord with the casual free floating, source-free opinion style of argument on the forums. I came then to appreciate again a bit of Cicero from Rhetorical Theory class:

- ✓ "In fact controversy about a word has long tormented those Greeklings, fonder as they are of argument than of truth." – Marcus Tullius Cicero, Of Oratory (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, The Rhetorical Tradition (1990), p. 207.
- ✓ Alternatively: "A controversy indeed on the word ORATOR has long disturbed the minute Grecians, who are fonder of argument than of truth" – Cicero on Oratory and Orators (1875, reprinted 1970), Translated by Rev. J.S. Watson, p. 18, found on the Internet Archive (archive.org) March 19, 2019.
- ✓ For context, I come from a civil legal professional background. Hardly a paragraph is filed (except for the Complaint) with the court in pleadings without citation to case law, orders, rules, testimony, exhibits, Bates-numbered documents, discovery responses, or prior pleadings in the case. We had an attorney who worked previously as a clerk to a judge; he said that when they received briefs he would skim through the pages to see whether the party cited sufficiently to case law in their arguments, if not, the brief was tossed aside. Briefs without citation to prior case law or rules are useless. Similarly, when going to court, attorneys bring notes, citations, and copies of pleadings and whatever else is needed, they come prepared.

*See Appendix NEWS – News Event & Modification Example*

*“Truth Decay is defined as a set of four related trends: increasing disagreement about facts and analytical interpretations of facts and data; a blurring of the line between opinion and fact; an increase in the relative volume, and resulting influence, of opinion and personal experience over fact; and declining trust in formerly respected sources of factual information.*

*Four drivers, or causes, of Truth Decay are described: cognitive bias, changes in the information system (including the rise of social media and the 24-hour news cycle), competing demands on the educational system that limit its ability to keep pace with changes in the information system, and political, sociodemographic, and economic polarization. Various agents also amplify Truth Decay’s trends.*

*The consequences of Truth Decay manifest in many ways. The most damaging effects might be the erosion of civil discourse, political paralysis, alienation and disengagement of individuals from political and civic institutions, and uncertainty about U.S. policy.”*

– Jennifer Kavanagh and Michael D. Rich, Rand Corporation,

[https://www.rand.org/pubs/research\\_reports/RR2314.html](https://www.rand.org/pubs/research_reports/RR2314.html), captured January 18, 2018

**No Noose is Good News:** Surely, it is no coincidence that Truth Decay sounds to the English speaker like, “tooth decay.”

A News Event is the *default Interpretation* related to each of the source positions’ Power Activations that is ‘broadcast’ to all of the players in the game through the use of the News Event game forum (each new News Event is a top level thread).

- ✓ There are some instances in GGDM where another Interpretation substitutes for the News Event on the Regular Turn the Power Activation occurs. These allow ‘invisible’ Power Activations that may be deceptive to the ‘card counting’ type players who watch to see how many Powers are activated by each position each Regular Turn.

The player submitting the Regular Turn Actions for their position will provide the full text of all required News Events in the correct format, which will be posted to the forum by the Concierge when the Actions are processed. While many online games have a forum where players can post comments about and discuss the game, the forum in this game is part of the game, not just about the game, so pay attention, or you may soon find that, “A funny thing happened on the way to the Forum...” (Roman farce, Broadway musical & film, 1966). All News Events must contain the following elements:

- **The News Brothers:** Each News Event must contain the issuer, i.e. the name of the position from which it originates. The issuer of the News Event will be published on the forums with the text of the News Event (for the purposes of retaliation – err, reaction to the News Event by other positions). It’s like an official press release – they can’t be anonymous. News Events cannot have fake issuers – if you want to blame something on someone else, see Plausible Deniability, 3 Special Operations, p. 1314, *infra*.
- **Power News Hour:** Each News Event must indicate to which Power Activation it applies. This does not have to be in the text of the News Event, and it will not be published on the forums (as that would constitute unnecessary ‘free intelligence’ for the rest of the players).

The only purpose of this component is so that the Concierge may judge if the proposed News Event ‘reasonably relates’ to the Power Activation to which it belongs and to insure that there is an Interpretation properly paired with each Power Activation.

- Truth or Dare: Each News Event must include an indication as to whether it is being presented as (absolutely) True or False by the issuer (aka, ‘spin’). This component will be published on the forums as it is information necessary for other positions to react to the news.
  - ✓ The Concierge and players should be aware of the *non-sequitur*; it informs humanity’s view, both collectively and individually on a daily basis, of the universe. None are spared.
- Text Message: The News Event must contain a short text blurb which describes the news and is reasonably related to the Power Activation to which the News Event relates. A News Event may be as simple as ... text which simply states what occurred during the Power Activation ... or it may be something a little less truthful/more creative/artful. The presentation of a News Event as absolutely true or false has little bearing on the actual truth or falsity of the event described in the text message (the Concierge may exercise discretion here).
  - ✓ Merriam-Webster online dictionary at *journalism*: **2:b** writing characterized by a direct presentation of facts or description of events without an attempt at interpretation.
    - So here’s the headspin: News Events in GGDM report ‘facts’ (i.e., Power Activations or even in some sense, made-up game facts for storytelling<sup>1</sup>) and must be reasonably related to the Power Activation with which they are paired ... but they are also official Interpretations, *imposed* as ‘facts’ on the game universe, see Official Interpretation and Flavors of Fact, 1 Dreamtime, pp. 130, 134, *supra*. The tail that wags the dog. *Check?*
- News You Can Use: The subject or target of the News Event does not always have to be the issuer of the News Event, it may be adversely targeted at other positions. But it must always be related to a specific Power Activation (in terms of subject) of the issuer of the News Event, even if that Power Activation has no relation or effect on the target of the News Event (but it’s a fuzzy kind of thing, you know, a judgment call, an interpretation). The Concierge may reject or modify News Events targeted at other positions, based on his superior knowledge, if those News Events are deemed to be either impossible based on the Fundamental Realities and other factors of the targeted position, or if they are inconsistent with the evolving storyline of the game. The Concierge will exercise this authority *as rarely as possible*, preferring to give the most liberal possible interpretation to News Events.
  - ✓ Exploding Kittens not exploding?
- News Effect: A News Event must describe a concrete effect on the game, which is immediately applied to the game. The ‘effect’ of a non-adverse News Event that simply reports the Power Activation to which it is related is the Power Activation, and nothing else (a feedback loop). The further a News Event deviates from the Power Activation to which it relates, the more likely it will require some kind of an effect description. Adverse News Events targeted at other positions always require an effect. The effect should be clearly described in the text of the News Event. The effect of the News Event is considered immediate.

- ✓ “A feedback loop is a term commonly used in economics to refer to a situation where part of the output of a situation is used for new input.” – Financial Times Lexicon, captured October 8, 2017.

---

*“Arthur C. Clarke’s famous phrase that ‘any sufficiently advanced technology is indistinguishable from magic’ certainly applies to tech’s impact on politics and society. While technology can greatly improve how or what we do as humans, it cannot yet change human nature. Social media has made people more able to maintain relationships, but it hasn’t led to better relationships. ...*

*Social media websites like Facebook, Twitter and Instagram certainly make it easier and cheaper to spread ludicrous beliefs, but these ideas existed long beforehand. The critical difference between now and 15 years ago is not the existence of social media platforms but rather that more and more people have decided to build businesses on selling nonsensical stuff to people who want to believe it.”*

– Matthew Sheffield, “Fake News: Much more than Facebook scams and Russian trolls,” Salon, September 27, 2017 <sup>2</sup>

---

**The Taxil Hoax:** Mr. Sheffield chose his words carefully because he knows it’s not a new phenomenon. For example, Léo Taxil who lived in late 19<sup>th</sup> Century France, made a career first out of satirizing and criticizing the Church and clergy, then converted to Catholicism, met the Pope personally and went on to spin wild unfounded tales about the Freemasons, whom the Church opposed.<sup>3</sup> He sold thousands of books filled with nonsense and falsehoods, continually pushed the envelope of sensationalism and creative fact-making, and filled dinner halls with gullible people who paid to hear him speak.

His career, probably not coincidentally, coincided approximately with the Dreyfus Affair and rampant anti-Semitism in France, and the beginning of tabloids. He was in short, a journalistic huckster in falsehoods. Finally, after promising to produce a witness in person at a lecture hall in April 1897, he admitted the entire run was a massive hoax, his conversion to Catholicism was a hoax, and thanked the angry audience.<sup>4</sup> He was escorted out by police in what must have been a near riot, and moved away. He died ten years later.

Information was gathered from Wikipedia articles, “Léo Taxil” and “Taxil Hoax” January 26, 2019, though I have known of this for many years previous. I especially recommend reading his interview confession published in the National Magazine, an Illustrated American Monthly, in September 1906 (he died six months later), which can be found in the Wikipedia article, “Taxil Hoax.”

- ✓ While Mr. Taxil’s strong self-serving, self-justifying 1906 public confessional will drive ethicists to fits, they also contain a sad and useful observation of public gullibility (and the state of journalism), at least in the late 19<sup>th</sup> Century. Taxil’s comments gain credibility when considered in conjunction with other late 19<sup>th</sup> century phenomena such as Joseph Smith and the bizarre murderous career of H.H. Holmes; suggesting that Western populations in the late 19<sup>th</sup> century displayed an unusual level of credulity, probably a result of social customs, education and worldview.

- ✓ Mr. Traxil’s confession goes some long way toward explaining supermarket checkout line tabloids; the ones that hawk stories about UFOs and all sorts of weirdness. There are two sorts of tabloid viewers, the ones who find humor in the utter ridiculousness of their front page claims – the best one ever for me read, “Vampires in the US are dying of AIDS” (although the recent claim that NASA has a child slave colony on Mars is, per Mashable, enough to melt your brain) – and the ones who take tabloids entirely seriously, as if they were some sort of ‘underground press,’ printing truths that others would hide. I knew one of the latter type in my youth. But this pales in comparison to the number of people who follow – and believe – the bizarre bile conspiracy theories sent over the airwaves by certain modern talk-show hosts after the FCC withdrew the Fairness Doctrine. Still, there is a common thread from tabloid nonsense to modern political conspiracy theory and echo-chamber talk shows.

---

*“The brain is a microcosm, creating its own stories. People then live out these stories.” – Seiichi Kirima, Boogiepop Phantom (2000)*

---

*“Human nature denies the past in order to justify the present. But do you believe there is anything in the present worth justifying?”*

*– Boogiepop, Boogiepop Phantom (2000)*

---

**The Nature of News Events:** Although players can and most likely will use News Events as weapons against each other (these are called adverse News Events throughout GGDM), the News Event is not ‘caused’ by the issuer, rather, players should treat News Events as merely being reported by the issuer, whatever the outcome. News Events are neutral in nature, they represent entropy in the universe, and serve as a vehicle for players to create part of the background of the game and even engage in ‘storytelling’ (even if that story is the use of News Events as a weapon). Because News Events are not ‘caused’ by the issuer, they therefore, cannot be considered as inconsistent with any Meanings or Shared Meanings (see 3 Diplomacy generally, *infra*) that are held between the issuer and the target (though using News Events against Shared Meanings might be considered passive-aggressive behavior...playing outside the lines...stepping out).

- ✓ “We got the bubble-headed bleached blonde, comes on at five, she can tell you ‘bout the plane crash, with a gleam in her eye, it’s interesting when people die...” – Don Henley, “Dirty Laundry” (1982).

Note that News Events don’t need to be introduced to ‘explain everything’ that occurs in the game. This would be a fallacy against fuzziness. Sometimes things just happen, and the mystery serves better than the explanation. The excessive compulsion to explain everything and tie up all loose ends is a fallacy into which some famous fiction franchises have fallen.

- A Story of V: Retaliation against a News Event should only be in the form of a News Event and should not occur ‘in the game’ (by activation of the Combat Power to attack the issuer, to ‘kill the messenger,’ for example) as the *issuer* of the News Event is not the *cause* of the News Event (such actions should be considered poor decorum).

However, a distinction must be made between: 1) retaliation in-game (e.g., Combats, Break Treaty, etc.) *against issuers* of News Events and 2) perceived retaliation *by issuers* of News Events against in-game actions.

- ✓ For example, Position A launches a Raid or Strike against civilian targets at Position B's colony (see 4 Carriers & Fighters generally, *infra*), it is *colorable* for Position B to subsequently issue a News Event indicating that some peaceniks of Position A's government or population object to killing civilians, with a reasonably-related effect.
  - Merriam-Webster online dictionary at *colorable*, **1**: seemingly valid or genuine. The most common example now is 'colorable argument.'

This would actually be part of the natural storytelling flow of the game. Again, Position B is not the *cause* of the News Event (actually, Position A is) and should not suffer in-game retaliation by any other position for it.

---

*“Why these numbers matter: If we lose the confidence that good ideas will overtake bad ones in the marketplace of ideas, if we lose the sense that we may disagree with offensive comments our neighbors say but we'll defend to the death their right to say them and if we lose the willingness to honestly debate hard issues, then the United States will keep becoming more tribal and, eventually, less free.” – James Hohmann, The Washington Post, October 23, 2017*

---

**Keep the Sand in the Sandbox:** This game is for the players, and the Concierge will not intervene in player disputes about the fair use of News Events (however, News Events must follow standard forum/journalistic rules regarding acceptable language and decorum<sup>5</sup>). While there is a potential for great abuse of News Events (home planets blowing up mysteriously, and such), News Events are self-policing (as GGDM is designed to be self-policing and minimally invasive<sup>6</sup>), in that what one position can do with News Events, another position can do equally in retaliation, until either the players have wrecked the game through lack of restraint, retaliation, and escalation (sort of like, you know, what we do on Earth), or the players establish a standard, a *stare decisis*, a body of rules and precedents on what constitutes acceptable uses of News Events.

It is strongly suggested, *as an insulation against game silliness*, that News Events never be allowed to work *dues ex machina* effects as follows:

- ✓ A News Event may not work to conquer, steal, or take ownership of anything from another position. If you want to do that, you have to get your hands dirty and send in the war fleets. News Events may often be used to 'make something out of nothing' but cannot be used to take something that already exists from another position.
- ✓ A News Event may not work to directly elicit intelligence, it may not substitute as a Special Operation or intelligence question. There is, however, an overlap such that News Events may frequently act as Special Operations Black-ops or Counter-Operations, tit-for-tat.
- ✓ A News Event (except by the Concierge) may not be used to eliminate a position from the game (i.e. cause extinction) or to declare the end of the game, or to declare anyone the victor or to otherwise improperly influence the end or victory in the game.

- ✓ A News Event (except by the Concierge) cannot be used to simply make a star or planet ‘not exist.’ News Events can be used to make very bad things happen to stars, planets, whatever (all in generally poor taste), but they simply cannot ‘not exist’ once they have been discovered through exploration in the game (even if the newsmaker owns it).
  - ✓ A News Event may not be used to start, create, cancel, delete or modify another Interpretation (e.g., Kairotic Moment, Reformation, Writ, or Patent). That is, you cannot just ‘undo’ someone’s Patent with a News Event that says it doesn’t exist, nor can you ‘wish away’ a Kairotic Moment, Reformation or Thesis Statement when it is no longer convenient.
  - ✓ A News Event (except by the Concierge) cannot be used to instantly Convert or Naturalize an **alien colony**, or to cause it to defect from its current owner to another position.
  - ✓ A News Event cannot be used to cancel or delete, or even modify, a Fundamental Reality or add or remove Monads from any Public or Diplomatic Space.
  - ✓ A News Event cannot be used to create or make something exist in violation of the basic rules of the game. An exception might be made to this rule if doing so would be intriguing or of great interest to the game, but it should only be done after consideration and consultation with the Concierge.
  - ✓ A News Event should not retcon (‘retroactive continuity’) established history like a bad movie series or comic book. And please avoid nuking the fridge.
- Fancy Foreign Words: *Stare Decisis* is always the case cited by the next guy who gets caught. Apple, Inc. overlooked trademarking Steve Jobs’ name. Two brothers in Italy looking to open a clothing company started using Steve Jobs as the name of their company because they discovered it wasn’t trademarked; Apple sued them in European Court. In December 2017, Apple lost the suit even though defendants admitted freely that they intended to exploit and benefit from Steve Jobs’ name recognition (and used a similar logo, a J with a bite mark, like the Apple computer mark) without either his permission (or Apple’s permission) and without paying him or anyone for it. Presumably, if the name had been trademarked, they would have chosen another name and logo for their company. The next defendants in a similar situation will cite to this case decision when arguing they did nothing wrong.
- ✓ “*Deus ex machina* means ‘god from the machine.’ In Greek plays, no matter what happened, everything was solved in the end when a god (played by an actor strung up on ropes over the stage) came down and changed everything. In an RPG, it’s the same idea. Under *deus ex machina* GMs, the game’s rules, world, and story are all changed on whim, often several times per game. This problem often goes hand-in-hand with Monty Haul troubles: The GM gives away tons of treasure, then has NPC gods take it all away again. This is the poorest way to manipulate plots, and few players stand it for long.” – Steve Maurer, “The Pitfalls of Game Mastering,” *Dragon Magazine* #170, June 1991 (emphasis in original).
- Diplomatic Protest: A position that is the target of a News Event may file a Diplomatic Protest with the Concierge against the issuer within 24 hours of the posting of the News Event

by sending an email. The Diplomatic Protest will not be posted to the forums, unless requested.

A Diplomatic Protest does not require the activation of the Diplomatic Power, or any Power, and is not an Interpretation. Upon *acceptance* of the Diplomatic Protest, the Concierge will assess an Intervention Potential against the protestor and an Intervention Potential Plus (IP+) against the issuer of the News Event (another feedback loop of sorts).

- ✓ Diplomatic Protest has nothing (other than very generally) to do with the Diplomacy Power in GGDM.

*Hostility is not an argument.* For example, the anti-feminism I witnessed growing up in the 1970s consisted mostly of moustached, naked hostility, crude humor, and low-brow, below the waist line commentary – as is often the case in disputes between the sexes. Anti-feminism was not led by men of intellect and education writing eloquent truths (and certainly not by Bobby Riggs), rather it was a general hostility enforced by institutional and social discrimination. In reaction, political correctness and anti-discrimination legislation was introduced into the public consciousness. Thus, *a protest to a News Event should not consist merely that the target position doesn't like it*; the protest must be something more substantial regarding abuse, game wrecking, or bad decorum from the issuer of the News Event.

- ✓ “Any gun looks impressive when it fires blanks and makes a lot of noise.” – Prince Rudolf (Omar Sharif), Mayerling (1968).
- **Seconding That:** Any other position may second the Protest by sending an email within 24 hours of the original Diplomatic Protest email. A second to a Protest will cause the Intervention Potential assessed against the original protestor to be removed. A third to the Protest will add one Intervention Potential against the original issuer of the News Event. All subsequent support for the Protest will be ignored.
- ✓ Martin Luther protested diplomatically (in the manner of his times) abuses of Church power in 1517. His protest was seconded by burghers and some Electors of the Holy Roman Empire, whose protection he needed. He later protested the uprising of the peasants against the Electors and magnates that became the German Peasant's War (1524-1525) and was seconded in that by the magnates and Electors of Germany whose support he (thought he) needed more than the support of the masses of peasants. *When you act because you need support* instead of because something is ‘right’ you are a politician (essentially, that's the definition); by 1524, Martin Luther was a politician, if not before, if not always. Within ten years Luther was marginalized.

---

*“Act only according to that maxim whereby you can at the same time will that it should become a universal law.”*

*“Act as if the maxims of your action were to become through your will a universal law of nature.”*

– Immanuel Kant, First Formulation of the Categorical Imperative

---

**Universal Legislator:** Perhaps another way to think of Interpretations in GGDM is by way of Immanuel Kant's *universal legislator*. Kant's First Formulation of the Categorical Imperative, above, is especially relevant.<sup>7</sup>

In GGDM, the acts of the players via Interpretations become the universal laws of the game, even if only history – history may be regarded as a universal law in the same way as gravity: history will always exist, ever-present because of the directional flow of time (though there is a question of whether it is history if no one is there to record it?), see Temporal Constructural Elements, 1 Constructural Elements, p. 173, *supra*.

Kant's Third Formulation continues in part: "the idea of the will of every rational being as a universally legislating will," and in the Kingdom of Ends, he states, "Act according to maxims of a universally legislating member of a merely possible kingdom of ends." GGDM through various Interpretations makes the players the universal legislators of the game universe.

Page | 150

There are some critics who charge that Kant's Categorical Imperatives are simply a rephrasing of the Golden Rule: "Do unto others as you would have them do to you." The Golden Rule can certainly also apply to GGDM (e.g., News Events, Diplomatic Protests), and is linked to the previous discussion of *stare decisis* in the game (*ut supra*). The Golden Rule, however, is never sufficient by itself to apply to all situations or religions, whereas Kant's Categorical Imperatives and universal legislator present a more complex, formal and nuanced system for resolving the ethics of acts.

- ✓ In Prof. Peter Suber's 1982 game "Nomic" the collective acts of the players change the rules of the game; as a group, the players act as universal legislators in the universe of the game. That is, in fact, the point of the game, players score points for changing the rules.<sup>8</sup> Nomic was intended to demonstrate the politics of self-amending systems, such as the U.S. Constitutional government. I believe there is a strong continuity from Immanuel Kant (d. 1804) to the U.S. Constitution,<sup>9</sup> and "Nomic" – not surprising since Mr. Suber is a professor of philosophy.
- ✓ Suppose as a universal legislator, I passed a law that every human above the age of eight years was required to nicely pet a cat every day. All cats would agree with that, even the feral ones if they could be made to understand. The dogs would probably object though (Diplomatic Protest), unless a law were passed that every dog must be petted nicely and have their head or belly scratched at least once a day. The cats would surely object to that (Diplomatic Protest), after finishing their afternoon nap, unless the barking of the dogs woke them up sooner.☺
- Unprintable Responses: Would you be offended if I told you, "Believe what you are told and do as I say because I said so and don't think or ask questions?" Of course you would and your response would probably be unprintable (aside from the question of commanding anyone to believe anything, see religion & psychiatry discussion, Dream Police, 1 Dreamtime, p. 132, *supra*). But that was the party line of the Church for over a thousand years (as Voltaire famously pointed out); anyone who thought, and thought differently, was a heretic or at least a suspect and shunned skeptic (e.g., Joanna of Castile, aka 'Joanna the Mad,' Galileo Galilei) and they launched Crusades and Inquisitions across Europe against Christians to make this point (e.g., the anti-Hussite crusades, the Roman Inquisition).
- ✓ This is reasonably similar to News Events and other official Interpretations in GGDM and on some level, will generate the same responses.<sup>10</sup> Things exist in GGDM because some of the participants say so and that may not sit well with others. This echoes religious history in the real world, but there are two important differences in GGDM: First, other than the Concierge, all participants have the same authority in

the game (that is initially, the relationship of the positions is not oppressive) and second, the participants are collectively responsible for the game universe (as opposed to being, or maybe while also being, exploitive). Within the history of major religions, neither of these conditions is usually true: Religion allied with secular authority becomes autocratic, oppressive and exploitive. The Concierge must, of course, carefully avoid the appearance of being allied with, or exploited by, any position.

It is vital that no position be able to suppress or curb the ability of another position to post adverse News Events. The dogma of the Church could not force the sun, planets and stars to go around the Earth so as to become truth. Any position that is oppressed and censored by another is less sovereign; to the extent that anyone else can tell you what to do or not do, you are less sovereign (see *Relative or Zero Sum*, 2 The Sidereal Stage p. 114, *supra*).

**Santa Claus:** *You are deep inside this dream, all right, and it is a shared mental state, so it is drawing power from **the multi-consciousness gestalt** which has now formed telepathically and...*

– Dr. Who, “Last Christmas” (2014) (emphasis added)

**Suspension of Disbelief:** Suspension of Disbelief is the first requirement for *the multi-consciousness gestalt*; to gain something emergent, one must shed rationality. This is probably why we have a difficult time defining the terms; they work better when they are fuzzy.

- ✓ “As a writer, it is your job to keep the reader believing in your story, even though you both know it’s fiction.” – Margaret Atwood, Master Class video trailer.

In creative works of fiction and works of historical narrative, the audience depends on the author to supply the relevant facts of the situation in which the characters find themselves. The actions of the characters are measured against the facts supplied. *Suspension of disbelief*<sup>11</sup> depends on many factors including the internal logical consistency of the facts presented, the character actions and results, the extent to which the audience accepts the authenticity of the presentation.

- ✓ “It’s probably obvious by now, but movies like this aren’t for everyone. Your enjoyment (or tolerance) of the story requires a very strong suspension of disbelief, as nothing is explained in any kind of logical manner. Things just happen and, like the 14<sup>th</sup> century villagers, we’ve just got to accept them at face value. The fact that these occurrences – from the Black Plague and time travel to an endless supply of easy coincidences – are perceived by their primitive minds as evidence of a divine being doesn’t really matter: within the context of this story, such beliefs are perfectly justified.” – Randy Miller III, “The Navigator: A Medieval Odyssey (Blu-ray)” review, DVD Talk, July 24, 2018.

The audience must accept the events happening in a fictional world as authentic or real to the characters in the world, unless and until the author breaks the fourth wall or provides some clue that they are not (e.g., as in dream sequences, visions of a possible future, hallucinations). Character actions in a story, and position actions in GGDM, cannot be deemed authentic if they ignore or contradict established story facts known to the character.

- ✓ I was chastised at least once by an adult in my teen youth for “talking about fictional characters as if they were real people” (exact words I recall); I believe I may have

been talking in that instance about the characters from the Saga of Pliocene Exile (Julian May, 1981) and the person I was talking to (and rambling on) probably had no idea (or care of) what I was talking about. I am sure that I was (and am) quite annoying. Who knows, but I think it likely that they were correct, in fact I feel it is so, that fictional characters in the books I read were more ‘real’ (important, mattered) to me than the people around me, my family, the masses of students in my high school, the people on the field work crews where I spent my summers: Shadows all.<sup>12</sup> I don’t remember who chastised me but I remember the chastisement, the slight embarrassment I felt, but also the resentment and unfairness of it – the characters, stories, ideas and places of fiction in my mind had greater presence than the unhappy ‘real world.’

- Wall of Understanding: “[Alexander] Cain assumes his own interpretation with cut and paste ignoring the larger context of what is going on in the passage.” – Nick Peters, “A Brief Look At Alexander Cain,” May 6, 2015 (forum post, TheologyWeb). Context is an important concept. For example, you could read the Wikipedia articles about Faust (both the historical and literary figures, which are separate articles) and Faustian Bargain and absorb a lot of facts and history; but a whole new level of meaning arises in understanding the time and place where the figures allegedly lived:
  - ✓ For example, Martin Luther was born and lived in Germany in approximately the same period attributed to the Faust characters, published the 95 Thesis during that period, and the period during which the historical Doctor Faust(s) (there may have been two) were noted as travelling throughout Germany, coincides with the German Peasant’s War, the first rumblings of the Protestant revolt against the Catholic Church and the institutions legitimized by the Church. And let’s not forget the Black Death.
  - ✓ Thus at that time there was considerable acrimony, with the Protestants calling the Church corrupt, and the Church accusing the Protestants of being in league with the devil, and false doctors and charlatans roaming about.

Another example of context, Pink Floyd’s “Another Brick in The Wall (Part 2)” taken out of *sociocultural context* when released in the U.S. market as a single, was completely misunderstood by American youth as being an anti-education anthem (i.e. what they wanted to hear – and our society is to blame for that as well); and the endless replay on MTV of the video certainly reinforced it. Those who misunderstood are not the kind who would look to find out they were wrong; they preferred to keep their selfish ignorance.

- ✓ “PINK Floyd singer David Gilmour has said it ‘wasn’t a good idea’ to release one of the band’s most famous singles because of its refrain ‘we don’t need no education.’ Gilmour, speaking on the Andrew Marr Show on Sunday, was responding to Marr’s statement that he never ‘got’ Another Brick in the Wall (Part 2) with the presenter describing its lyrics – ‘We don’t need no education / We don’t need no thought control... Teacher, leave those kids alone’ – written by Roger Waters as ‘reactionary.’ [Gilmour speaking] ‘Roger [Waters] would say that it’s all in the context; I suspect now... I’m not sure how good an idea it was to put something like that out as a single,’ said Gilmour. ‘Roger was talking about the type of teachers and teaching that was fairly common in schools when we were growing up. But I think I wouldn’t put that out as a song right now.’” – Brian Campbell, “Pink Floyd’s Gilmour regrets Another Brick in the Wall lyrics,” The Irish News, November 2, 2015.

- See discussions of the Lancastrian system, Gradgrind, 1 Colleges, p. 463, *infra*.<sup>13</sup>

➤ **Conspiracy Theories:** All conspiracy theories must begin with a statement or claim that is opposite of or contradicts in some way the official or generally accepted understanding or explanation of a historical event (or sometimes, just the state of things, such as whether Earth governments have had secret contact with extraterrestrials). Around the contradiction are added and built up a different interpretation of facts (sometimes omission of facts), and suggested ulterior motives – because there is always a question of why ‘they’ are hiding something or lying on such a scale.

The whole package is then spun rhetorically on an unsuspecting audience in a way that doesn’t provide for questioning (which is why printed conspiracy theories are less effective). Conspiracy theories can be good or bad fiction (e.g., the alleged Nazi base in Antarctica), but sometimes there are actual conspiracies; rarer still is the ability to prove them definitively.

---

*“White-gold was valued highly in Egyptian times. It was used as a symbol, close to the symbolic nature of yellow or white. White was symbolic of omnipotence and purity to the Egyptians – a symbol that is still valid today. Often used to represent the simple but sacred part of the Egyptian life ... Yellow for the Egyptians linked to the sun and gold, which were symbolic of their imperishable, eternal and indestructible nature. The Egyptians regularly used yellow in their art work to portray the gods, which they believed had gold bones. ... Tie white and gold together in a wedding ring and you have a symbol of purity, sacredness, eternity and an indestructible nature – all of which are the substance at the very heart of a marriage.”*

– Marie Coles, “Traditional Connotations of White-Gold From the Ancient Egyptian Civilization,” [ezinearticles.com](http://ezinearticles.com), June 18, 2010

---

**White Gold Wielder:** The white-gold wedding ring is a key element of Stephen R. Donaldson’s Chronicles of Thomas Covenant the Unbeliever series and the final book of the Second Chronicles of Thomas Covenant is titled, White Gold Wielder (1983) wherein Thomas Covenant finally becomes the white gold: omnipotent, pure, imperishable, eternal, indestructible, beyond the world, and symbolically married to Linden Avery.

A game of GGDM (the story) is an (hopefully) educational, stimulating, collaborative, but adversarial work of fiction created by the participants. The unique feature of participatory group fiction creation is that the group is both the author and the audience at the same moment.<sup>14</sup> The group thus has the dual and simultaneous responsibility of both providing the facts and accepting and acting on the facts of the game universe in a manner that encourages continued participation.

**Group storytelling** in GGDM is a collective emergent narrative, which is more powerful than a single-person emergent narrative created by video game play (see Emergent Narrative discussion, 3 Constructural Elements, p. 205, *infra*). With some professional postgame tweaking, the GGDM collective emergent narrative might raise to the level of a sci-fi work without characters (or maybe like Mike Resnick’s Birthright: The Book of Man (1982)).<sup>15</sup>

- ✓ To be successful as a collective emergent storytelling game, players must step out of the player view and think of the game as telling an epic history of starfaring people.

It is about these people, doing something, out there, and not about mechanics of Regular Turn actions, or failed Power Activations or regrettable decisions.

- The Urantia Book: One of the most intense and incredible (modern) acts of singular group storytelling or fiction is The Urantia Book, which may have involved up to 500 people over the course of four decades. According to the story, the book was received and written down via channeling from celestial beings visiting the Earth. Analysis has indicated that possibly up to nine people authored the book. Copyrights have expired on the book, which is now in the public domain. The free book, which is available online, is 2,197 pages in the indexed edition, which, considering the time it was created (mostly between 1925 and 1942), is astounding, and probably required many authors (if you don't accept the claimed authorship by celestial beings).

Page | 154

If you want to read it, start on Page 53 of the PDF where you will immediately find such stunning concepts as “the geographic center of infinity and the dwelling place of the eternal God” (Forward). Infinity by common definition doesn't have a center, because it doesn't have boundaries. Their description of universes of universes circling around universes is not automatically infinity, it is finite.

- ✓ “Gooch notes that while its ‘somewhat dated, elegant’ prose could be read as fiction, due to its claim of divine inspiration ‘the book invites reactions far more scathing than [it] ... might otherwise merit.’” – quote and basic information taken from Wikipedia article, “The Urantia Book,” October 6, 2018.

The Urantia Book is not mentioned here as ‘recommended reading’; I downloaded it and read most of the forward and sampled pages here and there throughout the book. I found it tedious, condescending and confusing, and not all that interesting (see Lost in Ludibriums and preceding feature quote, 2 Kairotic Moments, pp. 1435-1436, *infra*); it is not the contents of the book that are interesting (rather the opposite), but the history and existence of it.

- Prester John: One of the most curious stories circulating around Medieval Europe was that of a ‘Prester John’ who reputedly ruled a powerful semi-mythical Christian kingdom ‘somewhere’ in the East. The story circulated for centuries, unsubstantiated, was embellished and rose in popularity whenever European Christianity felt threatened, as by the Mongol invasions, Saracens, Fatimids or the Seljuk or later Ottoman Turks; Prester John was supposed to lead an army of knights to attack Europe's enemies from behind. It was popular enough that someone even tried a fraud in the form of a published letter from Prester John in the 12<sup>th</sup> Century. This was in a time when Europeans were not even certain where India was located, or for that matter, Abyssinia (Empire of Ethiopia), or their extents and powers.

Prester John was associated with India at times, Abyssinia at others (Abyssinia was thought to be part of India in some texts); there was a known Jewish population in Ethiopia, the Beta Israel, who claim descent from the Tribe of Dan, and exiled Christian communities through Syria, Armenia, and Persia. Lack of European firm knowledge of anything beyond the Middle East (a solely European term, BTW) is almost comical; de Gama's ships finally reached Mozambique, Mombasa, and Malindi, just south of Abyssinia, and then onto the real India in 1498. And there was no Prester John or mythical Christian kingdom anywhere to be found. But the fevered dream had its purpose, just as people of the Cold War looked to benevolent cosmic spirits and advanced aliens to come save us from ourselves (against which Carl Sagan wrote in Pale Blue Dot (1994)).

- ✓ The *original* Battlestar Galactica (1977) was a sci-fi Prester John story – the beleaguered, embattled colonial refugees searching for a mythic kingdom of humanity to save them in the unknown depths of interstellar space.

## Endnotes.

<sup>1</sup> Commentary & Citation: In a manner similar to the Traveller Bulletin published by GDW for the Traveller RPG game that was crucial in the unfolding Imperium Civil War in the transition from the Classic Traveller universe.

<sup>2</sup> Citation: “Christopher Blair produces false stories he insists are easily identifiable as satire rather than news. His pages can rack up millions of views, and at least part of that audience believes the material is true. Blair, 48, runs eight websites and five Facebook pages from his home in the northeastern US state of Maine. He says the claims his articles make are ‘ridiculous,’ such as that President Donald Trump’s current term could be extended by three years. But his content is widely shared by people who take it as fact, contributing to the spread of false information online. Blair – a self-described ‘liberal troll’ and political activist – says he knows what to write for his right-wing ‘target audience’ through years of ‘being embedded in their world.’ He does not hold that audience in high regard. ‘They live on... fear and hate and misinformation and very specific storylines that everybody knows aren’t true except for them,’ he told AFP. His content is rife with disclaimers: Satire. Fake news, fact-check. Nothing on this page is real. If someone clicks through to Blair’s articles, instead of instantly sharing them based on a headline, the warnings are visible. But often, it appears that people do not. Asked why people believe and share the articles, Blair answers: ‘Confirmation bias.’” – AFP, “Master of false news gives right-wing Americans headlines they believe,” February 16, 2020.

<sup>3</sup> Commentary: The Freemasons became the target of the Church in France and especially Italy, because they were generally associated with the Carboneria (Giuseppe Garibaldi was a member of both) and both were strongly anti-clerical. The Freemasons were associated with France also, but the Carboneria, a native Italian organization, was very similar in all respects, except being French. Being French in late 19<sup>th</sup> Century Italy was very complicated, and not a in a good way, between the conquest of Napoleon I and the French occupation of Rome under Louis Napoleon (later, Napoleon III) in support of the Papacy. The secrecy and anti-clerical stance of the Freemasons also led to repression attempts in other European nations of the 19<sup>th</sup> Century and created a burgeoning industry of story fabrication and caricature of Freemasonry (e.g., Leo Taxil) for the gullible public of the late 19<sup>th</sup> Century.

<sup>4</sup> Commentary: See Propaganda and Cartoon World discussions of The Big Lie, 1 Diplomacy, pp. 1091, 1106, *infra*. Hitler was born in April 1889 and was about 9 years old when Taxil admitted his hoax and walked away. Though Hitler probably never referenced Taxil directly, he accused Freemasons of being a Jewish tool in *Mein Kampf*. Freemasonry was banned in Germany in 1934, their property confiscated and Freemasons were rounded up, executed or sent to concentration camps where they were considered political prisoners. From Wikipedia article, “Suppression of Freemasonry,” January 26, 2019.

- ✓ So, while people might laugh at other gullible people spending their time and money on nonsense and transparently spurious claims, and some people making money from it, these are often just symptoms of deeper social movements and problems as demonstrated by the history of the last century.

<sup>5</sup> Citation: “Journalists are obliged to report what people do. What people say is another matter. If I shoot you, my act of aggression will be described as it occurred. If I insult you I’ll be paraphrased. The American press thoroughly covered the Charlie Hebdo massacre – except it refused to publish examples of the cartoons the Islamist killers claimed to be avenging. ‘At what point does news value override our standards?’ asked Dean Baquet, editor of

the New York Times, which decided the cartoons were unprintable and as a reward was accused of ‘absolute cowardice.’ ... Virginia McCaskey is matriarch of the family that owns the Bears. If her son, George McCaskey, chairman of the Bears, tells reporters after a 5-11 season that his mom is ‘pissed off,’ what can they do but say so? But 20 years ago they wouldn’t have said so: dashes and euphemisms would have been marshaled to keep the sports section fit for eight-year-olds. It’s still fit for eight-year-olds, but they’re more worldly than they used to be. Jagoff is another matter.... *Jagoff* means the worst kind of jerk, all right, but it’s been traced back to northern Britain, where a thorn bush is known as a jaggerbush and to jag means to prick or poke. Immigrants brought jagoff to Pittsburgh, where it’s a proud regionalism....” Michael Miner, “When you call someone a jagoff, what exactly are you trying to say?” *chicagoreader.com*, January 13, 2015.

<sup>6</sup> Commentary & Citation: Color analyst Bob Walk made this same argument in a Pirates baseball broadcast in June 2018 against those in baseball who are calling for a ban on defensive shifting (the baseball fad of the last 5-10 years). He said that the baseball players could defeat defensive shifting by simply hitting the ball to the side vacated by the defenders (“you could drive three school buses through the gap on the left side of the infield”) – the old baseball maxim “hit it where they ain’t” – and that imposition of a ban on defensive shifting would be an artificial rule to something the game can cure naturally.

- ✓ In a broadcast early in the 2019 season, he further commented – with some indignation – that it has taken players “three years to figure it out.”

<sup>7</sup> Commentary: Kant was trying to find a rational basis for human moral behavior and to do so, he asked us to view it from a height, to be above and outside of ourselves when morally considering courses of action. I believe some of the criticisms of Kant on this are misplaced: While Kant was trying to find a rational basis for human nature, I do not believe he was deluded in the least that humans are rational or would always follow a rational regimen of moral decision-making. He only needed to pretend that we are better than we actually are to be universal legislators.

<sup>8</sup> Citation: “Nomic is a game in which changing the rules is a move. In that respect it differs from almost every other game. The primary activity of Nomic is proposing changes in the rules, debating the wisdom of changing them in that way, voting on the changes, deciding what can and cannot be done afterwards, and doing it. Even this core of the game, of course, can be changed.” – Peter Suber, *The Paradox of Self-Amendment* (1982).

<sup>9</sup> Citation: “Kant’s enthusiasm for the French Revolution, the American Revolution and the Irish efforts to throw off the English yoke are well-known. It earned him the unenviable epithet of ‘the old Jacobian’; though he condemned the excesses of the Reign of Terror and the execution of the King and Queen, these events which turned many of his compatriots against the Revolution and all its works did not make Kant modify his adherence to the principles of the Revolution; and even it was believed that he was to go to Paris as advisor to Sieyès.” – Lewis W. Beck, “Kant and the Right of Revolution,” *Journal of History Ideas*, Vol. 32, No. 3, July-September 1971, pp. 411.

<sup>10</sup> Commentary: Just like when Peter arrived in Rome and informed them that they were sinners and had to quit their adulterous lifestyles. Whether Peter was ever in Rome is the subject of a massive debate (which I will not rehash here, *Google it*), unhappily for official Roman Catholic doctrine, but if so, it logically follows as to why he was crucified or killed while in Rome!

<sup>11</sup> Commentary: Reviewers of *The Time Traveler’s Wife* (2009) complained vaguely about an illogic of the movie or logical faults in the movie, more than one reviewer mentioned it. Whatever those are – none of the (secret cabal of) reviewers thought to back their assertions with evidence and explanation – they didn’t occur to me while watching the movie. I have seen a number of movies over the years whose faults jump out at the viewer and I usually immediately lose interest when my suspension of disbelief is disabused. However, it is also well known that holes can be poked in any plot, book or movie, starting with the underlying assumptions required and proceeding from there, and anything fantasy- or especially, science-fiction, literature tends particularly to run afoul of logic. Just as any work can be psychoanalyzed to profile the author, discover mental illness and cognitive defects (police do this, historians do this), and degrade the value of the author’s arguments and achievements. GGDM’s setting is science-fiction and the game story probably isn’t going to make categorical-syllogism sense.

<sup>12</sup> Commentary: I started working when I was 13 years old, and I am not talking about shoveling snow, mowing lawns a few times or delivering papers for pocket money or an allowance. I did *also* have an evening paper route from the time I was 12 years for over two years, so my early work days were about 12 hours and for extended times in my youth I worked seven days a week, because I also helped someone else deliver papers early Sunday morning.

<sup>13</sup> Commentary: The Pink Floyd sociocultural context discussion was originally an endnote in 2 The Big Bang; it was deleted in mid-2018 during editing as irrelevant to 2 The Big Bang. The endnote was the result of a discussion that I was having at the time with a friend about “Another Brick in the Wall (Part 2),” Charles Dickens’ Hard Times (1854) and the Lancasterian school system. I read shortly afterward (so the conversation may have been in 2015) an article where Mr. Gilmour expressed regrets over releasing it as a single in the United States. Fortunately, I was able to recover the endnote from July 2018 back up files (and amazed that I had a memory of having written it – sort of the underground burrowing effect in time) and also found The Irish News article still online, though I am not certain that is the original article I read back then, but is very similar.

- ✓ We went to see Roger Waters’ The Wall at the Consol Energy Center (home of the Pittsburgh Penguins) on July 3, 2012, it was a fantastic show. We had seats off to the side of the stage, a dozen or so rows up, and the airplane in the beginning flew right over our heads and crashed into the wall.
- ✓ I think it was the 2012 show, because it was right after we went to see the Asia 30<sup>th</sup> Anniversary Tour at the Carnegie Library Music Hall in Homestead.

<sup>14</sup> Commentary: There is at least a colorable argument that dogma (*ut supra*) and religious morality kills fiction in a culture, especially when they are backed by legitimized force. The best-known example in the West is that of Shakespeare and his censor(s) (e.g., the Master of Revels, and the ferocious censor of the Holy Office in Spain, Guillermo Sanchez), but there were countless others, then and now (e.g., Thomas Bowdler’s The Family of Shakespeare (1807)). In a country where dogma and piety abound, the audience is not watching the works to be entertained, they are looking for violations of dogma and piety, or if they are being entertained, their line between entertainment and offense is extremely thin; there is no patience, no charitable feeling toward the entertainers. And it is well known that dogma tried to bite science as well, until it was eventually moved off to the side and tied to a leash.

<sup>15</sup> Commentary & Citation: After reading another movie review accusing the movie that I just watched – and liked – of having wooden dialogue and wooden characters (which apparently I didn’t notice), I searched the internet trying to understand the criticism. I’ve always wanted to write science-fiction short stories. But I have no feel for writing dialogue, no real feeling for characterization of humanity, and without that, any short story I might write will simply look like my text in GGDM (or perhaps something like Franz Kafka’s “Metamorphosis” (1915)). I searched for an article that can explain what makes dialogue wooden; there are a bunch of forum discussions out there, but none of them really nailed the point for me beyond the superficial. I found a long blog by fiction editor Beth Hill, giving categories and examples of bad dialogue in fiction, and I knew that I’d trip over every one of them, except perhaps that I would not replicate Ayn Rand’s 70 page uninterrupted John Galt speech. My tendentious pedant style in GGDM text, which some might call preachy at times, developed to fit the task of conveying GGDM as I envisioned it. Fortunately, it is not fiction dialogue. Only the movie 2001: A Space Odyssey (1968) struck me as being stiff. For the aspiring fiction writer: <http://theeditorsblog.net/2011/11/03/bad-dialogue-bad-bad-dialogue/>.

- ✓ I apparently don’t know jack about what makes a good or bad movie. After watching Somnus (2016) in 2018, I read about ten reviews of the movie. I was sure wooden dialogue would be tossed out, but it was not mentioned in any of the reviews. In any event, I won’t say Somnus is the best movie I’ve seen, but I didn’t think it was awful exactly – but close. Pulling the deceased wife’s head out of the ship’s AI core was the worst part. The main point that turns me off on a movie is either too much action/explosion so that there isn’t really a story (or without context, which frequently occurs in the beginning of anime series), or worse, movies that are just dumb or offend my intelligence: I hated Demolition Man (1993).
- ✓ I finally found a movie whose dialogue was soooo bad (in addition to some other issues) that I couldn’t stand to watch it: Sorceress (1982). The dialogue was apparently written by someone who played way too much Dungeons & Dragons (and smoked grass probably) in the 1970s. It is probably just like the dialogue I might write. I sat next to a Pathfinder RPG group at the club a couple of years ago and they sounded like the bad movie dialogue, especially when the GM was reading from the module or speaking for NPCs (in addition to several other issues with their adventure). In fact, the entire movie seems like it was someone’s Dungeons & Dragons adventure module, and that perhaps, is revealing about how fantasy role playing is actually conducted – imagine if your role playing adventure were made into a movie?
  - Wooden dialogue is apparently like deception in pitching in baseball, which Pirates broadcaster Bob Walk argues is something that no one really knows what it is... but it happens.

*“Still, bogus content on Facebook is arguably a symptom of a bigger problem – the ‘filter bubbles’ created by blogs, social media, and other distribution platforms that help people consume only information that appeals to their existing biases and opinions. These ideological echo chambers thrive on Facebook, where the news feed algorithm is designed to surface the content most relevant and appealing to you. Such personalized news could also undo the tools to curb fake news that Facebook is now rolling out.”*

– Alison Griswold, “Facebook’s fake news tools are no match for the Facebook echo chamber,” Quartz, December 16, 2016<sup>1</sup>

**The FCC Fairness Doctrine:** The elimination of the Fairness Doctrine by the FCC in 1987 created the environment for echo chambers and paved the way for right-wing talk radio programming. To be sure, the Fairness Doctrine only applied to licensed broadcasters in an era of limited channels; it did not apply to printed media and art which already had publications catering to various ideologies. Further, the popular internet had not yet become and it is questionable whether the FCC would have been able to impose the Fairness Doctrine upon the internet. But the beginnings of the filtered news, modern echo chamber can be traced to 1987.<sup>2</sup>

- ✓ “...and he proposed reinstating the so-called ‘Fairness Doctrine’ over the weekend. (A government-mandated ‘fairness doctrine’ is a profoundly unconservative idea, and its repeal in 1987 – championed by the Reagan administration – helped allow for the proliferation of conservative media outlets in the 1990s.)” – James Hohmann, The Washington Post, October 12, 2017.
- **Winnowing the Hot Air:** Whenever you read or hear a statement, comment or argument that you (or others) consider controversial, you should first ask yourself if you can say with certainty that any factual claims contained therein are demonstratively or undeniably false or misleading. Many facts offered in a controversial statement, argument or commentary, are disputable, can be presented in a misleading way, but cannot be definitively proven or said to be either true or false; a fact that cannot be proven false must be in some sense true. There is also a difference – regarding controversies – between disagreeing because some facts are false or misstated, and disagreeing because you don’t like the conclusion.
  - ✓ “Just as a lot of conservatives ignore evidence of climate change, the study shows that many liberals disregard mounting evidence that vaccines and genetically-modified crops are safe. The report faults leaders on both sides of the immigration debate for misusing data and statistics, blurring the line between opinion and fact.... The team at Rand thinks that ‘truth decay’ poses a grave threat to the country’s future. Not only does it lead to the uncertainty that comes from schizophrenic policymaking, it also alienates people from the political process and drives detachment from democracy.” – John Hohmann, The Washington Post, January 18, 2018.

*“The Rashomon effect is a term related to the notorious unreliability of eye witnesses. It describes a situation in which an event is given contradictory interpretations or descriptions by the individuals involved. The effect is named after Akira Kurosawa’s 1950 film Rashomon, in which a murder is described in four contradictory ways by four witnesses. The term addresses the motives, mechanism and occurrences of the reporting on the circumstance and addresses contested interpretations of events, the existence of disagreements regarding the evidence of events and subjectivity versus objectivity in human perception, memory and reporting.*

*The Rashomon effect has been defined in a modern academic context as ‘the naming of an epistemological framework – or ways of thinking, knowing, and remembering – required for understanding complex and ambiguous situations.’ ...*

*A useful demonstration of this principle in scientific understanding can be found in Karl G. Heider’s 1988 journal article on ethnography. Heider used the term to refer to the effect of the subjectivity of perception on recollection, by which observers of an event are able to produce substantially different but equally plausible accounts of it.”*

– from Wikipedia article, “Rashomon Effect,” captured October 27, 2019  
(emphasis added)

**The Absolute Truth:** News Events are absolutely true (or false, depending on the spin assigned to the News Event) at the moment they are published on the forums (and this bears no relationship at all to what players believe is true or false about the game), and their effects are immediate and permanent. From that point on, however, the truth is negotiable as other positions are allowed to modify (but not contradict) the absolute true or false statements of the News Events.

- ✓ **Marge:** You loved Rashomon! **Homer:** That’s not how I remember it. – The Simpsons, “Thirty Minutes Over Tokyo” (1999).
- ✓ By Heider’s definition, a Byzantine Fault is the computer version of a Rashomon Effect: “A Byzantine fault is any fault presenting different symptoms to different observers. A Byzantine failure is the loss of a system service due to a Byzantine fault in systems that require consensus.” – from Wikipedia article, “Byzantine Fault.”
- **And Nothing but the Fuzzy Truth:** Any News Event may be subsequently modified – but not directly contradicted (sort of a Rashomon effect) – by any position, including the source position, however, the source position may not be the first to modify its own News Event (otherwise, it wouldn’t be absolutely true or false at the moment of publication). Positions may modify News Events until such time as all positions have had a turn since the News Event was originally published (i.e. a Turn Cycle), at which time, it is closed and becomes history.
  - ✓ Like a baseball pitch – spinning, curving, dropping – it is what it is when it passes the plate, regardless of the intent of the catcher and pitcher.

A position may only modify each News Event or a modification of a News Event once.

- ✓ In the fandom terminology of certain large, well-established video science-fiction franchises, News Events and all modifications become *canon/canonical* in the current game universe, and should not be retconned.
  - See retcon discussion, Things That Are True, 2 The Big Bang, p. 6, *supra*.

- **The Modified Truth:** Modifications to News Events by any position that is eligible to and desires to modify the News Event are posted on the forum by the Concierge in the thread for the News Event. The modification to the News Event must be submitted with the position's next turn actions, is considered a News Event for Power Activation purposes, must bear some reasonable relation to the News Event or the most recent modification, and may not directly contradict the original News Event or most recent modification (the Concierge exercises ultimate discretion). Like the original News Event, the modified News Event is absolutely true or false (for game purposes) at the time of the modification and the effects are immediate and permanent. Modifications can be legally modified, *ad nauseam*, until they become history.

- ✓ Modifications can only be submitted with turn actions, so opportunities are limited.

A modification cannot be used to 'undo' a Power Activation (which would then undo the News Event based on the Power Activation) or manipulate, nullify, return, or reduce Acts and Scenes required for a Power Activation; News Events should (but are not prohibited from), for game sanity, avoid giving free Acts and Scenes. Don't ever wish for more wishes.

- ✓ This is probably the reason why there are no more genies in lamps; some greedy human knave wished for more wishes, tore a hole in the fabric of the universe, and now there are no genies left to fix it.

- **Forms of Truth:** *A modification News Event is a News Event in its own right.* Like the original News Event, all modifications to the News Event must contain the required elements and must specify which posted News Event is being modified. For the purpose of modification only, the prior News Event on which the modification is based replaces the Power Activation requirement, for all purposes, in the News Event that modifies a prior News Event.

- ✓ Modifications of adverse News Events are automatically adverse News Events even if intended to help the original target position. The game makes no distinction. A non-adverse News Event cannot modify an adverse News Event, but must be its own top thread. Modifications of non-adverse News Events may be adverse News Events.

- **Subplots and Twists:** Because a News Event is an Interpretation, a modification of a News Event may not modify or destroy the original News Event in the sense that it cannot directly contradict the original News Event or completely nullify the game effects of the News Event. However, since the 'modification' is itself a News Event, it carries its own equal force, it is a 'modification' of the original News Event in the sense that it is a continuation of the News Event upon which it is based.

- ✓ Playing GGDM is like editing on Wikipedia: If you are concerned about others modifying or even using your perfect idea, expressed in perfectly written text, if you need to own your literature, then this probably isn't for you.

- See Dis-claim-UR discussion, 3 The Big Bang, p. 18, *supra*.

---

*“Fake news doesn't get retracted or corrected because it's specifically designed to deceive; detachment from fact is a feature, not a bug, as the saying goes.”*

– Robert Schlesinger, “The Maestros of Fake News,” U.S. News & World Report, July 7, 2017

---

**Red Purge:** Modification of News Events is not as complicated as it may seem, a historical example may help: In 1936 (the year of the Berlin Olympics), German intelligence learned of a plot by a top-ranking Red Army officer to topple Stalin.

Reinhard Heydrich (of later Wansee Conference fame), then the head of the Security Police, which included the Gestapo that he created, and head of counterintelligence, presented a plan to Himmler and then to Hitler, to expose the plotter to Stalin so that Stalin would purge the Red Army and/or create an air of suspicion in the relationship between Stalin and the Red Army. Hitler approved the plan and Heydrich then had his services create forged documents implicating the officers alleged to be plotting the overthrow of Stalin. These documents were provided to the Soviets. *Heydrich was played by Stalin.* In fact, Stalin had ordered his NKVD agent General Nikolai Skoblin to pass the false information to Heydrich expecting the Germans to do exactly what they did, thus manufacturing evidence for the Red Army Purge of 1936-1938.<sup>3</sup>

- ✓ Information for this example was taken from Wikipedia articles, “Reinhard Heydrich” and “Great Purge,” September 27, 2018. Whatever reservations you may have about information from Wikipedia, please just accept these as absolutely true facts for the purpose of this example.

These events might play out as follows in terms of GGDM adverse News Events:

- ✓ *Initial News Event* issued by Red Blok states that the UNA have carried out a purge of their top officers after discovering a plot to overthrow their supreme leader. The effect of the News Event is that the UNA lose one half of the faculties from the Combat College.
  - It is possible that this News Event might have no effect; Red Blok may not actually know if the UNA has a Combat College, that is, many News Events might be ‘shooting in the dark.’ Red Blok and UNA may not have had First Contact. However, adverse News Events that have no effect may still cost the target a Maintenance Shield, see 4 Order, pp. 566-567 *et seq.*, *infra*. Whether an adverse News Event has any effect is never revealed.
- ✓ *First modification* of the News Event issued by the Therians, the eternal scheming trouble makers, adds that the evidence used by UNA against the alleged plotters was entirely fabricated and passed to them by ONI Corporation (a position, not a GGDM Corporation or MegaCorporation), who is seeking business from Red Blok. The effect of this is that an Intervention Potential Plus (IP+) is assessed against UNA. This mod is not a contradiction of the initial News Event and is a News Event in its own right.
  - Whether IP or IP+ can be assessed in a News Event is unclear and up to the Concierge, but once the precedent is established, it must be followed consistently. It is in effect saying, there will be trouble later because of this, passing the buck (in the historical example, the Red Army lost many of their best officers to the Purge and suffered later in 1941). The Concierge is in no way required to use the IP+ in relation to the News Event, but can use it freely, emergent narrative can fill the linkage later if necessary.
- ✓ *Second modification* of the News Event issued by the UNA states that the evidence against the plotters was solid and that the falsified evidence was irrelevant. The result

- is that the Intervention Potential Plus (IP+) is reduced to a regular Intervention Potential. Note that this does not directly contradict the Therians' News Event, which is still absolutely true (sort of...). It also does not contradict the initial News Event (which may be irrelevant if UNA doesn't have a Combat College).
- Hair splitting time: The UNA News Event is not a direct contradiction to the initial News Event by Red Blok because it does not say that the purge never happened, or entirely abrogate the results. It also does not contradict the Therians' News Event because it does not say the falsified documents don't exist and it does not abrogate the results. Neither event then is entirely erased by the Second Modification.
- ✓ Finally, the Karmans issue a *third modification* to the News Event stating that the Therians secretly control part of ONI Corporation and their plot has been discovered, causing the Therians to lose one Diplomatic Space with ONI Corporation.
- Since ONI Corporation is a position in the game, it is not literally true that the Therians control ONI Corporation, here is an example of how the News Event is absolutely true, regardless of what the players in the game know or believe to be the truth. Additionally, the Karmans may not know if the Therians and ONI Corporation share Diplomatic Spaces or anything else, so again, there is possibly no effect. Like IP and IP+ assessments, the game participants will need to decide if Diplomatic Space can be created or lost by News Events, and once the precedent is set, must follow it consistently and try not to abuse it.
- ✓ At this point, it's all becoming kind of convoluted and conspiratorial and the situation has played itself out, UNA has possibly lost some faculties from the Combat College, an Intervention Potential has been added to the game, and the Therians may have lost a Diplomatic Space with ONI Corporation. Other News Events have posted, the players get distracted or move on, eventually posting to this News Event is closed by the end of the Turn Cycle, having become part of the Absolutely True history.
- Note that each position modified the News Event once on their Regular Turns as described above in The Modified Truth, *ut supra*.
  - Yes, these faction names were all barrowed from the tabletop miniatures wargame, AT-43, solely for amusement purposes. Both AT-43 and its publisher, Rackham Entertainment, are defunct since 2010.

---

*“In quantum mechanics, wave function collapse is said to occur when a wave function – initially in a superposition of several eigenstates – appears to reduce to a single eigenstate due to interaction with the external world; this is called an ‘observation.’ It is the essence of measurement in quantum mechanics and connects the wave function with classical observables like position and momentum.”*

– from Wikipedia article, “Wave Function Collapse,” captured August 25, 2019 <sup>4</sup>

---

**Eigenstates:** News Events are eigenstates in the game. A die roll result or blind card draw is also an eigenstate in whatever game is being played. It creates a value that *is for that moment*, the known, determining value/state in the game. The state of the game changes on the next action taken by the players. Before that, it is a cloud of probabilities. Humans have been playing with eigenstates since the beginning, sometimes it's been part of religious-mystic ritual. GGDM just does something a little different, News Events inject conscious choice into the eigenstate.

- ✓ Eigenstate is achieved in chess and non-random games as well. Each move by a player is an eigenstate of the game in that instance, until the next move. Each move changes the state of the game, and projects a cloud of probabilities of direction, momentum, position, and spin. Your life, your move!

How well this system of News Events and modifications works is critical to the game and dependent on the systems available to and the diligence of the participants in implementing the game story. During the preceding Red Purge fracas, positions may have processed Regular Turns which were both influenced by the data and changed the data in a dynamic flux of the game (and added new News Events, followed by modifications); Regular Turn submissions may be timed on the effects of the News Event modifications depending on how the game data modification process is implemented. There are two possibilities:

- ✓ The original concept of the News Events was a forum, like a normal online forum used by discussion boards and game clubs, but if the forum were internalized to the game program, it might be possible to implement a system where the effects on game data from News Events and modifications can be implemented instantly by the posting if accompanied by either Deep Learning AI or some sort of quasi-programming language. This then creates a need for position data to be updated constantly and to be downloaded to the players, checked by the players, constantly, daily, during the game, even when it is not time for submission of their position's Regular Turn actions. There are pros and cons to this depending on the group; it is very engaging but also possibly very tiring, like the current ongoing 24-hour news cycle (or like a RTS game or never-ending MMORPG world).
  - I can be a bit of a news junkie – maybe the quotes included in GGDM would provide a hint – but even I burned out.
- ✓ If an online forum system, as originally envisioned, is used, then the Concierge will need to manually and regularly input the changes, possibly with a few Interventions tossed in while doing the task (see 2 Entropy, *infra*), and how the dynamic of Regular Turn timing and News Events and modifications plays out will depend on the Concierge's schedule (again, like group DMing, the Concierge position may require two or three duty officers), regularity, and dedication. A position's data may still change in important, if small, ways during the Turn Cycle and this will either need to be tracked by the players on their own until their next Regular Turn is processed and new results received or they will need to have the ability to get updated information at any time.

In short, I admit – and have admitted throughout – that the implementation of this game is problematic and complex and that even reading the rules is a considerable effort.<sup>5</sup>

- ✓ Merriam-Webster online dictionary at *eigenstate*: a state of a quantized dynamic system (such as an atom, molecule, or crystal) in which one of the variables defining the state (such as energy or angular momentum) has a determinate fixed value.

---

*“And this, YouTube does incredibly well. ‘YouTube recommends right-wing videos to people watching similar right-wing videos,’ Zack Exley ... writes in a recent study of a prominent alt-right YouTuber. In the same way, YouTube sends left-wingers into a bubble of left-wing videos, fundamentalist Christians into a fundamentalist Christian bubble, and people who love to knit into a vast universe of fellow knitters. Among other things, that’s made it easy for the platform to host tons of content that some would find deeply offensive, and elude controversy – because YouTube only recommends what it thinks you want.*

*And if you don’t go looking for neo-Nazism, or videos of decapitations, you won’t be directed to them. You’d never know they’re there. But those videos were there, all the time, ready for any 15-year-old alienated white boy to find with a couple of key-strokes. He gets what he thinks he wants, too – and then some. This was part of the bargain of an open internet, but it wasn’t one that most of us had given much thought to – even if we’d stumbled onto some of the ugly stuff from time to time.”*

– Bob Moser, “How YouTube Became the World Wide Leader in White Supremacy,”  
New Republic, August 21, 2017

---

**Expose’ and Special Bulletin:** A Special Bulletin is a News Event posted by the Concierge with an Intervention (see 2 Entropy, p. 235, *infra*).<sup>6</sup> A Special Bulletin may be in any form desired, and may have any effect, or no effect; and may not be altered by the players.

- **The Expose’:** An Expose’ is an inviolate News Event posted by a position that is the result of the Reification of a Zeitice (see 4 Writs generally, *infra*). An Expose’ may not be changed or altered in any way by other positions, and the Expose’ may only affect the position posting it in reasonable relationship to the Zeitice that was reified. An Expose’ does not require a Power Activation and does not report on a Power Activation. Expose’ and Special Bulletins are both considered singular Absolute Truths in the game.

---

*“Aristotle cited the laws of contradiction and of excluded middle as examples of axioms. He partly exempted future contingents, or statements about unsure future events, from the law of excluded middle, holding that it is not (now) either true or false that there will be a naval battle tomorrow but that the complex proposition that either there will be a naval battle tomorrow or that there will not is (now) true.”*

– Encyclopedia Britannica online article, “Laws of Thought,” captured April 20, 2018  
(<https://www.britannica.com/topic/laws-of-thought>)

---

**Aristotle Sidestep:** The fundamental problem of interpretations is this: If I *felt or thought* x yesterday about A (wrote it down, have living memory of it, know the reasons) and it seemed/felt true to me yesterday, but today I no longer *feel or think* x about A, was it not true yesterday?

- ✓ Among humans, interpretations are both thought and feeling at the same moment. Treating them as thought only is untenable, and treating them as feelings only is dismissive.

- See related Work of the Mind discussion, 3 The Big Bang, p. 9, *supra*.

Many, if not most, would answer that if I have changed my mind overnight regarding A, or no longer feel that way about A, then what I felt about A yesterday must not have been true or correct (i.e. emotional, irrational, uninformed, ill-conceived, mistaken). Or the old Aristotle side-step that, well it was true that I felt that way yesterday (factually speaking), but it is not true that I feel that way today – without committing to whether what I thought/felt about A yesterday had any objective truth (in this, I am applying Aristotle’s ‘future contingents’ in ‘reverse’).

- ✓ For example, one might be asked in a court deposition what was their initial impression upon meeting a specific person or hearing of a specific event, and then whether they still held the same opinion or view now? Their answers under oath establish as *fact* – in the absence of contrary evidence, such as acts or implausibility – their state of mind for the purpose of determining the case at issue.
- ✓ “At first we all felt he was frightfully exaggerating and even offensive in tone. You see, he hurt all our deepest feelings, but gradually he won us around, although for a long time I had to – I just learned he was usually right in his conclusions, but I was not completely satisfied with his argument.” – Friedrich Hayek speaking about Ludwig von Mises, UCLA Oral History: Interview with Friedrich Hayek (1983), pp. 12-13 (searchable, free online at <https://archive.org/details/nobelprizewinnin00haye>).

*Every evolution of GGDM faced this question.* Aspects in GGDM (see 2 Culture, *infra*) can be said to hold that many truths can exist that are perhaps, seemingly contradictory, and that while the world may move onto the next day, what seemed (subjectively?) true yesterday remains (i.e. has persistence) and may come to the surface again under the right circumstances. Those who think that there is one objective reality and any failure to perceive it is human fallacy find this explanation wishy-washy and useless; while those who embrace less objective standards of reality, find the objective insistence both overly simplistic and not useful as a standard of human reality. It is the line that essentially divides empirical science, religion and math (who must insist that their truth is the whole of objective reality) from literary fiction, mental and social sciences.

- ✓ The same problem attaches to assessing the reliability of historical sources. Is some source to be considered not impartial because their overall view is negative, e.g., “Evagrius is mostly negative in his account of Justin and Sophia, so should not be taken as an impartial source.” (from Wikipedia article, “Sophia (empress),” April 30, 2019)? All historical sources present their interpretation of events, sometimes long after the events, and frequently of events they didn’t personally witness. Does a negative interpretation hold less truth value than sources who present a more favorable interpretation? Is that sufficient to condemn by itself, guilt by negativity? Depends on your politics. How many times have we gone around this cycle in historiography?

At the base of this discussion, and of the question with which this section began, is the interminable debate about what is knowledge? The problem has neither been solved, nor was it ‘cast aside’ as an unprofitable effort with the late advent of empirical sciences.<sup>7[quote]</sup>

Rephrased in that way, the question might be ‘is what I felt about A yesterday considered knowledge?’ Was it a justified true belief (‘JTB’ in the language of epistemologists)? It is thus likely that Interpretations and Aspects as presented in GGDM could (and should) be subjected to epistemological analysis, e.g., Gettier Problem, Lightweight Knowledge, Infallibilism/Fallibilism;

that Interpretations here are intertwined between our current worldview (i.e. modernity) and epistemological arguments about knowledge.

- ✓ Shifting to the ‘objective’ universe, Matt O’Dowd states, “Prior to Boltzmann, entropy was understood as...” (See 2 Taxation & Census, EN 3, p. 312, *supra*). Does this automatically mean that physicist were dead wrong before Boltzmann set them straight? No. Prof. O’Dowd goes on to demonstrate how their explanation works for a car piston. And then why Boltzmann’s explanation is better when applied to the universe generally.
- ✓ “As an indication of exactly how good the Ptolemaic model is, modern planetariums are built using gears and motors that essentially reproduce the Ptolemaic model for the appearance of the sky as viewed from a stationary Earth.” – Polaris Project, Evening Star, Unit 2, Iowa State University, “The Ptolemaic Model” (undated, author unattributed).<sup>8</sup>
- ✓ Thus, a ‘paradigm shift’ is like civilization waking up the next morning with a change of mind; what was true yesterday remains true within the framework in which the interpretation was created, but today, we have another frame which suits our understanding better.

I highly recommend the Stanford Encyclopedia of Philosophy article, “The Analysis of Knowledge.” I should probably re-read it myself.<sup>9</sup> It is thus that the question is presented here for both completeness (one of my virtues as a tendentious pedant) and as an educational hook (as is most of GGDM) to look it up and think about it.

- ✓ I admit that in writing GGDM, I have strained the limits of the purpose of GGDM as described above; this is attested to by the sheer size (and range) of the work.
- ✓ Whether or not GGDM is accepted as any sort of macro-sociological argument is dependent in large part (but not entirely) on the standards of knowledge applied; I would not present GGDM to a physicist even with the caveat that it is a ‘literary game’ and a work of macrosociology.

If I think I made a mistake playing Mahjonn (a puzzle solving exercise) but I solve the puzzle (i.e. remove all of the pieces), then it wasn’t a mistake. But that I believed it was is still a *fact* (see facts discussion generally, 1 Dreamtime, *supra*), so facts and knowledge are not the same apparently? Because it wasn’t true (i.e. knowledge) that I made a mistake, but it was a fact that I believed that I did? Or was it a mistake if I still succeeded in removing all of the pieces but it took more time to do so because of the alleged mistake?<sup>10</sup>

---

*“Most modern calendars mar the sweet simplicity of our lives by reminding us that each day that passes is the anniversary of some perfectly uninteresting event.” – Oscar Wilde*

---

---

*“Tomorrow is only found in the calendar of fools.” – Og Mandino*

---

**Calendar Civilization:** Calendars (and holidays) are in a way, the ultimate human interpretation; this should not be confused with seasons, tides, Lunar eclipses or any of the other objective measures that we think happen whether humans are looking or not.

But once you decide, for whatever reason, that a circle is divided into 360 degrees (or a compass has 6400 mils), and that the full rotation of the Earth should be divided into 15 degree arcs, you get a 24 hour day. Why 15 degree arcs; why not 10 degree arcs which match the number of fingers humans naturally possess and is the base of our numbering system? A 36 hour day? How about the answer I received when I asked in my youth: “Because that’s the way it is.” Great answer, really informative and inspiring, haven’t we all heard it once or many times? And why 60 minutes per hour? Does it matter to the universe, is it a natural law?

No, and the Republic period Roman leadership understood this well, while the farmers necessarily continued to plant and harvest with the seasons. It has seemed then that the further cultures move from an agrarian base, the less the march of the seasons matters in calendar interpretations, would it bother you or matter if January were in the autumn? January is summer in Australia; the European colonization of the Southern Hemisphere demonstrated once again that the calendar is an interpretation, regardless of whether it was the Republican Calendar, the Julian Calendar, the Gregorian Calendar, or the French Revolutionary Calendar. The Romans got around to fixing their calendar and re-synching it with the seasons in 46 B.C. with the introduction of the Julian Calendar and later adjustments under Augustus Caesar, because the wide-ranging empire was still largely or mostly agrarian. What cognitive dissonance happens when humans move into space, colonize other worlds?

- ✓ What is meant when scientists say a planet has a rotation period of 9 or 10 hours (Jupiter/Saturn) or 58 days (Mercury) or 243 days (Venus)? It means that the planet in question makes a full rotation in that much *Earth time*. Earth time is the only standard, objective measure that we have, and that is what we use, but it is only objective in our framework. The planet in question, however, has rotated the same 360 degrees as the Earth or any other rotating body, and its arc could be divided into 24 hours in 15 degree sweeps, just like the Earth. Those hours would not, objectively (e.g., in total vibrations of an atom), be the same length of time as ours, but could be divided into 60 very long minutes, if we wanted to – clearly colonizing such places (notably Mars has a rotation period very close to that of Earth (and is spinning a lot faster than the Moon) *would require some other form of time interpretation to keep us sane with our Earth-evolved circadian clock.*<sup>11</sup>

- See further Crossing the Rubicon, 1 Temporal Technology, p. 801, *infra*.

---

*“The need for instant analysis, or at least the demand for it, is every week increasing the profile of individuals who feel no sense of embarrassment at having, as we used to say, ‘no unpublished thoughts.’”*

– Christopher Hitchens, “How to be a Public Intellectual,” Prospect Magazine, May 24, 2008

---

**Who Are You?:** A man may think of a thousand things in a work day or an idle afternoon; 999 of them are not worth printing or even repeating. Yet we repeat the same thought cycles over and over, no matter how reprehensible those thoughts would be in the light of day. Twitter, Facebook, and all of the other forms of social media, provide an opportunistic megaphone and instant print gratification for thoughts that cycle in our heads.

- ✓ “It may be that attacks on expertise are more obvious due to the ubiquity of the Internet, the undisciplined nature of conversation on social media, or the demands of the twenty-four-hour news cycle.” – Tom Nichols (U.S. Naval War College) as quoted in the Washington Times, July 24, 2017.

Social media has indeed been a useful invention, but probably not in the way its creators intended; social media (and camera phones) has shown us who we really are, humanity as it really is, the thoughts that course among the anonymous masses of humanity, blared with a megaphone across social media for all to see.

And we recoil at the fury of it.

- ✓ “Trump defines the word ‘presidential’ negatively. For him, acting in a way consistent with the men who have held the nation’s highest office before him is just a media construct. There’s not really any such thing as ‘acting presidential’ in Trump’s world. If you’re the president, you can act however you want because, well, you’re the president. Might makes right. The president is presidential by default.

That view is consistent with this moment in our culture. The Kardashians have made being famous a goal in and of itself. It doesn’t matter what you do with the fame. What matters is that you are famous. YouTube has convinced every person that theirs is a voice – and a set of opinions – that need to be heard. Twitter – and social media more broadly – rewards takedowns of people; the bigger the person (in terms of number of followers) you dunk on, the brighter your star theoretically shines.” – Chris Cillizza, “Donald Trump’s Unpresidential Presidency keeps hitting new lows,” CNN, September 18, 2017.

- ✓ “It’s that same mentality that led sports radio personality Clay Travis – in a live CNN interview about ESPN’s Jemele Hill on Friday – to say: ‘I believe in the First Amendment and boobs.’ Travis, as his smirk made clear, believed he was being edgy and giving the middle finger to the political correctness police with his ‘take.’ He was sticking it to the liberal media! He was a hero of free speech! But here’s the thing: He wasn’t any of those things. Travis was just being a bro. He was expressing a misogynistic sentiment in a totally inappropriate setting. Like, why does the subject of boobs come up in an interview about whether or not Hill should be allowed to refer to Trump as a white supremacist? That’s like me shouting ‘boobs’ in mid-air of a cross-country flight and congratulating myself for my bravery. Opposing societal norms that are inherently unfair or misguided is one thing. Flouting conventions of good behavior ... is something totally different.” *Id.*

Wonderful thing about the Freedom of Speech: every fool and knave has a right to speak, even if on social media. So that the world has an opportunity to see them as fools and knaves as soon as they open their mouths and they can be banished to the kid’s table. We have a lot of din currently coming from the kid’s table, like all newness, it will take time to whac the moles of social media into some decent arrangement.

- ✓ “Wise men speak because they have something to say; Fools because they have to say something.” – Plato.

Eventually, most fools and knaves recognize what they are, but some never do. And a bunch of the latter have social media accounts or public media access. It sells advertising.

- ✓ “It is better to keep your mouth closed and let people think you are a fool than to open it and remove all doubt.” – Mark Twain.

---

*“What Spicer’s Emmy appearance proved is that in our culture, fame and infamy are indistinguishable. All that matters is that you are famous. How you got there doesn’t matter. It doesn’t even matter whether people are saying bad things or good things about you. It just matters that they are talking about you.”*

– Chris Cillizza, “Hollywood just enabled Sean Spicer, and that’s not funny,”  
September 18, 2017, CNN Politics

---

**Internet Advertising:** This seems to be true in internet advertising as well (and has been true of billboard advertising for a long time): It matters only that you see the advertisement apparently, even if you are annoyed by the fact that it popped up when you are trying to read a web page, or that it’s in the middle of an article, or that the flashing and movement are distracting, or that adverts are constantly reloading making the text on the page jump around while you are trying to read the stupid article, or that it popped up behind the page and hangs there until you notice it, or that it covers the entire screen when you first visit the web page – in other words, it’s apparently not considered important that the viewer remember the ad favorably, or even at all, only page impressions, hits, and rotations matter in internet advertising.

---

*“We live in a different world now (or at least those of us in the ‘West’ do); a world of social media, where anyone can have a view and disseminate it for anyone else to see relatively cheaply and with relatively little technical proficiency. Potentially everyone could be an expert on anything, or at least have a view on everything for anybody else to see. There is no longer a strict division between the controllers of communication and the consumers of communication, nor necessarily such a formalised relationship between the producers of knowledge and disseminators of knowledge. Does this have the potential to mean that everyone in the West can be a public intellectual? And further could one’s success on Facebook and Twitter indicate your status as a public intellectual?”*

– John Issitt and Duncan Jackson, “What does it mean to be a public intellectual?” March 2013

---

## Endnotes.

---

<sup>1</sup> **Citation:** “‘Facebook does not know what its own algorithm is doing,’ said Susan Benesch, a faculty associate at the Berkman Klein Center for Internet and Society and the director of the Dangerous Speech Project. ‘It is not the case that somebody at Facebook is sitting in a dark room cackling, and said, ‘Let’s encourage people to sell Nazi ads to Nazi sympathizers.’ She continued: ‘In some ways, that would be much easier to correct, because there would be some intention, some bad person doing this on purpose somewhere. The algorithm doesn’t have a bad intention.’” – Robinson Meyer, “Could Facebook have caught its Jew Hater ad targeting,” The Atlantic, September 15, 2017.

<sup>2</sup> **Citation & Commentary:** “Most Trumpists are not going to buy a book of several hundred pages and read it. Most Trumpists are going to see what Fox News, and Breitbart, and OAN and you know, Mark Lavin, say about the book, and that will be what they believe.” – David Pakman, David Pakman Show, June 18, 2020.

- ✓ That’s pretty astute, but don’t throw stones in glass houses. The same can and will be said by the other side about viewers of MSNBC and CNN. The fact is that most people, on both sides, don’t read books that are

several hundred pages; instead they tune into their favorite network echo chamber on cable or YouTube to see what they say about it.

<sup>3</sup> Commentary: Arguments have been advanced that the German fake documents made no difference, they were not used as evidence during the Moscow Trials. That is beside the point for the purposes of this example.

<sup>4</sup> Citation: See Peek-a-Boo discussion in 2 Expansion, p. 893, *infra*.

<sup>5</sup> Commentary: This is a continuing thread; my first big game design as a young teen (called “Machines & Mercenaries”), more than a decade before the internet and years before PCs became ubiquitous, had the same problem based on the technology available at the time, it wasn’t clear how it would have been actually playable then – though most big online games – I am thinking of the RTS/MMOG *Achron* for example (discussed in 1 Temporal Technology, EN 7, p. 815, *infra*) – have reached or exceeded what I envisioned in my pre-internet teenage efforts. I call it my ‘forward simulation problem.’ Or tripping over my own feet.

<sup>6</sup> Commentary: When I was young, I watched *Special Bulletin* (1983), about a group of terrorists who had a nuclear bomb on a tugboat docked at Charleston, SC, who were demanding all 900 nuclear detonators in the Charleston area (an ideological paradox not lost on the participants). The bomb detonates. It was shot as a newscast; I had grown up hearing the urban legend of the panic reaction to the newscast like the radio broadcast of *War of the Worlds*.

- ✓ One of the most haunting bomb detonation scenes (I have been unable to identify the show) showed a normal-looking man sitting calmly in the early morning on a bench in Central Park, NYC with a suitcase on his lap. The suitcase contains a nuclear bomb. Which detonates at ground level in New York City.
  - “Suitcase Nukes” have been available since the late 1950s. Most have yield of less than 1 Kt.; the bomb that destroyed Hiroshima was 15 Kt. By the 1970s, their potential use in terrorism was realized and slowly filtered into the public consciousness. But that genie won’t go back in the bottle.

<sup>7</sup> Citation: “We know that every age has its own problems, which the following age either solves or casts aside as profitless and replaces by new ones.” – David Hilbert, “Mathematical Problems,” an address to the International Congress of Mathematicians at Paris (1900), translated by Maby Winton Newson for the *Bulletin of the American Mathematical Society* 8 (1902).

- ✓ In the Hilbert analysis, humanity is in the same age, epistemologically, that we were 3,000 years ago. The question of what is knowledge has neither been solved nor cast aside.

<sup>8</sup> Citation: “It is beyond the scope of this course to discuss all the complex social and historical implications of an Earth-centered versus a Sun-centered model of the solar system. ... Ptolemy’s fame comes partly from what he figured out, but his influence was largely because he wrote a great summary of everything known about astronomy.” *Id.*

<sup>9</sup> Commentary: No human, other than those who are illiterate, can claim that they immediately fully understood everything they have ever read on the first reading, or that they never had a different understanding after re-reading.

<sup>10</sup> Commentary & Citation: One favorite literary gimmick is the situation where the fraudster inadvertently turns out to be right. For example, in the gloomy *Twilight Zone* episode “Dust” (1961) a travelling fraudster sells ‘magic dust’ to the father of a young man who is about to be hanged for murder, taking advantage of his distressed state. The fraudster is shocked when the ‘magic dust’ seems to work as advertised; and then it starts to work on him too.

- ✓ This scheme was repeated – albeit in a lighter tone – in *Bednobs and Broomsticks* (1971) where Miss Price is taking a correspondence course in how to become a witch (considering the dreadful history of that particular subject, one wonders at the sanity of it?). The fraudster is shocked that the spells actually work. So were the Nazis.

<sup>11</sup> Commentary & Citation: I watched a report long ago about a man in a deep underground cave for a year without clocks or daylight. Researchers were trying to discover the natural circadian rhythm of humans. The conclusion was that the natural internal clock of humans is close to 25 hours. This presented a puzzle. Had the Earth’s rotation sped up (implying it moved closer to the sun) during human evolution? This would not be entirely unprecedented as we know the Moon is apparently moving farther away from the Earth (Mattias Green, “Why the Moon is Moving Away from the Earth,” *Newsweek*, April 29, 2019) – at 3.8 cm per year. According to Wikipedia article, “Circadian Rhythms,” the study I recall watching as news report or documentary was faulty, and a later Harvard study established that the human circadian rhythm is 24 hours and 11 minutes, close to the solar day.

- ✓ “This distance, and the use of moon rocks to date the moon’s formation to 4.51 billion years ago, are the basis for the giant impact hypothesis (the theory that the moon formed from debris after a collision early in Earth’s history). But if we assume that lunar recession has always been 3.8cm/year, we have to go back 13 billion years to find a time when the Earth and moon were close together (for the moon to form). This is much too long ago – but the mismatch is not surprising, and it might be explained by the world’s ancient continents and tides.” *Id.*

3 Dreamtime – The Absolute Truth

## **SHARD: II. Persistence of Existence**

\*\*\*

### The Walnut-Tree

A WALNUT TREE standing by the roadside bore an abundant crop of fruit. For the sake of the nuts, the passers-by broke its branches with stones and sticks. The Walnut-Tree piteously exclaimed, "O wretched me! that those whom I cheer with my fruit should repay me with these painful requitals!"

Translated by George Fyler Townsend. Aesop's Fables (p. 56). Amazon Digital Services, Inc.

**Excerpt from “Reality Is Subjective”**

Chaki Kobayashi (blog), May 8, 2013

Most people have the idea that the world, the universe, is an objective reality. It exists independently of us, independently of perceivers. For example, a tree is a tree. Regardless of whether I perceive the tree or an ant perceives the tree, the tree is the same thing. It has its own objective reality which is perceived in different ways by different beings. My experience of the tree is subjective, as is the ant's, but the tree has a true essence that exists objectively.

I don't believe there is such a thing as an objective reality. Reality is subjective. Of course, among humans, our perceptual experiences are similar enough in most cases that we can agree on most things and label trees as trees, for example. They have roots, trunks, branches, leaves. They're trees. But to an ant, a tree is a vastly different thing. It can be an ant's entire world, something enormous, something that provides endless work and sustenance and shelter. But of course we know what the tree is *in reality* because ants are stupid, right?

What if a much more advanced race of beings understands more about trees than we do, so we are similarly “stupid” compared to them as ants are to us? This race knows that trees are actually a particular kind of energy source with a particular vibration that they can perceive and we can't, and they are able to communicate on a vibratory level, telepathically, with the trees? They would think that we're stupid and don't know what a tree *really* is.

So what is a tree, *really*? Is it an entire world, an unconscious living thing, an intelligent, vibrating being, or something completely beyond our comprehension? It's all of those things, depending on the perceiver. No one of those realities is any more valid than the other. To us, of course, our perception of the tree is the most valid. But not to the ants, and not to the advanced race.

The point is that the tree is all of those things, and all of those things are equally valid. If there is no perceiver, the tree literally doesn't exist. I know that sounds crazy...

## Indifference of Apathy

**Social Apathy:** “Apathy has been socially viewed as worse than things such as hate or anger. Not caring whatsoever, in the eyes of some, is even worse than having distaste for something. Author Leo Buscaglia is quoted as saying ‘I have a very strong feeling that the opposite of love is not hate – it’s apathy. It’s not giving a damn.’ Helen Keller claimed that apathy is the ‘worst of them all’ when it comes to the various evils of the world. French social commentator and political thinker Charles de Montesquieu stated that ‘the tyranny of a prince in an oligarchy is not so dangerous to the public welfare as the apathy of a citizen in the democracy.’ As can be seen by these quotes and various others, the social implications of apathy are great. Many people believe that not caring at all can be worse for society than individuals who are overpowering or hateful.” – from Wikipedia article, “Apathy,” May 13, 2019.

**Indifference:** “The opposite of love is not hate, it’s indifference. The opposite of art is not ugliness, it’s indifference. The opposite of faith is not heresy, it’s indifference. And the opposite of life is not death, it’s indifference.” – Elie Wiesel, French-American writer and 1986 Nobel Peace Prize winner.

**Acedic Adults:** “Thus, *acedia* and stagnation are virtually synonymous. Stagnant adults are apathetic. They are self-absorbed, imprisoned in their own narrow self-indulgence, and suffering from boredom and interpersonal impoverishment. They are also potential psychological and even physical invalids. This is consistent with traditional descriptions of *acedia* as a kind of motionlessness, an inability to move about or to be moved within by the indwelling spirit of God. So the deadly sin of *acedia* grows out of a failure of generativity. The truly generative adult has a sustained emotional investment in what is being generated. The acedic adult has no such investment, is unable to care. The initial losers are those who rely on the goodwill of adults responsible for their care and support. The eventual losers are the acedic adults themselves as they become interpersonally impoverished and spiritually empty.” – Donald Capps, Deadly Sins and Saving Virtues (1987), p. 63 (found on Google books).

**Transmission Pathology:** “Generativity requires a spiritual self possible only after identity and intimacy are reasonably navigated. No one can give another this self. Generative adults are invested because they want to be. Acedic adults do not care, and no one can make them care. Even if younger members of the community try to inspire an indifferent older member, it is unlikely they will be effective.

The indifference of apathy is offset from within. No one can do another’s inner work. In the multi-aged relationships of a community, the young cannot rescue middle-aged and older adults from apathy. There is great risk that the younger person will be drawn into the older member’s pathology and take on a cynical and despairing attitude. The young must attend to their own developmental tasks. Destructive and addictive relationships in a community can result from a cycle of enmeshment based on such a ‘rescue’ of others” – Judith A. Merkle, A Different Touch: A Study of Vows in Religious Life (1998) (Niagara University, Dept. of Religious Studies) (Citing to Donald Capps, Deadly Sins and Saving Virtues, 108).

**Dying Alive:** “Apathy and cynicism usually take root early in life. If unchecked by middle age, they lead to bitterness, lack of energy, health problems, depression, and related difficulties. A public opinion poll taken by the National Opinion Research Center found that over half of all adults in their twenties rate their lives as ‘exciting.’ Once people reach their forties this slips to 46 percent. At 60 it falls to 34 percent. The Noble Prize winning French philosopher, physician,

and musician, Albert Schweitzer, fervently believed ‘The tragedy of life is what dies inside a person while they live.’

As the years slide by, a growing number of people don’t really live, they merely exist – trapped in their lives of quiet desperation. Just getting by is as dangerous as resting in the snow on a frigid winter night; our passion and spirit dozes off and dies in our sleep.” – Jim Clemmer, “Apathy and Cynicism Zap Our Spirit.”

*“I’ve been tryin’ to get down to the Heart of the Matter  
Because the flesh will get weak  
And the ashes will scatter  
So I’m thinkin’ about forgiveness  
Forgiveness  
Even if, even if you don’t love me anymore”  
– Don Henley, “Heart of the Matter” (1990)*

**Drill Down:** A person (human or otherwise) has an intellectual interest in a subject when they have found that thing for which they want to drill down to the ‘heart of the matter,’ for which they seek a profound understanding. An intellectual mind might then refer to the habit of thinking deeply about nearly everything. Constructural Elements are the...

**Degrees of Connectedness:** Any two subjects or things, no matter by how many ‘degrees’ they seem to be separated, are improbably related. Start talking, and over the course of an hour, in an unstructured conversational setting, the 🍄 drifts here and there, until what we are talking about at the end of the hour (to our astonishment) has little or no seeming relation to how or where the conversation began an hour ago. Yet, as the conversation slipped from subject to subject, antecedent to anecdote, everything seemed to flow, seemed to be related...<sup>1</sup>

*“Ah, yes – sometimes the Bible is the word of God. Sometimes it’s the word of man. And sometimes, it’s the word of two or more men. Sometimes the Bible’s literal, and sometimes it’s simply symbolic.”  
– Penn Jillette (emphasis in original)<sup>2</sup>*

**The Collective Consciousness:** Everything, every object, currently placed within a position’s Public Space or Diplomatic Spaces is part of that civilization’s collective consciousness. Things and objects that have been removed will be remembered by the players (and the in-game population) in a historical sense (and possibly in places such as the Star Log, News Events), but are not part of the current consciousness.

- **Public:** Put another way, the Public Space can be characterized as ‘everything we can talk about in any real sense.’ For example, statements such as: “Theories on optimal design of cities, city traffic flows, neighborhoods and demographics were in vogue after World War I.” (copied from Wikipedia), describe in a shorthand way what was in the Public Space at the time, at least among intellectuals and politicians, if not the population.
  - ✓ The Public Space as used in GGDM is thus the phenomenological experience of a civilization (see Avi Sion feature quote, Epistemological Constructural Elements, p. 175, *ut infra*). Notably, well over half of what is in the Public Space has appeared to us *from our own minds*; most of what we call culture has little or no objective reality *beyond us* but is one of the ultimate realities *to us*. In this sense, this discussion has circled back to the definition of reality offered in Spaces, 4 Beginnings, p. 46, *supra*.
  - ✓ In some senses, Public Space may overlap the concept of “noosphere,” but they are probably not congruent.

- **Spaces:** ‘Spaces’ is a term used to denote a significant area of importance to which a civilization devotes real estate and economic and cultural activity, spaces feature prominently in urbanist studies, e.g., Edward Soja. It is not a shallow term of goods and services; once recognized, spaces tend to develop meaning reaching to the core of civilization. For example, each civilization has a ‘dead space’ in terms of real estate dedicated to cemeteries and public monuments to the dead (the subject of Ray Bradbury’s 1948 short story “Pillar of Fire”<sup>3</sup>), plus all of the material and services related to burial or disposal of the dead, but beyond that, there is also a massive cultural significance and meaning attached to the whole process from individual persons to religion to insurance, civil and criminal legal resolution, to medical and philosophical issues.
  - ✓ Spaces may overlap depending on how they are defined, but the Public Space must necessarily be all inclusive and overlap over all of the other spaces in a civilization, it must be the entire sphere of a civilization. The overlap of ‘spaces’ sometimes results in odd combinations, for example, one could certainly argue that there is a ‘pet space’ in our civilization based on the number of dog and cat pictures on the internet, the number of books, products, movies, videos, medical care, and the overall meaning of pets to humanity (a meaning we do not attach to the animals that are part of our daily meals). Authors frequently find material and inspiration in the combinations; when combined with our care for departed loved ones or significant creatures in our lives, we have, oddly, pet cemeteries and Stephen King’s 1983 book.
    - Public Space and Constructural Elements collectively, in GGDM seem to be somewhat like Gilles Fauconnier’s ‘mental space’ (Mental Spaces: Aspects of meaning construction in natural language (1984), which I have not read) and as a bonus, GGDM also uses Aspects as a form of Cultural Trait piece on the Public Space (see 2 Culture, p. 364, *infra*). Designing GGDM has been a *journey through the Public Space (and language) of our current civilization*; I did not discover Mr. Fauconnier’s ‘mental space’ (nor had I heard of him) until I was rewriting the Reformation sections early in 2019, but Public Space, Aspects, and Constructural Elements have been in GGDM for at least 15 or more years prior to 2019 (though Constructural Elements was completely rewritten around 2015-2016).

---

*“To develop a complete mind: Study the science of art; Study the art of science. Learn how to see. Realize that everything connects to everything else.”*

– attributed to Leonardo da Vinci <sup>4</sup>

---

**Constructural Elements:** All *appearances* to an individual consciousness or the collective consciousness of a group, civilization, have four innate/necessary qualities that connect them to everything else within the sphere or realm of consciousness. These are called Constructural Elements. In game terms, this means that *all ships and friendly/naturalized/converted colonies* have four potential innate qualities that ‘fit’ or ‘place’ them within the structure of civilization.

- **Concepts:** “Constructural Element” is a term I invented for the game in 2002; you will not likely find it anywhere else prior to this work (i.e. *Google it*). “Public Spaces” is a term I

adapted from graduate Rhetorical Theory. However, the Public Space meaning that has evolved in this game greatly exceeds the meaning of the term in Rhetorical Theory.

- ✓ “Constructural Elements” is a term of patent law ([www.uspto.gov/web/patents/classification/cpc/html/defF16S.html](http://www.uspto.gov/web/patents/classification/cpc/html/defF16S.html)), however, even though I had a college course in Intellectual Property Law, I never heard the term and it is not the origin of Constructural Elements in GGDM. Constructural Elements in GGDM, while building a worldview, also refer more to connectedness by degrees than to unclassified parts.

The original concept of Constructural Elements was similar to a molecular building set, like the one seen in the movie, *Lawmower Man* (1992). It is thus that Constructural Elements were ‘sticks,’ representing bonds, joining the parts of society. This is the reason I first called them Constructural Elements and an entire clunky, vague game system was built on that idea. In a rewrite of the system more than five, probably ten years later, the Constructural Elements became innate and intrinsic qualities from which our worldview is constructed and that connects everyone to each other and our civilization to the universe. Thus the name Constructural Elements remains even as the underlying concept changed perceptively.

- Innate Qualities: The four ‘types’ of Constructural Elements – Temporal, Epistemological, Symbolic and Ideological, each described in a section below – are the intrinsic qualities of all objects within our consciousness (or at least for game purposes), whether active or not.
  - ✓ It would be an interesting study or discussion point as to what extent computers, our pets, and other living creatures possess Constructural Elements. I maintain that they must and that it is only a matter of how.

---

*“Nothing ever becomes real till it is experienced – even a proverb is no proverb until your life has illustrated it.” – John Keats*

---

**Temporal Constructural Element**: Causality is the basic condition shared by all of the universe that we know; the first question we ask of anything in our world, is where did it come from, how did it get there, we want to know its history, its temporal lineage. So the first connection of any ‘other’ thing in our consciousness is to place it in our timeline,<sup>5</sup> from the date of ‘discovery’ or appearance (p. 175, *ut infra*) to what happened to make it be there (if and when we know) and what has happened since.

It is assumed that time flows in the same direction and at the same rate for everything in the game (as time seems to be related to the expansion of the universe); that is, the ‘arrow of time’ points in the same direction for all, and we are all immersed (drowning) in the same ‘stream.’ An experienced Concierge and players may carefully vary from this, see Temporal Technologies generally, *infra*.

- ✓ Because we are born and we die, and time runs in only one direction, we tend to assume that this is true of the universe and everything in it; that the universe has a finite point at which it began, before which was either nothing or something else, and that it will have a finite point at which it ends, and that is true of everything within the universe as well. At this point in our evolution, we are unable really to grasp the implications of something that has always existed and will always exist (the snake eating

its own tail), without beginning or end; we are limited by the dimensions in which we live.

We are all victims of our childhood memories. The question is, whether that is a good thing or a bad thing. How many times do we act on situations as an adult because of some triggered childhood memory?

Page | 174

None of us have personal memories of our own complete temporal lineage. Like the eternal being in Isaac Asimov's "The Last Answer" (pub. 1980, see First Question & Last Answer excerpt, Information, *infra*) we do not remember coming into existence, we do not know for certain how or when or if our existence will ever end. We assume that we will die at some point because that is the common fate on Earth, and that it will be within the normal human lifespan (what the hell did Adam do for 930 years?); we have only the fact that we exist to suggest that we came into existence at some point. And we (most of us, anyway) have parents who suggest to us that we have not always existed and that accords with the common experience.

➤ Creator: In terms of what is 'real' the things we create or have a part in are more real to us than anything else; it is that we were involved in the establishment of our own Temporal Constructural Element rather than witnessing it or discovering it retroactively for that 'thing.' There is nothing more real to me – in this order – than my life (despite having no memory of being born or of anything before about the age of 3-4 years), my lifetime project (i.e. GGDM), and the cat companions I brought in as feral kittens, or in one case, a rescued adult female, and those that I caretake outside. A sense of this may be why some people like to grow or prepare their own food, or become craft hobbyist or professionals – they value making something with their hands, the special personal engagement with the TCE of that thing. And since Western religion teaches that man was made in the image of God and that God is the benevolent creator...

- ✓ "The late heiress [Gloria Vanderbilt] made it clear throughout her life that she valued making her own money. In a 1985 interview with The New York Times, she said, 'I'm not knocking inherited money, but the money I've made has a reality to me that inherited money doesn't have.'" – Antoinette Bueno, "Why Gloria Vanderbilt Did Not Leave an Inheritance for Son Anderson Cooper," Entertainment Tonight, June 18, 2019.

Now, if God created the universe, as the Christian literalist and fundamentalist argue, then God predates the Temporal Constructural Element that is the universe. It is in this idea that one might find a way to saying that God is eternal, has always been (in terms of this universe), and so on, because God predates the creation of the Temporal Constructural Element. This does not solve the First Cause or Prime Mover problem, however, because we do not know the conditions of the place from whence God originated (Robert Heinlein explores this a bit in Job: A Comedy of Justice (1984)) before creating this universe because we cannot see past the original Temporal Constructural Element event (which is ... The Big Bang); it does not suggest in any way that God created himself, as some have argued.

- ✓ About the only things we know Adam did was talk to God, get tossed out of the Garden – probably for urinating on the trunk of the holographic tree disguising the console that controlled the garden (like Octavia the Octopus who died because it accidentally opened the control to drain the aquarium<sup>6</sup>) but other reasons for the eviction

were made up later – and have a bunch of kids by one or more wives/women. And those kids grew up, intermarried, inbred, and acted just like us. How convenient.

*“Phenomenology is the study of appearance as such. It is a branch of both Ontology and Epistemology, since appearing is being known. By an ‘appearance’ is meant any existent which impinges on consciousness, anything cognized, irrespective of any judgment as to whether it be ‘real’ or ‘illusory.’ The evaluation of a particular appearance as a reality or an illusion is a complex process, involving inductive and deductive logical principles and activities. Opinion has to earn the status of strict knowledge. Knowledge develops from appearances, which may be: (a) objects of perception, i.e. concrete phenomena in the physical or mental domains; (b) objects of intuition, i.e. one’s subjective self, cognitions, volitions and valuations (non-phenomenal concretes); and/or (c) objects of conception, i.e. simple or complex abstracts of preceding appearances.*

*Abstraction relies on apprehensions of sameness and difference between appearances (including received or projected appearances, and projected negations of appearances). Coherence in knowledge (perceptual, intuitive and conceptual) is maintained by apprehensions of compatibility or incompatibility. Words facilitate our construction of conceptual knowledge, thanks to their intentionality. The abstract concepts most words intend are common characters or behaviors of particulars (concrete material, mental or subjective experiences). Granting everything in the world is reducible to waves, ‘universals’ would be equalities or proportionalities in the measures of the features, motions and interrelations of particular waves. Such a theory of universals would elucidate sensation and memory.”*

– Avi Sion, from abstract for his book [Phenomenology](#) (2005) <sup>7</sup>

**Epistemological Constructural Element:** The next question for any object in our consciousness is how we obtained knowledge of the object, what we can know about it, and how the object fits within the constructed knowledge of our world. Every consciousness must necessarily organize and place knowledge of the world into some sort of structure that is functional, internally consistent, and forms a worldview. In our civilization, this is done by historical narrative, branches of study, college majors, classification, segregation and division.

- ✓ Ontology – the study of existence – is the geeky big brother of epistemology – the study of knowledge. Note that no gender has been assigned to epistemology by the preceding statement.

Throughout GGDM, epistemology is treated as a worldview, with the central question being, how are we going to slice the pie? And the related and broader questions of who, what and when was it determined how the pie was to be sliced? A cursory examination of intellectual history, and the current division of disciplines, study areas, degree programs, and professions and specialization, and of other cultures, shows that the pie might have been sliced much differently.

- ✓ The division of knowledge into professions, disciplines is a *boundary creation and control function*, the same as division by economic class, government power by branches, humanity by national borders, and religious movements by doctrinal fragmentation; nearly all of civilization is a struggle for boundaries and feedback loops.

- Appearance: To appear is to be known, is the axiomatic statement of phenomenology. Looking is the meeting of conscious will with appearance. What are the consequences of denial? That something can be known without appearing to us in some form? Or that which appears to us does not become known to us by appearance?
- ✓ Phenomenology is a relatively modern term, according to Merriam-Webster online dictionary its first use was about 1797. The idea has evolved through several phases to the modern meaning. The process of forming new frameworks to understand that which is not explainable within the preceding framework is the process of reforming worldviews of civilization.
  - ✓ Phenomenology provides a means to explain how non-real things, such as fictional characters or stories (in movies, novels, fairy tales, etc.) can have an impact on our consciousness. How would we discuss these things as ‘real’ if not for the framework of phenomenology? It is the basis of a branch of psychology which holds that our mental reality is formed by perception of phenomenon instead of objective reality.

*“Due to the First Jewish-Roman War, the destruction of the Second Temple ushered in a major time of dramatic reformation in religious leadership, causing the face of Judaism to change. The Second Temple served as the centralized location from which the ruling groups Sadducees and the Pharisees maintained Judaism, with rivaling Essenes and Zealots being largely in opposition. With the destruction of the temple, the major ruling group lost their power – the Sadducees, who were the priests, directly lost their localized power source and were rendered obsolete. Due to this, only one group was left with all the power – the Pharisees, who were the rabbinic group. The rabbinic groups’ power did not derive from the temple or from military prowess, which enabled their power to spread among synagogues to different communities.*

*This changed the way Judaism was practiced on a daily basis, which included changing from sacrificing animals to praying in order to worship God. Rabbinic Judaism became a religion centered around synagogues, and the Jews themselves dispersed throughout the Roman world and beyond. With the destruction of Jerusalem, important centers of Jewish culture developed in the area of Galilee and in Babylonia and work on the Talmud continued in these locations.*

*Before Vespasian’s departure, the Pharisaic sage and Rabbi Yohanan ben Zakkai obtained his permission to establish a Judaic school at Yavne. Zakkai was smuggled away from Jerusalem in a coffin by his students. This school later became a major center of Talmudic study.”*

– from Wikipedia article, “Jewish-Roman Wars,” captured September 7, 2019 <sup>8</sup>

**Symbolic Constructural Element:** “...but face it, most of the things we call ‘sexy’ are symbolic, you know, except perhaps an exhibitionist’s open fly.” – Frederik Pohl, “Day Million” (1966). Abstraction is a key element of sapience. Experiences and events are reduced (edited) to memories, rules, summaries, points, regulations, codes, idols, icons, and symbols.<sup>9</sup> Symbols are objects, often idols or icons that represent or stand for something else, an idea, image, belief, action or another person or object.

- ✓ [Interview] “To the French public, this was a great victory. [Fort] Douaumont was a great symbol. It was of no military significance whatsoever, but it was a symbol. It

had to be recaptured. And it was seen in France as being a great victory. In Germany, it was seen as a terrible defeat. The reality is, it didn't matter tactically. It was all about perception." – Major Gordon Corrigan (British Army, Gurkha Rifles), Under Siege television series (2008), Episode 4.

- ✓ [Dialogue in Russian with English Subtitles] “[Lyudmila] Pavlichenko is not just a soldier anymore. With this, she's become a symbol. And no one invalids a symbol. ... The Germans announced her death. [Officer produces a German propaganda hand-out] The third assault wave is coming and my guys are going to battle with her name on their lips.” – Soviet Officer, from Battle for Sevastopol (2015).

She is then forced to get out of the hospital bed, badly wounded along her back and still bleeding, and put on a uniform jacket and hat, hold a rifle and smile for the camera so they can take a photograph to disprove the German propaganda. After the camera flash, she almost faints.

Anything, any place, or anyone is capable of being made a symbol of something else or of a class or category of things, by highlighting certain attributes and dismissing or diminishing others. Cult of personality, hero worship, deification, historical distortion, the victor writes history; all of these highlight or exaggerate some things and diminish or hide others to create the symbol. A symbol therefore, is *an exercise in inequality* (for example, athletes, heroes, political leaders are symbols); true egalitarianism would have no symbols.

- ✓ My neighbor was arguing with his wife because she wanted a red front door. His wife talked about the Chinese and American meanings of a red door. I talked about the meaning of a red door on a Christian church. He then asked why does everything have to have a meaning assigned to it? The answer is because that is what humans do; true egalitarianism would not be human. Because what, other than the void, exists beyond meanings we assign, however silly they are?

The act of choosing one thing over another, making a choice or decision, or elevating anything over another, is an act of discrimination, *an act of inequality*. Even comparing things requires making a judgment about qualities, such that modern cultural anthropology discourages comparisons of cultures. *Discrimination* is, by itself, a *neutral* term of cognizance.

- ✓ “First among equals” – as the Norse god Odin described himself in Robert Heinlein’s *Job: A Comedy of Justice* (1984) – is an old ironic phrase in English, its actual meaning is the opposite of its intended meaning: Being first is not being equal. It is often expressed in the title First Citizen; the Latin term for it, Princeps, was a title of the Roman Emperor. As TV Tropes points out, it is often used in fiction to avoid the complications of being called Emperor.

Most *discrimination* is good and necessary (e.g., comparing price, quality of product, choosing a car mechanic, deciding whether to supersize your meal, which movie to watch tonight); however, the term has taken mostly a negative connotation in our current culture because certain acts of discrimination against people (e.g., racism, homophobia), being without rational basis, are considered culturally damaging and illegal or legally actionable.

- ✓ [Narrator] “The uncomfortable truth for [Kim] Philby was that his value to Russia was more symbolic than personal.... but what mattered much more to them was that this old man was a living example of a signal victory over the West at a time when

the skids were under the socialist dream.” – The Spy Who Went into the Cold: Kim Philby, Soviet Super Spy (documentary, 2013).

- Smuggled in a Coffin: What would be more symbolic of the death of Second Temple Judaism than the remaining Rabbi being smuggled out of the city in a coffin by his students? Did it literally happen that way, is it literally true? Who cares? The important underlying elements are the students (the next generation), caring for their master (the old generation authority figure), and exercising ingenuity to insure the survival of the tradition. The idea of leaving the ancient sacred city and going forth may also be important.

Although Rome was the co-seat of Christianity alongside Constantinople, Rome is not the “Second Temple” of Christianity, even if the Vatican acts like Sadducees. Christianity as practiced, followed the format of Rabbinical Judaism, centered on community churches.

Interpretations are built on symbols and symbolic events. For example, Rome was sacked by the Vandals in 455 A.D., and within 35 years, the last traces of the Western Roman Empire had vanished under the wave of migrating ‘barbarian’ tribes. Those tribes slowly became Christianized, mainly between 700 and 1000 A.D. The fall of Constantinople was almost 1000 years after the sack of Rome by the Vandals. One might see in these places and important historical events a grand epic cycle. Macro-history is a bit of interpretation.

- White Rose: *Symbolic acts* are acts lacking in practical utility but that convey to the audience what the actor believes or wants to happen.<sup>10</sup> February 1993 was the 50<sup>th</sup> Anniversary of the execution of Sophie Scholl, her brother Hans Scholl, and Christoph Probst for passing out anti-Nazi pamphlets. Copies of the sixth White Rose leaflet were dropped over Germany by allied planes in July 1943. *Symbolic act*.
  - ✓ “Playwright Lillian Garrett-Groag stated in Newsday on 22 February 1993, that ‘It is possibly the most spectacular moment of resistance that I can think of in the twentieth century ... The fact that five little kids, in the mouth of the wolf, where it really counted, had the tremendous courage to do what they did, is spectacular to me. *I know that the world is better for them having been there, but I do not know why.*’ In the same issue of Newsday, Holocaust historian Jud Newborn noted that ‘*You cannot really measure the effect of this kind of resistance in whether or not X number of bridges were blown up or a regime fell ... The White Rose really has a more symbolic value, but that’s a very important value.*’” – from Wikipedia article, “Sophie Scholl,” May 20, 2019 (emphasis added).

One of the members of the White Rose group who was executed in July 1943, Alexander Schmorell, has been canonized by the Orthodox Church in 2012 as St. Alexander of Munich ([https://orthodoxwiki.org/Alexander\\_Schmorell](https://orthodoxwiki.org/Alexander_Schmorell)). Canonization makes you a symbol.

One of the most literal examples of the power of a symbol is the episode of the Holy Lance of Antioch and the strange Battle of Antioch (June 1098 A.D.) in the First Crusade.<sup>11</sup> The success at Antioch set the pattern for the use of alleged religious artifacts for morale and motivational purposes during the Crusades.<sup>12</sup> The power of religious symbols<sup>13</sup> served to make up for the failings of incompetent leadership, poor planning, bad logistics and morale, and strategy based on religious faith instead of realities (e.g., the army of the First Crusade arrived at the walls of Jerusalem in July 1099 without either siege equipment, proper supply or a plan;<sup>14</sup> they just got lucky that ships arrived at Jaffa).<sup>15</sup> Later, in August 1099, a fragment

thought to be of the True Cross, discovered in Jerusalem, was used to lead the Crusader army, outnumbered 2 to 1, to victory at the Battle of Ascalon.

*“Hate speech like that proudly employed by those organizing, participating in and discussing the horrifying events ... is unwelcome on many platforms. In fact, discouraging hate speech is an ideological stance common to nearly all internet services, with the marked exception of services created specifically to circumvent that stance.”*

– Devin Coldewey, “Discord shuts down alt-right server and accounts for ToS violations,” TechCrunch, August 14, 2017

**Ideological Constructural Element:** In the final analysis, all things within our consciousness are fitted into a set of ideas, idealized conditions (or the extent to which the object in question departs from ideals and ideal conditions<sup>16</sup>) and worldviews, and wishful thinking about our relationships to each other and the real universe around us.

- ✓ “Kant’s argument turns on the view that, while all empirical phenomena must result from determining causes, human thought introduces something seemingly not found elsewhere in nature – the ability to conceive of the world in terms of how it *ought* to be, or how it might otherwise be. For Kant, subjective reasoning is necessarily distinct from how the world is empirically. Because of its capacity to distinguish *is* from *ought*, reasoning can ‘spontaneously’ originate new events without being itself determined by what already exists.” – from Wikipedia article, “Compatibilism,” captured October 27, 2019 (emphasis in original), citing to Immanuel Kant, The Critique of Pure Reason (1781), trans. by Max Mueller (1949), p. 448.

The ideology involved may or may not be overtly political, but nearly all ideology relates to politics, economics or religion (and the entanglements thereof); it would be difficult to imagine otherwise without significantly changing the meaning of the word “ideology.”<sup>17</sup> While ideology can have negative connotations in the normal discourse, it is used in a neutral sense in GGDM.

- ✓ For example, I started trying to understand the American political term, “neocon,” a group upon whom much blame has been heaped for world history since the end of the Cold War. I eventually realized that the neocon movement and individual politicians of the group, were attempting to resist, albeit with limited success, the famous observation, ‘If you are a conservative when you are young, you have no heart, if you are a liberal when you are older, you have no brain’; neocons were trying to be both. Neocon is the current name for what is probably a normal historical process or movement in any civil society culture that has conservative and liberal political elements; there are, for example, “neolibs,” though the term hasn’t gained widespread use here in a society moving toward conservatism.

The process of understanding neocons is a good example of the normal application of Constructural Elements (even if you think my understanding is wrong), as each question was answered in order – temporal, epistemological, ideological and symbolic – and they were fitted snugly into the political spectrum present in the current worldview.

The Ideological Constructural Element is perhaps the hardest to grasp in any concrete way; this is in part because we are all members of the modernity; modernity, starting with Machiavelli's discussion of politics of power in 1532, elevates realism over the idealism that came down through Western civilization from Plato through Hellenized Judaism, and finally, Christianity. Modernity is a worldview *because membership is not the least voluntary*; you were raised in it and it informs your expectations.<sup>18</sup> Even Martin Luther, an ordained clergy in a very religious time, found a streak of realism when writing about what Christians actually do, and the subject of secular authority (see Luther & Charles excerpt, Government Titles, *infra*).<sup>19</sup>

Had GGDM been written in another idealist time, the Constructural Elements (a realistic construct of worldviews) – if the concept could even exist – would have been sliced differently, it might have followed, for example, Plato's essences or Luther's two kingdoms doctrine – there might, for example, have been two representing the left hand and two parts for the right hand of God (which would be considered dogmatic and quaint, as my construct will undoubtedly be in 500 years), and they would have been the construct of worldview.<sup>20</sup> Or in ancient China:

- ✓ “The first to unite the yin-yang and Five Elements into a single system was apparently Tsou Yen (ca. 305–ca. 240), traditionally regarded as the ‘father’ of Chinese naturalistic thinking. Living as he did during the Warring States period, he gave the elements political significance by correlating each of them with a particular dynasty or reign in an endlessly recurring cycle. In this way he and his followers induced several of the Warring States rulers to institute state cults of the Five Elements in the hope of gaining the support of that particular element destined by its position in the cycle to replace the ebbing element of the Chou dynasty. Before Tsou Yen and perhaps for some time after him as well, the Five Elements seem to have been almost exclusively the concern of court astronomers, physicians, music masters, diviners, and the like, and it was to this class of men that Tsou Yen himself possibly belonged. By contrast, the elements are barely mentioned in sociophilosophical writings before the second half of the third century B.C.” [Derk] Bodde (1991), pp. 101-102. (from University of Washington, text notes for translation of Weilue 魏略 by Yu Huan 魚豢).
- ✓ See continued discussions in Conflagration, 3 Constructural Elements, p. 211 and The Bargain, 5 Culture, p. 426, *infra*.
- Language & Philosophy: Language serves as an ideological archeology; a sedimentary deposit of ideas, silt accumulation in the intellectual stream:
  - ✓ “Resistance to Aristarchus, a kind of geo-centrism in everyday life, is with us still. We still talk about a sun rising and the sun setting. It's 2200 years since Aristarchus and the language still pretends that the Earth does not turn, that the sun is not at the center of the solar system.” – Carl Sagan, Cosmos, Episode 7.

Political philosophy is often, but should not be, confused with ideology:

- ✓ “Let us start by noting that the Austrian School of Economics is not an *ideology*, but a way of scientific thinking. The Austrian theorists never thought in terms of an ideological assumption that ‘the free market is the best, so we have to build a theory around it to integrate this ideology with the general body of science.’ Quite the contrary. Carl Menger, considered to be the founder of the Austrian School, experienced

the real market first hand by talking with entrepreneurs and stock investors, and this inspired him to develop his theory in a way that best suited reality. ...

The reason the Austrian School may be accused of being ideological is probably that it is often associated with libertarianism. These two, however, are separate things. The fact is evident by the existence of libertarian economists who are not Austrians, and Austrian economists who are not libertarians. Libertarianism is a political philosophy. *Philosophy answers a different kind of questions than economics.* Economics, as Ludwig von Mises wrote, does not ask which ends should people desire, but what means they should employ to achieve their desired ends.” – Econclips.com, “The Methodology of the Austrian School,” (undated, no author attributed), captured July 9, 2019 (emphasis added).<sup>21</sup>

The preceding commentary links ideology to epistemology in its description of how ‘knowledge’ is sometimes built in an unscientific way (i.e. backwards, where the conclusion comes first) via ideology and distinguishes between *a priori* science and philosophy.

- ✓ Rhetorical Question: Is the GGDM simulation presenting an ideology or an *a priori* science? Is it more like the U.S. Declaration of Independence (see discussion 1 Beginnings, p. 24, *supra*) or Ludwig von Mises’ Human Action (1949)?

---

*“Alienated from the present. There are great advantages in for once removing ourselves distinctly from our time and letting ourselves be driven from its shore back into the ocean of former worldviews. Looking at the coast from that perspective, we survey for the first time its entire shape, and when we near it again, we have the advantage of understanding it better on the whole than do those who have never left it.” – Friedrich Nietzsche*

---

**Medieval State of Mind**: It is very difficult to step outside your time’s worldview; medieval people are alien to us, we are more like the Romans (and also not very much like the Romans) than people of what were later called the Middle Ages. Most characters in modern-written medieval fantasy, docudrama, or historical fiction and costume epics, are modern or nearly modern people in medieval costume, and most of them are lords and ladies (i.e. ‘important people’), and not peasants (like in the SCA<sup>22</sup>). This was a point that stood out most noticeably in the failed – it lasted one month – 1992 television series, Covington Cross, the characters were modern people in medieval costumes: The pilot opening scene was ridiculous and the rest didn’t get better.

- ✓ Conversely, sometimes a true effort is rewarded: “After researching about old pagan beliefs and folklore about witches, that were supposed to roam the mountain woods in those times, my interest was to develop a character that these folk tales would have branded as a witch, but to dig deeper into her psyche and see her as the traumatized, mistreated and finally delusional person that society constructed. As well as to understand what utterly evil things people were lead to do while suffering from psychosis in the middle ages and being surrounded by superstition and religious prosecution. The film tries to depict a very personal and empathetic mental image of a nightmarish and sick mind.” – Lukas Feigelfeld discussing his movie, Hagazussa – A Heathen’s Curse (2018), from Brad Miska, “Hagazussa’ Poster Evokes a Heathen’s Curse,” September 13, 2017.

- **Questions of Intelligence:** Let's become a dog for a moment, and since I am a male, and obviously male biased... In the case of a male dog meeting another dog, the first question asked is whether the other dog is a male or female? The second question is, if it is a male, am I the alpha in this case, and if it is a female, is she ready to mate? This is not to make fun of dogs (humans quietly do the same, just watch them), but to point out that the questions asked (i.e. the Constructural Elements) in any situation depend on intelligence. Dogs ask questions that fit a dog's world and pre-interstellar races ask questions that fit a pre-interstellar planet-bound world. Time is only a very vague concept to dogs, the now is paramount (notably less so for intelligences that have foresight and legacy consciousness), epistemology/ontology is non-existent for dogs as far as we can determine, and their only ideology is 'loyalty to a fault,' an anthropomorphic trait we identify and treasure in dogs (and supporters of President Trump, see Charlie Sykes comment, Red Guards, 1 Order, p. 517, *infra*).
- ✓ The Constructural Elements presented here are thus the questions asked by a planet-bound, pre-interstellar race, as are all of the other questions asked in GGDM. This is so because we cannot yet imagine the questions that a real interstellar or trans-dimensional culture will ask when they understand FTL technology, have passed the Technological Singularity, for example or can penetrate black holes. Yet, fragments of worldviews linger from the past, we still have mythopoeic elements in our thoughts and flat earth phrases in our language, so likely these questions will remain in some form as artifacts in future civilizations.

---

*“For Egypt, the greatest horror was the destruction or abduction of the cult images. In the eyes of the Israelites, the erection of images meant the destruction of divine presence; in the eyes of the Egyptians, this same effect was attained by the destruction of images. In Egypt, iconoclasm was the most terrible religious crime; in Israel, the most terrible religious crime was idolatry. In this respect Osarseph alias Akhenaten, the iconoclast, and the Golden Calf, the paragon of idolatry, correspond to each other inversely, and it is strange that Aaron could so easily avoid the role of the religious criminal. It is more than probable that these traditions evolved under mutual influence. In this respect, Moses and Akhenaten became, after all, closely related.”*

– Jan Assmann, [From Akhenaten to Moses: Ancient Egypt and Religious Change](#), (2014), p. 76

---

**Rebels, Romans and Ruins of Religions:** Or as Dr. Stephen Griffith (Lycoming College, Dept. of Philosophy) pointed out, rebels are not really 'free,' as being a rebel requires them to be the opposite of what they oppose, therefore, they cannot ever be what they want to be or could be. A very existentialist thought!; sometimes we make our own boxes and live in them. In the context of the ancient Egyptians and Israelites, the Jewish culture developed religion to symbolize their opposition to the other. This opposition religion then was redirected toward the Romans who conquered Egypt and, eventually, Palestine.

- ✓ In a sense, everyone is a rebel against something, just as Erasmus maintained that there wasn't a sane human, it was just a matter of degrees. Many people are confused about this, consider for example, the 1971 hit song by Lobo, "Me and You and a dog named Boo." The hitchhiking character in the song is clearly rebelling against attachment and being settled (against urbanization and suburbia), and declares, "How I love being a free man." The song appealed to the wishful thinking of the public and thus

was a hit. But the song confuses freedom to travel (freedom from employment, education, family, home ownership) and “livin’ off the land” with being free. The character in fact is caught stealing eggs and forced to work on the farm. Freedom in this sense is just the opportunity to rebel against something and we are all equally free and insane inside our minds.

- If after reading GGDM, you want to be the opposite of whatever you perceive I am, go right ahead, but I feel bad for the people around you. But that is the way we often react to our parents, elders, society.

The collapse of the Roman Empire eternally fascinates us for three reasons: 1) it was considered in its early form, the pinnacle of Classical Euro-Mediterranean civilization, 2) the collapse was tragically long and slow (and at the receiving end of the Great Migration, an epic in its own right) and 3) the collapse took an entire stage of civilization into the history books along with the Empire. And the Eastern Roman/Byzantine Empire was an almost, but not quite, equally impressive second season that protected post-Roman, post-Great Migration, Christianized Europe from additional impacts and also absorbed some of the remaining warlike entropic energy of the tribes as they settled down at the end point of the Migration.

- ✓ The collapse of the First Intermediate Period of Egypt (or any period of ancient Egypt) is probably nearly as epic, in different ways, but we do not identify with it. Possibly because Egypt recovered and had later greatness, but more likely, because Christianity emphasized the collapse of Rome and because the Roman and Byzantine Empire occupied and influenced over 1,400 years of history in Europe (from which Western culture sprang forth to 500 years of colonial hegemony) on the other side of the New Testament.

---

*“This argument is strongly reminiscent of that of Shephard Clough, who suggested that weakness and collapse can be caused by diverting resources from investment in capital to expenditures on art and knowledge. As more resources are devoted to artistic achievement, the share available for creating economic well-being diminishes, as does the society’s strength. Thus the elements that define ‘civilization’ lead to its demise. The collapses of Egypt in the First Intermediate Period, and of Rome, are explained accordingly (Clough, 1951: 3-7, 52-53, 143-59, 261).”*

– Joseph Tainter, [The Collapse of Complex Societies](#) (1988), pp. 55-56

---

**Framing Collapse:** Martin Luther in 1517 complained in the 95 Thesis about the Church’s lavish expenditures on cathedrals rather than using the money to help the poor. Through his own filter, he perceived this in the current state of German culture, beset by corruption, plague, and desperately poor, restless peasantry. The widespread peasant revolts, which Luther vehemently condemned (he needed the support and protection of the hereditary Electors and magnates), started in 1524 and evolved into the devastating German Peasant’s War (1524-1525).

This argument suggests that modern technological, global civilization may suffer from excessive investment in technology research and specialized education. The suspicion that this might be the case, or cause of problems, has long been harbored in the West and expresses itself in arguments about universal college access, narrow specialization, student loan debt, credentialism, and

government investments in (or lack of investment in) infrastructure, deterioration of infrastructure (usually by raising the debt ceiling) and loss of jobs through regulation.

In short, this argument encapsulates generally elements of the conservative position in America, including the usual sorts of anti-immigration arguments. Because of the development of radicalism and hostility between conservatives and liberals in the U.S., and the vagaries of unpredicted events in the 24-hour news cycle, the conservatives have not been able to sell this argument in any long-lasting manner. And as Joseph Tainter stated, the technological optimist argument has been hard to counter because so far they have been right:

- ✓ “The second problem ... is that technological optimists argue that we don’t really [need] to worry about resources, that all we need are free markets and the price mechanism. That as long as there are free markets that whenever resources start to become scarce, the market signals that it’s time to innovate, that there will be rewards to innovation. And so the assumption is that as a resource becomes scarce, people develop – put effort into developing a new resource or finding more efficient ways of using the existing resource or developing new technologies and so forth. This is a hard argument to counter because up until this point, the technological – excuse me – the technological optimists have been correct. We have maintained the most complex society humanity has ever known, and we have maintained it up to this point.... I have argued that technological innovation and other kinds of innovation evolve like any other aspect of complexity. The investments in research and development grow increasingly complex and reach diminishing returns.” – Joseph Tainter, podcast interview on PeakProsperity.com, by Adam Taggart, June 25, 2017.

---

*“Among Europe’s Catholic peasantry, religion was all consuming and laden with folk custom. Believers sacrificed animals to the Virgin, prayed to the new moon, and worshiped the sources of streams. They made curative pilgrimages to the sites of miracles... The faithful believed in the necessity of witch hunts and resisted the Church’s attempt to stamp them out. Satan was everywhere and his creatures had to be eradicated....*

*After 1650 the Church made a supreme effort to spiritualize peasant Catholicism by attacking its magical content. A better educated clergy was sent to rural parishes, emphasizing scriptural teaching, the sacraments, and the catechism. The Church attacked semi-pagan folk festivals and declared war on the veneration of accumulated bric-a-brac that had transformed Churches into sacred warehouses.”*

– Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648 to 1789 (2<sup>nd</sup> Ed., 1992), pp. 171-172 <sup>23</sup>

---

## Endnotes.

<sup>1</sup> Citation: See, for example, The Life of a Flea discussion in I Information, p. 1334, *infra*, of pets in space-opera fiction, which leads to commentary about Muffit in the original Battlestar Galactica series, which in turn, becomes a backdoor to a discussion of standard tropes in 1970s television.

<sup>2</sup> Citation: cf. “As David said, ‘Against thee, thee only, have I sinned, so that thou art justified in thy sentence’ [Ps. 51:4]. As a matter of fact, true Christians willingly accept the rebuke and judgment that is in the preaching of God’s word. But those who won’t receive this judgment show plainly that they are really damnable knaves. They are sinning against the Holy Spirit when they refuse to accept the rebuke of the preachers through whom he speaks. Or

they are so far gone that they regard our preaching as nothing more than man's word and so won't tolerate it." – Martin Luther, "Appeal for Prayer Against the Turks" (1541) *Luther's Works*, Volume 43 (1968).

<sup>3</sup> **Citation:** Originally published in Planet Stories, summer 1948 issue (information from the ISFDB), also reprinted in *S is for Space* (1966) of which I have had a hard copy since I was a teenager (along with *R is for Rocket*), I think I got them from my mother who probably bought the books in the 1970s.

<sup>4</sup> **Commentary & Citation:** This quote attributed to Leonardo da Vinci has been bouncing around the internet for decades, in various versions, e.g., "Principles for the Development of a Complete Mind: Study the science of art. Study the art of science. Develop your senses – especially learn how to see. Realize that everything connects to everything else" and "Leonardo Da Vinci's principles of learning are: Study the art of science, study the science of art, use all your senses, and know that everything connects to everything else." According to the Talk Page discussion on Wikiquote, it does not appear anywhere in his writings, but may have been derived from something he actually wrote, "*Studia prima la scienza, e poi la practice bata da essa sceinza. (Libro di Pittura, 32r)*" (Wikiquote Talk Page). This is a common situation with quotes of questionable attribution or accuracy on the internet. However, the *more important* fact is that people like the bits of wisdom contained in the alleged Leonardo da Vinci quote and have enough respect for da Vinci as a polymath to attribute it to him without question, a form of internet nexialism.

<sup>5</sup> **Commentary:** Imagine how profoundly the invention of names for objects and concepts affected our ancestors? Conversely, imagine a conversation in a world where nothing has any formal name? Is it possible? Who are you without a name? Helen Keller relates that the 'breakthrough' came on the day at the water fountain, when she finally grasped that sounds represented objects. Afterward, she wanted to know the names of everything.

<sup>6</sup> **Citation:** J. Michael Kennedy, "Octavia the Octopus Dies as Tank Empties: Animals: The sea creature at San Pedro aquarium apparently tore off a drain pipe with her tentacles overnight. The death intensifies controversy over her captivity." *Los Angeles Times*, April 12, 1994.

- ✓ Octopi seem to particularly detest captivity. There are many stories of them escaping tanks, trying to crawl away, go down drains, etc. The one at the Santa Monica Pier Aquarium disassembled a valve and flooded the exhibit and offices with 200 gallons of water. See, Bob Pool, "Did this mollusk open a bivalve?" *Los Angeles Times*, February 27, 2009. According to PETA, another octopus in Germany shorted out lights by squirting water, and also redecorates his tank, throws rocks, etc.
- ✓ Unlike other sea creatures who may be unhappy in captivity, Octopi have manipulative appendages and some sort of intelligence to manipulate their surroundings, including some human technology. See related Hox Genes discussion, 1 Technology, p. 685, *infra*.

<sup>7</sup> **Citation:** "Before the French philosopher Descartes (1596–1650) pointed out the existence of the conscious self as a turning point in epistemology, using the phrase 'Cogito ergo sum,' the 11th century Iranian philosopher Avicenna had referred to the existence of consciousness in the flying man argument. Thus, long before Descartes, Avicenna had established an argument for the existence of knowledge by presence without any need for the existence of the body. There are two stances on the relationship between the arguments of Avicenna and Descartes. Some scholars believe that there are apparent similarities between the floating man and Descartes' cogito. Others consider these similarities trivial and superficial. Both Avicenna and Descartes believed that the soul and self are something other than sense data. Also, Avicenna believed that there is no relation logically between the self and the body. In other words, there is no logical dependency between them." – from Wikipedia article, "Floating Man," May 21, 2020.

<sup>8</sup> **Citation:** "It is around this time that the gravest of omens took place. This spiritual crisis involved the daily sacrifice of lambs to Yahweh. Like clockwork, the priests [Sadducees] had upheld the Holy Rite of Talmud amidst the bloodshed and starvation of the siege. But on the 5<sup>th</sup> of August, the last of the sacrificial lambs ran out. Now, at the height of the siege with the Romans advancing, the Jews lost their connection to God." – from "The Siege of Jerusalem (70 AD) – The Great Jewish Revolt [FULL DOCUMENTARY]" Invicta YouTube Channel, August 11, 2019.

- ✓ The triumph of the Pharisees and rabbinic Judaism is proved thus: It is inconceivable to us – silly and shallow seeming even – to hold that the inability to sacrifice a lamb daily severs a people's connection to God. It also seems an unnecessary cruelty to animals and a terrible waste of food. Sadducee Judaism seems to hinge faith on the *neurotic paradox* of a daily *symbolic act*: The ritual sacrifice of animals to God.

<sup>9</sup> **Commentary:** One busy summer workday, we were walking along Grant Street in the mid-afternoon carrying boxes from one office to another. We noticed that people would look at us briefly and smile, some a little, some more obviously. After a few moments of wondering, we realized that people were smiling at the large image of Kermit the Frog that was on the box I was carrying. Kermit the Frog is a symbol of something to those who showed a reaction; perhaps a symbol of their childhood, a memory of fun and innocence on a sunny summer workday.

<sup>10</sup> **Commentary & Citation:** I have wondered if the original concept of being 'turned to stone' was a reference to being immortalized, rendered in statuary form? Thus, being turned to stone was a symbolic act, demonstrating what

the subject or the people desired of that particular person – and it kind of worked, people see the statue and assuming it must have been a great one, ask, who is that? They rarely ask who was the artist-sculptor. Being ‘turned to stone’ comes down to us, however, as an ‘evil,’ horrific, literal event thanks to Greek mythology; do you suppose that Medusa might have been originally an especially skilled and prolific, and rival, Minoan sculptor, perhaps making statues of women? Might the monster Medusa have represented the extreme of symbolic acts, or of clear memory, or a time-travelling tourist with a Polaroid camera? We do not view statues in the same way now, or not even in the same way as a couple of centuries ago, the symbolic of most things has been lost out to the literal, the commercialized, and the cheap, but our language is still loaded with symbolic act references.

- ✓ This trend continued from classical sculpture into Renaissance painting; it is not a coincidence that some of the most famous Renaissance painters were also sculptors in stone, and this is the reason for the Mona Lisa.
- ✓ In the TV miniseries Masada (1981), the Roman commander had a miniature bust sculpture of his wife in a sort of temple in his tent. It is not certain – as is the case with husbands and wives – whether this is symbolic of his wife being there with him or symbolic of his joy that she was not there with him – like Londo’s three wives in Babylon 5, whom he symbolically called war, pestilence and famine.

<sup>11</sup> Commentary: Peter Bartholomew, the purported discoverer of the Holy Lance of Antioch in 1098 A.D., went through an ordeal by fire in April 1099 A.D. to prove himself as an authentic prophet or holy man. He survived, but was probably severely burned (beyond what medieval medicine could help), he died less than two weeks later (organ shutdown? infection?). There were vocal skeptics at the time of how the relic was allegedly discovered and his claims of visions.

<sup>12</sup> Commentary & Citation: In this, the Crusaders had classical Christian inspiration – however, alleged religious artifacts can be more reliably produced than celestial phenomenon, to wit:

- ✓ “Always sympathetic to Christians, he claimed to have had a divine vision that helped lead his troops, flying Christian symbols on their standards, to victory in civil war in 312. The most reductionist reading of the evidence would say that, in 310, Constantine saw a solar halo, a rare but well-documented celestial phenomenon, in the south of France and in the company of his army, but Constantine’s account of events changed over the years and we can’t be sure. We can say with greater certainty that for several years he wavered between Christian and non-Christian *interpretations of the sign*. He eventually decided, to the delight of the Christian leaders in his entourage, that he had been sent a sign by the Christian God. He became a Christian, as a matter of belief and perhaps policy too.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” Aeon, January 30, 2017 (emphasis added).

<sup>13</sup> Commentary: Most of Western vaguely Christian humanity tends to think of “angels” as deceased souls who have gone to heavenly afterlife. At least that’s how it seemed when I was growing up, probably the priesthood has encouraged the idea. If so, that makes angels simply eternally dead people with wings and halos and chordophones...one can imagine Jimi Hendrix’ impenitent utterance when they tried to issue him a lyre or harp. Yet the same is not said of those condemned to Hell in the afterlife, most generally do not equate that with souls of the damned becoming demons or devils, being issued pitchforks; instead, most imagery features souls as being tortured and consumed by the hellish host. And the clergy certainly had something to do with constructing that image from the pulpit! So we are not willing to have it both ways equally, otherwise the hosts of Hell would grow exponentially and overwhelm Heaven.

- ✓ The holy lore seems to support the Hellish vision of the afterlife more than the common posthumous angels, because what little is said on the subject suggests that the two hosts existed before humanity and thus would not be recruited from the souls of the deceased, but came from another origin (they must have had an origin because in the way it is told, they could not have existed before God, who some contend always existed). And in my youth, I would occasionally hear, “He/She [the deceased person] is with the angels now,” certainly suggesting that deceased souls are different than angels (though I never made that distinction because of Saturday-morning cartoons and other television shows) – a point that Robert Heinlein exploits comically and satirically in Job: A Comedy of Justice (1984).

<sup>14</sup> Commentary: Some crusaders were informed via a vision that they would capture the city in nine days if they paraded around the walls of Jerusalem. On July 10, 1099, twenty thousand crusaders marched barefoot in a religious procession over sharp stones and rubble, singing hymns, following priests carrying holy relics. This may have been repeated for a few days. The defenders could only watch in amazement from the walls. What a great plan!

<sup>15</sup> Commentary: An argument has been advanced that media reporting of the Siege of Kobani in 2014 forced the hand of the U.S. commanders who were indifferent to the capture of Kobani by the Islamic State. The U.S. com-

manders were focused on their campaign of depriving the Islamic State of revenues and infrastructure, but with intense media reporting, the fate of Kobanî became too symbolic to risk loss and they were drawn into the battle. It seems also that the Islamic State sensed the symbolic value of a victory there, and committed their last reserves.

<sup>16</sup> Commentary: I read a scathingly negative review of the Banner of the Stars series on MyAnimeList written by user Mister Gibbon ([https://myanimelist.net/anime/396/Seikai\\_no\\_Senki](https://myanimelist.net/anime/396/Seikai_no_Senki)). I have seen both Crest of the Stars and Banner of the Stars I & II. Mister Gibbon is a very sensitive and observant intellectual, and I found it refreshing that he saw and deconstructed all of those things in the show's characters, story arc and background. But in the end, it seemed mainly that his complaints were the fact that the show's political and cultural milieu offended his ideological sensibilities and that the writers presented the story consistently from the Abh Empire's view, without cutting out to show the other side's story. Who knows, maybe the show writers were Abh nobles? I took the show more neutrally; I know that the Humankind Empire of Abh is an empire – it's in the title – and a monarchy, expansionist and authoritarian – it is implicit in the term “empire” with hereditary nobility, restricted upward social mobility and of course, restricted access to starships. And it's not surprising that the characters don't see that they have other options or don't see that they are trapped in the system. But for what Mister Gibbon criticizes about the show, I applaud the writers for being able to construct and maintain consistently, even down to the personal quiet time conversations of the characters, a worldview that is really from another time, but in a space-opera setting. The point of this asymmetric response to a review I read online is not to pick a fight with anime fandom, but rather, as with all of my commentary, to illustrate a point within GGDM, in this case worldviews and storytelling.

- ✓ I do not dislike anime and have watched some entire series, but I pick my spots. I could have become an anime fan, maybe even *otaku* (but am instead, GGDM *otaku*), but I find that so much of it is juvenile, eye-rolling (not to mention the anime fanboys I knew in college or at my friend's comic book shop); the art is usually good or gorgeous, the story may have been a good, potentially fascinating idea, but poorly executed and the characters are frequently unlikeable, inconsistent, silly, pointless or flat. Examples of this include Geneshaft and Kabaneri of the Iron Fortress. My favorite anime series to date are Boogiepop Phantom and Serial Experiments: Lain, while Banner of the Stars/Crest of the Stars and The Last Exile were also good.

<sup>17</sup> Citation & Commentary: Excerpt from a 2009 Marxist review of the 1955 movie, *Strategic Air Command*:

- ✓ “How many miles of celluloid have been exposed in the business of glorifying the men and planes that dropped the bombs that burned the cities? ‘Too many’ is not a flippant answer. *Strategic Air Command* (1955) is the supreme ideological example of the (for want of a better word) ‘USAF genre’ movie. Washington's defeat in the Korean War thwarted plans to overturn socialism in the USSR and curb anti-colonial struggles via atomic intimidation, and created the stalemate between imperialism and the dictatorship of the proletariat we have come to call the Cold War. And in the Cold War, so far as Washington and its Madison Avenue and Hollywood drum-beaters were concerned, the newly inaugurated USAF had center stage.... It was beside the point that the organization they ran, and still run, is an international murder machine pushing the violent rule of the world's final empire. *Strategic Air Command* is no sensitive treatment of such ‘organization’ men, the men in the ‘gray flannel suit.’ It is, instead, about the satisfaction to be found when men (and their wives) embrace the shipwreck of their lives and careers on the rocks of a necessity called National Security.... [The movie] espouses ‘professional military conformity’ writ very large. If anyone other than the Pentagon can be identified as the film's ‘auteur.’... The dramatic spine of both movies is the education of a husband and wife in their responsibilities as cogs in the great engine of national war-making.... It all has to do with what we came to call deterrent and mutual assured destruction. Eventually the stifling moral cynicism of imperialists like General Hawks would be rejected, but until the Wall Street barons and the state that defends their rule is finally removed from power, the real SAC will thrive.” – Jay Rothermel, “How James Stewart Learned to Stop Worrying and Love the Bomb: Anthony Mann's *Strategic Air Command*,” *Bright Lights Film Journal*, October 31, 2009.

This review, which actually makes several very good points, is so loaded with extreme ideological language that it is choking on its own vomit. It is intended to placate and reinforce those who are already convinced, and offend anyone who is not already convinced: It is not seriously attempting to convince anyone who is not already convinced.

- ✓ The elephant in the room for any 21<sup>st</sup> Century Marxist, communist or socialist argument is the failure of the Soviet Union. For the aspiring 21<sup>st</sup> Century Maoist, it's in the name – the Great Leap Forward, the Great Chinese Famine, the Red Guards, and the Khamer Rouge travesty. For future Islamic extremist or idealist, it is the Islamic State. How do you get around that elephant without being trampled or sat on?

<sup>18</sup> Commentary & Citation: This is the problem with neo-paganism and ‘goddess’ New Age religions: Can we really go back there? Our view of and scientific knowledge of the universe, and of the natural world on Earth, is so

much different than our ancestors, we simply cannot ‘forget’ it and adopt the worldview of our pre-Christian ancestors. It’s the same problem as the one with anarcho-primitivism, we can’t go back even if they have great and convincing arguments, it’s too late. These movements generally reflect the human wish to be children again, to revisit the golden halo of our childhood memories, but you can’t be a child again, it’s wishful thinking (and it wasn’t really as good as we remember it anyway). See further mythopoeic thinking discussion, *More Than a Feeling*, 1 Temporal Technology, p. 808 *et seq.*, *infra*.

- ✓ Undoubtedly, one of the oddest musical performances I have ever seen is the group Heilung. Live performance videos from their 2017 album *Lifa* are available on YouTube. I spent an hour or two being mesmerized by their performances of “Krigsgaldr,” “Fylgija Ear,” “Hamrer Hippyer,” and “Othan,” etc. Frankly, I have no idea what they were singing, some part of it was in English, and still I couldn’t follow it all, but their performance is quite impressive, elaborate, and novel and on some level, is language independent. A lady I know called them creepy. Later in the evening, I listened to the entire *Lifa* concert (the opening pagan prayer is in English) to get the continuity which is lost by watching the parts. A very creative group, I wonder how long they can do this gig before the novelty wears off or they get tired? Can they be healed?

<sup>19</sup> Citation: See Luther and Calvin on Secular Authority excerpt in Luther & Charles, *Government Titles*, *infra*.

<sup>20</sup> Commentary: I often don’t understand why a movie is branded as terrible; I guess I am a sucker for suspension of disbelief in sci-fi and fantasy movies, until the moment when I see something that I think is just stupid.

- ✓ Consider the following reception of the film *Open Windows* (2014): “John DeFore of *The Hollywood Reporter* wrote that only genre diehards are likely to accept the level of suspension of disbelief necessary to enjoy the film.” – from Wikipedia article, “*Open Windows* (film).” I have watched some low budget, borderline bad-awful movies, e.g., *Somnus* (2016) to the end, but like *Sorceress* (1982), *Open Windows* was the rare movie that I could not finish, about halfway through I felt it was so ridiculous that I turned it off.

I like when movies show us a surprising glimpse of another worldview, something that tells me the writers have thought it through. One example is *Waterworld* (1995) where dialogue reveals that the people believe that the world was made that way and that they envision the mythical “Dryland” as sort of an island of dirt floating on the sea. The captain of the *Valdez* has a suburban development picture and speaks in awe about “acreage.” The various adaptations of religion and the reverence for a few remaining artifacts are amusing, especially the burial ritual at the atoll. Or when the *Smokers* celebrated the *Mariner* killing *Smitty*, an opposite of the expected reaction. Yes, I know it’s a *Mad Max* formula movie, but the ending leaves an interesting question; it is clear that the waters are not going to recede anytime soon, so the island (Dryland) will only support so many humans before overpopulation becomes an issue (disease killed the original inhabitants), there is also the issue of whether or not there are any other *Mariners* out there, who will probably inherit the world. If so, the land-dwelling humans on Dryland are just another artifact.

<sup>21</sup> Commentary: Given that praxeology flies apparently in the face of empiricism and positivism, I was curious if any colleges offered degree programs or courses in praxeology. I did first a Google search for courses in praxeology; of course the first hits are related to the *Misus Institute*’s virtual academy online courses. I also found a Ph.D. seminar research course at the University of Bergen titled with praxeology, but appears to be really a course in academic publishing in health science and social science journals, thus it is difficult to discern what it has to do with praxeology other than the human conduct in peer reviews and manipulating editors! There were, of course, many articles on praxeology from free intro articles, libertarian encyclopedia articles, a *Research Gate* article on praxeology and epistemology, to an article related to economics education of engineering students. I found no schools offering a degree in praxeology. Yet it appears from Google search that one can take courses and obtain degrees in homeopathy, a medical practice that is at best viewed with great skepticism, doesn’t line up empirically with the rest of medical science, and in worse cases, is far more dangerous than praxeology in terms of possible life, death, health, and lawsuits; homeopathy is regulated in all countries, one does not need a license to ‘practice’ praxeology.

- ✓ Am I comparing apples and oranges? But this does point to a ‘second layer’ of epistemology in our civilization; homeopathy and praxeology are subject to disputations, disdain, dismissal, and are not considered of such use that one can get a degree (or a respectable degree) in those fields, but they hang around in the substrata because they cannot be absolutely proven or disproven, and they provide useful ideas to include in discussions in more respectably-established disciplines. Positivism, empiricism and inductive reasoning have also not yet managed to banish either religion or philosophy for the same reasons.

<sup>22</sup> Commentary: SCA is the Society for Creative Anachronism. I was a member of the *Shire of the Isle of the Blue Mists*, *Barony of the Far West*, in 1986 and 1988, before falling away into the abyss.

<sup>23</sup> Citation: On the subject of religion and European witch hunts, see also the *Little Ice Age* feature quote, bottom p. 230 and *Sands & Seas* discussion, p. 231, 1 *Entropy*, *infra*.

*See Appendix DE&A – Disruption Events, Inactive Constructural Elements & Apostasy  
See Appendix PAT4 – Power Activations Tables 4 – Power Activation Failures*

**Marriner:** *You are life itself. Without you, I'm nothing. Don't you understand?*

**Tegan Jovanka:** *What?*

**Marriner:** *I am empty. You give me being. I look into your mind and see life, energy, excitement. I want them. I want you. Your thoughts shall be MY thoughts, your feelings MY feelings.*

**Tegan Jovanka:** *Wait a minute. You tryin' to tell me you're in love?*

**Marriner:** *Love! What is love? I want existence.*

– Dr. Who, “Enlightenment,” Part 4 (1983)

**Presence:** All objects in the game have four Constructural Elements which connect them to their position in the game. Each Constructural Element of each object is considered to be either active or inactive at any time in relation to each position. The state of a Constructural Element for any object relates to one position in the game (the owner), is independent of all other positions, and cannot be shared. Constructural Elements of a position cannot be seen by another position – can you look into my mind and see what I believe? – thus they are secret, but hints may be received – as in the real world – from diligent observation of actions.

Constructural Elements are activated by an activation of the Culture Power and are typically deactivated by a Disruption event; once activated, a Constructural Element cannot be ‘turned off’ voluntarily (and there would be no reason to do so) while the object remains within the position’s Public Space. However, the Temporal Constructural Element is automatically activated by placing the object in the Public Space and is always the last Constructural Element to be deactivated, which would cause the object to be removed from the Public Space. The Temporal Constructural Element cannot be deactivated by Disruption Event; the only ‘deactivation’ is by removal from the Public Space, i.e. loss or destruction. The Temporal Constructural Element is the English “to be” verb in its existential form, “to exist.”<sup>1</sup>

➤ **Intuitive Things:** Constructural Elements are intuitive and nearly as axiomatic (in the ancient sense) as Euclid’s postulates and common notions; waiting only for someone to point out the obvious and give it a name and place in our Public Space. The only quibble will be with how I have chosen to slice the cognitive pie; I chose four types for the game. And that is absolutely true.

- ✓ “Mises used the term praxeology to name the deductive science that begins with the premise *that human beings act intentionally*. This premise is often called the ‘axiom’ of praxeology. It is an axiom because, in order to disprove it, you have to engage in what the proposition affirms, i.e., you have to act intentionally to argue against the proposition. An intentional action identifies an *end*, or purpose, to the action, as well as certain means selected to achieve that end.” – Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” alertandoriented.com (blog), April 13, 2016 (emphasis in original).

In order to argue against Constructural Elements, you must have a different worldview than I do... meaning you have Constructural Elements, but may simply call them something different.

- **Imaginary Things:** Even imaginary things have Constructural Elements, that is, they have a time and place where the author first imagined them or that they first passed into the public consciousness; imaginary things can symbolize real things, they can be part of an ideology (e.g., Avalon), and they have a place within our cognitive structure of the world – that is, they are imaginary, pretend, not ‘real’ (are you sure you know what’s real?). Anything in our consciousness has Constructural Elements. Perhaps, this gives a sort of reality to imaginary things; explaining why they have such force when we know they are not real?
  - ✓ Many years ago – and for me, that’s usually about twenty or more – I was surfing channels and came across an odd animation called Rarg (1988) on a PBS station. In the story, the people of a great town realized that they were part of some boy’s dream who was sleeping in his bed at night. They were afraid he would wake up and they would cease to exist, so they contrived a way to come into our world and kidnap him into their world. In a vast operation suitable for an existential threat, they opened a portal in his wall, came to his room, and carefully carried his bed through the portal with him in it still sleeping (of course). They placed his bed in a sealed vault where no sound could disturb his sleep, and felt then that they were safe, he would never wake. But then he began dreaming of flamingos.<sup>2</sup>

---

*“Character – a reserved force which acts directly by presence, and without means.” – Ralph Waldo Emerson*

---

**When The Lights Are On...:** Active Constructural Elements affect the game, inactive Constructural Elements have no effect.

- **Power On:** All Homeworlds and starting colonies and ships begin with all Constructural Elements activated. *Each successful Power Activation at a location has a **10% chance** of making each active Constructural Element on sovereign ships and colonies at that location become inactive.*<sup>3</sup> The less actives you have, and the less local activities, the less chance ... the universe punishes you if you stay in bed, the universe punishes you if you get out of bed.
- **Skool Tyme:** The Host World of a College must have an active Epistemological Constructural Element; if it becomes inactive, the operation of the College is suspended.
  - ✓ Any object – ship or colony planet – that does not have an active Epistemological Constructural Element may not (50% chance) be able receive the effects of College Faculties (i.e. Enlightenment, whether for use in die rolls, including Combat, or Institutes on that colony). This applies to rerolls of Power Activation failures as well.
  - ✓ A Research Group (see 2 Technology, p. 700, *infra*) that is not adjacent to a colony with an active Epistemological Constructural Element becomes *disrupted* and cannot be Developed to the Era Matrix, but is not removed from the Public Space.

The Concierge may introduce other requirements as the game progresses, for example, some Writs may also require an active Epistemological Constructural Element.

- **Waving the Flag:** The Capital Colony of a position must have the Symbolic Constructural Element activated; if it becomes inactive, the *Capital status* of the colony is suspended.
  - ✓ A Capital Colony must have a Symbolic Constructural Element to serve as a connection to a Diplomatic Space; without it, the Diplomatic Space is inaccessible.

- ✓ And since symbols drive sapience – think of political slogans and advertising, active Symbolic Constructural Elements are also a required part of Fuzzy Groups (for Writs) and Zeitrice (for Exposé) formations. See Fuzzy Formations, 4 Culture, p. 405, *infra*.
- ✓ Most activations of the Diplomatic Power are unavailable while the Capital colony's status is disrupted, as well as the inability to access Diplomatic Spaces. See Stepping Out, 1 Diplomacy, p. 1096, *infra*.

Finally, Symbolic Constructural Elements may be used in other parts of the game as appropriate, for example, a 'flagship' may require an active Symbolic Constructural Element to function in whatever way a flagship might in the game (probably requires a Writ or Doctrinal Template).

- ✓ [Interview in Russian translated by English subtitles] “As well as strategic, it also held great political significance. For Hitler, Leningrad was above all a symbol of Bolshevism and he considered that it was impossible to achieve victory over the Soviet Union without defeating Leningrad. It held political significance for the whole Soviet population, and as a totalitarian state that depended on ideology and symbols, Leningrad was one of the symbols of power. Therefore, its fall would definitely have had a negative effect on the mood of the whole country.” – Dr. Nikita Lomagin, St. Petersburg State University, Under Siege (documentary, 2008), Episode 5.
- Body Politic: A Writ is an act of sociopolitical will.
- ✓ An active Ideological Constructural Element is required for any object to be effected by the activation of a Writ. Because of the number of possible different situations that might occur, the Concierge will judge and rule on specific situational requirements. In the alternative, the Concierge may determine that Writs may affect objects with inactive Ideological Constructural Elements to a lesser extent than they would if an active Ideological Constructural Element were present.
  - ✓ An active Ideological Constructural Element is also required on any Friendly or Naturalized colony planet adjacent to a Fuzzy Group in the Public Space to form the Fuzzy Group.

---

*“This is the kind of power-preserving cynicism that was embedded in the Third Imperium from its beginnings, and which ultimately brought its downfall. It can be argued that the reason it lasted as long as it did was because for centuries its base cynicism was understood by only a relative few. But once word got out, it was open season on **social cohesion**, and there was nothing anyone could do to stop it.”*

– Dave Nilsen, “When Empires Fall II,” Challenge Magazine, Issue 69, February 1993 (emphasis added)

---

**Artifice**: Inactive states of Constructural Elements is a game artifice: Zero or one is not generally reflective of human affairs. Rather, ‘inactive’ refers to a state in which the worldview (or sociopolitical views) *and actions* (this *does not* mean violent revolt, but divergent interests) of a group diverge from those desired by or agreeable to the government or governing powers.

While GGDM frames the concept in the form of governments, it is true of any organization that has any philosophical pretensions or pretensions of legitimacy, e.g.:

- ✓ “This is not the first time American Methodists have split over the issue of human dignity. The predecessor to today’s United Methodist Church split over the issue of slavery in 1844 and did not reunite until 1939. The issue of ordaining and marrying LGBTQ people has been contentious within the denomination for decades. Now the United Methodist Church, the nation’s second largest Protestant denomination, has reached another breaking point. Like many, I’ve believed for the past several years that schism is necessary. ... But if 2020 does indeed result in a schism of the Methodist movement like 1844, it’s because a break is needed, if unity cannot be achieved, to ensure human dignity is respected.” – Guthrie Graves-Fitzsimmons, “Opinion: Methodist Church has reached its breaking point,” CNN, January 6, 2020.

When enough Constructural Elements are ‘inactive’ in the current culture or cognitive scheme,<sup>4</sup> they form an increasingly potent alternate worldview (schism).<sup>5</sup> This ground shift explains, for example, the fading of monarchies in modern times, some ended abruptly and/or violently (e.g., Tsar Nicholas II, Keiser Wilhelm II), some lived out their lives in exile (e.g., Umberto II of Italy), some are extinct as a title (e.g., King of Italy, King of Bavaria, Emperor of France, Holy Roman Emperor) and the remainder are now just figureheads (e.g., Albert II of Belgium, Elizabeth II of England, Felipe IV of Spain) with limited political influence. Simply, the world moved on from monarchies, as republicanism and modernity converted the worldview of their subjects. To fight this, the remaining actual monarchies have stagnated their culture and limited influences.

- ✓ “Ibn Khaldun also argued that ‘asabiyya [social cohesion] is cyclical and directly related to the rise and fall of civilizations: it is most strong at the start of a civilization, declines as the civilization advances, and then another more compelling ‘asabiyyah [social cohesion] eventually takes its place to help establish a different civilization.” – from Wikipedia article, “Asabiyyah,” captured May 9, 2020. [see Nilson, *ut supra*] <sup>6</sup>

Thus it is a dynamic process of gradual change. To the extent that the current government is able to reactivate Constructural Elements (by process of Cohering, see 5 Culture, p. 421, *infra*) it is the ability to reinforce the authority of the prevailing worldview in the short term.<sup>7</sup> Over time, the passage of generations and the turnover in Government Titles, the view of government does and must shift with the worldview of the governed and those who govern. Thus, Cohering, like the mutual embrace of gravity between the Earth and the Sun, works both ways, Cohering can be seen equally as bringing the government in line with the worldview of its sovereign populations (see discussion of pseudo-physics, 2 Kairotic Moments, p. 1434, *infra*).

- ✓ For an interesting exercise in change of worldview over time, study a line of portraits of Holy Roman Emperors from the Middle Ages to the last Holy Roman Emperor Francis II, who abdicated in 1806. In between are vast, sometimes startling changes not only in dress and personal appearance, but also in artistic style and the way in which they chose to be depicted. See Wikipedia article, “Holy Roman Emperor.” This process can be repeated with any line of monarchs, e.g., a line of portraits of Kings of England, Russia, Germany, Popes, etc.
- Deprecation: I have noticed in the last few years that only about 40% of houses put up decorations for the Holidays and of those who do, they are much more subdued and much less than they were in my youth in the 1970s (and Halloween is almost non-existent now). This tracks generally with polling data that says the United States is becoming more secular.

Christmas and Easter have been for dozens of centuries the strongest symbols in the Christianized West. Christmas has become tired, trite, hypocritical, the inspiration for misguided attempts at good will, and has been the subject of satire and lampooning, and flat or mean-spirited comedy (e.g., *Deck the Halls* (2006), a box office bomb).

In GGDM terms, the current state of Christmas, taken as a Symbolic Constructural Element in our civilization, is not ‘inactive’ in a strict sense because it does not cause groups to do what civilization or the government doesn’t want them to do or fail to ‘obey’ a Power Activation (the retailers, however, are somewhat less happy about it); the current state of holiday celebration does not cause wildly different behavior than what is expected or approved, and is not generally regarded as harmful. In fact, as the government of each generation comes from the previous generation and is peopled by the people, it tends to eventually follow the trend of its civilization. Rather, in IT terms, Christmas is a ‘deprecated’ Symbolic Constructural Element; in any event, the current state represents a shifting worldview of our civilization in which *all* holidays are generally lower-keyed than previously, and with them, whatever symbols they previously represented.

- ✓ “In the world of software development, ‘deprecated’ refers to functions or elements that are in the process of being replaced by newer ones. The term comes from the word ‘deprecate,’ which means to disapprove of something. While deprecated items may work in the current version of a programming language, they may not function in future updates. Therefore, software developers are advised to replace deprecated items with other options.” – Tech Terms (techterms.com) at *deprecated*.

---

*“Culture jamming is sometimes confused with artistic appropriation or with acts of vandalism which have destruction or defacement as their primary goal. Although the **end result is not always easily distinguishable** from these activities, the intent of those participating in culture jamming differs from that of people whose intent is either artistic or merely destructive. The lines are not always clear-cut; some activities, notably street art, will fall into two or even all three categories.*

*Recently there have been arguments against the validity and effectiveness of culture jamming. Some argue that culture jamming is easily co-opted and commodified by the market, which tends to ‘defuse’ its potential for consumer resistance. Others posit that the culture jamming strategy of **rhetorical sabotage**, used by Adbusters, is easily incorporated and appropriated by clever advertising agencies, and thus is not a very powerful means of social change. Yet other critics argue that **without moving beyond mere critique** to offering an alternative economic, social, cultural and/or political vision, jams quickly lose their power and resonance.”*

– from Wikipedia article, “Culture Jamming,” captured August 21, 2019 (emphasis added) <sup>8</sup>

---

**Power Off:** Colonies and ships have a base 5% **plus** 15% chance per inactive Constructural Element of *not obeying each Power Activation* (including Cultural Activations for the purposes of Cohering, see 5 Culture, p. 421, *infra*) that applies to them.

- ✓ For example, a colony might not respond to Taxation or a ship may not respond to a Combat Power activation.
- ✓ However, colonies will *always follow a Census Power Activation*<sup>9</sup> and units will always defend themselves (defense in Combat is never a Power Activation anyway).

The 5% chance to fail to obey a Power Activation provides a very small chance that in the best of circumstances, it can still fail. This is very important to remember as it relates to Government

Title legitimacy, etc.; sometimes failure occurs without any immediate explanation. But incohesion is the main culprit in GGDM.

- ✓ Merriam Webster online dictionary at *incohesion*: incoherence, *especially*: lack of orderly effective interaction between human groups.

Some Power Activations require only one activation failure check of ships or a colony, some require checks of both the ship and colony involved. Power Activations that *fail* any check **will not execute**.

- ✓ “Oh! Mutiny makes me so angry!” – Marvin the Martian, “The Hasty Hare” (1952).
- ...But Nobody is Home: Primarily, this is a discussion of Epistemological, Symbolic and Ideological Constructural Elements. If all three are inactive, the chance of failure is 50%, so there is always a 50% chance that the ship or colony will obey the Power Activation regardless. As mentioned previously, loss of the Temporal Constructural Element means that the object is no longer in the Public Space (and potentially the Galactic Space as well) and cannot be affected by Power Activations; Temporal Constructural Elements cannot become inactive due to Disruption Events, so there is always a 50% chance....
  - ✓ Acts, Scenes and RPs *are not used* for location-specific Power Activations that fail. This blanket rule may or may not be realistic, but for game purposes, it avoids having to distinguish global Power Activations that can fail at each planet, such as Taxation or Cohering... It simply means rainchecks have been issued.

The potential for Cohering attempts to fail due to inactive Constructural Elements at a target is akin to starving or dying of dehydration because injuries have left you unable to eat, drink, or move to procure food and water. Thus, it can become a spiral situation when inactive status of Constructural Elements is widespread through the position.

- ✓ The active/inactive state of Constructural Elements is not especially realistic; it is an example of how reality must be bent to the simulation, simply that the idea must be expressible as a game mechanic. Emergent, creative storytelling fills the gaps.
- ✓ These are, again, just game numbers without realistic basis. They can be adjusted to suit the taste of the players; inactive Constructural Elements can be made more or less punishing. However, great caution should be exercised in doing so because the relationship of Power Activations and Constructural Elements *is a critical core of the game*; I would suggest adjustment no more than +/- 5%. Inability to Cohere is black ice on a highway at night; drivers must be very careful.
- Decentralized Resistance: Not every Power Activation is capable of failing due to inactive Constructural Elements. Constructural Elements apply to *location-specific activities*, i.e. those that occur at colonies or on ships; they apply to units in GGDM (see game units discussion, View from a Height, 1 Construction, p. 660, *infra*). Power Activations that target specific ships and colonies can fail, but global or positional Power Activations often fly over the checks. A normal position turn will likely include some Power Activations that can fail due to inactive Constructural Elements and some that do not require a check, and of those that can fail, only one or two will occasionally fail. Just enough to keep it interesting, and infuriating. Position’s Regular Turns will not be regularly wiped out, rendered pointless, by Power Activation failures, a position will not be rendered a prostrate position solely because of inactive Constructural Elements.

- ✓ Enlightenment, discussed in 2 Colleges generally, *infra*, can serve as a sort of ‘band-aid’ for Power Activation failures due to inactive Constructural Elements by forcing rerolls of failed Power Activations. It is a matter of priorities and demands, but generally, constant use of Enlightenment for this purpose is not best practice.
- Traitors Will Be Shot: Power Activation checks only occur on Regular Turns, thus units in combat will not fail to obey their Combat Orders each Combat Round due to inactive Constructural Elements (see Relativity, 2 The Streams of Time, p. 85, *supra*; Regular Turns and Combat Round run independently of each other). However, they may be unable to benefit from Enlightenment in Combat due to inactive Epistemological Constructural Elements. This may make some units heroic or elite as compared to others who cannot benefit from Enlightenment in Combat.
  - ✓ Constructural Elements are a ‘bridge’ between the collectivity of individual worldviews of volitionals and the ability of their governments to act.
- Meanwhile...Back at the Ranch: The list and variability of situations requiring or not requiring Power Activation failure checks is too long for here, and will be addressed in each section as necessary. For the record, the status of colony Constructural Elements is slightly more important than ship Constructural Elements – more Power Activations depend on colony Constructural Elements than ship Constructural Elements, however, many check both for failure, and all of the interstellar movement and combat activations depend solely on ships. Colonies are the base of the position, ships are the lifeblood and reach ... like ranch dressing on a salad or sandwich.<sup>10</sup>
  - ✓ In GGDM, Constructural Elements form the underside, the metal girding and concrete, of the rest of civilization. Enlightenment rerolls from Colleges (see Vampire Suicide, 2 Colleges, p. 478, *infra*) may patch over the problem in the short term by rerolling failures.
  - ✓ The most devastating consequence of the failure to obey a Power Activation (excepting Taxation) is the loss of a Power Activation or a Government Title disruption.

*“The fundamental cause of the trouble is that in the modern world the stupid are cocksure while the intelligent are full of doubt.” – Bertrand Russell*

---

---

*“We men are the monsters now. The time of heroes is dead, Wiglaf – the Christ God has killed it, leaving humankind with nothing but weeping martyrs, fear, and shame.” – Beowulf (2007)*

---

**In the Mirror, I Meta Me**: There is a twilight zone, uncomfortable to some, where epistemology – the study of knowledge, meets meta-consciousness, our meta-awareness – that we are aware of our own awareness, conscious of our own consciousness, thinking about our own thoughts. The Constructural Elements discussion is of meta-consciousness of our worldviews. Meta-consciousness is nearly congruent with sapience and personhood (and personhood is congruent currently with humanity); is it possible to render judgments, anticipate the future, and all

other things assigned to the definitions of sapience and personhood, without at the same time, being aware of our awareness, conscious of our own thoughts and shared reality? They are so connected, that it is nearly impossible for us to disconnect them. People that we consider stupid are people who cannot seem to see that what they are doing is stupid, foolish, unwise, dangerous, or who don't seem to be aware of why they are doing what they are doing. *See?*

Thus, the underlying assumption in GGDM is that all Major Races have meta-awareness or meta-consciousness (sometimes the two terms are the same, sometimes they are treated differently). It might be fun at some point, if the participants are familiar with bicameralism in psychology or Jaynesian psychology, to experiment with concepts such as intelligent life forms that have not achieved “bicameralism” (noting and conceding that this concept is specific to the human brain evolutionary development).

- ✓ GGDM, by frequent reference to the judgment and Interventions of the Concierge, has a built-in awareness of its own limitations as a simulation. GGDM is self-aware of what concessions must be made to game play and this awareness is shared through notes in the text. The in-game judgment of the Concierge and emergent game play are the salve to the meta-consciousness of GGDM's limitations...
- ✓ ...It is a designer's *white-flag signal* whenever GGDM rules appeal to the Concierge judgment or Intervention, or the story arc – that the issue is beyond game mechanical solution or that the possible factors are too numerous and varied to be reducible.

What happens when artificial intelligence becomes aware of its own awareness? Can the Deep Learning software being used now become aware of its own awareness? Is it possible that the Existential Void is merely a function of our meta-awareness, and perhaps, why other creatures, even our cherished house pets, do not seem to see it? If a creature lacks meta-awareness, can they be aware that they will eventually die? Notwithstanding that they may witness other creatures dying, their own kind, or if they are predatory, their prey, can they know or impart upon themselves, that they will die eventually?

- ✓ The paucity of meaningful results for the phrase ‘existential void’ in the Google searches I conducted is perhaps indicative. We don't want to talk about it and most people have no idea what it means, think it is some abstract concept of philosophy. It's like knowing how to add, but nobody wants to talk about multiplication or subtraction. It's easier to find results for ‘nuclear winter.’ Perhaps this will change when GGDM becomes a part of the internet, but probably not.
- Becoming Human: An interesting question is at what age or stage of development does a human become meta-conscious? Can you remember becoming meta-conscious? Or alternatively, are we sapient when born? When does extended self-awareness or autobiographical memory begin? It's an interesting subject for thought. But certainly no one thinks that humans are born meta-conscious, or with extended self-awareness or autobiographical memory. We are only born with the potential, and all of the various descriptions of stages of cognitive growth (e.g., Piaget) and childhood are mainly descriptions of stages of gaining meta-consciousness, self-awareness, autobiographical memory – sapience.

- ✓ See also object permanence, Ontological Schisms, 2 Expansion, p. 892, *infra*.

The ‘other’ role of public education – other than to create a population with a uniform set of basic skills, extend adolescence/delay entry into the workforce, and provide access to the

print revolution – seems to be to extend consciousness-awareness beyond what would be natural to the majority of humanity. The ‘other role’ of education was snatched partially in recent centuries from religion (just as family and probate law were secularly incorporated) and because it is still bound up with it, the ‘other role’ seems to receive secondary treatment in primary schooling.

In andragogy, part of the theory is that adults respond more to internal motivation and less to external motivation. That this is specifically stated in andragogy theory suggests that it is not considered equally true in pedagogy. The theory of andragogy specifically implies (assumes) that meta-consciousness and extended self-awareness are adult human traits – adults who do not have them must be instructed by more pedagogical methods (including incarceration):

- ✓ “[Malcom] Knowles himself changed his position on whether andragogy really applied only to adults and came to believe that ‘pedagogy-andragogy represents a continuum ranging from teacher-directed to student-directed learning and that both approaches are appropriate with children and adults, depending on the situation.’ Hanson (1996) argues that the difference in learning is not related to the age and stage of one’s life, but instead related to individual characteristics and the differences in ‘context, culture and power’ within different educational settings.” – from Wikipedia article, “Andragogy,” May 3, 2019.

A large part of daily judgment of maturity in people we meet – potential mates, potential employees, clients – and those to whom we are unfortunately related as family, rests upon assessment of their meta-consciousness, self-awareness in relation to ours, and the traits derived from them, such as responsibility, moral compass, intelligence and foresight, character, etc. When someone does something incorrectly, immoral or criminal, we want to know if they understand why they did it and we sometimes erroneously apply this to our pets.

- ✓ Alia Atreides in *Dune* (1965) was meta-conscious, self-aware, awake in the womb. Even Frank Herbert didn’t think this was a good idea (the Bene Gesserit called her an abomination), as Alia’s life led to a tragic end in *Children of Dune* (1976).<sup>11</sup>
  - ✓ An intellectual might be defined as one who takes their own meta-consciousness seriously; most others think it an amusing aside (e.g., ‘Oh ha ha, that’s pretty good!’).
- History of History: The meta-consciousness of our civilization is an evolving thing, perhaps accelerated by the wars of the 20<sup>th</sup> Century and the information age, to wit:
- ✓ “In the early modern period, the term historiography meant ‘the writing of history,’ and historiographer meant ‘historian.’ In that sense certain official historians were given the title ‘Historiographer Royal’ in Sweden (from 1618), England (from 1660), and Scotland (from 1681). The Scottish post is still in existence. Historiography was more recently defined as ‘the study of the way history has been and is written – the history of historical writing,’ which means that, ‘When you study ‘historiography’ you do not study the events of the past directly, but the changing interpretations of those events in the works of individual historians.’” – from Wikipedia article, “Historiography,” captured February 14, 2019, citing to “The Methods and Skills of History: A Practical Guide, 1988, p. 223, ISBN 0-88295-982-4” no author identified.
    - A Google search for the ISBN located the book on Direct Textbook, in the 2<sup>nd</sup> Edition, listing Michael J. Salevouris; Conal Furay as the authors.

Merriam-Webster online dictionary at *historiography* includes all three of the previous meanings, but seems to have appended the modern developed meaning as an afterthought. The term is listed as first appearing in 1569.

The meaning of historiography that I learned in college is the modern meaning; the changed meaning of historiography in the last century or so is part of a developing cultural meta-consciousness about history, historiography is ‘meta-history’ because we finally *grokked* – probably around World War II, that it is important how history is taught and that the teaching of history can be manipulated for current ideological and political benefit.<sup>12</sup>

- ✓ See continued discussion in Play Dates, 3 Information, p. 1368, *infra*.

---

*“I am the same person I was before you found out I have a mental disorder.”*

(unsourced, anonymous meme)

---

**Insanity:** My peculiar insanity, if you consider it such while reading GGDM, is one of meta-consciousness; it’s (almost) the same insanity as that of literary types. In fact, isn’t the entire science of the third order of natural phenomenon, “the mental organic”<sup>13</sup> (i.e. psychology, psychiatry) and all of the attendant theories, about the affliction of meta-consciousness? This is one of the main reasons why psychiatric drugs have been ineffective in solving human mental problems.

What David Rosenhan started, Richard Castillo (*Culture and Mental Illness* (1997)) finished.

- ✓ “Psychiatry gets no respect, least of all, it would seem, from psychiatrists. Ever since its inception, psychiatry has been the subject of takedowns from within, critiques that have attacked its foundational beliefs. Freud’s disciple Ferenczi in the 1920s and ’30s, Erich Fromm in the 1950s, Thomas Szasz and R.D. Laing in the ’60s and Jeffrey Masson in the ’80s all characterized established psychiatry as everything from ineffectual and corrupt to destructive and sadistic.” – John Broening, “Book Review: ‘Admirable Evasions: How Psychology Undermines Morality,’ by Theodore Dalrymple,” *The Denver Post*, June 4, 2015.

There will be people who will argue with my statements about psychiatric drugs, and perhaps I am not qualified to make such statements. ***But what drug cures meta-consciousness? What drug cures sapience?***<sup>14</sup>

- ✓ Implicit in this question is the suggestion that recreational drug use is in fact and reality, a seeking of a drug to cure meta-consciousness and sapience. The purpose of recreational drug use is to not be here, to not be in yourself; the elsewhere, out of body, out of mind experience, the drug-induced apparent nothingness, was mistaken in the Eastern-influenced 1960s counterculture *for enlightenment*. Drug addicts often get exactly what they are seeking without knowing that is what they seek.

The best claim that psychiatric drugs can make is suppression of symptoms; doctors will talk about balance of chemicals in the brain, etc. Suppression is not, by definition, a cure in medicine any more than it is a solution in countries where dissent is suppressed by the government; the outward symptoms are suppressed but the underlying problems remain. I observed this in person at Point Park College; a youth came to the college who had a history of behavioral issues (he also walked around in leather, with spikes and jack boots, and looked hulking and intimidating) that were being controlled by medications. Predictably, he trailed off taking his medications after he

was away from home (and was not befriended by most of the students, adding to alienation) and shortly he began spontaneously doing juvenile and dangerous things (which I witnessed one day) just because he wanted to or was bored or maybe was trying to impress? He was sent away shortly, returned the next semester when he was back under control medications, but again, didn't fit in and didn't stay long.

- ✓ The problem that most people have is that wherever they go, they take themselves with them. Do you ever get tired of yourself? Of being in your own head?

There is in a sense, a locked three-way cage match – because we are all locked in the same humanity together on planet Earth – going on between Western religion, psychology and psychiatry (the latter representing ultimately strict objective medical empiricism) views for control of the interpretation of the “mental organic” (the third order of natural phenomenon, Clarence Marsh Case, 1924) reality of humanity. Like sociology which I maintain is closer to philosophy than it wants to admit, psychology is the natural progeny of formerly religious views of mental humanity combined with empirical approaches. See for example, the following quote from Dr. William Backus on the subject of sloth, which contains elements of both clinical psychology and religion:

- ✓ “Depression involves aversion to effort, and the moral danger of sloth lies in this characteristic. The work involved in exercising one's will to make moral and spiritual decisions seems particularly undesirable and demanding. Thus the slothful person drifts along in habits of sin, convinced that he has no willpower and aided in this claim by those who persist in seeking only biological and environmental causes and medical remedies for sloth.” – Dr. William Backus, What Your Counselor Never Told You (2000), pp. 147-148, as cited in Wikipedia article, “Sloth.”

Adding not the least confusion to this is the influence of Eastern Religions in the mid-20<sup>th</sup> Century who regard detachment (which the West considers ill apathy and sloth) as an enlightened and ideal state of mind.

- ✓ “Detachment, also expressed as non-attachment, is a state in which a person overcomes his or her attachment to desire for things, people or concepts of the world and thus attains a heightened perspective. It is considered a wise virtue and is promoted in various Eastern religions, such as Jainism, Taoism and Buddhism.” – from Wikipedia article, “Detachment (philosophy).”
  - There may be people who argue that Eastern ‘detachment’ should not be equated with ‘aversion to effort’ or lack of willpower; if so, if there is a difference, that fine distinction *has not come through in the West*.
  - Though possibly not appropriate, I cannot help but to think of the grunge generation of the 90s, in the immediate post-Cold War. Whatever dude!

Doubtless, this view played into Max Weber's attempts to apply his analysis of the Protestant historical coincidence to non-Western cultures, discussed in 5 Diplomacy, p. 1154, *infra*.

- Animal Farm: Do other animals suffer insanity – other than that brought on by age and disease – e.g., dementia and rabies – we kill animals with rabies for the same reason that we commit people to mental hospitals – because they are a danger to themselves and others (mostly others). Whether other animals suffer ‘insanity,’ isn't that an interesting question indeed? We cannot know, at least in our current state, and our definitions and models wouldn't fit anyway, how many of the theories of human cognition do you think apply to animals?

Freud wasn't talking about animals, he was talking about the animal in us; 'animal psychology' at this point is merely behaviorism. How many theories of human cognition begin with human meta-consciousness, rather than assuming it without comment?<sup>15</sup> Insanity and mental illness as we know it apply only to sapience and complex society with others; and psychology and psychiatry, rather late modern developments in our civilization, are the science of meta-consciousness, space that was formerly occupied by rhetoric, religion and storytelling.

*“He who controls the past controls the future. He who controls the present controls the past.” – George Orwell, 1984 (1949)<sup>16</sup>*

**Foresight, Multiplicity & Complexity:** The chance of anything like the world of 1984 happening – directly speaking – is greatly diminished in Western culture due to the skill and force with which a young writer presented this hypothetical future, extracted from the milieu of the mid-20<sup>th</sup> Century. Further, technological advances in media and – yes – the internet, have greatly complicated the control of information by governments – the antidote to control of information is multiplicity, complexity with decentralization. The internet has quickly grown beyond the control of anyone and beyond the comprehension of most, some believe that it may be emergent (e.g., Guy Tal, “Emergent Properties of the Net” (2006)<sup>17</sup>).

*“There are many different terms that Derrida employs to describe what he considers to be the fundamental way(s) of thinking of the Western philosophical tradition. These include: logocentrism, phallogocentrism, and perhaps most famously, the metaphysics of presence, but also often simply ‘metaphysics.’ These terms all have slightly different meanings. Logocentrism emphasises the privileged role that logos, or speech, has been accorded in the Western tradition. Phallogocentrism points towards the patriarchal significance of this privileging.*

*Derrida’s enduring references to the metaphysics of presence borrows heavily from the work of Heidegger. Heidegger insists that Western philosophy has consistently privileged that which is, or that which appears, and has forgotten to pay any attention to the condition for that appearance. In other words, presence itself is privileged, rather than that which allows presence to be possible at all – and also impossible, for Derrida. All of these terms of denigration, however, are united under the broad rubric of the term ‘metaphysics.’ ...*

*According to Derrida then, metaphysics involves installing hierarchies and orders of subordination in the various dualisms that it encounters (M 195). Moreover, metaphysical thought prioritises presence and purity at the expense of the contingent and the complicated, which are considered to be merely aberrations that are not important for philosophical analysis. Basically then, metaphysical thought always privileges one side of an opposition, and ignores or marginalises the alternative term of that opposition.”*

– Jack Reynolds (La Trobe U.), “Jacques Derrida (1930 – 2004),” The Internet Encyclopedia

## Endnotes.

<sup>1</sup> **Commentary:** Or perhaps Constructural Elements are analogous to quarks, except that three active Constructural Elements make a **Bryon** (as in Lord Bryon, father of Ada Lovelace, since he lost his own Temporal Constructural Element long ago) instead of a *baryon* (the combination of three quarks).

<sup>2</sup> **Commentary:** I don't know the origin of the title for this animation, I don't think it references the RARG gene.

<sup>3</sup> **Commentary:** This can be reduced to 5% or 8% if 10% is found excessive over a **very large sample size**.

- ✓ Power activations that are not location-specific, such as Technology, do not cause this effect. This seems plausible from the simulation view; few object to technology – any problems caused by technology manifest themselves locally in unforeseen ways. This creates an operational principle for the simulation at least.

<sup>4</sup> Commentary & Citation: Sometimes when I read summaries of what people in earlier centuries, and especially the 19<sup>th</sup> Century, considered pressing and of the utmost importance to their civilization, they seem petty in hindsight, *considering what has happened since*, to wit:

- ✓ “[Eduard von] Hartmann considers a reopening of the huge field of phenomena, that were rejected in the Age of Enlightenment, as a great merit of the modern spiritistic movement. However, in his opinion, Spiritism threatens to become a public disaster in Germany, therefore the state should use its authority in order to interest scientists in a study of the spiritistic phenomena. He writes that the public has the complete right to know about these things, and since it is not able to formulate its own opinion, it only remains to wait for the conclusions drawn by the official representatives of science.” – from Wikipedia article, “Spiritism,” captured June 21, 2019.
  - It’s truly difficult to imagine that Spiritism in and of itself ever threatened to become a public disaster (however, ‘occult thinking’ played some part in Germany’s later national disaster) and it’s even more difficult to imagine the state using its power to compel or force scientists to study it! And worse, that the public will sit around on their hands waiting for the state scientist to provide them with an opinion on Spiritism matters. These three practically point out to several shifts in worldview since von Hartmann’s book was published in 1885.

<sup>5</sup> Commentary & Citation: Not all alternate worldviews are potent, it takes more than daily briefings (or in one famous case, tweets) from a national politician to create potent alternate view:

- ✓ “Slotted in between Chairman Adam Schiff’s daily paeans to conscience and Constitution and the witness’ earnest introductions – Nunes fundamentally sought to change the channel on impeachment. The millions of viewers getting a steady drip of Trump’s questionable activities on Ukraine were abruptly brought in, for five to ten minutes each day, into an entirely different political universe.

In that universe, Trump is totally innocent of all of the Ukraine allegations, and what’s more, those allegations are just one more step in a coordinated and years-long conspiracy by an evil coterie of actors – Democratic Party operatives, the ‘fake news’ media, faceless and nefarious deep state bureaucrats, and even Ukrainians themselves – who will stop at nothing to destroy the president.

It was the same story, and the same handful of chapters, that Nunes told across every day of the public impeachment inquiry. Ultimately, they blended together, *becoming something like a prolonged shout into the void*.

Indeed, Nunes’ remarks hardly ever left a lasting impact on the hearings themselves or the coverage of them. The viral moments went to the Republicans who focused laser-like on the Democrats’ case. Nunes himself left the room each day with little beyond some attaboys from Trumpworld, a healthy dose of Fox News coverage, and plenty of snarky tweets from his dedicated online detractors.” – Sam Brodey, “The Chronicles of Nunes: How His Impeachment Speeches Created an Alternate Reality for GOP,” *The Daily Beast*, November 26, 2019 (emphasis added).

<sup>6</sup> Commentary: Ibn Khaldun’s 14<sup>th</sup> Century cyclic theory of social cohesion might be a justification for the rise of Islam, but it can be equally seen as a warning to Islam. Tunisia where he lived had been part of the Roman Empire.

<sup>7</sup> Citation & Commentary: “Since 1875 the eventual triumph of the metric system in science and international commerce has been assured, despite continuing popular opposition in Britain and the United States. In fact, the metric system has met popular opposition in every country at the time of its adoption. **People don’t want to change their customary units, which are part of how they see and control the world.** It is naturally disturbing to do so. This opposition has been largely overcome everywhere, except in the U.S., by economic necessity: the need to participate fully in the global economic system. Even in the U.S., economic needs assure the continued creeping adoption of the system in one area and then another. Those Americans opposing adoption of metric units often argue that the metric system is abstract and intellectual or that its use would embroil us in calculations. This is not true.

The metric system has been the customary measurement system in France for almost two centuries, in the rest of continental Europe for at least one century, and in the rest of the world for at least a generation or two. Most people in the world know exactly how long a kilometer is, how large a liter is, how much a kilogram weighs, and how

warm 25 °C is, because they use these units every day of their lives in the same way Americans use miles, gallons, and pounds. Outside Britain and the United States there is almost no need to convert metric units into something else. In fact, the way to avoid conversion formulas is to use the metric system. As long as Britons and Americans continue to use traditional units, they will have to remember how these units relate to the metric units.” – Russ Rowlett, “The Metric System,” <http://www.ibiblio.org/units/metric.html>, April 27, 2018 (emphasis in original).

- ✓ Mr. Rowlett hits the point perfectly, worldview is about imposition and control of reality, order out of chaos, and thus something as simple as a system of weights and measures is a part of worldview. I know how many miles I can walk in an hour from the experience of having walked uncountable miles (my Fitbit which I have worn continuously since April 2012, says I have walked 16,123 miles and 136,539 floors as of January 17, 2019, and I haven’t walked very much in the last year), but I don’t know, without calculations, how many kilometers I can walk in an hour. It’s not part of my day, not part of my measurements – notice that metric is not used universally throughout GGDM, conversions are not provided – even though I remember the big government push in the 1970s to teach metrics in primary school. Politicians hardly dare to mention the issue now, as the U.S. has become increasingly nationalist and international resistant.
- ✓ The English system of weights and measures has become a *symbol* of the Anglosphere and popular resistance to the metric system (born of the French Revolution), a resistance to both internationalization and in particular, an internationalized weights and measures system invented by the French and adopted first and quickly by Continental Europe, which, for much of history, have been the natural enemies of Britain.

<sup>8</sup> Citation & Commentary: “The Gibson guitar people claim the origin of the word ‘jamming’ is in reference to music played at the Black Musicians Union Hall in Kansas City in the early 1900s. The late night playing between the musicians got so popular that they crowded up or jammed up the stage – hence the name.” – Nancy Buchran, “We Be Jammin’!” Quepolandia (Costa Rica), December 12, 2013.

- ✓ The picture at the top right of the article is the classic one of Bob Marley ... because, of course! Because wasn’t jamming an early form of ‘culture jamming’ within the spectrum of minority social divergence?

<sup>9</sup> Commentary & Citation: The ‘gift of life’ is a set of shackles. People abuse drugs, alcohol, food, substances, animals, children, themselves and each other because the universe doesn’t give us the option of having never existed. You can live, die, commit suicide, hide in the night, but you cannot have never existed, when you are dead, that means you existed. There is no eraser, once you are conceived, you are a prisoner of this universe and cannot help but to get older. This is the essence of the human existential problem, we have always been able to see it in different ways: Literature, poetry, religion. In fact, it might be the defining mark of sapience, the ‘existential consciousness’ – the ability to see and experience the existential void through the limits of our sapience.

- ✓ “Though chains be of gold, they are chains all the same.” – Bruce Cockburn.
- ✓ This is disturbing to read? Maybe you heard it before at the Bates Hotel:
  - **Norman Bates**: I think that we’re all in our private traps, clamped in them, and none of us can ever get out. We scratch and we claw, but only at the air, only at each other, and for all of it, we never budge an inch. – Psycho (1960).
- ✓ You say that you are enjoying your life? Enjoying a life prison sentence? Live long and prosper.

<sup>10</sup> Citation: “‘Meanwhile, back at the ranch...’ is a catch phrase that appears in a variety of contexts. For example, it may be employed by narrators of American cowboy movies and TV shows to indicate a segue from one scene to another but there is often more to this than meets the eye. The expression originated as a stock subtitle in the silent movies and at first the reference to the ranch was literal. Later, as the phrase became a cliché, it was used more and more loosely and with a growing sense of mockery or levity, often with a vague focus. In this manifestation the phrase came into common use in unrelated contexts.” – from Wikipedia article, “Meanwhile, back at the ranch,” January 22, 2019.

<sup>11</sup> Commentary: Alia Atreides became regent of the empire at age 12 due to her accelerated growth, Children of Dune was published about 11 years after Dune, perhaps Herbert oddly signaling Alia’s pending death the moment she became regent?

<sup>12</sup> Commentary: If you were to go back to the 1920s or 30s, you’d have to be careful not to refer to The Great War as “World War I” or use “WWI” in writing – you wouldn’t conversationally call someone of The Lost Generation a WWI vet. The importance of the historiographic shift in 1945 to the looming Cold War Era cannot be overstated.

<sup>13</sup> **Citation:** Clarence Marsh Case, *Outlines of Introductory Sociology* (1924); see discussions 2 Culture and 1 Order generally, *infra*.

<sup>14</sup> **Citation & Commentary:** “People look for retreats for themselves, in the country, by the coast, or in the hills . . . There is nowhere that a person can find a more peaceful and trouble-free retreat than in his own mind .... So constantly give yourself this retreat, and renew yourself.” – Marcus Aurelius.

- ✓ Emperor Aurelius was a Stoic Philosopher, so it is not intended as irony, though it strikes us so.

<sup>15</sup> **Commentary:** For example, I read a brief pop article about the Five Factor Model of Personality. I know it is an outward personality modeling theory and not a cognitive model – so that perhaps puts it into a different category, but they are certainly conjoined. The first part that my eyes focused on was the ‘conscientiousness’ trait, but it turns out that what is meant by the term here has nothing to do with meta-consciousness and little with self-awareness:

- ✓ “People who are conscientious are more aware of their actions and the consequences of their behavior than people who are unconscientious. They feel a sense of responsibility towards other and are generally careful to carry out the duties assigned to them. Conscientious individuals like to keep a tidy environment and are well-organized. They are keen to maintain good timekeeping.” – “Five Factor Model of Personality,” *Psychologist World* (article uncredited and undated). There is also an article on Wikipedia.

Reading the brief history from Gordon Allport and Henry Odbert in 1936 to Raymond Cattell to Robert McCrae and Paul Costa and Lewis Goldberg, I can’t help but to think the Titanic theory sinks on gross oversimplification. I have heard of employers who require applicants to submit to personality assessments and I think it is highly suspect, of questionable value, and very probably prejudicial or discriminatory in a legal sense. Any personality assessment of a human probably requires a thousand questions at least, hundreds of ‘traits’ – there is a reason why Allport and Oddman were able to extract 4,500 words describing behavior and personality traits from the dictionary in 1936 – and in that even, it would be suspect in lack of what is called ‘objectivity.’ There is always a question in any psychological test or profile of the honesty and awareness of the individual being profiled. This, along with tedious, repetitive questionnaires, is the complaint about dating sites that use the Five Factor Model to profile users.

- ✓ All of this is quite aside from the fact that I think I would do ‘terrible’ on a Five Factor test and jobs that require applicants to submit to such are now rare as most people will not even apply. Psychologist will object, of course, that it’s not like a pass/fail school test and thus there is no ‘good’ or ‘terrible’ result – but they cannot get past the fact – rather inherent in the lexical approach – that the model is clearly geared toward outward, social personality traits or appearances, and that the spectrums and scales are based on and slanted toward what is considered socially desirable, successful, positive-negative, or at least, acceptable combinations of social personality traits.

<sup>16</sup> **Citation:** “**How did it feel inside?** I arrived there, and I immediately felt like a character in the book ‘1984’ by George Orwell – a place where you have to write that white is black and black is white. Your first feeling, when you ended up there, was that you were in some kind of factory that turned lying, telling untruths, into an industrial assembly line. The volumes were colossal – there were huge numbers of people, 300 to 400, and they were all writing absolute untruths. It was like being in Orwell’s world. **What sorts of untruths did you write?** My untruths amounted to posting comments. I worked in the commenting department – I had to comment on the news. No one asked me my opinion. My opinions were already written for me, and I had to write in my own words that which I was ordered to write. **For example?** When I was there, there were sanctions [by the European Union and the United States in response to Russia’s intervention in Ukraine] and the ruble started falling. I was writing everything that was the opposite: how wonderful our life was, how wonderful it is that the ruble was strengthening, and that kind of absurdity. That sanctions were going to make us stronger and so on and so forth.” – Anton Troianovski, “A former Russian troll speaks: ‘It was like being in Orwell’s world,’” February 17, 2018.

<sup>17</sup> **Citation:** I found this paper in February 2006 and shared it with a blockchain guy, who appreciated the idea. I do not know where I found it, but in February 2019, I Google searched it again and learned that it was a Spring 2006 term paper at the University of Illinois at Urbana-Champaign for the Physics 569 Emergent States of Matter course. However, it also appears on <https://pdfs.semanticscholar.org/8dbe/4425265f376745f67095a446a644483aafa5.pdf>. Semantics Scholar is a peer-reviewed research site where Guy Tal is credited as part of group authorship in over a dozen other papers on the site.

*See Appendix PAT4 – Power Activations Tables 4 – Power Activation Failures*

*“The bulk of the world’s knowledge is an imaginary construction. History is but a mode of imagining, of making us see civilizations that no longer appear upon the earth. Some of the most significant discoveries in modern science owe their origin to the imagination of men who had neither accurate knowledge nor exact instruments to demonstrate their beliefs. If astronomy had not kept always in advance of the telescope, no one would ever have thought a telescope worth making. What great invention has not existed in the inventor’s mind long before he gave it tangible shape?”*

– Helen Keller, [The World I Live In](#) (1910)

**Quizzical Looks:** In a game of Twenty Questions<sup>1</sup> (with “yes” and “no” answers) is it possible to identify an object of which you have no knowledge, that is outside of the Questioner’s cognitive structure? Carl Sagan in *Cosmos*, Episode 10 maintained that any object in the universe could be identified by 20 skillful questions with yes and no answers (the segment is available on YouTube). Suppose I played Twenty Questions with a 13<sup>th</sup> Century European Monk, I am the Answerer, the object is a Trinitrotoluene (TNT) molecule. What are the chances that the Questioner would guess correctly in 20 questions or 2,000 questions? Thus, we are limited by the items and objects in our cognitive structure; however, what is more interesting is that our cognitive structures are filled with things that never existed, except in movies, literature, myths, to which we give nearly equal standing to real objects. Such that, in a modern game of Twenty Questions, “Is the object a Looney Tunes character” would be a legitimate yes/no question to the Answerer.<sup>2</sup>

**New Ships and Lost Worlds:** Newly constructed ships have the same Constructural Elements as the world where they are constructed, on the turn they were completed.

- **Wet Paint:** Population loaded onto Colony Ships (and Orbital Cities) will retain the Constructural Elements present on the source world at the time of their departure. Any new colony established by the Colony Ships will continue the Constructural Elements of the population on the Colony Ships and thereafter, become subject to the normal processes for activation or deactivation of Constructural Elements. When colonist are added to existing colonies that do not have matching active Constructural Elements, it is completely within the discretion of the Concierge as to the effect on the colony, whether some Constructural Elements on the combined Colony population might be activated or deactivated.
- **Lost Worlds:** The only way a colony world can lose its Temporal Constructural Element is by being removed from the Public Space. This should not be equated with removal from the Galactic Space, though that may occur as well. Colonies that are destroyed, completely evacuated, or are lost to another position or power and/or for whatever reason, are no longer subject to the sovereignty of their former position, are ‘lost’ from the Public Space. Generally, captured colonies should pass to the new owner with the same active Constructural Elements they had at the time of capture, though there is much room for interpretation and discretion by the Concierge and participants as to what that means; for example, the active Ideological Constructural Element of a captured colony likely will not be the “same” as the Ideological Constructural Element of the new owner’s position. *Emergent narrative* is story.
  - ✓ A besieged colony is not a ‘lost world’; see discussion of Besieged Colonies, 3 The Sidereal Stage, p. 124, *supra*.

*“Good triumphs over Evil, justice prevails, the hero marries the Princess and becomes Emperor of Everything, and everyone lives happily ever after, or anyway till it’s time to grind out the sequel. Sound familiar, doesn’t it? ... If there could be such a thing as a foolproof formula for crud, this would be it. This is the time-honored equation for the commercial SF plot skeleton with all of the variables cranked up to their theoretical limits.*

*The identification figure isn’t just a sympathetic hero, he’s the ultimate wank fantasy, the reader as rightful Emperor of the Universe, indeed as the Godhead. The stakes are nothing less than human destiny for all time, and the Princess to win is always the number one piece of ass in the galaxy. The villain is as close to Satan as you can get without awarding bull horns and the tail, twirling his black moustache as he feasts on the torment of downtrodden masses, performs unspeakably vile sex acts, and squashes cute little animals in wine glasses so he can drink their blood.*

*Ah, but there is no such thing as a **foolproof** formula for crud, not even the outline of the **Emperor of Everything**. For while it is certainly true that the diligent application of this formula has allowed armies of hacks to pile up mile-high mountains of adolescent power-fantasies for the masturbatory delection of wimpish nerds, wonder of wonders, it is also true that many of the genre’s genuine masterpieces fit comfortably within its formal parameters ... and many ... novels of real literary worth are brothers between the covers, at least in plot summary terms, to the Ur-action adventure formula.”*

– Norman Spinrad, Science Fiction in the Real World (1990), pp. 150-151 (emphasis in original)

**Emergent Narrative:** An emergent narrative is an in-game story that comes from a player’s interaction with the game systems (usually a computer program, but can also be a board/card game); it is a colorful story constructed around the player’s interpretation of in-game events.

- ✓ Many critical reviews of Conan the Barbarian (1982) use the same language as Spinrad above, e.g., “these themes appeal to ‘98-pound weaklings who want to kick sand into bullies’ faces and win the panting adoration of a well-oiled beach bunny” by James Wolcott, Texas Monthly, July 1982 or “a perfect fantasy for the alienated preadolescent” by Roger Ebert in 1982, both quoted in the film’s Wikipedia article.

It is natural for humans to imagine more than is apparent from a strict linear log of in-game events. Many games, including GGDM, are built to encourage emergent narrative. Constructural Elements – representing part of the worldview of the position – provide very good opportunities for the emergent narrative of the game, especially in situations where there is a mismatch of active Constructural Elements or two races are brought into contact by game events.

- ✓ “Emergent narratives are stories that are not authored by a single person or by any person really. They are stories that emerge from the interaction between players and the systems that govern gameplay. They are random, transient, ephemeral things that only ever exist for one person at one moment in time. I like emergent stories as much as the next person. There’s something empowering about being witness to a singularly unique series of events, watching systems interact with systems in a certain way at a certain location that might never happen again for any other player. Even if such an experience is not really that unique, it still feels that way.

Yet when I look back at my emergent experiences or when I try to tell the stories to others, I realize just how shallow an experience they really are. Emergent stories feel more engrossing than authored stories because they’re personal for the player, and that personal interactivity gives it the illusion of importance. I assume that because

this event was exciting for me, it must be exciting for others as well. But it's not. My adventures in *Skyrim*, my tense game of *XCOM*, my rooftop chase in *Assassin's Creed*, my war against komodo dragons and cassowaries in *Far Cry 3*, all of these stories seem much more exciting in the moment than they do in the retelling, and that's because they're missing the key component of any good story. They're not about anything." – Nick Dinicola, "The Problem With Emergent Stories in Video Games," Pop Matters, July 30, 2013.<sup>3</sup>

- ✓ A *dream*, whether waking or sleeping, is an *emergent narrative* formed of images and sounds that bubble into consciousness in our brains; the difference being the level of consciousness between waking or sleeping. This is why dreams don't carry the same quality when telling someone else about them (like your video game adventures, *ut supra*); they must be consciously modified in later telling to give them literary weight (e.g., "Kubla Khan: or, A Vision in a Dream: A Fragment," by Samuel Taylor Coleridge in 1797): Dreams stories are always later recounted through a conscious filter.

Video games are in a sense, an interactive *Emperor of Everything* placed on a computer screen. The Emperor of Everything is about the reader in SF crud, and about the player in video games. Both in the shallowest possible sense. Telling the story of a plot of a hack SF Emperor of Everything formula story is no different than telling the emergent narrative of a video game. Thus Mr. Dinicola comes to the conclusion they aren't about anything – that is, they lack literary value.

- ✓ King Arthur: The 'magic' of King Arthur in the movie *Excalibur* (1981) and possibly more loosely in the background stories, is the emergent. At least twice, if not more, in the 1981 movie, Merlin (the eternal schemer) says, "I didn't anticipate that," or "I never saw that coming" indicating (choose one): 1) unknown external forces at work in the story (i.e. probably the Christian god or later in the movie, Morgana, and whatever you might choose to imply from that) or 2) an emergence from the forces in play which by their nature, cannot be predicted along straight lines of reasoning and inference. Merlin later, denying his own loneliness and infatuation with Morgana, is trapped by his inability to anticipate her scheme, but in turn, she dies later due to her inability to anticipate the power of dreams (the metaphysical crux of the story) and the vain revulsion of her own son to her changed age-ravaged appearance.
- ✓ For the record, I am not here preaching common Peter Pan philosophy about the 'power of dreams' (or as Billy Joel sang in "Pressure" (1982), "Now here you are with your faith, And your Peter Pan advice") – there is nothing warm, cuddly and reassuring about GGDM. It is my interpretation of the movie and one that probably follows the common consensus (I am sure someone wrote a doctoral thesis on this).

But King Arthur has been the archetype story behind many more modern stories, he is one variety of the Hero with a Thousand Faces (Joseph Campbell), a tragic 'Emperor of Everything' (Norman Spinrad) before anyone thought of science-fiction literature; the belief in the power of dreams (in whatever form) stretches back through millennia of humanity, as if our ancestors (with pre-theoretical cognition) sensed Archibald Wheeler's "It from bit" (see feature quote, top of 1 Information, p. 1327, *infra*). Whether you believe it or not, it is up to you, and irrelevant to GGDM.

- ✓ GGDM is a civ sim cranked to its **theoretical limits**. **Redlining...**

*“Despite signs of spiritual revival in the late seventeenth century, secular values gradually were replacing religious ones as major influences on European life. By 1715 it had become unfashionable to go to war in the name of rival Christian creeds, and within states themselves, a few princes noted the political and social impracticality of inconveniencing religious minorities. In their quest for new settlers the German rulers of Brandenburg and Saxony deemed religious affiliation a private ... matter, a position which the Dutch had long accepted....”*

*Nevertheless, because credal affiliation could easily be confused with political loyalty, bigoted rulers like Louis XIV or Leopold I failed to see how non-Catholics could ever be loyal subjects.... Despite this, however, the notion was in the air that religious association might be irrelevant to citizenship. Nurturing such a position was an accompanying movement that subjected religious practice to rigorous critical analysis, ridiculing unproven credulity, and weakening traditional belief.”*

– Raymond Birn, [Crisis, Absolutism, Revolution: Europe 1648 to 1789](#), 2<sup>nd</sup> Ed., pp. 173-174

**Modernity:** Prof. Birn describes the core issues of the early modern Western turn to secularism; think about this the next time some tent preacher or televangelist fellow wants to turn back the clock to the ‘good old days’ of religious devotion (i.e. ‘old tyme religion’).

The sum total of the Western worldview over the last five centuries is in the term, *modernity*, which Merriam-Webster online dictionary defines as **2**: the modern era or world and especially the ideas and attitudes associated with the modern world. That’s the simple part. The discussion of what modernity means and how it is defined across various fields of social study is the core of modern studies. Modernity must always be contrasted with past civilizations to have any meaning, but is typically looking at the now and future of humanity. It is also associated with a range of tag terms, such as secularization, post-traditional culture, modern history, institutional complexity, market economy, experimental observation, inductive logic, moral relativism, feminism.

- ✓ “The casting of Jodie Whittaker as the lead in Doctor Who is the difference between tolerating modernity and embodying it – but why has it taken so long to get here? ... The paradox of entertainment is that modern values take so long to catch on. The ultimate showbiz character is liberal, creative, mould-breaking, forward-thinking, highly unlikely to be bound by conservative and/or religious values. Showbiz is a world for misfits, not rule-followers. Yet nowhere do we see a plainer iteration of ‘traditional’ thinking than on our screens. It is more surprising to find a woman in a blockbuster movie with a mind of her own than it is to find a woman in an ‘arthouse’ film not naked or crying. It is more likely for a 10-part thriller to start with a dead woman’s body than a living woman expressing agency and determination. It is routine for a current affairs team to be led by a grey-haired man doing the serious stories while a fit, younger woman handles the family stuff. Important political events, be they regular ... or irregular, are seen as male territory by default, women seemingly included under sufferance. Panel shows shoehorn in a woman to salve their consciences; women can exist, but never get old, on nature shows. Black actors have a more arduous trajectory still, sometimes having to go to the US and make it big before they are considered famous enough to overcome the tacit colour bar in the UK. The extraordinarily slow pace of change is a sharp contrast to the good game everyone talks. TV executives constantly underline their commitment to equality, while happily accepting that men must keep the main jobs until they are literally dead. ... It is the stasis that baffles. How is it possible for such a visible industry to stay for so

long in a male-dominated, monochrome world that it often decries explicitly?” – Zoe Williams, “A female Doctor? She’s the revolutionary feminist we need right now,” *The Guardian*, July 17, 2017.

Modernity is discussed throughout GGDM as it is implicit in the setting and in 90% of science-fiction literature. It has already been mentioned in 1 *The Big Bang* (cognitive divide of science and philosophy), 1 *Constructural Elements* (realism vs. idealism), 2 *Constructural Elements* (demise of monarchies), *supra*, and its various aspects are discussed in 3 *Culture* (proficiencies), 1 *Technology* (atheism, scientific creation vs. religious creationism), 1 *Temporal Technology* (realism), 6 *Combat* (Japanese cultural reaction to Western modernity), and 3 *Reformation* (precision timekeeping), *infra*.

➤ Anti-Semitism: Anti-Semites have refused to cross the credal barrier described by Prof. Birn above. Rather, the opposite, to them credal affiliation is the sole defining attribute of the ‘other,’ more than just a question of citizenship, but a question of their human status and worth. It transcends even the male-female question. Thus, to an anti-Semite, a Jew regardless of gender, age, or nationality, is a non-person, and quite aside from the strategic considerations, one can see why the Nazis invaded Holland on the basis of anti-Semitism alone. Anti-Semitism merges easily with racism because the Jewish people consider themselves a race rather than a religious affiliation, and racism applies the same value system based on skin color, appearance and apparent ancestry – regardless of gender, age, or nationality. Thus, in an important sense, based on the elements of historical development of modernity, racists and/or anti-Semites have refused to take an important step over the threshold, and thus remain outliers in modern society.

Now, this is not to suggest that anti-Semitism is a phenomenon solely of modernity. No one would argue that the Romans were great humanitarians and the result of the Bar Kokhba War leaves little doubt what the Romans thought of Jewish people.

- ✓ “Hadrian (emperor 117-138 CE) attempted to completely root out Judaism, which he saw as the cause of continuous rebellions. He prohibited the Torah and the Hebrew calendar and executed Judaic scholars. The sacred scroll was ceremonially burned on the Temple Mount. At the former Temple sanctuary he installed two statues, one of Jupiter, another of himself. In an attempt to erase any memory of Judea or Ancient Israel, he wiped the name off the map and replaced it with Syria Palaestina, supplanting earlier terms, such as Judaea. Similarly, he reestablished Jerusalem, this time as the Roman polis of Aelia Capitolina, and Jews were barred from entering the city, except on the fast day of Tisha B’Av.” – from Wikipedia article, “Jewish-Roman Wars,” captured September 7, 2019.

Still, in other places throughout the Empire, the Jewish people lived and flourished and were given a pass from required attendance at Roman state-religious functions, thus it is most likely that the Romans disliked the Jews as radical disturbers of the peace, which is a different quality than later anti-Semitism. The last thing an empire wants is disorder and the Romans created enough of their own through their endless succession wars.

The wonderful Christians picked up from the Romans and added new religious layers to existing anti-Semitism. They either thought Christ was approve or they didn’t care whether he did or didn’t. The Romans would have never thought of such, their state religion was different; *modern anti-Semitism is a Christian phenomenon*, not a Roman one. Over 1,500 years

later, in the time that Prof. Birn described above, some sense started to creep into the secularization of Europe. Note that this was not a religious revelation, but a result of secularization. But it wasn't finished yet. The time-honored formulas of anti-Semitism found new adherents and uses in radical ultra-nationalism in modernized Europe. I cannot imagine that any Roman emperor or counsel would have approved of the Holocaust.

- ✓ Within GGDM play, using all of the things that are considered as 'modernity' (and since you are a modern, you intuitively know what those things are, but definitions are useful) as a springboard, participants (or even fiction writers) can create extremist, phobic or curious minorities or movements (e.g., the 'plain people,' FLDS, Branch Davidians, primo- or green-anarchists) against the zeitgeist of modernity.
- ✓ In fact, the deviances from theoretical modernity are both extreme and slight in all of us. The fact that such deviances exist in such a wide array informs participants that worldview is neither monolithic, nor ruler-straight in any civilization. Thus there is a wide range for expression and deprecation of Constructural Elements in GGDM, as well as Government Titles, and opportunity for entropic events in each position. Otherwise, the positions might be considered androids, bees or ants.

---

*“Clearly, unsolved philosophical problems exist in the lay sense (e.g. ‘What is the meaning of life?’, ‘Where did we come from?’, ‘What is reality?’ etc.). However, professional philosophers generally accord serious philosophical problems specific names or questions, which indicate a particular method of attack or line of reasoning. As a result, broad and untenable topics become manageable. It would therefore be beyond the scope of this article to categorize ‘life’ (and similar vague categories) as an unsolved philosophical problem.”*

– Wikipedia, “List of Unsolved Philosophical Problems,” June 15, 2018

---

**Unsolved Problems:** Wikipedia has an article nine-pages long, well-written and updated by people who care, of unsolved problems in *physics*. There are numerous other unsolved problems lists on Wikipedia, for example, biology, chemistry, math, economics, information theory, linguistics, medicine, philosophy, all of which must be written by people who have a broad and deep understanding of the fields. Has anyone ever tried to make a list of “unsolved problems” of sociology, psychology, anthropology or history? Why not?

I expect that the knowledgeable would look at it as a ludicrous undertaking because knowledge in *those subjects* just *doesn't work that way*.<sup>4</sup>

- ✓ “The more or less exclusive claims of the other sciences rest upon their use of mathematical, quantitative reasoning, and are inadequate in two ways. In the first place, their mathematical accuracy is only a question of degree, as compared with one another; and secondly, mathematical reasoning is not the only method of exact thinking. No one who has notice at all the procedure of careful students, even in the fields of historical, ethical, or aesthetic values farthest removed from quantitative considerations, will longer cherish the obsolete notion that painstaking observation, systematic classification, and rigid analysis are the prerogatives of workers in any field of human thinking. The same attitudes of mind and method of procedure are now to be met in every branch of investigation, and it is the assumption in this book that it is a mere

confusion of terms to give to the word science, which, historically and logically speaking, designates just this systematic investigation of reality, any narrow or private interpretation.” – Clarence Marsh Case, Outlines of Introductory Sociology (1924), p. xvi.

- See further discussion, *Aspects of Sociology, 2 Culture*, p. 371, *infra*.

It is an essential quality of those subjects that it is hard to define what is a problem in the fields, other than missing facts or historical mysteries, because history is the most empirical of the three – and thus it is difficult to determine when and how, what or which problem has been solved.

- ✓ “Historical sciences share four features that set them apart from non-historical sciences such as physics and chemistry: methodology, causation, prediction, and complexity. Laboratory experimentation, so important in physics, cannot apply to historical sciences. Instead, one must gain knowledge through observation, comparison, and so-called natural experiments. *Historical sciences are concerned with chains of proximate and ultimate causes*. We do not only want to identify certain developments, but also the events leading up to those historic moments in time. Still another difference arises in prediction. In history, one can provide *a posteriori* explanation for why something happened the way it did, but cannot necessarily provide *a priori* predictions. Predictions about what might happen in a given situation are ultimately too complex to develop.” – Jared Diamond, Summary of Guns, Germs, and Steel (2017), p. 46, Kindle Edition (emphasis added).

- “Biology is more like history than it is like physics. You have to know the past to understand the present. There is no predictive theory of biology, nor is there for history. The reason is the same: Both subjects are still too complicated for us.” – Carl Sagan, *Cosmos*, Episode 2.

That is, they are inherently fuzzy, they are philosophical, yet they have been represented in the past as being empirical and objective, and as Prof. Frank Elwell notes, the educational trend in sociology has been toward writing survey questions, conducting surveys, and statistical analysis – numbers crunching – because numbers are ultimately objective. Sociology is more tied to philosophy than it generally admits:

- ✓ “In more recent decades, students of *biological* phenomenon, apparently well disremembered of their own former exclusion from the circle of the elect, have so far made themselves at home in it that one often hears the word ‘science’ used, even in faculty discussions and literature, to designate exclusively the physical and biological departments. Recently, however, investigation of mental phenomenon has become so exact and systematic that *psychology* is sometimes recognized by the academic legitimized as falling within the scientific pale, thus leaving the *social* studies, notwithstanding one of them is known as political ‘science,’ to grope in the outer darkness, along with *philosophy* in all its branches.” – Case, *Id.*, p. xv (emphasis in original).

This account from the early 20<sup>th</sup> Century shows that social studies was excluded from science and possibly considered some odd branch of philosophy. Professor Elwell seems to know this, without saying it, when he argues that sociology is straying from its roots:

- ✓ “Mainstream sociology is straying from its roots. This can be clearly seen in introductory sociology and social problems texts in which a focus on microsociology and

social psychology has become ever more prominent. It can also be seen in the more recent graduates of sociology programs, specialists in one or two of the more than thirty subfields of sociology. While all tend to be well versed in questionnaire design and data manipulation as well as being excellent specialists in such diverse fields as gerontology or deviance, most have little background in the broader traditions of the discipline, little appreciation or experience with holistic analyses. Today, too many sociologists practice the discipline as one of social data collection and manipulation, a reification of method over substance. Others are specializing in a small part of the sociocultural system – say family, or deviance, or criminality – and losing the inclination or ability to communicate with their colleagues and their students either in other subfields or about the larger social whole. Some still do continue the practice of macrosociology, but it too is often the preserve of specialists with their own jargon, interests, and readership.” – Frank W. Elwell, Macrosociology: Four Modern Theorists (2006), p. xi.

I argue throughout GGDM that to be recognized as ‘science,’ sociology had to become a survey data-numbers crunching exercise because philosophers don’t get grant money or win scientific respect. Though I am loathe to equate physics with macrosociology (or the other way around), what Prof. Hossenfelder said of the lack of progress in physics (see 1 Eras, EN 4, pp. 765-766, *infra*) could easily apply also to macrosociology; questionnaire design is comparable to refining applications without advancing understanding of the fundamental nature of our civilization.

*“If Charles Martel had not checked the Saracen conquest at the Battle of Tours, the interpretation of the Koran would be taught at the schools of Oxford, and her pupils might demonstrate to a circumcised people the sanctity and truth of the revelation of Mahomed. Had Pilsudski failed to arrest the triumphant advance of the Soviet Bolshevik Army at the Battle of Warsaw, not only would Christianity have experienced a dangerous reverse, but the very existence of Western civilisation would have been imperiled. The Battle of Warsaw saved Central and most parts of Europe from a more subversive danger – the fanatical tyranny of the Communist Soviet.... On the essential point, there can be little room for doubt; had the Soviet forces overcome Polish resistance... Bolshevism would have spread throughout Central Europe and might well have penetrated the whole continent.”*

– Edgar Vincent, 1<sup>st</sup> Viscount D’Abernon, The Eighteenth Decisive Battle of the World: Warsaw, 1920 (1931) <sup>5</sup>

**Conflagration:** In 1917, the Russian Empire famously collapsed before the Bolshevik Revolution. Thereafter followed approximately four years of the Great Russian Civil War, which the Bolsheviks had essentially won by mid-1920. The USSR was created in 1922.

The Treaty of Versailles in 1919 restored the sovereign nation of Poland, which had not existed for over 120 years since the Third Partition in 1795. The leadership of the new Polish republic sought to create a federation of states as a bloc between Germany and Russia. The proposed members of this bloc were primarily to the east between Russia and Poland. Reception of the idea was lukewarm, some potential members believed they were simply trading the Russian yoke for a Polish yoke. The Soviets saw it as a threat, and also regarded Poland and the territories of the proposed Polish Federation as lost Russian territory. As subsequent history showed, the Russian peasantry had simply traded one yoke for another as well and perhaps in Lithuania and Ukraine some leaders sensed in 1919-1920 that would happen.

The Soviets were not present at the Paris Peace Conference – as Germany had previously made peace with Russia – and they generally resented the Treaty of Versailles. Lenin wrote:

- ✓ “The Soviet revolution in Germany will strengthen the international Soviet movement, which is the strongest bulwark (and the only reliable, invincible and world-wide bulwark) against the Treaty of Versailles and against international imperialism in general.”

The Marxists interpreted the Treaty as an oppressive, predatory, anti-Communist alliance document. This is the version of history that the current senior Russian leadership learned in elementary school; this is the worldview of Putin and his allies who grew up in the Soviet system. Like the Soviets, the West will simply contain and outwait them and they will pass into history.

Probably more importantly, the Bolshevik leaders’ ideology envisioned a worldwide communist revolution with the next anticipated angry proletariat uprisings occurring in defeated Germany and war-weary France. Poland was in the way, a symbol of the bourgeois and capitalism on their border. Thus, in 1920, the revolutionary Red Army crossed into Poland intending to subjugate Poland and install a Bolshevik-friendly government, and to join the Soviet revolution with the anticipated Communist conflagration in Central and Western Europe.

- ✓ “The fate of world revolution is being decided in the west: the way leads over the corpse of Poland to a universal conflagration....” – Mikhail Tukhachevsky, Red Army commander for the 1920 invasion of Poland.

In August 1920, the beleaguered Poles won a stunning victory in the Battle of Warsaw (the “Miracle on the Vistula”) sending the Soviet armies reeling back toward the Ukraine. The Polish Army won the cypher war, breaking the Soviet radio code and disrupting the Soviet communication by flooding their frequencies with transmissions of the Bible in Morse Code; foreknowledge of Soviet military plans, combined with desperate defense on the ground and audacity of command, turned the Soviet flanks and the attack on Warsaw disintegrated quickly into a Red Army rout. Notable defeats of the Soviet armies by the Poles in following weeks and months forced the Treaty of Riga that ended the war. Historians for both sides have claimed victory in the matter; the Poles succeeded in defending their homeland which remained free and sovereign for another generation until 1939, while Russian historians have maintained that the Poles were prevented from forming the federation bloc on the Soviet-Russian borders. In any event, the Soviet leadership turned away from the worldwide Communist Revolution via Europe.

- ✓ “There can be no doubt that if we had been victorious on the Vistula, the revolutionary fires would have reached the entire continent.” – Mikhail Tukhachevsky, Red Army commander, 1920 invasion of Poland.

Imagine, however, the subsequent history of the world had the Soviets prevailed over Poland in 1920 and been in position to invade Germany and Austria to link up with local communist movements, with armies driven by revolutionary fervor, in 1923 or 1925?

I have not heard of any alternate histories based on a Red Army victory in Poland in 1920. Probably because it is a lesser-known historical event and it would require too much explanation for the audience, whereas, WWII is sexy, everyone knows about it (or thinks they do), it was perceived as a universal existential threat to Western civilization, the setting requires little explanation, there are hundreds of movies about WWII or set in the WWII era, and it is easy to paint gloomy alternate histories. Not one historical narrative cares about 20<sup>th</sup> Century Poland until the German invasion in 1939.

In the power vacuum created by the German surrender in 1945, a generation later, the Communist revolution was pushed halfway across Europe by the Soviet Leader Josef Stalin, who as a member of the Soviet Russia Politburo in 1920 pushed for the invasion of Poland. However, by 1945, did Stalin still believe in the worldwide communist revolution, or was the revolutionary cause cynically used as a ploy to enhance Stalin's personal power? Thus, the Cold War.

*“I am leaving Paris, after eight fateful months, with conflicting emotions. Looking at the conference in retrospect, there is much to approve and yet much to regret. It is easy to say what should have been done, but more difficult to have found a way of doing it. To those who are saying that the treaty is bad and should never have been made and that it will involve Europe in infinite difficulties in its enforcement, I feel like admitting it. But I would also say in reply that empires cannot be shattered, and new states raised upon their ruins without disturbance. To create new boundaries is to create new troubles. The one follows the other. While I should have preferred a different peace, I doubt very much whether it could have been made, for the ingredients required for such a peace as I would have were lacking at Paris.”*

– Edward Mandell House, Diary Entry, June 29, 1919, regarding the Treaty of Versailles

#### Endnotes.

<sup>1</sup> Commentary & Citation: The parlor game of Twenty Questions became a radio program in 1946 and a television game show in 1949-1955 and attempts were made to revive it in 1975 and 1989 (after Carl Sagan's Cosmos episodes). Information was taken from Wikipedia article “Twenty Questions,” August 18, 2018.

<sup>2</sup> Citation: “A study from the University of California at San Diego, playing off the social-animal theory, further suggests that the head tilt is an ‘indication to play,’ making the head-tilt a sign not just that the dog is listening, but also engaged – and perhaps that it's engaged because it wants something. A final, less-studied explanation: Owners love the head tilt, and shower attention on their pup when it performs it (whether it's through treats or head rubs or just laughter and attention). The dog, in turn, therefore will be much more likely to make that movement again. Which is fine with us, because it is adorable.” – Dan Nosowitz, “Q: Do Dogs Tilt Their Heads When Confused?” The Dodo (thedodo.com), January 13, 2014.

<sup>3</sup> Commentary: Some years ago, a kind fellow rescued me from his gamer geek wife who had cornered me in a game store and was regaling me in enthusiastic and excruciating detail about her high-level thief character's fight with a dragon using only a dagger in a recent Dungeons & Dragons game session ... though I am sure it was a great story for her, and maybe for the other players in her group, he could see I wasn't really getting it, nor getting into it, and was just politely listening. GGDM game stories will probably be like that.

<sup>4</sup> Commentary: Perhaps an analogy. In baseball, when a team bats around in one inning they will score a minimum of three runs guaranteed. Because there are only three bases in addition to home plate where the runs score, not six bases. But baseball people will tell you *that's not how it works in baseball*, the reality is that when a team bats around in an inning, they will likely score at least five or six runs. Because a team isn't going to hit nine consecutive single-run scoring singles! Or take nine consecutive walks to first base. That's outlandish. And it is likely also that the defense behind the pitcher has not been stellar in that situation. The probabilities and the way baseball actually works in all the parts conspire to make batting around situations much worse than the theoretical minimum.

<sup>5</sup> Citation: Dupuy & Dupuy express the same opinion generally in the Encyclopedia of Military History (2<sup>nd</sup> Rev. Ed., 1986), p. 991. Surprisingly, Lynn Montross *omits to mention this world-history changing victory in War Through the Ages* (3<sup>rd</sup> Ed., 1960), there is not even a mention of the Soviet-Polish war. This is a mystery for someone else to solve (but one suspects prejudice); I do not believe it was in the 1946 2<sup>nd</sup> Edition of the book either.

## **Hierarchic Social Entropy: An Information Theoretic Measure of Robot Group Diversity**

Tucker Balch, *Autonomous Robots*, Volume 8, Issue 3, pp 209–238, June 2000

How should diversity be quantified? Shannon faced a similar problem when he sought to quantify the uncertainty, or randomness, of an information source (Shannon, 1949). The uncertainty of an information source has important implications for communications systems, particularly with regard to the minimum band width required to transmit error-free messages. Interestingly, the properties Shannon sought in a measure of information uncertainty are also useful in the measurement of societal diversity (Shannon, 1949). In fact, researchers in a number of disciplines have adopted information theoretic concepts of diversity. As an example, consider this passage from Wilson's book *The Diversity of Life* (Wilson, 1992):

Suppose that we encounter a fauna of butterflies consisting of 1 million individuals divided into 100 species. Say one of the species is extremely abundant, represented by 990,000 individuals, and each of the other species therefore comprises an average of about 100 individuals. One hundred species are present but, as we walk along the forest paths and across the fields, we encounter the abundant butterfly most of the time and each of the other species only rarely ... In a nearby locality we encounter a second butterfly fauna, comprising the same 100 species, but this time all are equally abundant, represented by 10,000 individuals each. This is a fauna of high equitability, in fact the highest possible. Intuitively we feel that the high-equitability fauna is the more diverse of the two, since each butterfly encountered in turn is less predictable and therefore gives us more information on average.

Wilson's view embraces the idea that societies with members equally distributed among subsets are the most diverse. It also suggests that diversity and information are closely related concepts. Information entropy is used in a number of related fields as well. It is used by ecologists as a means of evaluating species' diversity (Lurie et al., 1983; Lurie and Wagensberg, 1980; Magurran, 1988), by sociologists as a model of societal evolution (Bailey, 1990), and by taxonomists as a tool for evaluating classification methodologies (Sneath and Sokal, 1973; Jardine and Sibson, 1971).

Shannon's measure, *information entropy*, is easily adapted to suit the needs of a societal diversity metric (Shannon, 1949). Bailey popularized the application of information entropy to the study of social groups in his book *Social Entropy Theory* (Bailey, 1990). Although the formulation of simple social entropy for robot groups is somewhat different than Bailey's formulation for human societies, we adopt his term here.

### **Boundary Maintenance in Living Systems Theory and Social Entropy Theory**

Kenneth D. Bailey, *Systems Research and Behavioral Science*, Vol. 25, Is. 5, pp. 587-597,  
January 7, 2009

Social Entropy Theory (Bailey, 1990, 1994) views the social system as an entity that seeks to maintain internal entropy at some optimal level below maximum entropy. The role of the boundary is crucial in this task. The societal boundary must be able to open in the proper manner and at the proper time to ensure that adequate inputs of energy and information can be attained from the environment, that refuse or harmful material can be properly extruded from the system, and that needed exports of matter- energy and information can be moved across the boundary.

Conversely the boundary must be able to close in the proper manner and at the proper time in order to ensure that the system remains secure from threats outside in the environment (prohibits harmful inputs), and also guards against the loss of valuable internal resources (prohibits harmful outflows). Thus, the functions of boundary maintenance are fourfold: to open in a manner that (1) ensures needed inputs and (2) ensures needed outputs, and to close in a manner that (3) prohibits harmful inputs and (4) prohibits loss of valuable matter-energy or information through harmful outputs.

Social Entropy Theory states that the social system functions on a daily basis by regulating six key system components: Population (P), Information (I), Space (S), Technology (T), Organization (O), and Level of Living (L), which can be remembered by the alternative acronyms of PILOTS or PISTOL. This framework can be used to analyze the large variety of flows across the body of a given social system.

These flows across social boundaries can be roughly divided into matter-energy flows, or information flows (Miller, 1978). We can identify eight essential dimensions presented in that can be represented in terms of flows or movement across boundaries. These are: (1) human population; (2) elements from the internal environment (for example, plants, animals, or minerals); (3) energy; (4) culture; (5) technology; (6) information; (7) organization; and (8) level of living (for example, wealth).

\*\*\*

Social groups obviously can vary widely in their ability to achieve their specific boundary maintenance goals. Efficacy in boundary control can depend upon a number of factors, including the following:

1. The distance from the central decider (government) to the boundary.
2. Accessibility of the boundary.
3. Physical conditions, terrain, and topography at the boundary.
4. Length of the boundary.
5. Form of the boundary, and so forth.

The physical form of the boundary can vary widely. In some cases it may be basically only an “informational” boundary consisting of a line on the ground, or merely a sign indicating the location of the boundary. In other cases the boundary might be a wire, or a small fence, or a very large and impenetrable fence or wall such as the Berlin Wall. In some cases it is unguarded. In other the boundary is an expanse of territory that is heavily guarded and filled with land mines, such as the North Korean-South Korean De-Militarized Zone (DMZ). Although it is a gross generalization, we can say that the boundaries that control the flow of matter-energy tend to be the more traditional physical boundaries such as gates, fences, and steel shutters. These gates and shutters are often mechanized, and can thus be controlled through motors that are capable of moving them rather rapidly.

Notice, however, that even physical boundaries that are regulated to either bar or admit physical (matter-energy) flows, also require the use of information. Thus, boundary regulation is generally not solely accomplished through physical (matter-energy) processing or solely through information-processing, but is a combination of both.

For example, consider the common occurrence of visitors approaching the gate of a walled mansion in a wealthy residential area. Assume that this is the front gate, and is deemed a “public entrance.” Assume also that it is never used for “transducer” functions such as garbage removal (another gate, in the rear, serves this purpose), nor for exits of persons from the mansion (yet another gate, a side exit gate, serves this function). ... It is always closed to outputs, and it is variable with regard to its openness of input...

Notice however, that while the gate is a matter-energy (physical) barrier, and is regulating the flow of matter-energy (primarily people), this regulation ultimately depends not only on matter-energy, but also on information. After the people approach the gate, the gate will remain closed, and they will not be allowed to enter unless some information is received by the decider that indicates that entry would be warranted, and would not be harmful to the group (family) residing in the mansion. This information must be transmitted by some form, such as direct voice transmission (speaking), wireless voice transmission, wired voice transmission, video, and so forth.

The length or distance of the information transmission required for gate regulation may vary widely, from a short-distance transmission to a gate-keeper such as an onsite guard stationed at the gate, to a much longer distance transmission to some more remote gate-keeping location. The particular information to be transmitted needs to be sufficient as a signal either to admit, or not admit.

This can be determined in a number of ways, such as the clothing of the persons desiring entry, an identification badge, or credentials (Miller, 1978), passports, passwords, and so forth. Since all of these are increasingly easy to imitate and thus to falsify, security decisions will increasingly be determined through data that is more difficult to alter. This includes biometric data such as fingerprints, unique blood vessel patterns in the face, patterns in the eyes, or even ultimately through rapid DNA determination conducted at the site.

While information is always required, along with matter-energy to process the admittance or barring of entry of matter-energy at a physical barrier, the reverse is also true. That is, the decision to either admit or bar information generally also necessitates the utilization not only of information, but also of some matter-energy or physical apparatus (“hardware”). That is, while information may be transmitted in via a “wireless” device, at some point, generally the organization and decoding of the message (and perhaps in between, as in the case of a satellite or transmission tower) there is “hardware” (matter-energy). You may devise a password to determine whether the information is to be admitted, and you may consider this password to be “information” rather than a physical entity, or matter-energy. Nevertheless, unless you imbed this information in some form of hardware (for example, your computer) it generally cannot fulfill its safeguarding function.

Thus, it is axiomatic that even when using matter-energy boundaries to control matter-energy flows, information processing is required. Conversely, even when using information boundaries to control information flows, matter energy is required. To summarize, it takes matter-energy to process information, and information to process matter-energy.

The classical distinction is that thermodynamics systems are “isolated” systems, whose boundaries are closed to flows of both energy and information (Bertalanffy, 1968). ... No living system such as a social system could conceivably exist in such a permanently closed fashion. Thus, in contrast to isolated or closed systems, social systems are said to be “open systems” (Bertalanffy, 1968; Parsons, 1951).

However, this term has often been used without clarification, implying that all social systems are permanently open. Often the types of flows that social systems are supposedly open to are not specified. ... While it is doubtful that any social system could survive if it remained permanently closed, it is theoretically possible (but highly unlikely) that a social system could exist in a permanently open state. However, this would certainly not provide an optimal quality of life. As we have indicated previously, a social group with no security measures in place to bar nonmembers can suffer not only losses such as the theft of resources, but also dilution of group identity, and contamination of its information base or ideology. Perhaps the sort of social group most likely to survive with totally open boundaries is one with minimal resources, and minimal invitations, theft, or contamination attractions.

\*\*\*

The average society cannot leave itself perpetually open even to flows of potentially valuable raw materials or food or energy, as it would then face subsequent problems of transportation and storage. It cannot leave itself open to unregulated information inputs without danger of information overload, which can be a rather severe problem (Miller, 1978). Similarly, it cannot leave itself perpetually open to exports of matter-energy or information without the risk of having all of its needed resources diminished.

... doubtless some societies would be willing to receive inputs of goods without reciprocating through exportation, but this is obviously difficult to achieve in a world of shortages. Probably the contemporary society that comes closest to this is North Korea, as it lacks a market economy, and can afford comparatively few exports, as the goods of the sort it produces are generally needed at home. However, it does welcome inputs in the form of humanitarian food aid, and does receive such aid from a number of countries.

*See Appendix IP – Interventions Reference Sheet*

**Catherine Sakai:** *While I was out there, I saw something. What was it?*

**G'Kar:** [pointing to a nearby flower] *What is this?* [upon closer inspection, an insect is visible]

**Catherine:** *An ant.*

**G'Kar:** *“Ant”!*

**Catherine:** *So much gets shipped up from Earth on commercial transports, it's hard to keep them out.*

[As Catherine is talking, G'Kar carefully picks up the ant.]

**G'Kar:** *I have just picked it up on the tip of my glove. If I put it down again [replacing the ant on the flower] and it asks another ant, “What was that?” ...how would it explain? There are things in the universe billions of years older than either of our races. They are vast, timeless. And if they are aware of us at all, it is as little more than ants...and we have as much chance of communicating with them as an ant has with us. We know. We've tried. And we've learned we can either stay out from underfoot, or be stepped on.*

**Catherine:** *That's it? That's all you know?*

**G'Kar:** *Yes. They are a mystery. And I am both terrified and reassured to know that there are still wonders in the universe...that we have not yet explained everything. Whatever they are, Ms. Sakai, they walk near Sigma 957. They must walk there alone.*  
– Babylon 5, “Mindwar” (1994)

**Ants!:** The idea of ants gaining technology has rightfully scared the bejesus out of us since we first understood the power of humans plus knowledge. Many ancient cultures were impressed by ants, the ancient-Greek derived *myrmidon* is associated with ant-like subordination to the hive.

- ✓ “It’s the highest form of sociality,’ he said, ‘and it’s what enables the ants to dominate the tropics. No organism but man so dominates everything that goes on in a tropical rain forest.’ Dr. [William D.] Hamilton [Oxford University] attributes the ants’ success to their ability to organize their activities.” – Carol Kaesuk Yoon, “Social Castes Found to be Not So Rare in Nature,” New York Times Archives, 1993.

The idea has been explored in many movies and short stories (for schlock horror rather than philosophical purposes) since H.G. Wells introduced it in his famous 1905 short story, “The Empire of the Ants.” The appearance of advanced intelligence “Phase IV” (1974) ants on Earth (especially if they happen to be starfaring) would be an event for humanity of epochal proportions.<sup>1</sup>

**Entropy Is...:** Entropy is the pervasive natural tendency of the universe, it is the chaos that exists just beyond order. Order and systems are imposed by intelligent life and some other natural forces of the universe, but as any system expands, as the universe continues to expand (and become less and less absolute), entropy seeps in and breaks down order.

- ✓ **Rhetorical Questions:** Is the modern general concept of Entropy, as applied to all things, a form of Camus philosophical suicide? Are they in the pale of this world, or do we treat them as something transcendent? Is Entropy like ambient noise or is it the modern *sacrificium intellectus*? See 3 Kairotic Moment, p. 1450, *infra*.
- **Entropy Is Not Constant:** Entropy is both a low-level corrosion and a sudden, explosive systemic collapse. It is the pebble that starts the avalanche, and it is also the avalanche. Entropy is not constant in application but it is always there.

- ✓ The implicit suggestion here is that we will never eliminate all of the problems – there is no utopian society waiting for our future generations. Rather, society has to decide what problems to eliminate and what social problems are tolerable; how to allocate resources. Solving one social problem creates another.

The Concierge applies Entropy creatively in different ways for the benefit of the game.

- ✓ Interventions should rely significantly upon and frequently reinforce the position's *Fundamental Realities* either as historical echoes or as reactions to departures violations by the position during play. During the game, it is probable that many players will forget about their Fundamental Realities, they will fade into the background.
  - Example, during Season 1 of The Man in the High Castle, Smith and Kido are presented as humans, with human problems, and so much happens, so many tortured twists and turns in the story, that it becomes easy to forget they are both cold-blooded murderers, each personally responsible for multiple deaths either through their authority or by their own hands.

It is the providence of the Concierge to keep the Fundamental Realities *in play* alongside Interventions based on the unfolding events of the game and the storytelling arc.

- ✓ See also Stewed, Brewed, Baked, Boiled or Fried, 1 Disruption, p. 258, *infra*.

Players might not always appreciate the application of entropy to their position, however, players are encouraged to take a longer view of the game as a story arc.

- ✓ Stories (even comedies) where nothing bad or unusual happens are not usually very interesting; all of our stories are primarily about or contain an element of bad things happening to good people or sometimes bad people, e.g., Alfred Hitchcock's 1960 movie, Psycho, where the *original* morally compromised protagonist has fled to the Bates Hotel, setting up the 'she had it coming' archetype in horror films, basically desperate thief meets psycho serial killer.
  - This is one of the reasons, for example, why GDW decided to shatter the seemingly stable (and somewhat boring) Third Imperium setting of Traveller RPG to create the more open and adventurous setting of the Shattered Imperium for MegaTraveller RPG. The carnage of the Imperium civil war began the inevitable road to the Asimovian Long Night. The AI Virus (Traveller: New Era or the third edition of the game), inadvertently created by Imperium researchers, finished the job, leaving a cluster of highly developed interstellar civilizations in ruins. And many places, of many flavors, for RPG adventure.
- ✓ Similarly, most of what we call 'news' are reports of bad things happening to other people (cynically: "if it bleeds, it leads"). History can be viewed in one sense as the story of bad things happening. So can our lives.
- ✓ Stories about normal people having normal days and lives aren't interesting.
- ✓ And 'bad things' happening to anyone in our stories, excepting the natural disaster movies, usually equates to either bad people doing bad things or people doing bad things to others out of ignorance.
- ✓ Thus, in GGDM, someone will become or will need to be the Bad Guy in the story (as discussed in 3 Beginnings, EN 10, p. 45, *supra*). It takes a special kind of player (or actor) to become the Memorable Bad Guy.<sup>2</sup>

- “The difference between life and the movies is that a script has to make sense, and life doesn’t.” – Joseph Mankiewicz.

- The Devil’s Argument: [Navarre approaches the Bishop with his sword drawn] **Bishop**: “But kill me, Navarre, and the curse will go on forever. You must think of Isabeau.” – Lady Hawke (movie, 1985). Without bad guys, there wouldn’t be much news or many movies.

And this is always the difficult part, the ‘devil’s argument’ if you like: Without racism, we would not have the wisdom of opposing racism, without sexism, we would not have the argument for equality of the sexes, without the experience of war, especially in the mid-20<sup>th</sup> Century, and it’s generational aftereffects, there would be no modern pacifist argument, without alcohol, cigarette smoking and drug abuse, we would know significantly less about humanity; without Victorian morality, there would be no modern medical study of psychology. No one is in ‘favor’ of these ‘evils,’ but no one can seriously imagine a world where they never existed and can hardly imagine a future where they don’t still exist.

A utopian world would be, of necessity, perfect, and because it is perfect, nothing can change, otherwise it would no longer be perfect. This is the problem with the utopian argument. *An author quote is like utopia*, it is perfect because it is a quote, if anything is changed, it is not a quote any longer, but perhaps a paraphrase.

So in the GGDM game, players, like fiction authors, must let bad things into the game to move the story along the track; they must assume that their races are not perfect beings, but rather, filled with pregame fallacies and vulnerabilities.<sup>3</sup>

- Crappy Things Must Happen: What we forget when we fall into a big budget movie is that for the story to work, *really crappy things* must be assumed to have happened to a lot of people, to our world, to specific people, before the story begins (i.e. the background) and/or will happen during the story, and possibly afterward as a result of the story. We forget these things in the moment, let them pass over us, *because it is exactly what we expect*, nothing new here – just as we don’t notice people coming and going in a crowded public place, unless there is something different. It is only a matter of what flavor of bad we prefer.
  - ✓ “Every account of a higher power that I’ve seen described, of all religions that I’ve seen, include many statements with regard to the benevolence of that power. When I look at the universe and all the ways the universe wants to kill us, I find it hard to reconcile that with statements of beneficence.” – Neil deGrasse Tyson, at the University at Buffalo, Q & A session, April 9, 2010, video on YouTube as of September 2018.

Bad things are always necessary to create an interesting background.

- ✓ Example, **alien** Colony Ship arrives at the Earth, aliens want to settle on Earth, humans allow some settlement, negotiations continue, humans and aliens reach an agreement for mass settlement of a million aliens on Earth, the alien ship explodes, killing most of the alien population, the sides blame each other, debris from alien ark ships fall to Earth, alien terraforming technology is loosed, uncontrolled, massively alters the Earth, billions of humans die, there is a war, Earth is unrecognizable when it ends...

This is the ketchup ... uh, setup for the 2013 TV series, Defiance. It allows the writers to do whatever they want, just as the space-opera setting of GGDM allows participants wide lati-

tude (almost) without historical constraint. It is also the requirement for every post-apocalyptic setting (Ark II, Twilight 2000, Mad Max, Gamma World, Jericho), to have a post-apocalyptic setting, one must have an apocalypse and Defiance is an example of the post-Cold War sort now that the threat of global thermonuclear war has receded. And sometimes the bad guy is right and makes the most sense too:

- ✓ “The plot has a raggedy quality.... At its worst, it raises basic creative questions that are a far cry from its philosophical and moral concerns: *Is the heroine special because she truly has special qualities, or because the ‘You are the chosen one’ thing lets [Brad] Bird barrel through two hours without having to give Casey any traits besides spunk? Is it a problem, story-wise and message-wise, that Frank’s chief antagonist ... makes more sense than the heroes who oppose him?*” – Matt Zoller Seitz, review of Tomorrowland on rogerebert.com, March 18, 2015 (emphasis in original).
- ✓ “It is also a fallacious *ad hominem* argument to argue that a person presenting statements lacks authority and thus their arguments do not need to be considered. As appeals to a perceived lack of authority, these types of argument are fallacious for much the same reasons as an appeal to authority.” – from Wikipedia article, “Argument from Authority,” captured April 7, 2020.

*“I want to talk about Feng Shui, which is something I know very little about, but there’s been a lot of talk about it recently in terms of figuring out how a building should be designed, built, situated, decorated and so on. Apparently, we need to think about the building being inhabited by dragons and look at it in terms of how a dragon would move around it. So, if a dragon wouldn’t be happy in the house, you have to put a red fish bowl here or a window there. This sounds like complete and utter nonsense, because anything involving dragons must be nonsense – there aren’t any dragons, so any theory based on how dragons behave is nonsense. What are these silly people doing, imagining that dragons can tell you how to build your house?”*

*Nevertheless, it occurs to me if you disregard for a moment the explanation that’s actually offered for it, it may be there is something interesting going on that goes like this: we all know from buildings that we’ve lived in, worked in, been in or stayed in, that some are more comfortable, more pleasant and more agreeable to live in than others. We haven’t had a real way of quantifying this, but in this century we’ve had an awful lot of architects who think they know how to do it, so we’ve had the horrible idea of the house as a machine for living in, we’ve had Mies van der Roe and others putting up glass stumps and strangely shaped things that are supposed to form some theory or other. It’s all carefully engineered, but nonetheless, their buildings are not actually very nice to live in.”*

– Douglas Adams, “Is there an Artificial God?” speech at Digital Biota 2, Cambridge U.K., September 1998

**Flipping (off) Modernity:** Entropy and the four Constructural Elements in GGDM are probably broadly (and unintentionally) functionally similar or analogous to in many ways *yin-yang* and the Five Elements of *Wuxing* (Chinese philosophy). See 1 Constructural Elements, p. 180, *supra*.

- ✓ You may be familiar with the West’s poor cousin: Earth, Wind, Fire and Water. The five elements of *Wuxing* are Wood, Fire, Earth, Metal and Water (various orderings).

It’s a matter of worldview – how one slices the pie – as both are deductive, the difference being what is attempted to be described or explained and the starting point from which it is deduced,

e.g., if one were to try to deduce the parts of a modern automobile as opposed to beginning with deducing the parts of the passenger cabin or engine without looking farther. Both *Wuxing* and GGDM describe relationships between humans and the universe and between each other, *Wuxing* begins appropriately with the cosmos *down* to Earth, whereas GGDM begins with the Earth *up* to the cosmos. It's a matter of view, ancient mythopoeic vs. modernity, top-down or bottom-up. Taken in this sense, we have completely 'flipped the script' in modernity and that is the essence of the three-century dispute between religion globally and modernity.

- ✓ Continuing: “An awful lot of theory has been poured into this, but if you sit and work with an architect ... then when you are trying to figure out how a room should work you're trying to integrate all kinds of things about lighting, about angles, about how people move and how people live – and an awful lot of other things you don't know about that get left out. You don't know what importance to attach to one thing or another; you're trying to, very consciously, figure out something when you haven't really got much of a clue, but there's this theory and that theory, this bit of engineering practice and that bit of architectural practice; you don't really know what to make of them.” *Id.*
- ✓ “Another approach to Western esotericism has treated it as a world view that embraces ‘enchantment’ in contrast to world views influenced by post-Cartesian, post-Newtonian, and positivist science which have sought to ‘disenchant’ the world. Esotericism is therefore understood as comprising those world views which eschew a belief in instrumental causality and instead adopt a belief that all parts of the universe are interrelated without a need for causal chains. It therefore stands as a radical alternative to the disenchanted world views which have dominated Western culture since the scientific revolution, and must therefore always be at odds with secular culture.” – from Wikipedia article, “Western esotericism,” February 20, 2019, citing to Wouter Hanegraaff, Western Esotericism: A Guide for the Perplexed (2013).

---

*“Many arc-based series in past decades, such as V, were often short-lived and found it difficult to attract new viewers; they also rarely appear in traditional syndication (one notable example being the science fiction ‘novel for television’ Babylon 5). However, the rise of DVD retail and DVR of television series has worked in arc-based productions’ favor as the standard season collection format allows the viewer to have easy access to the relevant episodes. One area of television where story arcs have always thrived, however, is in the realm of the soap opera, and often episodic series have been derisively referred to as ‘soap operas’ when they have adopted story arcs.*

*Arc-based series draw and reward dedicated viewers, and fans of a particular show follow and discuss different story arcs independently from particular episodes. Story arcs are sometimes split into subarcs, if deemed significant by fans, making it easy to refer to certain episodes if their production order titles are unknown. Episodes not relevant to story arcs (such as ‘monsters of the week’) are sometimes dismissed as filler by fans, but might be referred to as self-contained or stand-alone episodes by producers.”*

– from Wikipedia article, “Story Arc”

---

**Arc Covenant:** Story arc is a relatively recent development in television programming. A story arc in a program is a covenant with the viewer to which television people were hesitant to enter.

Three features distinguished American television series up to the late 1980s: they were formulaic, episodic, and written for a very low common denominator. That is, the premise and main characters were established in the pilot, each episode was predictable, nothing ever changed (everything was reset at the end of each episode), no one ever died or was seriously hurt, rarely were social controversies raised, *rarely did the characters display any memory of previous episodes* (thus the episodes could be viewed/aired in any order), and shows were suitable for an 8 year old to watch, possibly understand, and be amused (i.e. the lowest common denominator).

Change, increased maturity level (lowest common denominator perhaps hovers around 10 to 12 years old now), increased complexity, and social issues in television coincide approximately with the end of the Cold War and increasing audience education level (i.e. a surge in college graduates) and sophistication.

- ✓ “In order to understand how ‘Babylon 5’ changed the rules of dramatic television, it is important to first understand the evolution of dramatic television over the last two decades. Up until the late 1970s, most prime-time dramas on American television consisted of a series of standalone episodes with very little continuity between each show (the events on one episode rarely had an impact on the events in subsequent ones). In addition, the events portrayed in the series usually revolved around a central character. The original ‘Star Trek’ is a good illustration of this, as you can watch the majority of the episodes in any order without any continuity issues, and the stories tended to revolve around its lead character, Captain Kirk.

However, at the latter end of 1970s, a number of ‘prime-time soaps’ emerged (‘Dallas,’ ‘Dynasty,’ etc.), which brought the ongoing and multi-episodic narratives of daytime soap operas to mainstream audiences. Furthermore, these ‘primetime soaps’ were characterized by ‘community creation,’ in which the action revolved around a number of individual characters related to one another through some means, and the dramatic conflict was often derived from the interactions between these characters. The popularity of the prime-time soaps soon begat the ‘ensemble drama,’ which combined the multi-episodic story arcs and community of characters with decidedly more serious thematic content. The first ensemble drama that exhibited these characteristics was ‘Hill Street Blues,’ which was cited as a ‘groundbreaking show’ and helped to pave the way for other ensemble dramas such as ‘St. Elsewhere,’ ‘L.A. Law,’ ‘Twin Peaks,’ and yes, even ‘Star Trek: The Next Generation. ...

In many genre programs (and numerous ‘old school’ television dramas for that matter), the main character usually remained static over the life of the series. For example, Detective Columbo was the same person from week-to-week and only the situations he was in differed.” – Anthony Leong, “Babylon 5: Triumph and Tragedy in Three Acts,” *Frontier: the Australian Science-Fiction Media Magazine*, April/June 1999 (article is available free online).

- To this list, I might add one of my multi-episodic story arc favorites from the ensemble drama era, *Wiseguy*, 1987-1990 (not to be confused with that awful episodic series, *The Fallguy*, 1981-1986). Another ♥, *Forever Knight* (1992-1996), was a dark-themed episodic late 1980s style series (including prime-time hair) with pretensions of being an ensemble drama, that desperately wanted to have a story arc, but eventually just wore itself (and the actors) out and tried to revive with a sudden change in the third season.

*“Social Entropy Theory (SET) is a very general macrosociological systems theory.”*

– Kenneth D. Bailey, from Abstract of “Social Entropy Theory: An overview,”  
Systems Practice, Vol. 3, Is. 4, August 1990

**SETiGGDM:** Entropy as used in GGDM is primarily an application of Social Entropy Theory salted with a little ‘stupid crap happens’ for storytelling purposes.

Page | 220

- ✓ “Our goal in Social Entropy Theory is to construct an adequate model of complex society. It is taken as axiomatic that to understand complex society adequately, we must have a complex model. More specifically, the model must be isomorphic with the society, and, so, must be as complex as the society that it models.” – Kenneth D. Bailey, “Social Entropy Theory: An overview,” Systems Practice, Vol. 3, Is. 4, p. 365, August 1990 (was he talking about GGDM? ☺).
- ✓ “A pseudo state function, the ‘*Social Entropy*’ (SE) is defined in order to show the application of the second law of thermodynamics to the human social behavior. This is achieved under the assumption that such property (SE) is equivalent to the degree of *social dissatisfaction* (SD), of certain social, economic, or political system. Hence, a Boltzmann type equation is used after simplifying it with Stirling formula, to obtain a rough estimative of the amount of the relative SE in a determined place and moment of history. A case study related to the Peruvian society has been used here to demonstrate our hypothesis that the *social entropy* tends to increase with time. Similarly the **degree of disorder** of a thermodynamic system increases with time. Generally speaking we observe so far that the degree of disorder is a manifestation of the social dissatisfaction within the limits of the system.” – Alfredo Palomino Infante and James H.L. Lawler, “Social Entropy: A Paradigmatic Approach of the Second Law of Thermodynamics to an Unusual Domain,” Nexial Institute, 2002 ([http://www.nexialinstitute.com/social\\_entropy.htm](http://www.nexialinstitute.com/social_entropy.htm)).

While I have little to no chance of understanding the math of Social Entropy Theory, the basic concept resonates in GGDM: ‘Increase’ in entropy is change from low- to high-probability states (like your cup of coffee getting ‘cold’ over time), in the GGDM setting, population movement from the single homeworld to the stars. The Entropy rules in GGDM are both a simulation of SET and a storytelling tool in the game (what’s the difference anyway? What is history?).

*“The student of mathematics does not, as a mathematician, know anything whatsoever about the world of concrete reality. This is true because mathematics is not a body of knowledge with respect to any of the order of phenomena in the objective world. It deals with concepts and is a kind of quantitative logic, purely subjective in its essential nature. But that is not to say that it is not an immensely valuable discipline.*

*Quite the contrary. While one who knew only mathematics, even if he mastered it all, would know nothing about the objective, phenomenal world, he would be in command of an incomparable mental equipment for the accurate explanation of natural phenomena if he were to turn his mathematically equipped mind to their systematic investigation. Thus it is that pure mathematics, far from being a single science, is no science at all. It is, however, the measure of accuracy for all sciences, or the ‘standard of positivity,’ as Comte expressed it.”*

– Clarence Marsh Case, Outlines of Introductory Sociology (1924), p. xvi

**Math Boy:** I did not grasp math as “quantitative logic” when I was young; if I had thought of it or been taught and internalized it in that way, the outcome might have been different. My main memories of math are memorizing multiplication tables in elementary school and failing math (but somehow passing) every year in high school.<sup>4</sup> I knew I was lost and failing, but somehow passing onto the next course each year in high school, and passing toward graduation (or at least not getting into trouble for failing a course) was all I cared about in high school.

- ✓ In high school, I think my math teacher assumed you’d either ‘get it’ or not get it, and it didn’t matter which; thus no effort was made to frame ‘what is math’ or to pull the most dimwitted students up to the shelf where they ‘got it’. The same was true later in college, but the difference is that not getting it blocked progression in my majors; *understanding* is the difference between college and mandatory public high school.

I think in my youth, math was a sort of mystical thing that kids smarter than I was understood (for example, the girl in the orchestra with whom I was infatuated), I don’t know that I really could have said what math was when I was young (any more than I could have said what literature was at that time). Maybe this is middle-age excuse-making, but if you are teaching math, perhaps it is better to start students with this concept and keep repeating until they internalize it.

- ✓ “Who does not know, as regards to the so-called mathematicians, what very obscure subjects, and how abstruse, manifold, and exact an art they are engaged in? Yet in this pursuit so many men have displayed outstanding excellence, that hardly one seems to have worked in real earnest at this branch of knowledge without attaining the object of his desire.” – Marcus Tullius Cicero, *Of Oratory* (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, *The Rhetorical Tradition* (1990), p. 201.

In college it might have been better had I begun with the question, ‘what can calculus do that math cannot?’ But it was ever presented that way; they simply began teaching calculus as if students already knew that answer or would figure it out.<sup>5</sup> Similar questions are asked on the internet even now; e.g., on Quora in 2013, “How is calculus different from algebra?” and a redux in 2017, “What is the difference between maths and calculus?” There are many sites dedicated to explaining what is calculus; this is the one I wished I had been able to read back around 1990:

- ✓ “For over seven hundred years algebra and geometry coexisted but were not well linked. Geometry describes the physical nature of our world while algebra is a sophisticated tool for mathematical analysis. Due to the Greek influence on Persian (or Islamic) mathematics geometry was successfully used to verify some of their algebraic methods, but there was no known way to harness the analytical power of algebra to analyze geometry.

In the late 1500’s the French philosopher and mathematician, Rene Descartes, had a profound breakthrough when he realized he could describe position on a plane using a pair of numbers associated with a horizontal axis and a vertical axis. By describing, say, the horizontal measurement with x’s and the vertical measurement with y’s, Descartes was able to give geometric objects such as lines and circles representation as algebraic equations. This seminal construction of what we call graphs is, arguably, the cornerstone without which our modern technology would not be possible. Des-

cartes thus united the analytical power of algebra with the descriptive power of geometry into a branch of mathematics he called analytic geometry. This term is sometimes seen in textbooks with titles such as ‘Calculus with Analytic Geometry.’ ...

The next major breakthrough in mathematics was the discovery (or creation) of calculus around the 1670’s. Sir Isaac Newton of England, and a German, Gottfried Wilhelm Leibnitz, deserve equal credit for independently coming up with calculus. Each accused the other of plagiarism for the rest of their lives, but for what it’s worth, the world largely adopted Leibnitz’s calculus symbols. Calculus did allow Newton to establish physics principles which remained uncontested until the year 1900 and which in our ordinary scale world still suffice to explain physics to excellent accuracy.

Calculus was developed out of a need to understand continuously changing quantities. Newton, for example, was trying to understand the effect of gravity which causes falling objects to constantly accelerate. The speed of an object increases constantly every split second as it falls. How can one, for example, determine the speed of a falling object at a frozen instant in time, such as its speed when it strikes the ground? *No mathematics prior to Newton and Leibnitz’s time could answer such a question, which appeared to amount to the impossibility of dividing zero by zero.* The solution to this type of issue came to be known as the derivative. Derivatives are slopes of particular lines called tangent lines, and the reader may recall that slope of a line is a concept from Descartes’ graphing.” – Jon Davidson, “What is Calculus,” Southern State Community College (Ohio), undated article (emphasis added).<sup>6</sup>

So calculus solved a problem that seemed previously impossible. Ok. And the solution is precisely and accurately applicable to modern physics and graphic visualization problems. Even better. Would the impossible framework problem of quantum physics likewise be solved by a new form of math? That seems to be the strong underlying assumption of most who understand the problem far better than I; it is implied in much of modern science-fiction literature.

- ✓ Rhetorical Question: What ‘impossible’ problem has GGDM solved or not solved? Or is that not the correct framework for discussing human civilizations? Or GGDM?

The Stargate Universe series character Eliot (“Eli”), an apathetic MIT dropout and ‘math boy’ as he called himself in the episode “Light” (2009) is the epitome of Mr. Case’s preceding description of a mathematician. It is not likely that the SGU staff ever heard of Mr. Case or read his books; it is most likely that Eli’s character is derived from a long-running sci-fi stereotype.

- ✓ “The origin of the mathematization of economics is traced back to Swiss mathematical genius Daniel Bernoulli, who precisely conceived of utility in terms of the intensity of psychic effect. Murray Rothbard elaborated on the foundation of mathematical economics ... but it is worth noting that two hundred and fifty years after his death, Bernoulli’s probabilistic insights are also getting criticized by Nobel Prize winner Daniel Kahneman.” – Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” alertandoriented.com (blog), April 13, 2016.
- ✓ See Unsolved Problems discussion, 3 Constructural Elements, p. 209, *supra*.
- The Other View: There was debate in the early 20<sup>th</sup> Century about whether mathematics was a science; there are other views that are contrary to the ones expressed by Mr. Case:

- ✓ “Mathematical science is in my opinion an indivisible whole, an organism whose vitality is conditioned upon the connection of its parts. For with all the variety of mathematical knowledge, we are still clearly conscious of the similarity of the logical devices, the relationship of the ideas in mathematics as a whole and the numerous analogies in its different departments. We also notice that, the farther a mathematical theory is developed, the more harmoniously and uniformly does its construction proceed, and unsuspected relations are disclosed between hitherto separate branches of the science. So it happens that, with the extension of mathematics, its organic character is not lost but only manifests itself the more clearly.” – David Hilbert, “Mathematical Problems,” an address to the International Congress of Mathematicians at Paris (1900), translated by Maby Winton Newson for the Bulletin of the American Mathematical Society 8 (1902).

Thus, it seems that Mr. Hilbert, a mathematician, who is considered one of the greatest mathematicians of the 20<sup>th</sup> Century, would disagree with Mr. Case, a sociologist, on that point. But there are other statements from the address in which Messrs. Hilbert and Case would seem to be in agreement, e.g.:

- ✓ “The organic unity of mathematics is inherent in the nature of this science, for mathematics is the foundation of all exact knowledge of natural phenomena. That it may completely fulfil this high mission, may the new century bring it gifted masters and many zealous and enthusiastic disciples!” *Id.*

I still think the view of mathematics as “a kind of quantitative logic” is and would have been far more useful. But math is now unanimously presented as a ‘science.’

---

*“Some say the wind just stoppered.  
Others reckon it were a gang called Turbulence!”*

– The Tell of Captain Walker, *Mad Max: Beyond the Thunderdome* (1985) <sup>7</sup>

---

**...Turbulence of Being:** Beyond entropy, the universe seems to have a quota for stupidity, pettiness and annoyance of which it is mine and humanity’s designated role to fulfill (I call it the ‘To Screw List’). What would happen, if for once, when there is a probability that the cat food can with a spoon in it would not fall over, if, in fact, it didn’t fall over? Would the universe collapse into chaos? Would the universe cease to exist as we know it?

We will never find out because the stupidity quota insures that the can of cat food with the spoon in it, will always fall over regardless, especially if doing so is to our greatest annoyance. Or under the Many Worlds Interpretation of quantum mechanics, it always ‘happens’ because we never see the universe where it doesn’t happen. What’s the difference? It’s like an executing computer program. Although these questions might be regarded as humor, they are equally part serious,<sup>8</sup> to wit:

- ✓ Is it the basis of our science and technology that observed phenomenon are repeatable, and if they are repeatable, then they can be tested and eventually, we obtain a natural law by which they operate, and are predictable? I am waiting for science to explain the preceding to me (and other related commentaries in GGDM, e.g., top of 3 Entropy, 1 Temporal Technology, 2 Fallen to Earth, 3 Colleges, etc. *infra*, a theme

running through GGDM), why this always happens? Science cannot even frame the problem, the observed phenomena, in fact, it will be dismissed instead as just my mental state, my negative interpretation, when everyone who is paying attention can see it happening every day. We write songs about it, e.g., what happens when you play a country song backwards (old joke)?<sup>9</sup> I feel that it is at least colorable that the phenomena will be understandable when we have the proper framework in which to ask quantum questions:

- “Unlike classical physical processes, some quantum mechanical processes (such as quantum teleportation arising from quantum entanglement) cannot be simultaneously ‘local,’ ‘causal,’ and ‘real,’ but it is not obvious which of these properties must be sacrificed, or if an attempt to describe quantum mechanical processes in these senses is a category error such that a proper understanding of quantum mechanics would render the question meaningless.” – Wikipedia, “List of Unsolved Problems in Physics,” captured June 18, 2018.
  - This quantum quandary is mirrored in GGDM game mechanics.
  - See also Peek-a-Boo, 2 Expansion, p. 893, *infra*.
- “As time travel films get more complex, however, we need new models to think through their mechanics, and *new ways to think about the ways they produce meanings*. A recent and quite impressive addition to the genre is Rian Johnson’s 2012 film *Looper*. And as with many such films, soon after release, there were a panoply of explanations, diagrams, and attempts to explain its time-travel dynamics, many on the Internet. While most praised the film in one form or another, many argued that the presentation of time travel in the film is in some senses sloppy, because it mixes and matches various theories of time travel, and hence sacrifices structure for character development. This reading of the film has in some senses been supported by the director, who implied in at least one interview that he went with his gut rather than work out the details. Despite this, there’s actually some very strong reasons to see Johnson’s gut instinct as having a lot going for it. *For when contextualized by aspects of contemporary quantum mechanics, the fuzzy logics of Looper are hardly inconsistent*. In fact, this film can be seen as actually advances the time travel genre to a new level of complexity.” – Christopher Vitale, “Collapsing the Fuzzy Wave: Rian Johnson’s ‘Looper’ (2012), Quantum Logics, and the Structures of Time Travel Films,” networkologies (blog), written in 2012, updated and reposted, October 31, 2014 (emphasis added).
- When this occurs, the results will be epochal, emergent throughout humanity. See continued epochal evolution discussions in 1 Order, 1 Star-drive, and 1 Reformation, *infra*.

These are questions I have asked myself over and over again for years and years (it might be somewhat evident in the design of GGDM).

- ✓ You are free, of course, to dismiss my unfavorable views in GGDM as confirmation bias (the modern pat on the head). As self-fulfilling prophecy. The glass half-full or

half-empty, and all that. We can all go on pretending that the causality around humans is coincidental, random, that the universe loves us and is our intellectual playground (like kids who don't know snakes bite). And all that. Because of course, I am nuts. Santa Claus is watching, you had better look happy, innocent and harmless.

- Sometimes I feel like Paul Simon's "Something so Right" (1973).
- ✓ You may think that like Pangloss, I am confusing causes with effect. That because the universe annoys me, I think that it is the intent of the universe to annoy us. I can only shrug at such a suggestion, "you may be right, I may be crazy, I may be just the lunatic you are looking for!" (Billy Joel, "You May be Right" (1980)). But that is what the universe means to me, and to many others if they stop to think of it. And the only way you can dismiss my thoughts is to believe that what I think has no meaning or effect on the universe, is not a fact equivalent to or the same as say, a lightning strike that blew off the corner roof of my grandmother's garage in 1996.
- A Simple Proof: If I hold and release a ball, it falls to the ground. If I do it 100 times, in exactly the same way, applying no other forces, it falls to the ground 100 times, in exactly the same way. How many times does this need to happen before you decide it is not a coincidence, even if you do not have modern knowledge?
  - ✓ *Why* did an egg (have to) drop on the floor while I was making breakfast this morning? Well, you might say, you were careless or you didn't have a good grip on the egg when you took it out of the carton. Those are answers to *how* the egg dropped on the floor, who is responsible, blameworthy, not why the egg dropped on the floor (the 'have to' part is a separate issue). So you say, ok gravity caused it to fall to the ground and it broke. Again, this is the mechanics, a *how* answer. Since we never get an answer to the *why*, *we have become accustomed to interpreting how answers as whys*. Our language actually makes it difficult to directly express the real question, and very easy to fumble about hows, responsibility, causal chains, and blame. Thus we live in confusion and ask confused questions. Can physics solve this?
  - ✓ That is the question we must resolve: How many times does entropy – either petty or large – have to happen before we resolve that it is not a coincidence? And if it is not a coincidence then it is either natural law or malicious agency, and what is the difference? Treatment of natural laws as neutral is just a mental trick to keep us from losing our minds, to keep it empirical; no one can prove that natural laws are neither benevolent nor malevolent though science so asserts. The best that science can argue is that they are neutral in application from a strictly empirical perspective.

- See also UNITY OF OPPOSITES discussion, 5 Fallen to Earth, p. 1570, *infra*.

The ancients didn't think for a moment that gravity was a coincidence and expressed it in their own framework, their own terms. They also used it, giving it military and engineering applications, just as they did the wind and the currents. Phenomenology and ontology are not so separated from empirical science as they would like; to be empirical, it must both exist and appear, from which we derive facts such as measurements, behavior, natural laws.

- ✓ Long ago, I read a story that I think was titled, "The Girl Who Lied to Save the Earth." I cannot locate it now, but the gist of the story was that an extradimensional explorer crossed over to Earth. The explorer noticed that there was much chaos in humanity and asked a girl if this was normal. She lied. Thinking that it had disturbed

this dimension, the extradimensional explorer removed itself back to the origin, and made ‘repairs’ of the damage to our planet that it thought it caused.

- Fourth Frame: Turning to a different framework, it ‘feels’ or ‘seems’ as though the idiot, petty entropy in our daily lives is a form of ‘turbulence’ (I have no other suitable term, so that will have to do) from the very fact that we exist. Of course, science holds that everything in the universe experiences entropy, that is, that entropy migration to high entropy is a universal process the same as gravity, magnetic attraction and so on. But there seems to be something different about the way humans experience petty entropy in their daily lives.
  - ✓ One colorable possibility is that the low entropy state, the existence of anything in this universe interrupts something that we have not yet identified, or perhaps the successive emergences of the natural orders (see discussions 2 Culture and 1 Order, *infra*) has ‘violated’ some laws of the universe, but not in the sense that they would be prohibited (again, we really lack the vocabulary) or perhaps the laws were changed by the emergences. We live in a fractured universe, so to speak.
    - However, there is possibly a circular argument that could occur here: That the fractures are the cause of entropy, but then, what else – other than entropy – would we call the process that caused the fractures? Or more precisely, is an emergent event entropic? Which comes first, the chicken or the egg?
    - See also discussion of paradoxes, 2 Temporal Technology generally, *infra*, and opposites, 5 Fallen to Earth, p. 1570, *infra*.

Humans experience entropic events in an emergent way. What among the first order of natural phenomenon laws (i.e., the physical universe) known to us dictates that an entropic event should cause anger, annoyance, cognitive dissonance in human observers? Gravity, magnetism, electron spin? Within the framework of the second order of natural phenomenon (i.e. the organic), we find some cause in organic reaction to entropic events that are negative stimuli, but that is still a far cry from human reaction (of all types) to entropic events. It is only within the third and fourth orders of natural phenomenon (i.e. the mental and the super-organic, respectively), that human reactions to entropic events become frameable and to these, we hardly have developed any natural laws in the sense of the first/second order sciences.

- ✓ The orders of natural phenomenon described by sociologist Clarence Marsh Case in 1924 are discussed throughout GGDM, see especially 2 Culture and 1 Order, *infra*.
- ✓ Entropy is relative to the environment. If you lived in the ocean, dry would be a very low entropy state and wet would be the high entropy state (like the distribution of air molecules in a room). In fact, fish would never know they are ‘wet’ without an opposite state. However, in physics lectures and videos, it is not presented this way, rather, high and low entropy are always presented as either a room full of air or against the ultimately objective background state of the universe beyond the Earth and Sun. Physics is in love with the ultimate objective reality, which is the background state of the entire known universe and every argument flows from there. But not human arguments. Human experiences flow from the *ought* and *not*. Or the *ought*, the *is*, and the *not*. Relativity is the recent interloper into the world of physics.

The next question is, does the universe have an emergent response to humanity? Does the emergence work both ways? In the same way perhaps that the Earth’s gravitational pull moves the Sun very slightly due to the vast differences in mass? Or the way the Moon

causes tides on Earth? The problem is that for all of history, our experience of entropy, was just the way things were, the craziness of the world, and no one gave any thought to it (and it almost destroyed us, may in the future), instead, we learned to bump along on the waves. I have refused to accept that it is ‘just the way it is’ or that it’s just the natural universe, I want a better understanding personally, and I believe if we are to survive in the next centuries, humanity needs to understand this (nay, *grok* this) better as a civilization.

The human experience of entropy, both individually and as civilization, is either then peculiar to the third and fourth orders of natural phenomenon and/or we are more likely to experience the ‘turbulence’ because we are more complex still than all of the other lifeforms on Earth (that is, the nail that sticks up most gets hammered down the hardest and first).

- ✓ Oddly, Douglas Adams said of the Infinite Improbability Drive in the Hitchhiker’s Guide to the Galaxy (radio scripts 1978, novel 1979 *und so wieter*) books that the less probable your existence, the faster you can go. Though it was taken as some vaguely philosophical comedic comment, it has always been intriguing and who knows, maybe Mr. Adams sensed something of what I have noted above?
  - See also ‘disturbulence modifier,’ 2 Movement, p. 846, *infra*.
- ✓ I may, if you will pardon, be the sanest person on Earth for all of my eccentricities.

---

*“But I know this: I have never believed much in conspiracy theories. Secrets are difficult to keep when they involve two or more people. My answer to questionable events aligns more with Peter Bergen’s spot-on assessment: ‘Incompetence is a better explanation than conspiracy in most human activity.’”*

**Interventions:** Entropy is the ‘player position’ of the Concierge; it is the means by which the Concierge can participate in the story of the game. The Concierge interacts with players in various ways while running the game (such as processing turns, News Events, and Patents), but Interventions provide a special ability for the Concierge to influence the game directly. Perhaps you guessed that Interventions happen without warning or permission of the position players...?

- ✓ The Concierge has thus progressed in these rules from being first an admin (set up and processing of turns) to being a mod (game forums and News Events) to a fully-empowered game master (Interventions) and participant in the game.

The Concierge is not beyond the Fourth Wall, is not lowered from the ceiling by ropes (*deus ex machina*) and is not the wizened little old guy emerging from behind the bush to dispense gentle moral wisdom;<sup>11</sup> the Concierge is standing on the stage with the rest of the actors – or at least off to the side with a Vaudeville Hook! In all sports, the referees standing on the field are considered to be part of the playing field, e.g., if they inadvertently get in the way or if the ball or puck hits them, they are part of the field.

- ✓ “All existential thinkers quoted by Camus have realized the futility of reason, all them are seen to have recourse to some transcendent entity as *raison d’être*: Husserl to his ‘extratemporal essences’ of innumerable phenomena, Chestov and Kierkegaard to a deity whose loftiness consists precisely of His incomprehensibility, indeed in His inconsistency, arbitrariness, inhumanity.” – Erich Kahler, The Tower and the Abyss (1957) (see full quote, 3 Kairotic Moments, bottom p. 1450, *infra*).
- Interventional Potentials: The Concierge receives one Intervention Potential each time a Regular Turn is processed. Interventions should be used when appropriate but may be retained from turn to turn, indefinitely (i.e. they never ‘age-out’). The Concierge may use any number of available Interventions in a Regular Turn or Turn Cycle. Interventions may be used freely and do not have to be directed to the position from which they were generated. They *should* be used, however, as there are few good reasons not to intervene regularly.

It is possible that one Intervention Potential per turn will be insufficient later in the game, when the positions have grown. Other rules provide some ways that extra Potentials may be generated by player actions. It may be necessary to add Intervention Potentials to the game; hopefully, this can be done with consent and understanding of the players, and in a creative way that fits the style and story of the ongoing game.

In the language of Entropy, Intervention Potentials represent any or all of the following: a measure of the unavailability of part of the system to do work, the increased amount of information needed to determine the exact state (i.e. Byzantine Fault), the increased range of possibilities arising from the uncertainty, the dispersal of social energy and parts toward unintended purposes, and conflicts arising between parts. Interventions can also be used to introduce external and random factors into an otherwise orderly appearing system.

- Intervention Bulletins: Each use of an Intervention requires a Special Bulletin news posting. All Special Bulletins by the Concierge are considered to be absolutely true, with the exception of Prose Bulletins. Of course, when using Interventions the Concierge will operate from their superior knowledge of the game.
  - ✓ The principles of the Special Bulletin are storytelling promotion and transparency even if unrealistic. Players may be upset if the Concierge constantly acts in secrecy.
  - ✓ Like Game Masters everywhere, the Concierge receives their superior knowledge of everything from a 6’ 3.5” invisible rabbit named Harvey, who can stop the hands of the clock and go anywhere.
- Intemperance: The Concierge should avoid the appearance of pettiness and vindictiveness (or other intemperate acts) or impropriety in use of Interventions, nor should players feel

their positions are being constantly ‘targeted’ by the Concierge. Interventions should fit the *scale of the game* and advance the story or keep the game interesting with new twists.

- ✓ “Human beings are very bad at scale, and theories about the rigging of a presidential election make that clear. Maybe you can throw a mayoral race in a small town by getting a handful of people to go vote several times (assuming they can sneak past the protections in place to prevent such a thing). But presidential races involve millions of votes. That’s a whole different ballgame.” – Philip Bump, *The Washington Post*, October 17, 2016.
- ✓ “The Trump administration’s May budget called for cutting *\$1.2 billion* from the Centers for Disease Control and Prevention, which is part of HHS, including an *\$82 million* cut at the center that works on vaccine-preventable and respiratory diseases.... Price’s budget proposed a cut of *\$186 million* from programs at CDC’s center on HIV/AIDS, viral hepatitis, sexually transmitted infections and tuberculosis prevention. There was also *\$222 million* in cuts to the agency’s chronic disease prevention programs.... The agency’s center on birth defects and developmental disabilities saw a 26 percent cut to its budget. ... Price’s first budget also sought *\$1 billion* in cuts for the National Cancer Institute, *\$575 million* in cuts for the National Heart, Lung and Blood Institute and *\$838 million* in cuts for the National Institute of Allergy and Infectious Diseases. The administration asked Congress to slash the overall National Institutes of Health budget from *\$31.8 billion* to *\$26 billion*. ...

All these numbers are far more consequential to the long-term health, both fiscal and physical, of the United States than Price’s private plane habit. But they are also way more abstract, and thus less sexy, than a million bucks spent on airfare. People are inclined to focus on relatively small expenditures because they sometimes struggle to wrap their heads around bigger numbers that underscore harder truths. A search of Lexis Nexis and Google News makes clear that Price’s flights have garnered far more attention than the proposed HHS budget cuts in May or even the GOP’s \$1.5 trillion debt deal last week.” – James Hohmann, *The Washington Post*, September 29, 2017 (emphasis in original)

- User PelletFan on YouTube commented in regard to Stephen King’s *The Stan* (1978), that loss of 99.4% of the U.S. population in 1990 still leaves 1.5 million people! Certainly, it is collapse, but not extinction. People don’t *grok*.

Mysterious losses of ships, for example, are acceptable on a certain number of occasions during the game (perhaps when the technology is new), but should not be the steady resort of Concierge Interventions unless doing so serves a much larger purpose in the game.

- ✓ The Concierge must be – like the Lawnmower Man (movie, 1992) – God in the game (and game program), both able to change anything in the game data, and of the wisdom to refrain from doing so unless there is a good long-term reason or necessity.
- **Indifference:** Interventions are not always negative, destructive, or ‘bad’ nor are they required to be. An Intervention can be positive, negative, or neutral, good, bad or just ugly; and the view depends on the observer.
  - ✓ “And thus I clothe my naked villainy / With old odd ends stolen forth from holy writ / And seem a saint when most I play the devil.” – William Shakespeare, “Richard III” (1597).

Interventions are not a form of ‘justice’ or ‘retribution’ or ‘balancing’ or ‘leveling’ as that implies that the Concierge has abandoned neutrality.

- ✓ “There is an artistic principle – not a rule – that volitionals should be treated consistently. But to insist on kindness would be to eliminate that degree of freedom for which volition in creatures was invented. Without the possibility of tragedy the volitionals might as well be golems.” – The Entity *above* Yehwah talking about humans (i.e. ‘volitionals’) in Robert Heinlein’s Job: A Comedy of Justice (1984).

**Honor** is something that only occurs when there is a choice and when some stupid situation arises among creatures with volition; if humans were computers, there would be no honor.

- ✓ **Fundamental Realities** are an important part of the Concierge’s position in the game. Some Intervention Potentials should be used to prod a position to act within their Fundamental Realities and when the position is acting in ways inconsistent with their Fundamental Realities, these Interventions would be deemed helpful and good and not entropic and harmful. For example, a position whose Fundamental Reality says that its Native Population Type has a ‘migration urge’ might receive ‘helpful’ Interventions by the Concierge when Loading Population on Colony Ships. The Load Population mechanics (see Sardine Tins, 3 Expansion, pp. 911-912, *infra*) provide no bonuses or variance for Fundamental Realities, and thus it would be incumbent on the Concierge to possibly give a little boost so the Fundamental Reality has real effect.
- **Inspiration:** The daily news provides plenty of examples and inspirations for Interventions by the Concierge; knowledge and understanding of history and historical conditions adds nearly infinite options and ideas. Most good fiction comes from or is based more or less on history and reality; it helps with suspension of disbelief (see Grinding Chic Fact, 1 Dreamtime, p. 138, *supra*). Additionally, there is a general literary and anthropological consensus that there are 7 basic plots that describe all human stories, and 36 types of dramatic situations – that is, 36 types of human personal conflicts described in literature. All of this can be found easily on the internet by searching. *Google it.*

---

*“The Little Ice Age, by anthropology professor Brian Fagan of the University of California at Santa Barbara, tells of the plight of European peasants during the 1300 to 1850 chill: famines, hypothermia, bread riots and the rise of despotic leaders brutalizing an increasingly dispirited peasantry. In the late 17<sup>th</sup> century, agriculture had dropped off dramatically: ‘Alpine villagers lived on bread made from ground nutshells mixed with barley and oat flour.’ Historian Wolfgang Behringer has linked intensive witch-hunting episodes in Europe to agricultural failures during the Little Ice Age.”*

– from Wikipedia article, “Little Ice Age,” July 9, 2019

---

Merriam-Webster online dictionary at *Little Ice Age*: an episode of glacial expansion whose maximum extension occurred in the 17<sup>th</sup> and 18<sup>th</sup> centuries.

---

**Sands & Seas:** Some entropic events in history seem so perfect in hindsight that we imagine some supernatural intelligent agent at work, or if they weren't, they could not have done it better. Allow me to introduce the Concierge who has a handful of Intervention Potentials and probably had a bad or slow, boring day at work ... though that shouldn't have anything to do with it!:

- ✓ If you wanted to destroy the Minoan civilization, could you have done better than the volcanic eruption on the island of Thera, 100 km from Crete? Simple, really.
- ✓ If the Peloponnesian War (along with Socrates, Plato, and Aristotle, Alexander the Great) was your objective, could you have done better than the earthquake in Sparta in 464 B.C. and the Plague of Athens in 430 B.C.?
- ✓ If you wanted to destroy the late Roman Empire, could you do better than the Great Migration, would you have uprooted the Huns from the northern frontier of China?
- ✓ If your objective was the collapse of mound-building late Mississippian civilization in North America, how about starting the Little Ice Age?
- ✓ If weakening the Church to move Europe toward exploration and secularization or to make sure the printing press was not suppressed was your goal, was there any agent craftier than the Black Death?
- ✓ If you had wanted to destroy the Aztecs, Cortez was your man on the spot...

The tools of entropy are many and this list is, of course, Western-centric. Our ancestors made stories about the bad events that they felt were too perfect to be just chance, e.g., Iram of the Pillars, sometimes called Ubar, known in the West as the Atlantis of the Sands.

➤ **In Our Puddle:** This, of course, is the little cousin to the larger feeling of humanity that the universe must have been designed, even while religion has receded in the face of secularization. Although 'intelligent design' has been rejected by the Courts and media as a progeny of 'creation science,' which in turn has been rejected as any sort of science by everyone except creationist, still, it represents a lingering, persistent intuition or idea that the current universe could not have arisen to such complexity and form without some supreme intelligence.

- ✓ "Occasionally someone remarks on what a lucky coincidence it is that the Earth is perfectly suitable for life – moderate temperature, liquid water, oxygen atmosphere, and so on. But this is, at least in part, a confusion of cause and effect. We earthlings are supremely well adapted to the environment of the Earth because we grew up here. Those earliest forms of life that were not well adapted died. We are descended from the organisms that did well. Organisms that evolve on a quite different world will doubtless sing its praises too..." – Carl Sagan, *Cosmos*, Episode 2.

If the universe was designed by an intelligence, entropy must be intentional? And we were 'placed' in it – or at least entropy was a partial 'cause' of our existence. Why? Why Not?

- ✓ "This is rather as if you imagine a puddle waking up one morning and thinking, 'This is an interesting world I find myself in – an interesting hole I find myself in – fits me rather neatly, doesn't it? In fact it fits me staggeringly well, must have been made to have me in it!' This is such a powerful idea that as the sun rises in the sky and the air heats up and as, gradually, the puddle gets smaller and smaller, it's still frantically hanging on to the notion that everything's going to be alright, because this world was meant to have him in it, was built to have him in it; so the moment he disappears catches him rather by surprise. I think this may be something we need to be on the

watch out for.” – Douglas Adams, “Is there an Artificial God?” speech at Digital Biota 2, Cambridge U.K., September 1998 (transcript and audio recording of speech are available free at <http://www.biota.org/people/douglasadams/>).

These arguments by Carl Sagan and Douglas Adams seem designed to specifically refute self-fulfilling Christian intelligent design arguments about how perfect the Earth is for human life, e.g., see Christian exoplanets discussion, bottom 2 The Sidereal Stage, p. 117, *supra*.

- ✓ See also additional related Douglas Adams quote and Children & Puddles discussion, 3 Technology, p. 720, *infra*.

---

*“Curious, I took a pencil from my pocket and touched a strand of the web. Immediately there was a response. The web, plucked by its menacing occupant, began to vibrate until it was a blur. Anything that had brushed claw or wing against that amazing snare would be thoroughly entrapped. As the vibrations slowed, I could see the owner fingering her guidelines for signs of struggle. A pencil point was an intrusion into this universe for which no precedent existed. Spider was circumscribed by spider ideas; its universe was spider universe. All outside was irrational, extraneous, at best raw material for spider. As I proceeded on my way along the gully, like a vast impossible shadow, I realized that in the world of spider I did not exist.”*

– Loren Eiseley, “The Hidden Teacher” (1969)

---

## Endnotes.

<sup>1</sup> Citation: Phase IV is a very surreal movie from 1974 about ants who have suddenly developed collective intelligence. It was a box office flop but is a creepy cult classic now.

<sup>2</sup> Citation: “Bad people sometimes tell the truth, that is, bad people aren’t always lying.” – David Pakman, David Pakman Show, June 18, 2020.

- ✓ “It is not polite to assume someone is lying when you have only just met them.” – Phillipe Gaston, Lady Hawke (1985).

<sup>3</sup> Citation: “A few weeks ago, Zeb Cook wandered into my office and told me that the Berlin Wall was coming down. I had been to both West and East Berlin in 1979 while I was in the Army, and I was staggered by the news. The world was miraculously made a better and brighter place – or so I certainly hoped. Shortly after that, I had a slightly twisted thought: This was probably *bad* news for all of the post-holocaust, nukes & mutants RPGs on the market. The rise of democracy and freedom across Eastern Europe makes it unlikely that we’ll see those white mushrooms rise over our home towns in the near future. And that does take some of the thrill out of playing World War III games. I had to admit that hand-to-hand combat with a four-armed alligator over a box of stale Puppie Yummies in the radioactive sewers of New York now seemed a little less believable. In his editorial in GDW’s *Challenge Magazine*, issue #41, Timothy Brown correctly pointed out that ‘a peaceful world is a boring world – from a role-playing point of view.’ I would personally never want to be within a light-year of a *real* nuclear exchange, but the *idea* has lots of entertainment value. Conflict and adventure are key elements in any role-playing scenario, and few modern-era events can dish out conflict and adventure like a nuclear war. Many gaming companies saw that and played up on it. ... The themes of the post-holocaust games probably reflected the changes in public opinion on nuclear war. Not many people ever really cared for the idea, but the longer we all lived with the Bomb, the less enthusiasm we had for it. Movies like *The Day After* and *Testament* certainly showed that. And now it seems that the collapse of the old order in Europe has given those nightmares a final kick in the head (again, so we hope).” – Roger Moore, Editor, “Bye-bye, WWII,” *Dragon Magazine* #154, February 1990 (emphasis in original).

- ✓ “After naming some of the current destabilizing factors at work in the world today, Allen [Varney] [Austin TX] wrote, ‘this is no time for complacency.’ I admit that the idea had occurred to me that I might not die from fallout, and I did feel pretty good about that. The thought had been with me since I watched Civil Defense supplies being stockpiled in my high school during the Cuban Missile Crisis in 1962. With regards to gaming, my main thesis was that gamers who wanted realistic scenarios would have to forget about the Big

Nuke option. I did take pains to point out in my editorial that there were ‘lots of believable bad things left to come for our gaming enjoyment.’ I wasn’t very specific about what bad things there were, though. I wasn’t in the mood to think about them. In all that cheer, I missed a few things, like Iraq, and an Army buddy of mine is now in Saudi Arabia for the indefinite future. War has lost its ‘gaming enjoyment’ value for me. I certainly don’t feel complacent about anything, either. And nukes? They never went away, did they? Submarines still cruise the seas. Bombers still fly. ICBMs still sleep in their silos. At least six nations have atomic weapons, and every one of them has been at war within the last 45 years. Many other countries would love to have the Bomb. Iraq sure would. No reason the Bomb can’t hang around in games as well. I fooled myself, and I admit it. Sometimes you go with what you want rather than what’s actually there. I’ll avoid getting too wishful in my editorials in the future. Role-playing games are unrealistic and romantic. And that’s a blessing, isn’t it?” – Roger Moore, Editor, “Bye-bye, Complacency,” *Dragon Magazine* #165, January 1991.

<sup>4</sup> **Commentary:** One alleged quote attributed to David Hilbert reminded me of what seems to be the attitude of mathematicians; he is reported to have said, upon hearing that one of his students quit the mathematics program to study poetry: “Good, he did not have enough imagination to become a mathematician.” Some may take the statement as ironic humor, but it echoes what has seemed to me for a long time: To mathematicians (‘math people’) if you don’t get mathematics, then you are just one of the dumb people; the world is divided into mathematicians and the dumb masses. And I think that describes the attitude of my high school math teacher in whose class I spent 10<sup>th</sup>, 11<sup>th</sup>, and 12<sup>th</sup> grades (so he well knew I was lost and clueless when he was passing me to the next grade).

- ✓ Hilbert’s sentiments additionally express an attitude that is inappropriate for any teacher regardless of the subject; you should not be happy that someone has quit learning, quit your program – though I do know that several of my elementary school teachers were happy when I moved to a new school.
- ✓ “Mathematicians know that they are studying an objective reality. To an outsider, they seem to be engaged in an esoteric communion with themselves and a small clique of friends. How could we as mathematicians prove to a skeptical outsider that our theorems have meaning in the world outside our own fraternity? If such a person accepts our discipline, and goes through two or three years of graduate study in mathematics, he absorbs our way of thinking, and is no longer the critical outsider he once was. ... If the student is unable to absorb our way of thinking, we flunk him out, of course. If he gets through our obstacle course and then decides that our arguments are unclear or incorrect, we dismiss him as a crank, crackpot, or misfit. Of course, none of this proves that we are not correct in our self-perception that we have a reliable method for discovering objective truths. But we must pause to realize that, outside our coterie, much of what we do is incomprehensible. There is no way we could convince a self-confident skeptic that the things we are talking about make sense, let alone ‘exist’” – Philip J. David & Reuben Hersch, “The Ideal Mathematician.”

<sup>5</sup> **Commentary:** Not only didn’t I understand this, I didn’t even know to ask the question until much later in life; *this is a personal example of the Dunning-Kruger effect*. They assumed that I knew at 21 years what calculus was and what we were trying to achieve, therefore, it was never explained. Had a competent instructor given my difficulty any thought, he who barely spoke English might have asked questions and revealed my incompetencies to me, but I don’t think the instructor cared: either you got it or you didn’t and you were just wasting tuition money.

<sup>6</sup> **Commentary:** René Descartes was a polymath. He is more famous for his philosophical musings, but he contributed to both math and philosophy in original ways, evinced by the fact that he is still relevant today.

<sup>7</sup> **Commentary & Citation:** From the Lost Tribe’s (feral children’s) account of the crash of the Boeing 747 piloted by Captain Walker that flew them and their parents away from the nuclear apocalypse (or “Pox-eclipse” in the language of the children) and into the Outback.

<sup>8</sup> **Commentary:** My personal journey has possibly been from disdain for the world I live in to despite for being in this universe. Which is the precise distance from Thomas Covenant the Unbeliever to Lord Foul.

<sup>9</sup> **Citation:** e.g., Rascal Flatts, “Backwards” (2006), Ryan Arklin, “Country Backwards” (2014) – two songs with amazingly similar concepts – videos on YouTube. And there is the ultimate kiss-off classic ‘perfect country song,’ David Allen Coe, “You Never Even Called Me by My Name” (1975).

<sup>10</sup> **Citation:** “No plot emerges, no premeditation ... Let the emphasis repose on ignorance – an accident is safer to invoke than design.” – Sir Ronald Syme, quoted by C. L. Murison in “The Revolt of Saturninus in Upper Germany, A.D. 89,” *Echos du monde classique: Classical views*, Vol. 29 No. 1, 1985, p. 31-49 (found on Project Muse).

<sup>11</sup> **Citation:** From the Dungeons & Dragons cartoon (1983-1985) that I used to watch on Saturday morning in high school. The timing coincided generally with my early interest in the basic Dungeons & Dragons game.

---

*“My son, we are non-noble and proud of it. The non-noble is the man par excellence. It is he who pays the taxes, works, sows, harvests, trades, builds and manufactures. The right to be useless is a poor right indeed.”*

– By the father of writer Nicolas Restif de la Bretonne <sup>1</sup>

---

*“Gratitude is one of those things that cannot be bought. It must be born with men, or else all the obligations in the world will not create it.”*

– Edward Wood, 1<sup>st</sup> Earl of Halifax

---

**Arrears in Aristos:** “Aristocracy is that form of government in which education and discipline are qualifications for suffrage and office holding.” – Aristotle. Inherent in *aristos* is the vague, questionable, mythic concept that social superiority equates to moral and intellectual superiority.

There appears to be a link between the failure of *aristos* in the aristocracy and the print revolution: Deprived of their major advantage in education, critical thinking, over the masses by the wide availability of learning and the rising middle class, the only things left to the position of the aristocracy were their eroding wealth advantage and hereditary dynastic authority. That is, during the Middle Ages (as we call them) and, to a lesser extent, up to the Reformation period, the aristocracy was *aristos* by virtue of their position and educational advantages, but following 1500 A.D. both eroded very quickly into a hereditary, leisured – useless – upper class.

- ✓ George III of England was mocked by the late 18<sup>th</sup> century press because he was interested in mundane things like agriculture, astronomy, because he wanted to learn and to know on his own.

There is a distinct contrast between a person who has a sense of entitlement, especially of the unearned kind, and a person who has a sense of obligation (duty), especially to strangers and when not externally imposed. Just as there is a similarly distinct difference between a government that has a duty toward those it rules (i.e. *Nobless Oblige*) and those who feel that people have a duty to and serve the purpose of wealthy, elite, and powerful (i.e. *Noblesse n’oblige plus*), see 4 Movement, p. 869, *et seq., infra*, for further discussion of this issue in an interstellar setting.

The tug-of-war is so fundamental to our civilization that books and volumes could be – and probably have been – written. The two go hand-in-hand through history, we all have a daily part.

---

*“It is believed that when the Creator made the earth, he unknowingly released Despite upon it, and did not realize his error until it was too late. In actuality ... Lord Foul seems to have existed for as long as the Creator and is his antithesis as he marred one of the Creator’s creations which became known as The Wounded Rainbow and somehow became trapped in the Land when the Creator sealed the wound on the Rainbow which also trapped the Creators children on the Land creating the stars.”*

– from unbeliever.fandom.com wiki article, “Lord Foul”

\*\*\*

---

*“The Creator is the mysterious being who created the Land and the universe in which it exists. This universe is referred to as ‘the Land’ but is clearly a different reality than Covenant’s world. The fundamental structure of the universe, the Arch of Time, prevents the Creator from intervening directly in events in the world of his creation, and he never appears in physical form within that world. He can, however, manifest himself in the ‘real’ world – he appears to Covenant and Linden as an old man in an ochre robe – and guides those who attempt to make contact between the universes.”*

– from [unbeliever.fandom.com](http://unbeliever.fandom.com) wiki article, “Creator”<sup>2</sup>

**Acts of Intervention:** Each Intervention Potential equates (in most cases) to one Intervention act at a later time, a potential is subtracted each time an Intervention occurs. The following five types of Intervention Actions should provide the Concierge with the ✂s needed. It is possible that other types of interventions may be invented later as necessity dictates.

GGDM is a macrosocial simulation; because of this, the divergence of local interests and cultures on colony planets isolated and separated by light years is diminished and minimized in favor of a broad picture of the largescale civilization. This is one deficiency of the game where the intervention of a human Concierge can improve the game and keep it interesting.

- ✓ “People are always coming up with new theories of the novel. But the main rule is, hold my attention.” – Margaret Atwood, Master Class video trailer.
- ✓ At the bottom of *every* adventure story is a sense of *divine intervention*; unusual events need to happen, things have to appear in convenient places and times to special people (the protagonists) to move the story along. Fiction writers are gods.
- **Push:** The Concierge issues a Special Bulletin, the text of which is given to push the game in a particular direction. Generally, this Intervention is not targeted at a specific position (unless something otherwise indicates) and should be phrased in the most general and gentle terms. The positions on their next Regular Turns should follow the push as much as practicable. Hopefully, the Concierge and players can agree on the direction of the game.
- **Pull:** The Concierge issues a Special Bulletin detailing some pregame history which has an immediate effect on the game and/or position. In most cases a Pull Intervention will detail history relating to one position, however, it is equally possible to detail history belonging to no position in the game and have that history affect a position in the present (e.g., ripples).
- **Plot:** The Concierge issues a Special Bulletin introducing a plot device or plot element to the game. A plot device is generally defined as anything that moves the plot forward, frequently it is an important-seeming object, sometimes it is a red herring. This in turn implies that there is a plot or storyline planned for the game, or for some part of the game. The plot or storyline can be that of the Concierge alone or in agreement with the players; however, the actors – in this case, the players – make the story happen.
- **Poke:** The Concierge issues a Special Bulletin, stating some immediate concrete event and effect that occurs to a specific position in the game. The effects generally should be small and probably will mainly effect a specific physical item in the Galactic Space, but is not limited to such application. The Poke can have ripple effects on the next turns.

- ✓ The ‘Poke’ is the most direct Intervention act by the Concierge, it most resembles an adverse News Event. Special Bulletins, of any sort, are not subject to modification by the positions, as they would a regular News Event. Nor can they be blocked by a Maintenance Shield, see Hammer Thumb, 4 Order, p. 567, *infra*.
- **Prose:** The Concierge, using a Special Bulletin, expands upon something that happened recently in the game using his/her own knowledge, or maybe just makes something up that does not have an immediate effect. What is said may or may not be true, so this is one exception to the absolutely true rule, Prose actions do not need to be taken as absolutely true for game purposes. The Prose Action may also be used for humor. The Concierge should be careful not to publish details of positions that should be kept hidden from other players.
- **Punch in the Nose:** The eternal question of godhood and GMing, is to what extent should the Concierge act to ‘force’ volitional positions or players to play within the guidelines of their Fundamental Realities and Government Titles? Like a director watching an actor, guest, or speaker go off script and start ad-libbing terribly on stage before a live audience, what can the Concierge do if the players, or some players, don’t want to play their part? There is some room for differing interpretation. *What if some players want to force the game in a different direction or think the game is boring?* The tools given to the Concierge are not autocratic, though admittedly, sometimes in the GGDM text, the tone seems as if they are intended to be or may need to be – *all participants* must have equal standing to weave the crazy game story.
  - ✓ **Ancient One:** [angry] Demons can do just about anything except possibly think what might happen when they do just about anything! – BeastMaster (TV Series), “A Terrible Silence” (2001).

---

*“Christ reigns in such a way that the Emperor who persecutes Luther for the Pope is forced to destroy the Pope for Luther.” – Martin Luther, LW 49:169<sup>3</sup>*

---

**Rascal Reverend:** I have wondered about the story of Martin Luther helping the ladies escape from the convent (which included Katharina von Bora, his future wife) by hiding them in large empty barrels (do you think J.R.R. Tolkein copied this idea in *The Hobbit*?). How did it come about? And when did the authorities know of his involvement and what did they do? Did it play any part in later events, such as the Diet of Spires or the Diet of Augsburg?

- ✓ Anyway, it doesn’t seem from the stories I have read that he intended to marry Katharina von Bora (if you were thinking that was his motive, but few would blame him if that were the case), but rather, that was an *unintended consequence*. But it shows that Rev. Martin Luther had a rascally side when he was younger.

**Unintended Consequences:** GGDM participants should never underestimate the power of unintended consequences, which may be one of the Concierge’s most powerful tools. A historical example demonstrates one of the most profound effects on history.

Charles V, Holy Roman Emperor (and one of the most powerful men on the planet in his day<sup>4</sup>) was at war with the French in northern Italy. His mercenary armies were victorious, but unpaid and poorly supplied, in the spring of 1527. His armies marched on Rome, which they captured and sacked (loot, rape, burning and murder – in case the term needed any clarification) on May

6, 1527, also capturing and sacking several other towns along the way. The Habsburg commander, Charles III, Duke of Bourbon, was killed in the attack and the subordinate commanders lost control of the troops as they rampaged through Rome.

- ✓ Charles III, Duke of Bourbon, had what we would call ‘street cred’ with the mercenary forces he commanded – he was wanted for treason by the King of France, Francis I, with whom he had a very personal and familial dispute. In addition to being a capable military commander, with experience and fame, he was also an outlaw, a dispossessed titled noble, and a soldier of fortune, and was able to keep his army disciplined with his personality, gravitas and prestige. When he died attacking the walls of Rome, there was nothing left to restrain his men. His death probably led to unintended consequences, otherwise, you would have to argue that what happened in Rome is what Charles III intended. It seems he intended extortion after capturing Rome, but probably not a massacre, disease, burning, or looting of the Vatican (but that might have happened anyway).

This is the date of the famed stand of the tiny Swiss Guard within the Vatican, against overwhelming odds; the Guard was nearly annihilated buying time for the Pope to escape. As a result of which, the Swiss Guard became a symbol of a sort of eternal honor based on loyalty, duty, dedication, courage and sacrifice. This is consistent with generally, the Christian worldview.

- ✓ The little known Stand of the Swiss Guard is the subject of Sabaton’s excellent song, “The Last Stand” (available on YouTube). The historical problem is that while the Swiss Guard’s virtue was immortalized, the events and damage to the Church’s legitimacy were not something the Church wanted reminded of, but you can’t have it both ways; to talk about the Stand of the Guard brings forth the facts they wish to sideline.

Ninety percent of the population of Rome either was killed or fled in the course of eight months, Rome and the Vatican suffered immense and unrecoverable cultural damage, the city’s economy was destroyed, and disease ran rampant. The Pope was forced to pay a huge ransom, melting down gold artifacts and works of art to meet the demand. The Habsburg armies finally withdrew in February 1528, leaving a shattered city. Only the Vatican Library survived mostly unharmed, being used as a headquarters for the occupying army.

Following the Sack of Rome, the temporal power of the Papacy was effectively broken and bankrupt. Because of the fear of another such occupation by the Habsburg forces, the Pope was unable to restrain Charles V from dealing harshly with the Lutheran (Protestant) princes in Germany (the German Peasant’s War, the first ‘Protestant uprising,’ occurred in 1524-1525) and with the burgeoning Reformation movement. Additionally, the threat may have also convinced the Pope to refuse to annul the marriage of Henry VIII of England and Catherine of Aragon, who was Charles V’s aunt, resulting in the English break from the Roman Catholic Church and the subsequent English Protestant Reformation.

- ✓ King Henry’s envoy bearing the petition arrived in Rome in 1527, and would have been an eye witness to the Habsburg occupation. In 1529, the Pope forbade annulment without Papal approval.
- ✓ While some may dispute the sequence and facts presented here, please accept them as true for the sake of the discussion of unintended consequences. Certainly, Martin Luther recognized the oddity of the situation (*ut supra*).

A tricky thing to work,<sup>5</sup> unintended consequences are by definition a rue in hindsight, meaning that to make them work in the story, participants must place themselves slightly in the future to anticipate the consequences unforeseen by the initial actor.<sup>6</sup> Fiction authors and historians can always do this easily;<sup>7</sup> it may take some practice to master, however, for group storytelling.

- ✓ “... it is rare for a series creator to envision how the series will develop over time. Furthermore, the creative process in dramatic television writing tends to be organic, as events in the series will unfold based on the events that preceded it. For example, were the wars with the Klingons and the Dominion on Deep Space Nine foreseen by its creators back in the first season? Of course not ... these events developed over time through the input of its writing staff.” – Anthony Leong, “Babylon 5: Triumph and Tragedy in Three Acts,” *Frontier: the Australian Science-Fiction Media Magazine*, April/June 1999 (article is available free online).

Thus, although there is a series creator, executives, directors, producers who hold the IP rights, purse-strings, and all final authority over the series, a television series with or that develops a story arc is still a group storytelling exercise in some sense through the input of the writers who create the scripts and the actors who bring the characters to life and argue for their characters.

- ✓ Emergent and group storytelling was discussed in *White Gold Wielder*, 2 Dreamtime, p. 153, *supra*.
  - ✓ See also Prophecy discussion, 2 *Wheels in the Sky* generally, *infra*.
- Hot Dog Conspiracies: After-the-fact conspiracies mistake unintended consequences for the intended consequences of the conspirators. The sign of an after-the-fact conspiracy theory is when the alleged intent of the conspirators matches exactly (or almost), the known end result of the completed conspiratorial acts. For this to happen, everything has to work exactly as planned, with no unexpected asides, obstacles or unintended consequences, with no unaccounted for facts or actors; the alleged conspiracy executed with extraordinary luck and skill.

This is true of the Russian conspiratorial claims about Mr. Browder, the post-9/11 conspiracy theories, and even to some extent, the illegal voting claims from the 2016 presidential election. The more steps and actors required, the more farfetched and amateurish the after-the-fact conspiracy theory appears (compare this to inchoate conspiracies, where the end result is obviously not known and may never happen). The problem with this, of course, is always *that you can never say it is impossible* that everything worked exactly, that the end result was exactly as intended regardless, or even that the conspiracy theorist might be correct, but for the wrong reasons, e.g., mistaking unintended consequences for the intended consequences.

- ✓ A pack of hot dogs has eight, a pack of buns has eight too. There is a conspiracy of hotdog makers and hotdog bun makers to make you buy a pack of each!☺

---

*“The manuscripts I have to look over are full of the doodles of bored monks, like battle-armed knights dueling snails or monkeys using chamberpots, or their distinctly unholy complaints, like the monk who appended ‘Now I’ve written the whole thing: for Christ’s sake, get me a drink’ to the end of his manuscript. Would that their comments on performance techniques in Cycle Plays were so strikingly vivid.”*

– Jay Eckard, “Drama PhD Students Delve into Medieval Manuscript Pages in UW Special Collections,” *University of Washington, School of Drama*, April 5, 2016

---

**Torn Pages:** My economically depressed, beleaguered home city (following the lead of several larger cities in the U.S.) decided to reinvigorate the local economy by building a convention center in a large empty lot next to the beltway (that had destroyed center city by allowing traffic to bypass the city in 3 minutes) for easy access. However, they could not compete with the larger, better-known cities and there were not sufficient quality hotels, dining, and other amenities in walking distance to support the convention business (it's a chicken or the egg first question, planners expected these to develop with the convention center) and the convention center folded in a few years leaving a huge, mostly new, large, empty building with a large parking lot.

Someone eventually broached the idea of turning it into a roller skating rink, it seemed like a wonderful idea as the only local rink had closed years before in the early 1980s.<sup>8</sup> So they made it into a roller skating rink and it seemed to work well with the local youth, except that it became the center of the illegal drug trade, was raided by authorities several times, and the city was forced to close it down after about two years as a public nuisance (that they created). Last I knew, the big empty building with the big empty parking lot had finally been converted to a large chain grocery store that seemed to be doing well enough; center city, populated by few residents who are not in the county jail, had not had a large grocery store in at least 50 years.

- ✓ Drug dealers are like cockroaches and mice, they seem to just spread into wherever they can go and take over, any place where people congregate for any purpose, destroying the value of whatever place they plague, trading our society and legacy to pocket easy cash now (and adding nothing of value to civilization);<sup>9</sup> because of them, generations of youth are deprived of places and experiences that their parents enjoyed. People have not fully realized the widespread corrosion caused by illegal recreational drug use and drug dealers; just as a small example, public restrooms in center city Pittsburgh are no longer available because an ordinance was passed to prevent drug dealers from using public restrooms as their place of business (if your office is the public restroom, what line of business are you in?). Because of people who take advantage of the former friendliness and openness of our culture, our culture has become much less friendly and open over the last 40 years. What effect will this have on the future? When everything is closed, isolated, everyone viewed with suspicion?
  - “I’m from Sydney yes. I live there now, yeah. Sydney’s a good city actually; it’s a very easy city to live in, a very hedonistic city in the sense that it’s full of sun and plenty of beaches and yet it’s small enough. It’s not like L.A. or somewhere that’s too spread out, it’s very small. And that’s where the film industry tends to be concentrated. Only one big bad problem with Sydney, we’ve had a succession of corrupt state governments almost since the early convict era, I think, and unfortunately during the sixties they let in organised crime, so Sydney is also the gateway to organised crime in Australia. Heroin and everything are ridiculous there. *Really I mean it has noticeably affected society.*” – George Miller as quoted by Anne Billson, “George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview,” previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015 (emphasis added).
  - “[Aaron] Shamo called himself a ‘white-collar drug dealer,’ drew in co-workers from his time at eBay and peppered his messages to them with smiley-face emojis. His attorney called him a fool; *his primary defense*

*was that he isn't smart enough to be a kingpin.* ... For traffickers, the profit margins are irresistible: The DEA estimates a kilogram of fentanyl synthesized for a few thousand dollars could make a dealer more than \$1 million. 'Any moron can basically become a major drug kingpin by dealing in fentanyl,' said [Mike] Vigil [former chief of international operations for the Drug Enforcement Administration]. 'You can have somebody with an IQ minus 100 who becomes an overnight multimillionaire.' ... The story they told convinced the jury to convict Shamo of 12 counts, including continuing criminal enterprise, the so-called 'kingpin charge' that is typically reserved for drug lords like El Chapo and carries a mandatory life sentence. The jury deadlocked, though, on the 13<sup>th</sup> count: the death of [Ruslan] Klyuev." – Claire Galofaro and Lindsay Whitehurst, "The rise and fall of an Eagle Scout's deadly fentanyl empire," Associated Press, September 15, 2019 (emphasis added, *what a fun defense!*).

- ✓ I recall an outcry over a page that was torn from a medieval manuscript in a special collections library by a German Ph.D. student who had a drug addiction problem. Sadly, that young scholar's future was probably destroyed by the act. This is offered here in relation to the unseen damage of illegal drug use, but the process has been ongoing for a very long time: Thousands of individual pages of manuscripts are available for sale and in collections, having been torn out of their original volumes by looters, thieves, or by owners, or by second-rate scholars, who needed quick cash to support hedonistic needs (feature quote, *ut supra*). There is of course, a black market. Occasionally, the destruction of manuscripts and illegal sales makes the news cycle, e.g., William H. Honan, "Teacher Tied to Stolen Manuscript Pages Faced Prior Ethics Questions, Colleagues Say," New York Times (archives), May 30, 1995 (available free online), regarding a U.S. university professor.

## Endnotes.

<sup>1</sup> Citation & Commentary: Cited in Crisis, Absolutism, Revolution: Europe 1648-1789 (2<sup>nd</sup> Ed., 1992), p. 226 by Raymond Birn. The 18<sup>th</sup> and 19<sup>th</sup> Century European nobility's "right to be useless," is an example of slow and insidious deterioration from within due to stratified economic and social inequities. Many works in or about the period (e.g., Horatio Hornblower and Barry Lyndon) explore the arrogant, self-entitled attitudes of European nobility.

<sup>2</sup> Commentary & Citation: These wiki entries refer to Stephen R. Donaldson's Chronicles of Thomas Covenant the Unbeliever; Linden appears in the Second Chronicles.

<sup>3</sup> Commentary: Regarding the Habsburg sack of Rome in 1527.

<sup>4</sup> Commentary: Upon Charles V's prominent Habsburg jaw (a result of extensive pedigree collapse) rested the nexus and zenith of European dynastic power and the Holy Roman Empire. He did much to push both toward their eventual sunset centuries later. By 1683, after the Thirty Years War left Germany in shambles and the Holy Roman

Empire battered, Vienna was saved from the last Ottoman invasion only by the intervention and brilliant leadership of the Polish king, John III Sobieski. Afterward, the sun set on the prospects of all of the Vienna combatants.

<sup>5</sup> Citation: “WhatsApp’s Oct. 29 message to users warned journalists, activists and government officials that their phones had been compromised, Facebook said. But it also had the unintended consequence of potentially jeopardizing multiple national-security investigations in Western Europe about which Facebook hadn’t been alerted – and about which government agencies can’t formally complain, given their secret nature.” – Dov Lieber, Valentina Pop, Robert McMillan, “Police Tracked a Terror Suspect – Until His Phone Went Dark After a Facebook Warning,” *The Wall Street Journal*, January 2, 2020.

- ✓ “At that time, I warned about the deadly, so called, unintended consequences of a unilateral invasion. Today, 17 years later, that fear has unfortunately turned out to be a truth.” – Sen. Bernie Sanders speech, January 3, 2020.
- ✓ “I hope the administration, I pray the administration, has thought through the second and third order consequences of what they have chosen.” – Joe Biden speech, January 3, 2020.
- ✓ Unintended Consequences: U.S. Navy shoot down of Iran Air Flight 655 in the Persian Gulf, Russian shoot down of Malaysia Airlines Flight 17 in Ukraine, Iranian shoot down of Ukraine International Airlines Flight 752 near Tehran, all by surface air defense systems, not air-to-air (unlike Korean Airlines Flight 007).

<sup>6</sup> Commentary: Rhetorical Question: What is the difference between unintended consequences and emergent behavior?

<sup>7</sup> Citation & Commentary: “As it is popularly known, Straczynski went into ‘Babylon 5’ with a ‘five-year plan’ that he originally conceived in 1986, an ambitious blueprint that outlined the events of every episode right up until the series finale. In addition to providing a roadmap for the development of the series, this five-year plan ensured a level of consistency unparalleled in dramatic television, which allowed Straczynski to use literary devices such as foreshadowing and allusion to great effect during the course of the series. This was exemplified by the various dream sequences and flash-forwards that sometimes took up to three seasons for their significance to be revealed. This, of course, rewarded loyal viewers who tuned in week after week, and required the audience to take on a more active role while watching the series, analyzing and interpreting each plot point and line of dialogue in the context of the overall story.” – Anthony Leong, “Babylon 5: Triumph and Tragedy in Three Acts,” *Frontier: the Australian Science-Fiction Media Magazine*, April/June 1999 (article is available free online).

<sup>8</sup> Commentary: The old roller rink was turned into a dirty, junk-filled warehouse for a moving and storage company at which I worked as a temp for a few memorable days in 1997.

<sup>9</sup> Citation: “Despite his celebrity, sources say [David] Ortiz seems to have invited trouble in his home country. One Dominican source called the neighborhood around Dial Bar & Lounge ‘not a safe area’ and described the bars in that part of the city as ‘well-known for being full of people with unjustified money, new rich guys with attitude and unjust wealth, driving Lamborghinis and Rolls-Royces. You don’t have to be a genius to figure out how (they have the money). David [Ortiz] has a terrace (in his home) with a better view than the one he was at. It’s unconscionable what happened.’ ‘Everything is fishy in the D.R.,’ [Dominican Republic] adds the Cuban-born Dominguez, who spent six years investigating corruption in baseball as a DOI member and lived on the island off and on during that period. ‘What you see is not what you get. Everything is Three-card Monte.’” – Teri Thompson and Christian Red, “A drug lord, a car chase and more: New details make Ortiz shooting more complicated,” *Daily News*, June 16, 2019.

<sup>10</sup> Commentary: The weather man can tell us about patterns, how storms move, why it rains. But he cannot tell us why it rains every evening when it’s time to walk home from work, or why it seems that it rains any morning when you have a bunch of stuff to carry to work. It’s 4:30 p.m., sunny, at 5:00 p.m. when you leave the office, it’s overcast, by 5:30 p.m., it’s storming. Why? No one can explain why, a hundred times a day, a simple task turns into an extended annoyance, three times more difficult than it should have been. This is the human question to the universe. This is why all of our science and empirical knowledge is unsatisfying in the long run of our lives.

*See Appendix IP – Interventions Reference Sheet*

*“When you admire the sunset, does it admire you back?”*  
– Riversong, Dr. Who, “The Husbands of Riversong” (2015)

*“All love is unrequited”*<sup>1</sup> – Lennier, Babylon 5, “Rising Star” (1997)

**Sure as Hell:** There are so many stupid, unnecessary things that happen every day in our daily lives, and it ‘*sure as hell*’ (idiom) isn’t for our benefit or enlightenment (hell is apparently a rather sure place, the only sure place in humanity’s universe). The concepts of some god guiding us to wisdom through events and tragedies in our lives are just outdated, worn out mythopoeic explanations. And what is this stupid thing exactly? It is that jackass, asinine event which, if it didn’t happen every time or nearly every time, you might think is really random, coincidental or just bad luck. Except that it happens or something idiotic happens, every time.

- ✓ Need an example do ya? You don’t know what I am talking about? Are you alive? Ok, I was just giving the cat his pill; the doctor said he has to take two of these pills (alpha blockers) per day for seven days. While giving the cat his pill, I set the bottle down and it fell over and went flying off the desk. All the tiny pills fell out, I only found one of the remaining four pills. Why did that have to happen? I was doing what I was supposed to do, caring for my cat. Yet, the stupid thing had to happen. Like being punished for doing what I am supposed to do, for doing anything at all, for living, for even getting up in the morning. You get punished by the universe for doing nothing at all too. Do you actually think this is random? Coincidence? How about if it happens every time? Like gravity.
  - Sometimes I feel like the character George Bergeron (Kurt Vonnegut, “Harrison Bergeron” (1961)).

- ✓ In July 2019, Pittsburgh Pirates closer Felipe Vázquez (né Rivero) was a sought after trade as the July 31<sup>st</sup> deadline loomed. He is considered one of the best closing pitchers in the MLB. Pirates fans were relieved when he wasn’t traded, being one of the few bright spots on the team that performed dismally after the All-Star Break; no team offered a trade that tempted the Pirates management to trade away an elite pitching anchor for next year’s team. In early September, he got into a locker room altercation with another pitcher which the broadcasters dismissed as typical end-of-the-season wear of seeing-the-same-guys-everyday; the participants were disciplined by the organization.

On September 18, 2019, Felipe Vázquez was arrested by Pennsylvania State Troopers on felony charges issued in Florida and Pennsylvania; and his locker had been cleaned out by that afternoon, all signs and promotional materials with his name or image removed from PNC Park. He instantly became a non-person, like many ex-Soviet dictators, no ‘innocent until proven guilty’ sentiments. During the game on September 18<sup>th</sup>, he was across the river incarcerated in the Allegheny County Jail, his bail denied by the Judge. On this date many teams were glad they hadn’t traded for him, while the Pirates’ *seemingly prudent no-trade decision* turned suddenly into a major headache.

- In the short term... As it turned out, the Pirates didn't need a closer anyway. From September 13 to September 22, 2019, the Pirates were clobbered by the Cubs in three games at Wrigley Field, then swept in three game sets by the Marlins and the Brewers, losing nine straight games, never needing a closer because most losses weren't close. When the Pirates finally won one over the Cubs on September 24, 2019 (the day before Vasquez arraignment), the score was equally lopsided and they didn't need a closer.

---

*“And we have a saying that today's tyrant is yesterday's hero. And if you really look at the rhythm of the way things are, that's often the case. You have political heroes, for instance... but if you go back to the classical sense, the definition of a hero, as far as we can decide, is that they're the agents of evolution. They are the characters by which the world changes to a new order, usually for the better. They are the agents of evolution.*

*And they're simply that. If they create a new order, and they love that world too much, then they become what you might-call holdfast. (This is all this stuff from Joseph Campbell who I think is by far the best writer on mythology.) They become holdfast, they love their world too much, and they want to hold on, and they won't allow the next, natural evolution, natural change, to happen. [The world] becomes brittle and is doomed to change.*

*That's what we wanted with Tina Turner; we wanted to have the sense that before she built Bartertown, she was a genuine hero. You could have told a story, almost like a Mad Max story, about her. But now, because she's holdfast...*

*... Yeah, you want to keep the same thing going. We do it in families, we do it in political institutions, we do it in corporate institutions, we do in political ideologies – look at Russia, the heroes of the Revolution; it didn't take long before they became the tyrants of Stalin. You look at tribes, at herds of buffalo, you look at anything; it seems to be a very simple rhythm in nature.”*

– George Miller as quoted by Anne Billson, “George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview,” previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015

---

**Entropy is not Unforeseen; Unforeseeable:** Our ability to discuss entropy here abstractly as a concept and in historical hindsight implies that we may, can and do predict occurrences of entropy in fairly specific detail. With enough history and experience, one can predict or foresee that any action in a complex system will generate unintended consequences. That much is certain, but it is not the same as predicting what those consequences might be – new cottage industries arise, new forms of crime are devised, people leave or come in droves, demands might suddenly spike, new unforeseen inventions and innovations occur, processes slow or speed.

- ✓ “The different modes which nature takes to prevent or repress a redundant population do not appear, indeed, to us so certain and regular, but though we cannot always predict the mode we may with certainty predict the fact.” – Thomas Malthus, An Essay on the Principle of Population (1798).

While some events do appear to occur ‘out of the blue’ – for example, how could the Romans have predicted the displacement of the Huns from the northern borders of China? – most disruptions occur within the system (see 1 Expansion, p. 880, *infra*, for additional discussion of the

Hunnian migration). In game terms, then, players should expect most entropy to originate within the game with occasional incursions from the universe beyond the Galactic Space of the game.

- ✓ “While the late seventeenth century Europeans in India faced a declining empire, those who penetrated China found one on the ascendancy. In 1644, the Ming dynasty had succumbed to a recently formed confederation of invading northern tribes, the Manchus.... in 1662, the year following Louis XIV’s accession to absolute rule in France, an eight year old Manchu prince, Kangxi...became emperor of China. His impact on eastern Asia proved at least as great as the Sun King’s on Western Europe. During his sixty year reign, Kangxi...successfully wooed Chinese intellectuals through his respect for Confucian principles. Like Louis XIV, he subsidized classical forms of literature and learning....

Under Kangxi, Manchu China entered its golden age.... The Chinese peasantry probably welcomed the new regime. Out of the social turmoil of the 1640s emerged free tenancies and even independent peasant ownership.... He was sincerely interested in both Buddhism and Christianity and took European Jesuits as advisers. It was this tolerant, cultivated side of the emperor that captured the imagination of eighteenth-century Europe, which envisioned him as the archetypal Oriental sage, a philosopher king.” – Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648 to 1789 (2<sup>nd</sup> Ed., 1992), pp. 162-163.

- Historical Accident: Prof. Joseph Tainter uses the term “historical accident” to describe the event that tips a complex civilization toward collapse; the event(s) that the system cannot handle. Merriam-Webster’s online dictionary’s definition at *accident* includes the words “unforeseen,” “unplanned,” “unexpected,” “uncontrolled,” “unfortunate,” and “lack of intention or necessity,” but the word “unforeseeable” does not appear anywhere in the definition, and that is no accident! Foreseeability is at once both a function of information processing and conscious will; we all know those who won’t (refuse to) see no matter what happened in the past or what is presented. Most historical accidents were foreseeable, even if only as speculative fiction; suppose that some speculative mind in ancient Knossos had tried to imagine the ways in which Knossos might end, understanding that nothing lasts forever? He would have been executed for sedition or sold into slavery in a distant land.
  - ✓ Pierre Curie (husband and Nobel Prize partner of Marie Curie) was killed in 1906 when he slipped and fell under a wagon while crossing a street. We tend, when we think about it, to assume traffic accidents are a phenomenon of automobiles, population and alcohol. Maybe we think there weren’t many accidents with horse-drawn wagons because horses are more intelligent than cars? Katharina von Bora, the widow of Martin Luther, was injured in a cart accident at Torgau, Saxony in a traffic jam at the city gates in 1552 and eventually succumbed to her injuries three months later. If this thinking is correct, to avoid auto accidents, cars must be made more intelligent than horses (and humans) and there would still be accidents because human pedestrians would be (are) less intelligent than cars!
- Standing on the Tracks: There are three ‘freight trains coming down the track’ – three events which at this time appear to be certain to happen in the next century: 1) Significant climate change from Global Warming (including rising oceans), 2) The Singularity and 3) Outbreaks of drug resistant or immune epidemics.<sup>2</sup> Any combination of these three added to and exacerbating existing problems, plus unforeseen collusions,<sup>3</sup> will likely be catastrophic to global

civilization. We may not recognize the world of our grandchildren or even our great-grandchildren. The doom of humanity is probably not from alien invasion or a meteor strike. If you get hit by a train, it was because you were standing on the tracks.<sup>4</sup>

- ✓ “We had so much time to understand.” – Xandria, “Nightfall” (2014).

---

*“He knows changes aren’t permanent  
But Change is”*

– Rush, “Tom Sawyer” (1981)<sup>5</sup>

---

**Echo Chamber:** The typical current use of “echo chamber” is somewhat derogatory (as a form of bias), as in “right wing” (or “alt-right”) and “left wing” (or “alt-left”) echo chambers.

- ✓ Example of the current use of “echo chamber.” I read an article by a conservative political columnist that was published in a regular media outlet. The article made some dubious conspiratorial assertions in the beginning, offered little evidence, and after a minute, I realized from the undertone of the article, that the writer of the article is probably one of those people who gleefully refers to liberals as “snowflakes” and therefore the assertions required no factual evidence because they were already accepted by the target audience and only needed to be recited (sort of like Biblical text). The writer was making assertions, but the tone of the article clearly suggested that it was written for the echo-chamber and that the writer was convinced of his own argument and only marginally interested in convincing anyone else. As we have recently become so aware, the social cost of the echo chamber is a breakdown of discourse that can be summed up by the old phrase, ‘you are preaching to the choir.’

While it is possible that groups of participants in this game might develop to reflect the current meaning of those terms, the term “echo chamber” as used within GGDM is intended to reflect how current real world events and circumstances (current or historical) might – intentionally or not – become part of the game or are reflected in the game narrative, actions of positions, and Interventions by the Concierge. That is, because of the scope and subject matter possible in GGDM as a literary sandbox macrosocial simulation, GGDM could and will likely become an ‘echo chamber’ of the real world of the participants. This is a similar process seen in fiction and ‘ripped-from-the-headlines’ legal drama television shows.

- ✓ To what extent do the extensive quotes throughout GGDM serve the same purpose as the current political use of the term *echo chamber*? Do extensive supporting quotes throughout the work – in the manner in which I have used them – serve to reinforce the author’s arguments while filtering out unfavorable information and other arguments – create or demonstrate cognitive bias? See Alison Griswold quote regarding Facebook filter bubbles, top of 3 Dreamtime, p. 158, *infra*, and Bob Moser quote about extremist information filtering, 1 Information, bottom of p. 1334, *infra*. What have I now just done? To what extent is a school or college paper filled with quotes – which is intended to demonstrate that the student has read and done appropriate research on the subject – simply a mechanism for enforcing the current paradigm on the next generation or a positive feedback loop to what the instructor already believes is true, playing back ideas they already find familiar and comfortable (see Andrew Oswald peer review quote, top of 2 Fallen to Earth, p. 1510, *infra*). ***Just did it again!***

- Human Drift-course: There is room within the powers and imaginations of the Concierge to introduce into the game all manner of subcultures:

### Frontier Drift

“Competition between random genetic drift and natural selection play a central role in evolution: Whereas non-beneficial mutations often prevail in small populations by chance, mutations that sweep through large populations typically confer a selective advantage. Here, however, we observe chance effects during range expansions that dramatically alter the gene pool even in large microbial populations. ...

The observations presented here strongly suggest that enhanced genetic drift at expanding frontiers can dramatically alter the genetic makeup of large microbial populations. ... More generally, our experiments demonstrate that mutations at expanding frontiers can sweep through a population without any selective advantage. This observation supports theoretical arguments and genetic evidence that common alleles in a population might not necessarily reflect positive selection but, instead, recent range expansions, which have probably occurred in many species.” – Oskar Hallatschek, Pascal Hersen, Sharad Ramanathan, and David R. Nelson, “Genetic drift at expanding frontiers promotes gene segregation,” PNAS, December 11, 2007 (available free online).

### Language Drift

A good example is Afrikaans, a Dutch language spoken in South Africa that, with over four hundred years of separation, shows significant divergence from the mother tongue. It is still mutually intelligible (if somewhat difficult) with spoken Dutch, but many of its forms are either archaic or odd to native Dutch speakers.

Another example is the Great Vowel Shift.<sup>6</sup>

### Spatial Injustice

“The normal workings of an urban system, the everyday activities of urban functioning, is a primary source of inequality and injustice in that the accumulation of locational decisions in a capitalist economy tends to lead to the redistribution of real income in favor of the rich over the poor. This redistributive injustice is aggravated further by racism, patriarchy, heterosexual bias, and many other forms of spatial and locational discrimination.

### Cultural Drift

“This revolution made cosmos out of chaos. Here, in the sixth century B.C., a new idea developed, one of the great ideas of the human species. It was argued that the universe was knowable. Why? Because it was ordered. Because there are regularities in nature which permitted secrets to be uncovered. Nature was not entirely unpredictable. There were rules which even she had to obey.

This ordered and admirable character of the universe was called cosmos. And it was set in stark contradiction to the idea of chaos. This was the first conflict of which we know between science and mysticism, between nature and the gods. But why here? Why in these remote islands and inlets of the eastern Mediterranean? Why not in the great cities of India or Egypt, Babylon, China, Mesoamerica? Because they were all at the center of old empires. They were set in their ways, hostile to new ideas. But here in Ionia were a multitude of newly colonized islands and city-states. Isolation, even if incomplete, promotes diversity. No single concentration of power could enforce conformity. Free inquiry became possible. They were beyond the frontiers of the empires.” – Carl Sagan, *Cosmos*, Episode 7.

### Oligarchic Drift

“We will continue doing everything that we can to oppose the drift which currently exists toward an oligarchic form of society, where a handful of billionaires exercise enormous power over our political, economic and media life.” – Sen. Bernie Sanders, July 4, 2016, at the White House.

### Economic Inequalities

“An imbalance between rich and poor is the oldest and most fatal ailment of all republics” – Plutarch.

“Still, whether the numbers are strictly accurate, there are clearly immense wealth and income inequalities in the world. As a global population, we are wasting human resources, allowing suffering, and expecting large portions of the population to underwrite the lifestyles of a far wealthier minority.” – Erik Sherman, “Simple Redistribution from

Note again that these processes can operate without rigid forms of spatial segregation.” – Edward Soja, “The City and Spatial Justice,” JSSJ, January 2009.<sup>7</sup>

### Political Drift

“Every so often—perhaps once or twice in a century – ideas move the unmovable. The weight of information and experience becomes so overwhelming that entrenched ways of doing things give way. Paradigms shift. Patterns of thought change and align with a new reality. In Eastern Europe, a political philosophy that shaped an empire evaporated almost overnight and brought down a dozen regimes with it.” – “Political Drift or Paradigm Shift?” A Mackinac Center for Public Policy Report, November 1994.

“Bureaucratic drift in American political science is a theory that seeks to explain the tendency for bureaucratic agencies to create policy that deviates from the original mandate. The difference between a bureaucracy’s enactment of a law and the legislature’s intent is called bureaucratic drift. Legislation is produced by elected officials, but is implemented by unelected bureaucrats, who sometimes act under their own preferences or interests. Bureaucratic drift is often treated as a principal-agent problem, with the House, Senate and Presidency acting as principals and bureaucracy acting as the agent. The government seeks to control bureaucratic drift in a number of ways, most notably congressional oversight and procedural controls.” – from Wikipedia article, “Bureaucratic drift,” August 26, 2019.

- ✓ Think this quote is in the wrong spot? Read it again.

the Wealthiest Won’t Fix Income Inequality,” Forbes Magazine, January 16, 2017<sup>8</sup>

### Bureaucratic Drift

“The Peter principle states that a person who is competent at their job will earn promotion to a more senior position which requires different skills. If the promoted person lacks the skills required for their new role, then they will be incompetent at their new level, and so they will not be promoted again. But if they are competent at their new role, then they will be promoted again, and they will continue to be promoted until they eventually reach a level at which they are incompetent. Being incompetent, they do not qualify to be promoted again, and so remain stuck at that final level for the rest of their career (termed ‘Final Placement’ or ‘Peter’s Plateau’). This outcome is inevitable, given enough time and assuming that there are enough positions in the hierarchy to which competent employees may be promoted.

The ‘Peter Principle’ is therefore expressed as: ‘In a hierarchy every employee tends to rise to his level of incompetence.’ This leads to Peter’s Corollary: ‘In time, every post tends to be occupied by an employee who is incompetent to carry out its duties.’” – from Wikipedia article, “Peter principle,” August 1, 2019.<sup>9</sup>

“Parkinson’s law is the adage that ‘work expands so as to fill the time available for its completion.’ It is sometimes applied to the growth of bureaucracy in an organization. ... Much of the essay is dedicated to a summary of purportedly scientific observations supporting the law, such as the increase in the number of employees at the Colonial Office while the British Empire declined (he shows that it had its greatest number of staff when it was folded into the Foreign Office because of a lack of colonies to administer). He explains this growth by two forces: (1) ‘An official wants to multiply subordinates, not rivals’ and (2) ‘Officials make work for each other.’ He notes that the number employed in a bureaucracy rose by 5-7% per year ‘irrespective of any variation in the amount of work (if any) to be done.’” – from Wikipedia article, “Parkinson’s Law,” August 1, 2019.

GGDM is designed to simulate civilizations and historical process at a generally macro-level, and without such Interventions by the Concierge at least, or even with a little cooperation from the players or among the players, GGDM's civilizations might seem rather mechanical, bland and banal. It is thus the task of the Concierge to understand generally the narrative and dynamics of the game, and to not be afraid to toss in the monkey wrench (e.g., Joan of Arc, Hong Xiuquan, Marisa Coulter) at opportune and dramatic times and locations during the game; the Concierge needs to not only be thinking with the game, but also, ahead of the game.

- ✓ People who subscribe to some conspiracy theories such as the ‘white genocide conspiracy theory’ are confusing historical process with conspiracy, or trying to use wide-ranging, far flung conspiracy to explain a historical process they dislike: Rage and alienation looking for a target. There are historical processes going all the time, it is quite likely that globalization (which is what they really dislike, paradoxically enough because the Europeans caused it) has set in motion some multi-century process of genetic and cultural homogenization of humanity. But unless you believe that there was some alien or divine intervention to cause the Great Migration and the collapse of the Roman Empire, there is no conspiracy; no one to target or blame.

---

*Katie: Time is never a problem on the God level. Or space. Whatever needed to deceive you was provided. But no more than that. That is the conservative principle in art at the God level. While I can't do it, not being at that level, I have seen a lot of it done. A skillful Artist in shapes and appearances does no more than necessary to create His effect.*

\*\*\*

*Lucifer: Listen carefully. I am about to take you in to see – no, for you to be seen by – an Entity who is to me, and to my brother, your god, Yahweh, as Yahweh is to you. Understand me? ... To this Entity your lord god Jehovah is equivalent to a child building sand castles at a beach, then destroying them in childish tantrums. To Him, I am a child, too. I look up to Him as you look up to your triple deity – father, son, and holy ghost. I don't worship this Entity as God; He does not demand, does not expect, does not want, that sort of bootlicking. Yahweh may be the only god who ever thought up that curious vice – at least I do not know of another planet or place in any universe where god-worship is practiced. But I am young and not much traveled.*

– Robert Heinlein, *Job: A Comedy of Justice* (1984)

---

**Cosmic Impracticality:** In 2014, William Gadoury, a teenager from Quebec, won the school science prize for his project that showed that Mayan cities, settlements and constructions aligned with the star patterns of known Mayan constellations. He even discovered a possible previously unknown city based on a missing star from one of the constellations.

- ✓ “‘The Mayans were extremely good builders, but they often built in places that made little practical sense – far from rivers, far from fertile areas. It seemed strange for a civilization that was so intelligent,’ he told the Canadian Broadcasting System.” – Mary Bowman, “Canadian teen may have discovered ancient Mayan city,” USA Today, May 11, 2016.<sup>10</sup>

The Mayans apparently had significant impracticality built into their civilization. Impracticality among humans individually, and in human civilizations, is a result of a perception of abundance and wealth without apparent end or responsibility. In most civilizations, it is the wealthy who engage in the most impractical behaviors as a matter of status, to flaunt their wealth for political purposes and to demonstrate to the masses the wealth gap (as part of their status).<sup>11</sup> This exists in all civilizations, in all times, the level of pure impracticality in every civilization corresponds to that civilization's concept of its own wealth and place in the world.

- ✓ Merriam-Webster online dictionary at *impractical*: not practical: such as: a: not wise to put into or keep in practice or effect.

Now, we also know that the Mayans had a very cosmic religion and an unusually long view, as evinced by the famed Mayan long count calendar (which is a combination of the two). If you take a culture saturated with a powerful cosmic religion and add to it a built-in level of impracticality, the result or the combination explains the recently-revealed Mayan building patterns.

That is an interesting combination, not seen many times in this world that also points somewhat to their demise; because people only become practical and resourceful when pressed by scarcity or by outside forces. If the Mayans subsequently encountered famine and drought (which also destroyed the Mississippian culture about the same time) and a dwindling of resources, but continued their traditional civilization, the probable end result is easily evident.

- ✓ “On whim, to pass a slow half-hour, she can command more energy than the entire nation of Portugal can spend today, and use it to launch a weekend satellite or remold a crater on the Moon.” – Frederik Pohl, “Day Million,” (1966).<sup>12</sup>

What will interstellar civilizations do with nearly infinite – limited only by their own production, transportation and consumption abilities – energy and matter? What sort of impracticalities might they develop? Some classic sci-fi answers are that interstellar ancient civilizations build monuments and enigmas around the Galaxy, or go off in seemingly pointless and petty endeavors, such as sorting sand grains by size and color.

- ✓ **Alex:** I have never been a Millenarianist. I am aware how often the number one thousand appears in the Bible, especially in prophecy – but I have never believed that the Almighty was constrained to work in even millennia – or any other numbering patterns – just to please numerologists. – Robert Heinlein, Job: A Comedy of Justice (1984).

## Endnotes.

<sup>1</sup> Commentary: What does this say about the “love of God”?

<sup>2</sup> Citation: “At a time when germs are growing more resistant to common antibiotics, many companies that are developing new versions of the drugs are hemorrhaging money and going out of business, gravely undermining efforts to contain the spread of deadly, drug-resistant bacteria. ...

Experts say the grim financial outlook for the few companies still committed to antibiotic research is driving away investors and threatening to strangle the development of new lifesaving drugs at a time when they are urgently needed.

‘This is a crisis that should alarm everyone,’ said Dr. Helen Boucher, an infectious disease specialist at Tufts Medical Center and a member of the Presidential Advisory Council on Combating Antibiotic-Resistant Bacteria. ...

Drug-resistant infections now kill 35,000 people in the United States each year and sicken 2.8 million, according [to] a report from the Centers for Disease Control and Prevention released last month. Without new therapies, the United Nations says the global death toll could soar to 10 million by 2050.” – Andrew Jacobs, “Crisis Looms in Antibiotics as Drug Makers Go Bankrupt,” The New York Times, December 27, 2019.

- ✓ In early 2020, a news report said that it would take at least a year to develop drugs to treat and vaccines against the coronavirus. Do the math: Any outbreak that inflicts massive losses on humanity in less than a year – especially losses of trained medical professionals and researchers – would collapse civilization. According to the same news article, the coronavirus had infected 75,000 people and 2,100 had died as of February 2020, a low mortality rate and a contained example; it had not yet become a global pandemic.

<sup>3</sup> Commentary: In late April 2020, it began to be reported that the COVID-19 (coronavirus) was found to adhere to particles of air pollution aiding its spread. That is, manmade industrial air pollution. Unforeseen collusions.

<sup>4</sup> Citation: “Let’s imagine. If you glimpsed the future and were frightened by what you saw, what would you do with that information? You would go to... Who? Politicians? Captains of industry? And how would you convince them? With data? Facts? Good luck. The only facts they won’t challenge are the ones that keep the wheels greased and the dollars rolling in. But what if... What if there was a way of skipping the middleman and putting the critical news directly into everyone’s head? The probability of widespread annihilation kept going up. The only way to stop it was to show it. To scare people straight. Because what reasonable human being wouldn’t be galvanized by the potential destruction of everything they have ever known or loved? To save civilization, I would show its collapse.

But how do you think this vision was received? How do you think people responded to the prospect of imminent doom? They gobbled it up, like a chocolate éclair. They didn’t fear their demise, they repackaged it. It can be enjoyed as video games, as TV shows, books, movies. The entire world wholeheartedly embraced the apocalypse and sprinted towards it with gleeful abandon. Meanwhile, your Earth was crumbling all around you. You’ve got simultaneous epidemics of obesity and starvation. Explain that one. Bees and butterflies start to disappear. The glaciers melt. Algae blooms all around you. The coal mine canaries are dropping dead, and you won’t take the hint! In every moment, there is the possibility of a better future. But you people won’t believe it. And because you won’t believe it, you won’t do what is necessary to make it a reality. So you dwell on this terrible future, and you resign yourselves to it. For one reason, because that future doesn’t ask anything of you today. So, yes, we saw the iceberg, we warned the Titanic. But you all just steered for it anyway, full steam ahead. Why? Because you want to sink. You gave up. That’s not The Monitor’s fault. That’s yours. Put them through. Thanks for visiting, Frank. It was genuinely nice to see you again.” – Governor David Nix (speech), Tomorrowland (2015).

- ✓ ‘Bad guy’ *mens rea* monologue from Tomorrowland (2015). Mmmmm... chocolate éclairs! Director Brad Bird has been criticized broadly for being preachy, elitist, favoring gifted, superior people in his movies (gee... what a list of crimes against humanity, *Hostis humani generis* alrighty). But what if, as movie critic Matt Zoller Sitz asked in his review of Tomorrowland:
  - “*Is it a problem, story-wise and message-wise, that Frank’s chief antagonist ... makes more sense than the heroes who oppose him?*” (Italics in original).
- ✓ In case you have wondered ... GGDM would never be published without the internet, in the age before the internet, I would have needed to have copies printed and bound myself at my cost, to give away. I would have done that, without complaint. Back to the matter at hand, ideas aren’t worth anything unless business can find a way to make money from them, i.e. sell, cheat, steal. There is no value in GGDM and by extension, my time working on it, unlike an attorney, doctor, or other important person, is worthless.
- ✓ See Bad Guy discussion, 1 Entropy, p. 216, *supra*. There’s even a discussion on Reddit about this speech which people found relevant and timely and criticism of the critics who called it preachy and dark.

<sup>5</sup> Commentary: One day, as the Lumpkin Revolutionary Army approached, the Wizard began experimenting with dull gray rocks and some other explosive stuff. That is why Emerald City no longer exists; but it still glows at night.

<sup>6</sup> Commentary & Citation: The Great Vowel Shift was identified by Otto Jespersen; this subject that confused the h\*\*\* out of me in college, is addressed in fascinating video on The History Guy YouTube Channel (January 2020).

<sup>7</sup> Commentary: The ultimate and true spatial injustice is that we have to live in this universe. Death is not a cure; assuming for sake of argument that there is an ‘afterlife,’ how can we be sure that the afterlife is not just a move from one part of the prison to another? The people who claim to know have no demonstrable evidence; the fevered mystical dreams of our ancient ancestors translated through multiple languages, are not proof.

<sup>8</sup> Citation: According to a 2016 Oxfam study, the wealthiest 8 people in the world have as much as the poorest half of the world population (approximately 3 billion people). The 10 biggest corporations have revenue greater than the 180 poorest countries combined. “Study: 8 people have same wealth as the world’s poorest half.” – Kim Hjelmgard, USA Today, January 15, 2017.

- ✓ On Monday, January 22, 2018, Oxfam again reported that 82% of the wealth generated in 2017 went to the richest 1% of the world population, while on December 27, 2017, Bloomberg reported that the 500 richest people in the world gained \$1 trillion in wealth in 2017.
- ✓ “One brutal sentence sums up the dismal state of wealth disparity in the US. ‘The bottom half of Americans combined have a negative net worth,’ Ben Steverman wrote in a recent Bloomberg article. This statement is based on the research of economists Emmanuel Saez and Gabriel Zucman, who study wealth inequality. Zucman is a ‘wealth detective’ who spends hours combing through spreadsheets of tax tables, macroeconomic datasets, and international money flow calculations to find the secret money stashes of the world’s richest people. Saez and Zucman’s research on wealth inequality also found that 20% of American wealth is controlled by the top 0.1% of taxpayers – or about 170,000 families. The top 1% control about 39% of the country’s wealth, and the bottom 90% hold only 26%, despite years of economic growth in the US overall. ‘The pie has not become bigger’ in the US, Zucman told Bloomberg. ‘It’s just that a bigger slice is going to the top.’ These statistics are perhaps not surprising considering how many Americans are weighed down by substantial student debt. Millennials are saddled with more than \$1 trillion of student loan debt, Business Insider’s Callum Burroughs previously reported. And it’s not just millennials who are suffering. More than 3 million Americans aged 60 and older are still paying off their student loans, INSIDER’s Kelly McLaughlin recently reported. Credit card debt is also on the rise. More than 40% of US house-holds carry credit card debt, and the average debt balance is \$5,700, according to a 2018 report from ValuePenguin. And about one fifth of Americans don’t have any money saved up, according to a Bankrate survey.” – Katie Warren, “One brutal sentence captures what a disaster money in America has become,” Business Insider, May 24, 2019.

<sup>9</sup> Commentary: In the U.S. Marines, if not the military generally, the Peter Plateau is usually called ‘terminal rank,’ usually referring to Lance Corporals, Sergeants, Lieutenants, Captains and full-bird Colonels.

<sup>10</sup> Commentary: From 2016 to 2020, LIDAR surveys from the air have revealed tens of thousands of unknown Myan buildings in the jungle, plus a raised road network built similar to Roman roads, one road running 100 km, demonstrating a far more populous and sophisticated civilization than previously thought in one of the worst places to live.

- ✓ See “BREAKING NEWS – Hidden Mayan Road Network Uncovered in Yucatan Rainforest Using Laser Technology,” Pete Kelly YouTube Channel, April 19, 2020, for LIDAR images and information.

<sup>11</sup> Commentary: In the 1999 movie, *Hornblower: The Wrong War* (aka *The Frogs & the Lobster*), after the marquis evicted the revolutionary peasants from his home, he asked what happened to his art collection; the mayor replied, it seemed of little practical use, so they used it to start fires.

<sup>12</sup> Commentary: It’s a sunny warm Saturday in the spring. You decide to wash your car and vacuum out the interior. How much water do you command in an hour, how much electricity? What do you think a desert dweller would think of your semi-recreational car cleaning? Frederik Pohl, simply multiplied existing conditions.

<sup>13</sup> Citation: John Gross, *The Oxford Book of Parodies* (2010).

<sup>14</sup> Commentary & Citation: It is interesting and odd that in August 2015, nearly 20 years after the Sokal Hoax, the eminent contributors of Times High Education (THE) were holding a vigorous debate about whether to scupper the entire peer review system for journal articles and the Sokal affair is not mentioned (though it seems to have been the elephant in the room, that some of the contributors had in mind but would not call out by name). See, “The worst piece of peer review I’ve ever received,” Times Higher Education, August 6, 2015.

**Excerpts from The Collapse of Complex Societies**

By Joseph Tainter (1988)

Collapse, as viewed in the present work, is a political process. It may, and often does, have consequences in such areas as economics, art, and literature, but it is fundamentally a matter of the sociopolitical sphere. *A society has collapsed when it displays a rapid, significant loss of an established level of sociopolitical complexity.*<sup>1</sup> The term ‘established level’ is important. To qualify as an instance of collapse a society must have been at, or developing toward, a level of complexity for more than one or two generations. The demise of the Carolingian Empire, thus, is not a case of collapse – merely an unsuccessful attempt at empire building. The collapse, in turn, must be rapid - taking no more than a few decades - and must entail a substantial loss of sociopolitical structure. Losses that are less severe, or take longer to occur, are to be considered cases of weakness and decline.

Collapse is manifest in such things as:

- a lower degree of stratification and social differentiation;
- less economic and occupational specialization, of individuals, groups, and territories;
- less centralized control; that is, less regulation and integration of diverse economic and political groups by elites;
- less behavioral control and regimentation;
- less investment in the epiphenomena of complexity, those elements that define the concept of 'civilization': monumental architecture, artistic and literary achievements, and the like;
- less flow of information between individuals, between political and economic groups, and between a center and its periphery;
- less sharing, trading, and redistribution of resources;
- less overall coordination and organization of individuals and groups;
- a smaller territory integrated within a single political unit.

Not all collapsing societies, to be sure, will be equally characterized by each item on this list, and the list is by no means complete. Some societies that come under this definition have not possessed all of these features, and indeed one or two that will be introduced had few of them. This list, however, provides a fairly concise description of what happened in most of the better known cases of collapse.

Collapse is a general process that is not restricted to any type of society or level of complexity. Complexity in human societies ... is not an all-or-nothing proposition. Societies vary in complexity along a continuous scale, and any society that increases or decreases in complexity does so along the progression of this scale. There is no point on such a scale at which complexity can be said to emerge. Hunting bands and tribal cultivators experience changes in complexity, either increases or decreases, just as surely as do large nations. Collapse, involving as it does a sudden, major loss of an established level of complexity, must be considered relative to the size of the society in which it occurs. Simple societies can lose an established level of complexity just as do

---

<sup>1</sup> Emphasis in original.

great empires. Sedentary horticulturalists may become mobile foragers, and lose the sociopolitical trappings of village life. A region organized under central chiefly administration may lose this hierarchical umbrella and revert to independent, feuding villages. A group of foragers may be so distressed by environmental deterioration that sharing and societal organization are largely abandoned. These are cases of collapse, no less so than the end of Rome, and no less significant for their respective populations. To the extent, moreover, that the collapses of simpler societies can be understood by general principles, they are no less illuminating than the fall of nations and empires. Any explanation of collapse that purports to have general potential should help us to understand the full spectrum of its manifestations, from the simplest to the most complex. This, indeed, is one of the central points and goals of the work.

These points made, it should be cautioned that in fact defining collapse is no easy matter. The present discussion may serve to introduce the orientation, but the definition will have to be added to as the work progresses

\*\*\*

Whether as cause or as consequence, there is typically a marked, rapid reduction in population size and density. Not only do urban populations substantially decline, but so also do the support populations of the countryside. Many settlements are concurrently abandoned. The level of population and settlement may decline to that of centuries or even millennia previously.

Some simpler collapsing societies, like the Ik, clearly do not possess these features of complexity. Collapse for them entails loss of the common elements of band or tribal social structure - lineages and clans, reciprocity and other kin obligations, village political structure, relations of respect and authority, and constraints on non-sociable behavior. For such people collapse has surely led to a survival-of-the-fittest situation, although as Turnbull (1978) emphasizes, this is but a logical adjustment to their desperate circumstances.

In a complex society that has collapsed, it would thus appear, the overarching structure that provides support services to the population loses capability or disappears entirely. No longer can the populace rely upon external defense and internal order, maintenance of public works, or delivery of food and material goods. Organization reduces to the lowest level that is economically sustainable, so that a variety of contending polities exist where there had been peace and unity. Remaining populations must become locally self-sufficient to a degree not seen for several generations. Groups that had formerly been economic and political partners now become strangers, even threatening competitors. The world as seen from any locality perceptibly shrinks, and over the horizon lies the unknown.

Given this pattern, it is a small wonder that collapse is feared by so many people today. Even among those who decry the excesses of industrial society, the possible end of that society must surely be seen as catastrophic. Whether collapse is universally a catastrophe, though, is an uncertain matter. This point will be raised again in the concluding chapter.

\*\*\*

As the development of complexity is a continuous variable, so is its reverse. Collapse is a process of decline in complexity. Although collapse is usually thought of as something that afflicts states, in fact it is not limited to any 'type' of society or 'level' of complexity. It occurs any time established complexity rapidly, noticeably, and significantly declines. Collapse is not merely the fall of empires or the expiration of states. It is not limited either to such phenomena as the decentralizations of chiefdoms. Collapse may also manifest itself in a transformation from larger

to smaller states, from more to less complex chiefdoms, or in the abandonment of settled village life for mobile foraging (where this is accompanied by a drop in complexity).

\*\*\*

The process of collapse, as discussed in the previous chapter, is a matter of rapid, substantial decline in an established level of complexity. A society that has collapsed is suddenly smaller, less differentiated and heterogeneous, and characterized by fewer specialized parts; it displays less social differentiation; and it is able to exercise less control over the behavior of its members. It is able at the same time to command smaller surpluses, to offer fewer benefits and inducements to membership; and it is less capable of providing subsistence and defensive security for a regional population. It may decompose to some of the constituent building blocks (e.g., states, ethnic groups, villages) out of which it was created.

The loss of complexity, like its emergence, is a continuous variable. Collapse may involve a drop between the major levels of complexity envisioned by many anthropologists (e. g., state to chiefdom), or it may equally well involve a drop within a level (larger to smaller, or Transitional to Typical or Inchoate states). Collapse offers an interesting perspective for the typological approach. It is a process of major, rapid change from one structurally stable level to another. This is the type of change that evolutionary typologies imply, but in the reverse direction.

\*\*\*

The proposition introduced above may now be rephrased in the terminology that will be used throughout the remainder of this work. It is suggested that the increased costs of sociopolitical evolution frequently reach a point of diminishing marginal returns. ... After a certain point, increased investments in complexity fail to yield proportionately increasing returns. Marginal return decline and marginal costs rise. Complexity as a strategy becomes increasingly costly, and yields decreasing marginal benefits.

Four concepts discussed to this point can lead to an understanding of why complex societies collapse. These concepts are:

1. human societies are problem-solving organizations;
2. sociopolitical systems require energy for their maintenance;
3. increased complexity carries with it increased costs per capita; and
4. investment in sociopolitical complexity as a problem-solving response often reaches a point of declining marginal return.

\*\*\*

But hasn't this increased investment in higher education brought at least equivalent, if not greater, returns? While the returns on investment in education are difficult to assess, most people would assume that the answer to that question must be yes. But there are ways of looking at the matter that suggest that this investment has not brought greater marginal returns. With increasing time spent in education and greater specialization, the learning that occurs yields decreased general benefits for greater costs. The greatest quantities of learning are accomplished in infancy; learning that occurs earlier in life tends to be more generalized. Later, specialized learning is dependent upon this earlier, generalized knowledge, so that the benefits of generalized learning include all derivative specialized knowledge. Axiomatically, therefore, generalized learning is of overall greater value than specialized.

---

*“How many valiant men, how many fair ladies, breakfast with their kinfolk and the same night supped with their ancestors in the next world! The condition of the people was pitiable to behold. They sickened by the thousands daily, and died unattended and without help. Many died in the open street, others dying in their houses, made it known by the stench of their rotting bodies. Consecrated churchyards did not suffice for the burial of the vast multitude of bodies, which were heaped by the hundreds in vast trenches, like goods in a ships hold and covered with a little earth.” – Giovanni Boccaccio*

---

*“Accounts from Europe indicate that the danse macabre took another form, inspired by the Black Death, rather like our children’s rhyme ‘Ring o’ Ring o’ Roses,’ which refers to the Great Plague. In 1374, a fanatical sect of dancers appeared in the Rhine, convinced that they could put an end to the epidemic by dancing for days and allowing other people to trample on their bodies. It is not recorded whether they recovered but, incredibly, they began to raise money from bystanders. By the time they reached Cologne they were 500 strong, dancing like demons, half-naked with flowers in their hair. Regarded as a menace by the authorities, these dancers macabre were threatened with excommunication.”*

– Catharine Arnold, *Necropolis: London and Its Dead* (2006)

---

**The Black Death:** This odd occurrence of the Dancers Macabre predates the Ghost Dance by 500 years and 5,000 miles, but both have the same root in world-shattering social upheaval.

The Bubonic Plague’s arrival in Europe (the Second Pandemic) provides a profound example of societal collapse fitting the scale and scope of this simulation. The Plague entered Europe from the south in about 1346 and spread over the next ten years north, west and east, reaching Moscow in 1353. From 1348 to 1350, a series of ‘spontaneous’ but organized anti-Semitic riots, massacres and looting – retroactively called ‘pogroms,’ a word invented almost 500 years later – swept across the major cities of Europe in response to the Black Death. Two Papal Bulls issued in 1348 could not stop or correct centuries of legitimized, sanctioned, institutionalized, and politically exploited anti-Semitism. In many cases, the authorities agitated the urban rioting against the Ghettos, and the Holy Roman Emperor added incentive by making Jewish property forfeit.<sup>1</sup>

It also spread through the Middle East, Egypt and North Africa with equally devastating consequences, the Black Death inflicted a huge toll on the Mongol Empire hastening its rapid decline.

The Church could not explain or stop the plague, the authorities had no answers, none understood the causes. The pandemic eroded faith in the Church and the secular authorities whose legitimacy was granted by the Church.<sup>2</sup> Since the Church also provided primary medical care and burial, a disproportionate amount of the lower clergy died of the Plague, such that the shortages were made up by admission of less qualified and less desirable people (and people with a different worldview due to the times, see 1 Constructural Elements, *supra*) to the clergy and staff.

- ✓ “Realizing what a deadly disaster had come to them, the people quickly drove the Italians from their city. However, the disease remained, and soon death was everywhere. Fathers abandoned their sick sons. Lawyers refused to come and make out wills for the dying. Friars and nuns were left to care for the sick, and monasteries and convents were soon deserted, as they were stricken, too. Bodies were left in empty houses, and there was no one to give them a Christian burial.” – author unknown.<sup>3</sup>
  - Pope Boniface VIII secularized medicine about 1300 A.D. by removing the requirements that medical doctors complete basic clergy training. The long-term importance of this small move – the secular medical science of the West – in the development of Western civilization cannot be understated.

Other factors, such as militarization of the peasantry (starting with the Crusades), the widespread use of gunpowder (‘the great equalizer’), dynastic ambitions, Church corruption from top to bottom,<sup>4</sup> religious schisms, rise of wealthy merchant classes and a new middle-class, wealth influx from the New World and population drain from colonization, and the literal and figurative bankruptcy of the feudal system, enabled and accelerated the collapse of European feudal society.<sup>5</sup>

Significant infant and youth mortality rates in Europe is the most probable *practical* reason for the practice of infant baptism by the clergy. Likely, this practice intensified late in the period as a result of the Black Death and the incessant warfare, becoming a target (along with indulgences) of the increasingly radical and fracturing Protestant movement.

- ✓ “Manz, formerly one of Zwingli’s closest allies, held that there was no biblical warrant for infant baptism. Refusing to recant his views, he was tied up and drowned in the River Limmat.” – Alister E. McGrath, Christianity’s Dangerous Idea: The Protestant Revolution: A History from the Sixteenth Century to the Twenty-First (2008).
  - The theological arguments for or against infant baptism between Luther and the Anabaptists are both oddly interesting and irrelevant.

Drowning Anabaptists was colloquially referred to as “third baptism.” Anabaptists were the radical forefront supporting the German Peasant’s Revolt in 1524-1525 and suffered greatly for it.

The Black Death was not the sole cause of the collapse of feudal society or the Reformation and the Wars of Religion between the 15<sup>th</sup> through 17<sup>th</sup> Centuries, but it was the initial cause, undermined the existing authority, upended the social order (Danse Macabre, no one was safe from the Plague, *mors omnia aequalia* – all are equal in death), and contributed to an era of widespread paranoia, fear, militant religious fanaticism and persecution of minorities and social outsiders.

- ✓ The most shocking act of fanaticism I can recall in fantasy-fiction literature was the ending of Katherine Kurtz’ novel The Bishop’s Heir, when the bride’s brother leapt into the wedding ceremony and slashed her throat to prevent the joinder of the Royal Houses of Haldane and Meara in marriage. The Bishop’s Heir was published in 1984, twelve years before that gross monstrosity called A Game of Thrones (1996) was published. If I were a clever literary type and had far more education than I do on the subject, I might suggest that from the mid-1980s onward, top fantasy writers embraced fanaticism in epic fantasy, or perhaps it just crept into the fantasy conversation. Fanaticism is an issue that comes up in speculative-fiction tales of all sorts, see Fanatics Not from Phili, 4 Culture, p. 415, *infra*.

- Ante Bacterium: A possible or probable earlier version, the Plague of Justinian, had ravaged Constantinople, Greece, Italy and port cities around the Mediterranean starting in 542 A.D., killing 25 to 50 million people over two centuries. That is about 10-12% of the current U.S. population, but with lower population density, it was much more devastating to them. However, the fatality rate of the Black Death was very high over a much shorter period of time; modern estimates range from 45% to 60% of population in an urban locality may die of the disease over a four year time.

The predecessor bacteria that triggered the Bubonic Plague has been found in human remains from the Bronze Age, 4,800 years ago. However, it was different. It has recently been discovered that a genetic mutation occurred in the bacteria that allowed it to survive inside the flea, blocking the flea's insides so that the flea felt hungry and bit the hosts more frequently. Further mutations allowed the bacteria to survive inside human lungs and spread to other tissues. This is the first time that we have been able to identify specific mutations.<sup>6</sup>

- ✓ Continuing the Sands & Seas discussion from 1 Entropy, p. 231, *supra*, could any scientist on Earth now have thought of a better, simpler – more diabolical – mutation to make the Black Death? Because the results were so perfectly devastating, we have to wonder, it makes us wonder if there was some sort of deliberate agency behind it? In modern terms, we call it ‘the perfect storm’; the perfect storm is the term we use for what we insist is a natural coincidence that sure looks like intelligent manipulation, human or otherwise.
  - ✓ “The secrets of evolution are time and death. Time for the slow accumulation of favorable mutations and death to make room for new species.” – Carl Sagan, *Cosmos*, Episode 2.
- History Lessons: The Plague reappeared regularly and swept through some regions of Europe every 15 to 30 years through the 15<sup>th</sup> and 16<sup>th</sup> centuries, and with diminishing intensity into the 17<sup>th</sup> and 18<sup>th</sup> centuries. Mortality rates were between 30% and 60% within a few months, especially in urban areas, and those who could, often fled to other places in human waves, spreading the disease farther. As late as 1771, there was a riot in Moscow that began as protests against extreme measures taken in the city to stop one of the last outbreaks of the Bubonic Plague. The archbishop was murdered by a mob and two monasteries were burnt.

The history lesson for the Bubonic Plague and Black Death usually amounts to a page in most public school history books. All memory of it disappears as soon as the chapters advance from the Renaissance to the discovery of the New World. Most school histories fail to discuss the Reformation or the Ottoman threat. Students are left with the impression that the plague was a one-off event, like a big stomach ache that went through Europe.<sup>7</sup> None of this is an accident. The truth of the plague would alarm and the truth of the Reformation would reopen debates that we in the United States want to remain buried. This was collectively decided by our grandparent's civilization. History of the world courses in American public schools are really ‘American justification’ courses, ‘world history’ lessons usually end with the New World, which then becomes an ‘America in world history’ course.

Much of this may have to do with the Cold War. The Black Death scares the bejesus out of us even now (e.g., movies such as *Outbreak* (1995) and zombie apocalypse movies), it is possible that educators saw already the effects that the threat of global thermonuclear annihila-

tion had on our culture and decided to skip serious teaching about the Black Death. And during the Cold War, U.S. justification courses were deemed ideological necessity; more important than understanding the late Medieval period or the Reformation.

- **Post Apocalypse:** Effects markedly similar to the Black Death would occur after a nuclear holocaust. While most of the nuclear holocaust movies I watched as a teenager (Damnation Alley (1977), WWII (TV mini-series 1982), The Day After (1983), By Dawn's Early Light (1990)) were made primarily for shock and horror instead of post-apocalyptic profundity, the movies Threads (1984) and Testament (1983) stand out as stories about normal people caught up in the immediate aftereffects of a nuclear attack.

---

*“It is no longer enough to see as a man sees – even to the ends of the universe. It is not enough to hold nuclear energy in one’s hand like a spear, as a man would hold it, or to see the lightning, or times past, or time to come, as a man would see it. If we continue to do this, the great brain – the human brain – will be only a new version of the old trap, and nature is full of traps for the beast that cannot learn.” – Loren Eiseley, “The Hidden Teacher” (1969)*

---

**Forward Expectations:** “Are you better off today than you were four years ago?” – Ronald Reagan, Presidential Debate, October 28, 1979. The underlying expectation of populations is the steady advance of their Native Population and colonization in Galactic Space, harvesting of resources from new planets, industrialization and urbanization of colony planets over time, advance of technology, sufficient food and reproductive activity, continuity of government, institutions and a way of life known to most of the population; rinse and repeat every generation.

It is perhaps serendipitous to say that forward expectation is tied to our experience (and limitations) with respect to time. However, even in a society that does not want to change, forward expectation still exists in the idea of changeless continuity to the next generation. That is, sameness is an expectation also subject to time passages.

Once reliable interstellar travel exists that leads to colonization and the widespread seeding of interstellar space, species survival is no longer strictly a zero-sum game (see 6 Diplomacy, p. 1171, *infra*). But our business and governmental organizations and species instincts will continue as though it is a zero-sum game.

- ✓ See also The Bargain, 5 Culture, p. 426 and Technosolution, 1 Patents, p. 726, *infra*.

---

*“Every account of a higher power that I’ve seen described, of all religions that I’ve seen, include many statements with regard to the benevolence of that power. When I look at the universe and all the ways the universe wants to kill us, I find it hard to reconcile that with statements of beneficence.”*

– Neil deGrasse Tyson, at the University at Buffalo, Q & A session, April 9, 2010, video is available on YouTube as of September 2018

---

**A Disruption:** A disruption is an “unplanned, negative deviation from the expected.”<sup>8</sup> Disruption signals a departure from the norm. A disruption can be a continuing act of disorder. A Disruption Event is a game term for events that loosely and generally include:

1. Hostile aliens (oh my goodness!), especially the technologically advanced kind;

2. Population loss, colony loss or damage, Raids and Ground Combat on Colonies;
3. Voluntary or involuntary removal of colony populations and industry;
4. Loss of colony and trade ships;
5. Sieges;
6. Changes in Government;
7. Loss of institutions, including Colleges, MegaCorporations, Corporations;
8. Diplomatic isolation, economic isolation;
9. Wars and battles.

---

*“The École Libre des Sciences Politiques (ELSP) was founded in 1872 by Émile Boutmy in response to the political and moral crisis in France in the aftermath of the 1870 Franco-Prussian War. It was intended to educate the new elite and generate modern knowledge for a new France.”*

– from Sciences Po webpage, “History,” captured July 2, 2019

---

**Hand Me the Hemlock:** Ancient Athens can be said to have undergone what has been called a cultural identity crisis (or “moral crisis”<sup>9</sup> or “religious crisis”<sup>10</sup>) after losing the Peloponnesian War and surrendering to Sparta in 404 B.C. After throwing off the eight-month catastrophic rule of the pro-Spartan oligarchy, the Thirty Tyrants in 403 B.C., Athens was questioning its politico-cultural commitment to democracy, a core element of its cultural identity. This is a Disruption Event for that civilization which led to the famous Trial of Socrates in 399 B.C.:

- ✓ “Socrates lived during the time of the transition from the height of the Athenian hegemony to its decline with the defeat by Sparta and its allies in the Peloponnesian War. At a time when Athens sought to stabilize and recover from its defeat, the Athenian public may have been entertaining doubts about democracy as an efficient form of government. Socrates appears to have been a critic of democracy, and some scholars interpret his trial as an expression of political infighting. Claiming loyalty to his city, Socrates clashed with the current course of Athenian politics and society. He praised Sparta, archrival to Athens....

One of Socrates’ purported offenses to the city was his position as a social and moral critic. Rather than upholding a *status quo* and accepting the development of what he perceived as immorality within his region, Socrates questioned the collective notion of ‘might makes right’ that he felt was common in Greece during this period. Plato refers to Socrates as the ‘gadfly’ of the state ... insofar as he irritated some people with considerations of justice and the pursuit of goodness. His attempts to improve the Athenians’ sense of justice may have been the cause of his execution.” – from Wikipedia article, “Socrates.”

- ✓ “By 399 B.C. the immediate political crisis had passed, but so had public euphoria at surviving the war, at dodging the bullet of endless civil war, and reuniting the polis under a reestablished code of law. The realization sunk in that reunification was only the beginning of a costly and uncertain rebuilding period, and that Athens remained fragile and vulnerable to its enemies. The Athenian willingness to tolerate peculiar behavior and apparently irresponsible public attitudes reached a low point. And so,

for Meletus the time was ripe: he could prosecute Socrates for impiety on relatively novel grounds with little concern of incurring the penalty for failing to gain a fifth of the votes. As it turned out, Socrates' idiosyncratic defense enabled Meletus to gain a guilty verdict. The Socratic tradition holds that [he] could not have give [sic] any other sort of defense and yet remain true to his own convictions, and recognized that it was unlikely to secure his acquittal." – Josiah Ober, "Socrates and democratic Athens: The story of the trial in its historical and legal contexts," Princeton/Stanford Working Papers in Classics, July 2006 (available free online).

**Pechenegs:** Wars and battles frequently led to loss of cultural identity and political autonomy during the Great Migrations. The Pechenegs invaded the Byzantine Empire and were defeated and their invasion force nearly annihilated in 1091. Then they were attacked by the Turkic Cumans in 1094 and much of the remainder were killed or captured and absorbed. Many of the survivors may have fled to Kiev, but were expelled in 1121. Thereafter, they invaded the Byzantine Empire again, crossing the Danube in 1122. On the second invasion, they were again defeated at the Battle of Beroia with many captured and absorbed into the Byzantine army.

All of these are the epitome of Disruption Events for the Pechneg polity and population. The Pechenegs polity effectively ceased to exist at that time, population pockets remained in Hungary, but generally they lost their cultural or ethnic identity and followed the path of the Samnites, Iberian Alans, Huns, Ostrogoths before them; the Cumans were in turn overrun by the Mongols in 1237, absorbed, or fled to Hungary, and Kiev was massacred.

Unlike their Pecheneg cousins who left little behind, the Cumans continued to have an effect even after they lost their cultural-political power in the Pontic and Russian Steppes; their language survived for some time afterward and was written down, some clans rose eventually to ruling dynasties in Eastern Europe, and they continued to provide powerful warbands that served the Byzantine Empire, the Second Bulgarian Empire, The Holy Roman Empire, the Fourth Crusade, and involved themselves in dozens of other kingdoms and states in Eastern Europe.

---

*“Double, double toil and trouble;  
Fire burn and caldron bubble.  
Cool it with a baboon’s blood,  
Then the charm is firm and good.”*

– William Shakespeare, “Macbeth” (1623)

---

**Axioms of Consequences:** There must be consequences, or there will never be change, like Newton’s laws of physics. Situations and incidents that are allowed to go without consequences will be repeated.<sup>11</sup> Attacks and advances by adversaries that are unmet and unmatched, will continue.

Wars, battles, tactics, legal trials, business disputes, political fights, public media spats, and generally disputes are contests of consequences. The side that cannot impose consequences loses. Even the stars and galaxies are consequences of the physical laws, stars and galaxies change and produce the stuff that makes us.

The relationships of consequences can sometimes take odd turns or seem strange. For example, axioms by their nature must be irrefutable within their environment. The consequence of saying

no, of denying the axiom is an insoluble intellectual contradiction. *Thus the axiom is the strongest imposition of consequence among sophants.* In a struggle, the side that can present the most axiomatic-like position (framed in popular terminology if it is a matter of politics, social movements, or a lyrical song, e.g., “The only thing we have to fear is fear itself!”) is in the strongest position to impose intellectual consequences (i.e. cognitive dissonance<sup>12</sup>) on the opposition.<sup>13</sup>

➤ **Shortest Distance to Dumb:** The shortest distance between two points is a straight line. This axiom has been around for millennia, if it is not obvious at first glance that it is true, we can take measurements, create empirical data to prove it. It would be a fool’s errand to try to disprove it *on a flat surface*. If the contest occurs on a flat surface, you cannot lose, the consequence of denying this is a falsehood, a contradiction. But the world has many fools, some of them are science-fiction writers (e.g., folding space so that two points are closer than they would be by a straight line, imagine folding a piece of paper and poking a hole through the joined ends) or mathematicians:

- ✓ “The Pythagorean theorem only works on two-dimensional surfaces like football fields; mathematicians refer to such surfaces as Euclidean geometry (named for Euclid, the 3<sup>rd</sup>-century B.C. Greek mathematician). The theorem fails for non-Euclidean geometries, such as spheres and more complex geometries like saddles. Indeed, all the rules you learned in school, like parallel lines staying parallel, only refer to Euclidean geometry. In the non-Euclidean universe, parallel lines may actually diverge or converge. Although non-Euclidean geometry may seem exotic and unfamiliar, it is actually common in many fields of science – perhaps most notably, in Einstein’s general relativity theory, in which gravity can bend the shape of space and time.” – The Editors, “When Is a Straight Line Not the Shortest Distance between Two Points?” *Scientific American*, November 8, 2010 (available free online).

Thus, math demonstrates that axiomatic statements are peculiar to their environment and to defeat the consequence of an axiom or axiomatic-like statement, you have to change the game. *If you don’t like the plane, make a globe and you can cheat the axiom.* Imagine then in what environment the axiom of human action of praxeology becomes refutable?

---

*“You know, I used to think it was awful that life was so unfair. Then I thought, wouldn’t it be much worse if life were fair, and all the terrible things that happen to us come because we actually deserve them? So, now I take great comfort in the general hostility and unfairness of the universe.”*

– Marcus Cole, *Babylon 5*, “Late Deliveries from Avalon” (1996) <sup>14</sup>

---

**Disruptive Nature:** Marcus Cole is one of the most unique and tragic characters in *Babylon 5* television series; he has been described as the master of funny-not funny and a British Batman.

Disruption is the term used in GGDM to represent the various aspects of societal collapse, systemic and government changes and population movement. “Disruption check” refers to specific game procedures to be followed in situations where disruption is triggered.

➤ **Stewed, Brewed, Boiled, Baked or Fried:** In specific game terms, a Disruption Event has two effects. First is an immediate ‘check’ to see if any Constructural Elements have been rendered inactive at the site of the disruption. Additionally, the event generates an Intervention

Potential Plus attached to the position that suffered the Disruption Event, which the Concierge may use later, hopefully in a creative exploration of the continuing effect of the disruption and its interactions with Fundamental Realities (see discussion 1 Entropy, p. 215, *supra*).

- ✓ Failed Power Activations cannot by themselves, for game logic reasons, be Disruption Events – that would create a vicious cycle (or negative feedback loop).
- Interventions Plus: Normally, one Intervention Potential is generated for each time Regular Turn Actions are processed and the Intervention Potential can be used for one Intervention Action (from the previous list) at a later time.
  - ✓ On any Regular Turn when a position has a Disruption Event (whether voluntary or involuntary), an Intervention Potential Plus (IP+) is generated instead.

The ‘plus’ means that the Intervention Potential *must be used* for two Intervention Actions at the same time (e.g., perhaps two Pokes, like the Three Stooges) directed to the position that generated it. Additionally, it follows that the Intervention Potential Plus (IP+) is forever tied to that position that generated it, and cannot be used to affect any other position directly.

- Double Your Troubles: Where possible, an Intervention Potential Plus (IP+) *should be used to generate two related Interventions* (which may also echo into other events such as Government Title disruption and diplomatic actions). Twenty-five hundred years of history – from the ancient world to living memory – provides plenty of fine examples:
  - ✓ “The Sparta earthquake of 464 BC destroyed much of Sparta, a city-state of ancient Greece. Historical sources suggest that the death toll may have been as high as 20,000, although modern scholars suggest that this figure is likely an exaggeration. The earthquake sparked a revolt of the helots, the slave class of Spartan society. Events surrounding this revolt led to an increase in tension between Sparta and their rival Athens and the cancellation of a treaty between them. After the troops of a relief expedition dispatched by conservative Athenians were sent back with cold thanks, Athenian democracy itself fell into the hands of reformers and moved toward a more populist and anti-Spartan policy. Therefore, this earthquake is cited by historical sources as one of the key events that led up to the First Peloponnesian War.” – from Wikipedia article, “464 BC Sparta earthquake,” captured July 4, 2019.
  - ✓ “It is nevertheless clear that in any case the revolt of 464 BC represented a major traumatic event for the Spartans. Plutarch indicates that the Crypteia and other poor treatments of the helots were instituted after this revolt. If there is any doubt in these affirmations, they at least underscore the immediate Spartan reaction: allies are gathered and war ensues with the same Athens that would be faced later in the Peloponnesian War.” – from Wikipedia article, “Helots,” captured July 4, 2019.

This brings together several threads: The helot revolt and the earthquake of 464 B.C. that prompted it, was a ‘traumatic event’ for Spartan civilization – their home was being rocked, their legs were being kicked out from under them (by the helot revolt, the helots being the source of their food and income) and their world was being tilted – all of these being useful descriptors of local Disruption Events in GGDM. Disruption events are things that make great history and good fiction (especially alien invasion movies), but a really bad day if they happen to you.

- ✓ The Black Death (the Bubonic Plague’s entry into Europe), *ut supra*, is thought to have begun at the Siege of Caffa (now Feodosia) in Crimea in 1346. While the plague had long ravaged central Asia along the Silk Road, the ‘modern’ introduction (setting aside questions of the Plague of Justinian) into Europe came when Genovese ships fled Caffa and returned to their home ports: The besiegers had catapulted the bodies of their dead over the walls into the city to infect the city.
  - In Stephen King’s 1978 novel The Stand, the U.S. military – once the accidental pandemic had begun – deliberately infected Cold War archrivals China and the Soviet Union to prevent them from ‘winning’ thus contributing greatly to the death of over 99% of global human population in a few months. In GGDM, such a thing could happen on a Balkanized planet with hostile colonist, without consulting the interstellar government...
  - In 12 Monkeys (1995), the culprit deliberately spread the plague by flying from major airport to major airport around the globe in 24 hours.
    - Interventions are inherently local events that happen without permission from the position players (i.e. the interstellar government).

In GGDM terms, while humans certainly did not ‘create’ the plague (as we might nowadays, and that’s another related issue, e.g., The Stand (1978)), it is the occurrence of multiple entropic events that might be reflected in a GGDM Intervention Potential Plus (IP+). It is considered the first case of intentional biological warfare, see Mark Wheelis, “Biological Warfare at the 1346 Siege of Caffa,” *Emerging Infectious Diseases Journal* (of the CDC), Vol. 8, No. 9, September 2002 ([https://wwwnc.cdc.gov/eid/article/8/9/01-0536\\_article](https://wwwnc.cdc.gov/eid/article/8/9/01-0536_article)).

In living memory, the March 11, 2011 Fukushima Daiichi nuclear power plant disaster which combined an earthquake and tsunami, flooding important parts of the plant, followed by nuclear accidents (melt downs, hydrogen air explosions, high radiation spikes, water discharges), followed by recriminations of mismanagement, political back-patting, and bad engineering, and a spike in anti-nuclear attitudes – *crosses the full range of Intervention Potentials Plus and echo effects in GGDM*. From this incident arose the media portrayal of a more modern, scientifically-informed sort of conscious heroism, the Fukushima Fifty:

- ✓ “The workers and volunteers were assigned the mission of stabilizing the reactors. Their activities included assessing the damage and radiation levels caused by the explosions, cooling stricken reactors with seawater, and preventing any risk of fire. These workers remained on-site despite serious risks of radiation poisoning. Levels of radiation on site are far higher than in the 20 km (12 mi) exclusion zone and media outlets reported that the severity of the situation could have grave implications on their future health, with possibly fatal consequences for the workers. On 18 March, according to Prime Minister Naoto Kan the workers were ‘prepared for death’” – from Wikipedia article, “Fukushima 50,” captured July 8, 2019.
- ✓ “Referring to the original 50 workers, nuclear researcher Dr. Eric Hall opined that they were likely to be older, and unlikely to have further children, so the long-term effects of exposure to high-levels of ionizing radiation would be less likely to appear

before a natural death. Some younger workers were injured and young Osaka fire-fighters were operating at the site. A group of 250 skilled senior citizens volunteered to work in the radioactive environment, citing reduced harm to them.” *Id.*

Science-fiction imagination had early anticipated these types of events, e.g., Robert Heinlein’s “The Green Hills of Earth” (1947), requiring humans to consciously sacrifice themselves in an attempt to get a reactor under control (e.g., the famous K-19 Widowmaker accident in 1961). And of course, there was the ‘logical’ death of Spock in Star Trek II (1982) ... as a result of Kirk’s decisions in the “Space Seed” episode (ST:OS 1967) – and a whole lot of bad Earth future history and alien manipulation...

- ✓ Diligent and clever players probably can keep track of the Intervention Potentials Plus (IP+) tallied against their position and this may affect the play of the game if the players know there is a potential big hammer blow waiting over the Regular Turn horizon. It would require an extraordinary group effort however, to keep a tally of Intervention Potentials held by the Concierge at any point in the game.

---

**Ambassador Kosh:** *The avalanche has already started. It is too late for the pebbles to vote.* – Babylon 5, “Believers” (1994)

---

**Too Late for the Pebbles to Vote:** GGDM places a heavy burden on the Concierge, which the players can make lighter by keeping the game fun and interesting. Still, it is likely that the Concierge will not always have great freak’n ideas for Interventions (along with News Events, Reformations, Kairotic Moments, Patents, Writs, Special Operations, Special Planets, Fundamental Realities) and a significant number of unused Intervention Potentials may buildup – rather defeating the purpose of Interventions as part of GGDM. One possible solution is to have the computer assistant soak off some of the excess entropy by using automated lists of things that ‘happen’ and randomly applying them to player positions (with the side benefit that no position can claim they are being unfairly targeted). This will keep it interesting for the Concierge as well, because events – not originating with player actions – may happen beyond even the Concierge’s control, but the Concierge must always be able to Intervene and to have first chance to use Intervention Potentials to orderly advance the story and/or just to amuse themselves.

This system may coincidentally create a periodic avalanche of events affecting all positions in the game simultaneously, if built up Intervention Potentials are suddenly cleared – like waves of entropy. Like watching your delicious hot dinner dumping off the plate as gravity accelerates its fall to the floor. “On top of old smoky, all covered in cheese, I lost my poor meatball, when...”

- ✓ “The May 1968 events in France refers to the volatile period of civil unrest throughout France during May 1968 which was punctuated by demonstrations and major general strikes as well as the occupation of universities and factories across France. At its height, the events brought the economy of France almost to a halt. The protests reached such a point that political leaders feared civil war or revolution; the national government itself briefly ceased to function after President Charles de Gaulle secretly fled France for a few hours. The protests spurred an artistic movement, with songs, imaginative graffiti, posters, and slogans. The unrest began with a series of student occupation protests against capitalism, consumerism, American imperialism and tra-

ditional institutions, values and order. It then spread to factories with strikes involving 11 million workers, more than 22% of the total population of France at the time, for two continuous weeks.

The movement was characterized by its spontaneous and decentralized wildcat disposition; this created contrast and sometimes even conflict between itself and the establishment, trade unions and workers' parties. It was the largest general strike ever attempted in France, and the first nationwide wildcat general strike. The student occupations and wildcat general strikes initiated across France were met with forceful confrontation by university administrators and police. The de Gaulle administration's attempts to quell those strikes by police action only inflamed the situation further, leading to street battles with the police in the Latin Quarter, Paris, followed by the spread of general strikes and occupations throughout France. De Gaulle fled to a French military base in Germany, and after returning dissolved the National Assembly, and called for new parliamentary elections for 23 June 1968. Violence evaporated almost as quickly as it arose. Workers went back to their jobs, and when the elections were held in June, the Gaullist party emerged stronger than before." – from Wikipedia article, "May 1968 events in France."

- François Mitterrand (a graduate of Sciences Po) was in 1968, the leader of the 'democratic socialist left' and was ready to 'form a new government' without the communist with whom the socialist had allied (to their apparent detriment) in February 1968. *Id.* Monsieur Mitterrand was later President of France from 1981-1995 and died in 1996.<sup>15</sup>

---

*"The idea that there's undetectable ... fraud is, of course, impossible to refute, in the same way that it's impossible to refute the idea that there are aliens who've visited Earth. There's no evidence of those close encounters, but some people believe that it happens. How can you dissuade them?"*

– Philip Bump, *The Washington Post*, October 17, 2016

---

## Endnotes.

---

<sup>1</sup> Commentary & Citation: Do you think anything has changed? Fast forward 600 years to Los Angeles, 1943:

- ✓ "During the next few days, thousands of servicemen and civilians joined the attacks, marching abreast down streets, entering bars and movie houses, and assaulting any young Mexican American males they encountered. In one incident, sailors dragged two zoot suiters on-stage as a film was being screened, stripped them in front of the audience, and then urinated on their suits. Although police accompanied the rioting servicemen and civilians, they had orders not to arrest any, and some of them joined in the rioting. After several days, more than 150 people had been injured, and the police had arrested more than 500 Latino civilians on charges ranging from 'rioting' to 'vagrancy.'

A witness to the attacks, journalist Carey McWilliams wrote,

Marching through the streets of downtown Los Angeles, a mob of several thousand soldiers, sailors, and civilians, proceeded to beat up every zoot suiter they could find. Pushing its way into the important motion picture theaters, the mob ordered the management to turn on the house lights and then ran up and down the aisles dragging Mexicans out of their seats. Streetcars were halted while Mexicans, and some Filipinos and Negroes, were jerked from their seats, pushed into the streets and beaten with a sadistic frenzy.

The local press lauded the attacks, describing them as having a ‘cleansing effect’ to rid Los Angeles of ‘miscreants’ and ‘hoodlums.’ As the riots progressed, the media reported the arrest of Amelia Venegas, a female zoot suiter charged with carrying a brass knuckleduster. While the revelation of female pachucos’ (pachucas) involvement in the riots led to frequent coverage of the activities of female pachuca gangs, the media suppressed any mention of the white mobs that were also involved.

The Los Angeles City Council approved a resolution criminalizing the wearing of ‘zoot suits with reat [sic] pleats within the city limits of LA.’ Councilman Norris Nelson had stated, ‘The zoot suit has become a badge of hoodlumism.’ No ordinance was approved by the City Council or signed into law by the Mayor, but the council encouraged the WPB to take steps ‘to curb illegal production of men’s clothing in violation of WPB limitation orders.’ While the servicemen and civilians had first targeted only pachucos, they also attacked African Americans in zoot suits who lived in the Central Avenue corridor area. The Navy and Marine Corps command staffs intervened on June 8 to reduce the attacks, confining sailors and Marines to barracks and ordering that Los Angeles be declared off-limits to all military personnel; this was enforced by Navy Shore Patrol personnel. Their official position was that their men were acting in self-defense.” – from Wikipedia article, “Zoot Suit Riots,” captured September 5, 2019.

<sup>2</sup> Commentary & Citation: The short movie *Dead Faith* (2018), among many possible interpretations, seems to be an allegory of the Black Death and medieval faith vs. renaissance humanism. The movie title is a double entendre, which is also used several times in the dialogue, in that the main character’s wife, Faith, is slowly being turned into a zombie. The zombies in the movie don’t seem overly dangerous except that they are infectious, while the real danger is the main character, a staunchly religious Bible-quoting end-of-the-world Christian living in an isolated backwoods home. His faith turns morbid, he dies of the results of his sins from smug self-righteousness – he shot the sheriff in the back and a deputy sitting in the vehicle after pretending to surrender. He had apparently come to the belief that the zombies were God’s chosen who would be redeemed and resurrected at the end of the world, and he allows his infected, turned zombie wife Faith, to fatally bite him.

<sup>3</sup> Commentary & Citation: This account is found on internet sites without attributing an author. Searching, I found this same quote in three different books on Google Books: Howard B. Radest, *Bioethics: Catastrophic Events in a Time of Terror* (2009), p. 99, Paul F. Ploutz, *Global Warming: Handbook of Ecological Issues* (2012), p. 38, and Tom Davis, *Red Letters: Living a Faith That Bleeds* (2007), pp. 68-69.

- ✓ Howard B. Radest includes it in three paragraphs quoted from a CDC (Centers for Disease Control) FAQ from 2005 (Note 2). Tom Davis also has a citation, but the notes are not available on Google Books.
- ✓ The CDC issues many FAQs and media releases each year and I was unable to locate the referenced CDC FAQ via Google Search. However, the alleged eyewitness quote does not stand out as anything awry or unexpected in the context of all of the other knowledge and consensus regarding the Black Death’s effects.

<sup>4</sup> Citation: “Buried under the froth is the fact, and the fact is that less than one half of one percent of policemen misfit that uniform, and that is a better average than you’d find among clergymen.” – Paul Harvey, “What is a Policeman?”

<sup>5</sup> Commentary: The concept of “feudalism” and “feudal society” is a 19<sup>th</sup> Century invention – the first known use of “feudalism” occurs in 1818 according to Merriam-Webster online dictionary – applied retroactively to describe the society of the Middle Ages – another invented and retroactively applied term from the Renaissance. None of the terms we use now would have been known to or current to the people of the ‘Middle Ages.’ History is always a retroactive interpretation.

<sup>6</sup> Citation: See, Brian Handwerk, “Plague was infecting humans 3,300 years earlier than thought,” *Smithsonian.com*, October 22, 2015.

<sup>7</sup> Commentary & Citation: Perhaps this is a somewhat similar phenomenon:

- ✓ “But the motives behind and iterations of Nazi symbolism in Asian fashion, where [Laura] Kidd [Southern Illinois University at Carbondale] says Nazi chic is growing much faster than it is in Western markets, are different – there’s less cultural baggage attached to Hitler, and wearing a swastika around is less inherently shocking. ... One reason Hitler’s reputation might not be fully realized in this corner of the world is simply due to the geographical and emotional distance between South Asia and the atrocities of World War II. These were horrors in a distant land – most people in South Asia had no real connection with the Holocaust and other atrocities, giving it less cultural impact.” – Mark Hay, “Nazi Chic: The Asian Fashion Craze That Just Won’t Die,” *Vice*, February 12, 2015.

For example, in Southeast Asia, there is no Imperial Japanese Army chic fashion craze; there it might be found as offensive as we find Nazi chic. Thus, Nazi Germany is a big stomach-ache that Asia never experienced.

- ✓ “In other words, there’s an instinct not to throw baby Hitler out with the bathwater. Evil? Sure, but he lifted Germany into one of the world’s most powerful countries in just a decade. And it’s easier to narrow the focus onto Hitler’s leadership qualities when even school curriculums glaze over his role in World War II. ‘In our high schools, we learn about Hitler, but they don’t teach us about the Holocaust,’ said Pramod Jaiswal, a Nepali university student studying at Jawaharlal Nehru University in New Delhi. ‘Teachers only teach how he was a good leader for German development. I had a friend from Belgium and I told her Hitler was good for Germany and she started crying. I was really shocked.’” *Id.*

<sup>9</sup> Citation: Juin-Lung Huang, Doctoral Thesis, St. Andrews University, 2008 (available free online at St. Andrews Research Repository).

<sup>10</sup> Citation: Josiah Ober, “Socrates and democratic Athens: The story of the trial in its historical and legal contexts,” Princeton/Stanford Working Papers in Classics, July 2006 (available free online).

<sup>11</sup> Commentary: Although this text was written some years ago, in early 2018, I left my employment of over twelve years in part because bad stuff was going on at work and nothing was going to change unless there were consequences. I also didn’t feel right about my job and it was affecting me; I needed to go do something else. After I resigned my employment, management was left with a big problem and I know some changes were made shortly.

<sup>12</sup> Commentary: In the spring of 2020, I discovered your YouTube a J-group called Babymetal. Babymetal’s performance is a cultural-cognitive dissonance for a Western male viewer. It is a mix of metal guitar with J-Pop Kawaii. It struck me as very strange, metal is not cute, metal music is born of angst and we like our dark angst very much!

<sup>13</sup> Commentary & Citation: Bobby Darin’s “Mack the Knife” (1958) inflicts a cognitive dissonance on the attentive listener: It describes in fairly gruesome detail the exploits of a local murderous underworld thug sung in a happy upbeat big band swing style with big band background music. One feels like they are supposed to be cheering for this guy, happy that he is back! Dance everyone!

<sup>14</sup> Commentary: If I ever need to be angry at the universe, I will play a game of Hashira, a most unfair Tetris-like falling tile game; I never end a game without feeling that I have just been ‘screwed’ by the computer and that it could not have been random chance. There is never a good ending in Hashira, and the program is designed to insure such, no matter what my final score, even if it makes the Hall of Fame, it is not a satisfactory end. Yet I continue to play? But on the other hand, if Hashira was a fair game, it would never end, and I would be stuck to my seat forever eliminating falling tiles. Still, is this a valid reason to make a computer game that blatantly cheats? Games can be made unfair without cheating by the computer; besides, if I play long enough, I will make a mistake, so the game would not go on forever anyway. It is all the more galling when the computer cheats too.

- ✓ Human video games are designed precisely for this purpose – in the beginning back in my youth, games were unfair to keep players pumping quarters into the machines (and I did much of that! Star Castle, Galaxian, Defender, Space Invaders, Missile Command...) – but they persist in the same design paradigm because it fits both our sense of life and the universe, and our sense of accomplishment. Are we as human players engaging in confirmation bias? Is the secret to immortality then the elimination of all of the unfairness in our lives; is death an unfairness? Would you want to be alive forever eliminating falling tile sets or running repeatedly through the corridors of a first-person shooter?

- ✓ See further discussion of Hashira in 1 Culture, EN 2, p. 359, and Diagonal Play, 2 Eras, p. 770, *infra*.

<sup>15</sup> Commentary: Wow, this was a strange one. While reading the history page for Sciences Po, I saw a mention of the student strikes in May 1968. Later, while watching television, I was kind of bored and started playing around with the Google lookup on my phone. I decided to see how good it was, so I voiced “Paris student strike May 1968.” Google bombed on that one; I think I received a “sorry, something went terribly wrong” response a few minutes later. About two days later, when I had nearly forgotten about it and moved on from the Sciences Po subject, suddenly I received a message on my phone from Google in response, showing the Wikipedia article, “May 1968 events in France.” I, of course, do not remember those events, I was less than a year old then, nor have I heard very much about them in my half century in the United States. I am sure that France talks much about it internally – it is considered a crucial moment in French society – but doesn’t mention it often to the rest of the world.

*See Appendix DE&A – Disruption Events, Inactive Constructural Elements & Apostasy  
See Appendix IP – Interventions Reference Sheet*

*“There cannot a greater judgment befall a country than such a dreadful spirit of division as rends a government into two distinct people, and makes them greater strangers and more averse to one another, than if they were actually two different nations. The effects of such a division are pernicious to the last degree, not only with regard to those advantages which they give the common enemy, but to those private evils which they produce in the heart of almost every particular person.*

*This influence is very fatal both to men’s morals and their understandings; it sinks the virtue of a nation, and not only so, but destroys even common sense. A furious party-spirit, when it rages in its full violence, exerts itself in civil war and bloodshed; and when it is under its greatest restraints, naturally breaks out in falsehood, detraction, calumny, and a partial administration of justice. In a word, it fills a nation with spleen and rancour, and extinguishes all the seeds of good-nature, compassion, and humanity.”*

– Joseph Addison, “Mischief of Party Spirit” (1711)<sup>1</sup>

**Déjà vu News:** If Addison seems prescient of the 21<sup>st</sup> Century, it is because ... um ... this has all happened before. And this has all happened before, and before...and again.

- ✓ “Unlike in the past, where we were unified and drew in allies, currently our own commons seems to be breaking apart. What concerns me most as a military man is not our external adversaries; it is our internal divisiveness. We are dividing into hostile tribes cheering against each other, fueled by emotion and a mutual disdain that jeopardizes our future, instead of rediscovering our common ground and finding solutions.” – Gen. Jim Mattis (USMC Ret.) op-ed, “Jim Mattis: Duty, Democracy and the Threat of Tribalism,” Wall Street Journal, August 28, 2019.

But since most people will not read non-fiction written before they were born – and perhaps that is the mark of a scholar, reading works written before the century in which you were born – it is up to entertainers, journalist and op-ed commentators to recast the observations of the past into current terms, usually without reference to past writers, so that the audience is *surreptitiously educated* by those who have read some works of the past or have greater knowledge of the subject, while seeming to receive timely and insightful commentary and opinion on current events.

- ✓ “To save endless time wading through the contemporary novels to see which ones are any good, I just read dead writers.” – Annie Dillard quoted by Lawrence Malcolm, “Lunch with Annie Dillard,” April 30, 1982 (free online).

*“Turning and turning in the widening gyre; The falcon cannot hear the falconer; Things fall apart; the centre cannot hold; Mere anarchy is loosed upon the world, The blood-dimmed tide is loosed, and everywhere; The ceremony of innocence is drowned; The best lack all conviction, while the worst, Are full of passionate intensity.” – William Butler Yeats, “The Second Coming” (1919)<sup>2</sup>*

**When the Center Cannot Hold:** There are four elements to societal or general systems collapse within the game:

1. Inability to generate Acts and/or Scenes due to failure of Government legitimacy.

2. Inability to form Fuzzy Groups due to inactive Constructural Elements.
3. Loss or disability of Colleges due to physical loss of Host Worlds, inability to replenish Endowments, and/or loss of Constructural Elements.
4. Disruption of resources – resources cannot be used (due to loss of shipyards for example, or in ability to activate vital powers), cannot be moved (loss of trade), or are not being produced (loss of population/industry and or inability to invoke Taxation).

Which translate as:

1. Failure/inability of the government to act,<sup>3</sup> loss of acceptance of remote authority.
2. Lack of will and proficiency to operate civil institutions.
3. Loss or disability of the intelligentsia and/or loss of professionalism and scholarship.<sup>4</sup>
4. Inability to produce, obtain, use, protect, transport and/or manage resources.<sup>5</sup>

The interactive occurrence of these four events is the fall of a civilization. Arguably all civilizations, or at least the modern Western societies, are always in some state of low-level societal collapse; modern Western civilizations seem to be constantly churning.

- ✓ “When the Americans act that way, when the Americans start talking like that, it sends signals to everybody. *The center isn’t holding*. The Americans are expected to be better than this. We don’t talk this way, in the same way we don’t expect the South Koreans to talk the same way as the North Koreans do. We expect more from democracies, we expect more from liberal countries.” – Herman Wong, “Why Trump’s North Korea Warnings were unnecessary, scary and irresponsible,” Washington Post, August 9, 2017 (emphasis added).
- **Four Pillars:** Prosperity, technology, nationalism and acceptance of remote authority are the four pillars of the modern Western state that has allowed the development of nation-states of unprecedented size, power and complexity across the Northern Hemisphere in the 20<sup>th</sup> Century and beyond. *They will be even more important to interstellar states*. The lack of these four (even in small measure) would cause modern Western states to fragment into feuding regional powers in possession of an arsenal of lethal modern weapons (frequently as a result of global nuclear war or other catastrophe). The lack of these four, in the current world, has contributed to weak, corrupt, or non-existent central authority in the poorer states formed in the 20<sup>th</sup> Century from colonial empires, especially in areas where tribalism prevails.<sup>6</sup>
  - ✓ Acceptance of remote authority is the opposite of factionalism. This is key when dealing with tribes and with groups like the Taliban. The problem was on full display in 2019 when the U.S. had been secretly negotiating with the Taliban in Afghanistan. There were people on all sides who didn’t like the idea, the proposed peace outline, or the proposed withdrawal of U.S. troops. Many were shocked or offended that the Taliban leadership had been provisionally invited to Camp David, as if they were equals and had international standing. Those within the governments kept quiet because it was not their place to speak or act against the authority of their employers, but on the other side, someone set off a car bomb at a check point in Afghanistan that killed a U.S. soldier and civilians. This caused President Trump in his usual bombastic manner, to cancel the peace process; the practical reality is that we cannot be sure who is really in charge on the other side, and there appears to be no one who can impose their authority. The problem with the Taliban is that no matter what the central

‘leadership’ group thinks or tries to do, there are splinters, factions, and dissenters who cannot ‘turn it off,’ have unrealistic, uncompromising and radical ideals of what could constitute victory, and will not accept any end to the conflict regardless.

- This attitude throughout history is probably what prompted the saying, ‘live by the sword, die by the sword.’
- As has been demonstrated with the IRA (Irish Republican Army) and the troubles in Northern Ireland, these processes require multigenerational time to wear themselves out, lose momentum and appeal, and wind down to a point where dialogue might constructively solve the remaining issues.

➤ Civil Wars: When two or more antagonistic authorities exist within a state and each commands the remote obedience of a part of the *regular armed forces*, the elites, bureaucratic and police-security forces and/or the population, conditions are ripe for a civil war. A civil war cannot occur *without a major split in the regular armed forces of a country*; any other condition is a local uprising or insurgency, and usually labeled criminal activity by the authorities. Racial agitators on both sides claiming there is going to be a ‘civil war’ are thus ignorant or deluded, because such would require a split in the regular U.S. armed forces.<sup>7</sup>

✓ “Brothers killing brothers casts a spell that never ends.” – Dave Mathews, “The Road to Gettysburg,” *Shades of Blue & Gray*.<sup>8</sup>

- The largest number of military casualties in a single day suffered by the United States was self-inflicted at the Battle of Antietam (1862). The U.S. suffered more casualties in the Civil War than in WWII.

The English, American and Syrian Civil Wars were such splits. A civil war is more likely to be a symmetrical conflict whereas uprisings, revolts, insurgencies are asymmetrical conflicts.

✓ “As the war enters its fifth year, the barrel bomb has become the most notorious weapon in the regime’s arsenal. Two or three years ago, I saw the results of what must have been one in Douma, a suburb of Damascus that has been held by rebels since close to the beginning of the war. Mr. Assad insisted that the Syrian army would never use them in a place where people lived. ‘I know about the army. They use bullets, missiles and bombs. I haven’t heard of the army using barrels, or maybe, cooking pots.’ It was a flippant response; the mention of cooking pots was either callousness, an awkward attempt at humour, or a sign that Mr. Assad has become so disconnected from what is happening that he feels overwhelmed.” – “Assad says Syria is informed on anti-IS air campaign,” analysis by Jeremy Bowen, BBC Middle East Editor, BBC News, February 10, 2015.

Civil Wars come in different flavors, but share the same traits generally; Rome’s civil wars (of succession) were not of the same character as the American and English Civil Wars. The famed slave uprising led by Spartacus was revolt and not a civil war. As history records in infinite multitudes, civil strife (or succession-legitimacy disputes) combined with foreign invasion is the most potent of all brews:

✓ “The assassination [of John the Fearless, Duke of Burgundy at Montereau Bridge in 1419] marked the end of any attempt of a reconciliation between the two factions Armagnacs [House of Valois-Orleans] and Burgundians [House of Valois-Burgundy], thus playing into the hands of Henry V of England. ... [Note: These two factions had

long been in armed strife for control of the throne (1407-1435), John the Fearless had assassinated Louis, Duke of Orleans in Paris in 1407] ... At the death of [Charles VII's] father, Charles VI, the succession was cast into doubt. The Treaty of Troyes, signed by Charles VI in 1420, mandated that the throne pass to the infant King Henry VI of England, the son of the recently deceased Henry V and Catherine of Valois, daughter of Charles VI; however, Frenchmen loyal to the king of France regarded the treaty as invalid on grounds of coercion and Charles VI's diminished mental capacity. For those who did not recognize the treaty and believed the Dauphin Charles to be of legitimate birth [it was rumored that Louis, Duke of Orleans was his father], he was considered to be the rightful heir to the throne. For those who did not recognize his legitimacy, the rightful heir was recognized as Charles, Duke of Orléans, cousin of the Dauphin, who was in English captivity. Only the supporters of Henry VI and the Dauphin Charles were able to enlist sufficient military force to press effectively for their candidates. The English, already in control of northern France, were able to enforce the claim of their king in the regions of France that they occupied. Northern France, including Paris, was thus ruled by an English regent, Henry V's brother, John of Lancaster, 1<sup>st</sup> Duke of Bedford, based in Normandy.” – from Wikipedia article, “Charles VII of France,” captured October 21, 2019.<sup>9</sup>

And then the Concierge used an Intervention Potential and Joan of Arc arrived in Chinon.

- Inherent Failure: A question to ponder. Would we have survived the Cold War if the Soviet Union had not *collapsed*? Would we have survived the Cold War if Western strategists had not seen that the Soviet system would eventually fail (and as George Kennan pointed out, the Soviets were in no hurry as they believed their triumph inevitable) and designed a plan of containment of Soviet expansion until that time?
  - ✓ The Soviets began at a huge disadvantage. The allies controlled three of the four major industrial centers at the end of WWII: Japan, The United States, and Western Europe along with the oil in the Middle East and naval superiority along with probable air superiority. The Soviets spent more of their GDP supporting a huge army and supported a navy, air and missile forces sufficient to give NATO short term problems in case of war, but they were never able to convert that into gains. Over time, the industrial and technological disparity with the West more than offset their ground force.

How do you think the Cold War plays out if the Soviets had worked out a better system or if the West were not an economic-industrial-technological-military bulwark? Would the world have survived the Cold War if there were no Sino-Soviet split? It seems that we may have survived the Cold War *because of the failure and inequity of our systems* and the marginal foresight and restraint of our leaders. We survived the Cold War in spite of ourselves, not because of ourselves. This simple realization is the first step. It started with breaking the historical feedback cycle in October 1962.

- ✓ “Self-preservation is not a bad foundation for victory...” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 454.

*“A society has collapsed when it displays a rapid, significant loss of an established level of sociopolitical complexity.”*

– Joseph Tainter, *The Collapse of Complex Societies* (1988), p. 17

**Diminishing Returns:** Dr. Joseph Tainter is a professor at Utah State University and is the pioneer of General Systems Collapse Theory, of which societal complexity, problem solving, and diminishing returns for the energy expended are the main culprits of societal collapse. **GGDM may be Exhibit A for your inspection:** every aspect of civilization simulated, every problem or issue solved in the pursuit of simulation, plus the years of living and exposure to new ideas, has produced a macrosocial game that pushes the absolute bounds of complexity in simulations, and has probably reached the point of diminishing returns for both the designer and players.

- ✓ If GGDM were ever considered a social theory or even a set of social generalizations, Thorngate’s Postulate would have something similar to say about it: “It is impossible for a theory of social behaviour to be simultaneously general, simple or parsimonious, and accurate.” See also *Time After Time*, 2 Information, p. 1351, *infra*.

**Why Not?:** “Why not” is the most important question civilization must answer to keep order from top to bottom, from personal and informal relationships, etiquette to formal legal, government, and business proceedings. It is functionally equivalent to *Camus’ question about suicide*.

- ✓ For example, in 1867-1868, there was a widely disruptive, social/political movement in Japan called *ee ja nai ka* – which translates as “why not,” “what the hell,” or “who cares”? In a country then very strictly governed by defined social order, fatalistic codes of honor (e.g., 47 Ronin), oppressive etiquette, customs, from top to bottom, birth to death, and ruled by a failing xenophobic, isolationist, militaristic feudal government (shogunate), the youth asking *ee ja nai ka* of their elders was the ultimate protest. Reputedly, they danced, drank, sang, partied, had promiscuous sex, cross dressed, went naked in the streets, and eventually turned to mob violence, practically abandoning their former daily lives from the summer of 1867 to the spring of 1868. Eventually, the youth sort of discovered the answer to “why not” on their own, and order was restored by the new Meiji government. Does any of this sound familiar?

The answers to the Why Not question are what causes many people to feel imprisoned by civilization; e.g., why not do whatever I feel like, why not go back to sleep, why not get a college degree in Tudor Era Scottish Literature instead of Computer Programming, why not steal, why not murder, why not grow long hair, why not move to another country, why not insult whomever offends me, why not hit my mother if she says something I don’t like? Why Not? is the question of counterculture and political instability, the more repressed a culture, the more explosively it bursts forth into the daylight whenever there is a crack in The Wall. Fortunately, Why Not is a much easier question to answer than “why” (though it sometimes takes awhile); when Why Not? can be answered and the answer is accepted, there is order in civilization, when it cannot, there is counterculture and cultural-political anarchy.

- ✓ If you ask me why I am awake, I cannot say, my answer would probably address why I am not asleep. I can’t get to sleep, I have already slept, or I am not tired; all answers to why I am not asleep. The question works even less when you ask, why do I exist? Not why am I alive, but why do I exist. “Screams of no reply...” – Aerosmith.

The Why Not question significantly overlaps with what are called Ethics, whether they be Confucian or Greek or Judeo-Christian or Hindu – all are ancient and enduring – but I don't think of the Why Not question is being exactly the same, exactly on the same level. Perhaps it is the sociological equivalent of ethical questions?

- **Fed Up Friends:** The Why Not question is the force for change in social outlook and behaviors. To the extent that we feel that people now are less polite, rude, inconsiderate of others, uncouth, low-brow, impatient, shallow, materialistic, frustrated, obscene, etc. on social media or in life, it is because they have not answered the question Why Not be that way or have answered it differently than in times past. The answer evolves slightly this way or that, pushed along by experiences and changing attitudes. Consider the differences in mannerisms:
  - ✓ “[Jack] Barsky [alias, born Albrecht Dittrich] discovered that the people who trained him did not have an authentic understanding of Americans, and he struggled at first with his assignment. ... He also learned that while his English was excellent, he was very pushy and argumentative when dealing with people. He was shocked when he was confronted with this fact by a fed-up friend. He realized that he was essentially too East German to fit in.” – from Wikipedia article, “Jack Barsky,” June 29, 2019.

That was in 1978-1979, before the anonymity of the internet, before social media and a whole lot of other things that happened. Before the world got ‘connected.’ The question is, would the same be true today? In eastern Germany or in the United States? The Jack Barsky types, cloaked in anonymity, rule the internet and social media, but personal mannerisms, face to face are usually not the same – most people would get punched in the mouth if they acted the same in person as they do online.

---

*“There is unrest in the forest,  
There is trouble with the trees,  
For the maples want more sunlight,  
And the oaks ignore their pleas ...  
Now there's no more oak oppression,  
For they passed a noble law,  
And the trees are all kept equal,  
By hatchet, axe, and saw.”*

– Rush, “The Trees” (1978)

---

**Trouble in the Trees:** When a Social or Estate Government Title fails all Conflict Checks, it has lost legitimacy (see Foreclosure of a Dream, 3 Government Titles, p. 615, *infra*). The Government Title then becomes disrupted and no longer functions for the position. Failure of Legitimacy is considered a Disruption Event that will cost the position an Intervention Potential Plus.

- ✓ “Traditionally, presidencies see declining levels of talent as they age. The most talented appointees burn out (and cash in) and are replaced by the B team. But the administration started in a worse place than many of its predecessors. Many Republicans who would normally have been eager to serve under a Republican president hung back when Trump took office. Nothing that has happened since Trump has been in office has made people more willing to serve. More Republicans are sorry they accepted an opportunity to work for Trump than are sorry they turned one

down.” – Ramesh Ponnuru, “Trump’s Vow to Hire the ‘Best People’ Isn’t Panning Out,” Bloomberg, February 14, 2018.

- **Changing of the Gardner:** Each Regular Turn that a Social or Estate Title is disrupted generates an Intervention Potential Plus attached to that position. Further, each turn in which a voluntary or involuntary change of Government Titles occurs or is in process, an Intervention Potential Plus attaches to that position. Participants *may choose* to limit this to one per turn.

*“When in the course of human Events, it becomes necessary for one People to dissolve the Political Bands which have connected them with another, and to assume among the Powers of the Earth, the separate and equal Station to which the Laws of Nature and of Nature’s God entitle them, a decent Respect to the Opinions of Mankind requires that they should declare the causes which impel them to the Separation.”*

– United States Declaration of Independence, July 4, 1776

**Religious Recitals:** Lessons such as the story of Abraham or the preamble to the Declaration of Independence (recited like a religious passage<sup>10</sup>) become bland and lose meaning by repetition generation after generation (see CHILDREN’S GOD, 4 Fallen to Earth, p. 1562, *infra*); there is an insult hidden in the Declaration (i.e. the entire second paragraph) which is missed because it is taught without intellectual context (see self-evident discussion, 1 Beginnings, p. 24, *supra*).

And herein lies the conundrum of modern primary education; that is, that facts are shoved into preadolescent minds and that the measure of educational value at that level is the ability to test well on memorization of facts (e.g., think of the tests you took in school for history class, etc.) rather than understanding (understanding has an emotional element in terms of engagement with the subject). What makes this the Gordian knot is that a basis of facts are required for later understanding, and that preadolescent minds are best at facts and slow to understand. It is thus that each generation must have new writings and new expressions of their own understandings, citing in part to works of previous generations.

What is old is no longer new, enculturation makes ideas, words and phrases like year-old bread. Great success quickly wears away the sharp wit of the new, this is not limited to words alone, consider the following:

- ✓ “All the talentless impersonators and appalling black velvet paintings on display can make him seem little more than a perverse and distant memory. But before Elvis was camp, he was its opposite: a genuine cultural force.... Elvis’s breakthroughs are underappreciated because in this rock-and-roll age, his hard-rocking music and sultry style have triumphed so completely.” – New York Times Archives, “Long Live the King,” August 16, 2002 (article is now hidden behind a subscription wall).

**Rousing the Rabble:** Unsurprisingly, the main source of Disruption Events is population. Disruption Events in GGDM are only normally caused by or applied population on colonies (and Government Titles). A Disruption Event occurs:

- ✓ Whenever population is removed from or added to an existing colony (either voluntarily or involuntarily, excluding the initial Landing of Colony Ships to establish the colony, see Sardine Tins, 3 Expansion, p. 911, *et. seq., infra*) or colonized planet,

- ✓ Whenever population is alarmed or in fear for their lives,
- ✓ Whenever population is lost by any destructive or non-destructive means (for example, population lost due to exceeding the Maximum Habitability of the colony planet, see Dayworld, 3 Taxation & Census, p. 315, *infra*), and/or
- ✓ Whenever a colony or colony ships are captured or destroyed (see Planet Narn, 3 Taxation & Census, p. 316, and Combat generally, *infra*).

Any of these Disruption Events may result in inactivation of Constructural Elements (that is, it is considered a Disruption Event regardless of whether any Constructural Elements are inactivated as a result), plus secondary effects, and generation of a single Intervention Potential Plus (IP+) for the event. Each Disruption Event can only occur at each colony once per Turn Cycle (see definition in Buzzing Lightyears, 4 The Streams of Time, p. 101, *supra*); that is, the time from the owner's last Regular Turn to the end of the owner's current Regular Turn.

- ✓ For the effects of inactivation of Constructural Elements, see 2 Constructural Elements, pp. 190, 193, *supra*.

A Besieged Colony's Constructural Elements cannot be effected by the blockading warships during a Turn Cycle where the colony began besieged (see Besieged Colonies, 3 The Sidereal Stage, p. 124, *supra*), however, the besieged colony can suffer a *Disruption Event* as a result of the loss of a Ship to Ship combat on the same Regular Turn it becomes besieged; additionally, a colony that begins the Turn Cycle besieged may be affected by *other Disruption Events* resulting in the loss of population, industry and such from Raids/Strikes (see World in Flames, 4 Carriers & Fighters, pp. 1083-1088, *infra*), Special Operations Black-ops (see 2 Special Operations, p. 1297, *infra*) and so forth. A colony that has a current, ongoing Ground Combat situation is not a besieged colony. A Besieged Colony can also be affected by Concierge use of Interventions (in fact, that's half the fun of it!☺).

- Interesting Times: Whenever a Disruption Event occurs at a colony, at the moment of the Disruption, one check is made for each active Epistemological, Symbolic and Ideological Constructural Element (Temporal Constructural Elements are not checked). The check is always made in the form of a percentage chance that each *active* Constructural Element will become *inactive* at the site of the Disruption Event (sorry, it never works the other way!).
  - ✓ The percentage is calculated as a base percentage ('chance'), which varies by situation, plus 3% per Government Title over three (that is, plus 3% for four Titles and plus 6% for five Titles) regardless of the Title's current status.
  - ✓ Additionally, 5% is added per currently disrupted Government Title.
  - ✓ Finally, 2% is added if the position had any Disruption Event the previous Turn Cycle and 8% is added if the same colony had a Disruption Event the previous Turn Cycle.

Constructural Elements may also be inactivated by adverse News Events, *which is not a Disruption Event*. This is, as mentioned previously in Keep the Sand in the Sandbox, 2 Dreamtime, p. 147, *supra*, self-policing, in that if positions constantly target Constructural Elements as the effects of adverse News Events, the game will grind to a halt or will suffer creeping paralysis, lurching and stopping, because of Power Activation failures and positions spending their actions and resources Cohering (see 5 Culture, p. 421, *infra*) every Regular Turn.

- Highschool Friends: On any Regular Turn in which at least one population factor is Loaded from a colony to Colony Ships (see Sardine Tins, 3 Expansion, p. 911, *infra*), the base

chance of disruption is 2%. This applies no matter how much population are Loaded to Colony Ships. Additionally, population Loaded to Colony Ships carry with them the current activated Constructural Elements of their origin world.

- The New Neighbors: On any Regular Turn in which population is Unloaded onto an existing colony of the same Native Population Type (see Opening the Can Of..., 3 Expansion, p. 914, *infra*), the base chance of disruption is 5%. This check is made only for the largest population group, which is either the population of the existing colony before the Unloading or the population of the Colony Ships. The final active Constructural Elements of the largest population group will become the active Constructural Elements of the final combined colony population.

- ✓ For historical discussion, see The Great Drama, 1 Expansion, p. 880, *infra*.

- Forced Balkanization: Any time population is Landed from Colony Ships onto a planet which has an existing colony of a different Native Population Type (see Balkanized Colony Planets, 2 Order, p. 541 and Survival & Ethical Dilemmas, 4 Expansion, p. 923, *infra*), no matter who owns the preexisting colony(s), a check must be made for each colony on the planet and for the newly-landed colony.

- ✓ The Diaspora, The Exodus to Palestine, the English Protestant colonization of Northern Ireland are some historical examples of the many hundreds of forced colonizations and forced or unforced mass emigrations (such as the arrival of the Huns in Western Europe). All have led to ‘troubles’ for decades or centuries afterward.

- See The Great Drama, 1 Expansion, p., 880, *infra*, for additional discussion of the Hunnic migration.

This becomes a Disruption Event for all positions that own colonies on the planet (thus forcing IP+ assessments against others). If the other positions gave permission for the Landing beforehand (this should have been communicated to the Concierge previous to the Landing), the base chance of disruption is 4%; if the Landing is *hostile* (like your dad when you ‘barrow’ his car without asking) the base chance of disruption is 8%. Afterward, the separate colonies *do not share or combine* active Constructural Elements; to each his own grumbles.

Forced Balkanization only applies to Landing colony ships on the surface of the planet; moving alien population from into Orbital Cities does not trigger a Disruption Event.

- Peaches for Mad Molly: On any turn in which a Census occurs and population growth is lost at a sovereign colony *on the planet surface* as a result of the population exceeding the colony planet’s current Maximum Habitability, the base chance of disruption is 3%.

- ✓ In any instance in which population on the surface colony is lost due to reduction in the planet’s Maximum Habitability *without* a reduction in Habitability Class, the base chance of disruption is 5%.

- ✓ In any instance in which a reduction of Habitability Class occurred *with or without* a reduction in Maximum Habitability, the base chance of disruption is 8%.

- ✓ If both occurred at same time, the base chance is 15%.

The cause of the Disruption Event here is irrelevant, but *multiple Disruption Event checks of different kinds can occur* if the reduction was a result of hostile actions.

- ✓ “Peaches for Mad Molly” is the classic 1988 sci-fi story of global overpopulation by Steve Gould.
- ✓ “Relatively few observers pinpointed the inherent dangers of dramatic population growth until English economist and social critic Thomas Malthus (1766-1834) published his *Essay on Populations* in 1798. Malthus was among the first to make a mathematical correlation between food supply and demographic expansion.... Nineteenth century so-called progressive theoreticians built their own implications on to Malthus’ findings. They believed that the best way to avoid future universal calamity was by keeping the poor at subsistence levels. Let nature take its course and seize the weak. Between 1715 and 1789, however, a few west-European regions seem to have taken voluntary steps to avoid the Malthusian peril. The Dutch Netherlands were commercially rich and urban; Denmark was agriculturally rich and rural....

Within larger states, certain well-to-do provinces grew less rapidly than others. The reasons were neither high mortality nor fears of catastrophe. These regions had no agricultural frontier and were not industrializing rapidly. While opportunities were limited, residents lived well enough. They appear to have instituted family planning in order to keep things that way.” – Raymond Birn, *Crisis, Absolutism, Revolution: Europe 1648 to 1789* (2<sup>nd</sup> Ed., 1992), p. 205.

- Vesta and Tellus: In each instance in which populations perish due to the destruction of Colony Ships by any means (excluding Landing), a Disruption Check is made at the colony from whence the population *originated*. ‘Instance’ is always at the judgment of the Concierge...
  - ✓ The base chance of disruption is 2% if the cause of the destruction is unknown at the time of the Disruption Event, or 4% if the colonist are known to have been destroyed by aliens (the Concierge may have to make a determination on this).
  - ✓ Additionally, if an Orbital City or Orbital Shipyard is destroyed, each colony on the planet below must make a Disruption Check with a base chance of 3% if the population type of the Orbital Platform was not the same as the population type of the colony, or 10% if the population type was the same as the population type of the colony on the planet below. Shipyards have the population type of their owner.
- Mars Bombing Run: Each time surface population of a colony is killed /destroyed by hostile action (including Special Operations Black-ops and Looting), a Disruption Check must be made on that colony. In Orbital Bombardment one check is made for each ship.
  - ✓ The base chance of disruption is 15% or the percentage of the colony’s total population (as of the start of the turn) that was destroyed that instance, whichever is greater. If ten population factors were killed out of a starting population of 20, the base chance of disruption of each active Constructural Element would be 50% (collapse).

This scenario could easily generate multiple Disruption Events on a single colony in a situation if, for example, the colony planet also lost Habitability Class as well.

In situations where the entire colony is in Orbital Cities, or where the population in Orbital Cities greatly exceeds the population on the surface, the Concierge may find this a more appropriate disruption check for loss of orbital population than the one detailed in the Vesta and Tellus section, *ut supra*.

- ✓ [Calvin screaming] “Ahhhhhhhhhhhh!” [then calmly] “This has been a test of the Emergency Broadcast System. Had this been an actual emergency, we would have fled in terror and you would not have been informed.” – Calvin & Hobbs (comic).
- The Burning Sky: The base chance of disruption of Constructural Elements in any instance in which the owner of the colony retreated from or was eliminated in Ship Combat (including non-warships, except Scouts) in the system where the colony is located, is 10%.
  - ✓ If all colony Defense Bases were eliminated in Colony Combat or if alien warships arrived recently and the colony has no Defense Bases, the base chance of inactivation of each Constructural Element is 20%.
  - ✓ If the Ship or Colony Combat was a First Contact (see Bump in the Night, 1 Diplomacy, p. 1099, *infra*), 5% is added to the base.

In either situation, the enemy is left in control – whether or not they remain present – of the system space and/or orbital space around the colony. It is possible that a single colony may be subjected to both sorts of Disruption Events if the owner lost both a Ship Combat and Colony Combat in the same Turn Cycle (see Panic Bells, It’s Red Alert, 2 Combat, p. 960, *infra*). Additionally, other Disruption events may affect the colony if Ground Combat was fought, populations were killed or industry destroyed in the same Turn Cycle.

- ✓ Probing defense does not count as a Ship Combat, regardless of results, and thus cannot cause a Disruption Event at the target colony (see Alien Probes, 2 Information, p. 1346, *infra*).
- Downfall: The base chance for inactivation of each Constructural Element *at the end of* any Regular Turn in which there is an ongoing Ground Combat at the colony, is 20%.
  - ✓ If at the end of the turn processing, the enemy/invader force is larger than the defending ground forces (i.e. ‘we’re losing’), 5% is added to each chance of disruption.
  - ✓ If the total RP value of the invading forces (including fighters) exceeds one-third of the RPs that the colony would generate in Taxation as of the end of the turn, an additional 8% modifier is added to the base chance; both modifiers could apply to the same check in the same Regular Turn.
  - ✓ If any industry or a technological device was destroyed during the Ground Combat since the previous Regular Turn, add 10% to the base chance of disruption.
  - ✓ If the defending ground force is larger than the invaders and/or if the owner of the colony controls the orbital space (i.e. no attacking warships present, or is besieged), 2% is subtracted from the chance of inactivation for each Constructural Element.
  - ✓ If the Ground Combat is solely between two population types that previously held colonies on a Balkanized planet and/or if other alien ground forces are assisting the defenders, 3% is subtracted from the overall chance of inactivation.<sup>11</sup>
    - “The downfall of any powerful nation is a tragic spectacle but few observers were moved to pity for Germany.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 956.<sup>12</sup>
- Extinguishing the Light: Constructural Element inactivation rolls relating to Colleges or Corporate/MegaCorporate Headquarters are only made for the Host Colony, but are made for at the end of the Regular Turn after the event plus two to four turns afterward.

- ✓ The base chance of inactivation of Constructural Elements on a colony Hosting a College following the destruction, removal or dissolution of the College is 10%.
  - ✓ On each turn in which the College has no Endowment, the base chance is 5%.
  - ✓ In the event of a removal, dissolution or destruction of a Corporate or MegaCorporate Headquarters, the Host colony's deactivation rolls are at 5%.
- Barrowing the Future: On any Regular Turn in which Taxation of the colony takes more than is allowed by the base rules (that is, dipping into the domestic subsistence of the colony), there is a 10% chance of deactivation of each Constructural Element at the colony. Generally speaking this should not be allowed to be abrogated by the Writ authorizing the excessive taxation of the colony (but this is left to the judgment of the Concierge).
- ✓ “The deal would, indeed, do some good. And Senate leaders deserve credit for talking to one another and dealing in good faith, a model the House and the White House have resisted. Too bad it all had to come at the cost of more debt, confirming yet again that the only time Washington's leaders appear able to shake hands on big deals is when both sides agree to run up the national tab....
- All of these things are good. Congress should have agreed on them months ago. But they are what used to be considered the easy part. Instead of raising revenue or reforming big entitlement programs – or, ideally, both – to pay fully for government operations, senators would add billions more to the debt. Though they would offset some of the proposal's cost, they would not come close to covering all of it....
- The deal reconfirms that there is a lot of agreement about what the government should be doing and, therefore, roughly how large it will remain. Lawmakers differ only in their degrees of denial about how much it costs to provide the services Americans expect. One month, Republicans pass a massive tax cut that will add more than \$1 trillion to the debt; next, Democrats join them on a budget plan that hikes spending. The result is a big, unsustainable gap between revenue and outlays – just as the nation should be husbanding its resources for the next economic crisis and preparing to pay for the baby boomers' retirement.” – Editorial Board, “McConnell and Schumer celebrate a budget deal that denies reality,” Washington Post, February 7, 2018.
- 'Til We Meet Again: Any Constructural Element inactivation rolls applying to a colony at the time it is captured (or reverted) are applied *before* transfer of sovereignty. The Constructural Elements of a Conquered Colony are aligned with those of either their former owner or of the position representing their Native Population Type (this is a judgment call for the Concierge), and thus, the Conquered or Converted Colony doesn't automatically assume the ideology, symbolism or epistemology of the new owners; even if captured (or liberated) by the previous owners or the position representing their Native Population type, the colonist outlook will be different, especially if a long period has passed since the last capture and/or the colony has been significantly altered.
- The Way of the Dodo: A colony whose population *is completely destroyed* by hostile action or environmental (habitability class) failure still generates an Intervention Potential Plus (IP+) attached to the former colony's owner and the position representing the Native Population Type (one IP+ if same), but obviously loses all of its Constructural Elements, including the Temporal Constructural Element and thus there is no necessity for deactivation rolls.

There is some potential hair splitting that invites the interventional judgment of the Concierge. For example, if populations remain in Orbital Cities, but the surface population has been eliminated by hostile act or environmental failure, has the colony been destroyed or do the Orbital Populations suffer the Disruption Checks? What difference is there if the Orbital Populations are not the same Native Population Type as the surface populations, or whether they are Naturalized Populations or not? This is a situation that is probably more appropriately resolved by use of Intervention Potentials by the Concierge to ‘shape’ the situation rather than by dicey rolls.

---

*“Taking the socio-spatial dialectic seriously means that we recognize that the geographies in which we live can have negative as well as positive consequences on practically everything we do. Foucault captured this by showing how the intersection of space, knowledge, and power can be both oppressive and enabling.”*

– Edward Soja, “The City and Spatial Justice,” JSSJ, January 2009

---

**Immoral History:** Before getting wrapped around a moral axle about Forced Balkanization (which is addressed several times throughout GGDM), participants should realize that ‘resettlement’ has been *the* driving force of human history. Sometimes it is a result of catastrophic depopulation due to disease, famine or war, sometimes it is the result of seemingly spontaneous mass migration, and more often than not, it is a result of coercion (e.g., ethnic cleansing).

- ✓ It is very difficult to morally repudiate with seriousness the history that put you here. For example, if Philip of Macedon’s guard captain had been doing his job at the royal wedding, we would not have Kickstarter campaigns in 2019 for board games such as Successors or Cleopatra and the Society of Architects!☺

The Germans were much maligned for their plan to resettle German population into eastern areas that they conquered (subordinating, eliminating or displacing the existing non-Germanic occupants), but the Roman and ancient Chinese empires got there first, and Germany’s own ancestors followed suit in the twilight of the Western Roman Empire. The Romans were particularly diligent at resettling Italian populations into Noricum, Pannonia, North Africa, Gaul, Britain, and Romanizing or Hellenizing existing indigenous population through contact.

The spread of humans across the Earth is a result of resettlement after resettlement (e.g., drought and migration causing the Hittite-Egyptian Late Bronze Age collapse) and the same concept is inherent in space science-fiction and much post-apocalyptic science fiction trope regardless of whether alien races are involved or not. No one is defending immoral conduct, I would not stand up and defend the displacement of the Native Americans (where the very same process was at work before the arrival of the Europeans, e.g., the history of the Mexica), but it is history and it would be difficult for us to repudiate the processes and results that led to you reading this now.

- ✓ There are historical processes in humanity (and in all lifeforms) that both predates and trumps the concept of morality in most respects, and the development of morality is just another one of those competing historical processes of sapience. Morality is not usually a concept applied to gravity or to a lynx catching a field mouse in the snow (a scene in Carnuntum – Metropolis in the Land of the Barbarians (documentary, 2006) though I strongly suspected the scene was a setup and not chance nature filming, was it immoral?).

**Expatriation:** Below are special circumstances that adds to the Base Percentage of or triggers additional Disruption Event for those populations. For Naturalized Population, this acts as an additional Disruption Event to whatever other events may affect them. One Intervention Potential is assessed against the current ‘owner’ (sovereign) of the populations *and* one Intervention Potential Plus against the position representing the Native Population type.

- Eviction Notice: On any Regular Turn in which population is removed from a Conquered or Converted Colony, the base chance of disruption of current active Constructural Elements is increased by 5% (see Highschool Friends, *ut supra*, p. 272). This applies no matter how much population is Loaded to Colony Ships. Additionally, population Loaded to Colony Ships carry with them the current activated Constructural Elements of their source world.
- Hagar’s Faucet: On any Regular Turn in which a Conquered Colony is Looted (see 3 Commerce, p. 1210, *infra*), there is a 25% chance of deactivation of any remaining active Constructural Elements at the colony on that Regular Turn, in addition to all other checks.
  - ✓ In one of my favorite cartoons, Hagar the Horrible returns from raiding Paris with a present for his wife, a faucet he looted in Paris. The faucet doesn’t work – absent the plumbing it was attached to, and he says, ‘I don’t understand, it worked in Paris!’
- Trail of Tears: In the case of Minor Races, the Concierge may make a judgment call regarding assessing the IP+ against any position. Example, if a Major Position has placed the Minor Race under its protection; an Intervention Potential Plus may be assessed against that position due to loss of prestige from allowing the Minor Race to be forcibly removed from their Homeworld. In other situations, if the removal is repugnant to the position making the eviction, an IP+ might be assessed against that position. In many cases, where the Minor Race has no relationship to anyone, the Concierge may instead generate Intervention Potentials.
  - ✓ A strong sense of collective guilt and remorse regarding the Native Americans swept over America after the Wounded Knee Massacre and the closing of the Western Frontier in 1896, which played into the early 20<sup>th</sup> Century Temperance and Pacifist Movements; renewed and amplified by the revealed horrors of the Jewish Holocaust and the atomic bombing of Japan, became an important element of the counterculture, modern Feminist, Civil Rights, and anti-Vietnam protests and movements (e.g., Paul Revere & The Raiders’ song “Indian Reservation” (1971)), eventually fading away in the afterglow of the end of the Cold War in 1989-1992.

Endnotes.

<sup>1</sup> Citation: “‘People thought in ’09, ’10, ’11, that the country couldn’t be divided more. And you go back to Obama’s campaign in 2008, you know, he was talking about the divide and healing the country and all of that. And some would argue on the right that he did more to divide the country than to unite it. I kind of reject that notion.’ Why is that? ‘Because it wasn’t him!’ Boehner replies. ‘It was modern-day media, and social media, that kept pushing people further right and further left. People started to figure out ... they could choose where to get their news. And so what do people do? They choose places they agree with, reinforcing the divide.’” – Tina Nguyen, “‘Idiots,’ ‘Anarchists,’ and ‘Assholes’: John Boehner Unloads on Republicans in Post-Retirement Interview,” *Vanity Fair*, October 30, 2017.

<sup>2</sup> Commentary & Citation: Compare the last line to the less apocalyptic feature quote by Bertrand Russel in *2 Constructural Elements*, p. 195, *supra*.

<sup>3</sup> Commentary: Loss of sovereignty does not automatically equate to or trigger complete societal collapse. It can be a factor, a disruption and certainly erodes the subjugated society, for example, any occupied country during WWII.

<sup>4</sup> Commentary: For example, the Khmer Rouge, in the pursuit of ideological goals (an extension of the xenophobic, anti-Western fervor of Maoism), caused the partial collapse of Cambodian society in only four years, killing or driving into exile nearly 1/3 of the population and decapitating the intelligentsia, collapsing the economy, and creating a local disaster. I recommend watching *The Killing Fields* (1985). Invasion by Vietnam ended the nightmare in 1978.

<sup>5</sup> Citation: “An intriguing variation on this last theme has been developed by Phillips (1979). In a statement reminiscent of Gibbon’s views on the Roman Empire, Phillips suggests that ‘In a sense, the problem is not that states collapse (for this happens constantly), but rather that some states last so long...’ (1979: 138). Phillips’ argument is that it takes time for a newly dominant state to use all its resources efficiently, which he defines as ‘...high output or return per unit investment’ (1979: 140). Efficiency ... though, leads to inflexibility in resource allocation. The mechanism is this: a newly dominant state controls a large territorial base, but has not yet developed (or come to depend on) complex institutions that will derive a significant return for this resource base. In such situations, a large proportion of the new resources will always be used in non-critical or low return ways (such as monumental architecture).

This has the consequence of creating a hidden resource reserve that can be used for emergencies, for such non-critical activities are suspendable in a crisis. But through time social and political institutions emerge that use this resource base more fully (in Phillips’ terminology, ‘efficiently’). Eventually, most resources are allocated to support of ‘efficient’ institutions (political offices and the like), leaving no reserves or flexibility in resource allocation. The dominant center is then left susceptible to disruptions, so that ‘...historical accident alone is sufficient to touch off major failures’ (Phillips 1979: 142). A crisis like a revolt, which a newly dominant state would easily control, becomes an insurmountable problem for a more ‘efficient’ society that lacks reserves. Although formulated in regard to Mesoamerica, this argument has applicability elsewhere. The later Roman Empire, for example, succumbed to catastrophes the like of which had been overcome by the early Republic.” – Joseph Tainter, *The Collapse of Complex Societies* (1988), p. 55.

<sup>6</sup> Commentary: In my senior year of undergrad at Point Park College, I proposed a research term paper on the Congo for the first three to six months following independence from Belgium. As I worked, it was clear that the project I had set out was too big for the term paper (I am sure books have been written on the subject). My term paper ended up focusing on the first three weeks following independence, with some events extending to three months. It was during this time that I first conceived and understood the concept of ‘remote acceptance of authority’ which became a major part of the paper. The name of the term paper was “Little Orphan Congo.” I do not have it now; it was an undergrad college paper and not particularly important. “We didn’t start the fire...” (Billy Joel (1989)).

<sup>7</sup> Citation & Commentary: “The Civil War, there’s a great compromise as it’s called. It consists of Southerners admitting freely it’s probably best that the Union wasn’t divided. And the North admits, rather freely, that the South fought bravely for a cause in which it believed. That is a great compromise, we live with that, and that works for us.” – Shelby Foote interview, Book TV C-Span 2, July 26, 1994 (video on YouTube).

<sup>8</sup> Commentary: The DVD has a copyright of 2003, but I have the VCR tape which I found in a bargain bin at K-Mart in the late 1980s. This song is on both, so it was recorded sometime in the 1980s, and though the VCR tape and DVD have the same title, the songs on the DVD are different as is the reenactment footage. It seems that they tried to soften the DVD which has less military songs but adds a live performance by Susan Jackson and an instrumental piece by Mike Lynch that were not on the VCR tape. The CD which is much longer contains the missing songs from the original VCR tape that were not included on the DVD, but not all the songs that are on the DVD!

<sup>9</sup> **Commentary:** Charles VI really screwed the pooch – from the French point of view – by signing or even entertaining the Treaty of Troyes. It’s hard to imagine such a ‘blunder’ from a mentally competent ruler, even in the aftermath of the disastrous French losses at Agincourt in 1415. There certainly were other incidents which called into question the sanity of Charles VI, so it was easy to make the argument that mental incompetence voided the treaty.

- ✓ On the other side of the coin, the Burgundians had always been cool about the whole dispute, except when it came to the Armagnacs. The Burgundians contributed marginal military forces when called upon by the King of France to defend against the English; the Burgundians controlled Flanders which depended on imports of English wool. So the Burgundians tried to play both sides, until Louis, Duke of Orleans was assassinated in Paris in 1407, at which time, the Burgundians went over to the English side because the Armagnacs controlled the French court. The Burgundians handed Joan of Arc over to the English in 1430.
- ✓ “The war’s causes were rooted in the reign of Charles VI of France (Charles V’s eldest son and successor) and a confrontation between two different economic, social and religious systems. On the one hand was France, very strong in agriculture, with a strong feudal and religious system, and on the other was England, a country whose rainy climate favoured pasture and sheep farming and where artisans, the middle classes and cities were important. The Burgundians were in favour of the English model (the more so since the County of Flanders, whose cloth merchants were the main market for English wool, belonged to the Duke of Burgundy), while the Armagnacs defended the French model. In the same way, the Western Schism induced the election of an Armagnac-backed antipope based at Avignon, Pope Clement VII, opposed by the English-backed pope of Rome, Pope Urban VI.” – from Wikipedia article, “Armagnac–Burgundian Civil War,” captured October 21, 2019.

Neither of the faction leaders were direct heirs to the French throne (though both were closely related to the King), so this was not initially a succession dispute. But it became a succession dispute when Charles VI disinherited his son and signed the Treaty of Troyes in 1420 transferring the crown to the English through his daughter’s marriage to and issue by Henry V of England. Then it became really complicated, especially with the horrendous loss of knights suffered by France in two generations of war with English invaders (e.g., Crecy, Poitiers, Agincourt).

- ✓ It took an event like Joan of Arc to essentially cancel the Treaty of Troyes and resolve the succession dispute, while turning the tide against the invaders.

Oh, and there was also the Black Death still raging through Europe while all this was happening, see 1 Disruption, p. 252, *supra*. And completely beyond anything imagined by the participants at that time, the Reformation started on the other side of the border in Germany of the Holy Roman Empire, less than a century after the English victory at Agincourt, and eventually spread west along the *fault lines already established by the Hundred Years War*.

<sup>10</sup> **Commentary & Citation:** This was used to great (if corny) effect in the Star Trek OS episode, “Omega Glory,” where the post-apocalyptic savage natives venerated the American flag and Constitution as objects of religious worship, and recited the Pledge of Allegiance and the Preamble to the Constitution in distorted, garbled, stylized Latin-ese, holy words without meaning, like a prayer or invocation. Despite implausibility, this remains a classic.

<sup>11</sup> **Commentary:** Alien ground invasion stories have been a staple of mostly bad science-fiction literature for the last century, anyone who has seen Independence Day, Pacific Rim, Ender’s Game, Edge of Tomorrow, Battle for Los Angeles, Skyline, or any of thousands of other movies, video games, and television series can picture the devastation and shock – Hollywood is very good at that part – of an alien ground invasion (especially a certain minor race – Humanity). But it all started with The War of the Worlds in 1898; imagine for a moment how novel, how genius, and how telling was the concept of an extraterrestrial invasion of Earth, in 1898? Since most people at that time had heard of and believed that there were enormous artificially constructed canals on Mars, it followed naturally that said canals must have been built by a possibly desperate, but sapient and technologically advanced extraterrestrial (by definition) species. Mr. Wells simply imputed European colonialism onto extraterrestrial sapients. The ending was a clever extension of the havoc wrought by diseases as a result of African colonization and Columbian Exchange.

<sup>12</sup> **Commentary:** “Downfall” is one of those curious terms in our language; it suggests something slightly more epic than “falling down”.... you know, like when you skinned your knee falling off your bike in first grade, you thought it was an epic event at that moment. It’s something slight more than that!☺

*See Appendix DE&A – Disruption Events, Inactive Constructural Elements & Apostasy*

*“The study of the powers that shape, maintain and alter the state is the basis of all political insight and leads to the understanding that the law of power governs the world of states just as the law of gravity governs the physical world.”*

– Ludwig von Rochau

**Schwarze Kapelle:** There is always that ten percent ... as we used to say in the Marines. While colonies can suffer Disruption Events that can cause Constructural Elements at the colony to become *inactive* (see Power Off, 2 Constructural Elements, p. 193, *supra*), Ship Constructural Elements are affected mainly by two sources: Combat losses in crew and psychological fatigue (i.e. attrition) and by contact with colony populations (both friendly and alien). Colony populations can be further affected by losses in Ground Combat (e.g., the WWI generation is called the Lost Generation in Britain<sup>1</sup>).

- ✓ Schwarze Kapelle means ‘black orchestra’ which was the Gestapo’s term for conspirators in the German military and government. The term was re-popularized by the 2004 Germano-Austrian TV movie Stauffenberg, the 2008 movie Valkyrie, and the 2016 Kickstarted board game Black Orchestra. In GGDM terms, they represented groups with ‘inactive’ Constructural Elements (i.e. they tried to kill Hitler).
- **The B-Team:** Suppose that crew replacements for starships were kept frozen or in stasis, to be revived when needed. If you were a crew replacement, and were revived, it would be because whomever you are replacing in the crew has been lost. You would not ask what happened to the one you are replacing, the answer would be obvious, and it would be equally obvious that the replacements are not the ‘A-Team’ or they would not be replacements. They might be the A minus team, but not the best or most experienced, as that would be the original crew.<sup>2</sup> This has been true of replacements in any competitive endeavor throughout history.

That said, however, the Pittsburgh Pirates broadcasters Joe Block and John Wehner, on June 16, 2019, pointed out that sometimes the ‘replacements’ that are called up can be better than expected; the Pirates were forced to call up minor league prospects early due to injury and they won the everyday job by their performance. But generally, there is a reason why the replacements are not the starters... a team can generally expect to lose a little edge with replacements (the ‘Wins Over Replacement’ stat had better be positive or the player will be replaced by their replacement!); bullpen pitchers are not starters for a reason. So, there is room in replacements for an occasional Intervention... or maybe it’s just reflected in some lucky die rolls (or the use of Enlightenment).

- ✓ Whenever a ship survives a combat – that is, the combat ends with the destruction of all enemy units and/or a complete retreat of one side – there is a 15% chance that each Constructural Element on the surviving ships (except the Temporal Constructural Element) will become inactive. This is not the same as The Burning Sky, 2 Disruption, p. 275, *supra*, which applies only to any sovereign colonies left behind.
- ✓ At the end of any Ground Combat in which the defending colony was victorious, there is a 15% chance of each Constructural Element becoming inactive (*ut supra*) at the colony.

- ✓ At the end of any Colony Combat in which the defending colony was victorious, a 5% chance that each Constructural Element becomes inactive at the colony.
- ✓ These latter two are in addition to any preceding or subsequent Disruption Events that may have occurred as a result.
  - “The real miracle of the Marne, in fact, had been the hardihood of French conscripts so recently snatched from home life. They astonished even their own commanders during those first chaotic weeks by enduring casualties, arid privations which might have broken regulars. And therein lies the tragedy of the World War, for it did not take the generals long to adopt a spendthrift attitude toward their living matériel. Losses once regarded as appalling were soon thought inevitable, and the years of attrition saw human lives being ‘traded’ like the pawns of a chess game played by inept opponents.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 728-729.<sup>3</sup>

---

*“Your methods, so far as this court can discern, show what we shall cautiously term an excess of zeal. We cannot condemn zeal. We cannot rebuke an officer who has administered discipline according to the articles of war but the articles are fallible, as any articles are bound to be. No code can cover all contingencies. We cannot put justice aboard our ships in books. Justice and decency are carried in the heart of the captain, or they be not aboard. It is for this reason that the Admiralty has always sought to appoint its officers from the ranks of gentlemen. The court regrets to note that the appointment of Captain William Bligh was, in that respect, a failure.”*

– Court Martial Judge, *Mutiny on the Bounty* (movie, 1962) <sup>4</sup>

---

**Mutiny on the Bounty**: A newly constructed ship has the same Constructural Elements status as the origin colony, the population from whence the original crew is drawn (“naturellement” as Void Captain Genro Kane Gupta would say<sup>5</sup>).

- ✓ A ship located in-system with a Friendly, Naturalized or Converted sovereign colony at the end of any Regular Turn whose inactive Constructural Elements are opposed by matching active Constructural Elements on the colony has a 5% chance that the inactive Constructural Element will change to *active* status.
- ✓ A ship located in a system with a Friendly or Naturalized sovereign colony at the end of any Regular Turn whose active Constructural Elements are opposed by matching inactive Constructural Elements on the colony has a 8% chance that the active Constructural Element will change to *inactive* status.
- ✓ A ship located in a system with a Converted sovereign colony at the end of any Regular Turn whose active Constructural Elements are opposed by matching inactive Constructural Elements on the colony has a 10% chance that the active Constructural Element will change to *inactive* status.
- ✓ In some sense, positions may feel their ships are infected with a ‘mornovirus.’

- ✓ Multiple checks may be made if multiple colonies are in the system (resulting in a flickering of Constructural Elements on ships) even if they are the same planet (e.g., a planet with both a Friendly colony and a sovereign Converted **alien colony**).
  - ✓ Note that the widespread ‘cure’ for inactive Constructural Elements is by activation of the Culture Power for the purpose of Cohering and that the only means of ship Constructural Elements becoming inactive are combat and exposure to (i.e. ‘infection by’) being located at colonies that have inactive Constructural Elements, with the chance that the process could work the other way as well.
- **Gilligan Won’t Go Home:** It is only the opposition of Constructural Elements that causes change, and the changes here only apply to ships, not the colonies; matching Constructural Elements statuses do not invoke these rules. If a ship remains in a system long enough, there likely is a point at which the status of the Constructural Elements of the ship and colony will come to match; I have not the mathematical mind to figure it out (but someone will). Cohering successes can cause a ripple effect to ships at colonies in addition to the possibility that the ships may be directly ‘corrected,’ ‘reeducated,’ by the Cohering Culture Power activation.
- ✓ Are Gilligan and crew really trying to get off the island? Do they actually want to be rescued? Does John Carter want to leave Mars? Does Locke in Lost (2004-2010) really want to be rescued and go back to his wheelchair? Was being stranded in Blue Lagoon awful?
    - “Bligh was impatient to be away, but as Richard Hough observes in his account, he ‘failed to anticipate how his company would react to the severity and austerity of life at sea ... after five dissolute, hedonistic months at Tahiti’” – from Wikipedia article, “Mutiny on the Bounty,” citing to Richard Hough, Captain Bligh and Mr Christian: The Men and the Mutiny (1972).

---

*Captain Bligh: But in Tahiti, the insult lies in the omission of those lewd intentions. Manners that would offend a dock-side harlot seem to be the only acceptable behaviour to King Hitihiti. – Mutiny on the Bounty (movie, 1962) <sup>6</sup>*

---

**Alieney Apostasy:** Any *ship* that Unloads, Loads or Transfers Cargo, Population, *Supplies* or any Enhancements (including Looting and Trucking) to or from a non-sovereign **alien colony** planet (including Orbital Cities – regardless of whether the colony is owned by the position that controls its Native Population Type or whether there is also a sovereign colony on the planet – or *ship or Ground Unit* that participates in Pacification Combat on a Conquered Colony or Orbital Bombardment of any colony, has a chance at the end of the Regular Turn of having one or more active Constructural Elements become *inactive*, regardless of the status of Constructural Elements on the **alien colony**.

- ✓ This effect cannot occur if the Power Activation failed due to inactive Constructural Elements because the acts never occurred. Sometimes bad luck is a good thing.

Landing Colony Ships (see 4 Expansion, p. 920, *et seq., infra*) on a planet that has an existing non-sovereign **alien colony** (i.e. ‘forced Balkanization’) does not fall within the categories listed

above. Additionally, the Colony Ship no longer exists after the Landing (unless participants have modified the basic technology).

**Alien colonies** for this purpose include both Minor Races (see Mathó Thípila, 4 Diplomacy, p. 1140, *infra*) and even colonies of Native Population Types related to the position as a Lost Colonist Primal State (see 6 Beginnings, p. 63, *supra*) and Conquered Colonies being Looted.

- ✓ The chance of each *active* Constructural Element (except the Temporal Constructural Element) becoming *inactive* on the participating ship(s) is 10%.
  - ✓ Checks for non-sovereign **alien colonies** are made before checks for sovereign colonies that may be in the same system or on the same planet. As above, multiple checks may be made if there are numerous qualifying colonies in the system.
- **The *Apostasy***: Constructural Elements converted to *inactive* by contact with a non-sovereign **alien colony** or a Looted Conquered Colony may not be changed to active status by any means until a Census Power activation has occurred for the owning position (probably should be marked in **red** or **glowing green**). ☠ As the ship Constructural Element checks do not occur until the end of the Regular Turn, activation of the Census Power on the same Regular Turn as contact with the **alien colony** is ineffective.<sup>7</sup>
- ✓ “[Trump] even criticized Romney for invoking his faith in making his decision on impeachment. If the whole effort was meant to punish Romney for his apostasy or dissuade him from further acts of disobedience, it doesn’t appear to have worked terribly well. Trump has had great success in keeping the GOP troops in line, but not so much with Romney.” – Aaron Blake, “Analysis: Romney may vote against Trump again – this time with some bite,” Washington Post, March 5, 2020.
- **Don’t Hand Me No Lines & Keep Your Hands to Yourself!**: There are costs to activation of the Census Power beyond Acts, Scenes and use of a Power Activation; some proficiencies may also be lost and some colonies near Maximum Habitability could suffer Disruption Events, see Peaches for Mad Molly, 2 Disruption, p. 273, *supra*, And the Cradle Will Rock, 3 Culture, p. 382, *infra*. Activation of the Census Power represents a turnover of generations in the civilization.
- ✓ Quite frankly, throughout history, sexual and romantic attraction (not saying this will happen between aliens...<sup>8</sup>) have much to do with any form of apostasy, no matter how strictly the term is applied. In GGDM, the term is used and meant in a much wider sense than defined in the dictionary, e.g., Julius Caesar did not ‘lose’ any Constructural Elements over Cleopatra, but Marc Anthony ‘went native’ seduced by both her charms and the potential of grasping a military force to oppose Octavian Caesar. She had children by both men, though Julius Caesar refused to acknowledge his son, Caesarion, and the fate of her sons by Mark Anthony, Alexander Helios and Ptolemy Philadelphus, is disputed, but several Roman writers suggested that Octavian Caesar had Alexander killed before he reached maturity. Cleopatra’s daughter by Mark Anthony married the deposed king of Numidia and co-ruled a Roman territory with him. Her other son, Ptolemy Philadelphus disappeared from history.
    - “But each time we talk, I get the same old thing; Always, ‘No huggee, no kissee until I get a wedding ring!’ My honey, my baby, don’t put my love

upon no shelf; She said, ‘Don’t hand me no lines and keep your hands to yourself’” – Georgia Satellites, “Keep Your Hands to Yourself” (1986).

➤ **Jagged Points:** There is tremendous story potential in this process; apostasy is at the jagged point of rebellion and the Why Not question.<sup>9</sup> GGDM however, does not normally track the Native Population Types of the crew of each ship, but does assume generally that the crews of each ship share the same environment and are compatible (even if alien) and/or that the majority of crews are probably of the owning position’s Native Population Type or from Naturalized populations. See also Valarie and the Fleet of a Thousand Worlds, 1 Carriers & Fighters, p. 1052, *infra*.

Page | 285

✓ **The scene:** A smugly self-satisfied medieval-looking Friar on a starship approaches a planet with a primitive indigenous humanoid population with the intent of converting them.

- **Warrior:** Look blind one, a huge bird [that’s really funny!]
- **Blind Elder:** It is not a bird, my son, but a ship of base metal, and the man inside ... of baser mettle still.

The story does not end well when the gun-toting Friar demonstrates his ‘technological superiority’ to enlighten the natives (that is, in Pittsburgh speak, he was a total jag-off). From Ernie Colón (art & story), “Convert,” p. 62, *Epic Illustrated*, Vol. 1, No. 1, Spring 1980.

---

*“... I often hear the question: How can the United States of America help us today? My reply is as paradoxical as the whole of my life has been: You can help us most of all if you help the Soviet Union on its irreversible, but immensely complicated road to democracy. ... [T]he sooner, the more quickly, and the more peacefully the Soviet Union begins to move along the road toward genuine political pluralism, respect for the rights of nations to their own integrity and to a working – that is a market – economy, the better it will be, not just for Czechs and Slovaks, but for the whole world.”*

– Václav Havel, address at a joint session of the U.S. Congress,  
February 21, 1990

---

**Youth Bulge:** Unsurprisingly, one of the main causes of social disruption is the ‘youth bulge’ – and I am not talking about *that* kind of youth bulge, but it is kind of related... which occurs, generally, when the number of youth in a society *greatly exceeds* the opportunities available for employment, advancement, housing, marriage, wealth, and/or inheritances, i.e. failing economies.’

The bulge, even if temporary in the long view, pushes against the existing order, classically resulting in war, looting, crime, revolutions, extremism, insurgencies/terrorism, genocide, migrations, expansions, exploitation, and sometimes, inventions or improvements in technique. These things, of course, always exist in civilizations – in part because there is always youth, always a new generation pushing up and all economies are failing in some respect– but the pronounced youth bulge in a society is an enhancing factor. The movements have historically become entangled with religion, nationalism, ambition, and colonialism.

The current version of youth bulge results from demographic situations where fertility rate remains high while death and infant mortality rates drop. It also occurs in societies where a significant percentage of the youth are college educated, but stagnated for a number of years, unable to advance in life (a relative term to be sure, but one defined by their learned social expectations). In modern terms, ‘waithood’ or ‘adulthood.’

Mechanization is also considered a contributing cause, at least as to unemployment. In modern developed nations, the population is aging and the working population works into their later years, leaving fewer job openings for youth, but providing, as a tradeoff, a greater overall intellectual, technical expertise and understanding, and experience level.

Within the framework of GGDM (assuming human-like demographics), there are numerous situations where the Concierge may determine that a youth bulge has occurred locally or globally.

- ✓ For example, on a planet Hosting a College, or multiple Colleges, or heavily urbanized, a college educated youth bulge might occur. Also, on a colony where significant population was recently unloaded, it might reasonably be assumed that the new population is younger rather than older, changing the population pyramid significantly. Planets experiencing rapid industrial and urban development should expect population displacement and/or a bulge, especially on Optimal and Hospitable Class planets.

Globally, an activation of the Census Power that is not followed in close temporal proximity by an activation of the Expansion Power might cause a problem.

Be creative. Attempting to avoid ‘youth bulge’ and population pyramid problems by not activating the Census Power or by use of Writs, will surely lead to other sorts of problems.

- Viking Horns: The dense complexity of these factors are demonstrated by the Viking Age, where the Nordic expansion and raiding is attributed variously to a potent combination of:
  - ✓ A Nordic/Scandinavian youth bulge,
  - ✓ The spread of Christianity into Scandinavia,
  - ✓ Improved seafaring skills and ship technology,
  - ✓ The violent overthrow of the Saxons by Charlemagne and suppression of pagans,
  - ✓ Collapse of Eurasian trade routes following the fall of the Roman Empire,
  - ✓ Climate changes (i.e. the Medieval Warm Period to the Little Ice Age),
  - ✓ Lack of arable land in Scandinavia, and
  - ✓ A lack, generally, of organized defenses and central government in Europe after the Roman disintegration.<sup>10</sup>
    - No historical evidence exists that Vikings wore horned helmets. Consensus is that it is a late 19<sup>th</sup> Century romanticization that began with Wagner’s operas. But I was able to use it in the title here because it instantly suggests a commonly-held image that is symbolic of what we think the Vikings were... ‘Viking Horns’ could just as easily represent the two major prongs of Scandinavian expansion in the Middle Ages: Southeast into the

Ukraine (Kiev, Pontic Basin to the Caucasus) and southwest into post-Roman Europe (Frankia, Britain).

- Wossamotta U: According to the U.S. Census Bureau, approximately one-third of the U.S. population aged 25 or older has completed a Bachelors' Degree or higher. According to various sources, if you add those with academic Associates Degrees, the numbers go up to 10% higher. Every major election in the U.S., some politician trots out a promise to make college education free to all or more accessible, groans about the cost of college education, promises to reform student loans or issue forgiveness (much of which has already been done to some degree). But we all know it is not as simple as it sounds, there are already documented social problems with just an increase of 5% over the previous 28% ten years ago.

College-educated youth bulge may lead to a number of collateral social issues such as:

- ✓ *Credentialism*: increasing formal education and certification requirements for jobs without an increase in basic task, knowledge and skill requirements for those jobs,
- ✓ *Education Inflation*: an overall increase in people holding college degrees competing for the same jobs and/or for jobs that previously required lower or no degree or certification,
- ✓ *Grade Inflation or Creep*: upward creep of academic grading, higher grades for the same work that previously was given lower grades, driven by competition between institutions, education inflation and credential creep,
- ✓ *Fake degrees and diploma mills*.

All of which can possibly result in social and economic discrimination against less economically privileged groups and minorities (See this excellent law review article, Johnson, Creola (2006) "Credentialism and the Proliferation of Fake Degrees: The Employer Pretends to Need a Degree; The Employee Pretends to Have One," *Hofstra Labor and Employment Law Journal*: Vol. 23: Is. 2, Article 1. Available at: <http://scholarlycommons.law.hofstra.edu/hlelj/vol23/iss2/1>).

- ✓ See related discussion of the issue of 'publish or perish' pressure and plagiarism, research fraud, proliferation of journals, Paper Bubble, 2 Technology, p. 709, and 1 Information, EN 6, pp. 1337-1338, *infra*.

Thus to sustain higher college education rates, actual employment skills and employment concepts would have to change on a scale equaling the changes that have already occurred in the last century due to increasing basic literacy from mandatory public education: Is there any job you can get now without being able to count, read or write to at least a 7<sup>th</sup> or 8<sup>th</sup> grade level? Most cannot even imagine what it is like to be illiterate now. What happens when you cannot get a job without a college degree?

- Catch-22: When I was young – a teen and into my adulthood – I read the classified job adverts in the newspaper daily (before the internet). Nearly every advert states that applicants need X number of years of experience or don't apply. I shortly realized it was a Catch 22 – if you don't have the experience, you cannot get the job, and if you cannot get the job, you can't get the experience. All of the employers wanted experienced, trained workers, no

one wanted to train; they essentially want to poach each other's workers (literally, this happened at my mother's workplace). I took the third option, I went to college, incurred the debt, struggled, and somehow came out well.

In the summer of 2019, nearly 30 years later, my neighbor, a mother of two seeking to return to the workforce, complained to me about the very same problem. And her plan was similar, she wanted to get trained and licensed in something (quickly) so that she could get a job, even if it required a long daily commute.

---

*“The great achievement of the enlightenment, in Rochau's view, had been to undermine the notion that might equals right in politics. The mistakes that liberals had made however, was to assume that this meant the law of the strong had suddenly evaporated overnight just because it was unjust. When it became a matter of trying to bring down the walls of Jericho, Rochau wrote, ‘The real Realpolitiker thinks that lacking better tools, the most simple pick ax is more effective than the sound of the most powerful trumpets.’”*

---

**How Isaac Met Hari:** Suppose that in the first century A.D., the leadership of the Roman Empire were provided with an outline of the remaining history of the Western Roman Empire and the causes of its downfall, written by someone with two millennia of hindsight? Would the Roman Empire have ‘survived’ (ignoring the obvious temporal paradox) with this knowledge?

- ✓ “What Mr. [Arnold] Toynbee is referring to is much akin to building on a cracked foundation. Or painting over layers of wallpaper. Or physicians prescribing one pill to counter the side effects of another. It just doesn't make sense. It's not rational thinking. It's expensive in the long run. And it doesn't work. The United States of America ... found that out the hard way. Yes, it took many hundreds of years for the foundation to crack, but it still cracked. And they built on top of it over and over again. And what they built is no longer standing.” – J.A. Willoughby, “The Promised Land,” This Side of Center (2014), p. 150 (describing a future history of the United States).

This essentially describes the transition from the Roman Republic to the Roman Empire; the Roman Republic had cracks, the Roman Empire simply painted over them, without changes.

Survival of the late Roman Empire would have required extraordinary and multi-generational united political will, fundamental cultural, political and social changes, technological developments, and enlightened leadership to hold back the oncoming waves of humanity, plagues and famines, economic failures, civil wars and interior deterioration of Roman society. In short,

while some continuous singular political entity might have survived and held most of the territories – avoiding the catastrophic social collapse of classic antiquity – that entity would not be the Roman Empire; the Romans would have to un-become Romans, abandoning many of the characteristics of what we know of as the Roman way. This simply would not have happened; this is a feat that we cannot accomplish even now. And this is how Isaac Asimov met Hari Seldon.

- ✓ Emperor Diocletian in 293 C.E. attempted to fix the political, dynastic and succession problems that troubled the empire every generation and to reverse the trend of military losses at the frontiers. The Tetrarchy lasted only a generation before the cycle of civil war and dynastic ambitions again pushed the Empire to its fall.
- ✓ The Edict of Milan 313 C.E. and the conversion of Constantine the Great to Christianity did not prolong or save the Roman Empire; he in fact destroyed the Tetrarchy of Diocletian (similar to the way a hereditary or dynastic Presidency would destroy our Constitutional Republic) and created the future capital of the empire by renaming Byzantium to Constantinople. It is vaguely possible that in converting to Christianity, the desperate late Roman leadership was *seeking some kind of mystical infusion of the uncompromising, extremist Jewish ethno-nationalism* that had given the Roman Empire serious indigestion for two centuries. It was not to be; the world had changed and Christianity had evolved away from being a Jewish sect (if it ever was). The administrative, currency and military reforms of Constantine I did possibly extend the empire by up to 100 years, until the crossing of the frozen Rhine River by barbarians in December 406 C.E. doomed the Western Roman Empire.
  - “We will never know for sure what Constantine’s true motives were in converting to Christianity. What is certain, however, is that from the moment he had sole power in the West, he ruled as a Christian. He restored Christian property seized during the Great Persecution and enacted legislation that favoured Christians. When he became sole ruler of the empire in 324, he extended similarly pro-Christian policies to the eastern empire, where he not only favoured Christians, but actively discriminated against non-Christians, restricting their ability to worship or fund their temples.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” Aeon, January 30, 2017.
  - The complex, learned Emperor Julian (aka Julian the Philosopher) briefly reasserted traditional Greco-Roman religion from 355-363 and ordered the rebuilding of the Temple in Jerusalem. Julian was a Platonic philosopher and may have reasoned that if the Christians say their strength comes from belief, then Rome could recover by *believing again* in the Greco-Roman religion of the great ancestors. He was the last pagan emperor, and didn’t live long enough to reverse the tide.
- Terminal Patients: At some point, the Roman Empire was in terminal decline, the patient too far gone to have been saved. I doubt there is a historian who would spend a single thought disputing the foregoing. That point may have come as early as 195 A.D. when Emperor Septimius Severus – the victor of the Year of the Five Emperors who put an end to the ‘I’ll-let-

you-be-my-friend-if-you-give-me-your-lunch' 65-day reign of Didius Julianus – had the Roman Senate deify the insane Emperor Commodus whose assassination started the Year of the Five Emperors, and whom the Senate had previously declared a non-person, public enemy following his death. *In A.D. 195, the Roman Senate deified insanity.* Because, Why Not?

- ✓ This the Church learned from the Romans: Beatification and canonization has always been political. Fifty-four of the first fifty-eight Popes were canonized, plus two anti-Popes, before the practice finally petered out in the mid-6<sup>th</sup> Century. The first thirty-five Popes were all canonized. Has the Church ever canonized insanity? Take a closer look at the lives of the Saints (e.g., Saint Ignatius of Loyola, The Ecstasy of Saint Francis of Assisi).<sup>13</sup> Since there can only be one God, they had to invent Saints.

Diocletian's attempt at radical reform in 293 A.D., the Tetrarchy, fell apart in 20 years as the Roman Empire reverted to normal form. The Edicts of Milan (313 A.D.) and Thessalonica (380 A.D.) did not provide enough moral nutrition to make the ailing Empire fight like Pop-eye on a spinach high.

- ✓ Similarly, Washington D.C. voters in 1994 elected the controversial, philandering and compromised, legally troubled, crack cocaine smoking felon Marion Berry to a fourth term as Mayor after he served his federal prison sentence. The nation was shocked.

The United States is proud to have survived nearly 250 years and made a lasting mark on human civilization. The value of that, we shall leave to judgment of future historians. But the United States is still a young country compared to the Roman Republic/Empire-Byzantine Empire together, occupying over 1,800 continuous years of history and other entities of antiquity. The United States of America will not last forever either, and will be the subject of historical and archeological analysis for millennia afterward, as long as there is still someone who remembers us and as long as it still matters.

How does it end? What sort of *historical accident* will tilt the system beyond recovery? Does it end in violent invasion, catastrophic societal collapse, division into regional successor states, or will the United States morph gently into some other entity? Will we simply run out of resources. Or will the concept of sovereign states slowly vanish until none care?<sup>14</sup>

---

*“Friday (Christmas Day). We are having the most extraordinary Christmas Day imaginable. A sort of unarranged and quite unauthorized but perfectly understood and scrupulously observed truce exists between us and our friends in front. The funny thing is it only seems to exist in this part of the battle line – on our right and left we can all hear them firing away as cheerfully as ever. The thing started last night – a bitter cold night, with white frost – soon after dusk when the Germans started shouting ‘Merry Christmas, Englishmen’ to us.*

*Of course our fellows shouted back and presently large numbers of both sides had left their trenches, unarmed, and met in the debatable, shot-riddled, no man's land between the lines. Here the agreement – all on their own – came to be made that we should not fire at each other until after midnight tonight. The men were all fraternizing in the middle (we naturally did not allow them too close to our line) and swapped cigarettes and lies in the utmost good fellowship. Not a shot was fired all night.”*

– Capt. Robert Patrick Miles (King's Shropshire Light Infantry), Christmas Day, 1914  
(d. December 30, 1914)

---

**Christmas Truce 1914:** There is an ‘alternate history’ video on YouTube whose title asked “What if WWI had ended at the Christmas Truce” referring to the 1914 Christmas Truce on the Western Front. The Christmas Truce is the subject of the 2005 French film *Joyeux Noel*. I have not watched the alternate history video, but without doing so, I thought this is an example of dynamics that are beyond human comprehension.

- ✓ “Dear Mother, I am writing from the trenches. It is 11 o’clock in the morning. Beside me is a coke fire, opposite me a ‘dug-out’ (wet) with straw in it. The ground is sloppy in the actual trench, but frozen elsewhere. In my mouth is a pipe presented by the Princess Mary. In the pipe is tobacco. Of course, you say. But wait. In the pipe is German tobacco. Haha, you say, from a prisoner or found in a captured trench. Oh dear, no! From a German soldier. Yes a live German soldier from his own trench. Yesterday the British & Germans met & shook hands in the Ground between the trenches, & exchanged souvenirs, & shook hands. Yes, all day Xmas day, & as I write. Marvellous, isn’t it?” – Henry Williamson (London Rifle Brigade), Christmas Day, 1914.

Page | 291

Let’s call this the ‘un-Disruption’...

To begin, if WWI ended at the Christmas Truce of 1914, we can subtract the millions of casualties incurred in the following years. This means no Lost Generation and the cultural aftereffects of the war; this also means, if you follow some historians, that the French would have had 400,000 more troops in 1940. But never mind that, because a peace in 1914 or January 1915, would have been a much different result than the peace obtained in 1918-1919. The Emperor of Germany would probably have survived, and thus no Weimer Republic, and agitators like the Fascist would have been squashed. If the peace included Russia, then the Tsar survives and the Communist revolutionaries are squashed.

There may have been a WWII, but it would not have been propelled by Fascist and Communist ideologies, it might have been another nationalist-dynastic European conflict. As a result, hegemony does not shift away from Europe and there is no Cold War. Cycling back to the much abbreviated casualty list, those extra men have extra babies, and European population grows that much more overall, not just on the French side. Further, the intellectual and industrial power of those extra population must change things in ways we cannot imagine. The combinations of just these factors quickly spins out of comprehension.

This is not to say that the monarchies would have survived, but the end would have been much different and they probably would have lasted another couple of generations or 50 years as a result of an armistice in January 1915. The British Empire may have collapsed anyway, the Imperial Chinese may have been overthrown anyway, and none of this accounts for Japanese aggression, except that the European monarchies may have put forth more unified, resolute resistance. The United States would not have become involved in European Wars, at least not until much later, would have been more focused on Japan, and technology and concepts would have developed more slowly, as war is frequently the cause of technological acceleration. It is also likely that someone would have invented the atomic bomb anyway as the physics was there around 1920, but the outcome would have been different.

[Over dinner, new Babylon 5 “political officer” Julie Musante asks Sheridan about “lurkers.”]

**John Sheridan:** *It’s our version of the homeless. In many ways, we have the same problem Earth does.*

**Julie Musante:** *Mmm. Earth doesn’t have homeless.*

**Sheridan:** *Excuse me?*

**Musante:** *We don’t have the problem. Yes, there are some “displaced” people, here and there, but, uh... they’ve chosen to be in that position. They’re either lazy, or they’re criminal, or they’re mentally unstable.*

**Sheridan:** *They can’t get a job!*

**Musante:** *EarthGov has promised a job to anyone that wants one. So, if someone doesn’t have a job, they must not want one.*

[Musante runs down a list of all the social problems EarthGov has suddenly solved.]

**Sheridan:** *And, uh w-when exactly did all this happen?*

**Musante:** *When we rewrote the dictionary.*

**Sheridan:** *You can’t deal with the problems by pretending they don’t exist.*

– Babylon 5, “Voices of Authority” (1996)<sup>15</sup>

## Endnotes.

<sup>1</sup> Commentary & Citation: Lost Generation is interesting as a term in that it first referred to the horrendous loss of the young male population during WWI, loss of the promise of the future of England (and France, Germany, Italy, etc.) but later came to apply to the disorientation, unmooring of youth in the post-World War years (both the veterans and those at home) and finally settled specifically upon a clique of expatriate authors, artists and intellectuals who settled in Paris or went to the United States. The Lost Generation term wonderfully covers the spectrum.

✓ From Wikipedia article, “Lost Generation,” January 23, 2019.

<sup>2</sup> Commentary: I am coming in a bit fuzzy here, but I remember seeing a documentary about a first black vs. white basketball game or a basketball game that was widely seen as a racial showdown between all-white and all-black basketball teams. I am sure it was a college game, it probably was not the Secret Game in 1944, probably not the Lakers-Globtrotters game in 1947 (because of strict segregation); it may have also been later in the 1950s. What I remember most, and cannot now find on the internet searches, is an interview with the coach of the all black team, who said (paraphrasing) everyone saw it as a basketball showdown between white and black teams, I wasn’t really thinking about that, I just wanted to put my five best players on the court and they were all black as it happened. I think it must not have been either of the games mentioned previously because it seems the coach had a choice and somewhat accidentally, through player selection, made an ‘all black’ team.

<sup>3</sup> Commentary: As I mentioned to the designer of Verdun: Steel Inferno (2018), Mr. Montross may have been thinking of Charles Mangin “the butcher” when he wrote this text.

<sup>4</sup> Commentary & Citation: The 1984 retelling of the story, The Bounty, pays handsome tribute to Captain Bligh’s open boat voyage of 4,000 miles after he was set adrift with a group of loyalist (I’ve been on the deep Pacific, and I cannot even imagine it), but whitewashes the rest of the story and doesn’t show the deception by which the mutineers kidnapped Tahitian men and women for the voyage. The movie also cuts out before the internecine fighting, ambushes, Tahitian revolt, and homemade alcohol wiped out the men on the island. But you can do the math: The end of the movie indicates (correctly) that when they were found 18 years later, there were 9 women, 23 children and *one surviving man*, John Adams, from the nine mutineers, six Tahitian men and fourteen Tahitian women.

<sup>5</sup> Citation: Norman Spinrad, The Void Captain's Tale (1982), the term occurs 25 times in the book, according to a Kindle Edition search.

<sup>6</sup> Commentary: Likely the use of “King Hitihiti” here is intended to lump the indigenous people of Tahiti under one term and is used derisively, like ‘Jim Crow’ in the old south. Hitihiti, the historical person, was not a king, but a Tahitian “linked to the Puni chiefly line of Bora Bora,” (Jenny Newell) one of three Tahitian men (the others are Tupaia and Taiato) who joined Captain Cook’s second voyage in 1773 and travelled with him for two years stopping at Tonga, Easter Island, and the Marquesas before returning to Tahiti. He remained in Tahiti as a huge celebrity and dined with Captain Bligh of the HMS *Bounty* in 1788 (Bligh had been with Captain Cook previously in Tahiti); Captain Cook also visited him with gifts in 1777. Hitihiti left with the HMS *Pandora*, dispatched in 1790 to apprehend the *Bounty* mutineers, and spent three months in the summer of 1791 searching various islands. The HMS *Pandora* wrecked on the Great Barrier Reef in August 1791, ten mutineers captured by the *Pandora* in Tahiti were returned to England in 1792 and court-martialed. Hitihiti may have gone to rescue the Tahitian men and women kidnapped by trickery (using Captain Cook’s name) by the mutineers in June 1789. Hitihiti’s fate is unknown after that point but he was likely on the HMS *Pandora* when it wrecked.

- ✓ Information from various Wikipedia articles, e.g., “HMS *Pandora*,” “Mutiny on the Bounty,” and “James Cook,” but the most excellent, helpful and direct article on the subject is by Jenny Newell, “Pacific Travelers: The islanders who voyaged with Cook,” *Common Place*, Vol. 5, No. 2, January 2005 (available for free at <http://common-place.org/book/pacific-travelers-the-islanders-who-voyaged-with-cook/>). “Jenny Newell is a curator (Polynesia) in the Department of Africa, Oceania, and the Americas, British Museum. She is writing a doctoral thesis on cross-cultural exchanges and ecology in eighteenth-century Tahiti.” *Id.*

<sup>7</sup> Commentary: There are perhaps a half dozen countries in the world where religious apostasy can officially result in execution; and a few others where it is dealt with informally by religious enforcers and vigilante groups while the government looks the other way. You know which countries those might be already. *It’s a losing argument* and that is why even in countries where it is officially a crime, it rarely results in execution: You are not going to change the apostate’s mind by execution, you are only going to make him dead, *and others wonder why?*

- ✓ There are also secular countries in the world where questioning the supreme leader or placing any authority above that of the supreme leader (or by extension, the government) is a form of secular apostasy that can result in execution or labor camp ‘reeducation.’ You know which countries those might be already. The supreme leader is usually the center of a cult of personality and so far removed from the people as to be godlike and attributed divine grace.

It is the classic question: If you are so confident in your message, what are you afraid of? While apostasy execution is an extreme ideological measure not countenanced in the West, the same question reared its ugly head again in the religious boycott of the 2007 film, *The Golden Compass*. So much so, that the sequels have not been made for fear of religious nitwits.

- ✓ “Why don’t we trust readers? Why don’t we trust filmgoers? Oh, it causes me to shake my head with sorrow that such nitwits could be loose in the world.” – Philip Pullman commenting on the boycott of *The Golden Compass*, David Byers, “Philip Pullman: Catholic boycotters are ‘nitwits,’” *The Times* (London), November 27, 2007.

<sup>8</sup> Commentary: Unless those aliens are fairy-like creatures with ample bosom and buttocks. That always works in comic books.

- ✓ “Yeah fairies wear boots, and you gotta believe me, Yeah, I saw it, I saw it I tell you no lies, Yeah Fairies wear boots and you gotta believe me, I saw it I saw it with my own two eyes...” – Black Sabbath, “Fairies Wear Boots” (1970).

<sup>9</sup> Commentary & Citation: The Why Not question is discussed in 2 Disruption, p. 269, *supra*. The HMS *Bounty* mutineers were asking the Why Not question after five months in Tahiti.

- ✓ **Christian Fletcher**: I have done no more than any natural man would do. **Capt. Bligh**: No. You have done no more than any wild animal would do. It always makes me laugh, but when men lose their self-restraint they say they’re natural. They are more natural than men who have nothing to restrain. ... You will report to the ship immediately. Do you understand me? And you will stay on ship. There will be no more mixing with the degenerate natives of these islands. By any of my officers. Or by any of my crew. You comprehend my meaning, sir? Good. – from *The Bounty* (1984).

- The screenplay writer probably got the idea for this dialogue, which forms the crux of the conflict, from listening to the rationalizations of men accused of rape, sexual harassment or philandering.
- ✓ “In 1998, in advance of a BBC documentary film aimed at Bligh’s rehabilitation, the respective descendants of the captain and Christian feuded over their contrary versions of the truth. Dea Birkett, the programme’s presenter, suggested that ‘Christian versus Bligh has come to represent rebellion versus authoritarianism, a life constrained versus a life of freedom, sexual repression versus sexual licence.’” – from Wikipedia article, “Mutiny on the Bounty,” January 25, 2019, citing to Tim Minogue, “Blighs v. Christians, the 209-year feud,” *The Independent*, March 22, 1998 (article is available free online).
- ✓ “Whatever the truth, this 209-year-old story will run and run. As Kate McAll, the producer of Wednesday’s programme, said: ‘It’s got everything – sex, drugs and flogging. What more could anyone want?’” – *Id.*

<sup>10</sup> Commentary: The greatest Viking who never lived was not Hagar the Horrible, but Charles the Viking, who defeated Harold the Saxon and then a week later repelled William of Normandy, thus securing England as a future Nordic country.

<sup>11</sup> Citation: “But just as a matter of cold realpolitik, I cannot grasp why so many people think it’s a good idea to stand by a man who, if elected, will serve as a negative campaign ad made flesh.” – Jonah Goldberg, *The National Review*, as quoted in the *Washington Post*, November 10, 2017.

<sup>12</sup> Commentary: It is sad and bemusing that in the early days of Magic: The Gathering, people were surprised and annoyed when the rabidly popular game based on collectible cards turned into a reflection of our world: The Haves and the Have Nots. In any competitive exercise, it will come down to the Haves and the Have-Nots, in whatever quality is required to win. In Magic: The Gathering, it was possession of single powerful cards that could make an otherwise average deck design work much better, where the object of the game was the fun and glory of winning regularly and aspirations to the pro-tour. Thus, the single price of those cards skyrocketed and players were dismayed that a single card that cost less than a penny to manufacture sold for hundreds of dollars, they were dismayed to find that the cost of serious play of Magic: The Gathering favored the Haves in our world. Like GGDM, the early days of Magic: The Gathering were educational, unlike GGDM, the education was neither intentional nor free.

<sup>13</sup> Commentary: Had the Axis won WWII, would Hitler (despite his anti-Christian beliefs) have been canonized? Certainly the state would have fully taken over religion, as a necessity of control and legitimization; the Vatican has been criticized for not doing much during WWII, but consider where they are located. If not during Hitler’s lifetime, shortly afterward, it would have been necessary to legitimize the ‘de-Semitismization’ of Europe by claiming it as a triumph of the ‘Christian’ Third Reich; Italy would be eager to maintain its ‘special relationship’ with Germany, and the Vatican would be pressured as would the Patriarch. Hitler would also have been awarded various orders of knighthood (despite his anti-monarchist ideology) to both glorify and placate the Third Reich.

<sup>14</sup> Commentary: Aside from looming global warming, drug resistant microbes and the technological singularity – there are worrying internal signs for those of us attuned to proximate and ultimate causes of history that suggests that the United States is on the downside of its historical cycle, that it has started along a well-trodden path of history – entitlements, oligarchy, increasing security and erosion of rights, apathy, distraction, erosion of power to the Federal Government, tribalism and political theatre, national debt, erosion of military advantage and diplomatic prestige, etc. I am not predicting the imminent demise of the United States, but I think I will not want to live in this country in a century from now; it will not be the place I swore to defend. I probably have lived in the best time.

<sup>15</sup> Citation: Or in the famous Orwell Nineteen Eighty Four quote that has recently become popular again: “The past was erased, the erasure was forgotten, the lie became the truth.” How much history does this describe? A friend said to me, “Orwell always feels timely. Unfortunately.”

- ✓ One of the two forms of a tautology is *a statement that is true by necessity or by virtue of its logical form*. For example, “all bachelors are unmarried,” or “all triangles have three corners” are statements that cannot be disproven or made untrue by anything short of changing the definition of bachelors and triangles (or the prefix tri-, but then what about tripods? triumvirate? tri-centennial?). In the nature of language, of course, you are free to change definitions at any time – the problem is, getting others to accept new definitions and for them to become common in use (and the implications thereof). Sometimes it happens, but it’s a glacial process, not a matter of momentary political convenience.

## **SHARD: III. Around the Campfire**

### The Owl and the Birds

AN OWL, in her wisdom, counseled the Birds that when the acorn first began to sprout, to pull it all up out of the ground and not allow it to grow. She said acorns would produce mistletoe, from which an irremediable poison, the bird-lime, would be extracted and by which they would be captured. The Owl next advised them to pluck up the seed of the flax, which men had sown, as it was a plant which boded no good to them. And, lastly, the Owl, seeing an archer approach, predicted that this man, being on foot, would contrive darts armed with feathers which would fly faster than the wings of the Birds themselves. The Birds gave no credence to these warning words, but considered the Owl to be beside herself and said that she was mad. But afterwards, finding her words were true, they wondered at her knowledge and deemed her to be the wisest of birds. Hence it is that when she appears they look to her as knowing all things, while she no longer gives them advice, but in solitude laments their past folly.

Translated by George Fyler Townsend. Aesop's Fables (p. 69). Amazon Digital Services, Inc.

**Excerpt of Justice Jackson’s Concurring Opinion**  
***Youngstown Sheet & Tube Company v. Sawyer*, 343 U.S. 579 (1952)**

Loose and irresponsible use of adjectives colors all nonlegal and much legal discussion of presidential powers. [343 U.S. 579, 647] “Inherent” powers, “implied” powers, “incidental” powers, “plenary” powers, “war” powers and “emergency” powers are used, often interchangeably and without fixed or ascertainable meanings.

The vagueness and generality of the clauses that set forth presidential powers afford a plausible basis for pressures within and without an administration for presidential action beyond that supported by those whose responsibility it is to defend his actions in court. The claim of inherent and unrestricted presidential powers has long been a persuasive dialectical weapon in political controversy. While it is not surprising that counsel should grasp support from such unadjudicated claims of power, a judge cannot accept self-serving press statements of the attorney for one of the interested parties as authority in answering a constitutional question, even if the advocate was himself. But prudence has counseled that actual reliance on such nebulous claims stop short of provoking a judicial test. [343 U.S. 579, 648]

The Solicitor General, acknowledging that Congress has never authorized the seizure here, says practice of prior Presidents has authorized it. He seeks color of legality from claimed executive precedents, chief of which is President Roosevelt’s seizure on June 9, 1941, of the California plant of the North American Aviation Company. Its superficial similarities with the present case, upon analysis, yield to distinctions so decisive that it [343 U.S. 579, 649] cannot be regarded as even a precedent, much less an authority for the present seizure.

The appeal, however, that we declare the existence of inherent powers ex necessitate to meet an emergency asks us to do what many think would be wise, although [343 U.S. 579, 650] it is something the forefathers omitted. They knew what emergencies were, knew the pressures they engender for authoritative action, knew, too, how they afford a ready pretext for usurpation. We may also suspect that they suspected that emergency powers would tend to kindle emergencies. Aside from suspension of the privilege of the writ of habeas corpus in time of rebellion or invasion, when the public safety may require it, they made no express provision for exercise of extraordinary authority because of a crisis. I do not think we rightfully may so amend their work, and, if we could, I am not convinced it would be wise to do so, although many modern nations have forthrightly recognized that war and economic crises may upset the normal balance between liberty and authority. [343 U.S. 579, 651] Their experience with emergency powers may not be irrelevant to the argument here that we should say that the Executive, of his own volition, can invest himself with undefined emergency powers.

Germany, after the First World War, framed the Weimar Constitution, designed to secure her liberties in the Western tradition. However, the President of the Republic, without concurrence of the Reichstag, was empowered temporarily to suspend any or all individual rights if public safety and order were seriously disturbed or endangered. This proved a temptation to every government, whatever its shade of opinion, and in 13 years suspension of rights was invoked on more than 250 occasions. Finally, Hitler persuaded President Von Hindenberg to suspend all such rights, and they were never restored.

The French Republic provided for a very different kind of emergency government known as the “state of siege.” It differed from the German emergency dictatorship, particularly in that emer-

gency powers could not be assumed at will by the Executive but could only be granted as a parliamentary measure. And it did not, as in Germany, result in a suspension or abrogation of law but was a legal institution governed by special legal rules and terminable by parliamentary authority.

Great Britain also has fought both World Wars under a sort of temporary dictatorship created by legislation. As Parliament is not bound by written constitutional limitations, it established a crisis government simply by [343 U.S. 579, 652] delegation to its Ministers of a larger measure than usual of its own unlimited power, which is exercised under its supervision by Ministers whom it may dismiss. This has been called the “high-water mark in the voluntary surrender of liberty,” but, as Churchill put it, “Parliament stands custodian of these surrendered liberties, and its most sacred duty will be to restore them in their fullness when victory has crowned our exertions and our perseverance.” Thus, parliamentary control made emergency powers compatible with freedom.

This contemporary foreign experience may be inconclusive as to the wisdom of lodging emergency powers somewhere in a modern government. But it suggests that emergency powers are consistent with free government only when their control is lodged elsewhere than in the Executive who exercises them. That is the safeguard that would be nullified by our adoption of the “inherent powers” formula. Nothing in my experience convinces me that such risks are warranted by any real necessity, although such powers would, of course, be an executive convenience.

In the practical working of our Government we already have evolved a technique within the framework of the Constitution by which normal executive powers may be considerably expanded to meet an emergency. Congress may and has granted extraordinary authorities which lie dormant in normal times but may be called into play by the Executive in war or upon proclamation of a national emergency. In 1939, upon congressional request, the Attorney General listed ninety-nine such separate statutory grants by Congress of emergency or wartime executive powers. They were invoked from time to time as need appeared. Under this procedure we retain Government [343 U.S. 579, 653] by law – special, temporary law, perhaps, but law nonetheless. The public may know the extent and limitations of the powers than can be asserted, and persons affected may be informed from the statute of their rights and duties.

In view of the ease, expedition and safety with which Congress can grant and has granted large emergency powers, certainly ample to embrace this crisis, I am quite unimpressed with the argument that we should affirm possession of them without statute. Such power either has no beginning or it has no end. If it exists, it need submit to no legal restraint. I am not alarmed that it would plunge us straightway into dictatorship, but it is at least a step in that wrong direction.

As to whether there is imperative necessity for such powers, it is relevant to note the gap that exists between the President’s paper powers and his real powers. The Constitution does not disclose the measure of the actual controls wielded by the modern presidential office. That instrument must be understood as an Eighteenth-Century sketch of a government hoped for, not as a blueprint of the Government that is. Vast accretions of federal power, eroded from that reserved by the States, have magnified the scope of presidential activity. Subtle shifts take place in the centers of real power that do not show on the face of the Constitution.

Executive power has the advantage of concentration in a single head in whose choice the whole Nation has a part, making him the focus of public hopes and expectations. In drama, magnitude

and finality his decisions so far overshadow any others that almost alone he fills the public eye and ear. No other personality in public life can begin to compete with him in access to the public mind through modern methods of communications. By his prestige as head of state and his influence upon public opinion he exerts a leverage upon those who are supposed [343 U.S. 579, 654] to check and balance his power which often cancels their effectiveness.

Moreover, rise of the party system has made a significant extraconstitutional supplement to real executive power. No appraisal of his necessities is realistic which overlooks that he heads a political system as well as a legal system. Party loyalties and interests, sometimes more binding than law, extend his effective control into branches of government other than his own and he often may win, as a political leader, what he cannot command under the Constitution. Indeed, Woodrow Wilson, commenting on the President as leader both of his party and of the Nation, observed, “If he rightly interpret the national thought and boldly insist upon it, he is irresistible . . . . His office is anything he has the sagacity and force to make it.” I cannot be brought to believe that this country will suffer if the Court refuses further to aggrandize the presidential office, already so potent and so relatively immune from judicial review, at the expense of Congress.

But I have no illusion that any decision by this Court can keep power in the hands of Congress if it is not wise and timely in meeting its problems. A crisis that challenges the President equally, or perhaps primarily, challenges Congress. If not good law, there was worldly wisdom in the maxim attributed to Napoleon that “The tools belong to the man who can use them.” We may say that power to legislate for emergencies belongs in the hands of Congress, but only Congress itself can prevent power from slipping through its fingers.

The essence of our free Government is “leave to live by no man’s leave, underneath the law” – to be governed by those impersonal forces which we call law. Our Government [343 U.S. 579, 655] is fashioned to fulfill this concept so far as humanly possible. The Executive, except for recommendation and veto, has no legislative power. The executive action we have here originates in the individual will of the President and represents an exercise of authority without law. No one, perhaps not even the President, knows the limits of the power he may seek to exert in this instance and the parties affected cannot learn the limit of their rights. We do not know today what powers over labor or property would be claimed to flow from Government possession if we should legalize it, what rights to compensation would be claimed or recognized, or on what contingency it would end. With all its defects, delays and inconveniences, men have discovered no technique for long preserving free government except that the Executive be under the law, and that the law be made by parliamentary deliberations.

Such institutions may be destined to pass away. But it is the duty of the Court to be last, not first, to give them up.

**Sixth mass extinction: The era of ‘biological annihilation’**

Excerpts from article by John D. Sutter, CNN, July 11, 2017

Many scientists say it’s abundantly clear that Earth is entering its sixth mass-extinction event, meaning three-quarters of all species could disappear in the coming centuries.

That’s terrifying, especially since humans are contributing to this shift.

But that’s not even the full picture of the “biological annihilation” people are inflicting on the natural world, according to a study published Monday in the Proceedings of the National Academy of Sciences. Gerardo Ceballos, an ecology professor at the Universidad Nacional Autónoma de México, and his co-authors, including well-known Stanford University biologist Paul Ehrlich, cite striking new evidence that populations of species we thought were common are suffering in unseen ways.

“What is at stake is really the state of humanity,” Ceballos told CNN.

Their key findings: Nearly one-third of the 27,600 land-based mammal, bird, amphibian and reptile species studied are shrinking in terms of their numbers and territorial range. The researchers called that an “extremely high degree of population decay.”

The scientists also looked at a well-studied group of 177 mammal species and found that all of them had lost at least 30% of their territory between 1900 and 2015; more than 40% of those species “experienced severe population declines,” meaning they lost at least 80% of their geographic range during that time.

Looking at the extinction crisis not only in terms of species that are on the brink but also those whose populations and ranges are shrinking helps show that “Earth’s sixth mass extinction is more severe” than previously thought, the authors write. They say a major extinction event is “ongoing.”

“It’s the most comprehensive study of this sort to date that I’m aware of,” said Anthony Barnosky, executive director of the Jasper Ridge Biological Preserve at Stanford University, who was not involved in the study. Its value, Barnosky said, is that it makes visible a phenomenon typically unseen by scientists and the public: that even populations of relatively common species are crashing.

“We’ve got this stuff going on that we can’t really see because we’re not constantly counting numbers of individuals,” he said. “But when you realize that we’ve wiped out 50% of the Earth’s wildlife in the last 40 years, it doesn’t take complicated math to figure out that, if we keep cutting by half every 40 years, pretty soon there’s going to be nothing left.”

Stuart Pimm, chair of conservation ecology at Duke University in North Carolina, summed up the the concept this way: “When I look out over the woods that constitute my view from my window here, I know we no longer have wolves or panthers or black bears wandering around. We have eliminated a lot of species from a lot of areas. So we no longer have a functional set of species across large parts of the planet.”

This is an important point to emphasize, Pimm said. But the new paper’s analysis risks overstating the degree to which extinction events already are occurring, he said, and the research methodology does not have the level of granularity needed to be particularly useful for conservationists.

“What good mapping does is to tell you where you need to act,” Pimm said. “The value of the Ceballos paper is a sense of the problem. But given there’s a problem, what the bloody hell are we going to do about it?”

*“By 1958 (Causes of World War III), [C Wright.] Mills seemed much more concerned with the rise of militarism among the elites than with the hypothesis that many elites were military men. According to Mills, the rise of the military state serves the interests of the elite of industrial societies.*

*For the politician the projection of military power serves as a cover for their lack of vision and innovative leadership. For corporate elites the preparations for war and the projection of military power underwrites their research and development as well as provides a guarantee of stable profits through corporate subsidies. This militarism is inculcated in the population through school room and pulpit patriotism, through manipulation and control of the news, through the cultivation of opinion leaders and unofficial ideology.”*

– Frank Elwell, “C. Wright Mills on the Power Elite” (2013) <sup>1</sup>

**Interstellar Politics:** “Rhetoric is the art of ruling the minds of men” – Plato. One useful definition of politics is ‘the process by which we decide the allocation of resources, who gets what, when and where.’<sup>2</sup> From this process flows all things commonly identified with politics, for example, political power (the authority to decide or the ability to disproportionately influence the debate over resources), ideology (the philosophy upon which the decision to allocate resources might be based), rhetoric (now a derogatory term, but once an important and respected part of Western Civilization and classical learning), popular voting (the novel idea that the people paying the taxes and producing resources should at least have the illusion that they have a say in the allocation of those resources) and of course, conflict and war.

Civilizations live and die on resources. The Late Bronze Age Collapse, Greek Dark Ages, the collapse of Mississippian culture and of Mayan culture, the fall of the Akkadian and Khmer Empires, are all attributable in large part to failure of resources and competition from in-fighting and outside invaders fighting over dwindling resources.

What would make interstellar politics particularly different are the dichotomy of the limited resources of each world, each a unique island in the vast emptiness, and on the other hand, the potentially unlimited resources and expansion and living space available in Galactic Space, if we can just get there. Some have suggested, indeed, that once cultures reach galactic space, there will be no need for war over resources, or living spaces, as it would be easier to go out and get your own resources and living spaces than to war with another and take it from them by force. War would, theoretically, become obsolete and prohibitively expensive; that was the hopeful theme of the New Wave science-fiction movement of the 1960s.

Yet – curiously – most of the interstellar science-fiction trope from the late 1960s onward – in television, movies, and computer games (visual media) features almost endless interstellar warfare fought against the backdrop of great philosophical debates, moral issues, and even reforms. Because without literary content, it would be just senseless warfare and adventure.

- ✓ “While these are agonizing, career-defining decisions for lawmakers, they are also at heart based on cold political calculus. And that must not be lost in the conversation. Most politicians respond more to political incentives than principles. That’s the single most important insight to understanding how Washington really works.” – James Hohmann, “The Daily 202,” The Washington Post, August 9, 2016.<sup>3</sup>

*“Humans relate to nature through production of goods as well as the reproduction of the species. It is through the production process that humans transform nature (the ‘inorganic body’) into products for human use. The reproduction process both assures the continuation of society as well as regulates the amount of resources required from the natural environment. These processes are therefore central in understanding how humans relate to the environment, that is, in understanding human ecology.*

*‘The first premise of all human existence and, therefore, of all history,’ Foster cites Marx and Engels, ‘is that men must be in a position to live in order to be able to ‘make history.’ But life involves before everything else eating and drinking, housing, clothing, and various other things. The first historical act is thus the production of the means to satisfy these needs, the production of material life itself. And indeed this is an historical act, a fundamental condition of all history, which today, as thousands of years ago, must daily and hourly be fulfilled merely in order to sustain human life... the production of life, both of one’s own in labour and of fresh life in procreation... appears as a twofold relation: on the one hand as a natural, on the other hand as a social relation (116).’”*

– Frank Elwell, Macro Social Theory (2009), Kindle Edition, p. 81, quoting John Belamy Foster

**Life, Taxes, Death, and Taxes:** Professor Elwell’s summary succinctly links human production and reproduction as two prongs of nature and social relationships: Taxation & Census in GGDM. Activation of the Taxation Power allows a player to collect resources from *all* eligible colonies on the turn of the activation. Activation of the Census Power allows the position’s native and naturalized populations to ‘grow’ on *all* eligible colonies on the turn of the activation. Actually, taxation and population growth occur constantly/continuously, thus activation of the Taxation and Census Powers in the game only represent the act of ‘looking’ to realize and quantify the production of resources and the growth of populations. The Taxation and Census Powers may each only be activated once per turn, but both could be activated in the same Regular Turn (Census Power processes before Taxation ... if you are feeling greedy).

- ✓ Taxation and Census are very much linked in the world, in many nations one receives a tax benefit for having children. Benefits encourage certain linked behaviors or discourage bad results, such as children in poverty. Cold War Romania remains one of the most extreme examples of taxation used to drive explosive population growth.

Activation of the Census Power requires two Acts and no Scenes, while activation of the Taxation Power requires either three Acts, or two Acts and a Scene placed on the Capital.<sup>4</sup> Additionally, activation of the Census Power likely will cause the loss of Proficiencies on the Public Space (see *And the Cradle Will Rock*, 3 Culture, p. 382, *infra*) as a new generation turns over, thus activation of the Census Power also has a wider effect on the Public Space. The Taxation Power is the second most expensive Power activation, and will usually be processed last in the sequence (see *Clockwork Universe*, *The Streams of Time*, p. 90, *supra*) *except* when the Culture Power is activated to Found a College (see *Foundation*, 1 Colleges, p. 457, *infra*). The ability to either use three Acts or two Acts and a Scene on the Capital Colony provides flexibility.

- ✓ “People should realize that sons no longer send money to their fathers. They are using it as they choose. The government has done well to tax young men.” – King Dinuzulu kaCetshwayo, from *Bhambatha: War Of The Heads* (documentary, 2009).

- **Tax Revolt or Revolting Taxes:** Taxation and Census Power Activations are not targeted to specific colonies or do not affect just a single colony (unless the position has only one colony). Activation of the Taxation and Census Powers, unlike many other Power Activations, is a global event that affects *all eligible* sovereign colonies of the position, even if they cannot grow or contribute (eligibility will be discussed in 2 & 4 Taxation & Census, *infra*). Each colony is checked during Taxation to see whether it obeys the Taxation Power activation (i.e. due to inactive Constructural Elements, see Power Off, 2 Constructural Elements, p. 193, *supra*), some colonies might not pay their taxes. Failure of the Taxation Power activation at any colony does not count as a Power Activation failure for Government Title Conflict Checks (see 3 Government Titles, pp. 613, 615, *infra*) *unless* all eligible sovereign colonies fail Taxation (this could be really bad if you only have one colony...). However, *the Census Power is immune to inactive Constructural Elements* and thus requires no checks at each colony (they will never fail to reproduce) but may result in loss of Proficiencies (*ut supra*). Population on Colony Ships do not grow during the Census Power activation.
- ✓ Although science-fiction trope has posited situations in which an entire species either refuses to or cannot reproduce (e.g., Children of Men (2006) or the Asgard in Stargate SG-1), there are no historical examples that I am aware of where it has actually happened, unlike the millions of instances of refusal to pay taxes or annual tribute:
    - “The passion between the sexes has appeared in every age to be so nearly the same that it may always be considered, in algebraic language, as a given quantity. The great law of necessity which prevents population from increasing in any country beyond the food which it can either produce or acquire, is a law so open to our view...that we cannot for a moment doubt it. The different modes which nature takes to prevent or repress a redundant population do not appear, indeed, to us so certain and regular, but though we cannot always predict the mode we may with certainty predict the fact.” – Thomas Malthus, An Essay on the Principle of Population (1798).
      - *A priori* vs. statistical entropy.

---

*“There’s a building in the Cayman Islands that supposedly houses 12,000 U.S. corporations, which means it is either the largest building in the world or the biggest tax ripoff in the world, and I think we know which one it is.”*

– Sen. Barack Obama, 2007

---

**Tax Shelter:** There is a history of considerable interplay between taxation, business, culture, and the direction of a civilization. Some of it is vaguely addressed in GGDM’s mechanics, but there is room for some variance. Mad Max director George Miller provides a possible example:

- ✓ “Then it changed. We kind of became flavour of the week or flavour of the month in the United States; Australian directors tended to become popular there to some degree, and the government saw that we’re a good way of advertising Australia. And so they started to introduce the tax legislation which brought in tax shelter, which brought in a whole lot of people who were skilled at financing but not skilled as film makers. So the industry took on a degree of cynicism, it matured in one sense but also got cynical.

And so we had a lot of bad films, tax shelter [films]. We reproduced the Canadian system, as much as we tried to avoid it, we reproduced that system. And then people got sick of seeing the historical films, or we ran out of subjects, started to move into more contemporary stories which just didn't [work as well], because our society isn't significantly different enough to American society to really make our stories stand out as contemporary stories. The budgets were so high by now with the tax legislation that you can't make indigenous films for sixty-eight million people, what we call 'parish pump,' more intimate local colloquial stories.

So a lot of that work then went into TV, so in a sense we reproduced what's happened in England. So now as we see it, we have a small population with a degree of maturity in the industry, with a lot of the advantages that come with that and a lot of the disadvantages, but a fairly high degree of cynicism unfortunately, which I think is the death of any industry. And with a lot of the talent going into television, so who knows where we're going to go. A lot of the Australian directors are tending to work in Hollywood, mainly because the budgets are bigger there, and they have a wider range of stories that they can tell." – George Miller as quoted by Anne Billson, "George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview," previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015.

The main difficulty in simulating this in GGDM is the macro-level at which civilization is played in the game. It may be that participants decide that RPs taken from the Treasury for various activations or funding represents tax shelters, tax variances, or tax concessions, participants need to decide what is being represented by one or the other option and why they are different.

---

*"The problem with the census kerfuffle is that it, well, involves the census. The second problem is that it involves gerrymandering and complex calculations that most people inside political circles in Washington don't fully understand. You layer those two things, and it's a recipe for people's eyes glazing over. But, the inclusion of a citizenship question is the kind of thing that could be used to cement the GOP's already very strong advantage when it comes to the composition of the districts we use to elect our representatives. And that's a system the GOP has already gamed to great effect.*

*Given the GOP's existing advantages, some have wagered that the Democrats would never be able to win back the House until they can win power in key states and redraw some of the maps. Those suggestions proved wrong in 2018, but Democrats' hold on the House is and will be tenuous, at best, for the foreseeable future. What adding a citizenship question would potentially do for Republicans is twofold: 1) It could dissuade undocumented immigrants from responding (for fear of disclosing their status to the government), which would dilute their representation and transfer it to areas that are more likely to be Republican-leaning. And 2) It would give Republicans a potential game-changing tool to rejigger maps in the future. The GOP would very much like to draw maps according to citizen voting-age population, rather than total population, because that benefits more rural areas. That's questionable from a constitutional standpoint, but without a citizenship question to give it the data it would need, Republicans can't even really attempt it." – Aaron Blake, "The census is a sleeping giant of a potential Trump administration scandal," Washington Post, June 12, 2019*

---

**Krypton Kerfuffle:** We are accustomed to think that what we see in the game information is absolutely true; e.g., when we look while playing a board game, and see the location and information on our own game pieces, locations, and properties.

And unless the game has decoys and mechanisms that allow players to hide movement or disguise the composition of their forces, we also assume that what we see of enemy or opposing game pieces on the board is also absolutely true, e.g., the white bishop is really there, in that space, projecting those lines of force both ways across the board and there is no chance that it might really be in one space to either side.

While it is likely that information reported to a position about its own civilization, ships and so forth is absolutely true (correct, factual, verifiable), Census and Taxation Power Activations provide special opportunities for provision of less-than-accurate information to players about their own position, e.g., political gain, gerrymandering, local puffery, corruption, avoiding or causing failure of Conflict Checks. Other possible opportunities for Interventions to provide not-quite-true information to position players about their own positions might be research results, ship locations, and even Ground Units (e.g., in 2014, Iraq was paying tens of thousands of non-existent soldiers, local commanders were able to create non-existent soldiers and pocket their pay).

- ✓ “In addition, pursuit was made more difficult, according to Soviet Air Force Captain Aleksandr Zuyev, who defected to the West in 1989, because ten days before Arctic gales had knocked out the key warning radar on the Kamchatka Peninsula. *Furthermore he stated that local officials responsible for repairing the radar lied to Moscow, falsely reporting that they had successfully fixed the radar.* Had this radar been operational, it would have enabled an intercept of the stray airliner roughly two hours earlier with plenty of time for proper identification as a civilian aircraft.” – from Wikipedia article, “Korean Airlines Flight 007,” citing to CBS 60 Minutes program interview which is available on YouTube (emphasis added).

The participants will need to decide as in-game policy whether or not internal position information is absolutely true at all times; in cases where the Concierge has Intervened to present incorrect information to the position players, even if they know it is obviously not correct, they cannot be certain of what is the actual truth or perhaps that what they thought was true previously might not have been (e.g., a sudden drop in population factors in a new Census without external explanation, or ships *en route* arriving at a different destination than expected).

- Customer Service: So many things in our civilization are the opposite of what they are purported to be, the *opposite* of what they are labeled and represented as being. Modern customer support is plagued, *by design*, with know-nothingness and do-nothingness; rather, the agent’s task is to deflect and placate the upset customer and pass the buck up the corporate chain. This makes it easier and attractive to outsource to foreign or low-paid call centers.

Many customer service and government phone numbers are walls to avoid providing service. Some numbers have layers of menus and no way to talk to a person. Recordings, circular menus, recordings; *they don’t actually want to speak to you.* They assume you will eventually hang up. Modern ‘customer service’ is Talk to the Hand because we aren’t listening.

- ✓ Technical support is a joke.... they hire people who know nothing at all, put them in front of a computer and have them work through diagnostic tree menus. Most of them don’t listen to what you say, they are too busy trying to fit square pegs into round holes because they have no technical knowledge or broader understanding.

At a law firm that I worked for, they had an ‘origination fees award committee’ who reviewed new client acquisitions for assignment of origination fees to the attorney who brought

in the new business. In reality, the function of the committee was the opposite of their supposed purpose; they always had an excuse to not award origination fees, for example, they would claim that the new client called due to phonebook advertising by the firm or that they never received the forms. Their job was delay and obstruction, like good defense attorneys, except it was employed against their own producers in satellite offices. The system was not working as intended or was working exactly as intended, depending on your view.

There are opportunities where Concierge Intervention or creative storytelling by the participants may show that Colleges, Institutes, Corporations, and such, are not as claimed.

*“I’ve been watching the recent libertarian conundrum – concerning the morality of using taxes to prevent a killer asteroid from wiping out humanity – with great fascination. For anyone not privy to the whole saga... Essentially, some (uber) libertarians have made it plain that they would rather die with their principles than see some thievin’ gub’mint send up a Bruce Willis-type into space to blow up any asteroid on the back of stolen tax money. ...*

*Lest it be unclear, I am firmly in the camp that proclaims such positions as absurd. Further, it appears that many self-proclaimed libertarians count themselves in the same boat. I’d be worried if they didn’t; it would elevate a **cut-off your-nose-to-spite-your-face** mentality to an astronomical level, so to speak. Now, there have since been some more nuanced defences along the lines of: ‘I would contribute; I just don’t think you can force other people into contributing.’ However, from my perspective these positions still overlook the free-rider problem and ultimately equate to little more than a form of culpable homicide.”*

– Grant McDermott, “Mises’s action ‘axiom’ or false dichotomy?” [grantmcdermott.com](http://grantmcdermott.com) (blog), February 24, 2011 (emphasis in original)

## Endnotes.

<sup>1</sup> Citation: Retrieved from [faculty.rsu.edu](http://faculty.rsu.edu). Dozens of macrosocial essays on various theorists written by Professor Elwell can be found here for free.

<sup>2</sup> Citation: “Someone once said that politics is the second-oldest profession. I’m beginning to think it bears resemblance to the first.” – Ronald Reagan.

<sup>3</sup> Citation: James Hohmann seems to echo Walter Lippman; cf. “With exceptions so rare they are regarded as miracles of nature, successful democratic politicians are insecure and intimidated men. They advance politically only as they placate, appease, bribe, seduce, bamboozle, or otherwise manage to manipulate the demanding and threatening elements in their constituencies. The decisive consideration is not whether the proposition is good but whether it is popular – not whether it will work well and prove itself but whether the active talking constituents like it immediately. Politicians rationalize this servitude by saying that in a democracy public men are the servants of the people.” – Walter Lippmann, Essays in the Public Philosophy (1955).

- ✓ Monarchs, by engaging in 19<sup>th</sup> and 20<sup>th</sup> Century politics were reduced to being modern politicians, stripped of the last visages of their ancient majesty and mystique; engaging in politics also negates the concept of absolute authority, you don’t politic when you have arbitrary, unilateral, unaccountable authority. Emperor Napoleon III had to placate and compromise with religious and secular factions, and appeal to the masses in referendums, and it backfired on him. Modern monarchs are mostly titular only, many are either forbidden from engaging in politics or are of severely-limited constitutional power, leaving as their main means of influence their personal and media appeal to the populace, like, but less than, any modern politician – the modern royals have in most cases, no veto, no budget control, little or no power of appointment and no backroom access. They are living ghosts; retained for national-culture identity and spiritual connection.

<sup>4</sup> Commentary: This choice is given to the position players, there are many cases where the Scene on the Capital Colony may be needed for other tasks, such as Construction, Culture or Commerce Power Activations.

*“Ocean’s dying, plankton’s dying... it’s people. \*Soylent Green is made out of people.\* They’re making our food out of people. Next thing they’ll be breeding us like cattle for food. You’ve gotta tell them. You’ve gotta tell them!”*

– Soylent Green (1973)

**There’s a Signpost Up Ahead:** Consider that very few in our population can now hunt or fish effectively, few would know how to butcher and clean the meat properly, and many don’t even know how to cook. Many would be inept at making fire and shelter. And the part of our population that farms for a living is shockingly small and much of the arable land has disappeared in the last 50 years, turned into malls and suburbs (and probably unrecoverable as arable land). In a catastrophic and long term disruption of the food production, processing and distribution systems, there is not enough wildlife left to meaningfully support the population and canned, processed or frozen foods would be gone within six months to a year. A Malthusian catastrophe of sorts would soon reduce the population to a fraction of the current levels.

**Resources:** It is assumed that all colonies are basically self-sufficient, being as they are, isolated islands separated by vast interstellar space.<sup>1</sup> But all colonies also desire goods and services from other places and will work to make a profit.

- ✓ If you are importing all or most of your food, you’d better have an export that everyone else cannot do without – and a strong navy to insure the food shipments arrive.

Nascent interstellar politico-economics are projected to be similar to those of feudal Europe: Each community centered around a stronghold, castle, or town was essentially self-sufficient in terms of food, survival, essentials – they had fields, serfs or peasants, skilled tradesmen, cattle, oxen, a mill, housing or huts, a member of the clergy who doubled as a medical doctor many times, burial places – with some traffic along rivers, old Roman roads, or rutted dirt tracks and bridges depending on location, providing outside goods, culture and communication.

It is also assumed that colonies must look first to their own infrastructure, civil safety and order, and domestic subsistence, therefore, the amount received in taxation from the colony or any resources carried away in trade activities represents the *excess* production of the colony, ***above and beyond current culturally accepted levels of comfortable living***<sup>2</sup> that is available for the building of an interstellar civilization.<sup>3</sup>

- ✓ “Diet helped determine peasant status as well. Most likely the peasant and his family ate less nourishing and less varied food than his grandparents had. Certainly the family ate less meat, and the caloric content of its porridge and bread was below sixteenth century standards. However, variations were great from country to country and region to region. English renters ate better than French sharecroppers, and a Polish serf or Sicilian day laborer would have considered the diet of a Dutch truck farmer as positively princely.” – Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648 to 1789 (2<sup>nd</sup> Ed., 1992), p. 26, discussing domestic subsistence in 17<sup>th</sup> Century France.
  - Small Beer or Table Beer is believed to have been developed for and provided an important nutritional supplement to lower class diets from the Middle Ages onward to the 18<sup>th</sup> Century; it was consumed with meals by males and females of all ages due to the low alcohol content.

- ✓ “... doubtless some societies would be willing to receive inputs of goods without reciprocating through exportation, but this is obviously difficult to achieve in a world of shortages. Probably the contemporary society that comes closest to this is North Korea, as it lacks a market economy, and can afford comparatively few exports, as the goods of the sort it produces are generally needed at home.” – Kenneth D. Bailey, “Boundary Maintenance in Living Systems Theory and Social Entropy Theory,” *Systems Research and Behavioral Science*, Vol. 25, Is. 5, pp. 587-597, January 7, 2009.
- **Inescapable Logic:** The resources available to a civilization are always a cash flow type problem: Production → Processing (+ initial distribution/transport) → Secondary Distribution/Transport to markets → Consumption/Demand. A society can never consume more than it produces, has and/or brings to market at any given moment (through production, storage and/or importation); that is just inescapable logic. Thus, if aliens peacefully conquered the Earth and prohibited all forms of human transport and travel of more than ten miles, humanity would be limited to what they can produce locally and our systems would collapse.

It is also likely that some resources must be produced regardless of the cost and time, thus great efforts might be spent transporting over long distances or on high end processing for a small return. GGDM does not look at the star system/colony resource process; the game only looks to see what is available to the interstellar government from each planet/colony under its control without questioning the processes – whether equitable/inequitable, wasteful/efficient, polluting/clean, nor the politics or necessity (there is much room here for the Concierge to operate). The distribution, transportation and importation of resources on the interstellar level is addressed in the Commerce section generally, *infra*.

- ✓ “The art of taxation consists in so plucking the goose as to obtain the largest [number] of feathers with the least possible amount of hissing.” – Jean-Baptiste Colbert, Comptroller General of Finances, First Minister of State under Louis XIV of France.
  - Other shortened versions of this include “pluck the goose with a minimum of screeching”; Colbert may have got this idea from Albrecht von Wallenstein, an imperial mercenary commander in the service of Ferdinand I of Austria-Hungary who devised a new system of funding the war by levying ‘war taxes’ on subjugated populations.
- **What You Got, When You Get:** The ‘money’ of the game, the resources immediately available for the use of the interstellar government, are measured in the form of Resource Points, hereafter, “RPs.” While RPs do share many of the same functions as money in the real world, it would be a mistake to think of RPs as simply ‘money’ in the traditional sense. RPs represent instead, all of the kinds of resources available, from raw materials to intellect to time and the faith of the population. RPs represent some things that cannot be obtained with money (such as intellect and population) while ‘money’ only represents the holder’s potential to obtain the resources available at that time in his society, and a rough relative measure of the value of one resource against another. Resources are whatever a culture needs to do a job. Resource Points without people is a pile of rocks in the middle of a field of ragweed. For game convenience, RPs are always measured, added, subtracted, and used in whole units, any fractional units are lost. **RPs must always either be in the Treasury or on a Cargo Ship** (or in some cases, reserved for a specific purpose, but still technically in the Treasury).

- ✓ Fans of Star Trek: TNG refer to the 24<sup>th</sup> century as a ‘resource based economy’ in a meaning that is likely very similar to GGDM’s concept. This discussion was played out in the conversations between Captain Picard (who doesn’t actually use the term) and Ralph Offenhouse, a 20<sup>th</sup> Century money-obsessed human who had been awakened from cryogenic sleep in the episode “The Neutral Zone” (1988). In any event, ST:TNG was always very anti-capitalist in reaction to the 70s and 80s ‘material me money first’ Western culture, and seemed to try to suggest other ways of living and working; Star Trek fans should like GGDM’s resource economy concepts.
  - For many, of course, this borders on socialist-communist messaging; and there is no doubt that the future represented by Star Trek: TNG near the end of the Cold War was implicitly socialist in nature. Unlike many ideologues and pundits, I don’t see any great conspiracy in that suggestion, but I can see why the right has always painted Hollywood as left leaning.
  - Though I watched Star Trek TNG in the early 1990s, I cannot say for certain that it was the inspiration for GGDM’s resource economy. The original Stellar Conquest board game (1975) had Industrial Points (IPs), which I changed to RPs sometime after 2000. I don’t remember why I changed it, but I am sure that Intervention Potentials (IPs) were not added until after 2015, so that was not the reason. Once I changed them to RPs, I naturally began forming the resource-economy arguments to define its meaning in the game. Thanks to Amazon Prime and YouTube, in 2019, I became re-familiarized with Star Trek’s arguments long after I had already formed the resource economy arguments for GGDM.
- Treasury: RPs collected during Taxation are kept in an *imaginary* floating pool of resources called the Treasury. The Treasury is purely fictional, it has *no actual location* and it can’t be captured, looted, or robbed (unlike Ft. Knox).
  - ✓ I used to play a computer game called Lords of Conquest back around 1989-1990. Each position had a Treasury that had a location on the board, if your Treasury was captured, it was looted and added to the conqueror’s Treasury. I am not a big PC gamer, but I think that is the only game I have seen with that mechanic.
    - See also, Avar Ring discussion, 1 Resolution, p. 1466, *infra*. The concept of the Treasury in GGDM is the opposite of the legendary Avar Ring.

The Treasury represents the flow of the economy, the ability to trade information on developments and technologies, the work ethic of the population, and the ability of goods and services to flow along a developed infrastructure in the way that makes a nation and a civilization. Resources from the Treasury are used for activities when Powers are activated, such as for cultural traits pieces, endowing Colleges, researching technologies, and planetary development. However, there are limits to which the resources from the Treasury can be channeled to any particular colony due to the local limitations of time, manpower, and the arrival of materials. Thus, a colony cannot build 500 RPs of ships in a single Regular Turn because your position has 500 RPs in your Treasury! Time and planning are necessary to this game.

- ✓ As a general guide, positions must have RPs in the Treasury before most Power Activations that require RPs because most actions are processed before Taxation in the normal Regular Turn Actions processing sequence.

- ✓ Unlike in the real world, ‘taxes’ in GGDM are paid in resources. You cannot pay the U.S. government taxes in resources; only U.S. currency is accepted for payment of taxes, and this is one way in which the government enforces use of currency (not that it really needs to, the system is self-perpetuating now). Note however, this was not always the case; until a century or two ago (before paper money), even in systems that had metal coin currency, taxes could be paid with goods and services, e.g., it was common through most of history for farmers to pay their lord with part of their crop.<sup>4</sup>
  - Commodities futures allegedly began when Samurai sold future harvests at reduced value for money in the present to cover costs and exigencies.
- ✓ [Interview] “The poll tax was a means of getting the young Zulu men to go and find employment in the mines or construction. Because the Zulus were actually farmers, they didn’t need money, so there was no point in them going to work because they had everything they needed, and also, there were other taxes as well, there was a hut tax, there was a dog tax you can imagine and there was also taxes to man which was actually out of proportion.” – Aurelian Mndaweni (Research & Education Officer), Fort Eshowe Museum, Zululand, from Bhambatha: War Of The Heads (documentary, 2009).
- Aging Resources: Resources don’t last forever; you have 50 apples today, a month from now you will have 50 rotten apples crawling with bugs. While resources are accumulated as ‘points’ in an imaginary pool called the Treasury, at the end of each Regular Turn (or Turn Cycle if Regular Turn Actions are not submitted or processed), between 10% and 30% of RPs *in the Treasury* will be automatically lost due to various general entropic effects (this is not a Concierge Intervention).<sup>5</sup> Five percent will be added to the loss for each disrupted Government Title at the end of the Regular Turn. Even ‘money’ while it arguably lasts forever, will eventually decrease in value due to natural inflation. It may be wise and necessary to accumulate some resources, but the universe is a waiting pool of *nearly infinite resources* – so no need to hoard or go to war – and if we ever get out there, that will be why we go.
  - ✓ RPs on Cargo Ships do not ‘age-out’ so it is possible to end-run the aging process by storing RPs on Cargo Ships. Presumably, they represent hard RPs, not soft RPs, however, RPs loaded onto Cargo Ships become immediately less useful (e.g., you cannot use them to fund Technological Research or recruit Special Operations Missions). If this becomes an abuse in the game (and players should never seek to abuse the mechanics of the game), there are ways of dealing with it in-game, e.g., Interventions.

As automatic entropic effects are already built into the game system through aging of resources, the Concierge should act cautiously in applying Interventions against position Treasuries (e.g., to simulate corruption). Additionally, direct loss of RPs from the Treasury should probably not be allowed as effects in adverse News Events, for the reasons cited above, plus that it is problematical based on the abstract concept of the Treasury. This does not mean that catastrophes cannot happen to good planets, locally affecting RPs.

- ✓ Unlike money, resources are not redeemable or transferrable for anything; you must have the correct resources in the right place at the perfect time. GGDM is intentionally rather blurry on that subject, using a very expansive definition of RPs and generally assuming that the resource conditions are correct when RPs are used for Power

Activations. Thus, RPs seem like money in the game, but there is room for interpretation and Interventions. Additionally, RPs in GGDM age, whereas money never does generally (it isn't around long enough!).

*“Economists, however, have a language all their own when it comes to money. They define it as something that serves as a **medium of exchange**, a **unit of accounting**, and a **store of value**.... In other words, economists largely define money by the functions that it serves. It need not be green and made of paper, and it need not be little metallic discs – money is anything that fills those three essential functions. Now, the best money is also highly convenient – it is light, easy to carry, and can be broken into smaller units for easy exchange.... But most important, it must serve as a medium of exchange, a unit of accounting, and a store of value.”*

– from “Money: The Economic Definition,” retrieved from shmoop.com, November 24, 2017 (emphasis in original text)

**Hrimata Eleison!**: Although resources are and must be the basic economic standard of the game rules, players are free to develop whatever interstellar currency exchange systems they choose, and to bring to the game or develop, whenever practical and workable (and such that value is added to the game, without bogging it down in financial minutia), any of the complex financial systems of the real world. It may also be assumed (unless otherwise specified) that cultures beginning the game have developed and are comfortable with their own monetary systems, which are used to measure and transfer monetary value internally.

- ✓ “Lysander amassed a huge fortune from his victories against the Athenians and brought the riches home to Sparta. For centuries the possession of money was illegal in Lacedaemonia, but the newly minted navy required funds and Persia could not be trusted to maintain financial support. Roman historian Plutarch [Life of Lysander] strongly condemns Lysander’s introduction of money; despite being publicly held, he argues its mere presence corrupted rank-and-file Spartans who witnessed their government’s newfound value for it. Corruption quickly followed; while general Gylippus ferried treasure home, he embezzled a great amount and was condemned to death in absentia.” – from Wikipedia article, “Lysander,” captured July 3, 2019.

There are a number of moving parts to the Spartan situation:

- ✓ It implies that coins were being minted and in wide circulation around Greece (and likely most of the Mediterranean) by 404 B.C. and that the practice was known in Sparta but prohibited for some unknown reasons, perhaps to avoid accumulation of wealth by helots and lesser Spartan families or to avoid Spartan wealth being carried away by *perioikoi* (free traders) and foreigners. Or to avoid naked wealth disparity.
- ✓ The victory in the Peloponnesian War was a cultural-economic kairotic moment in Spartan society; their newfound wealth was mainly expressible in coinage and precious metalware (jewelry, etc.) they took from Athens, food and crafts and labor tribute from Athens allies would come to Sparta instead, easing their food shortages, shifting their economy.
- ✓ Out of political-military, cultural and economic necessity, Sparta was changed by their victory over the Athenians. This is possibly Plutarch’s way of expressing the ‘evils of war’ if he considered Sparta to be an ideal model of civilization.

In the end, what is money, but a number that we use to assign relative economic value to goods and services? An unfortunate side effect is that it is frequently used to assign value to people. Money cannot be used to make anything, other than paper airplanes or to start a fire. Money cannot buy resources that are not there. Money cannot be used to obtain resources that the owner is not willing or able to part with for any amount (though you may well use money to convince others to forcibly take the resources for you). Money cannot be used where the concept doesn't exist. Only resources count, money is just the ability of individuals, governments and groups to command and acquire the resources and goods available in a place and time; their relative 'share' of the pool of available resources. Some pools and shares are bigger than others though.

- ✓ The discussion of money, trade, and interstellar currencies continues in 2 Commerce p. 1205, *infra*. For all game purposes, RPs are used.
- ✓ “Everyday a new sensation, While a million creatures, See their soil turning to dust, *Hrimata Eleison!*” – Xandria, “Nightfall” (2014).

---

*“But [French-born Simon de Brion, Pope] Martin [IV] underestimated the Sicilians’ hatred of the French, and especially of Charles [I of Anjou, King of Sicily, Prince of Achea, Senator of Rome], who ruled from Naples rather than Palermo, where he could have seen the suffering caused by his officials. Charles’ island officials were far removed from his oversight; he did not see the avarice, the rape, theft and murder, nor did he see the high taxes levied against the meager possessions of the peasants, which kept them impoverished, but made no improvement in their lives.”*

– from Wikipedia article, “Sicilian Vespers,” captured November 21, 2018 <sup>6</sup>

---

**The Taxman Cometh:** Taxation is the process of ‘making’ the colonies produce RPs for the Treasury for use in other activities (or collecting RPs from colonies for use in other activities).

- **Resources from Population:** All population factors (native or alien) on all colonies owned by the taxing player, *except* for **Conquered Colonies** (see Colony Politics, *et seq.*, 2 Order, pp. 538-539, *infra*), produce 1 RP for every five factors of population on colonies. Resources from population factors generally represents ‘man hours’ and non-material mental resources rather than the kind produced by hard core Industry, but for the purposes of the game, they all go into one undistinguished pool of resources. Income from populations are calculated per colony (colonies cannot combine); odd or leftover factors are dropped (truncated) and produce nothing. Therefore, a planet with 62 population factors would produce 12 RPs, which then go to the Treasury.
- **Resources from Industry:** The production of Industry is based on the state of the position’s industrial technology (measured in RPs produced per Industrial installation) as of the end of the last Regular Turn (that is, a position may not use improvements in industrial technology in the *current turn* to boost industrial output during Taxation).

Unlike population, all of the Industry of the position (excluding Conquered Colonies) is totaled and then multiplied by the production value per Industry and that amount is added to the Treasury in RPs. So, if a position’s current Industry Patent (with COTs that improve industrial production, see Continuous Operational Technology, 2 Patents, p. 740, *infra*) allows Industry to produce .5 RPs per Industry installation, and that position has 30 industry, then

the position receives 15 RPs from Industry during Taxation. Industrial production depends entirely on development of technology and the industrialization of colony worlds.

- Resources from Special Planets: Colonies on Special Planets produce more RPs because there is something special about their planet that allows them to produce something unique and vital to the interstellar civilization. On a Special Planet, production of RPs is increased by 30 to 50%. As players will note, Special Planets are often Hostile Planets and/or are difficult or dangerous to colonize, thus they may require development of Controlled Environment Technology (see Colony Cans and Building Up, 1 Expansion, pp. 879-880, *infra*). The Concierge may impose other requirements.
  - ✓ Special Planets should not be confused with Specialized Colonies, which are described in 4 Expansion, p. 925, *infra*. It is possible though that Special Planets may be the site of or require Specialized Colonies.

Some planets may be ‘special’ because they contain evidence of alien civilizations with cultural artifacts and/or technological devices (useful for Reverse Engineering, see 3 Technology, p. 712, *infra*). In one of my favorite cartoons, Hagar the Horrible returns from raiding Paris with a present for his wife, a faucet he looted in Paris. The faucet doesn’t work – absent the plumbing it was attached to, and he says, ‘I don’t understand, it worked in Paris!’ This would be the functional equivalent to H.G. Wells using his time machine to steal a cell phone from 2017 and wonder why it doesn’t work in 1898. So, when assessing alien technological or cultural artifacts, participants should be cognizant that the artifacts are probably part of a system; that technology has in recent decades, developed into global systems rather than self-contained items, for example, the “internet of things” has connected common household items to the global network.

- Red Planet: It is possible during taxation to make a planet produce or ‘give’ more RPs than it normally would. This would take away from the comfort level of the population<sup>7</sup> and deprive the colony of resources for maintaining and building infrastructure, education, civil security, etc.<sup>8</sup> Because the game system is based on resources and not money, the only means of ‘deficit spending’ is to take resources from the domestic subsistence of the colony in the now; to essentially take from the present and future of the colony in the present, as the colony’s infrastructure will deteriorate and will have to be replaced at greater expense later.

The likely result would be an increase in entropy (see Barrowing the Future, 2 Disruption, p. 276, *supra*). In this sense, Domestic Subsistence is substantially identical to the lowest level of Abraham Maslow’s Hierarchy of Needs.

- ✓ For example, during the Great Chinese Famine (1958-1961), farmers harvested rice only to watch it being hauled away in trucks by the government for sale on the international market so that the government could acquire foreign currency. The Maoist leaders accused the peasants of hiding food and dismissed reports of mass starvation. See The Illusion of Superabundance discussion 4 Commerce, p. 1231, *infra*.

Note that there is a limit even to this, as you cannot take resources that are not there or are not ready; so each colony has a finite level of resources that can be taken by the interstellar government in any case.

It is also possible for the ‘thiev’n grub-ment’ to take less ‘taxes’ than are due from colonies, but there is no guarantee that such measures would result in a reduction of entropy, as materialism, corruption, sloth, wealth disparities, and other similar factors might still erode the social and economic systems.

- ✓ “We live in difficult times, Marquet. This famine has prevented people from paying their proper tribute to the Church. I raise their taxes, only to be told there’s nothing left for me to tax. Imagine!” – Bishop of Aquila, Ladyhawke (1985).

---

*“Sci-Fi Writers Have No Sense of Scale: The economy of the world seems built on mining deep space, despite the fact that the asteroid belt in the solar system alone would fulfil Earth’s needs for millions of years. An asteroid belt is not a place where you actually have to manoeuvre between rocks to avoid collision, since it’s still pretty damn empty. The world was clearly built to allow for the plot, not to be logical from the logical point of view. It’s also justified in that most of them want to be far, far away from Earth for various reasons. It’s further justified in that the planet was recently cracked open, so the debris hasn’t had a chance to re-coalesce.”*

– from TVtropes.org, “The Gap Cycle,” (Stephen R. Donaldson)  
captured July 21, 2019

---

**Mining Operations:** However, were humanity to discover a means of FTL, do you think that having sufficient resources in our own asteroid belt would keep us from expanding to the stars?

In GGDM there is no provision or mechanic where a planet or system becomes ‘mined out,’ though that is an ‘exhausted resources’ trope used in science-fiction, reflecting the wood-framed ghost towns of the American Old West period.

- ✓ “Well, students, at one time, Devron was a boom planet; that is to say, the people who came here did so with a rampant enthusiasm and sense of hope. There were precious ores to be mined. Of course, that was a number of years ago. Now the planet is that harsh little ball your visi-screens depict ... ill-equipped to offer sustenance to its meagre population of settlers. ... They were originally hard-bitten individualist bent on making easy fortunes. But their dreams were strip-mined with the ore. ... Exhausted of adventure, they are content with tilling the land (what’s left of it) and carrying on light trade with the more prosperous federation worlds.” *Id.*

The collection of RPs by Taxation Power Activations is non-specific, it may or may not, or may likely, reflect some aspect of mining in the system. If a game is played where certain very rare resources are of paramount importance, participants could use the Special Planets and/or Specialized Colonies to reflect mining of that specific resource, and if it something that can be mined out, then the Concierge could impose a maximum number of Taxation Power Activations at that location as part of the Special Writ.

- **Mining Ship:** If participants desire, they may create specialized ‘mining ships’ by use of Patents (see Patents generally, *infra*); there is no Existential Patent in GGDM for mining ships, or anything relating to mining. It is an entire subject that has only been lightly touched upon in science-fiction video; the singular most impressive mining ship in video science-fiction is depicted in Star Trek 2009 (the only thing impressive in the entire loud, colorful mess); the

alien ship in Independence Day: Resurgence (2016) was also massively impressive. The only screen visions after that are world-destroying things like the Lex or Galactus.

- ✓ The 2007 card game, Race for the Galaxy depicts mining ships, though it is difficult to tell their scale. Mining, represented by brown goods, is a strong element in Race for the Galaxy play.

- Sit-n-spin: It is possible, of course, for a Homeworld or Lost Colonist position, to decide not to colonize any planets during the game or to colonize only planets in their home system (the ‘sit-n-spin’ or ‘cement mixer’ strategy). This is not automatically wrong. It could be viable. It’s just a matter of scale (i.e. consumption rates); the sit-n-spin position would be like homesteaders, finding whatever they need in their own system and making everything they need. There are plenty of resources here in our own system to last thousands of years potentially; it just depends on the rate of consumption and production (i.e. population demands),<sup>9</sup> and whether there might be other ores on exoplanets that are not available in the home system.

But GGDM’s resource (and sociocultural) assumptions in the long term are based on the idea of interstellar access to resources and living space. Thus, the Concierge would need to determine when or if the Homeworld or system depletes its resources and the position would need to proactively address the potential situation with technologies and social developments. This is not the same as not having Stardrive technology, not like a Minor Race exactly.

- ✓ As an aside ... I remember reading a short story long, long ago about a future where every inch of the United States is paved. The presidential candidates made a campaign promise that people would be able to drive anywhere they wanted. It was definitely a story written for the very young audience, I think it might have been in our ‘Environmental Adventures’ book in 8<sup>th</sup> grade. But in science-fiction settings, there have been advanced, huge overpopulated worlds like Trantor or Coruscant where the entire surface has been covered by cities (obviously, vulnerable to Malthusian catastrophe because they depend entirely on massive food imports from farming worlds), and this is likely the situation that would develop in a sit-n-spin strategy in GGDM.

---

*“Socialism is defined by the government controlling the means of production and the distribution of goods and services – not simply by high taxes and the rich sharing their wealth with the poor. In fact, our own system, via the graduated income tax, already leads to the wealthy subsidizing the poor through higher income taxes – and taxes in general.”*

– Aaron Blake, “Donald Trump Jr. vows to take half of his daughter’s Halloween goodies in a bad lesson on socialism,” *The Washington Post*, November 1, 2017

---

**Political Will:** The numbers presented in this section for production of resources are baseline numbers used in the game system.

Collecting or taking more or less resources than normal during Taxation can only be accomplished by activation of a Writ (based on the Taxation Power) during Taxation that also acts as the Interpretation accompanying the Power Activation. Activation of the Writ (for example, emergency war powers) to take additional resources during taxation will result in an increase in entropy because machines and infrastructure are not maintained and repaired, or education suffers, or civil order is not maintained – any number of ‘breakdowns’ due to the lack of resources.

Conversely, it is also possible, by use of a Writ, to take less during taxation than normal, leaving more resources for the colonies (i.e. ‘bread & circuses’) – but if the position doesn’t need the resources, it’s probably better to save the Fuzzy Group and the Acts, and not activate the Taxation Power until the government needs the RPs.

- ✓ “Now that no one buys our votes, the public has long since cast off its cares; the people that once bestowed commands, consulships, legions and all else, now meddles no more and longs eagerly for just two things – Bread and Games!” – Juvenal (Decimus Iunius Iuvenalis, 1<sup>st</sup> – 2<sup>nd</sup> Centuries A.D., Roman Empire).
  - ✓ “The evil was not in bread and circuses, *per se*, but in the willingness of the people to sell their rights as free men for full bellies and the excitement of the games which would serve to distract them from other human hungers, which bread and circuses can never appease.” – Marcus Tullius Cicero (106 B.C. – 43 B.C., lawyer, politician, orator in the late Roman Republic period).<sup>10</sup>
- Crunch: Studies by the University of British Columbia demonstrate that the psychological pressure of poverty diminishes cognitive abilities in the population due to worries about finances and subsistence (see Lori Culbert, “Poverty Clouds the Brain: UBC Prof.,” Vancouver Sun, August 30, 2013). Depression is a kind of poverty. This research on poverty also dovetails nicely with Self-Actualization Theory and with the general idea in anthropology that human culture started when humans no longer had to struggle for daily subsistence.
- ✓ “The government doesn’t care if you have water or electricity, there’s nothing at all. They don’t care. It’s too bad. Too bad. The people work hard. They don’t have enough clothing. No one complains. You know why? You complain if you can compare. If you come from Europe, you can compare, but if you live in misery all your life, nothing will move you.” – Gadalla Gubara quoted by Nadja Kornith in “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun (bidoun.org), Issue 20, Spring 2010 (complaining about Sudan).
- Catastrophe: In classic human history, emigration and immigration have been the outlets for population suffering from a lack of resources, or overpopulation of an area. When the planet in question is a colony world that is either overpopulated or starving for resources, where is the population going to go, unless either they or the interstellar government provides colony ships? In extreme cases, a planet may be reduced to subsistence culture, a Malthusian Catastrophe, with loss of population and industry, and spawning Intervention Potentials Plus (IP+). As history shows, Malthusian Catastrophes can be externally imposed by force, siege, raids, ‘poisoned wells’ and ‘scorched earth’ policies and/or planetary civil war. The movie *Soylent Green* (1973) describes a classic, self-imposed, creeping Malthusian Catastrophe.
- ✓ “Violations of individual property rights (for instance through government taxation, regulations, etc.) will make property owners value *present goods* increasingly more highly than *future goods* – a conclusion which follows from the law of diminishing marginal utility. Violations of individual property rights thus raise peoples’ time preference, increasing consumption at the expense of savings and investment, thereby reducing (or even reverting) the pace of capital accumulation. An interventionist-socialist societal order will therefore *necessarily* lead to impoverishment relative to a free market societal order, in which there are no *systematic* violations of individuals’

property rights.” – Thorsten Polleit, “What Can the Law of Diminishing Marginal Utility Teach Us?” Mises Institute, February 11, 2011 (emphasis in original).

- Cyberia: Technology (i.e. Patents) cannot be used to directly improve the resource production of population factors during Taxation. All of the means by which production is increased, including automation, personal computers, cyborg implants (if your species is into that sort of thing), telecommunications, transport systems, and such, are classified under the *Industry Existential Patent*; therefore, Industry Installations on colonies do not only represent ‘factories’ and production centers, but the entire infrastructure by which a civilization produces the raw materials, food, manufactured goods, and services needed. However, it is possible to temporarily increase the resource production of population factors by use of Writs, College effects, and possibly other Interpretations, which address non-technological, non-material subjects, such as beliefs, ethics, education, organization, and national and social will.
  - ✓ For example, during WWII, idle Russian factory workers in cities under German siege built homemade tanks to aid in the defense; some of these homemade tanks were quite effective and left the German intelligence baffled. There was no new technology required for this; the workers simply had the will, resources, equipment, knowledge and creativity, and nothing better to do. In one spectacular night attack by factory-worker homemade tanks, the Russian forces overran a position, hooked up and towed away a battery of German 88mm anti-tank guns.

The basic game division that is being created here is the separation of pure biological ability (in the form of RPs from Population) from all of the various technological enhancements (in the form of RPs from Industry). While one might argue that biological engineering, being jacked into a global network, or cybernetics would increase population capability, in GGDM terms, those are placed on the side of Industry improvements, even if they are biological. It’s a game artifice that allows improvement to the Industry Existential Patent without need to specify exact areas or technologies of improvement. And that is the best my wetware can do.

---

*“But when a billionaire avoids paying taxes, he breaks a law that ought to be self-policing: the law of basic human decency.... Doing something because you can is no reason to do something. If a crazed libertarian became president and somehow legalized murder, I assume that we wouldn’t all start doing it?, right. The human conscience, which religious conservatives insist is the voice of God, would suggest otherwise....*

*Capitalism is supposed to inculcate morals. It assumes that people will honor deals, that a product is as good as the seller says it is, that theft is wrong. Capitalism and democracy work well together because authoritarian states undermine private property and distort the market. But a state is necessary – always necessary – to enforce the law and make sure the market works along agreed lines. In other words, by failing to pay taxes [THE BILLIONAIRE] not only did something bad in and of itself – he also did something that weakened capitalism by weakening the state. You can’t have good capitalism without good infrastructure, effective courts and well-trained cops.”*

– Timothy Stanley, October 3, 2016

---

Endnotes.

<sup>1</sup> Commentary & Citation: That is, each colony is a Wallerstein “world system” that becomes a “mini-system” in relation to the larger (probably ‘world empire’ type) interstellar world system. In this view, colonies will more or less be outlying districts from which goods and services are extracted (e.g., Taxation in GGDM) to a capitalistic center. See Frank Elwell, Macro Social Theory (2009), pp. 45-46.

- ✓ This is the assumption of nearly all science fiction on this subject. The question is whether or not this assumption is made simply because it is an extension of the world in which we live and we cannot imagine any other (e.g., the epic failure of Marxist evolution) or is it an assumption based on inconvertible fact?

<sup>2</sup> Citation: “To return from a short digression, we must note further that a nation with a low standard has no reserve to fall back upon; it lives on the margin of subsistence, which may easily fail in war-time, especially if much food is imported when conditions are normal. It can hardly be an accident that in this war the nations with a high birth-rate broke up in the order of their fecundity.... The sacrifice of comfort to numbers, which we have seen to be possible by maintaining a low standard of living, not only diminishes the happiness of a nation, and keeps it low in the scale of civilisation; it may easily prove to be a source of weakness in war.” – Dean William Ralph Inge, Outspoken Esays, “The Future of the English Race” (The Galton Lecture, 1919), available for free on the Gutenberg Project.

- ✓ Though this remains very generally true, as it was written in 1919, it does not anticipate the vast advances of technology which have allowed maintenance of ‘comfort’ as long as the resources remain to continue it (see Joseph Tainter’s ‘technological optimist’ discussion, Resources Proficiency, 3 Culture, top p. 397, *infra*). This is similar to the way that world energy crisis calculations in the early to mid-20<sup>th</sup> Century (e.g., the backstory for the Fallout video game series) were upended by the invention of the transistor, miniaturization, and vast improvements in automobile mileage and overall energy efficiency (and nuclear power plants) such that greater energy consumption does not automatically imply higher technology.
- ✓ See also discussion of the Inge Process, 5 Diplomacy, p. 1161, *infra*.

<sup>3</sup> Citation: “Prior to Boltzmann, entropy was understood as a measure of the proportion of energy in a system that can be used for useful work. ... the useful work performed by that increase in entropy [from the moment of the Big Bang] includes the formation of galaxies, stars, planets... indeed, the entire process of evolution.” – Matt O’Dowd (City University of New York), “Are You a Boltzmann Brain,” PBS Space-Time Channel, April 26, 2017.

<sup>4</sup> Commentary: Particularly interesting in this is Queen Game’s title Shogun (2006), where players collect rice from areas they control. However, two factors limit rice taxation: 1) the farmers get mad and may revolt, and 2) rice cannot be stored from year to year (which is probably how *sake* was invented), but you need to feed your people each year.

<sup>5</sup> Commentary: A real world example applicable to the game: One of the victims of the September 2013 Washington Naval Yard shooting rampage was a top, very experienced naval ship designer, shot in his office.

<sup>6</sup> Commentary: The Senate of Rome is arguably one of the oldest continuous existing ‘legislative bodies’ in the world, if one accepts the continuity of existence from the Senate of the Roman Republic to the Senate of the Republic of Italy in Rome. The Roman Senate declared Odoacer King of Italy (476 A.D.), thereby legitimizing the coup d’état that deposed the last Roman Emperor and separated the West from the Eastern Roman Empire. In this, the Roman Senate, as it had done many times before, acted as a legitimizer of authority, a role later taken over by the Popes because the Holy See was more politically palatable to the rest of Europe than the Roman Senate. Charles I of Anjou (of Naples) was a Roman Senator, but appealed to the Pope (everyone was playing the Pope cards) to adjudicate and legitimize his authority over Sicily during the War of the Sicilian Vespers (1282-1302), instead of the Senate of Rome.

- ✓ The War of the Sicilian Vespers is the ‘world war’ of the medieval Mediterranean world, based on their capabilities. It is a great unexplored gaming area; in the right hands, I think a really deep and fascinating (and educational) board game could be based on this smoldering 13<sup>th</sup> Century Mediterranean conflict. I do not think any games have been published on this particular subject. It would be a good card driven war-game.

<sup>7</sup> Commentary: A story I saw in a documentary video is that Eva Braun, Hitler’s mistress, got wind of a plan to reduce production of women’s clothing and cosmetics due to wartime demand. Though normally demure, she stormed into a meeting of Hitler and his ministers in protest and asked them if they wanted German women to be thought the ugliest women in the world? Though they would not give in to Eva in person, the planned reduction was quietly crossed off the list and delayed a year; she knew which buttons to push.

- ✓ This story apparently was related by Speer, and is included in two sentences on the Wikipedia biographical page for “Eva Braun.”

<sup>8</sup> Citation: “Alexei Larionov, the first secretary of the Ryazan Obkom, announced a very ambitious goal of tripling the amount of meat produced in the region within the next year. The promise, in spite of being unrealistic, was confirmed at the regional party conference. On October 12, 1958 Larionov delivered the promise to Khrushchev in person, who became excited.... On January 9, 1959 the promise was published in Pravda, the official party newspaper....publication was rushed by Khrushchev in spite of objections from the Agricultural Department.... The challenge was met by several other regions.... In order to meet the promise, the region had to slaughter all the bovine herd of 1959, as well as a considerable part of its dairy stock. In addition, all cattle reared by kolkhoz farmers in their private households was appropriated ‘temporarily.’ As the collected amount was still not enough to meet the target, obkom had to buy meat in neighboring regions by relocating funds from other sources, such as the purchase of agricultural tools and construction. On December 16, 1959, Ryazan obkom was able to announce that the region delivered 150,000 tons of meat to the state, which was three times the amount delivered the previous year. On top of this, the regional authorities promised to deliver 180,000 in the next year. On December 27, 1959 the success was announced by Khrushchev himself at the CPSU Plenum....

Larionov was awarded the title of Hero of Socialist Labor. However, in 1960 production of meat in Ryazan oblast plummeted to 30,000 tons, since mass slaughter had reduced the amount of cattle by 65% in comparison to the level of 1958. To make matters worse, kolkhoz farmers whose private cattle were ‘temporarily’ appropriated the year before refused to process kolkhoz land. This halved the amount of grain produced in Ryazan oblast. By the fall of 1960, it became impossible to hide the affair. In September 1960 Larionov was dismissed from his post, stripped of the title of Hero of Labor.... On October 10, 1960, he committed suicide.” – from Wikipedia article, “Ryazan miracle,” October 5, 2018.

<sup>9</sup> Commentary & Citation: The historically significant 1983 anime *Dallos*, which I immediately recognized as being spun off Robert Heinlein’s 1966 novel *The Moon is a Harsh Mistress*, does a very good job telling the story of a Lunar mining colony rebellion against Earth oppression.

- ✓ “On the dramatic front, the storytelling sets up a remarkably thoughtful approach to a colony growing into a rebellious state as time passes. While the earlier generations are willing to tolerate being answerable to Earth, as they feel that they have a great debt to repay to the Earth for it funding the establishment of the lunar colonies, the younger generation who knows nothing of Earth has no such sense of loyalty and so chafes under what they see as Earth’s oppression and Earth prospering on the backs of their labor.... In fact, whether intentional or not, the whole scenario gives off a vibe not too dissimilar from the American colonies in the days leading up to the Revolutionary War.

Over the course of four episodes we see characters either grow into revolutionaries or desperately cling to their ideals, like Shun’s father, who stubbornly insists that ‘someone has to get the work done’ even in the face of widespread strikes, or Alex’s fiancée Melinda, who firmly (and likely naïvely) believes that people on Earth will not turn a blind eye to the grievances of those in Monopolis even as most other characters regard her skeptically. There’s also some bureaucratic scheming going on, too, as Alex’s cocky attitude has not made friends amongst his allies.” – Theron Martin, Review of *Dallos* (Eastern Star DVD), Anime News Network, March 9, 2014.

The story is bleak, existential, political, and somewhat choppy, but they did a very good job of presenting multiple viewpoints on the rebellion, e.g., pointing out that the police suppressing the rebellion were also born on Luna and think that the Earth administrator doesn’t understand (which is why Federation military forces were deployed). And in the middle of all of it is the titular seemingly dormant alien artifact near the colony ... probably a fingerprint left behind when the Concierge used an Intervention Potential on the Moon. It really is the final ten minutes that make the entire story worth it, but you have to play it out to get to that place and time.

<sup>10</sup> Citation & Commentary: The box-office juggernaut *Hunger Games* (2012) was based on this entire idea of bread and circuses. *Panem* means bread in old Latin (e.g., “*panem et circenses*” means “bread & circuses”), and *Panem* has little bread.

- ✓ In the semi-cooperative board game, *Republic of Rome* (1990), players representing ambitious senatorial and patrician class families in Rome could (and always needed to) woo and distract the population by sponsoring bread & circuses while fighting multiple foreign wars.

*See Appendix EPAT1 – The Existential Patents*  
*See Appendix EPAT2 – Existential Patents Quick Summary*  
*See Appendix T&C – Taxation & Census Example*

*“It began to take so long to calculate the census that many observers envisioned a day when one census would come due before the last one was completed.... The solution to this problem was to use some kind of mechanization. The first attempt came in the census of 1870 when machines invented by Col. Charles W. Seaton, chief clerk of the census, were used. The machines were sorely needed because there were 40 million Americans to be counted.”*

– Joel Shurkin, Engines of the Mind (1984)

**The Great Abacus in the Sky:** Like the Resource Point (RP) the exact measurement of the population factor is not specific in the number of entities or population density it represents. One suggestion in Traveller RPG for translating population factors to hard numbers for human populations was that the population factors would represent the number of zeros after the one, in human populations. So, five population factors would be 100,000 people. This works for *human* populations perhaps, but how many ants could live in the same space taken by 100,000 people?

- ✓ For example, MSN reported in the last week of December 2017 that vandals had knocked over several large hives on a bee farm in Iowa, killing half a million bees from cold exposure and destroying the business.
- ✓ In another case, a man disturbed an estimated 800,000 bees living in a crawlspace attic of a house. Most unfortunate it was for him...

And there is no indication that there are, in fact, *any human populations* in this game, and with so many variables, who knows what exactly a population factor represents or why it is important? The GGDM game definition is that one population factor is a ‘unit’ capable of producing .2 RP when the Taxation Power is activated and .2 new population factors of the same Native Population Type on an Optimal Planet when the Census Power is activated.

- ✓ However, as humans are not very good at being anything but being human – and certainly are not very good at being godlike – undoubtedly the unspoken assumption in GGDM will be that the populations of the game will be human or humanoid aliens, as in most science-fiction television series (with the possible exception of the Truly Alien Primal State). Only big budget movies have dared in recent years to create truly alien – usually hostile to humanity – beings.<sup>1</sup>
- **Living Spaces:** One universal rule that applies to all living creatures, no matter how their population factors are composed: They have to live somewhere. At all times during the game, population factors must be either on a colony (or Homeworld) or on a Colony Ship. Population factors are recorded with the colony or ship information.

*“When the cosmos shoots pool, it plays for keeps. It sank a six mile wide rock in our pocket of the solar system 66 million years ago. The smack of the asteroid against Earth released energy on the order of billions of atomic bombs. Dinosaurs were the cataclysm’s most famous victims, joined by sea creatures, plants and microorganisms. All told, Earth’s biodiversity shrank by 75 percent in what is known as the ... KPg extinction. A large asteroid strike happens only once every 100 million years. And a controversial new report suggests the KPg impact was an exceptionally unlikely shot.*

*In a paper published ... in the journal Scientific Reports, a pair of researchers calculated the asteroid had little more than a 1 in 10 chance of triggering a mass extinction when it smacked into Earth. (We mammals should be glad it beat the odds: After the dinosaurs' swift exit, nocturnal furballs – our ancestors – scampered into the daylight and conquered the planet. And one branch of dinosaurs survived and persists as today's birds.)"*

– Ben Guarino, “Dinosaurs would have survived if asteroid hit Earth elsewhere, scientists claim,” Washington Post, November 9, 2017

**Habitability:** It is difficult to repudiate the events of history that put you here. Without the asteroid, perhaps you might have been an English-speaking dinosaur, as in the silly TV mini-series, *Dinotopia* (2002). Nocturnal furballs rule the world! And eat the food I put out for the cats.

All planets are classified, for colonization purposes, based on two criteria: Habitability Class and Maximum Habitability. The information on each planet's Habitability Class and Maximum Habitability (and other information) is subjective and is displayed on the position's information.

- **Cloud Shrouded Surfaces:** The Habitability Class and Maximum Habitability of each planet is determined when the starsystem is first explored. There is a relationship between Stellar Class (i.e. 'star color' in GGDM) and Habitability Class that is explained in detail in *Looking Through, 2 Expansion*, p. 900, *infra*. The game does not need or include any details of the appearance of a planet, or the planet's surface, land masses, weather, atmosphere, or a hundred-thousand other eco-geological details. The only relevant factors are Maximum Habitability and Habitability Class, and that is all the game looks to discover for each planet.
- **The Air That I Breathe:** Habitability Class refers to the *relative* natural environment of the Planet and are divided into six self-explanatory Habitability Classes: Optimal, Hospitable, Habitable, Unpleasant, Hostile, and Uninhabitable (think Venus, or Earth in 200 years). Populations can be landed on any Optimal, Hospitable, or Habitable planet without any additional technology, however, Controlled Environment Technology (CET) is needed to colonize Unpleasant and Hostile Planets. It is also possible, through great effort, to slowly improve the Habitability Class of a planet, while, conversely, pollution and other entropy events will slowly decrease the Habitability Class of planets.
  - ✓ It is striking the similarity between the reasons offered by Ted Kaczynski (aka the Unibomber) for his move to a primitive wilderness existence in Montana in 1971 and his later terrorist attacks, and the lyrics of John Denver's late 1972 hit song, “Rocky Mountain High.” It is probable that Kaczynski was aware of the song later and may have retroactively constructed his 1971 thinking along that line. But it is just as likely that the two, *to very different ends*, come from and express a common mystic anarcho-primitivism root. This is supported by the fact that the locals told the New York Times that shaggy, primitive, reclusive Kaczynski wasn't considered unusual or considered peculiarly strange in the area that attracted many of those types (see, John Kifner, “ON THE SUSPECT'S TRAIL: LIFE IN MONTANA; Gardening, Bicycling And Reading Exotically,” New York Times Archive, April 5, 1996, available free).
- **Dayworld:** Maximum Habitability is the maximum number of population factors that can be on the planet surface. No population can be added to or grown on the *surface* of a planet that is at Maximum Habitability. Orbital Cities (via the Orbital City Existential Patent), costing

20 RPs each, will extend the colony beyond the surface Maximum Habitability of a planet by 15 population factors each by placing populations in orbit (see *Orbital Platforms*, 2 Construction, pp. 666-667, *infra*, for more on *Orbital Cities*, moons, and *Orbital Platforms*) up to half of the planet's *original* Maximum Habitability (all of this can be improved by later Patents).

- ✓ Imagine a massive crowded colony on a habitable world, or imagine Earth with a population of 50 billion humans. Imagine that cities extend for miles underground, extracting heat energy from the magma layers. Imagine a combined orbital and lunar colony population in excess of 100 billion?
- ✓ Imagine that there are people who are born, live and die in underground cities, never seeing the stars, never seeing the surface, which is either becoming uninhabitable, or is reserved for spaceports, the imperial palace, government buildings and defense complexes, and the wealthy who can afford expensive surface estates.<sup>2</sup>
  - A city that covers an entire planet is called an ecumenopolis, a term coined in 1967. A city that covers an entire continent is called an eperopolis; parts of the Low Countries have shocking population density now. It is expected that colonies in the interstellar civilization will mirror the variable population density found on Earth; writers love it because it provides endless styles of planetary settings!
- ✓ Imagine the society, the people, the complexity. Imagine Trantor, the imperial capital in Isaac Asimov's Foundation series that has a polar heat sink:
  - "Excessive use of energy without adequate disposal of heat, for example, could plausibly make the planet of a civilization approaching Type I unsuitable to the biology of the dominant life-forms and their food sources. If Earth is an example, then sea temperatures in excess of 35 °C (95 °F) would jeopardize marine life and make the cooling of mammals to temperatures suitable for their metabolism difficult if not impossible. Of course, these theoretical speculations may not become problems in reality thanks to evolution or the application of future engineering and technology." – from Wikipedia article, "Kardashev Scale," February 12, 2017.
  - It appears that the "heatsink" (geothermal tap) on Trantor was introduced in *Prelude to Foundation*, published in 1988. The term Heat Sink has been used since 1936 according to Merriam-Webster and is a term used mostly in electronics. The Kardashev Scale was proposed in 1964.
- Salusa Secundus: As mentioned previously, some planets are 'special' in some way and may generate extra *something* for the position that colonizes the planet or controls the colony. Generally, Special Planets are Unpleasant or Hostile places (what else would you expect?), so come prepared. They may also be inhabited already. Yeah, it can get complicated.
  - ✓ **Paul Atreides to the Emperor**: You and your House shall have a throne on Salusa Secundus your prison world and the training ground for your accursed Sardaukar. – Frank Herbert, *Dune* (1965).
- Planet Narn: Planets may be damaged by Orbital Attack or Bombardment, or Ground or Pacification Combats when they are conquered. For every 25 population factors destroyed in Combat, the planet is *reduced by* one Habitability Class *and* 25 Maximum Habitability. Max-

imum Habitability is not affected until the loss of Habitability Class and then both are reduced at the same time; however, the accumulation of damage leading to the loss of Habitability Class and Maximum Habitability will be recorded until the event happens. A planet may reach zero surface Maximum Habitability before it is completely reduced to an Unpleasant or Hostile Habitability Class. A planet may lose any Special Status due to bombardment.

- ✓ In the event of dying, you either got what you deserved or got an end you didn't deserve. Either way, it's an idea that only exists and matters in human literature, just like saying 'they deserved a better result' when your favorite team loses. However, conversely, the concept cannot be stretched to being born, to say that anyone 'deserved' to be born implies a whole set of bizarre and untenable un-causal ideas. Not unlike the equally un-causal damnation of the un-evangelized who lived *before* Christ – the 'fate of the unlearned' and 'virtuous pagans' problems that placed Homer, Socrates and Virgil in the first level of Hell<sup>3</sup> in Dante's "Inferno" (first part of the Divine Comedy, 1320) – hell from living in a deficient, diminutive form of heaven!<sup>4</sup>

Whenever a planet loses Maximum Habitability and Habitability Class – whether quickly or gradually – it is a fair certainty that the result is a mass-extinction event of the native life forms, especially those of the higher orders, will occur. A significant increase of Maximum Habitability and/or Habitability Class relative to any alien species – as in terraforming – will likely have the same result (e.g., global warming). The biosphere of the Earth has proven to be rather fragile and delicate, while basic life has proven more resilient than expected (e.g., bacteria has been found down to 5 km under the surface). The result of the strike – as would any Orbital Bombardment – bears similarity to the idea of a Nuclear Winter, which idea originated from the observed global climate and weather changes following a volcanic eruption and from observations of sandstorms on Mars (see *The Air that I Choke* discussion, *ut infra*).

The system of marking planetary damage by increments of population lost by violent means is merely a benchmark system based on the assumption that whatever means is used to destroy that much population must also damage the planet (see also *Collateral Damage in Ground Combat* discussion, 4 *Combat*, p. 995, *infra*). As you can imagine, there are ways to kill or destroy technological sophant populations that would leave the remaining biosphere relatively unharmed (e.g., neutron bomb, plagues, bug spray). There is also the possibility that destruction of population, even violently, will not impact the Habitability Class of the planet, for example, a domed colony on a barren (like our moon) world. This is another area where the Concierge might exercise judgment.

- ✓ The bombardment of Planet Narn by the Centauri using mass-drivers and asteroids, was a ground-breaking (literally) moment in the *Babylon 5* television series. It is quite possibly the first use of mass drivers – railgun and coilgun systems designed for space exploration and colonization – as weapons for planetary bombardment in any science-fiction setting. Consider for a moment the damage done by the meteor strike that made the dinosaurs extinct; or the YouTube videos showing projections of worldwide cataclysm from a sizable meteor strike on Earth now. It would take only a few minutes of mass-driver bombardment to damage the Earth's biosphere significantly.
- Alien Agenda: The data for each planet is relative to the owner's Native Population Type, that is, each Native Population Type will see each planet slightly differently, so 'damaging' a planet may improve the planet's Habitability Class and Maximum Habitability for other Native Population Types<sup>5</sup> or it may reduce it for all Native Population Types. Other positions

may learn through game actions of the change in Habitability Class and Maximum Habitability of previously-discovered planets. This is more likely to occur if the position does something in-game to look, such as sending a ship (see 2 Information generally, *infra*); whereas, positions who don't look are less likely to discover changes. They may also learn through informal player communications (see Greys Diplomacy, 1 Diplomacy, p. 1097, *infra*).

- ✓ A position's planetary data, exploration information could be 'stolen' or learned in-game by Information Operations, see 2 Information, p. 1349, *infra*.

It seems more likely that the threat of Orbital Bombardment is greater against colonies on planets whose habitability class is unfavorable to the attacker's species and/or whose population is at or near the planet's Maximum Habitability. Not the least concern is that Ground Combat would require the attacking troops to be suited up, whereas, the opposing defenders, if the planet is of their favorable Habitability Class, will have the advantage of fighting in their own environment. But there are a lot of factors to consider...

- ✓ **Ambassador Londo:** [exasperated] Why don't you eliminate the entire Narn homeworld while you're at it? **Mr. Morden:** [menacing calm deadpan voice] One thing at a time, Ambassador. One thing at a time. – Babylon 5, "Revelations" (1994).

---

*"Nigerian leaders cannot put a number on the amount of Nigerian women and girls that have gone missing. Nigeria has never had a credible, successful census." – Olúfémi Táíwò, Professor of Africana studies at Cornell University*

---

---

*"The Gross National Product includes the destruction of the redwoods and the death of Lake Superior. It grows with the production of napalm and missiles and nuclear warheads... It includes... the broadcasting of television programs which glorify violence to sell goods to our children."*

– Sen. Robert F. Kennedy (1968 Democratic Presidential Candidate) <sup>6</sup>

---

**The Air That I Choke:** Would Richard Nixon have become President if Robert F. Kennedy hadn't been assassinated? If you were a time traveler...<sup>7</sup>

When I was young, the environmental problems discussed in school were air pollution, deforestation, and landfills, we talked about electric cars, mass transit, and eco-friendly urban planning and recycling. In 8<sup>th</sup> grade "Environmental Adventures" class with portly Mr. Greene (who was also my American History teacher), I don't recall any mention of global warming, glacier melt, or much mention of rising sea levels; it was all about air pollution from cars and factories, nuclear testing and power plants, deforestation of the Amazon, urban planning, and landfills and toxic dumps. At that time, the Love Canal and Superfund cleanup were regularly in the news, as was the Centralia, PA mine fire which eventually eliminated the town, and the Three Mile Island accident. Then there was the hole in the ozone layer and aerosol cans.

Then the main environmental threat shifted from air pollution to global warming and climate change. The bottom line problem with global warming is that it is probably a natural and predictable process on any biosphere planet that has a developing sapient technological civilization (see Kardashev Scale quote, p. 316, *ut supra*, regarding planetary heat disposal). This doesn't 'let us off the hook,' but conceptually, it is a good place to begin understanding.

- ✓ “But in the history of the solar system and even in human history there are clear records of extraordinary and devastating catastrophes. We have now achieved the dubious distinction of making our own major catastrophes both intentional and inadvertent.” – Carl Sagan, *Cosmos*, Episode 4.

It is true, we don't have any other examples to look at, ours is the only one we know of; but basically, the Earth (or any solid planet) contains trapped energy and the processes and demands of a technological civilization releases that energy – often wastefully, since, for example, 50% of the electricity put into the power grid is lost. The result of the process is that the technological civilization releases trapped geological and chemical energy into the atmosphere, which if it goes on long enough, will change the air temperature of the planet (like heating a room). Thus, the irony of keeping cool: In cooling our houses in the summer, and refrigerating our perishable foods and drinks, we contribute to heating the planet.

Almost certainly, this process would happen anywhere there is a developing planetary technological civilization, especially if fuels are available near the surface. And bringing resources or energy from space to use on the planet, would only introduce to the system *additional outside energy* to the detriment of the planet's ecosphere. It seems inevitable, unless a significant portion of manufacturing and energy use are moved to orbit, that humanity will have to leave the Earth for elsewhere eventually. And the process will be repeated wherever we go.

And the process will be repeated wherever a technological civilization arises, whether through damage and deterioration of their home world, or search for new energy sources and resources. And given the size and age of the Cosmos, this process may and likely will have happened many thousands of times before. But given the size and age of the Cosmos, it is not likely that we will immediately find a thriving developed interstellar civilization out there; the Galactic Space setting of the game remains a highly unlikely occurrence.

- ✓ “The growth in unconventional gas production involving hydraulic fracturing (‘fracking’) has transformed the energy landscape, reducing energy prices, decreasing conventional air pollution by displacing coal in electricity generation, disrupting international energy trading arrangements, and increasing the prospects for energy self-sufficiency for the United States.... The results of our analysis suggest that the introduction of fracking reduces health among infants born to mothers living within 3 km of a well site during pregnancy. For mothers living within 1 km, we find a 25% increase in the probability of low birth weight (birth weight < 2500g) and significant declines in average birth weight and in an index of infant health. There are also reductions in infant health for mothers living within 1 to 3 km of a fracking site, but the estimates are about one-third to one-half of the size of those within the 0- to 1-km band. There is little evidence of health effects at further distances, suggesting that health impacts are highly local.” – Janet Currie, Michael Greenstone, Katherine Meckel, “Hydraulic fracturing and infant health: New evidence from Pennsylvania,” *Sci Adv* **3** (12), e1603021, December 13, 2017.
- Martian Dust: Mars may be instructive. Mars has regular regional dust storms that, every few years, grow and merge into a *global dust storm that lasts for months*. The Earth dust storm in the film *Interstellar* (2014) was clearly modeled after a real disaster on Earth called the Great Dust Bowl (1935-1938 – look at the historical photos), but on a near-Martian scale.

Back to Mars, scientist recently noticed that water vapor on Mars tends to rise to the upper layers during the regular dust storms, where it may then be bled off into space, and have hypothesized that the dust storms were a major contributing factor to the loss of water on Mars (Viking lander has, however, photographed seasonal light frost on the ground on Mars). This is a self-perpetuating, runaway process, as loss of water makes the surface dry, contributing to a cycle of larger and more violent dust storms. From Elizabeth Howell, “Escape from Mars! Red-Planet Dust Storms Linked to Atmosphere Loss,” Space.com, January 25, 2018.

- ✓ “The most important fact about Spaceship Earth: an instruction manual didn’t come with it.” – Buckminster Fuller.

- Pollution Potentials (optional rules): One Pollution Potential is assigned to each Optimal, Hospitable, Habitable or Unpleasant class planet, each time the owner of a *surface* colony with Industry activates the Taxation or Census Powers, even if the colony does not grow population during the Census. Pollution Potentials differ from Intervention Potentials because they are assigned to a specific planet. Thereafter each time the Taxation or Census Power is activated at a colony on the planet, there is a 5% chance per Pollution Potential that an enviro-event will occur on the colony planet. A random number of the Pollution Potentials are converted to a single Intervention Potential (not an IP+) which *must be used* on the planet by the Concierge in that turn to reflect environmental degradation. Alternatively, normal Intervention Potentials could simply be used for this purpose as fits the game story.

- ✓ Pollution Potentials is damage to the *planet* which is not specific to a colony or Native Population Type. There can be some grey areas. But any species that had a favorable Habitability Class will see the planet less favorably after industrial pollution.

The baseline percentages can be variable, depending on two factors: The perceived amount of actual time that has passed in Galactic Space between Regular Turns, and that certain planet’s ecosphere/biospheres might be deemed more or less fragile than others. There are many possible variables which are simply expressed here as a basic percentage chance; which the Concierge may adjust for whatever reason.

- ✓ “The major problem with modern ecological thought, according to [J.B.] Foster, is that it is far too idealistic and spiritual (20). By ‘idealistic’ Foster means that causation is attributed to ideas and ideologies as opposed to material conditions. By ‘spiritual,’ he is referring to the mystical and sacred stance taken toward nature by many ecologists.” – Frank Elwell, Macro Social Theory (2009), Kindle Edition, p. 80.

- Low Carb Colonies: Colonies that produce no RPs due to low population and no industry should not be assigned a Pollution Potential in most instances. These are low population and probably low eco-impact colonies. Colonies consisting of only orbital platforms probably will cause minimum pollution, and no Pollution Potentials, on the planet below unless they are strip mining the planet.

- ✓ See discussion of Romania in 1989, 5 Government Titles, p. 644, *infra*.

- Prescriptions: Re-watching Episode 4 of Cosmos, which aired on October 19, 1980, Carl Sagan did warn:

- ✓ “The hellish conditions on Venus are a reminder that this is serious business. Computer models that successfully explain the climates of other planets predict the deaths of forests, parched croplands, the flooding of coastal cities, environmental refugees,

widespread disasters in the next century unless we change our ways. What do we have to do? Four things. One: much more efficient use of fossil fuels. Why not cars that get 70 miles a gallon instead of 25? Two: research and development on safe alternative energy sources especially solar power. Three: reforestation on a grand scale. And four: helping to bring the billion poorest people on the planet to self-sufficiency which is the key step in curbing world population growth. Every one of these steps makes sense apart from greenhouse warming.”

I did not watch any of Cosmos when it originally aired, but saw it years later in high school science classes, re-runs on PBS, and in undergraduate college courses on VCR tape. If I saw the end of Episode 4 in the mid-80s, it didn't make any impression and it didn't affect by 8<sup>th</sup> grade courses. But we were first warned of global climate change in at least 1980.

*“Polynesian subsistence had the greatest effect on societal development. Some remained or reverted to hunting and gathering because their islands could not support serious agriculture, while others developed advanced agricultural technology to either deal with difficult climates or take advantage of abundant ones. This impacted population growth and densities, which in turn impact political structures.”*

– Jared Diamond, Summary of Guns, Germs, and Steel, Kindle Edition (2017), pp. 8-9

**Homeworld Habitability:** Homeworlds are, or were, Optimal planets for the species that evolved on them. Prior to the game beginning, there may be Fundamental Realities that reduce the Habitability Class and Maximum Habitability of a Homeworld, but barring that, the default assumption is that a Homeworld is automatically an Optimal Planet with a Maximum Habitability of approximately 100 population factors (which can be shorthand written as Optimal 100).

- ✓ **Doctor Who:** You forgot the last time. You remembered the fear and you put it into fairy stories. It's a human superpower, forgetting. If you remembered how things felt, you'd have stopped having wars. And stopped having babies. – Dr. Who, “In the Forest of the Night” (2014).
- **Lebensraum:** Each Native Population Type may have only *one colony* per planet, *all* factors of a Native Population Type on a planet surface and in orbit (i.e. Orbital Cities) are considered *one colony*. Any number of different Native Population Types may colonize a planet – which becomes a ***Balkanized Planet*** – which is to say that the only way to prevent aliens from Landing on and colonizing planet is combat. When two or more species occupy the same planet, the Maximum Habitability of the planet for each population type is reduced by the percentage of the planet occupied by all of the other races.
  - ✓ For example, Populations A and B occupy a planet. Population A sees the planet as a Habitable Planet with 40 population Maximum Habitability, while Population B sees the planet as an Optimal Planet with 100 population Maximum Habitability. Population A has 30 population factors on the planet, therefore, they occupy 75% of the planet, leaving only room for 25 population factors of Population B.
  - ✓ A position may, through conquest, come to own more than one colony on a Balkanized planet, each with a different Native Population Type; this does not violate rules. For all purposes in GGDM, each colony on a Balkanized Planet ***is treated separately***

even if owned by the same position, including in defense. Cooperation may be developed in-game by means such as Trucking, Carting (4 Commerce, *infra*) and Writs.

- For the scheming types... owning two colonies on a Balkanized planet may be Constructural Elements insurance for placing adjacent Fuzzy Groups and Research Groups (see 4 Culture, p. 405; 2 Technology, p. 700, *infra*).

Any game mechanic that is dependent upon the number of population factors on a colony is pro-rated on Balkanized Planets where appropriate. One purpose in activating the Census Power might be to fill remaining spaces on Balkanized Planets, squeezing the aliens.

- ✓ It's a cold evening, I have six cats that live on my porch. I have five heated cat houses, three single and two double, theoretically, there is room for seven cats in the heated cat houses. I have even seen three cats in the double cat houses and two cats in singles in the past. But there's always the social aspect; some cats do not want to sleep with some others. And so I have a small adult tabby neutered female shivering because she either doesn't want to sleep with certain horny tomcats, or a juvenile almost-a-tomcat male kitten, or a rival neutered female, or doesn't want to squeeze into a single cat house where her neutered long-time boyfriend is sleeping. I went out later and she was sleeping in the single cat house where her boyfriend *had been sleeping*.
- Structural Sophistication: The Late Bronze Age collapse in the Middle East was occasioned, in part, by the inability of the political and cultural structures (mainly city-state kingdoms) to handle both the pressure of expanded populations and mass migrations from the North and East (piracy and invasion by the Sea Peoples also jeopardized cities and the supply of tin).
  - ✓ The collapse in Mycenaean Greece was particularly complete, as for two centuries following the widespread and mysterious destruction of the Mycenaean palaces (around 1100 B.C.) there is evidence of very sparse population and little metal working. The classic explanation of Dorian invasion has not worked out well upon investigation, as there is little evidence of the 'Dorian' society until at least 950 B.C. Still, there was clearly movement from the north of Danubian tribes, clans, and families gradually filtering southward into the available lands until enough population density accrued that cities arose again. The semi-mythical foundation of classical Sparta, for example, coincides roughly with the first evidence of the 'Dorian' period.

China is currently testing the limits of how much population can be governed by a mid-late 20<sup>th</sup> Century political structure. There have been many proposals to divide California into smaller states. For GGDM purposes, participants should assume that the Homeworld is populous enough that very sophisticated cultural and political structures developed pregame.

- Global Civilization: Global Civilization is a hot-button topic, one with enough weight to influence elections in the 21<sup>st</sup> Century. The sides agree on one point: It seems to be inevitable and unstoppable as a process. Those who want it cheer, those who don't want it scream, grumble, wave their arms, some are caught in the middle because it is their livelihood.
  - ✓ "In recent decades Western civilization has arguably starting [sic] to morph into the first truly Global civilization. Of course it has been a 'Global civilization,' in one sense, for centuries, ever since it started to span with planet with its trade networks and colonial off-shoots. What has been new, since the Second World War, is that non-Western countries around the world have been emerging a centres of political,

economic and cultural influence, whilst the influence of the old centres of Western civilization in Europe and North America have been in comparative decline. ...

As time goes by these trends will all become clearer. Of course, it will – already is – provoke some people all over the world to draw in on themselves. But, though it takes longer than some people expect, it is a process that cannot be stopped. What will emerge is a civilization which puts down roots in, and draws inspiration from, different parts of the world. Scientists, programmers, thinkers, poets, artists, architects, entertainers, entrepreneurs and statesman from right around the world are already playing their part on global advance, and this will become more and more the case in the future.” – TimeMaps Encyclopedia (timemaps.com) article, “A Global Civilization,” (no author attributed), captured August 27, 2019.

- One and All: c.f. “The modern world arguably features four global civilizations, each of which spans much of the world’s population and territory. The nations within a global civilization share a common cultural foundation, despite their vast cultural diversity.” – from essential-humanities.com, article “Global Civilization,” captured August 27, 2019.

The Essential Humanities article then goes on to identify the four current global civilizations as Islamic, South Asian (India and neighboring regions), East Asian (China-Japan and Indochina) and Western (European and all of the colonial offshoots). The map with the article shows the areas of each civilization, but sub-Saharan Africa is not included in any of them.

I found this concept at least interesting and colorable at first glance, but of course, it depends on whether you are thinking of global civilization as one wholistic idea or as four globe-spanning spheres of influence (i.e. how to slice the pie). The author doesn’t cite to any references for this idea, and I could not find any mention of it except on essential-humanities.com, so this may be an original concept of the author of the article. The article is very bare bones and basic, as is the site, and the site may be inactive since about 2013.

Compare this to the concept evident in the TimeMaps.com article cited above: TimeMaps implies that Western Civilization is becoming *the* global civilization; that other civilizations have been westernized by contact and are becoming part of that civilization. This is not a view – echoing 19<sup>th</sup> and 20<sup>th</sup> century ‘White Man’s Burden’ ideology, even if unintentionally – that will make non-Western readers happy, but it is colorable. In this view, global civilization is one wholistic idea, which, because of the history of the world, consists of Western civilization and it’s naturalized ‘satellites’ slowly morphing into *a* global civilization.

---

*“Hollerith, in a scientific paper published in the School of Mines Quarterly in 1889, suggested that ‘few who have not come into contact with a census office can form any adequate idea of the labor involved’ in taking a census. It was estimated that the census of 1890 would count around 62 million Americans, yet the method employed would be essentially the same one used since the Babylonians: ‘that of making tally marks in small squares and then counting and adding such tally marks...’ Hollerith pointed out that the increase in cost of the census greatly exceeded the growth of the population.”*

– Joel Shurkin, Engines of the Mind (1984) <sup>8</sup>

---

Endnotes.

<sup>1</sup> **Commentary:** The English-language Russian-made movie *Attraction* (2017) is an example of a cheesy first contact film. The film started out fine, but after all the alterity buildup, we find out that the aliens are just humans from another planet. Because they didn't have the budget (or intellect) to do that kind of movie, humans are cheaper. Then it turns into an alien-teen human romance with the daughter of the Russian Colonel, who has daddy issues, who is also associated with a group of Russian teens who seem to act just like American movie teens. It seemed to have been quickly forgotten (after about the 45 minute mark) that over 200 people were killed, and a section of Moscow laid waste by the alien craft crashing into the city – because Russian aircraft shot it down with air to air missiles, despite the fact that no electronics are supposed to function in the vicinity of the ship (a standard SF trope). There are also multiple narrative discontinuities where scenes jump and situations resolve themselves without explanation or imagery – because they had to trim the movie to 2 hours 12 minutes, which is twice as long as the idea merited. Or because the writers didn't have any idea how their characters would escape that ridiculous situation they created, so they just cut to the next scene of them walking away free and unhurt, without explanation. I turned it off a little more than halfway through – when she took the alien back to her daddy's apartment for dinner, I could see awkward stupidity about to ensue – and instead read the plot summary on Wikipedia which didn't make me sorry to have skipped the remainder of the movie. Yet apparently the film received good reviews, has a good rating and did well financially. I am sure the young female audience enjoyed it, the alien-teen human romance is not functionally different than the vampire-teen human romances (e.g., *Twilight* (2008)) that swooned the screen over the years – the 'love conquers all differences' trope.

<sup>2</sup> **Commentary:** In recent years, scientists have discovered billions of tons of biomass in the form of bacteria living under the surface of the Earth, down to 5 km on land and 3 km under the sea bed. This life never sees the sun.

<sup>3</sup> **Commentary:** Picture the scene. A Christian is preaching to a crowd in the square, saying that those who do not accept Jesus in their hearts will go to hell when they die. Then someone yells out, "What about Socrates, Plato, Aristotle?" Uh-oh, confused looks, the crowd is murmuring, house of cards just collapsed, beat a hasty retreat!

<sup>4</sup> **Commentary:** And while we are at it ... to make the absurdity even worse, Dante learned that Adam, Abel, Noah, Moses, Abraham, David, and Rachel – all of whom lived in the old testament before Christ and could not then have been evangelized – were previously resident in the first level of hell with the virtuous pagans, but were scooped in the Harrowing of Hell and taken (undeservedly) to heaven! Humph! My mind is doubled over with laughter!

<sup>5</sup> **Commentary:** Before the movie *Arrival* in 2017, there was a different sort of aliens movie called *The Arrival* in 1996, in which, the aliens, seeing that we were intent on polluting our planet (which made the climate better for them), decided to help us along toward climate change oblivion so that they could colonize Earth after we perished.

<sup>6</sup> **Commentary:** Back around the turn of the millennia, I played in a PBEM game where population was converted directly into armies and missile units, or would grow slowly if left untouched. This mechanic – unrealistic in anything but a zombie apocalypse movie – led to the game being dominated solely by 'steamroller' tactics (as the players called them) where players would conquer, convert the entire population into armies and missile units (like zombies), and roll on to the next province, leaving nothing behind (no need to garrison) because the victory conditions were 'last-man standing.' Steamrollers completely dominated the game (which was becoming boring, the flaws of its over-simplicity were becoming apparent) until I won the first World of Kaomaris "World Championship" game, against the top steamrollers, by playing differently, oppositely. The steamrollers destroyed each other, such that I was left with only two opponents when I finally made a move; I trapped them into damaging each other greatly in a huge final battle and I was able to clean the table with my fresh armies against two diminished enemies. During the six months approximately that the Championship game was in progress, discussions were raging on the forum about how to 'fix' the game and by the time the Championship game had finished, the game was radically different.

<sup>7</sup> **Citation & Commentary:** "Sirhan had violated three California laws merely by possessing the pistol he used to kill Robert Kennedy. Thus, if Sirhan were simply an unwitting patsy involved in a conspiracy, the conspirators must have knowingly chosen a man who had been risking the whole conspiratorial venture by possessing an illegal weapon and firing it at a police range. Had Sirhan been caught with the illegal weapon, the purported conspiracy would have collapsed." – from Wikipedia article, "Assassination of Robert F. Kennedy," citing to Mel Ayton, *The Forgotten Terrorist – Sirhan Sirhan and the Assassination of Robert F. Kennedy* (2007), pp. 109-110.

- ✓ Would there be so many conspiracy theories about the assassination of Robert F. Kennedy if John F. Kennedy had not been previously assassinated?

<sup>8</sup> **Commentary:** Hollerith invented the electric tabulating machine that was first used in the 1890 census. His company was one of four that merged to become IBM in 1911. IBM is iconic in the history of modern computing.

*“The onset and progression through the various stages of puberty are influenced by a number of factors. In both animals and humans, the age of puberty appears to be related more to body weight than to chronologic age. Undernutrition and low body fat, or an altered ratio of lean mass to body fat, seem to delay the adolescent spurt and to retard the onset of menarche....*

*Poor nutrition alters the ratio of lean mass to body fat and delays the onset of menarche. In the US, the age at menarche decreased by 3 years since 1840 due to improvements in the population’s nutritional status. Underweight females generally experience menarche at later ages than normal weight females. In contrast overweight females often experience menarche earlier than the average weight female. Athletic females and ballet dancers frequently experience late menarche, and these delays may be due to the disruption in fat accumulation which results from excessive exercise. Physically, inactive adolescents, on the other hand, tend to experience menarche at an earlier age than normally active females. In conclusion, the body’s fat content along with a variety of environmental and psychosocial factors are responsible for the development and maintenance of female reproductive functions.”*

– E.R. Baker, “Body weight and the initiation of puberty,” (abstract at <https://www.ncbi.nlm.nih.gov/pubmed/4053451>), Clin Obstet Gynecol. 1985 Sep; 28(3):573-9

**What Comes Naturally:** The Census only affects Friendly and Naturalized Colonies owned by the position that activated the Census Power. Conquered and Converted Colonies never ‘grow’ population (Converted Colonies *do produce* during taxation), nor do populations currently located on Colony Ships or Orbital Cities grow during the Census. The growth of populations during the Census<sup>1</sup> depends on the Habitability Class of the colony planet and the amount of population present at the beginning of the Census. Additionally, for the purposes of Naturalized Colony growth, it is important to remember that Habitability Class depends entirely on the Native Population Type of the colony. Thus, while the owner of the colony might see their planet as Unpleasant, the alien population might regard it as an Optimal Planet and grow accordingly.

- **Optimal Planets:** Population located on planets that their Native Population Type considers Optimal will increase at a rate of one per 5 population factors present at the beginning of the Census (i.e. 20%).

The growth rate for populations on Optimal Class planets would mirror the growth rate of the population on their industrialized origin planet before the game. Consider that the human population of the Earth near the end of the Middle Ages might have been *half a billion people*; whereas, 500 years later, despite wars, plagues, famines, and disasters (as Thomas Malthus noted), the population of the world had multiplied 14 times to *seven billion people*!

- **Hospitable Planets:** Population located on planets that their Native Population Type considers Hospitable will increase at a rate of one per 10 population factors present at the beginning of the Census (i.e. 10%).
- **Habitable Planets:** Population located on planets that their Native Population Type considers Habitable will increase at a rate of one per 20 population factors present at the beginning of the Census (i.e. 5%).

- Unpleasant & Hostile Planets: Population located on planets that their Native Population Type considers Unpleasant will grow by 1 population factor, regardless of the total population of the planet. On Hostile Planets, no population growth occurs; living in camps and domed cities doesn't encourage growth, at best, those populations simply replenish their numbers and deliberately maintain a zero-growth condition to avoid overburdening the precious environmental systems. Zero growth in this situation is not a Disruption Event.
  - ✓ In a perverse way, dumping population onto Unpleasant and Hostile Habitability Class planets is a means to curb runaway population growth (e.g., if the position is required to activate the Census Power). This is entirely consistent with what natural science says about the effect of environment on evolution and viability of species, and on the arguments about climate change/global warming: We may be wiping out thousands of species (see Sixth Mass Extinction Event Excerpt, this section) and making the Earth Unpleasant even to us, curbing our own runaway population growth.
- Low Population Colonies: Colonies whose total *planet surface* population at the beginning of the Census is below the threshold level for growth based on their Habitability Class will grow at half the normal rate each Census until they reach the threshold. Fractions will be rounded up. For example, a colony on a Habitable planet that has 10 population will grow one population factor each Census, until the colony reaches 20 population and then will continue growing at the standard rate set for the Habitability Class of the planet.
- Cabin Fever: Population located on an Orbital City (or Colony Ship, see Colonies in a Can, 3 Expansion, p. 913, *infra*) during activation of the Census Power does not grow. This is *not* a Disruption Event, see Peaches for Mad Molly, 2 Disruption, p. 273, *supra*. Orbital Cities both allow a colony to exceed the planet's Maximum Habitability (see Dayworld, 3 Taxation & Census, p. 315, *supra*) by up to half of the original Maximum Habitability and as a means to stymie runaway population growth if the position is required to frequently activate the Census Power (as a result of either a Fundamental Reality or Government Title).

---

*“It is a feeble population that cannot double itself every generation if it tries.”*

– Frederik Pohl, “The Deadly Mission of Phineas Snodgrass,” *Galaxy Magazine*, No. 20, Vol. 5, pp. 5-8, June 1962 (available free online)

---

**Math Exercises:** “The Deadly Mission of Phineas Snodgrass” is a 3½ page math exercise in runaway population growth. It is the story of a time traveler who made himself Augustus, Roman Emperor, just before the birth of Christ. He introduced sanitation and medicine to the Roman Empire, and convinced Rome to share it with the rest of the world. Peace and prosperity descended on the world. Population exploded hitting a billion by 60 A.D. and after starvation and housing shortages, science and technology were finally forced along, nuclear power was available in around 200 A.D. Eventually they liquidated the solar system for energy and then it took a galaxy to supply energy for humanity's exploding population. The total mass of humanity would exceed the mass of the Earth in 1962, and eventually the mass of the galaxy in a few centuries.

- ✓ “Those who in principle oppose birth control are either incapable of arithmetic, or else in favor of war, pestilence and famine as permanent features of human life.” – Bertrand Russell.

The story glosses over a staggering amount of details to get from ancient Rome to 1962 in three pages; apparently there was no Concierge and no Social Entropy Theory (see SETTiGGDM, 1 Entropy, p. 220, *supra*). The main point that has changed since 1962 are the energy calculations, miniaturization has changed the energy equation of civilization; the failure to develop miniaturization technology (i.e. the transistor) is the basis for the massive energy shortage and global nuclear war in the alternate history Fallout video game series.

- ✓ This 1962 story mentions a system of force mirrors around the sun so that none of the sun's energy escaped and the outer planets all froze. The concept known as a Dyson Sphere (a term not mentioned in the story) was formalized in 1960, though similar megastructure technologies had been described in science-fiction stories in decades before. The Kardashev Scale was proposed in 1964. Collectively, it appears that a new scale of thinking about civilizations emerged in the early 1960s both in science and engineering, and in its disowned step child, science fiction literature.
- ✓ See Kardashev Scale discussion in Scaling Eras, 1 Eras, p. 755, *infra*; more energy consumption doesn't equate to superior technology and may, in fact, demonstrate an inferior technology.

---

*“You take a cell, circumvent the Hayflick limit, you can prevent senescence. ... It means the cell doesn't grow old, it becomes immortal. Keeps dividing, doesn't die. They say aging is a natural process, but it's actually a fault in our genes. ... Without it, I could keep looking like this forever.”*

– Prof. Lena, Annihilation (2018)

---

**Natural Assumptions:** The game makes broad assumptions that in any colony, sufficient conditions exist for continuation of the species. For example, that the population contains sufficient numbers of viable members of the biological sexes (however many there may be) required for reproduction, that birth ratios are normal for the species (in human populations about 105 males are born for every 100 females, while among cats, 46.5% of kittens are female), that the conditions are otherwise right for reproduction. Alternatively, it is also colorable to assume that sufficient and satisfactory artificial means of reproduction exist in any technologically advanced civilization to insure local reproduction. All of this is *trivial* to the game unless the Concierge or players decide to make it non-trivial (that is, to ‘look’) by developing interpretations, technologies, or activating Interventions; there is plenty of room here for the Concierge to Intervene.

- ✓ Interventions are a form of ‘looking’ in the game where things are created by word.<sup>2</sup>

GGDM makes no direct reference or calculation regarding natural birth and death rates of any species, or of the aging of populations. It is generically assumed that, absent mass destruction of urban centers, birth and survival rates exceed death rates, and hence population increases during each Census. It is also assumed that infrastructure and systems grow with the population, as a sign of prosperity and wellbeing. Any deviation from these assumptions can be handled by Interpretations and Interventions; most permanent Census and population deviations are Type 1 Fundamental Realities.

The cost of raising and educating the next generation (\$233,610 USD per child born in 2015 and raised to age 17, according to the USDA) are, for game purposes, assumed as part of the basic

domestic subsistence of the colony, i.e. that portion of what the colony produces that is not available to the interstellar government through Taxation. That is why there is no ‘cost’ to the Treasury for the Census. It may even be possible that for some species, the young are born as adults needing little care or education (while human children require at least 12-14 years, other animals require only 1 or 2 years to reach adulthood), perhaps genetically programmed to perform certain tasks (e.g., eusocial insects). This makes little difference in the game system due to the uncertainty and variability of the time periods represented by each Regular Turn, and other undefined factors, such as the number of individuals per population factor, what exactly is a RP, etc.

- Senescence: The Hayflick limit is the main reason humans have a concept of the afterlife and more importantly, why modern humans cling to (and will continue to cling to) the ancestral ideas. Without it (well ok ... and predators, natural disasters, disease, and violence – do you still think the universe is our friend?), would anyone have wondered what happens after death? Would we have the need to reassure ourselves of continued existence in another form after we have lost this one?

Few people now ask why we cannot have immortality with the advance of technology; to the extent that they give it any thought, they probably just assume it will happen *someday*. It is not from scientific literacy that they do not ask, but rather because it is not a pressing issue; notice that seeking immortality has seemingly gone out of fashion in science-fiction literature in the last four decades?<sup>3</sup> Is the lack of thought about technological immortality a result of an acceptance that entropy is the way of the universe, or is it something perhaps more sinister: A lack of desire of humanity to be immortal in the current world? Condemned to endless absurdity?

Think that this cannot be true? Mass shootings and murder suicides have become a popular express checkout in recent years. People blame it on guns, television, movies, anything to not have to look up from the ground, look around.

---

**Paris:** *For Venus smiles not in a house of tears.*

– William Shakespeare, “Romeo & Juliet” (1595)

---

**Everyone has a Venus:** The focus of much of our thought about habitability of planets is based on what sort of atmosphere the planet has and whether it has water. Breathing and hydrating are pretty darned important to us. But beyond that, there are many other factors to consider, in order, gravity, light/heat, air pressure, storms, and perhaps, corrosive substances in the air and on the surface. Everyone has a Venus. Despite Controlled Environment Technologies in the game, a percentage of planets, about 10%, will have an Uninhabitable Habitability Class. While CET might establish colonies in those places, the viability of the colony is short (in GGDM terms) and the cost is too much, and there are many other places far better; positions will shortly have knowledge of hundreds of planets in the Galactic Space.

- ✓ Though largely irrelevant for Uninhabitable planets, Maximum Habitability will also be generated.

Ten percent or less of planets being deemed Uninhabitable to a Major Race in GGDM is quite generous, based on the technology which must exist in the GGDM setting. Currently, nearly 100% of planets we have discovered – including both planets in our own solar system and the

exoplanets – are (probably) Uninhabitable (or at the least, Mars is Hostile Habitability Class) in our current technology (and we cannot even get humans to another planet in our own system currently), so we have a long mountain to climb. The Concierge can adjust the percentages up or down; Uninhabitable does not prohibit isolated Orbital Cities from being established if the technology is developed in the game. ‘Improved’ CET technology can also be developed.

But colonization of ‘Uninhabitability Class’ (i.e. Uninhabitable Habitability Class) planets is more than just a technology issue, it is also a question of why bother? What is there that would lead an interstellar civilization to expend such effort?

➤ No Mars Light: GGDM stops just short of absolutely prohibiting colonization of Uninhabitable Class planets. But it will have to be a special situation, perhaps costing extra RPs, Acts, and/or maintenance, and with the potential for catastrophic loss of the entire colony (or significant loss in population) each Regular Turn. The Darien Scheme, discussed in Colonization, 3 Expansion, p. 911, *infra*, gives a hint of what might happen; the Isthmus of Panama where the Scots tried to settle in 1698 was effectively ‘uninhabitable’ based on the technology and logistics of the time, and is sparsely settled even now. And it is worth noting again, that a planet that is Uninhabitable to one species is home to another (and thus, there may be combat there, the Spaniards attacked the Scots in Panama and suffered greatly in the environment): microbial life has been found near volcanos on Earth.<sup>4</sup>

- ✓ “In fact, organisms that do not just survive but thrive in such environments are appropriately named ‘extremophiles.’ They have evolved to gather nutrients from very strange chemical processes, and they are hardy enough to exist where other forms of life would simply dissolve away, suffocate or starve. Yellowstone’s superheated, anoxic, acidic hot springs are a great example. These deathly pools are full of extremophiles; there’s even a microbe there that has been found to save energy by literally piggybacking around on other, larger extremophiles and stealing their nutrients to get by.” – Robin Andrews, “Living In Hell: The Possibility Of Life Inside A Volcano,” Forbes, April 15, 2017.

---

*“A viable population is a population capable of maintaining itself, without significant manipulation.... A minimum viable population is an estimate of the smallest viable population that will persist for a specified length of time (e.g., 500 yrs.) and with a specified level of certainty (e.g., 95%).... Generally, genetic and demographic uncertainty are only important in affecting viability of very small populations. Demographic uncertainty usually kicks in first.”*

– Iowa State University, Natural Resource Ecology and Management, “Minimum Viable Populations,” retrieved March 14, 2018

---

**Minimum Viable Population:** Discussion of the minimum viable population (MVP) of humans necessary to prevent inbreeding depression, pedigree collapse,<sup>5[example]</sup> and/or extinction from catastrophe (e.g., Lake Nyos disaster, 1986, killed over 1,700 people and 3,500 livestock in a few minutes) is a very fine subject occasioned first by the threat of global nuclear apocalypse and later by consideration of colonization of distant worlds, especially by generation ships.

Opinion ranges from approximately 50 humans (some go as low as 15 humans) up to about 4,000; many argue that a small village of about 160 people would be sufficient, barring disaster.

History provides some fine examples, such as the population of Pitcairn Island who are all descended from survivors of the *HMS Bounty* and Tahitian natives they brought along – after most of the men had died in internecine fighting (consider also the murderous rampage among the survivors of the *Batavia* mutiny, in a crude attempt at social engineering).

Population in GGDM is not defined in genetic terms, nor does it represent any fixed number except resource production. Further, population in GGDM might not even be human, but one must assume universally that reproduction requires some sort of information pattern that can be both replicated and corrupted. As such, inbreeding effects could occur or be introduced for very small, isolated colonies, with the participants deciding what population level and isolation period falls below the ‘minimum viable population’ for the species.

- ✓ In the Stargate SG-1 series, the Earth humans established an Alpha Site on another connected world to serve as an off-world base of operations, a quarantine site, a VIP evacuation site, and with enough population to insure that humanity would survive if the Earth were destroyed.
- Inbred Populations: It may occur during play, by accident or design that a position consists mostly of or entirely of low-population colonies. Absent large worlds, this would be a difficult position to play without extraordinarily high technology and industry output. But working from an established and well-defended world, it could be a strategy to seed space as far and wide as possible to explore and prevent extinction.
  - ✓ “Moreover, the Taíno woman’s genome doesn’t contain long repetitive sequences characteristic of inbred populations. Her community, therefore, was likely spread out across many islands and not confined to 500-square-kilometer Eleuthera. ‘It looks like an interconnected network of people exchanging goods, services, and genes,’ says William Schaffer, a bioarchaeologist at Phoenix College who helped excavate the remains in Preacher’s Cave.” – Lizzy Wade, “Genes of ‘extinct’ Caribbean islanders found in living people,” *Science Magazine*, February 19, 2018.

The Taíno island culture is an example for both low Maximum Habitability Habitable/Hospitable/Optimal planets and for the genetic integrity of interstellar nations generally.

- ✓ “Small, isolated populations such as those of remote islands represent extreme examples of pedigree collapse, but the common historical tendency to marry those within walking distance, due to the relative immobility of the population before modern transport, meant that most marriage partners were at least distantly related. Even in America around the 19<sup>th</sup> century, the tendency of immigrants to marry among their ethnic, language or cultural group produced many cousin marriages. If one considers as a function of time  $t$  the number of a given individual’s ancestors who were alive at time  $t$ , it is likely that for most individuals this function has a maximum at around 1200 AD. It has been suggested that everyone on Earth is at most 50<sup>th</sup> cousin to everyone else.” – from Wikipedia article, “Pedigree Collapse,” captured January 15, 2020.
- ✓ “Turns out, it was RYR2 – the gene the researchers had suspected all along. But there wasn’t just one mistake in the gene. More than 300,000 base pairs in the gene had been duplicated. ... To develop the duplication that causes sudden death, a child has to inherit a mutated gene from each parent – the chances of which are 25 percent.

That four children in one family inherited the mutation and died sudden deaths is incredibly unfortunate, [Michael] Ackerman said. The Amish may be more vulnerable to recessive inherited conditions because they are descended from a small number of ancestors and tend to intermarry, [David] Tester said. The two families studied in the report are seemingly unrelated, but because the children all had the exact same duplication in a gene inherited from both parents, Ackerman said that it's likely that they have a common ancestor." – Harmeet Kaur, "No one knew why the kids in 2 Amish families were dying suddenly. Now researchers have some answers." CNN, January 16, 2020.

*"Several recent studies suggest that the timing of the onset of puberty in girls has become earlier over the past 30 years, and there is strong evidence that the increasing rates of obesity in children over the same time period is a major factor. This article reviews studies from the United States that examined the age of menarche and the age of onset of breast development and pubic hair as a function of body mass index, which is a good surrogate measure of body fat.*

*... The linkage between body fat and the reproductive axis in girls may have evolved in mammals as a mechanism for ensuring that pregnancy will not occur unless there are adequate fat stores to sustain both the mother and the growing fetus."*

– P.B. Kaplowitz, "Link between body fat and the timing of puberty," (abstract at <https://www.ncbi.nlm.nih.gov/pubmed/18245513>), *Pediatrics*. 2008 Feb;121 Suppl 3:S208-17. doi: 10.1542/peds.2007-1813F

**Moving Parts:** As noted in the top feature quote and the quote above, the age of menarche is regressing in the human female population.<sup>6</sup> It doesn't require science however, I have heard commented many times over my life that females are growing up faster, maturing younger, etc. (some of this may have been sparked by the Traci Lords scandal). I have often thought it was due to cosmetics and culture, but there may be a physical reason as well. At the same time:

- ✓ "Researchers assessing the results of nearly 200 studies say sperm counts among men from North America, Europe, Australia, and New Zealand, seem to have halved in less than 40 years. Some experts are skeptical of the Human Reproduction Update findings. But lead researcher Dr. Hagai Levine said he was 'very worried' about what might happen in the future." – Pallab Ghosh, "Sperm count drop 'could make humans extinct,'" BBC Health, July 25, 2017.
- ✓ "In 1992, scientists from Denmark published a study claiming that there had been a decline in the quality of men's semen over the preceding 50 years. Though worries have persisted since then, it has been hard to back up this claim. Now a comprehensive new study has emerged that appears to support the research from decades ago. The average Western man's sperm count has fallen by about 60 percent in the last 38 years, sparking anxiety about what this might mean for humanity's future. The latest study was a meta-analysis of English-language studies on sperm count and concentration that was published this week in the journal Human Reproduction Update.

Led by researchers from the Hebrew University-Hadassah Braun School of Public Health and Community Medicine and the Icahn School of Medicine at Mount Sinai,

the work analyzed 185 studies on sperm count and quality that were published between 1973 and 2011. After combing through the material, the researchers found a large decrease in sperm quality among men from North America, Europe, Australia, and New Zealand. The drop was particularly notable among men who had never had kids and were unaware of their fertility status. In these men, they found a 52.5 percent drop in sperm concentration, and a 59.3 percent decrease in total sperm count. They did not find the same decrease in men from non-Western countries, although the authors acknowledged that this could potentially be due to a lack of data” – Leah Rosenbaum, “The Sperm Counts of Western Men Have Declined Dramatically, Alarming Experts,” seeker.com, July 26, 2017.

- ✓ “The state of male fertility has been one of the most hotly debated subjects in medical science in recent years. While a number of previous studies found that sperm counts and quality have been falling, some dismissed or criticized the studies over factors such as the age of men included, the size of the study, bias in counting systems and other aspects of the methodologies. Some other concerns are outlined in an analysis published by the American Society of Andrology which focuses on the male reproductive system. The skepticism also has to do with the difficulty of comparing records from a fertility center in the 1970s with one from today and with the fact a single man’s sperm count may fluctuate during his life span due to his weight, use of alcohol and many other factors.

However, Shanna H. Sawn, one of the authors of the new study published in the Human Reproduction Update, said that the new meta-analysis is so broad and comprehensive, involving all of the relevant research published in English, that she hoped it would put some of the uncertainty to rest.... The most important data points in the new study involved sperm concentrations of ‘unselected’ men who haven’t yet proven they are fertile. These are men in the studies who are on the younger side and are not yet fathers or do not have partners who are pregnant. Researchers estimated that the men had an average sperm concentration of 99 million per milliliter in 1973 but that had dropped to an average 47 million per milliliter in 2011.” – Adriana Eun-jung Cha, “Sperm concentration has declined 50 percent in 40 years on three continents,” Washington Post, July 25, 2017.

No one is sounding the alarm bells yet for human extinction due to dramatically decreased sperm concentrations. Rather the opposite is true; the population of the world has doubled from 3.5 billion to 7 billion in the time since I was born (about 50 years ago). *Exploding population is still one of the major looming catastrophes of the world*, but is a couple of notches down from some others that will kill us much more quickly. But one wonders at the process that is playing out.

It is an interesting dynamic eh? Earlier fertility in females and less fertility in men. The actual effect is more likely to be sociocultural than physical; e.g., our concepts of sexuality, youth, have changed vastly during the time that these physical phenomenon have occurred in the population. It’s hard to say if there is any connection, since there are so many other factors, such as the introduction of true, widespread contraception means in the 1970s.

- Headroom & Legroom: Similarly, and hand in hand with these phenomena, the average height of humans in developed and developing countries has also *increased* since the middle of the 19<sup>th</sup> Century. No one thinks this is an evolutionary development in humanity – in fact,

it is counter evolutionary in some respects – rather, the increase in height is likely a nutritional and medical benefit of modern food supply and healthcare maximizing our genetic potentials (Michael J. Dougherty, “Why are we getting taller as a species?” *Scientific American*, June 29, 1998).

This process has become so pronounced that the Chinese military has recently had to re-measure its soldiers and re-size its equipment (especially tanks and vehicles) which was becoming too small for the average soldier (Max Fisher, “Chinese soldiers are getting too big for their tanks,” *Washington Post*, February 18, 2014; Zhao Lei, “Chinese soldiers get bigger, requiring new gear to match,” *chinadaily.com.cn*, February 19, 2014). It has also been well commented in discussions about safety rules that professional sports athletes (except possibly horse jockeys) have become larger since the middle of the 20<sup>th</sup> Century (e.g., the injuries by big modern hockey players hitting each other at 20-30 mph on skates, or in American football, 300 pound ‘big eater’ linemen hitting each other); television cameras don’t really do it justice unless they are standing next to regular people; standing next to other big professional athletes on the field, the players look like normal people.

---

*“Other experts say it’s not surprising that human longevity may have hit a ceiling. ‘Right now, all we’re doing is we’re combating one disease at a time: heart disease, cancer, stroke,’ says S. Jay Olshansky, who studies aging at the University of Illinois and wrote a commentary article accompanying the report. ‘It’s like a game of whack-a-mole. You know: One disease goes down another comes up,’ he says. Olshansky says the only way that could change is if scientists figure out a way to fight the underlying cause of aging, not just individual diseases. ‘That would be a game changer,’ he says.”*

– Rob Stein, “Has The Human Life Span Hit the Ceiling?” NPR, October 5, 2016

---

## Endnotes.

<sup>1</sup> **Commentary:** I did not understand for most of my life that I was included in the cohort called Generation X. In my view, Generation X represented the children born in the 1980s whose coming of age coincided with the widespread availability of PCs and the early internet. Those children don’t remember the world before PCs, the internet, game consoles and hundreds of TV channels, they don’t remember 13-channel cable, over the air television, grocery store check cashing cards, government checks printed on Hollerith Code Cards, no direct deposit, paying cash for gas. So, even now, I do not see how children born after 1980 have not been assigned a different cohort than mine.

<sup>2</sup> **Commentary & Citation:** Lord Foul could not kill Thomas Covenant because he had tricked him previously into breaking the law that separates the dead from the world of the living. He spent himself into nothingness trying.

<sup>3</sup> **Commentary & Citation:** The exception, of course, is Dr. Who, e.g., “The Lazarus Experiment” (2007), but I think even in Dr. Who the concept is rarely addressed directly, or much less so than in the Tom Baker years.

<sup>4</sup> **Citation:** “Extremophile bacteria found living on South American volcanoes,” *Science News Releases* ([bitsof-science.org](http://bitsof-science.org)), June 9, 2012; “Volcanic life – the first microbes to colonise the Fimmvörðuháls lava,” Dr. Laura Kelly guest post (posted by John A. Stevenson), [all-geo.org](http://all-geo.org) (Iceland volcano ash geology open source GIS python), July 28, 2014.

<sup>5</sup> **Commentary:** Most people have two grandmothers; the simplest pedigree collapse is when this is not true. Most historical examples are more complicated, like not having eight great-grandparents or your uncle is your father.

<sup>6</sup> **Citation:** “Although the average age of menarche (onset of first menstrual period) has been getting younger in U.S. women.... The average age at menarche is now about 12.4 years old, down from 13.3 in women born prior to the 1920s, but the average age at menopause has been around 51.5 for decades.” – WebMD article, “Menopause.”

✓ Think of the opening scene of the 1976 Stephen King horror-movie classic, *Carrie*.

*“Like most tropes, this one didn’t come out of nowhere. In purely biological terms, men are more expendable than women because 1 male and 10 females can produce 10 times the offspring of 1 female and 10 males. In primitive times when epidemics were far more common and relatively few people survived to adulthood ‘women and children first’ was not just misandristic bragadocio, it was a matter of basic survival. Societies that didn’t protect their women tended to expand more slowly and die out more easily than those that did.” – TVTropes.org, “Men are the Expendable Gender”<sup>1</sup>*

**Birkenhead Drill:** e.g., Smurfette. Anthropology 101: Expendability Theory: A theory that suggests men will tend to do more dangerous jobs (especially combat) because the loss of a man is less disadvantageous reproductively than that of a woman. *Google it.* Smurfs are extinct.

- ✓ “In 1852, HMS Birkenhead was wrecked at Gansbaai while bringing reinforcements to the war at the request of Sir Harry Smith. As the ship sank, the men (mostly new recruits) stood silently in rank, while the women and children were loaded into the lifeboats. They remained in rank as the ship slipped under and over 300 died.” – from Wikipedia article, “Xhosa Wars,” captured June 15, 2019.<sup>2</sup>

Whether we acknowledge it or not, this is still the central issue to women serving in the military, especially in combat roles. It goes to the core of our psychology, how many women actually want to be in the infantry, artillery, or tanks? So the feminist argument in this case is one of principle (equality of opportunity and treatment), rather than reality.

Most viewers – especially the younger ones – may not have given it much thought when the dodo yelled, “There goes the last female!” in *Ice Age* (2002) as they all went over the cliff.

- ✓ If any human male asks why women and children first, he should go with the women and children.<sup>3</sup>

*“You have repeatedly condemned my triage philosophy as being too lenient, too soft. It is not. Triage is, and has always been, a concession to the inevitable, not premeditated mass-murder. Twenty-five years ago, in the white heat of a new crusade, we set a rather idealistic goal: semi-immediate reversal of runaway overpopulation.*

*We were dismayed to find it not that simple. How can an illiterate Third Worlder, whose single recreation in an otherwise drab existence is sex, be persuaded to remain chaste during his wife’s fertile period?”*

– William Walling, “Triage” (short story, 1976)

**Triage:** Basic Triage categories: 1) Those who will die even if they receive immediate medical care, 2) those who will die if they do not receive immediate medical care, and 3) those who will not die if they do not receive immediate medical care.

- ✓ “In advanced triage, specially trained doctors, nurses and paramedics may decide that some seriously injured people should not receive advanced care because they are unlikely to survive. It is used to divert scarce resources away from patients with little

chance of survival in order to increase the chances for others with higher likelihoods. The use of advanced triage may become necessary when medical professionals decide that the medical resources available are not sufficient to treat all the people who need help. The treatment being prioritized can include the time spent on medical care, or drugs or other limited resources. ...

In these extreme situations, any medical care given to people who will die anyway can be considered to be care withdrawn from others who might have survived (or perhaps suffered less severe disability from their injuries) had they been treated instead. It becomes the task of the disaster medical authorities to set aside some victims as hopeless, to avoid trying to save one life at the expense of several others.” – from Wikipedia article, “Triage,” captured August 26, 2019.

In the William Wallace story, certain parts of the world that were on the verge of collapse due to failure to check runaway overpopulation could be denied U.N. assistance from the limited remaining resources, and allowed to collapse. There was a political-ideological war in the U.N. agency over application vs. racism.

- ✓ “Despite our sanctions, proscriptions, lawful executions and extensive triage judgments; despite floods, earthquakes, plagues, and the farther encroachment of deserts upon our remaining arable soil, there are now some twenty-five thousand more human beings on Earth than the nine and three-quarter billions we could not feed last week. And you tell me all’s right with the world.” – William Walling, “Triage” (short story, 1976).

*“I pity your wife if she thinks six minutes is forever.”*

– Freddy Mercury’s character, *Bohemian Rhapsody* (2018)

---

**Reproductive Consciousness:** Pornography, masturbation, and prostitution are about recreational sex without consequences, more or less. Eroticism and sensuality are about psychological needs; lovemaking is about all three. Sexual intercourse is only about bonding and reproduction (reproduction does not require love<sup>4</sup>), bonding is only about having two or more humans to raise the young.<sup>5</sup> These are the three legs upon which the continued procreation of humanity stands.

Contraception and modern pornography, and millennia of accidental and inadvertent pregnancies, and attempts to moralize and control reproduction, demonstrate amply that reproduction is not the main human desire, but rather we desire the reproductive activities that just happen, as a side consequence, to lead to reproduction. As serendipitous as this revelation may seem to the modern mind, this is a fundamental reality which, more often than not, humanity sees only in afterthought; sex is a recreational exercise and psychological need. This is the human dichotomy.

- ✓ Again, the plethora of Why Not questions govern human sexuality; why not have sex with whomever you like, why not have sex with your friend’s girlfriend, why not masturbate, why not have sex with your brother, sister, cousin, mother or father, why not have sex with your students, why not have group sex, why not have sex with someone who doesn’t consent? *Camraderie amoureuse*?
  - “Here sexual union and family, there freedom or promiscuity” – Émile Armand (d. 1963), the early 20<sup>th</sup> Century French anarchist of *free love*.

Contraception places a barrier between the act, momentary gratification and long term consequences, both personal for parents and child, and for civilization. This changed Western sexuality and relationships to the horror of conservatives by removing the danger of reproduction while maintaining the gratification of psychological needs. Theoretically, this might have led to better long term bonding, but it hasn't as other primal drives remain active in young adult humans.

It is perhaps the cruelest joke that most of us were not 'intended' to be here, that the possibility was not considered in the moment and only half-mindedly afterward. That we were the after effect of a momentary gratification. It seems that 'nature' intended us not to be responsible for creation for which we could not possibly obtain permission – except that is backwards – rather that it was a necessary development for the procreation of life that it either be 'mindless,' involuntary (as an amoeba) or propelled by gratification.

- ✓ Is any *quid pro quo* involving sex automatically prostitution? Suppose by sworn court testimony it is established that after a husband bought a house in both their names, and they moved into the house, on the first night in the house, the wife felt like having sex and they did have sex. And it was in main part because they finally had a house of their own, and she felt secure being the co-owner. Is this *quid pro quo* or just normal bonding-reproductive behavior of humans (what some call romance and love)? You might argue that I am stretching the point of *quid pro quo* in relation to sex, the modern usage of the term carries an expectation that the arrangement is explicit. But, there is nothing in the translation of the phrase that implies that it must be explicit, it can be implicit or even accidental or natural. For example, the species of energetic little birds whose males build nests on the ground (they like anything blue) solely for the purpose of attracting and mating females, and they mate as many as they can!
- Domesticated Animals: It is not entirely certain, prehistorically, *when humans began to understand that sex leads to reproduction* – an understanding called reproductive consciousness – which seems to be unique to humans. Some believe that domestication of animals first led to understanding the connection. Without modern science, the causal relation might be less obvious than it would seem, due to the relaxed fertility cycle of human females, the long gestation periods of human reproduction, and perhaps, youthful promiscuity and the fact that every act of copulation does not immediately lead to pregnancy (no 1:1 correlation between the act and the result). It is possible, though disputed, that some isolated tribes studied by anthropologist in modern times, may have attributed pregnancy to magic or acts of the gods, while regarding sex as a social activity. Even with modern understandings, the moment of contraception remains magical as we still cannot create life out of non-living matter.

- ✓ In the 1967 hit song "I Think We're Alone Now" by Tommy James and the Shondells, the young adults think the parents don't understand what they are doing and what they want to do, but it is just the opposite; the parents know exactly what they are trying to do, and the children do not: They seek the momentary gratification.

It is thus that only humans can *intend* reproduction of ourselves and the animals we control – because of reproductive consciousness; the latter being the source of dog, cattle and horse breeding, and cat fancy.

- ✓ Allow your mind to range for a minute over the implications of understanding the connection between the sexual encounter and birth (vs. not understanding). Is there

any part of humanity that has not been touched by this understanding? History, family relationships, inheritance, crime, food, medicine, politics, ethnicity, race, religion, drama, law. It is a profound understanding equal in all ways to knowing that we can control and make fire (discussed in *The Secret of Fire*, 3 Technology, p. 721, *infra*).

We naturally watch animal documentaries from our perspective; it is not entirely clear, and somewhat unlikely, that the animals themselves perceive the cause and effect of their actions; that mating season driven by instinctive behavior, leads to young members of the species later. Nor do they likely see the larger picture of the march of the seasons, being mainly concerned with the here and now, daily survival. Causal understanding has two elements, memory of what happened, and inference or reasoning, with the results eventually confirmed or dismissed by testing or continued observation. Do animals actively remember the activity of mating?

- ✓ “They [dogs and cats] don’t even understand, we are sure, any relationship between a sexual encounter and pregnancy and birth, and therefore, cannot understand the necessity or techniques for interfering with the process. They seem closed off from their own mortality and the peril of it all. That level of comprehension would appear to be ours alone.” – Roger Caras, *A Cat is Watching* (1989), p. 208.<sup>6</sup>

Sapient understanding of death, our own death, an abstraction since we will not actually experience it and live to write about it, is a major step toward seeing the meaninglessness, comprehending the Existential Void. The inability to connect the sexual encounter with pregnancy and birth, probably indicates a lack of “autobiographical memory” and “extended self-conception” advanced as central pillars of human consciousness (which is locally co-extant with sapience and personhood, Daniel Dennett) by Prof. Antonio Damasio (Jason Pontin, “The Importance of Feelings,” MIT Technology Review, June 17, 2014). See full feature quote, 3 The Big Bang, p. 9, *supra*.

Although it cannot be ruled impossible that a technologically advanced species would not automatically possess reproductive consciousness, it might be fun to try in the game, though the operational consequences are not immediately clear. Reproductive consciousness is so fundamental to the human condition currently that we would automatically assume that any sapient species we encounter would be firmly in possession of the same consciousness.

- ✓ Autobiographical memory and extended self-conception does not extend to preexistence: A human doesn’t remember being born (or before being born, which is absurd) and does not know when they will die. And that makes us no different than cats, dogs or any other living creature. Other than the common, accepted, observed fact of birth and death, hospitals and graveyards, each human would have no idea that they have not always existed – other than their parents’ claims – or that they will not always exist, other than seeing death around them (and humans are carnivores, which makes it necessary for survival). Without such communication (which humans could provide if they had the ability to understand), cats and dogs don’t know they have not always existed if they ever thought of it. It has usually been considered quite probable that non-sapient species do not have this extended awareness, and to the extent that they consider it, each has always existed and always will, and thus they cannot see the Void. Metaphysics and religions simply keep and reinforce in humanity that animal

blindness to the Void by moving it to a realm beyond the now and the physical, so that we can think – with varying sincerity – that we will always exist in some form.

- Notice that Western religions talk about the ‘afterlife’ but never a ‘pre-life’?

- What Is, Is: If male cats were self-absorbed with moralities, absurdism, Kantian imperatives, and meanings, there would be no more kittens in the world. I might even go so far as to suggest that male cats don’t know what a female cat *is*; as Chaki Kobayashi (see excerpt *What is a Tree?* in *Persistence of Existence*, *supra*) pointed out, perhaps inadvertently, the *what is* of anything is an interesting concept in and of itself. To the male cat, the female cat *is* that smell which at certain times makes him fight and do other instinctive behaviors which we call mating (or the sexual encounter, as Roger Caras called it), the female cat *is* the one who wants to do that thing against his belly sometimes that the male cat wants to do any time.<sup>7</sup> The female cat *is* the one who wants to love up against him when he comes up and *is* the one who wants to play sometimes and he doesn’t mind.

That is different, of course, from what the kittens think a female cat *is*; there really is no such thing to the kittens: There is only mother caregiver, siblings, and all other things in the world which might be an existential threat, food, or something to play with and pounce. To us, who have reproductive consciousness, extended awareness, autobiographical memory, sapience, etc. – and no sexual-reproductive interest in female cats (don’t even go there, Catan ‘wood-for-sheep’ people) – the female cat *is* the sex of the species that bears and cares for kittens, the ‘mother’ of the future. As Chaka Kobayashi might ask, is the male cat dumb? Dumber than us? Whose *is* is?

The notion of a childbearer and sexual reproduction is so engrained in creatures above amoeba – an amoeba is not considered an animal – because it has been wildly successful in evolutionary terms and ingrained in our psychology such that we cannot imagine otherwise. The *non-childbearing role is the definition of the male* biological sex – the essence of ‘maleness’ – for most people, and since the dawn of sapience (to which we made deities and mythologies), though biologist may have a slightly different definition due to natural oddities such as the sea horse.

But, of course, we do know of asexual reproduction (e.g., fission, budding, spores) without ‘childbearing’ in the sense that we think of it, and according to the Wikipedia article on the subject (January 13, 2019), approximately half the phyla in the animal kingdom, up to snakes and reptiles, have displayed asexual reproduction, though there had to be a childbearer (i.e. a female) in those cases. Anyway, GGDM makes no assumption or specification (with the exception of some Fundamental Realities) as to whether reproduction is sexual or asexual, or whether any member of the species is a childbearer, female, or other. This may impact, for example, Black-ops, see ‘honey trap’ feature quote bottom p. 1291 and discussion in *Bees, Bears and Sci-Fi, 2 Special Operations*, p. 1292 *infra*, if the participants *choose to look*.

- What It Isn’t: The stark dividing wall between mainstream filmmaking and pornography is unsimulated sex. For example, the spectrum from actual prostitution to lap dancers to strip tease performers. While this may seem serendipitous to the reader, it is taken quite seriously and marks the single, most enduring cognitive divide of human literature and art since the beginning. Though the wall has eroded slightly over the last 50 years (beginning with Andy

Warhol's Blue Room (1960)) in the film industry, it is still very much intact, but there remains an odd, contorted relationship between the two poles: While more 'mainstream' productions have *slowly* featured more unsimulated sex (and increased 'gratuitous' nudity and simulated sex), porn *quickly* moved exclusively into the video niche, generally abandoning in the last 30 years all pretense of mainstream filmmaking, storytelling, sets and costumes, or even erotic art and sensuality (though, in the larger picture, there are always historical cycles). As one critic pointedly said, there is nothing sexy about modern porn.<sup>8</sup>

The evolution of the movie Caligula (1979) from mainstream Roman movie (as *political satire*) with mainstream actors (it featured veteran actors Peter O'Toole, Malcom McDowell, and Helen Mirren) and production quality – to which was added first violence and simulated sex, and finally unsimulated sex (i.e. pornography) is a fascinating example, and caused Gore Vidal and Tinto Bass to subsequently disown the movie.

- ✓ See related Good Vibrations discussion, 7 Beginnings, p. 69, *supra*.
  - ✓ See also Neurotic Religion and Temple Prostitution discussion, 4 Culture, pp. 412, 415, *infra*.
- Fuzzy Places: Science-fiction literature has long vaguely suggested here and there that intellectual maturity of the human race and/or future evolution would lead either to an end of reproduction or an end of natural reproduction. The back basis for this ranges from early 20<sup>th</sup> Century ideas of the separation of intellect and bestiality – in these futures, intellect wins and human bestial drives fade – to full embrace of Kantian imperatives and anti-natalist arguments. Population control and advanced anagathics are often also cited. At the other end of this is extinction. To adapt a Nick Bostrom-like argument, which is the greater moral imperative – to avoid the harms of individuals being born into this world without consent – the anti-natalist argument – or to avoid extinction of humanity – as Bostrom suggests? See Derek Parfit and Nick Bostrom, The Unicorn Song, 1 Resolution, p. 1461, *infra*.
- ✓ As mentioned previously, so far as we know, only humans can intend to reproduce, whether they happen to be thinking about it at that moment or not, they know it is a possible consequence. This is enough to place them on a shelf separate from all that we know. It is thus possible for humans to cause their own extinction through choice. Does every sapient life in the universe end in that way? If so, Fermi Paradox solved. Or is it part of the emergent evolution of the universe (see fractures discussion, Fourth Frame, 1 Entropy, p. 226, *supra*) that over time, the basic drives of life in the universe will be supplanted by choice by lifeforms on whether or not to continue reproducing?
  - ✓ Anti-natalism is thus a function of human consciousness, sapience, recognition of birth and death, mortality and reproductive consciousness which *makes the blameless in animals blameworthy in humans*. At least until the time of Malthus, the attitude was that we should just be like the animals, blameless for reproduction even if conscious of it. Reversion to being like the animals or attempts to be so blameless have never worked out for humans; we cannot go back to being animals any more than we can revert to our childhood innocence. We are stuck with our sapient consciousness.
  - ✓ 🕯 “When the candles are out, all women are fair.” – Plutarch, Conjugal Precepts.<sup>9🕯</sup>

*“There are three forms of sexual coercion that researchers have documented in both human and nonhuman primates: harassment, intimidation, and forced copulation. Harassment is the most common and results when males make repeated attempts to mate that imposes costs on females, intimidation is the use of physical violence inflicted on females who refuse to mate with a given male, and forced copulation (or ‘rape’ in the human literature) is the least common form that involves violent restraint for immediate mating.*

*The researchers found convincing evidence that the first two forms of sexual coercion (but not the third) increased the long-term reproductive success among males in Japanese macaques, baboons, and our closest evolutionary relatives the chimpanzees. This suggests that, at least for these three species, sexual coercion has been selected as an adaptive strategy in male sexual behavior. But what about humans? This is a difficult question to answer since, for reasons of privacy, researchers can’t very well study human sexuality by stationing a field researcher in our bedrooms.”*

– Eric Michael Johnson, “The Science of Sexism: Primate Behavior and the Culture of Sexual Coercion,” *Scientific American* (blogs), July 20, 2011 <sup>10,11</sup>

**Unnatural Selection:** ‘Unselected male’ is a scientific term for a male who has not proved his fertility (see Moving Parts, 4 Taxation & Census, p. 331, *supra*), but the term also carries with it a load of profundity: It is the female of the species who selects, it is the female – as the child-bearer – who decides and consents to sex throughout the animal kingdom.

Many young human males cannot accept this fact; fear that the female may select another (or fear of remaining unselected) is the primary force behind societal controls on female reproduction, male dominance hierarchy, restrictions on female clothing, movement and occupations, arranged marriages and bride kidnapping. No other species – with the possible exception of some observed instances among apes in the wild – commits rape or imprisons females.

- ✓ Rape is, by definition, a circumvention of the natural order, to force selection on the female (bearing in mind, however, that sex is a psychological need and reproduction an afterthought).
- ✓ Rape is only possible because of the relaxed fertility cycle of female humanity (i.e. the fact that humanity does not have a ‘mating season’<sup>12</sup> like other species, that human females are sexually available most of the time) and different physiology: In all other species, it would do the male no good (reproductively) to force a sexual encounter on the female who is not ready to submit.

Most human males learn, eventually, that it is a far better experience when the female chooses; studies have shown that females who like the guy they have sex with are more likely to orgasm, and the female orgasm plays an important multi-part role in reproduction. Thus, human reproduction is adapted such that the nice guy wins, in an evolutionary sense.<sup>13</sup>

Rape is, of course, not likely to occur between humans and aliens (any more so than humans and non-human animals ... don’t go there! No bad Settlers of Catan jokes!), and is rarely if ever depicted in science-fiction or space-opera literature except where the aliens are parasitic and use humans as hosts (and even then, it is not sexual rape, but predatory assault). See previous discussion of crossbreeding in GGDM in Pan-Galactic Pornography, 5 Beginnings, p. 53, *supra*.

- Tears of a Woman: “Men tend to hate it when women cry – for reasons that they often have difficulty articulating. Now, new research suggests why – men may be biologically primed to react to a woman’s tears. According to a new study, even a whiff of these tears can dramatically reduce men’s testosterone levels and to a lesser extent, their sense of sexual arousal. With or without conscious awareness, women’s crying can just turn men off.” – Maia Szalavitz, *Time*, January 6, 2011.
- ✓ “Seeing tears clearly has an effect on people – it tends to turn anger into compassion. But scientists at the Weizmann Institute of Science wondered if the effect was strictly visual. Might there be some chemical in human tears that was responsible for the urge to care for someone? ... But psychologist James Cherry of Boston University says though the Israeli study convinces him that there is some chemical signal, he isn’t convinced the chemical is only in the tears. ‘Certainly there are effects,’ he says. ‘But whatever substance or substances that may be there could be found in a lot of places. You just don’t know that.’ Cherry says the chemical could be in sweat or saliva. Psychologist Ad Vingerhoets of Tilburg University in the Netherlands has also been studying human tears. He says women’s tears may reduce male testosterone and sexual arousal, but that’s not the main effect. ‘It’s my hypothesis that tears [have] an effect not primarily on testosterone but on oxytocin,’ says Vingerhoets, referring to the hormone that promotes social bonding and caregiving.” – Joe Palca, “Smell That Sadness? Female Tears Turn Off Men,” *NPR*, January 7, 2011.
  - ✓ “Robert Provine, who studies the evolution and neural basis of behaviour at the University of Maryland, Baltimore County in Catonsville, says that the results are consistent with previous suggestions that crying could reduce aggression. Testosterone may be linked to hostility, and lowering aggression could be evolutionarily adaptive, he explains.” – Janell Weaver, “Women’s tears contain chemical cues,” *Nature*, January 6, 2011.

Unfortunately, our domesticated animals and pets can love but cannot cry (with the possible exception of elephants, “Elephant cries after rescue from 50 years of abuse”<sup>14</sup>), but their actions can arouse human anger, especially in the immature, intemperate types, and they often become the focal point of the moment for our anger and frustration at the universe, our life, ourselves, our children, our jobs, and other people. Pets have no tears for defense.

- Comparative Zoologies: I observe much cat behavior and socialization. An aggressive young wandering tomcat that I have seen a few times came onto my porch where my semi-feral outside cats gather and live. He first tried to force himself on a yearling female; she rolled over and he had to jump back to avoid having his tummy clawed by her hind legs and his nose swatted. Next he tried to run up behind an older female who understood well what was on his mind, before he got to her, she turned around and hissed and swatted, he barely avoided having his nose swatted again. Though most male cats don’t try to force females to mate, the behavior is not exclusive to primate males. Unlike humans, however, the other males present didn’t act to protect the females from him, they didn’t need it.

There is some limit to which human behavior can be compared to those of our favorite animals and sexuality and reproduction are the nexus of the argument. On one hand, zoologist (specifically Desmond Morris, see *Tyranny in the Nursery*, 3 Colleges, p. 491, *infra*) have demonstrated that much of human behavior is the same as other animals. On the other, what separates human behavior from those of other animals is our metaconsciousness and all that

comes with sapience. And reproductively, it is our reproductive consciousness that conflicts with the automatic mating behavior in other animals. So while human females are available for ‘mating’ more often than other species, the gestation period of human reproduction has extended beyond the seasonal mating of other animals, making greater demands on the parents, and in most humans, consciousness has changed the reproductive behavior. Both can be true in any given instant.

- **Nude Apes:** As a demonstration of how we are programmed by our culture, Dr. Fessler (my abnormal psychology professor) pointed out that sexual arousal from adult human nudity or the association of nudity with sex, only exists in cultures that have long had clothing.<sup>15</sup> This has progressed to the point that the sight of bared female breasts alone causes mild to substantial arousal, in some historical and extremely conservative contemporary cultures female bared feet, bare necks, bare faces, and even bare hands in public are or have been in the past, considered scandalous. In cultures where clothing was not invented before the arrival of the Europeans, or where the female breasts are not covered, nudity or near complete nudity alone is not sufficient to cause sexual arousal in adult members of those societies.<sup>16</sup> Consider the modern phenomenon of nudist camps where male arousal must quickly separate from nudity.

**Heimdall:** *I am conducting research into the genetic history of the Asgard.*

**O'Neill:** *Yeah, now see, that doesn't sound like something worth dying for.*

**Heimdall:** *That is because you do not understand the gravity of the situation.*

**O'Neill:** *Feel free to enlighten us.*

**Heimdall:** *As a race, the Asgard reproduce exclusively through a process of enhanced cellular mitosis.*

**Carter:** *Are you serious? You have no other means of propagation?*

**Heimdall:** *No.*

[Carter looks surprised]

**O'Neill:** *Carter?*

**Carter:** *They're clones, sir. All of them.*

**O'Neill:** *Ah. Well, that answers a few questions.*

**Heimdall:** *In fact, for nearly a thousand years, we have been physically incapable of achieving cell division through meiosis.*

[O'Neill looks questioningly at Carter]

**O'Neill:** *Hmm?*

**Carter:** *Sexual reproduction, Sir.*

**O'Neill:** *Ah. (to Heimdall) A thousand years?*

**Heimdall:** *It is not something we usually discuss with other races.*

**O'Neill:** *This I understand.*

**Heimdall:** *Through cloning we have achieved a measure of immortality. As each Asgard's body fails, his consciousness is transferred into a newer, younger version of himself. Unfortunately, the lack of genetic diversity has become a problem.*

**Carter:** *It's like making a copy of a copy of a copy. Eventually there's deterioration.*

**Heimdall:** *We created a process of controlled mutation which has helped us to avoid complete genetic breakdown. But we are at the limits of our technical capabilities. The truth is, the Asgard are a dying race.*

– Stargate SG-1, “Revelations” (2002)

**Brave New World:** Technology brings with it the ability to control population growth (either by increasing or decreasing the rate of growth) in an orderly and peaceful manner (as opposed to war, starvation, disease, drugs, incarceration, and prostitution), however, *the will to do so is an entirely different matter*. Even while it may make sense to balance and even retard population growth on a planet, it has proven to be quite difficult to convince the population to curtail their power of reproduction.

✓ See Triage, *ut supra*, p. 334.

Conversely, when technology allows a civilization to explode into interstellar space – where the space and resources to grow is theoretically unlimited – there is little reason, generally, to retard population growth, except:

- 1) When the growth threatens the governmental control and overall political unity of the species, and
- 2) When it threatens to overwhelm the local systems and resources available on colony planets, e.g., in Controlled Environment Habitats, Colony Ships or Orbital Cities.

This brings the discussion back around to the sci-fi staple of being able to ‘build’ population by industrial means – clones, *in-vitros* (e.g., *Space: Above and Beyond* (1995-1996)), replicants (e.g., *Blade Runner* (1982)), and of course, cyborgs. The basic rules of the game prohibit it (for sanity purposes, see View from a Height, 1 Construction, p. 660, *supra*). It is not *impossible* to create by Patents the ability to ‘build’ population by use of RPs and the Colony Enhancement activation of the Construction Power (perhaps in conjunction with the Census Power) with all of the inherent existential questions to play out in the game.

- ✓ Among the myriad possible ramifications of widespread, industrial-scale cloning, the Dust sci-fi short, “The Replacement” (on YouTube, 2019) presents an interesting issue: The clone of a janitor becomes the first clone President of the United States. And orders a thousand more clones of himself. In fact, it is hinted that a significant part of the population is clones, and ‘originals’ are becoming uncommon;<sup>17</sup> the media in the story treats the clone presidential victory as a civil rights victory.

In the game, positions may, of course, develop some technologies to increase, decrease, or mutate populations, however, the game makes the assumption that the ability to do so efficiently exists within the technology of the 1<sup>st</sup> Era (without having to create the technology in-game – unless players desire to develop the game in that way), so that mainly population growth is properly controlled by first, the frequency of the activations of the Census Power (and Maximum Habitability), and second, by use of Writs (which express the social and political will – see It is Written, 1 Writs, p. 435, *infra*) related to the activation of the Census Power.

- ✓ When asked why he reads Playboy magazine, Edward Bernays replied, “For the same reason I read the National Geographic, I like to see places I will never visit.” – L. Tyre, *The Father of Spin* (1998).
- **Technological Senescence:** The benefits of technological civilization: tobacco, alcohol, drugs, automation, food stuffs and drinks, cosmetics, dentistry, elective surgeries, Botox injections, and clothes, fashion and pop psychology, plentiful and cheap, and extended adolescence and delayed entry into the workforce, expanding life expectancy – have distorted our sense of normal human aging.

- ✓ “[Brandon Milholland] and his colleagues came to this conclusion by analyzing decades of longevity data from about 40 countries. As just about anyone could tell you, it has become increasingly common for those in wealthy nations to live to ages that once would have seemed impossible. For decades, the ages of the oldest living people were increasing over time – but that slowed and pretty much stopped by the 1980s. And the researchers found that, based on statistical trends, those who reach age 110 today do not have a longer life expectancy than individuals who reached the same age decades ago. The results may sound straightforward, but life span is a debated subject in the scientific community.” – Rachel Felton, “Are we approaching the limits of human life span?” Washington Post, October 6, 2019.<sup>18</sup>
- ✓ “The report says that if a human lifespan was extended beyond 125 years, it would require other scientific interventions beyond improving someone’s health. ‘Although there is no scientific reason why such efforts could not be successful, the possibility is essentially constrained by the myriad of genetic variants that collectively determine species specific lifespan,’ it says.” – Bianca Britton, “Humans Have Reached Their Lifespan Limit, Researchers Say,” The CNN Wire, October 6, 2016.

Our Bronze Age ancestors would not recognize us.

- ✓ “And you – with your aftershave lotion and your little red car, pushing papers across a desk all day and chasing tail all night – tell me, just how the hell do you think you would look to Tiglath-Pileser, say, or Attila the Hun?” – Frederik Pohl, “Day Million” (1966).<sup>19</sup>
- Assortative Mating: Pulling back the mask.
  - ✓ “Assortative mating is a mating pattern and a form of sexual selection in which individuals with similar phenotypes mate with one another more frequently than would be expected under a random mating pattern.” – from Wikipedia article, “Assortative mating,” January 12, 2019.

Assortative mating is a form of ‘natural unnatural selection’ that is available to animals of higher orders from snails to common toads to bluebirds (*Id.*); although snails don’t seem at first glance to be of a ‘higher order,’ they are relatively recent – about 550 million (i.e. more than half a billion) years ago – in the evolution of life on Earth, which is estimated to have begun 3.5 billion years ago.<sup>20</sup>

- ✓ “... it took nature hundreds of millions of years to evolve bacterium, and billions of years to make a grasshopper” – Carl Sagan, *Cosmos*, Episode 5.

Assortative mating in animals requires at the least the sentience to distinguish characteristics between members of a species;<sup>21</sup> assortative mating is a natural form of discrimination.

- ✓ Merriam-Webster online dictionary at *assortative mating*: nonrandom mating: such as **a**: mating between the more similar individuals of a population especially when regarded as a factor in evolutionary differentiation within a population **b**: selective mating between individuals whose choice of marriage partners is determined by similarity of social environment.

Although assortative mating has been well documented in other species, humans take it many steps further into the realm of sociocultural, educational and intelligence preferences. Assortative mating preferences in humans has been established by scientific data since around 1900. Dating match sites – the ones that pop up in internet banners and air television commercials in February – seem to be using very sophisticated assortative mating programs to match economic, education, and sociocultural personal profile inventories, and additionally, they have a huge database of the millions of past responses submitted to find socio-patterns. In the form of endogamy and extreme homogamy, inbreeding and assortative mating can intersect causing pedigree collapse (e.g., the famous Habsburg jaw).<sup>22</sup>

Within the time scales of GGDM, assortative mating could display some strong local effects (e.g., see Frontier Drift, 3 Entropy, p. 246, *supra*) though probably not approaching truly evolutionary changes,<sup>23</sup> without the assistance of technology.

- ✓ “[Q] What can French and American women learn from one another about love? [A] *We can learn from French women to maintain a certain mystery in a relationship and to pay more attention to the aesthetics of one’s personal appearance and lovemaking. They can learn from us to be more direct in expressing our needs, whether they be in the kitchen, the bedroom, or the boardroom.*” – Mary Duncan interview with author Marilyn Yalom, “Love, Fidelity and Sex: French Style,” Huffington Post, January 23, 2014 (emphasis in original, article is free online).

---

**Dr. Strangelove:** *Naturally, they would breed prodigiously, eh? There would be much time and little to do. With the proper breeding techniques, and starting with a ratio of, say, ten women to each man, I should estimate the progeny of the original group of 200,000 would emerge a hundred years later as well over a hundred million. Naturally the group would have to continually engage in enlarging the original living space.*

\*\*\*

**General Buck Turgidson:** *Doctor, you mentioned the ratio of ten women to each man. Now, wouldn’t that necessitate the abandonment of the so called monogamous sexual relationship, I mean, as far as men were concerned?*

**Dr. Strangelove:** *Regrettably, yes. But it is, you know, a sacrifice required for the future of the human race. I hasten to add that since each man will be required to do prodigious... service along these lines, the women will have to be selected for their sexual characteristics which will have to be of a highly stimulating nature.*

– Dr. Strangelove (1964)

---

## Endnotes.

<sup>1</sup> **Commentary:** Not to mention that in a situation where there are ten human males and only one viable human female, the total population is likely to decrease significantly before it increases! Humans murder for reproduction.

<sup>2</sup> **Commentary & Citation:** This seemingly unbelievable account of stoic discipline and male chivalry is confirmed by quotes and citations in the Wikipedia article, “HMS Birkenhead,” to wit:

- ✓ “The surviving soldiers mustered and awaited their officers’ orders. Salmond ordered Colonel Seton to send men to the chain pumps; sixty were directed to this task, sixty more were assigned to the tackles of the lifeboats, and the rest were assembled on the poop deck in order to raise the forward part of the ship. The women and children were placed in the ship’s cutter, which lay alongside. Two other large boats (capacity 150 each) were manned, but one was immediately swamped and the other could not be launched due to poor maintenance and paint on the winches. This left only three smaller boats available. The surviving

officers and men assembled on deck, where Lieutenant-Colonel Seton of the 74<sup>th</sup> Foot took charge of all military personnel and stressed the necessity of maintaining order and discipline to his officers. As a survivor later recounted: ‘Almost everybody kept silent, indeed nothing was heard, but the kicking of the horses and the orders of Salmond, all given in a clear firm voice.’” *Id.*, citing to William Henry Giles Kingston (1899) and “The Wreck of H.M. Steamer ‘Birkenhead’ – 26 Feb 1852” at [capeinfo.com](http://capeinfo.com).

- ✓ “Just before she sank, Salmond called out that ‘all those who can swim jump overboard, and make for the boats.’ Colonel Seton, however, recognising that rushing the lifeboats would risk swamping them and endangering the women and children, ordered the men to stand fast, and only three men made the attempt. ... The soldiers did not move, even as the ship broke up barely 20 minutes after striking the rock. Some of the soldiers managed to swim the 2 miles (3.2 km) to shore over the next 12 hours, often hanging on to pieces of the wreck to stay afloat, but most drowned, died of exposure, or were killed by sharks.” *Id.*
- ✓ “The order and regularity that prevailed on board, from the moment the ship struck till she totally disappeared, far exceeded anything that I had thought could be effected by the best discipline; and it is the more to be wondered at seeing that most of the soldiers were but a short time in the service. Everyone did as he was directed and there was not a murmur or cry amongst them until the ship made her final plunge – all received their orders and carried them out as if they were embarking instead of going to the bottom – I never saw any embarkation conducted with so little noise or confusion.” *Id.*, testimony of Captain Edward W. C. Wright of the 91<sup>st</sup> Argyllshire Regiment, reported by William Henry Giles Kingston, *Id.*

Neither ship captain Salmond nor Lt. Col. Seton survived the sinking, which was memorialized in a poem by Runyard Kipling called “Soldier an’ Sailor Too” (1893) – the term came to mean stoic discipline in such situations – and the protocol of ‘women and children first’ became standard evacuation in *all* circumstances. It *codified expendability* and a social expectation of civilized, calm, orderly male courage that is reflected in later fiction, e.g., *Star Trek* and *Titanic* (1997) where the musicians played cheery music while the women and children evacuated.

<sup>3</sup> Commentary: ***The bright line***: During the planning of the execution of the Romanov family in July 1918, the two guards who objected to shooting women and children were dismissed to their barracks by Yakov Mikhailovich Yurovsky for ‘failing to do their revolutionary duty.’ Would that give you pause about the revolution? But it happens all the time; the rationalization being that a few innocents will be killed now for a better world later.

<sup>4</sup> Commentary: In this context then, the statements by Stormy Daniels in the belatedly published interview by InTouch Magazine are very revealing about our sexuality, casual sex and pornography:

- ✓ “So anyway, the sex was nothing crazy. He wasn’t like, chain me to the bed or anything. It was one position.... It was textbook generic. It wasn’t like, ‘Oh my God, I love you.’ He wasn’t like Fabio or anything. He wasn’t trying to have, like, porn sex... You know. It was one position, what you would expect someone his age to do. It wasn’t bad. Don’t get me wrong.”

Stormy Daniels has not done the female causes any good, she is certainly *not an icon of feminism*. She has basically told every boy in America what they can have if they are a celebrity billionaire; fortunately for her, the conversation has been about *the philanderer*, she has not been a scorned woman (to any extent more than is normal for a porn actress), forced to wear a Scarlett Letter on her chest or be publically slut-shamed (not possible considering her occupation): A Bill Clinton milestone to be *quietly* celebrated by feminists. She has also reduced the religious conservative family values caucus to shambles and shudders as they have had to issue a mulligan and perform a pretzel logic contortionist act in order to support *the philanderer* (stating that he is an “imperfect instrument of God” Ack!). I suspect that she is most pleased by this.

- ✓ This argument is in the same vein as the suggestion that sexploitation movie director Russ Meyer was inadvertently a feminist: “Film historian and Meyer biographer Jimmy McDonough posits that Russ Meyer’s usage of physically and sexually overwhelming female characters places him in his own separate genre. He argues that despite portraying women as sex objects, Meyer nonetheless depicts them as more powerful than men and is therefore an inadvertent feminist filmmaker.” – from Wikipedia article, “Russ Meyer,” December 18, 2018, citing to [Big Bosoms and Square Jaws: The Biography of Russ Meyer](#) (2005).

<sup>5</sup> Citation & Commentary: “Their opinion might be roughly summarized in the words of Arnold Toynbee: ‘With the increase in our power, our sense of responsibility and our sense of distress increases.’ Toynbee has said that the growth of science and technology makes more acute the disparity between the real and the ideal.” – Brian Aldiss, [Galactic Empires, Vol. 1](#) (1976).

- ✓ Science and technology are more than just a thing, they are a worldview, a way of thinking – about everything. For example, is it possible that the demystification of sex, attraction, reproduction, has led to a greater division between the sexes than has ever existed before? The disparity between the real and the ideals of the participants creates the distress in the relationship? My personal experience, in hindsight, suggests strongly that is the case: The fantasy is always better than the reality.

<sup>6</sup> Commentary: Extend this thought out a little: They probably don't see any causal connection between consumption of food and defecation. They probably don't see any causal connection between consumption of food and growing or getting fat like my housecats. They simply know they are hungry, and they eat, or hunt if necessary. Hunting and eating become a chicken and egg argument, they need to eat to hunt, and they need to hunt to eat and procreate. My cats are food dish predators. It also is not likely, from my experience, that they understand that biting and their claws cause pain, or possibly they don't understand that others feel pain; perhaps this is necessary for them as natural predators. Animals are notoriously short of understanding cause and effect relationships, which understanding humanity takes as a sign of sapience, abstract thought, foresight, the long view, experience, judgment.

<sup>7</sup> Commentary: I have observed homosexual male cat behavior this spring, a friendly, but sexually aggressive male cat who comes to my porch sometimes was apparently confused about the gender of a small yearling male cat who lives on my porch and chased him around the neighborhood trying to mate with him. At other times when he has been on my porch, I have noticed that he showed no interest in the yearling female, but is obsessed with her brother. I have similarly observed homosexual behavior among my neutered male indoor cats – who were neutered as kittens, but have not observed the same with an outdoor male cat who was neutered as an adult (at about 2 yrs. old).

- ✓ Male dogs are notorious for homosexual behavior and I have witnessed several instances among my neighbor's big dogs. I believe the going theory as to male dogs is that it is not sexual as much as dominance.

<sup>8</sup> Citation: “Ruminov does not consider *Love Machine* to be pornography. For him, it is an illustration of his idea of ‘new pornography.’ He refers to the contemporary Swiss-born and British-based philosopher Alain De Botton, famous for his promotion of complex philosophic ideas concerning love, sex and happiness. Quoting him, Ruminov sets an example of the perceptive integrity of a human being presented by the icon of the Virgin Mary made by painters of the Renaissance period. The admiration of the human body in the Renaissance led to present the Virgin Mary with nude breasts and a halo, unifying the separation of the corporal and the divine. And the icon of Virgin Mary inspired Ruminov for his future film.

Starting from the mid-1970s, society stopped to pretend that love and the relationship between a man and a woman is possible without sex. Erotic elements, sex and pornography took their place in mainstream cinema during the era of the sexual revolution, and allowed the appearance of such masterpieces as Bernardo Bertolucci's *The Last Tango in Paris* (1972) or Nagasi Oshima's *Empire of Passion* (1978). Today, erotic scenes are almost made obligatory by Russian producers to ensure commercial success. However, during the Soviet Union period the idea of sex was totally excluded from cinema, and only during perestroika the gate opened up to huge amounts of video pornography.

Since the end of the 1970s the pornographic industry does not really try to enter the world of cinematographic art, staying in the niche of video and serving very specific purposes. Such films usually deploy a very simple script and a limited number of angles for shooting that are edited in a primitive way. The pornography is often associated with perversity and shame. The last attempt to transgress the border between cinema and pornography was made in 2015 by Gaspard Noé with his film *Love*. By the time *Love* created an uproar at Cannes, Ruminov's film was almost completed and *Love* didn't influence it.

The idea of Ruminov's ‘new pornography’ is supposed to purify the perception of the naturalness of the human body from the morbid and aggressive views proposed by traditional pornography. However, is *Love Machine* pornography? According to one of the most important specialists on the question of pornography, Linda Williams, we can consider the film as ‘body genre,’ or even as ‘an extended rubric of melodrama, considered as a filmic mode of stylistic and /or emotional excess that stands in contrast to more ‘dominant’ realistic, goal-oriented narrative’ (Williams, 1991). *Love Machine* transgresses pornography: the story concentrates on Natal'ia Anisimova's crumbling world that attracts the spectator more than erotic scenes.” – Ksenia Konstantinova-Ragot, Université Paris VIII, review of “Pavel Ruminov: *Love Machine* (*Mashina liubvi*, 2016),” *KinoKultura*, Issue 54, October 8, 2016 (Creative Commons 3.0) (available free online).

- ✓ There are nearly a dozen movies listed with the title “*Love Machine*,” about one a year. This review refers to the experimental Russian language film. Other titles with the same name range from trashy psycho exploitation horror (literally, in one a psychiatrist using a beam machine to cause women to kill their husbands during sex) to comedy to sex robots (*à la* the Replicants in *Blade Runner*). Yeash!

- ✓ Not all such ‘new pornography’ efforts are appreciated in the West (whatever the requirements of Russian cinema), consider the following criticisms of the 2012 movie *Sexual Chronicles of a French Family* (gathered from Metacritic):
  - “Offers diverting date-night fare for open-minded heterosexual couples and swingers, though its superiority (artistic or otherwise) to actual porn is debatable.” – Dennis Harvey, *Variety* (score 50/100).
  - “It’s a celebration of libertine sexuality – nothing more, nothing less – and almost remarkably untroubled by any of the dramatic issues it raises. Much of its 79 minutes is spent marveling over how skillfully the actors simulate the real thing.” – Scott Tobias, *The AV Club* (score 42/100).
  - “A barrage of screwing with interludes does not yield a cohesive movie. Watching *Sexual Chronicles of a French Family*, the one-note idea grows increasingly evident, as does its absence of fresh ideas.” – Eric Kohn, *IndieWire* (score 42/100).
    - This latter also describes the problems with action movies cranked to the theoretical max. It is hard to have a coherent story or promote any thought or message in a movie that features over the top violence and action with a few interludes. Movie makers and tyrants both know this.

<sup>9</sup> Commentary: If it were not for sex, there would be no love in the world. This is more than just a snarky male comment; you should give it more than a passing moment of thought. Your first love is the unconditional love of a mother (however short-lived), all else later is a transfer of the need for affection from another of the opposite sex. It is possible for something to seem snarky, but profound at the same moment. Just like after-sex commentary.

<sup>10</sup> Commentary: This ‘harassment’ should not be taken quite in the same context as human females use the term; in the spring of 2020, a tomcat became obsessed with a very sociable neutered female who lives on my porch. I think she reciprocated a little of it, but cannot fully respond because she is neutered. He followed her around enthusiastically, even to the point of sleeping on top of the heated cat house in which she took refuge.

<sup>11</sup> Commentary: Since I was young, I have heard many men say, “I’m a boob man.” I have heard men say it around other men, I have heard men say it to women sometimes, and it has come up as comments made in a few well-endowed client sexual harassment cases I worked on over the years. I think it’s just an idiotic statement; every man is a boob man, to the point of even being used as a display of wealth and status (e.g., among the 10<sup>th</sup> Century Rus people, as reported by Ahmad ibn Fadlan). And so are women. It’s the most basic, infantile part of human sexuality.

- ✓ “Each woman wears on either breast a box of iron, silver, copper, or gold; the value of the box indicates the wealth of the husband. Each box has a ring from which depends a knife. The women wear neck-rings of gold and silver. Their most prized ornaments are green glass beads. They string them as necklaces for their women.” – Ahmad ibn Fadlan, as quoted in Gwyn Jones, [A History of the Vikings](#) (2001).
- ✓ The value of the materials in the box wasn’t the only thing on display, the size of the box probably mattered too! Imagine the weight of those things around the neck.

<sup>12</sup> Commentary: An annual activation of the Census Power... In a very strange way, ‘evolutionary progress’ can be thought of as the successive ability to activate new GGDM Vital Powers, just as evolution was taught backdoor in high school biology (without ever mentioning the word) by teaching the phyla of the animal kingdom in order from simplest to most complex. Every species begins with the Census Power.

<sup>13</sup> Commentary & Citation: I guess it speaks to my view that I misheard a lyric in Ratt’s “I Want a Woman” (1988) for over 30 years, I heard, “I think I found out what means so much, baby’s tears and the woman’s trust!” I didn’t consider it inconsistent generally with the rest of the song (whose subject is romantic maturity) and actually thought it was a crowning lyric (despite Ratt’s appearance and overtly sexualized, testosterone driven, ebullient cocksure youthful, but very talented and smooth jazzy metal musical style). Most lyric sites have “I’m thinkin’ now down the week so much, Think the chances that that woman’s touch,” which doesn’t make a lot of lyrical sense to me, some others have “I’m think I got down what means so much, Fingertips with that woman’s touch” which at least makes better sense and is much closer to what I have (mis-)heard for years. I still like my interpretation better and will probably continue to mishear the lyric for the rest of my life.

<sup>14</sup> Citation: “An elephant that spent 50 years in captivity cried real tears when wildlife conservationists staged a daring midnight rescue.” – Internet Broadcasting, July 8, 2014.

- ✓ “An elephant that was kept in chains for 50 years and abused by a drug addict who used the animal beg in India has been freed. Raju had been beaten and starved since being poached from the wild as a baby and resorted to eating paper and plastic to fill his stomach. The chains and spikes wrapped around his legs had left him with chronic wounds and arthritis and he was in almost constant pain. But now he is walking free for the first time after a daring rescue by conservationists with a court order by the Uttar Pradesh Forest Department to take the elephant from his abusive owner. The charity took Raju in the middle of the night on Thursday, supported by police and state officials. The elephant’s mahout and previous owner tried to stop him being taken by adding more chains and having people block the roads for the rescue lorry. Experts worked for hours to gain the elephant’s trust with fruit and encouragement until they could get him into the van that would take him to a sanctuary.” – Lizzy Dearden, “Elephant ‘cries’ while being rescued after 50 years of abuse in India,” Independent UK, July 7, 2014.
- ✓ “Raju’s captors layered tighter chains on him and attempted to confuse him by shouting commands, but their efforts proved futile. A team of 10 veterinarians and experts from Wildlife SOS along with 20 Forestry Commission officers and two policemen managed to rescue the abused elephant, according to the Mirror, a British tabloid. ‘Raju was in chains 24 hours a day, an act of intolerable cruelty. The team were astounded to see tears roll down his face during the rescue,’ Pooja Binopal, a spokesman for Wildlife SOS, said, per the Mirror. ‘It was incredibly emotional. We knew in our hearts he realized he was being freed. Elephants are majestic and highly intelligent animals. We can only imagine what torture the past half a century has been for him.’” – Cavan Sieczkowski, “Raju The Elephant Cries After Being Rescued Following 50 Years Of Abuse, Chains,” Huffington Post, July 7, 2014.
- ✓ The rescue video is on YouTube. Another elephant, Mohan, who was to be rescued with Raju ‘disappeared’ after the rescue, and was eventually located and rescued with another court order (Mark Molloy, “World’s unluckiest elephant’ finally free after 50 years in chains,” Telegraph UK, September 29, 2016).

<sup>15</sup> Commentary: I was lucky to have Dr. Robert K. Fessler as my psychology instructor at Point Park College. I don’t think I realized entirely at the time how unusual was his approach, but it has grown on me over the years as I have matured intellectually. Dr. Fessler was a psychologist who had no love of psychiatry, he was on the other side of the ledger so to speak; I summarize that he felt they overplayed their hand, greatly inflated their claims of effectiveness. He used Richard Castillo’s Culture and Mental Illness (1997) as his course textbook, pointed out cultural differences in effective rates of use of psychiatric drugs, talked about the Soviet diagnosis of “Sluggish Schizophrenia” and political uses of clinical psychiatric confinement to suppress dissent, he introduced me to Rosenhan’s article and his course had an entire section on Viktor Frankl. He pointed out the amount of money spent on research of psychiatric drugs and the lack of important success in treating true mental disorders with them (as a paralegal, I later learned some of the dark relationship of doctors and drug companies, which are reflected in the Rosenhan article). He didn’t whitewash anything, when I expressed interest in pursuing a graduate degree in psychology at another university, he advised that it would be nothing like he taught in his courses, I would be doing Skinner boxes.

- ✓ The difference in outlook between psychiatry and psychology (and between mental sciences and religion) is more stark than most realize, consider the following encapsulation, by a *psychologist*, of contrasting views of what was through millennia past considered a mortal sin:
  - “Depression involves aversion to effort, and the moral danger of sloth lies in this characteristic. The work involved in exercising one’s will to make moral and spiritual decisions seems particularly undesirable and demanding. Thus the slothful person drifts along in habits of sin, convinced that he has no willpower and aided in this claim by those who persist in seeking only biological and environmental causes and medical remedies for sloth.” – Dr. William Backus, What Your Counselor Never Told You (2000), pp. 147-148, as cited in Wikipedia article, “Sloth.”
- ✓ On the matter of my extensive use of the Rosenhan report and Dr. Castillo in criticism of medicalized mental sciences throughout GGDM, one might argue that I was ‘conditioned’ to that point of view by my maverick college psychology professor. Fair enough, though I am also not without life experience – a half century worth – and in that sense my ‘conditioning’ has held up remarkably well! But to make that argument is to also, fairly, suggest that the arguer is also equally conditioned by their education to unquestioningly accept the validity of medicalized mental sciences as the profession is currently practiced and taught. We are all conditioned, that is a side effect of education and why honest debate is necessary.

<sup>16</sup> Citation & Commentary: Our textbook for the course was Richard J. Castillo’s Culture & Mental Illness (1997). I believe this very phenomenon is discussed in the book, along with sexual mores of several wide-ranging cultures,

and as such, you can probably work out the connection with mental illness. In any event, I highly recommend reading this book. It was written as a companion to the DSM IV, and though newer DSMs have been issued, it is still relevant to the discussion.

- ✓ “Dr. Richard J. Castillo, Ph.D. Harvard University, Psychiatric Anthropology, was a cross-cultural adviser on the writing of DSM-IV, and has now written two companion works, Culture and Mental Illness: A Client-Centered Approach and Meanings of Madness: Readings on Culture and Mental Illness. Dr. Castillo is Professor of Psychology at the University of Hawaii – West Oahu, and Clinical Professor of Psychiatry at University of Hawaii at Manoa. Dr. Castillo’s work involves the fields of Psychology, Psychiatry, Cross-Cultural Studies, Anthropology and Religion, and includes topics of mental illness and psychotherapy in all DSM-IV diagnostic areas, shamanism, and the cultural factors affecting dissociative disorders and the relationship of dissociative symptoms to schizophrenia and other psychotic disorders. He presents a client-centered model of assessment and diagnosis based on a holistic paradigm that integrates known biological, psychological, social, and cultural factors.” – from <http://www2.hawaii.edu/~rcastill/welcome.html>.

<sup>17</sup> Citation: The janitor (main character) says, “I feel like a horse after the car has been invented.”

<sup>18</sup> Citation: “‘We cannot break through that ceiling,’ [Jan] Vijg says. ‘The take-home message essentially is this whole ever-increasing life expectancy of humans cannot go on.’ ... The researchers found that the age of the oldest people dying had indeed increased steadily between the 1960s and 1990s, according to their report. But beginning in the 1990s, ‘you no longer see that,’ Vijg says. ‘You see that it stays the same.’ The absolute maximum human life span may be as high as 125, the researchers calculated. But the chances of anyone actually living that long are less than 1 in 10,000. ... But, he added, ‘the take-home lesson from what we found is that the human species most likely has a maximum life span of about 115 and we cannot break through that ceiling, at least not as far as we now know.’” – Rob Stein, “Has The Human Life Span Hit the Ceiling?” NPR, October 5, 2016.

- ✓ “Vijg’s team concludes that there is a natural limit to human lifespan of about 115 years old. There will still be occasional outliers like [Jeanne] Calment, but he calculates that the probability of a person exceeding 125 in any given year is less than 1 in 10,000. The limit is surprising, says Vijg, given that the world’s population is increasing – supplying an ever-increasing pool of people who could live longer – and that nutrition and general health have improved. ‘If anything you would have expected more Jeanne Calments in recent years, but there aren’t.’” – Linda Geddes, “Humans May Have Already Reached Their Maximum Lifespan,” Nature Magazine, October 5, 2016.
- ✓ “Prof Jan Vijg, one of the researchers from the Albert Einstein College of Medicine, told the BBC News website: ‘In people over 105 we make very little progress, that tells you we are most likely approaching the limit to human life. For the first time in history we’ve been able to see this, it looks like the maximum life span – this ceiling, this barrier – is about 115.’” – James Gallagher, “Limit to human life may be 115 (ish),” BBC News, October 5, 2016.
  - Queen Elizabeth II is currently 92 years old and Prince Philip is 97 years old. The Queen Mother lived to 101 years old.
- ✓ “For the first time in more than two decades, life expectancy for Americans declined last year – a troubling development linked to a panoply of worsening health problems in the United States. Rising fatalities from heart disease and stroke, diabetes, drug overdoses, accidents and other conditions caused the lower life expectancy revealed in a report released Thursday by the National Center for Health Statistics. In all, death rates rose for eight of the top 10 leading causes of death.” – Lenny Bernstein, “US life expectancy decreases for the first time since 1993,” Washington Post, December 8, 2016.

<sup>19</sup> Commentary: There is an argument that keeps cycling round every decade, that electric lights interfere with and delay the human circadian rhythm. And that interior heating has interrupted our seasonal rhythms. The argument is both not quite accepted empirically but also hard to deny in existential observation. I remember seeing a news report on studies of third-shift workers, specifically, it focused on salt mine workers in Utah. It is well-known that third shift disrupts lives, both internally and externally, few people do it for long, everyone who gets an opportunity at a regular weekday job jumps off the third-shift merry-go-round (e.g., the low-paying, third-shift job at an always open McDonalds or CoGo’s store, or even graveyard shift contract security, which I worked many times). Most places that care about their workers, especially professionally-trained, licensed workplaces or places subject to malpractice liability (e.g., hospitals, nursing homes, and first responders – because stupidity, chaos, and carelessness never take a night off), find ways to rotate workers’ shifts to avoid third-shift burnout while maintaining a 24-hour operation. Consider the plight of time-zone crossing airline pilots and crews?

5 Taxation & Census – Reproductive Consciousness

- ✓ Whatever the effects are, they are arguably more pronounced since the 19<sup>th</sup> Century and before; wealthy people in previous centuries could be ‘night owls’ and party into the morning hours, but everyone else stuck to the daylight schedules and seasonal schedules until modern times brought cheap, reliable universal electricity. Modern interior lighting is beginning to take into effect light colors and intensities required for vision without disruption of circadian clocks; I remember a report just within the last two years (maybe in 2017?) that suggested that the bluish light used by cell phones, tablets, and readers – which many people use sitting in bed at night before going to sleep – disrupts or delays being able to get to sleep. In fact, even in my youth, watching television (which were CRT screens then) right before bed was discouraged.

<sup>20</sup> **Citation:** See for example, Stephanie Pappas, “What Was the First Life on Earth?” Live Science (livescience.com), March 1, 2017.

<sup>21</sup> **Commentary & Citation:** Assortative mating has also been identified in plants – whose mating would seem most random of all – in the form of differing flowering schedules, i.e. if plant mating were truly random, all of the members of a species would flower at the same time to achieve maximum random assortment:

- ✓ “We focus on a hybrid zone population between the two closely related ash species *Fraxinus excelsior* L. (common ash) and *F. angustifolia* Vahl (narrow-leaved ash), which is composed of individuals of the two species and several hybrid types. This population is structured by flowering time: the *F. excelsior* individuals flower later than the *F. angustifolia* individuals, and the hybrid types flower in-between. Hybrids are scattered throughout the population, suggesting favorable conditions for their local adaptation. ... We detected a very high pollen immigration rate and a fat-tailed dispersal kernel, counter-balanced by slight phenological assortative mating and short-distance pollen dispersal. Early intermediate flowering hybrids, which had the highest male mating success, showed optimal sex allocation and increased selfing rates. We detected asymmetry of gene flow, with early flowering trees participating more as pollen donors than late flowering trees. ... This study provides striking evidence that long-distance gene flow alone is not sufficient to counteract the effects of assortative mating and selfing. Phenological assortative mating and short-distance dispersal can create temporal and spatial structuring that appears to maintain this hybrid population. The asymmetry of gene flow, with higher fertility and increased selfing, can potentially confer a selective advantage to early flowering hybrids in the zone. In the event of climate change, hybridization may provide a means for *F. angustifolia* to further extend its range at the expense of *F. excelsior*.” – Pierre R Gérard, Etienne K Klein, et al., “Assortative mating and differential male mating success in an ash hybrid zone population,” BMC Evolutionary Biology, November 15, 2006; the entire paper is available for free online.

<sup>22</sup> **Commentary:** My mother at a time in my youth was employed by Greek families who sent their sons back to Greece to find ‘proper wives’; they would not allow their sons to marry American-born women. I am not certain if this also applied to their daughters, but it probably did. They also sent their wealth back to banks in Greece.

- ✓ Not coincidentally, there are videos on YouTube currently complaining about the amount of money remitted (“remittances”) by immigrants working in the United States to relatives in foreign countries. So this is not a new subject. The tone of the videos makes their nationalistic, ethnic, anti-immigration intent obvious.

<sup>23</sup> **Citation:** “Nonrandom mating occurs in plants when there is inbreeding or assortative mating. The consequence of nonrandom mating is that population genotype frequencies do not exist in Hardy-Weinberg equilibrium. Although nonrandom mating does not directly drive evolutionary change – meaning allele frequencies are not altered – it can have a profound effect on genotype frequencies and hence can indirectly affect evolution. There are three main ways for nonrandom mating to occur. First, positive assortative mating results when individuals and their mates share one or more phenotypic characteristics with themselves. Negative assortative mating occurs when individuals and their mates are dissimilar phenotypically. Inbreeding is a third form of nonrandom mating that occurs when individuals mate with relatives more often than would be expected by chance. For both inbreeding and assortative mating, genes combine in such a way that offspring genotypes differ from those that are predicted by the most basic population genetic model, described by the Hardy-Weinberg theorem. One assumption of the Hardy-Weinberg theorem, which predicts unchanging equilibrium values for genotype and allele frequencies, is that individuals mate at random. Unlike other violations of this model (such as natural selection, genetic drift, mutation), nonrandom mating affects genotype but not allele frequencies.” – Plant Life (<http://lifeofplant.blogspot.com/2011/03/nonrandom-mating.html>), “Nonrandom Mating,” retrieved January 12, 2019.

**Excerpt from “A black protester hugged a white nationalist outside Richard Spencer’s talk. ‘Why do you hate me?’, he asked”**

Mary Hui, Washington Post, October 20, 2017

Wearing a white T-shirt emblazoned with swastikas, Randy Furniss, hands in his pockets, walked slowly through a crowd Thursday that had largely gathered to protest white nationalist Richard Spencer, who was delivering a speech at the University of Florida.

\*\*\*

“Go home, Nazi scum!” the crowd chanted, jeering at Furniss, of Idaho.

Suddenly, an individual in a green hoodie punched Furniss in the face, before quickly disappearing into the crowd. Furniss recoiled, but carried on walking. Blood trickled from his lip down his chin.

Then something unexpected happened.

A man went up to Furniss and gave him a hug, wrapping one arm around the Nazi’s shoulders, and another arm around his shaved head.

“Why don’t you like me, dog?” the man asked Furniss.

The man, identified by the New York Daily News as Aaron Courtney, is a 31-year-old high school football coach in Gainesville. He said he wanted to show Furniss some love. The hug may have been a small act, but Courtney thinks it can speak volumes.

“It’s a step in the right direction. One hug can really change the world. It’s really that simple,” he said.

\*\*\*

Furniss, a self-described white nationalist, explained his views to News4Jax.

“They want what we have. And we just want them to shut up and get on with life,” Furniss said. “They’re being raised up and it’s getting to the point where they want to push us down. That’s not right.”

\*\*\*

Courtney hadn’t originally planned on attending the protest. But he was surprised when he received a state of emergency notification on Monday, ahead of Spencer’s planned appearance, the Daily News reported.

“I found out about what kind of person he was and that encouraged me, as an African-American, to come out and protest,” Courtney said. “Because this is what we’re trying to avoid. It’s people like him who are increasing the distance . . . between people.”

Courtney was about to leave the protest, having already spent almost four hours at the scene, when he saw Furniss causing a scene in the crowd, the Daily News reported.

“I had the opportunity to talk to someone who hates my guts and I wanted to know why. During our conversation, I asked him, ‘Why do you hate me? What is it about me? Is it my skin color? My history? My dreadlocks?’” he said.

Courtney repeatedly asked Furniss for an answer, only to be met with silence and a blank look. Exasperated, Courtney asked Furniss for a hug. He was initially reluctant, but as Courtney reached over the third time, Furniss reciprocated, wrapping his arms around Courtney.

“And I heard God whisper in my ear, ‘You changed his life,’” Courtney said.

“Why do you hate me?” Courtney asked Furniss one last time.

“I don’t know,” Furniss finally answered, Courtney said.

For Courtney, that was a good enough answer.

“I believe that was his sincere answer. He really doesn’t know,” Courtney said.

**Excerpt from “Footage of Mother Scolding Son During Baltimore Riots Goes Viral”**

Meena Jang, Hollywood Reporter, April 28, 2015

Violent rioting continues to overwhelm the streets of Baltimore, Maryland following Monday’s funeral for Freddie Gray, an African-American man who died while in police custody, but one woman is making sure her family stays away from it.

Video footage of the ongoing riots shot by WMAR surfaced on Tuesday, showing a mother scolding her teenage son for apparently participating in the public protests. The woman, who reportedly caught her son throwing rocks at police on live television, can be seen repeatedly slapping the teen while asking, “You want to be out here doing this dumb shit? Get the f--- over here.”

The mother demands that her son, who is dressed in all-black attire, take off his face mask and hood as she angrily drags him away from the scene.

**Excerpt from “Baltimore mom who smacked son during riots:**

**‘I don’t want him to be a Freddie Gray’”**

CBS News, April 28, 2015

The Baltimore mother caught on video repeatedly smacking her son after catching him participating in rioting in Baltimore told CBS News that she was only concerned about protecting him.

“He gave me eye contact. And at that point, you know, not even thinking about cameras or anything like that. That’s my only son and at the end of the day I don’t want him to be a Freddie Gray,” Toya Graham said, referencing the 25-year old man who died after mysteriously sustaining severe spinal injuries in police custody earlier in the month. His death has sparked protests throughout the city, with tensions boiling over Monday.

Graham told CBS News she launched into action after spotting her 16-year-old son Michael wearing a hoodie and mask amid the protesters.

“At that point, I just lost it,” said Graham. “I was shocked, I was angry, because you never want to see your child out there doing that.”

**Excerpt from “Baltimore Protests: What Smacked Baltimore Teen  
Has to Say About His Mom”**

Steve Osunsami and Meghan Keneally, ABC News, April 30, 2015

The teenage boy publicly shamed when his mom smacked him around at the Baltimore riots this week said he knows she “really cares about me.”

A video shows Michael Singleton being dragged from the protests and whacked by his mother, Toya Graham, after she saw him on television and recognized a key piece of clothing.

“What caught my eye was his sweatpants,” she told ABC News. “Even though he had on all black, I knew those sweatpants he had on, they had a stripe on the side of it and then his eye contact met mine. And I knew that was my son.”

Though he was visibly annoyed and tried brushing off his mom in the video that has now gone viral, the 16-year-old recognizes that she was just looking out for him.

“I’m like, ‘Oh man! What is my momma doing down here?’” Michael told ABC News, laughing while thinking back to the moment his mom nabbed him Monday afternoon.

“All my friends know my mother. Every time they see her they’re like, ‘Toya coming.’ Oh, yeah she’s coming. Everybody better get straight,” he said.

He added: “I understand how much my mother really cares about me. I just got to try to do better.”

Despite some criticism that she went too far with the corporal punishment, Graham has been widely praised as a hero and an example of good parenting by taking control of her son, who said he wasn’t planning on going out on the afternoon of Freddie Gray’s funeral but his friends convinced him. Gray died this month with unexplained injuries after being taken into police custody, prompting protests in Baltimore and elsewhere.

“To see him down there, doing what he was doing, we’re not doing that,” Graham said.

“I’m not angry with him anymore. As long as I have breath in my body, you will not be on the streets, selling drugs, you just not going to live like that.”

*See Appendix PAT1 – Power Activations Tables 1 – Power Activation Costs*  
*See Appendix PAT2 – Power Activations Tables 2 – Normal Sequence of Power Activations*  
*See Appendix PAT3 – Power Activations Tables 3 – Scenes, Planets & Stars*

*“Culture is the sum of all the forms of art, of love and of thought, which, in the course of centuries, have enabled man to be less enslaved”*

– Andre Malraux, Minister of Culture of France (1959-1969)

*“It’s because we’re so trapped in our culture, in the being of being human on this planet with the brains we have, and the same two arms and legs everybody has. We’re so trapped that any way we could imagine to escape would be just another part of the trap. Anything we want, we’re trained to want.”*

– Chuck Palahniuk <sup>1</sup>

**Programming Dilemma:** Once you fully understand the extent to which you have been taught to want certain things and disdain others, you – and every other individual – must decide whether or not to be angry about it, to change it, to discard it, or whether perhaps you, and the world, are better off in the primal state or the cultured state of humanity. Most people, while they may come to disagree with this and that, choose the latter; most people are also at least somewhat angered – and it may or may not express itself in various circumstances and degrees – by some of the cultural idioms and ideals they are taught that don’t accord with reality they experience.<sup>2</sup>

- ✓ This problem is particularly acute when populations experience rapid transition periods such as that of European and American industrialization that brought masses of displaced farmers and former mom-and-pop shop owners to work in factories. Similar if more radical processes occurred in European colonies in Africa, for example, the Zulu farmers, sovereign and self-sufficient homesteaders, were forced off their land to work on white-owned farms, in mines, or in construction. This transition occurred within a generation and was complete in two generations.
- ✓ This transference of agrarian and independent family run trade shops – who worked whenever necessary and as much as they felt they needed, keeping somewhat irregular schedules – to wage workers who had to report and leave at specific times, on a regular schedule, vastly changed the human time sense (which was reinforced by public schooling that requires students to be in class at a specific time each day). See Time Sense discussion, 3 Reformation, p. 1406, *infra*.

**The Problem of Immersion:** aka drowning. GGDM started with a problem. In games that I played in my youth, such as Stellar Conquest, Advanced Civilization (the Avalon Hill version), and Axis and Allies, population existed game mechanically just to produce money or industry to buy technology and military units. Similarly, I noticed that in most science-fiction stories, especially in movies and television, the audience learned very little about the aliens; mostly, we are shown only their military, flashy technologies, and few cultural parts necessary to propel the adventure or make a point. I began in the early 1990s to create a game where the population was more than just ‘factors’ or ‘points.’ The evolution from Stellar Conquest to GGDM has been to solve a problem that I set forth over 25 years ago.<sup>3</sup> Problems to take on a life of their own...<sup>4</sup>

- ✓ “Most games hang their hats on their stories or feats of button-dancing reflexes, but the humble simulation has always had a place at the table. And there are a number of

weirdly specific and joyfully banal simulation games out there.” – Max Eddy & Matthew Buzzi, “The Most Niche Simulation PC Games We Could Find,” PC Magazine, March 15, 2019.

- ✓ The growth of GGDM epitomizes Joseph Tainter’s collapse of complex societies and the Roman Empire: Layers of complexity were added to solve the simulation problem, it grew rapidly in size and resources, expansion was frozen, then all available space was filled (*horror vacui*). In this model, all that is left is simulation collapse.

A parallel example of how an initial project grows and morphs over decades:

- ✓ “The development of the Quantified Judgment Method of Analysis began in 1964, when HERO performed a study for the Army’s Combat Developments Command called ‘Historical Trends Related to Weapons Lethality.’ The study involved developing a process to compare the lethality of weapons over the course of history. This resulted in a measurement scale providing ‘theoretical lethality indices.’ Awareness of the dynamic interrelationship among dispersion, mobility, and firepower led to the development of further measurement scales, and subsequently to the QJM model, and later the TNDM.” – Susan Rich referring to the Quantified Judgment Method, T. N. Dupuy Associates Inc., biography page for Trevor N. Dupuy at The Dupuy Institute.
- ✓ “For it is your wish, as you have often told me, that – since the unfinished and crude essays, which slipped out of the notebook of my boyhood, or rather of my youth, are hardly worthy of my present time of life, and of my experience gained from the numerous and grave causes in which I have been engaged – I should publish something more polished and complete on these same topics...” – Marcus Tullius Cicero, *Of Oratory* (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, *The Rhetorical Tradition* (1990), p. 200.
- ✓ “Finally, the one distinguishing feature of ‘Babylon 5’ among other science fiction genre offerings in general was the focus on ‘people problems’ instead of ‘technobabble.’ What set ‘Babylon 5’ apart from many other sci-fi series was the emphasis on personal development, relationships, and politics – most other series will tend to rely on ‘creature/battle/spatial anomaly of the week.’ Each week, ‘Babylon 5’ would explore issues such as ethics, beliefs, backroom deal-making, redemption, and empire-building. Problem resolution was never diminished to ‘reinitializing the tachyon emitters’ (a popular tactic on ‘Voyager’) – it was often a more difficult, drawn-out, and realistic process that attacked the underlying problem, often with unforeseen consequences. Of all the other science fiction series on the air, only ‘Deep Space Nine’ comes close to this.” – Anthony Leong, “Babylon 5: Triumph and Tragedy in Three Acts,” *Frontier: the Australian Science-Fiction Media Magazine*, April/June 1999.
  - See 2 Entropy, p. 236 and 3 Entropy, bottom, p. 243, *supra*, for discussion of unintended/unforeseen consequences.

---

*“Let’s go down to the Sunset Grill  
We can watch the working girls go by  
Watch the ‘basket people’ walk around and mumble  
And stare out at the auburn sky.”*

– Don Henley, “Sunset Grill” (1984)

---

**Down at the Sunset Grill:** Culture is what happens when people are bored. If you put a group of strangers in a room together, without miniaturized electronics, no television, no connectivity, with nothing better to do, and no outside pressures to distract them, they will in short order go about inventing culture. Someone will begin drumming or humming, or singing.<sup>5</sup> Someone will begin drawing or writing. Someone would invent a game. Someone will snore loudly. Others will sit and talk, while some sit quietly and think. Some will look out the window and become seemingly fascinated by the movements of a fly, or the blowing of the clouds across the sky. Someone will eventually tell someone else how it is, how they should be, and what is what in the world. Some charismatic fool will gather a bored-amused crowd around.<sup>6</sup>

It is no surprise then that the favorite exercise of creative writing instructors worldwide is to assign students the task of writing a story about two, three, or four people in a room. Culture is the accumulated history of sapient human boredom.

- ✓ Alternatively – my recollection from watching a documentary – the Japanese believe that much of what became high culture began as an effort to give the warrior elite something else to do when not fighting, to give meaning to life outside of martial glory, to discourage petty and unnecessary combat between clans, to develop deeper, refined and more rounded warriors and rulers. Clearly the endless petty warfare of honor and slights was taking a great toll on feudal Japan.

Culture is what happens when the mind is not entirely and constantly preoccupied with the daily struggle and search for food or shelter, or fleeing from predators. Culture is what happens when primitive intelligence comfortably overcomes the challenges of the environment in which it was fostered. Culture is what happens when intelligence becomes the predator rather than the prey.

- ✓ I have long thought that the stories of Greek mythology that came down to us were invented by a bunch of drunk old men sitting around the fire – I mean, Zeus' head split open and Athena was born? Allegory for the wisdom-in-hindsight of a morning-after hangover?

It is not entirely beyond understanding that in centuries past, people of leisure, hereditary nobility, and royalty, considered themselves the civilized most people of the world, and looked down upon the struggling working masses generation after generation, until by the 18<sup>th</sup> Century, men of leisure prided themselves in being completely useless. Uselessness and culture are related.

Culture is what happens when the bond continues after the milk runs dry. War is what happens when culture happens. While animals are sometimes aggressive, territorial, they never fight for principles or leaders or causes. Animals generally have the sense to run away and live another day. While animals may fight for territory or mates, war requires civilization, and civilization apparently requires war. Cultured beings fight wars for (or imagine they do) ideals and futures.

- ✓ Bonobos, one of the two closest (genetically) remaining primate relatives of humans, engage in genito-genital rubbing and other socio-sexual activities more frequently in captivity than in the wild. Possibly this is because they are bored and the only meaning they have is their group. Bonobos are also the only other species known to engage in face-to-face copulation.
- **People in a Room:** I highly recommend watching *Man from Earth* (2007), which is basically seven educated people in a room (most of them professors with one young student), one of whom, John, claims to be 14,000 years old and seems to have reasonable answers to all of

their questions. An eighth person – a psychiatrist – joins them, then leaves, then rejoins them. Within that framework, the author – who dictated the last parts to his son as he was dying – is able to discuss a wide range of topics related to humanity ranging through daily lives, memory, existence, families, life and death, progress of humanity, history, creation, religion generally, and the relationship of Buddhism and Christianity. Critics felt the latter part was heavy-handed, but I suspect it is because it contains an uncomfortable truth that they don't like having forced on them, they prefer to close their eyes and whistle at the sky.

People in a spaceship stories are basically people in a room stories, ranging from Star Trek (where about half or more of the scenes are on the bridge), *Alien* (1979), *Passengers* (2016), to lower-budget stories like the movie *5<sup>th</sup> Passenger* (2017), *Pandorum* (2009) and *Cargo: Space is Cold* (2009). Because, where are you going to go? The difference in scale is simply whether or not the ship ever reaches a destination, as it does frequently in Star Trek, but less frequently or never in most other fiction.

Not coincidentally, *GGDM is precisely the same*; the players are a group of people in a room – or degenerated savages on a generation ship like the *Warden* (Metamorphosis Alpha RPG, 1976) which may be inspired by Brian Aldiss' 1958 novel, *Non-Stop* or Robert Heinlein's 1963 novel *Orphans of the Sky* (consisting of two stories published in 1941) – playing a storytelling game (perhaps with extra equipment to keep track of it all) ranging over all of humanity and creation. The reader and I are two people in a room or at a café table in a corner or on a patio (and some readers will prefer to close their eyes and whistle at the sky), only the GGDM framework is slightly different, it has the organized structure of the game to depend dialogue and commentary upon.<sup>7</sup>

- Sophistry to the Stars: In the classical Western tradition, the much reviled Sophists of Ancient Greece, who travelled from city to city (they may also have been travelling merchants, entertainers, and sailors as well, from which English gets Sophia, sophistry, sophistication – which latter is always relative) were the first to realize that culture was neither absolute or objective; that culture, worldviews, rules, myths, rituals and taboos were slightly different in each city, from place to place. The Sophists themselves violated a social taboo against charging fees for education when they were paid to teach young men to speak well in public (e.g., see the tale of Corax vs. Tisais).<sup>8</sup>
  - ✓ The concept of being paid to teach was scandalous in ancient Greece and was (as I learned in college), one of the charges against the Sophists. However, charging to teach, once embedded in our culture, regardless of the objections of philosophers, led to emergent results over 2500 years – professionalization, writers being paid to create textbooks and instructive works (as opposed to entertainers, who were apparently always paid, which morphed into fiction writers), public schools, multiplication of knowledge, organization of knowledge for presentation, etc. Though the issue has long been 'settled' the debate still lingers in the background, leading to charges that ideas are not worth anything unless someone can sell or use them to make money.
    - As discussed in 3 The Big Bang, p. 12, GGDM is, in the vein of philosophy, a form of freely given teaching and even peer-to-peer learning.

Because of this sudden understanding of the 'subjectivity' of culture, knowledge came into danger, and thus, Plato attacked the Sophists (in Gorgias, 380 B.C.) and rhetoric for their ability to 'create' knowledge in the minds of the listener (pretty much the staple of religion,

then and for millennia to come), which, in Plato's view, unless spoken by a Philosopher, was prone to create falsehood and deception (St. Augustine echoes this with arguments that classical knowledge could be repurposed and cleansed of corruption for Christianity through the Church).<sup>9</sup> Basically, the problem was that insular Greece became cosmopolitan and the two forces struggled against each other for centuries in the midst of Persian incursion, Grecian world conquest, and eventual Roman ruin: How could Greece keep its 'soul' in contact with the wider world?

- ✓ The same problem exists today individually for each person reading this work and for the near-infinite multitudes who don't or won't or wouldn't.
- ✓ And the same is expected to be true within the GGDM setting, or if humans encounter alien life, especially either sapient or technologically advanced alien life: How will the 'soul' of the species be preserved against wider contact, will the cultures of the homeworld survive, flourish, conquer, and run into ruin in the universe?

---

*"A man's character always takes its hue, more or less, from the form and color of things about him." – Frederick Douglass*

---

**Gemini Dream:** Culture is a Vital Power of the government or central authorities of each position in the game.

However, this is more a matter of game mechanical contrivance than 'reality' as governments (at least those that last long) can rarely exercise or attempt to exercise autocratic power over the culture of the people; those that do are regarded for their radical ideology or theology.<sup>10</sup> Rather, government and the culture they rule are inseparable, but not equal, equity twins; the culture creates the government that it accepts as legitimate, the individuals who lead or are employed in the government come to their jobs or places from the culture that created it, carrying with them all of the cultural baggage, and the government, through various actions, and often unintended consequences subsequently shapes the culture that created it.<sup>11</sup>

That being stated, the Culture Power may be activated by positions for the following purposes:

1. Exposing Aspects,
2. Perfecting Proficiencies,
3. Cohering,
4. Introduce Writs (see Writs, *infra*),
5. Found College (see Colleges, *infra*),
6. Amend College Charter (see Colleges, *infra*),
7. Endow Colleges (see Colleges, *infra*),
8. Develop Doctrinal Templates (see Colleges, *infra*).
  - Activation of the Culture Power for the purpose of Develop Doctrinal Templates requires a concurrent activation of the Combat Power for any purpose.

Activations of the Culture Power for the purposes of Exposing Aspects, Perfecting Proficiencies or Cohering require two Acts. Additionally, Perfecting Proficiencies and Cohering also require the expenditure of Resource Points (RPs) because money talks and ... (you know it already), see Perfect Proficiencies, 3 Culture, p. 381, and The 'Getting on the Same Page' Meeting, 5 Culture,

p. 422, *infra*. These three purposes of Culture Power activation will be fully explained in this section, while introduction of Writs, Foundation and Endowment of Colleges, and Amended Charters, and Doctrinal Templates are the subject of the following sections.

- **About Porpoises:** Many Power Activations throughout GGDM have multiple possible purposes – that is a subset of actions to choose from under the Power Activation. Taxation and Census Power Activations only have single purposes, the Culture Power Activation is the first to have multiple purposes (listed above). Actions submitted for any Power Activation that has multiple purposes must state the purpose for which the Power has been activated or they cannot be processed as the mechanics and cost for each purpose are different. Each Power Activation can only be for one purpose.
  - ✓ “So long and thanks for all the fish.” – note left by the dolphins when they left Earth shortly before the Volgon construction crews demolished the Earth to make way for a hyperspace bypass. It is also the name of the 1984 book by Douglas Adams, part of the Hitchhiker’s Guide to the Galaxy series.
- **Undersea Glow:** Exposing Aspects, Perfecting Proficiencies and Introduce Writs cannot be affected by inactive Constructural Elements and will never fail for that reason. Cohering is attempted at each colony and ship that has inactive Constructural Elements and can potentially fail at any colony or ship due to inactive Constructural Elements. The remaining purposes will be addressed in the Writs and Colleges sections.

---

*“Reporters are not generally well versed in artistic movements, or the history of literature or art. And most are certain that their readers, or viewers, are of limited intellectual ability and must have things explained simply, in any case. Thus, the reporters in the media tried to relate something that was new to already preexisting frameworks and images that were only vaguely appropriate in their efforts to explain and simplify.*

*With a variety of oversimplified and conventional formulas at their disposal, they fell back on the nearest stereotypical approximation of what the phenomenon resembled, as they saw it. And even worse, they did not see it clearly and completely at that. They got a quotation here and a photograph there – and it was their job to wrap it up in a comprehensible package – and if it seemed to violate the prevailing mandatory conformist doctrine, they would also be obliged to give it a negative spin as well....*

*The consequence is, that even though we may know now that these images do not accurately reflect the reality of the Beat movement, we still subconsciously look for them when we look back to the 50s. We have not even yet completely escaped the visual imagery that has been so insistently forced upon us.”*

– Thornton Lee Streiff, Introduction to The Beat Vortex website about the Beat Culture in Wichita, Kansas, retrieved from The Way Back Machine, November 28, 2016

---

**Beat Down:** Contrast Madison Avenue and Hollywood images of the Beat Culture (“Beatniks,” from “beat” and “sputnik,” as in far out or up there) with the following:

- ✓ “The Beat Generation, that was a vision that we had, John Clellon Holmes and I, and Allen Ginsberg in an even wilder way, in the late Forties, of a generation of crazy, illuminated hipsters suddenly rising and roaming America, serious, bumming and hitchhiking everywhere, ragged, beatific, beautiful in an ugly graceful new way – a vision gleaned from the way we had heard the word ‘beat’ spoken on street corners on Times Square and in the Village, in other cities in the downtown city night of post-war America – beat, meaning down and out but full of intense conviction. We’d even heard old 1910 Daddy Hipsters of the streets speak the word that way, with a melancholy sneer. It never meant juvenile delinquents, it meant characters of a special spirituality who didn’t gang up but were solitary Bartlebies staring out the dead wall window of our civilization ...” – Jack Kerouac, “Aftermath: The Philosophy of the Beat Generation,” *Esquire*, March 1958.

The origins of the Beat Generation possibly extend back to the post-Civil War in the United States, cf.:

- ✓ From Merriam-Webster online dictionary at *guttersnipe*: “Unfurl yourselves under my banner, noble savages, illustrious guttersnipes, wrote Mark Twain sometime around 1869. Twain was among the first writers to use guttersnipe for a young hoodlum or street urchin. In doing so, he was following a trend among writers of the time to associate gutter (a low area at the side of a road) with a low station in life. Other writers in the late 19<sup>th</sup> century used guttersnipe more literally as a name for certain kinds of snipes, or birds with long thin beaks that live in wet areas. Gutter-bird was another term that was used at that time for both birds and disreputable persons. And even snipe itself has a history as a term of opprobrium; it was used as such during Shakespeare’s day.”

*Guttersnipe*, or at least its Deutsche equivalent, is the term used by the aristocracy and high-ranking military officers for a young rabble-rouser named Adolf Hitler. He was also called a *bohémian*.

Beat Culture might thus be a transcendental evolution of guttersnipe into *avant garde* intellectual and their main antagonist, apparently, was Establishment Poetry (and the local police cadre). The Beat Movement in the altered state of the media image Beatniks, evolved into the hippies. Modern popular culture has the well-noted tendency to transform deep meanings into window dressing and ornamentation through commercialization and mindless repetition.

- ✓ Another famous example of where the media got it wrong, and in the process distorted an entire art form, is ‘breakdancing’ – which I remember the kids doing on cardboard in the high school cafeteria during lunch. This was in the early 1980s, it was new, non-conformist, and misunderstood. Real practitioners call it breaking.

*“This dippy, if seemingly harmless, book on men’s style serves as an unintentional marker of certain pop sociology trends. ‘The Gentlemen’s Guide to Grooming’ proclaims that ‘hirsute is hip,’ a pronouncement that will hardly come as news to anyone living in metropolitan areas where the young and stylish congregate....*

*One does not need advocate a return to the clean-cut conformity of the Eisenhower era to find the folderol being sold here fundamentally spurious. The flamboyant hair and dress of beatniks, hippies and punks was genuinely transgressive because it was authentically risky; showing up at that job interview in leather had quantifiable consequences. And if we’ve learned anything from the rise of Silicon Valley, it’s that the unkempt look is, in fact, fully compatible with grotesque forms of corporate greed.*

*The rebel-outsider attitude depends upon a wholly self-contradictory and finally unsustainable idea of a mass bohemia, one that would require the majority of the population to feel superior to itself. The ‘Gentleman’s Guide’ represents the selling of what we think we want to be, and in this, it may be the perfectly groomed sign of our times.”*

– Michael Lindgren, “Hipster style at its most annoying,” *The Washington Post*, December 26, 2017

## Endnotes.

<sup>1</sup> Citation & Commentary: “The conscious and intelligent manipulation of the organized habits and opinions of the masses is an important element in democratic society. Those who manipulate this unseen mechanism of society constitute an invisible government which is the true ruling power of our country. We are governed, our minds are molded, our tastes formed, our ideas suggested, largely by men we have never heard of. This is a logical result of the way in which our democratic society is organized. Vast numbers of human beings must cooperate in this manner if they are to live together as a smoothly functioning society. ... In almost every act of our daily lives, whether in the sphere of politics or business, in our social conduct or our ethical thinking, we are dominated by the relatively small number of persons...who understand the mental processes and social patterns of the masses. It is they who pull the wires which control the public mind.” – Edward Bernays, Propaganda (1928).

- ✓ I highly recommend watching Marvin Olasky’s 1984 interview of Edward Bernays, who was 93 years old – not because of Marvin Olasky, but because of what Bernays said when he had nothing left to fear or lose.
- ✓ Shirley Temple Black smoked cigarettes, but never in public because it might influence her fans; it is as if, or possible, that she resented what Bernays had done for his tobacco clients with the 1929 “Torches of Freedom” campaign. Comments the New World Encyclopedia:
  - “In the 1890s, when gender role reversals could be caricaturized, the idea of an aggressive woman who also smoked was considered laughable. In 1929, Edward Bernays proved otherwise when he convinced women to smoke in public during an Easter parade in Manhattan as a show of defiance against male domination. The demonstrators were not aware that a tobacco company was behind the publicity stunt.” – article “Edward L. Bernays,” captured October 12, 2018.

<sup>2</sup> Commentary: It’s like the Tetris-like falling tile game Hashira. It becomes obvious that the computer is cheating. There are only six types of tiles. They are generated on the board in groups of three. You could roll 3d6 for the generation manually. Amazingly, when you need a particular tile, 18, 24, 30 tiles will generate before you see the tile you need. That can’t be random. You might think it is just an outlier run of bad luck, like throwing 30d6 and not getting any sixes. Except that it happens all the time; the program seems to sense that you need a specific tile and it cheats. That’s the only way to put it, it plays with loaded dice. If a human player did that, anywhere, it would be called cheating (I have a friend who alleges that the Race for the Galaxy computer AI opponents cheat as well).

Additionally, the last 30+ tiles generated before the end of the game are also *amazingly unplayable* and finish filling the board quickly (it's not just the endgame speed, I am talking about the tiles don't match any plays currently on the board). It happens every game, it's not just bad luck. This is very odd because it is not a competitive game, you are not playing checkers against the computer; the simple role of the computer in any Tetris-like game is to randomly generate tiles, which is why Tetris-like games are so old already, because that's what early computers could do. So why is the computer allowed to cheat, why does the computer need to cheat? There is no money involved, it's not like an arcade game machine, which were designed to keep players pumping quarters into the machines.

- ✓ Regardless of whether you think I am nuts or being hyperbolic, or that I am flat wrong, go with it; being hyperbolic or one-sided does not equate to being either factually or argumentatively wrong. I have seen *consistently* the most improbable tile generation sequences in Hashira. If I could contort the odds of die rolls as reliably as Hashira does regularly, I'd take it to Vegas and be a millionaire in a few hours. I am neither exaggerating nor kidding around.
- ✓ Back to the discussion above, once you have decided that the computer game program is cheating – once it becomes clear that you cannot reliably plan ahead, set up elimination plays or chains, or anticipate that *normal* random generation of tiles (at what? 20, 30 tiles per minute) will occur, then the question becomes what amount of effort, emotion do you put into the game? How much do you care about the score, getting higher scores? Is it a pointless game or is it a game where you try to get higher scores despite the computer cheating?
- ✓ Not only is Hashira like the discussion of cultural programming in this sense, but it is also reflective of the universe – or at least the human relationship with the universe – as discussed previously in *Turbulence of Being*, 1 Entropy, p. 223, *supra*.

<sup>3</sup> Commentary: Imagine running in a race where you don't know where is the finish line? In the first breath, most people would declare roundly that is unfair; but in the next breath they'd realize that's the way it is with life. You can finish the rest of this line of thought on your own.

- ✓ In GGDM design, I had no idea where the finish line was when I started or as the game evolved. It probably moved a few hundred times. I had no idea I'd still be working on it half a lifetime later. The game was certainly exploding beyond the initial bounds in the summer of 1996 and crashed in 1998 and had to be re-written from a different base in 2000-2002. As I approached middle age, the final shape of the game and my expectations of what it would become slowly emerged in my mind; I still don't know where the end line is, but in early 2018 I began a blind dash for the finish line.
  - This particular thought or analogy was probably inspired by listening to the Indie-folk song "Youth" by the group Daughter (2013); it came up because I was listening to Bôa on my music app. Bôa performed the opening theme for *Serial Experiments: Lain* ("Duvet" 1998).

<sup>4</sup> Commentary: I guess that since my adolescence, I have wanted my gaming hobby or experience to be more, mean more than what it can or could be in our current society – more than pre-boxed market manipulation-exploitation (i.e. commercialism, materialism). I always took it far more seriously than others. Military intelligence training as a battlefield intelligence analyst thus fit my personality perfectly; I excelled in it. As I reach middle age, I realize that it is not possible in our current milieu and that I am not very good at games in any event.

<sup>5</sup> Commentary & Citation: A question for Plato and Cicero: What is the difference between rhetoric (as oratory) and singing? By this, I mean modern lyrical singing as I have heard from music historians that music was not performed in Plato or Cicero's time in the way it is now, e.g., John Koopman, Lawrence University notes in a "Brief History of Singing" that Roman music, derived from Greek music, was mostly instrumental and military, but they did have some singing (<https://www2.lawrence.edu/fast/KOOPMAJO/antiquity.html>, April 4, 2019). Is singing skill, does it create knowledge in the mind of the listener? Can it be elegant and resplendent but hollow thunder?

<sup>6</sup> Commentary: The kernel of this discussion is probably an argument I made in freshman English class at Lycoming College around 1990. I argued that peace and utopia were generally not possible because (in the vein of The Player Piano, which we may have been reading and discussing) people would be bored, need to find something to do, and there would again be conflict and destruction. Professor Hawkes (or Hawkins, I don't recall), one of the late counterculture generation that became professors (he sold used farm equipment while getting his Masters Degree), didn't like my probably-not-well-phrased argument (and I don't think he liked me either, as I was more pro-military at that time and he also informed me that I was a know-it-all), and gave me a hard time before dismissing it entirely.

- ✓ Unknown to me at the time – and this happens to me quite a lot – my argument that day was sort of in the cant of similar arguments that had been made by a line of intellectuals before me, e.g., Lewis Mumford etc. to the extent that they argued that social problems arose from lack of meaningful work.

<sup>7</sup> Commentary: Is the other person like him that John met once around 1600 a reference to “Flint” in “Requiem for Methuselah” (ST:OS 1969, which Bixby wrote)? This would make John in *Man from Earth* older than “Flint” as John would have been born around 12,000 B.C.; Flint who claimed to be born in 3,834 B.C. was very roughly over 6,000 years old in *Star Trek*. The era (late 1960s) and the 51-minute television series setting in which the episode was produced and the intended audience (adolescent and young males) all very much limited what could be discussed or even mentioned. *Man from Earth* was Jerome Bixby’s final exposition (he appears to have worked on it for about 30 years) of what he wanted to discuss in “Requiem for Methuselah” and all of his other works. *Man from Earth* says far more in a tight 87 minutes than *Star Trek* said in any 50 minute episode (see previous discussion of *Young Adult vs. Adult Fiction*, 3 *The Sidereal Stage*, EN 7, p. 127, *supra*).

- ✓ Incidentally, *Man from Earth* (2007) is classified on some sites as sci-fi: Wikipedia calls it “drama science fiction,” and IMDB calls it “drama, science fiction, fantasy” (they couldn’t make up their mind, I guess, or were just clueless and didn’t care anyway). There is nothing in *Man from Earth* (2007) that makes it specifically science-fiction themed except the author’s relationship to *Star Trek*, specifically relevant here, he was the author of the “Requiem for Methuselah” (1969) episode. Rather, the concept of immortality has been around since *ancient myths*, nor is the setting science-fiction, it is ordinary everyday drama, as opposed to *Star Trek* which is a science-fiction setting, that is, science-fiction assumptions and inventions are required for the *Star Trek* setting, like GGDM, but not in *Man from Earth* (2007). I would agree that *Man from Earth* is fantasy – in a low-key way – and very literary, but is not science-fiction literature.
  - There is a small three-post debate about classifying *Man from Earth* as science-fiction on the Wikipedia talk page for the article about the movie. The last poster points out that if *Man from Earth* is science-fiction, so is every fantasy story that contradicts known natural laws or scientific principles (in John’s case, the Hayflick Limit). No one has seen fit to edit the article however to remove the science-fiction claim because all of the other equally clueless websites call it ‘science-fiction.’
  - Is it contradictory for me to argue that *Man from Earth* is not science-fiction literature because it does not require a science-fiction setting, but then to claim it is vaguely fantasy literature without it being in a fantasy setting? Or is it more true that fantasy is related to ancient myths and ancient myths could occur in ordinary settings, whereas, science-fiction literature generally requires a science-fiction setting at some point in the story in order to be ‘science-fiction’?

<sup>8</sup> Citation: <https://americanrhetoric.com/corax&tisias.htm>.

<sup>9</sup> Commentary: I had early lessons in the power of rhetoric. My mother – who had a 1970s obsession with the history of the rise of Hitler in the 1930s – hated Howard Cosell. Up to about third grade, we listened mostly to the radio, which was on almost all day long; my mother deliberately avoided getting a television so that I wouldn’t be too influenced by it. Howard Cosell came on right after Paul Harvey signed off, we always listened to Paul Harvey, but as soon as she heard Cosell’s intro, she turned off the radio. I can still do a decent imitation of his bombastic, stuffy intro (I can also imitate Paul Harvey, we listened to him into the 1980s). Anyway, I remember that my mother said to me in 1<sup>st</sup> grade that a man on the radio should not have the power to destroy an athlete’s career.

<sup>10</sup> Commentary: There is no shortage of examples of these sorts of governments; governments or ruling groups who rename the months of the year, restart the calendar from the year their rule began, outlaw music, dancing or games, attempt to change the language to fit their ideology, outlaw certain words, force the people to conform to a particular clothing style, color scheme, or hair style, outlaw art and literature, summarily dispose of traditions and old laws, summarily execute intellectuals and teachers, export the population from the cities, and/or insist that the population worship the head of government. Nothing stirs resentment like heavy-handed internally imposed radical cultural change in the name of religion, revolution, or ideology. I recommend watching or reading Margaret Atwood’s *The Handmaid’s Tale* (novel – 1985, movie –1990, series – 2017).

<sup>11</sup> Clarification & Citation: See *Base and Superstructure in Marxist Theory*. However, Marxist Theory is obsessed with power relationships; whereas the formulation of the relationship in these rules is more of a never-ending neutral, asymmetrical and uneven embrace. “In an everlasting kiss,” Bruce Springsteen, “Born to Run.”

*“According to Tainter’s Collapse of Complex Societies, societies become more complex as they try to solve problems. Social complexity can be recognized by numerous differentiated and specialised social and economic roles and many mechanisms through which they are coordinated, and by reliance on symbolic and abstract communication, and the existence of a class of information producers and analysts who are not involved in primary resource production. Such complexity requires a substantial ‘energy’ subsidy (meaning the consumption of resources, or other forms of wealth). ... In Tainter’s view, while invasions, crop failures, disease or environmental degradation may be the apparent causes of societal collapse, the ultimate cause is an economic one, inherent in the structure of society rather than in external shocks which may batter them: **diminishing returns on investments in social complexity.**”*

– from Wikipedia article, “Joseph Tainter,” captured November 22, 2018  
(emphasis in original)

**Lunette Ring Weight:** There is a difference between what you can pick up and what you can carry if someone helps you get ahold of it. I most likely cannot pick 180 pounds straight up from the floor, I probably never could. But I could carry two 90 lb. artillery shells, one on each shoulder, when unloading ammo from the truck. The Marines on the truck lowered one onto one shoulder, I turned around, and they put the second one on the other shoulder. The shells had eye rings at the top so they were fairly easy to balance and control, if heavy and I could simply bend forward and rotate or flip them using the eyebolt handle to stand them up at the destination.<sup>1</sup>

- ✓ Can you pick up a 180 pound person from the floor – say if they were unconscious? Heroes in movies do it all the time, of course, but in the WWE, it’s all choreographed (i.e. ‘kayfabe’) with the opponent surreptitiously cooperating in being body-slammed to the mat or picked up and spun around the ring. In the moment of an emergency you can pick up a person with their assistance (that is, injured but aware) and help them for a short distance to safety or a treatment center. Conversely, it is nearly impossible to singlehandedly pick up a person who is completely committed to resisting; police and first responders know this from training.<sup>2</sup>

Civilization is like that too, but to a vastly greater degree. There is a difference between the level of thought and complexity that each human would develop on their own in a vacuum of sorts, and the complexity that we carry (our cognitive or cultural schema) in our heads and daily behaviors and interactions that is placed upon us by education and living daily in our civilization. A civilization can be helped if it wants it, it cannot be helped if it is resisting foreign ideas.

- ✓ “Complexity characterises the behaviour of a system or model whose components interact in multiple ways and follow local rules, meaning there is no reasonable higher instruction to define the various possible interactions. The term is generally used to characterize something with many parts where those parts interact with each other in multiple ways, *culminating in a higher order of emergence* greater than the sum of its parts. The study of these complex linkages at various scales is the main goal of complex systems theory. Science as of 2010 takes a number of approaches to characterizing complexity; Zayed et al. reflect many of these. Neil [Fraser] Johnson [physicist, complexity theory] states that ‘even among scientists, there is no unique definition of

complexity – and the scientific notion has traditionally been conveyed using particular examples...’ Ultimately Johnson adopts the definition of ‘complexity science’ as ‘the study of the phenomena which emerge from a collection of interacting objects’.” – from Wikipedia article, “Complexity,” captured November 22, 2018 (emphasis added).

The modern social safety nets may be a form of social complexity which is experiencing diminishing returns in addition to locking down resources in the present and endless future. See Conquest by Entitlements discussion 5 Culture, p. 430, *infra*.

---

*“Researchers, as yet, have very little ability to **identify internal structures of large distributed systems** like human societies, which is an important scientific problem. Genuine structural collapse seems, in many cases, the only plausible explanation supporting the idea that such structures exist. However, until they can be concretely identified, scientific inquiry appears limited to the construction of scientific narratives, **using systems thinking for careful story telling about systemic organization and change.**”*

– Wikipedia article, “Societal Collapse,” February 24, 2015 (emphasis added)

---

**Deductive Drek:** Broadly speaking, there is absolutely no empirical basis for the structures or many of the claims offered in GGDM. As such, GGDM is a work of philosophy at best and/or just my considered and meaningless personal opinion, at worst. Possibly it is pre-theoretical intuition, see John W. Carroll quote, 1 Temporal Technology, pp. 811-812, *infra*. It might even be rubbish; see Richard Dawkins bottom feature quote in 2 Fallen to Earth, p. 1527, *infra*. It is not certain how any of this is testable or verifiable in the current sense.

**Cultural Traits:** Culture is represented in the Public Space by placement of Cultural Traits. There are two types of Cultural Traits: Aspects and Proficiencies; each takes one monad on the Public Spaces. Culture is like a multi-faceted diamond that appears differently each time you turn it slightly in the light; it is impossible to see all of the aspects of a diamond at any one time.<sup>3</sup>

For those steeped in what we now call culture – the theatre denizens of the cultural district, the fashion victims, the cultural anthropologist, art historians and musicologists, micro-sociologist (as in a diminutive sociologist, like the tiny witch who kept getting smaller with age☺), comedy club crawlers, fringy poets, and artsy types – this section is not what you call culture. This section contains game rules and procedures, and a broad structural outline of a “large distributed system” (*ut supra*), it is very mechanical. It’s up to the game participants to add color (or not).

- ✓ “A fad is an intense but short-lived fashion trend. Fads are also by their nature at the extreme range of currently acceptable style, which means they commonly cross the line from the sublime to the ridiculous. Fashion victims can be seen to have crossed this line.” – Wikipedia article, “Fashion victim,” captured September 8, 2018.

---

*“But, here’s the thing: Campaigns – especially those for president – are rarely won and lost on ‘carefully thought-out policies.’ They are almost always won on emotions – positive ones or negative ones.”*

– Chris Cillizzia, CNN Politics, September 6, 2017

---

**Aspects:** An Aspect that became apparent in 2016 in the U.S. and Europe.

A song is a feeling, experience, emotion, moment compressed into a few minutes of eternity. Our lives have songs; human life feels like eternity pressed into a trice. Like the songs of whales, civilizations have one or more songs repeating at various cycles. Aspects represent part of the songs of a civilization. Aspects are particular glimpses of a culture (eigenstates?) which only appear at particular times, or under the correct circumstances (*ut infra*, p. 369). Aspects might represent a mood of the people, or emotion, or underlying feeling, or unspoken values, unstated beliefs, a historical movement or trend, or something not quite expected from the outward appearance of the culture, but that become apparent to the objective observer periodically. Whether such are considered rational or irrational, they exist and are real:

- ✓ “Whites have to realize that African American men have a fear, and boys have a fear of being confronted by the police because of some of these incidents. Some people may consider it rational. Some people may consider it irrational. But it’s a reality. It exists.” – Rudy Giuliani, on “Face the Nation,” July 10, 2016.

The question in GGDM was, what concept is sufficient or necessary to describe the phenomena? It is the same question asked by Ptolemy’s astronomy and by nuclear physicists. That is an aspect of this problem. While Aspects might arguably be another ‘interpretation’ in the game, they are not officially Interpretations for game purposes: They lack form, they are only pieces.

- ✓ The whale song is one of the only songs humans recognize that are not about us. It’s a start at least.
  - ✓ My very handsome, well-fed tomcat Fritz has the loudest, most melodious, sustained purr I have ever heard and he exercises it often. I think the other cats like it, and he uses it when joining them wherever they happen to be snoozing, he likes to sleep with other cats (not just females). It is an important socializing tool for him, something added to the tribe, I think it serves somewhat the same purpose as singing in humans; mother cats purr to their kittens like a human mother sings to her baby or infant.
- Aspects A to Z: There are literally thousands of possible Aspects: Verb forms and abstract nouns. Aspects available in any game will be limited to those on the Aspects List provided by the Concierge during the setup. The Aspects List is an alphabetical list where each letter represents a particular Aspect whose word appears next to the letter. Thus, the Aspects in the Public Spaces will bear the letters of the alphabet (26 possible Aspects) and the letter on the Aspect represents the Aspect corresponding the letter on the list.
- ✓ For example, “A” might mean “aggression,” “M” might mean “mediocrity” while “C” represents “charity” and so forth. Dial M for Murder?☺

The Concierge will provide each position with a *secret* Aspect List for their culture. The list might or might not be the same for all positions; each position could have its own list, or more likely, there will be some significant overlap. Not all letters might be used in a list.

Like the Galactic Space in this game, the Aspect List reduces the impossibly infinite to a manageable, playable, finite sample for game purposes – it is thus a concession to playability. Your species will exhibit about 20-25 Aspects during the game.

- ✓ The Aspects List in GGDM is a loose form of lexical hypothesis such as that used in personality psychology or traits theory, which I previously criticized as resulting in

gross oversimplification in relation to the Five Factor Model of Personality (aka The Big Five), see 2 Constructural Elements, EN 15, p. 203, *infra*. And it is inherently based upon the lexicon that humans apply to themselves and would likely impute upon alien species we might encounter, similar to anthropomorphic idealized traits imputed on animals in children’s stories, fables and myths (e.g., the sly fox, the clever but vain or selfish bird, the wise owl, the industrious ants).

- “Despite some variation in its definition and application, the hypothesis is generally defined by two postulates. The first states that those personality characteristics that are important to a group of people will eventually become a part of that group’s language. The second follows from the first, stating that more important personality characteristics are more likely to be encoded into language as a single word.” – from Wikipedia article, “Lexical Hypothesis,” captured May 10, 2019.
- I agree with lexical hypothesis as a *generally interesting and informative idea* about language. But it struggles to find concrete, utilitarian application in human personality, sociology, or cognitive theory without becoming just absurd and untenable, as demonstrated by the Five Factors Model of Personality Traits. This is similar to the long intellectual struggle of reducing general concepts about civilization (and my personal experience) to concrete, objective game mechanics in GGDM. I am aware then, that GGDM may be criticized, as a simulation of civilizations, in the same way I have criticized the Five Factors Model or Big Five Personality Traits.
- ✓ The Aspects List of each position may be changed during the game by Kairotic Moments, see *After the Fall*, 3 Kairotic Moments, p. 1445, *infra*.
  - All of the commentary, endnotes, and quotes<sup>4</sup> in this work are Aspects as the term is used here; in that each is a thought, insight, personal feeling or expression that became apparent (‘exposed’) at the time I was thinking and reading about, researching the subject to which it belongs. Had I not written GGDM, those same (probably unimportant) insights may or may not have become apparent in another context, possibly never.
- A Bustle in Your Hedgerow: Whenever the Culture Power is activated for the purpose of Exposing Aspects, the position may attempt to ‘expose’ three Aspects of their choice. This Power Activation *cannot fail* due to inactive Constructural Elements, it is not locational.
  - ✓ Being able to choose which Aspects are Exposed is admittedly, an unrealistic mechanic, a necessary game concession (and the ‘godview’ of the players over their position), depending on how much you believe that the media and the government manipulates public emotion in our current society through invisible hands (*a la* Edward Bernays). If this becomes too unbelievable for the participants, the Concierge could always use an Intervention to create an unanticipated result or consequences.

Exposed Aspects must be immediately placed on any available unoccupied Monad in the Public Space *adjacent to a **Friendly or Naturalized Colony*** (cf. Cultural Proficiency Pieces can be placed adjacent to *any other piece*). Each attempt to expose an Aspect must provide a short (one sentence) reference to a game event, condition, News Event, or circumstance that

might provide the opportunity to ‘expose’ the named Aspect and the location where the proposed Aspect is to be placed on the Public Space. The Concierge will interpret very liberally, but the sentence or reference and proposed location must reasonably relate to the Aspect to be Exposed; only the most specious Exposure attempts will be rejected without a die roll. Whether or not the Aspect is in fact Exposed, is not up to the Concierge, rather, the Aspect will be exposed 50% of the time. If the Aspect is part of an existing Writ Interpretation, the Aspect will be exposed 55% of the time, and if a Writ containing that Aspect is activated (not issued) in the same Regular Turn, the Aspect is exposed 60% of the time.

- ✓ Positions may attempt to increase their chance of success in bringing forth a particular Aspect by doubling up on Exposure attempts. The Concierge may or may not allow this, but whatever rule is established should be applied consistently, and to all positions throughout the game. Positions may also choose to activate the Culture Power multiple times during the same turn to Expose Aspects; because of the cost of this, duplication should be allowed for Exposing the same Aspects, as long as they are part of different Culture Power activations. Players should be prepared for the possibility that duplicate attempts may both be successful, and, as the Aspect must be placed on an empty Monad, second and subsequent successes will be lost if there is no place to put them. What you risk or pay for something is governed by how much you need it.
- The Rule of Three: Three Aspects per activation of the Culture Power for the purpose of Exposing Aspects is a simple baseline number that may prove insufficient in actual game play. There are ways to constructively increase (or decrease) this number. For example, one attempt may be added for each First Contact (this works better in games with fewer positions) or Shared Meanings (for larger games perhaps) thus linking Aspects to Diplomacy and encouraging First Contacts and Shared Meaning interpretations. The Concierge may also allow one additional Aspect exposure attempt per uninterrupted Government Title or one Aspect Exposure attempt for each Fundamental Reality held by the position. Players may use Writs activations to gain additional Aspects. The Concierge can also play with percentages, for example, altering the percentages based on the total population of the target colony for the Aspect, or making Writs near automatic for Aspects. These are all optional, and options.
- Between the Candle and the Stars: The primary quality of Aspects are that they are momentary, transitory; the mood changes, values recede from the forefront, times change. As a result, Aspects are not permanent. Aspect pieces have a light side and a ‘dark side’; on the turn they are placed, they are placed light side up (or occasionally, the dark side up, at the judgment of the Concierge). At the end of each Regular Turn, the Aspects that started the turn with the light side up are flipped to the dark side, and Aspects that started the turn with the dark side showing are removed at the end of the Regular Turn.

The following is possibly a good, practical example of the aging of Aspects:

- ✓ “Back in our Dec. 2016 [NBC/WSJ] poll, respondents were asked which word best described how they felt about the results of the [Presidential] election, and the top answers (allowing for multiple responses) were ‘hopeful’ (32 percent), ‘disgusted’ (25 percent), ‘scared’ (23 percent), ‘excited’ (12 percent) and ‘relieved’ (11 percent)... But when we asked the same question about how Americans feel about Trump’s first year as president in our latest poll out this morning, here were the top responses: ‘disgusted’ (38 percent), ‘scared’ (24 percent), ‘hopeful’ (23 percent), ‘proud’ (12

percent) and ‘angry’ (11 percent).” – Chuck Todd, Mark Murray, Carrie Dann, “Trump at one year: From hopeful to disgusted,” NBC News, January 19, 2018.

Thus, Aspects age off the Public Spaces if they are not removed before then due to other causes. In the human mindset, there is an inherent suggestion that accompanies having light and dark sides to Aspects, and participants are free to incorporate that into the game if they wish. It is possible even to have Aspect Lists that have different Aspects for the light and dark side of every Aspect, if desired, for example, Apathy/Aggression, Peace/Police, or infinite other combinations (see UNITY OF OPPOSITES discussion 5 Fallen to Earth, p. 1570, *infra*). However, dark sides do not always need to be *exactly opposite* of the light side, just different and somewhat related (e.g., see ‘Quiet’/‘Queer’ in Appendix ASP, *infra*).

- ✓ This is a very simplified system. There is room for the Concierge to intervene. For example, there might be a 50% chance that the Aspect will flip each Regular Turn, and a percentage chance (say 33%) that after the first flip, instead of aging off, the Aspect flips again. The caution here is that the system introduced in the rules above is designed to create regular turnover on the Public Space so that it does not become clogged, while at the same time, emphasizing the fickle nature of Aspects. Introducing percentages will slow the turnover process or introduce unevenness.
- To Be a Rock and Not to Roll: The argument may be made that many things are both good/desirable or bad/undesirable under various circumstances.
  - ✓ For example, one might have righteous anger – which may arguably be good/desirable – which later becomes irrational or intemperate anger that most agree is bad/undesirable, both personally, and for civilization, especially when combined with power.

A common and recurring argument in our society regards the relationship of charitable giving to fraud, corruption and bloating of large charitable non-profit organizations, and homeless begging to support illegal drug use habits. Rampant consumerism and materialism has been argued as being both good for the economy, guaranteeing employment and profit, and as a driver of technology, but very bad for our mentality, our moral or spiritual good (e.g. generativity), and for the environment. Thus, Aspects can have light and dark sides while still being the same Aspect, if the participants decide to play Aspects in that way.

---

*“Music is the soundtrack of our lives.” – Dick Clark*

---

**The Music of Your Life**: Within the framework of GGDM, modern popular music can be explained by Aspects – performers or groups that have a few charting hits, such as contemporaries Gary Wright or Lobo and the groups Orleans, Bread, or Bad Fingers, are successful insofar as their music matches (*exposes* or *modifies*) a dominant Aspect of the time.

- ✓ “The overriding theme, of a world doomed by its passive acquiescence to and overdependence on its own overdone technologies, struck a resonant chord in millions of people around the world in the late 1960s. The song was #1 on the Billboard Hot 100 singles chart during the Apollo 11 moon landing.” – from Wikipedia article, “In the Year 2525,” captured January 14, 2020 (505 years to go...).

Performers that have long successful charting singles careers are those whose music have the most success in matching or affecting the Aspects of their time; this is nothing new, it is just a

macrosocial way of stating what has been stated in documentaries, commentaries, and articles about 1960s music and performers of the Vietnam Era (the time when modern popular music was *emergent* with certain sociopolitical movements), such as Bob Dylan, The Rolling Stones, The Who, the fading of the Beach Boys, and the musical changes through which The Beatles passed. The difference is that by looking at Aspects, the effect is not confined to a certain tumultuous decade, but instead applies to all popular music including Taylor Swift, the split between rock n' roll and country music (and the evolutions within each, and *crossovers*), to modern European metal groups (Gothic, Symphonic, or Power Metal), for example, the Scandinavian metal groups that still heavily rely on mythological images.

As such, it is not surprising that we like the music that we grew up listening to – my favorite music, that I still listen to, is the music that was on the radio in my youth, that my friends and family listened to, and added to it, is the music I heard and liked while I was in the service. At some point, most adults stop listening to new music (which sounds alien) and the music they like becomes the ‘music of their lives.’ We build interpretations around our favorite songs, sometimes based on incorrect hearing of lyrics.

- ✓ Thanks to the Eagles playing on the radio when I was young, I thought there was a “cheat’n side of town.” I had little idea of what that meant in 2<sup>nd</sup> grade, but I thought it was real – I probably pictured something from Bugs Bunny and Yosemite Sam cartoons. I remember asking my mother where it was, which direction ... I don’t think she answered because she was too busy cracking up with laughter (LAMO!). I might have thought it was the Fourth Ward bar down on the corner of Walnut and Lycoming Streets which I was not allowed to go near.

I am fairly convinced that we are ‘programmed’ on a certain level by the popular music of our times, and with the advent of recording and playback devices, broadcasting (and the energy to support their regular use), the effect gained *an order of magnitude* (discussed in Uber Alles, 2 Eras, p. 767, *infra*), previously, music was a novelty heard in churches, taverns, parades and shows, or sung while working or putting a baby to sleep. Rural people might have had less regular exposure to music than those in the city, or less variety, and this made those in the city ‘more cultured’ as part of the effect of “the stimulus of urban agglomeration” (see further discussion of this fourth order phenomenon and Edward Soja’s ‘synekism’ in 1 Commerce, p. 1183, *infra*).

- ✓ Glenn Frey talked about a problem that was creeping into our consciousness at that time and did it in a way that everyone liked, remembered and that is considered a classic: The 1984 hit song, “Smuggler’s Blues.”
- ✓ Criticism of songs like Phil Collins’ “Another Day in Paradise” (1989) creates a negative feedback loop: Any skilled, moderately successful singer who records a song about homeless people is exposed to criticism of exploitation. The published critics have made that criticism publically valid by their status. Why would anyone record songs about the homeless problem? And does recording songs about the homeless problem do any good in any case? Especially if all that is heard is the criticism. In the years after the song aired, however, ‘another day in paradise’ became a common sarcasm about work and life on Earth, but not in referring to homeless people.
- ✓ Vigorous singing or vocal performance can mask lyrical and logical defects in a song, for example, Benny Mardone’s power ballad antics in “Into the Night” (1980) makes the listener forget that he is singing about his lust for a 16 year old girl, whereas, Gary

Puckett's lyrical rejections in "Young Girl" (1968) keeps the jailbait issue front and center. Suspension of disbelief is an element in lyrical music as well as in literary fiction and movies, some songs, such as Steely Dan's "Deacon Blues" (corny lyrics, 1977) and Andrew Gold's "Lonely Boy" (logical failure, 1976) fail the test, lacking both lyrical logic and cover of vigorous vocal antics and power background music. This is the musical version of sophistry (in the sense of Plato's Gorgias (380 B.C.)).

- **Braggadocio:** "[Barry] Manilow was initially reluctant to record the song [I Write the Songs], stating in his autobiography *Sweet Life*: 'The problem with the song was that if you didn't listen carefully to the lyric, you would think that the singer was singing about himself. It could be misinterpreted as a monumental ego trip.'" – from Wikipedia article, "I Write the Songs," February 19, 2019.
  - ✓ Barry Manilow recorded "I Write the Songs" in 1975 and his concern is what has become known as braggadocio in RAP music. Barry Manilow expresses concisely an objection that I have long had about RAP/Hip Hop: So much of it is a shameless, blatant monumental ego trip by the performer singing or rhyming about how great they are, often combined with criminal, violent or bawdy street tales, instead of doing something creative, literary, poetic (not just rhyming words) and proving it, e.g., Run DMC's "Rock Box" (1984) and thousands of similar performances. To the outside observer, braggadocio has seemed to dominate RAP music, even when the music addresses real human issues such as Coolio's "Gangsta's Paradise" (1995) or is actually humorous such as Sir Mix Alot's "My Hooptie" (1989).

It's a cultural thing, I come from a different culture and so does Mr. Manilow and I interpret braggadocio in a different, classical way than those who like RAP/Hip Hop music. Some braggadocio crept into rock music in the 1980s, for example, The Scorpions "Rock You Like A Hurricane" (also 1984) might be interpreted as an ego trip. Certainly M.C. Hammer's "U Can't Touch This" (1990) contains a 'monumental ego trip' but is done much more artfully (i.e. proves it) and entertainingly, and he certainly pushes the envelope but stops just, and not much, short of overdoing it.

- ✓ I went to high school in the early 1980s, and lived in Marine Corps barracks in the late 1980s. If I was going to learn to like RAP music, it would have happened then. While I don't know RAP music like a fan would (or like I know my own favorite music), it is not the case that I have not been exposed to it! Some of it was funny, like "Funky Cold Medina" (1989), even if totally bawdy and ridiculous. I live in a neighborhood where RAP is still heard normally. For those who think I'm racist, ask yourself if you can genuinely dislike certain music without being racist? I also do not like the dominance of diss tracks,<sup>5</sup> which goes in hand with the rest of the culture.
- **Affliction of Aspects:** It is important to distinguish emotions from Aspects, I do not believe they are the same. An Aspect is a single word describing a quality of something that becomes apparent when exposed by circumstances that was not obviously apparent before. Many abstract nouns and some verb forms that might be used for Aspects in GGDM do not describe emotions (though they may be in some sense related, e.g., 'pride' – do you have it, do you feel it?). Thus, Aspects are an *overlapping subset* of abstract nouns and verb forms.
  - ✓ "The concept of 'Emotion' itself is an invention of the seventeenth century. Before that, scholars wrote about passions, sentiments, and other concepts that had somewhat

different meanings.” – Lisa Feldman Barrett, How Emotions Are Made: The Secret Life of the Brain (2017).

- ✓ “The word ‘smile’ doesn’t even exist in Latin or Ancient Greek. Smiling was an invention of the Middle Ages, and broad, toothy-mouthed smiles (with crinkling at the eyes, named the Duchenne smile by [Paul] Ekman) became popular only in the eighteenth century as dentistry became more accessible and affordable.” *Id.*

Problematic also is that emotions are generally regarded as phenomena of the individual human moment (Merriam-Webster, *emotion*, at c: the affective aspect of consciousness: feeling), and it is difficult to expand to describe larger and larger groups – for example, a crowd can be said to be angry figuratively but can a civilization?<sup>6</sup> – and maintained over extended periods of time – minutes, hours vs. years, perhaps centuries. To the extent that something like that can be comprehensible, is the extent to which Aspects *may* describe emotions.

- ✓ It is commonly said in sports that ‘you cannot play without emotion’; e.g., either Joe Buck or Troy Aikman repeated this common refrain on Thursday Night Football on November 8, 2018. To the extent that Aspects in GGDM represent emotion, they can be said to represent the emotion with which civilization ‘plays.’

If, however, Aspects are more related to ‘feeling’ – another definitional quagmire related directly to emotion, see Merriam-Webster online dictionary at *feeling* – then Aspects may relate more to zeitgeist within the time frames of GGDM. Merriam-Webster online dictionary defines *zeitgeist* as: the general intellectual, moral, and cultural climate of an era. The ‘feeling’ of the time must be part of zeitgeist, or, putting it in the reverse, to get the zeitgeist of a historical time, one must share or sense some of the feeling or feel.

- ✓ See Thinking vs. Feeling, Work of the Mind, 3 The Big Bang, p. 9, *supra*.
  - ✓ See also discussion of Godhead vs. Pinhead in literature, 1 The Sidereal Stage, p. 110, *supra*, and discussion of the modern concepts of emotion and evil in Modernity Machines, 1 Technology p. 696, *infra*.
- Hazy Overlapping Middle: There is a gray area where Constructural Elements and Aspects overlap. Picture a Venn diagram (i.e. overlapping circle graph) where two circles overlap and the overlap area is not shaded. Recall the following quote from Symbolic Constructural Elements, 1 Constructural Elements, p. 176, *supra*:
- ✓ [Interview] “To the French public, this was a great victory. [Fort] Douaumont was a great symbol. It was of no military significance whatsoever, but it was a symbol. It had to be recaptured. And it was seen in France as being a great victory. In Germany, it was seen as a terrible defeat. The reality is, it didn’t matter tactically. It was all about perception.” – Major Gordon Corrigan (British Army, Gurkha Rifles), Under Siege television series (2008), Episode 4.

Fort Douaumont, as part of a line of fortifications along the French-German frontier, was a military symbol of French nationalism and sovereignty, especially given the humiliation of 1870. In this sense, it was a Symbolic Constructural Element. However, Fort Douaumont became a stronger symbol, or larger symbol in the French Public Space, by becoming also an Aspect of the times in 1917, during the Siege of Verdun to which was strongly attached the emotions (hope, will) of the French and German military leadership and civilian populations.

*“A discovery is a new perception of an aspect of reality that already exists: the principle of the lever, a new continent, the hallucinogenic effects of mescaline, or the moons of Saturn. A discovery, if shared within a society becomes an addition to the society’s culture and store of knowledge.”*

– Ian Robertson, Society: A Brief Introduction (1988)

**Aspects of Sociology:** As is common in Western sociology, which was created in the reductionist and positivist image of the physical scientific view of the 19<sup>th</sup> Century, apparently “aspects” of a culture (similar to emotions, thoughts, and feelings) are not regarded as co-equal in any way with objective physical reality and are not intrinsically knowledge (e.g., Ian Robertson, *ut supra*).

- ✓ Consider: “The social sciences deal with the *fourth order of natural phenomenon, namely the super-organic or social*.... Culture itself is a phenomenon which has no existence for any of the sciences devoted to the strictly physical, organic, or mental orders of fact; nor can comprehension of it be reached by combining the viewpoints of physical, biological and psychological sciences, which deal with the first three orders of phenomenon. The super-organic constitutes a distinct, but of course, not isolated or detached, order of facts in the phenomenal, objective world, and it has to be studied by analyzing it on its own ground and in its own terms, *and not by extending over it the notions and terms arrived at in the sciences which study the lower, if not simpler, orders of phenomena.*” – Clarence Marsh Case,<sup>7</sup> Outlines of Introductory Sociology (1924), pp. xvii-xviii (emphasis added).<sup>8,9</sup>
- ✓ “The four orders are *the inorganic, the vital organic, the mental organic and the super-organic, or social*. In every one of these fields of investigation the student may proceed either by the historical method, which seeks to depict concrete reality in all its concreteness, or by the analytic, processual method, which tries to give an account in terms of abstract generalizations, mechanisms, processes, laws and principles.” – *Id.*<sup>10</sup>[Full Quote]
- ✓ “The earlier sociologist were accustomed to make comprehensive, even extravagant claims, for the new study, but they did not succeed in establishing its exact position in a logical classification of the sciences.... In the effort, they were encouraged, as is well-known, by the narrowness and barrenness of the older social sciences, notably history and political economy.” *Id.* at p. xviii.

I believe this is a fundamental epistemological flaw of Western sociology<sup>11</sup> and have chosen to base this simulation on the phenomenological supposition (i.e. appearance) that, from the view of civilization, culture is just as ‘real’ as the physical laws of the universe, but of a different character (e.g., Sokal Hoax, see Alan Sokal feature quote, bottom of 3 Entropy, p. 249, *supra*). This is a necessary step to understanding civilizations as a Gestalt Structure and participants are asked to accept as fact at least within GGDM that *sociocultural facts are as real as physical facts* and not some version of ‘virtual reality’ that we ‘know’ is not real (but actually is, in a way, because it’s part of our worldview now).<sup>12</sup>

- ✓ “In stating this principle, [Ludwig von Mises] was voicing opposition to the introduction into economics of concepts such as ‘market equilibrium,’ *which were largely inspired by the physical sciences*, and were perhaps *motivated by a desire on the part of*

*some economists to establish their field as a science on par with physics.*” – Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” alertandoriented.com (blog), April 13, 2016 (emphasis added). Mises and Case agree.

- See full feature quote, 1 Beginnings, bottom p. 25, *supra*.

- Methodological Dualism: It is clear from Mr. Case’s arguments, and Mises ‘methodological dualism,’ that sociology (and “the sciences of human affairs”, *Id.*, e.g., economics) struggled in the early 20<sup>th</sup> century (e.g., 1924) to separate itself conceptually from the bounds and expectations of physics and biology.<sup>13</sup> Psychology as a medical science, was then less than 50 years old (Sigmund Freud was still alive in 1924), but at least it was based on medicine, a long-respected discipline. I had this impression as well from the *high school lectures* of my youth that distinguished ‘hard science’ and ‘soft science’ and implied strongly that the ‘soft sciences’ (e.g., sociology, psychology, criminology, etc.) were somehow less real or not really sciences. Though the Marsh book would seem to be ‘outdated’ (but Plato is not?) to some, the epistemological structuring of the studies of natural phenomenon in ‘four orders’ is interesting and agreeable (but not axiomatic, irrefutable, *ut infra*); the idea of the super-organic seems now to suggest an emergence (discussed generally in 3 Fallen to Earth, *infra*).
  - ✓ “Ludwig von Mises in particular argued against empiricist approaches to the social sciences in general, because human events are unique and ‘unrepeatable,’ whereas scientific experiments are necessarily reducible.” – from Wikipedia article, “Praxeology,” citing to Human Action (1949).

That this place struggle continues to this day is evinced perhaps by the comments of John Kaag and David O’Hara, and Christine Hensler in EN 11 (*ut supra*) about the effects of the educational reemphasis on STEM and decline in humanities, or by Professor Elwell about *micro- vs. macrosociology*:

- ✓ “Mainstream sociology is straying from its roots. This can be clearly seen in introductory sociology and social problems texts in which a focus on microsociology and social psychology has become ever more prominent. It can also be seen in the more recent graduates of sociology programs, specialists in one or two of the more than thirty subfields of sociology. While all tend to be well versed in questionnaire design and data manipulation as well as being excellent specialists in such diverse fields as gerontology or deviance, most have little background in the broader traditions of the discipline, little appreciation or experience with holistic analyses. Today, too many sociologists practice the discipline as one of social data collection and manipulation, *a reification of method over substance*. Others are specializing in a small part of the sociocultural system – say family, or deviance, or criminality – and losing the inclination or ability to communicate with their colleagues and their students either in other subfields or about the larger social whole. Some still do continue the practice of macrosociology, but it too is often the preserve of specialists with their own jargon, interests, and readership.” – Frank W. Elwell, Macrosociology: Four Modern Theorists (2006), p. xi (emphasis added).

Mr. Case, in the same pages cited above, goes on to distinguish the “*social* sociologist” (emphasis in original) as one who studies social and cultural phenomenon as a thing onto itself, *equal to all others in fact*. Mr. Case was therefore aware of the disparity in factual prestige.

- ✓ In the mental health fields, psychiatry and psychology are distinguished; psychiatrists are medical doctors (like Sigmund Freud) who can prescribe medications for mental conditions. Psychologists are counselors, roughly speaking, who focus on helping patients by changing the patient's cognition, worldview, and thus are seemingly more related to rhetoric and philosophies and the humanities in general. While psychiatrists are medical doctors and are instantly respected as such in our civilization, psychologists and their field, are notably less so and struggle for place, beyond pop culture books and motivational speakers. I remember in relation to the Abnormal Psychology class I had in college, a comment critical of psychology suggesting *that any good effect obtained by clinical psychologist is due to their level of personal empathy and conversational skill* (as if this is a problem?... ) and not to any theories of the mind or understanding of cognition and worldviews developed in psychological theories.
- Not Quite A Priori: Clarence Marsh Case's four orders of natural phenomenon is not quite axiomatic; that is, they can be refuted, one can say, "No, I disagree" without creating an insoluble intellectual contradiction. Thus they are probably not or are borderline as synthetic *a priori* propositions. One can propose alternative arrangements, but one cannot argue that there are no divisions, no difference in natural phenomenon between non-living and living things (Case's first and second orders), humanity and the rest of life on earth, etc. No biologist argues that there is no difference between a human and a bacteria or between a cow and the grass it eats, on the basis that they are all 'life' indivisible or based on the same molecules. That things are different from each other and can be divided – must be divided – into classes, groups, and so forth and ordered has been *a priori* to human knowledge – not just Western knowledge – in the same way as day and night; Aristotle said, 'It is the mark of an educated man to look for precision in each class of things just so far as the nature of the subject admits.' Plato and Aristotle were the original tendentious pedants of the West.

Within that range is a matter of how you slice the pie, but one cannot deny – without arriving at nothingness<sup>14</sup> – that there is a pie to be sliced; even the most radical anarchist or esotericist does not go about arguing this. Mr. Case's four orders are very intuitive and useful in that sense, and at the bottom of it all, they accord with the fundamental observations of humanity since prehistoric times: That there are living things, non-living things, and things that were living but are not now, that there is what is inside your head and the rest of the world (in literature, godhead vs. pinhead, Case's *third order*, see 1 The Sidereal Stage, p. 110, *supra*), and that there are individuals and then there is society, civilization, that both predates and outlasts individuals, and that carries from generation to generation (i.e. culture by definition) and is somehow much more organically complex than mere life forms (Case's *fourth order*).

- ✓ Although Mr. Case may have followed Comte (whom he mentions) in describing the orders (with modifications), identification of the third order (i.e. the "mental organic") may have been inspired by or originated from Immanuel Kant, to wit:
  - "Kant's argument turns on the view that, while all empirical phenomena must result from determining causes, human thought introduces something seemingly not found elsewhere in nature – the ability to conceive of the world in terms of how it *ought* to be, or how it might otherwise be. For Kant, subjective reasoning is necessarily distinct from how the world is empirically. Because of its capacity to distinguish *is* from *ought*, reasoning can 'spontaneously' originate new

events without being itself determined by what already exists.” – from Wikipedia article, “Compatibilism,” captured October 27, 2019 (emphasis in original), citing to Immanuel Kant, The Critique of Pure Reason (1781), trans. by Max Mueller (1949), p. 448.

The distinction between ‘subjective reasoning’ and the empirical world is the difference between the first/second orders of natural phenomenon and the third order.

**State of the Union:** At any time, the Concierge may (and should) view any position’s Public Spaces (like looking inside your civilization’s head) and judge the current state of the position’s civilization based on Aspects, Proficiencies, Government Titles and any other criteria for purposes of Interventions or other Interpretations.

---

*“To put it simply: men are neither supposed nor allowed to be dependent. They are expected to take care of others and themselves. And when they cannot or will not do it, then the assumption at the heart of the culture is that they are somehow less than men and therefore unworthy of help. An irony asserts itself: by being in need of help, men forfeit the right to it.”*

– Peter Marin, “Abandoning Men: Jill gets welfare – Jack becomes homeless,” APF Reporter, Vol. 14 #3, 1991 (Alicia Patterson Foundation) <sup>15</sup>

---

*“Studies from other policy areas find that how the beneficiaries of policy are depicted in mass media and political campaigns can strongly influence support for policies that aid others. For example, Martin Gilens and Paul Kellstedt found that the disproportionate political and media depiction of welfare beneficiaries as minorities diminished white American support for welfare.”*

– Alexandria Guisinger, “American’s views of trade aren’t just about economics. They’re also about race.” Washington Post, August 16, 2017 <sup>16</sup>

---

## Endnotes.

<sup>1</sup> Commentary: The ‘lunette weight’ (or properly, ‘lunette ring weight’) of the M198 Howitzer I was assigned to in the late 1980s was 600 lbs. That is how much weight had to be lifted straight up in order to hitch the gun to the ball tow hitch on the M925 truck. There were no hydraulics, it was done manually. There were six handles at the end of the trails, three on each side, for six men to grab hold and lift together; the lunette had to be lifted at least between waist and chest high to hitch it to the truck (depending on angles, terrain, etc.); the men have to lift and hold while the driver slowly backs the truck hitch under the lunette ring. Sometimes we did it with just four men, one time we did it with four men which included the driver who had to let go and run up to the cab of the truck to back it up.

✓ It was not unusual to do this process half dozen to a dozen times a day and we usually had only 7 or 8 men on the gun, meaning the same men were lifting the lunette weight over and over.

<sup>2</sup> Commentary: Lt. Dillard was a big man, broad at the shoulders and narrow at the hips (to barrow from Jimmy Dean’s “Big Bad John” (1961)), he worked out three times a day and had been lifting weights since he was 12 years old. NFL linebacker sized, he stood at least 6’3 and bought his shirts in big & tall clothing stores. At a unit beach party, it took about 10 Marine artillerymen to chase him down, tackle him, and carry him down the beach and dump him in the surf against his will (he lost a bet with the commanding officer).

<sup>3</sup> Commentary: Alternatively, see the parable of “The Blind Men and the Elephant.” Originating on the Indian sub-continent, the parable has been adapted and used across most of the world’s religions to express pan-religious truth.

<sup>4</sup> Commentary: GGDM is in fact, an impressive collection of quotes from famous and self-evidently important people, interspersed with my second rate freshman blathering on about subjects that 99.9% of humanity never heard of and does not care about. GGDM is also a cultural artifact of my times.

<sup>5</sup> Citation: “A diss track or diss song (diss – abbr. from disrespect) is a song whose primary purpose is to verbally attack someone else, usually another artist. Diss tracks are often the result of an existing, escalating feud between the two people; for example, the artists involved may be former members of a group, or artists on rival labels. The diss track as a medium of its own was popularized in the hip hop genre, fueled by the hip hop rivalry phenomenon (especially the East Coast–West Coast hip hop rivalry of the mid-1990s). More recently, entertainers from outside the traditional music landscape have adopted the genre.” – from Wikipedia article, “Diss (music),” May 21, 2020.

<sup>6</sup> Commentary & Citation: It is implied in Babylon 5 that the Centauri civilization was angry after the alliance bombed Centauri Prime and especially the capital city in “The Fall of Centauri Prime” episode (1998). Londo’s actions are interpreted as representing the anger (and hurt pride) of the Centauri civilization. Similar anger could be an aspect of the United States after the 9/11 attacks or after Pearl Harbor in 1941.

<sup>7</sup> Citation: Clarence Marsh Case was born in 1874 and died in 1946, age 72 (information and image at Find a Grave, <https://www.findagrave.com/memorial/113359178/clarence-marsh-case>). There is currently no Wikipedia page for him, but he wrote many books.

- ✓ Three books by Clarence Marsh Case, The Social Psychology of Passive Resistance (1915), Non-violent Coercion: a study in methods of social pressure (1923) and Current social problems, an outline for the study of present day issues in the secondary school (1936) are available for free online at the Hathi Trust Digital Library (Los Angeles County, CA) which books I found linked through an online books page at the University of Pennsylvania Library (<http://onlinebooks.library.upenn.edu/web-bin/book/lookupname?key=Case%2C%20Clarence%20Marsh%2C%201874%2D>) through Google.
- ✓ User Galuchat on the Philosophy Forum also located a Doctoral Dissertation (232 pages) by Esther H. Penchef, June 1947, at [digitallibrary.usc.edu](http://digitallibrary.usc.edu), which is free to download. According to Google Searches, Dr. Penchef was Emerita Professor of Sociology, teaching and working in academia from 1948-1973 at USC and Los Angeles City College, graduated law school, became an attorney in 1957 and practiced law in California. She is also listed as the editor of sociology books on poverty into the early 1970s.

<sup>8</sup> Commentary: I ‘rescued’ this book and many others, actually several boxes of books, that had been tossed out in the garbage, in the alley in the rain, at the Lycoming County Museum, where I worked as a volunteer around 1990-1991. The head of the museum was the mother of a young woman who was in my classes at Lycoming College and who sometimes worked part-time at the museum, her father was a professor in the English Department at Lycoming College. Though slightly rain damaged, I have had this book on my shelf for nearly 30 years and have read some.

<sup>9</sup> Commentary: I was unable to locate the source of Clarence Marsh Case’s ‘orders of natural phenomena’; e.g., a Google search for the term yields sites about classifying weather phenomena. It might be related tangentially to praxeology or developed from it, but I have no direct reference and the concept must necessarily – as a condition precedent – predate even praxeology. I don’t recall encountering the term before and I strongly doubt that it is taught in schools now. Which is sad... Regardless of the origin of the epistemology (or classifications if you like), I immediately grasped it as axiomatic, intuitive, and useful, in that it expresses concisely what we have all naturally known since developing childhood awareness brought us to the realization of life, death, and the inanimate (see further, Keijijōgaku (the Japanese word for metaphysics), *The Next Season, infra*).

- ✓ As mentioned in 3 The Big Bang, p. 19, *supra*, this is a case (no pun intended) where, like much of what is said in GGDM, “you know this stuff already, even if you don’t yet know that you know it.”
- ✓ See further discussion of the Orders of Natural Phenomena in 1 Order and 3 Fallen to Earth, *infra*.
- ✓ Something of the idea in other forms may have been circulating in the first decades of the early 20<sup>th</sup> Century, compare Mr. Case’s “The four orders are the inorganic, the vital organic, the mental organic and the super-organic, or social,” to the following from an article by G.T.W. Patrick (George Thomas White Patrick) in 1922, two years before Mr. Case’s book: “When nature achieves the molecule, the atom ceases to be the thing of primary importance, worth, or even of reality. When nature achieves the cell, the molecule is eclipsed. When the organism is achieved, the cell is eclipsed. When mind is achieved, the body is eclipsed. Mind is a new reality, gained, achieved, won. It is, in Aristotelian phrase, the form of the body.” (“The Emergent Theory of the Mind,” *The Journal of Philosophy*, Vol. 19, No. 26 (Dec. 21, 1922), pp. 701-708, see full quote in 1 Dreamtime, EN 3, pp. 139-140, *supra*).

- ✓ “I’ve come to realize that there are three categories of truth – personal truth, political truths, and the objective truths that shape our understanding of the universe. The interesting thing about an objective truth is that it’s true no matter what. Imagine that.” – Neil deGrasse Tyson, “Class Trailer” to Master Class program.
  - Mr. Tyson seems to implicitly and intuitively recognize the co-equal existence of ‘truths’ which correspond roughly to Mr. Case’s third order, fourth order, and first/second orders.

I posed the origin question on the Philosophy Forum (Philosophy of Science) in February 2019 (<https://thephilosophyforum.com/discussion/5131/orders-of-natural-phenomenon>):

- ✓ Users Galuchat and Terrapin Station responded that Mr. Case probably invented the idea of the four orders of natural phenomenon, but Galuchat added helpfully, “But in sociological terms, Auguste Comte’s five great groups of phenomena (astronomy, physics, chemistry, biology, and sociology) was a likely influence on subsequent sociologists.” Indeed, Mr. Case does mention Comte in a footnote on the previous page in relation to the discussion that math is not supreme, thus establishing that Mr. Case was familiar with Comte even if he did not mention him in relation to the four orders of natural phenomenon.
- ✓ Galuchat then proposed an alternate modernized classification of natural orders and asked how I would modify them and if they fitted within macrosociology. I responded that I liked Mr. Case’s orders better because they are intuitive and easy for the audience to immediately grasp. User Harry Hindu agreed.
- ✓ I responded: “1) By 1924, intellectuals and scientists understood that astronomy, chemistry and physics were all part of the same continuum. Stars have chemistry, astronomy makes and bows to physics, and there was a whole lot going on there, but it was all in the same ‘spectrum.’ Thus, Comte’s first three categories collapsed into the first order of natural phenomenon in Case’s structure. 2) Mr. Case makes clear in the introduction that the mental sciences were just recently becoming members of the ‘elite circle’ (formerly occupied exclusively by physics and biology) and modern psychology was not yet ready during the time of Comte – Comte died the year after Freud was born. So in Case’s structure, the mental sciences in 1924 were added into the third slot (i.e. the third order of natural phenomenon).”
- ✓ User Galuchat later asked: “Are there natural kinds, or are classifications merely cultural and/or linguistic conventions? And if there are natural kinds, does that imply artificial kinds?”
- ✓ Responding to only his first question, I wrote: “There are natural phenomenon and interpretations. One cannot claim that natural phenomenon are themselves cultural/linguistic conventions, e.g., the Sokal Hoax. But we have interpreted them in different ways – as history shows – that are suitable for the milieu of the times, compare Aristotle to modern physics. Part of the issue is that interpretations have not been accepted as equally factual, instead they have been dismissed as non-objective, illusion, human fallacy. The fallacy has been to try to treat them as facts within the first order, whereas they are actually facts within the fourth order. The same fallacy occurs in reverse when you try to deny that first order facts are facts within the fourth order – i.e. treating physical facts as cultural/linguistic constructs – again, the Sokal Hoax. There is not exactly a symmetry in this arrangement, facts of lower orders cannot be denied by higher orders, but facts of higher orders are not facts in lower orders. It’s sort of like the way time flows in only one direction (I hadn’t actually thought of it this way before I typed this). Time is then probably – is definitely – related to – is probably even the ‘cause of’ – emergences in all the orders. I’ll give your second question some thought.”
- ✓ *Thus a new line of thought, a new connection arose from the conversation:* Facts within the four orders operate like time, they are only true or valid in one direction, like the flow of time in our universe and a connection between time and emergences!

<sup>10</sup> Citation: “The more or less exclusive claims of the other sciences rest upon their use of mathematical, quantitative reasoning, and are inadequate in two ways. In the first place, their mathematical accuracy is only a question of degree, as compared with one another; and secondly, mathematical reasoning is not the only method of exact thinking. No one who has notice at all the procedure of careful students, even in the fields of historical, ethical, or aesthetic values farthest removed from quantitative considerations, will longer cherish the obsolete notion that painstaking observation, systematic classification, and rigid analysis are the prerogatives of workers in any field of human thinking. The same attitudes of mind and method of procedure are now to be met in every branch of investigation, and it is the assumption in this book that it is a mere confusion of terms to give to the word *science*, which, historically and logically speaking, designates just this systematic investigation of reality, any narrow or private interpretation.

Such a private, or at least special, interpretation is met in the reasonings of those who propose to use the word *science* to indicate only those branches of study which seek primarily to arrive at abstract generalizations, laws, and principles.

...But while the authors ... are plainly distinguishing between history and *natural* science, others are less discriminating, so that one can trace in current discussion a tendency to blur this clear and valid distinction between history and *natural* science, by substituting the term *science* in general for *natural* science, and thus making it appear that the historical studies (history proper, archaeology, anthropology, ethnology, etc.) are in sharp contrast as to method with *science*, whereas they are themselves worthy and fruitful branches of science itself.

If one steers clear of this confusion and recognizes that all systematically organized research and knowledge of every realm of phenomena is equally a form of *science*, it is then proper to recognize that there are several different orders of natural phenomena, and two distinct, yet inseparable methods of thinking about them which traverse all these orders. ... The four orders are the inorganic, the vital organic, the mental organic and the super-organic, or social. In every one of these fields of investigation the student may proceed either by the historical method, which seeks to *depict* concrete reality in all its concreteness, or by the analytic, processual method, which tries to give an account in terms of abstract generalizations, mechanisms, processes, laws and principles. ... It is the purpose simply to point out in this place that we have here, not history versus science, but the contrast between the historical and analytical aspects of science itself.” – Clarence Marsh Case, Outlines of Introductory Sociology (1924), pp. xvi-xvii (emphasis in original).

- ✓ Cf. “According to John Bellamy Foster (b. 1953), the great sociological tradition, at least as it has been received from our forebears, *seems as if it were developed almost completely devoid of any concern for or foundation in nature*. Marx, Durkheim, and Weber seemingly develop their theories ‘as if nature didn’t matter’ (Foster 2000, 18).” – Frank Elwell, *Macro Social Theory* (2009), Kindle Edition, p. 80 (emphasis added).
- ✓ In about mid-2019, I discovered praxeology and the Austrian School which I, oddly, had never encountered before. It required only a short time before I realized that the general tone and tenants of Clarence Marsh Case’s arguments in the 21-page intro to Outlines of Introductory Sociology (1924), were similar to and possibly inspired by the methodological dualism of his contemporary Ludwig von Mises; Marsh was born in 1874 while Mises was born in 1881 and Mises had already published four books by the time Marsh’s college sociology textbook was published. I have not the academic or research resources to determine if Mr. Case was familiar with or had read Mr. Mises works or had corresponded with him or his colleagues, or heard him speak, or met him; but I would not be surprised if there was an informal network of friends and acquaintances connecting them (i.e. the six degrees of separation). But the derision and criticism heaped on the Austrian School (and Mises seemed to have annoyed many people) at the time for being non-empirical, non-positivist, non-Keynesian, an ‘unscientific economist’ explains why Clarence Marsh Case’s books, work, and opinions were quickly tossed to the side and forgotten in the mid-20<sup>th</sup> Century. They don’t teach this in public schools, they don’t teach this ‘unscientific’ idea in undergrad college either; my high school was very STEM and conservative to the point of being reactionary. Yet the idea has not gone away, praxeology still exists within the *second strata* of epistemology (see discussion, 1 Constructural Elements, EN 21, p. 188, *supra*) in several fields, including medicine, economics and sociology.

<sup>11</sup> Citation & Commentary: “We are on the verge of becoming the best trained, and least educated, society since the Romans – and reducing the humanities to a type of soft science will only hasten this trend. As the sciences rightly grow, a free society must ensure that criticism of the sciences grows apace. Effective criticism depends on distance, in this case on an unshakeable difference, between the humanities and the STEM fields. That is not to say that STEM researchers can’t or shouldn’t be experts in the humanities, but rather that the work that the humanities do should not be judged by the metrics of hard science. As Aristotle, Plato’s most famous student, suggests at the beginning of the *Nicomachean Ethics*, ‘precision is not to be sought for alike in all discussions.’

Similarly, we should not expect the humanities to be driven or dominated by the objectives of science. Plato teaches us that part of the liberal arts’ enduring mission is precisely to critique these objectives. It ought to be obvious that the study of law, justice, and the arts is one of the best preparations for governing. This goes for governing our polis and equally for governing our technologies and ourselves. If you’re interested in learning about justice, you don’t go to the chemistry laboratory. You go to philosophy class and travel to Plato’s Republic. But if you go to the Republic in search of concrete answers about justice (as many of our students are encouraged to search for the ‘right’ answers in their labs), you will be disappointed. Plato is not famous for answering questions but for staking his life on the chance to ask them. He seems more interested in inviting his readers to ask their own questions and to finish

the dialogue themselves, as if to say that it's more important to learn to think than to memorize others' dogmatic principles. The question about justice that motivates the Republic is posed in a lengthy series of dialogues, and it does not give rise to a fixed doctrine. Plato seems to be suggesting that part of being just is taking the time to think seriously about justice." – John Kaag and David O'Hara, "Big Brains, Small Minds," *The Chronicle of Higher Education*, May 13, 2016.

- ✓ Likely, the title of this article is a play on the title of a January 11, 2008 article by Russell Jacoby, also in *The Chronicle of Higher Education*, titled, "Big Brains, Small Impact," about the decline of the public intellectual in the 1980s.
- ✓ Sociology and the social sciences sit – in the current epistemology of the West – in the twilight between Humanities and Science, to wit: "Although political science, government, geography, anthropology, and sociology may, from certain perspectives, be considered *humanistic* social sciences, for the purposes of the Humanities Indicators, they are categorized as *non-humanities* disciplines. Interdisciplinary studies that link a predominantly social science perspective with humanities disciplines are also considered *non-humanities* studies." – from "The Scope of the 'Humanities' for Purposes of the Humanities Indicators," (<https://www.humanitiesindicators.org/content/document.aspx?i=180>), American Academy of Arts and Sciences (emphasis in original).
- ✓ "Around the turn of the millennium, American society realized a looming crisis: the lack of female representation in STEM fields. But today we are witnessing a crisis of male leadership in a variety of workplaces. From the president to CEOs of major companies to actors and power players in Hollywood, the past several months have exposed the toxic work environments they preside over or worsen in scandal after scandal. Though different in nature, this crisis is of equal importance as the STEM shortage. Yet, to date, no prominent solutions or interventions have been seriously proposed. In contrast, a quick Google search brings up dozens of programs for girls in STEM, but not one national program appears for boys in the arts and humanities...."

How dire is the situation? The latest indicators of the demographics and earnings of public school humanities teachers – most of whom are women and many of whom aren't paid well – underscore that we need more men in the arts and humanities. Although philosophy and religious studies all grant more degrees to men than women, all other arts and humanities disciplines encounter a reverse situation. To make matters worse, The Humanities Indicators report that, 'As of 2015, women earned 61 percent of all master's and professional-practice degrees in the humanities and 54 percent of the doctoral degrees in the field.' And the latest report on public school teachers found that '76 percent of humanities teachers were women, the largest share among subject specialists.' When male K-12 role models barely exist in these disciplines, what message does that send to our young boys and men?" – Christine Hensler, "We Need More Men in the Humanities," *Inside Higher Ed*, October 2, 2018.

<sup>12</sup> Commentary & Citation: According to Merriam-Webster online dictionary, *virtual reality* first appears in English in 1987; I know that I never heard the term growing up.

- ✓ "Finally, we arrive at the six discourse, on the postmetropolis as Simcity, a place where simulations of a presumably real world increasingly capture and activate our urban imaginary and infiltrate everyday urban life. A key concept here is that of the simulacrum, roughly defined as an exact copy of something that may never have existed. ... At the very least, this Simcity discourse needs to be addressed seriously in contemporary urban studies, not just at the micro-scale of everyday life but also in macro-scale analyses of urbanization and the social production of urban space. My own work has increasingly focused on this precession of simulacra and the growing hyperreality of urban life in the postmetropolis, in part because I suspect that this restructuring of the urban imaginary is playing a key role in the emerging mode of social regulation associated with what the French regulation theorist define as the new regimes of capitalist accumulation...." – Edward Soja, "Six Discourses on the Postmetropolis," (1997), the entire paper, written in English and French, is available for free online at [http://www.opa-a2a.org/dissensus/wp-content/uploads/2008/05/soja\\_edward\\_w\\_six\\_discourses\\_on\\_the\\_postmetropolis.pdf](http://www.opa-a2a.org/dissensus/wp-content/uploads/2008/05/soja_edward_w_six_discourses_on_the_postmetropolis.pdf).

<sup>13</sup> Citation: "In more recent decades, students of *biological* phenomenon, apparently well disremembered of their own former exclusion from the circle of the elect, have so far made themselves at home in it that one often hears the word 'science' used, even in faculty discussions and literature, to designate exclusively the physical and biological departments. Recently, however, investigation of mental phenomenon has become so exact and systematic that *psychology* is sometimes recognized by the academic legitimists as falling within the scientific pale, thus leaving the *social* studies, notwithstanding one of them is known as political 'science,' to grope in the outer darkness, along

with *philosophy* in all its branches.” – Clarence Marsh Case, Outlines of Introductory Sociology (1924), pp. xv (emphasis in original).

- ✓ “The denial of purposefulness in man’s attitudes can be sustained only if one assumes that the choosing both of ends and of means is merely apparent and that human behavior is ultimately determined by physiological events which can be fully described in the terminology of physics and chemistry. Even the most fanatical champions of the ‘Unified Science’ sect shrink from unambiguously espousing this blunt formulation of their fundamental thesis. There are good reasons for this reticence. So long as no definite relation is discovered between ideas and physical or chemical events of which they would occur as the regular sequel, the positivist thesis remains an epistemological postulate derived not from scientifically established experience but from a metaphysical world view.... But it is evident that such a metaphysical proposition can in no way invalidate the results of the discursive reasoning of the sciences of human action. The positivists for emotional reasons do not like the conclusions that acting man must necessarily draw from the teachings of economics. As they are not in a position to find any flaw either in the reasoning of economics or in the inferences derived from it, they resort to metaphysical schemes in order to discredit the epistemological foundations and the methodological approach of economics.” – Ludwig von Mises, Theory and History: An Interpretation of Social and Economic Evolution (1957).
- ✓ In school in the early 1980s, more than half a century later, our courses were still called “Social Studies.” See previous discussion of ‘hard sciences’ vs. ‘soft sciences’ (*ut supra*, p. 372) and discussion of Unsolved Problems, 3 Constructural Elements, p. 209, *supra*.

<sup>14</sup> Commentary & Citation: This is what is so frightening about the scene in Conan the Barbarian (1982) where an adept of the nihilistic religion of Thulsa Doom, standing silently in a high wall alcove staring into nothingness, blithely steps to her death when summoned to come to Thulsa. Within the film, it was a 10-second scene to demonstrate Thulsa Doom’s power over his adherents and is then quickly forgotten in the sword and sorcery adventure.

<sup>15</sup> Citation: “Men are allowed to have passion and commitment for their work ... a woman is allowed that feeling for a man, but not her work.” – Barbara Streisand.

<sup>16</sup> Citation: “What do a Christian overnight camp, abstinence-only sex education, and pro-marriage advertisements all have in common? They’ve all been funded with money that used to provide cash assistance for low-income families.

In the U.S., the federal Temporary Assistance for Needy Families program – often known simply as ‘welfare’ – is administered by the 50 states, which have considerable leeway about how to spend the money. The choices states make are unmistakably correlated with race. The higher the proportion of African Americans in a state, the more likely officials are to try to change the way poor families run their lives, rather than simply help them with basic expenses. ...

In a new study published in the journal *Socio-Economic Review*, I find that a state with a higher share of black families is less likely to allocate TANF funds toward the provision of cash assistance, but more likely to allocate TANF funds toward efforts to ‘encourage the formation of two-parent families’ and ‘reduce the incidence of out-of-wedlock pregnancies.’ The stated assumption behind these initiatives is that strengthening the family unit has greater long-term benefits than simply giving money to needy people.

In practice, though, the diversion of TANF funds away from cash support and toward programs meant to influence family formation has likely exacerbated racial differences in poverty. A clear pattern emerges: a black family in poverty is more likely than a white family to be offered a ‘Healthy Marriage Initiative’ in place of direct cash support.

These racial inequities in states’ use of TANF funds turn out to have important consequences for racial differences in child poverty. I find, for example, that closing the racial differences in states’ use of TANF funds would narrow the black-white child poverty gap by up to 15 percent. ...

We often perceive policymakers as defenders of economic opportunity, and social policy as a set of tools to alleviate inequalities. But as [Jamila] Michener’s [Cornell University] work shows, and as the data on TANF suggest, state governments often function as a source of inequality rather than its cure. Rather than narrowing gaps between the advantaged and disadvantaged, social policy can, when deployed unevenly across the country, act to deepen them instead.” – Zach Parolin (<http://zachparolin.com/>), “Welfare money is paying for a lot of things besides welfare,” *The Atlantic*, June 13, 2019.

*See Appendix AGE – Aging Out*

*“Take full account of what excellencies which you possess, and in gratitude remember how you would hanker after them, if you had them not.”*

– Marcus Aurelius, Emperor of Rome, Stoic (b. 121 A.D., d. 180 A.D.)

**Something Sublime:** ...this way comes... To have true passion for something is to see something sublime. A child, or young person, who has a passion for music, literature, art, history, acting, mechanics, architecture, math, science, filmmaking, writing, programming, sports (if you have talent, and that’s a whole other discussion), sees in the whole of it *something sublime*, even if they cannot themselves reach or touch it in any practical or enduring sense. The sublime is part of the human answer to the Existential Void and this is why it never gets old or goes away, we just invent different words to describe the same phenomenon – perfectionist, virtuoso, inventor, prophet, pioneer, savant, sage, visionary, genius, prodigy, master, polymath.

Conversely, imagine if you woke up one morning and suddenly found you were a house cat. I love my cats, but I would not willingly trade places with them. Being a cat would be like being an infant again, but worse, because you would never be anything but an infant. Thus, ‘Take full account of what excellencies you possess and ...remember how you would hanker after them if you had them not.’ *Id.* The Dunning-Kruger effect, however, suggests Aurelius is wrong...

➤ **Bubbling to the Top:** People who have a sense of the sublime about a subject or object experience Diminishing Returns Phenomenon differently – as to that particular subject or object – than the rest of us. This would be a very interesting area for cognitive study and I am sure it has been studied in regards to professionals, especially highly-paid innovators and athletes, and graduate students.

- ✓ “According to the Law of Diminishing Returns (also known as Diminishing Returns Phenomenon), the value or enjoyment we get from something starts to decrease after a certain point. Let’s say we go to an amusement park and ride our favorite roller coaster five times in one day. The first time is exhilarating. The second and third times are also exciting. But after the fourth or fifth ride, we start to feel sick and bored – we’ve had enough. The law of diminishing returns also applies to performance. Although it’s important to study for an exam or practice for a game, there is a limit to how much time and energy we can invest and still expect to see an improvement. If we practice too much we’ll start to feel burned out and may even start performing poorly.” – AlleyDog.com (psychology student website), “Law Of Diminishing Returns” (unattributed, undated), retrieved June 26, 2019.

This is why, for example, when a baseball player is ‘slumping’ (diminishing performance) they get a ‘day off’ from being a starter and sit in the dugout the entire game unless they are needed to pinch hit, pinch run, or to replace an injured player on the field; they play 162 games in 6 months, plus travelling to a new city every few days, plus charitable events, media appearances, working out in the weight room, and whatever else they do.

- ✓ Can sports be sublime if you don’t have talent for it? I suppose, but then you end up being a baseball historian or stats wonk, instead of playing professionally. But then which is really sublime to you, the sport (‘the game’), or the history, or the stats? It is difficult to separate talent from the sublime, and that is why television broadcast sports are such a part of modern civilization.

- ✓ I liked baseball as a kid and we played every day at recess and backyard ball at home, but I was (obviously) never *that fascinated* by it (not to mention lack of physical talent); if I played baseball three days every week, I'd be soon tired of it (I think I even got tired of it as a kid, somewhat), but I work on GGDM almost every day now or several times a week when I had a fulltime job. Like baseball players, my recovery time, response to Diminishing Returns Phenomenon is different in relation to GGDM; my mind and GGDM are inseparable, I think of things or think about it even when doing other tasks or watching Pirate's baseball.
  - See additional discussion, *The Flipped Side*, 1 Colleges, p. 468, *infra*.

*“That film’s feverish commitment to every detail of the universe it created was admirable. From the names and powers it bestowed on its machines and creatures to the thought it put into what urban life and popular culture would look like in a world besieged by kaiju attacks, there was no doubt that it meant something to the people who made it. It was the work of true believers with childlike enthusiasm for the absurd. Del Toro even believed in the themes of personal redemption and collective effort that were baked into the details of the jäger’s mechanics. He got high on his own supply, and not only was that forgivable, it was exactly what a filmmaker was supposed to do in that kind of circumstance.”*

– Matt Zoller Seitz, discussing the original Pacific Rim movie, in the review of Pacific Rim: Uprising, [rogerebert.com](http://rogerebert.com), March 23, 2018

**Perfect Proficiencies:** When the Culture Power is activated for the purpose of Perfecting Proficiencies, the position may automatically and immediately place two new Proficiencies of their choice on any unoccupied Monads in the Public Space that is adjacent to any other piece (cf. Cultural Aspect Pieces must be placed adjacent to *any Friendly or Naturalized Colony*).<sup>1</sup> The resource cost of Proficiencies is based on the total population of the position at the time the Power is activated, including Conquered, Converted and Naturalized **alien colonies**, population on colony ships, and colonies of all political status (see Colony Politics, *et seq.* 2 Order, p. 538, *infra*). Each new Proficiency costs 1 RP per 100 population factors. A position may indicate to the Concierge that only one new Proficiency is desired, but the cost of the Culture Power activation is the same, regardless of whether one or two Proficiencies are received.

- ✓ Activation of the Culture Power to Perfect Proficiencies is not location specific and cannot fail due to inactive Constructural Elements.

Note that due to relative activation costs, the placement of new Proficiencies will occur before activation of the Census or Taxation Power in the normal Power Activations processing sequence (see Clockwork Universe, 3 The Streams of Time, p. 90, *supra*). Lower cost activations are processed first. The cost of proficiencies is consummate with the size of the position; a position with 1000 total population would be a fairly large position in GGDM (perhaps 5 or 6 large industrialized colonies, and a dozen smaller colonies), for whom the cost of 10 RPs per Proficiency should still be nominal, considering their industrial output.

Like Aspects, if two Proficiencies per activation prove insufficient for game play, the Concierge could find in-game ways to increase the number of Proficiencies placed per Culture Power activation. For example, maybe one extra Proficiency might be allowed if all Government Titles are currently undisrupted and all Colleges are Endowed; or maybe one more if one additional Act is

added to the cost of the Culture Power Activation. But in both cases – Aspects and Proficiencies – *great care should be exercised* in altering the rules set forth here, try it with the rules first!

- **Proficient Pieces:** Proficiencies are similar to Aspects except that they have numbers on them, rather than letters, and the numbers, ranging from 1 to 20, reflect the Proficiencies listed below. Proficiencies never ‘age’ like Aspects and can remain in the Public Spaces indefinitely; they do not have light or dark sides. However, as noted in The Sidereal Stage sections, the cycling of pieces in the Public Spaces is important, and as such, positions probably don’t want Proficiency Pieces to remain for a long time. Proficiency Pieces may be removed by the ‘actualization’ of Fuzzy Groups and some may be lost by Census Power activation.
  - ✓ Dr. Li Wanliang of China who first warned of the coronavirus was arrested with seven other ‘whistleblowers’ for spreading rumors. He died of the virus in February 2020, amid an outpouring of frustration at the government. China has the *medical proficiency* to recognize a potential pandemic, something that is very important to a country so huge, but *political expediency* trumps truth – there is no inoculation against political expediency on either side of this wobbly sphere. This is the danger to any proficiency in GGDM terms or in the real world, e.g., engineers who warned of bridge or pedestrian walkway collapse who were ignored or the 1960 Nedelin Catastrophe.
- **And the Cradle Will Rock:** Each time the *Census Power* is activated there is a 30% chance that each Proficiency will be eliminated from the Public Space due to turnover of generations.
  - ✓ Each time a Government Title becomes *disrupted or changes*, there is a 20% chance that each Proficiency on the Public Space will be eliminated.
  - ✓ Proficiencies *that are no longer adjacent to another piece* on the Public Space **are also lost** (i.e. ripple effect, thus the placement of Proficiency Pieces is important). Research, Census, activation of Fuzzy Groups, removal of stars and planets from the Public Space, and the order in which Power Activations are processed can lead to Proficiencies losses, destroying Fuzzy Groups and destabilizing governments.<sup>2</sup>

Positions should take care in the placement of Proficiencies on the Public Space, for example, the removal of a Research Group or a star at which the position has only a ship, from the Public Space could cause the loss of Proficiencies left isolated on the Public Space. Care should also be taken in the spacing of events, though the losses may be small, activation of the Census Power in conjunction with a Writ, during a time when a Government Title becomes disrupted or changes – can leave many open Monads on the Public Space!

Loss of Aspects from aging each turn and actualization of Fuzzy Groups, loss of Proficiencies from activation of the Census Power, Government Title disruption effects, and other causes, along with various effects caused by ongoing exploration and caused by entropy effects and the actions of other players (really the same thing), are the mechanics that insure healthy turnover on the Public Space.

- ✓ The title of this section is the title of a 1980 song by Van Halen, “And the Cradle Will Rock” which is probably not related to the 1937 musical, *Cradle Will Rock*, which was the subject of a 1999 historical docudrama of the same name. The question with this song and many other Van Halen songs is, was he celebrating and promoting a type of juvenile delinquency that is not good for our society in the long term – which

is certainly what their fans (i.e. juveniles) and critics assumed in the 1970s and 1980s – or was Van Halen simply writing and singing about an ongoing observable phenomenon – an Aspect – of their times?

*“What I find so striking today is not that people dismiss expertise, but that they do so with such frequency, on so many issues, and with such anger,” [Tom] Nichols laments. ‘It may be that attacks on expertise are more obvious due to the ubiquity of the Internet, the undisciplined nature of conversation on social media, or the demands of the twenty-four-hour news cycle. But there is a self-righteousness and fury to this new rejection of expertise that suggest, at least to me, that this isn’t just mistrust or questioning or the pursuit of alternatives: it is narcissism, coupled to a disdain for expertise as some sort of exercise in self-actualization.’”*

– Tom Nichols (U.S. Naval War College) as quoted in the Washington Times, July 24, 2017 <sup>3</sup>

**Proficiencies:** Proficiencies represent the systems, organizations, ways, techniques, traditions by which society handles the day-to-day, person to person problems and needs of civilization. For example, keeping order, distributing food and resources, caring for the young, education, assistance, etc. are developed proficiencies. The group of proficiencies is large and interrelated, and in this game is grouped into twenty areas of proficiency, as follows:

Communication Proficiency	Nationhood Proficiency
Customs Proficiency	Police Proficiency
Education Proficiency	Powers Proficiency
Engineering Proficiency	Resources Proficiency
Equity Proficiency	Regeneration Proficiency
Expression Proficiency	Rhetoric Proficiency
Finance Proficiency	Security Proficiency
Integrity Proficiency	Spirit Proficiency
Intelligentsia Proficiency	Urbanization Proficiency
Medical Proficiency	Will Proficiency

Proficiencies are both the bodily functions and life skills of civilization. Many functions of civilization, such as obtaining and processing resources and waste elimination are analogous to bodily functions. Alternatively, think of these as the ‘life skills’ of civilization, while the number of ‘life skills’ we must master to get along in our culture is large – while it takes at least 12 to 15 years – the actual list of ‘tasks’ you must regularly and reliably perform on a daily basis to live in our world – getting and preparing food, feeding yourself, sleeping, communicating, obtaining money – is fairly limited, finite, even if complex and challenging. Development of marketable skills, intelligence, education, and mature ambition takes another ten years.

- ✓ There is *no prohibition* on Aspects having names identical or similar to Proficiencies; they are different functions with Aspects representing a heightened consciousness.

The proficiencies used in this game reflect modernity; other current societies and historical periods may be ‘missing’ some or many of these proficiencies, or more likely, just have a different view of the matter. Like Constructural Elements, the pie could have been sliced many ways, I

chose twenty Proficiencies for the game (and four Constructural Elements); there could have been more or less, or different groupings. Participants may invent new, modify existing, add or subtract Proficiencies to fit their three-eyed alien sophonts. Proficiencies are only objective in the sense that results matter – does the group get done what needs to be done, does the group have the material and resources it needs to carry on? To meet forward expectations?

- ✓ Cultural Proficiencies were probably inspired by discussion of bureaucratic agency proficiency ratings in Dr. Slesinger’s Law & Economics class in 1997.

---

*“...whereas in all other arts that is most excellent which is farthest removed from the understanding and mental capacity of the untrained, in oratory the very cardinal sin is to depart from the language of everyday life, and the usage approved by the sense of the community”*

– Marcus Tullius Cicero, *Of Oratory* (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, *The Rhetorical Tradition* (1990), p. 201

---

**Communication Proficiency:** The systems for transmission, preservation, and transfer of knowledge, directives, culture and news. This is more than just sending orders.

One of the proudest achievements of developing nations is the development of national cinema in their native language as a cultural affirmation – in the same way that in much of the world, translation of the Bible into the local language was an affirmation of unique cultural and linguistic identity (e.g., the Bible was translated into Afrikaans in the early 20<sup>th</sup> Century). This is so important that the leader-in-waiting of North Korea, Kim Jong-il, in 1978 kidnapped a South Korean film director and leading lady (Shin Sang-ok and Choi Eun-hee) in a bizarre attempt to found a North Korean national cinema, while in 2001 Sudan’s military junta destroyed the country’s budding national cinema – a military sociopolitical scorched Earth against their own nation – because they couldn’t fully control its progenitor, octogenarian Gadalla Gubara – if we cannot control it then we must destroy it!

- ✓ “It was too good to be true, though. In retrospect, the coup was the beginning of the end. In 1989 an army lieutenant named Omar Al Bashir ousted Prime Minister Sadiq al-Mahdi, a relative of Gubara. Many of Sudan’s creative class left the country, but Gubara had too much invested. He kept working on films, even as he found himself under political pressure. The government assigned him a producer to work with – a cousin of Bashir. It went predictably badly. (The rights to Gubara’s 1998 film *Barakat el Cheikh* are now owned by the cousin.) The political climate disintegrated, with fighting and famine, the resumption of the civil war, and the rise of the Islamic parties. [His film studio was seized by the government] ... When he fought the order, they put him in jail. His studio was turned into an army barracks. His children led a campaign for his release, but when he came out he was a broken man. It wasn’t just the blindness – it was the powerlessness. He had spent his whole life making film, building the studio, and now it had been taken from him. ... It was Sara, his youngest daughter, who got him out of jail and eventually won the studio back, or part of it.” – Nadja Kornith, “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun (bidoun.org), Issue 20, Spring 2010.

When Americans and to some larger but lesser extent, Westerners, watch films about dystopian futures, we do so with a detached, dismissive, incredulous air of fiction, improbability, it will never happen in my lifetime. In dystopian films featuring authoritarian and fascist governments, censorship is (dear as the issue is to the heart of cinema) first in line of evidence of evils afoot in such films. But here it is in black and white – Sudan in the 1990s, the government first tried to intimidate and co-op the only film studio – the sole representative of Sudanese national cinema – into government political messaging and then finally shut it down and turned the studio into an army barracks when it became too troublesome. Nothing could be more symbolic of oppressive military rule than turning the country’s only film studio into an army barracks, the message had been writ large for all to see.

---

*“True civilization consists precisely of conventions, rituals, and modes of oblique communication whereby the chaos within and the void without may be expressed and contained within the harmonious consensus of shared social objectivity, thus maintaining our bubble of crafted reality, the necessary illusion.”*

– Norman Spinrad, The Void Captain’s Tale (1982)

---

**Customs Proficiency:** The non-statutory rules of social behavior, etiquette, mores, protocols, and taboos, thought policing.

- ✓ “[Count] Hoyos did not look any closer, but rushed to the station and took a special train to Vienna. He hurried to the Emperor’s Adjutant General, Count Paar, and requested him to break the shocking news to the Emperor. *The stifling protocol that characterized every movement in the Hofburg swung ponderously into action.* Paar remonstrated that only the Empress could break such catastrophic news to the Emperor. Baron Nopcsa, Controller of the Empress’ Household, was summoned. He, in turn, sent for Countess Ida Ferenczy, Empress Elisabeth’s favorite Hungarian lady-in-waiting, to determine how Her Majesty should be informed.

[Empress] Elisabeth was at her Greek lesson and was impatient at the interruption. White to the lips, Ferenczy announced that Baron Nopcsa had urgent news. Elisabeth replied that he must wait and come back later. The countess insisted that he must be received immediately, finally being forced to add that there was grave news about the Crown Prince.... The countess entered the room again to find Elisabeth distraught and weeping uncontrollably. The Emperor appeared outside her apartments and was forced to wait there with Nopcsa, who was controlling himself only with great effort. The Empress broke the news to her husband in private; he left the room a broken man.” – from Wikipedia article, “Mayerling Incident,” captured January 17, 2020.

There was a protracted and hotly contested battle in Allegheny County over property taxes and assessments. The battle was legal, political and played out in the local evening news, and resulted in multiple reassessments and rollbacks to previous assessments. On a local news station’s website, I watched a video in shock and bemusement as a local reporter – in violation of longstanding custom – with a news camera and microphone, accosted the long-serving Honorable Stanton R. Wettick as he was leaving his chambers, and tried to ask him a question about his recent ruling on the legal matter. I smiled when Judge Wettick gave the perfect answer: He said simply, “Read my opinion,” and walked away, leaving the reporter standing looking foolish.

For another example, see the article, “The Weaponization of Awkwardness” by Megan Garber, published in *The Atlantic* on December 15, 2017, relating social conditioning and social custom – to avoid the awkward conversation or awkward silence, to avoid making a scene, to sexual harassment and sexual assault of women in the workplace, and even casual consensual sex.

- ✓ “When Harvey Weinstein told Ambra Battilana Gutierrez, ‘Honey, don’t have a fight with me in the hallway,’ he was attempting to turn centuries’ worth of cultural conditioning – gendered conditioning – against her. He was weaponizing the mandate against scene-making, against disruption, against unruliness. He was grossly blatant about it; often, though, the pitfalls of awkwardness, as a negative imperative, reveal themselves more subtly.” *Id.*
- ✓ “*No one knew what to say.* It’s one of the simplest and most widespread mechanisms that helps open secrets to stay secret for so long: the impulse to avoid making scenes, to avoid making things weird. Women bear the brunt of these forces; men, of course, experience them, too. ... Awkwardness became a cyclical force, weaponized not through malice, but through the convenient delusions of benign neglect.” *Id.*, emphasis in original.

Awkwardness is generally considered juvenile and comic, it is often the main feature of ‘puppy love’ movie scenes.

---

*“But hasn’t this increased investment in higher education brought at least equivalent, if not greater, returns? While the returns on investment in education are difficult to assess, most people would assume that the answer to that question must be yes. But there are ways of looking at the matter that suggest that this investment has not brought greater marginal returns. With increasing time spent in education and greater specialization, the learning that occurs yields decreased general benefits for greater costs.*

*The greatest quantities of learning are accomplished in infancy; learning that occurs earlier in life tends to be more generalized. Later, specialized learning is dependent upon this earlier, generalized knowledge, so that the benefits of generalized learning include all derivative specialized knowledge. Axiomatically, therefore, generalized learning is of overall greater value than specialized.”*

– Joseph Tainter, *The Collapse of Complex Societies* (1988), pp. 103-104

---

**Education Proficiency:** The process and systems by which new generations are educated, indoctrinated and accredited.

- ✓ “A developmental task is a task which is learned at a specific point and which makes achievement of succeeding tasks possible. When the timing is right, the ability to learn a particular task will be possible.” – Robert James Havighurst, *Human Development and Education* (1952).

Every step, every section read, of GGDM is a developmental task, so it was for me as the designer as well.

What does it say of a culture when – by virtue of wanting to know, eagerly learning, and trying to understand – one becomes alienated from the general masses of humanity? This was my youth.

- ✓ “Cinema in local languages was regarded as the best way to reach the mostly illiterate population. ... He produced educational films about the tsetse fly, about black magic. The key words were education, enlightenment, and progress, and the medium was part of the message. Gubara always maintained that nothing was more important than cinema. It was more important than building bridges and hospitals, even, because it could teach people to be self-sufficient, to take care of themselves.” – Nadja Kornith in “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun (bidoun.org), Issue 20, Spring 2010.
- ✓ “When we arrived at the village, people gathered to greet Gubara. They all remembered cinema vans. One man said he didn’t miss them, now that everyone has television. Gubara, who had lain down on a daybed under a tree, laughed. Another man, more of a cinephile, said that ‘TV is a small place, where people are alone. Cinema was a big place where everybody came together.’” *Id.*

The slow global spread of literacy over the last five centuries has had a profound effect on the course of human civilization (see excerpt The Print Revolution, Writs, *infra*). Mandatory literacy is the bedrock of Western technical and industrial civilization. Soviet and Western military trainers sent to other countries, have often encountered issues with illiteracy, sometimes willful (e.g., Soviet advisors and trainers in Egypt), among the local troops. Failure or decline of largescale literacy would lead to the collapse of Western civilization. The effects cannot be overstated. Imagine going to the grocery store now and not being able to read? GGDM must assume general and widespread literacy among the populations of the Major Races in the game.

I met a man once, in his late 50s, who was illiterate. I was 15 years old at the time, and a bit taken aback, because I had never met an illiterate adult before. It’s not that I had never heard of illiteracy, it’s just that I had not encountered it before – because of public schooling. My maternal grandmother finished 8<sup>th</sup> grade, my mother was the first in the family to graduate high school and start college; I was the first in the family to graduate from college. Because of my profession, education level, and where and the time in which I live, I probably have not encountered anyone else who was actually illiterate (other than *functional illiteracy* from being an immigrant). I did know a Gunnery Sergeant in the Marine Corps who had difficulty reading, he visibly struggled to work out the words as he was reading a note that had been delivered from headquarters, he may well have been dyslexic instead of having low literacy.

---

*“The ideal engineer is a composite ... He is not a scientist, he is not a mathematician, he is not a sociologist or a writer; but he may use the knowledge and techniques of any or all of these disciplines in solving engineering problems.”*

– Nathan W. Dougherty, American civil engineer

---

**Engineering Proficiency:** The application of technology to the construction of the things of a society.

- ✓ “At least the king did not deceive himself as to the identity of the victor at Maestricht. He realized that the success had been made possible by an engineering officer, Sebastian le Prestre de Vauban, who knew more about the related sciences of siege-craft and fortification than any other man on the Continent... Maurice and Gustavus had

broken the ice of tradition, but Vauban organized the first engineering corps of uniformed soldiers whose operations were combined with those of other arms.... His capture of Maestricht, a fortress dominating vital inland waterways, served France better at the time than if he had won a victory in the field. A few months later he took Trier after another brief siege, thus gaining control of the river Moselle for the supply of Turenne's forces in Germany. The following year Vauban directed the one defense in which he ever took part, the successful resistance of Oudenarde." – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), pp. 338-339.

- Maurice of Nassau (the "Maurice" mentioned above) was Turenne's uncle; Vauban and Turenne were famous Marshals of France under Louis XIV.

---

*"It's a little hard not to be an elitist when you're making millions of dollars a year." – Walter Cronkite*

---

**Equity Proficiency:** The sense of fairness and impartiality in a society and the systems and authority for enforcing such as well as ownership of civilization and enforcement of ownership rights and *responsibilities*.

'Equity' in English refers to both the quality of fairness and impartiality and ownership interest, to wit, Merriam-Webster online dictionary at *equity*: **1a:** justice according to natural law or right, **2a:** the money value of a property or of an interest in a property in excess of claims or liens against it, **3a:** a system of law originating in the English chancery and comprising a settled and formal body of legal and procedural rules and doctrines that supplement, aid, or override common and statute law and are designed to protect rights and enforce duties fixed by substantive law.

This duality is essential to understanding the Equity Proficiency in GGDM (and of English Common Law), the one word covers a lot of ground with two distantly related ideas attached, a complex dance. We all have equity in civilization; inequity is usually cited as the world's top socio-economic political problem. Although one aspect of equity is fairness and impartiality, it is not the same as equality, as pointed out by The Education Trust.

- ✓ "There is a common misconception that equity and equality mean the same thing – and that they can be used interchangeably, especially when talking about education. But the truth is they do not – and cannot. Yes, the two words are similar, but the difference between them is crucial. So please, don't talk about equality when you really mean equity. What's the difference? Should per student funding at every school be exactly the same? That's a question of equality. But should students who come from less get more in order to ensure that they can catch up? That's a question of equity." – Blair Mann, "Equity and Equality Are Not Equal," The Education Trust, March 12, 2014.

In this definition, equality is the same resources for everyone, whereas equity is the same results for everyone. Equity and equality are not the same also because equality does not imply ownership rights, but rather, other sorts of rights. Shall we dance?

Do you think you should be wealthy or at least well-off because you are a medical doctor? On what basis can anyone claim a greater right to the material wealth, real estate and services of our

civilization? We seem to have gotten things backwards. Yet this is true of famous athletes, performers, celebrities, artists, writers, producers and directors, and high-end professionals such as engineers, lawyers, accountants, designers, architects, professors, researchers, finance, entrepreneurs, publishers, promoters, and business people.

The one factor that ties all of this together is the idea that elitism is rewarded richly, the rationale that everyone should be able to earn whatever they are worth in the marketplace, that not everyone can be a doctor, engineer, big business executive, publisher, successful writer, etc.; that the love of knowledge, love of art, love of the profession, love of people, our civilization, your legacy, is not a sufficiently constant motivator to draw the ‘right’ people into professions or endeavors in which they will excel. This is true, but sad. Then you die. All are equal in death, death is both equity and equality.

*“Glasnost is a tortoise crawling towards Freedom of Speech”*

– Alexei Simonov, President of the Glasnost Defense Foundation

**Expression Proficiency:** The collective means and classifications for expression of ideas and emotions (in human civilizations at least), and the sense of such, music, creativity, poetry, the outlet, the social safety valve.

- ✓ “According to Professor Nicholas Conard of Tübingen University, this suggests that the playing of music was common as far back as 40,000 years ago when modern humans spread across Europe. ‘It’s becoming increasingly clear that music was part of day-to-day life,’ he said. ‘Music was used in many kinds of social contexts: possibly religious, possibly recreational – much like we use music today in many kinds of settings.’ The researchers also suggest that not only was music widespread much earlier than previously thought, but so was humanity’s creative spirit. ‘The modern humans that came into our area already had a whole range of symbolic artifacts, figurative art, depictions of mythological creatures, many kinds of personal ornaments and also a well-developed musical tradition,’ Professor Conard explained.

The team argues that the *emergence* of art and culture so early might explain why early modern humans survived and Neanderthals, with whom they co-existed at the time, became extinct. ‘Music could have contributed to the maintenance of larger social networks, and thereby perhaps have helped facilitate the demographic and territorial expansion of modern humans relative to a culturally more conservative and demographically more isolated Neanderthal populations,’ they wrote.” – Pallab Ghosh, “‘Oldest musical instrument’ found,” BBC News, June 25, 2009 (emphasis added).

Appreciate what the invention of the electric guitar represents. The generation that was immersed in “guitar rock,” “heavy metal,” “hard rock” didn’t see the big picture, and for the generations after, whose music is not electric-guitar centric, the electric guitar is an old instrument already mastered by a bunch of old guys. The world had never had an instrument like the electric guitar, capable of expression in new ways with modern emotion, it was the perfect musical instrument for the late 20<sup>th</sup> Century in the West, mastered in less than a generation by the greatest players, and combined with modern speakers and other electronic instruments, put the raw emotional power of an orchestra in the hands of a small band. It was an individual instrument like no other that had come before, perhaps once in a millennial event.<sup>4</sup> Just add lyrics.<sup>5</sup>

- ✓ See also Meeri Kim, “Newborn babies in study recognized music played to them while in the womb,” Washington Post, November 2, 2013, and Jenn Savege, “Babies recognize music heard in the womb,” Mother Nature News, November 4, 2013.

---

*“One of the funny things about the stock market is that every time one person buys, another sells, and both think they are astute.” – William Feather*

---

**Finance Proficiency:** The systems by which largescale economic power flows, is transferred, and directed. The systems of stored value, capitalization, ownership equity, managerial control of finances.

- ✓ “Despite his founding role, however, Gubara was always something of an outsider within the almost exclusively Francophone federation. He viewed France’s role in supporting, educating, and bankrolling nearly his entire cohort of African filmmakers with deep suspicion. But filmmakers in Anglophone African countries had no support from hardly any films in those countries, period. Eighty percent of African cinema is in French. ... Ironically, perhaps, he applied for funding from the French government. ‘Any producer who loves his work and understands the game will figure out a way to finance his films,’ he explained to me. ‘From my experience the human being is very strong. If you want to achieve something, you can do it. Provided you’re patient.’ The French agreed to provide the 35mm raw stock. The Iranian ambassador offered to have it processed and printed in Tehran. The rest came from Gubara’s savings, plus money from friends and family.” – Nadja Kornith (quoting Gadalla Gubara), “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun (bidoun.org), Issue 20, Spring 2010.

---

*“To announce that there must be no criticism of the President, or that we are to stand by the President, right or wrong, is not only unpatriotic and servile, but is morally treasonable to the American public.”*

– Theodore Roosevelt, “Sedition, Free Press, and Personal Rule” (1918)

---

**Integrity Proficiency:** The sanctity of the system, the measure of honesty and true purpose, lack of corruption. Integrity is also part of the boundary control of civilization, e.g., making sure the police, politicians are separated from the criminals.

- ✓ “They can be more concerned about their election, or their legacies. And I would argue to many of them: your legacy is more important than the next election.” – Charlie Dent, as quoted by Kate Sullivan, “House GOP members are ‘absolutely disgusted and exhausted’ by Trump’s behavior, former GOP congressman says,” CNN, November 29, 2019.

Law Professor Marjorie Cohn (Professor Emeritus, Thomas Jefferson School of Law) published an article in the HuffPost on November 27, 2017, titled, “The Duty to Disobey a Nuclear Launch Order.” The title of the article alone is enough to determine the intent of the article and the intended audience or effect of the article – despite the Congressional War Powers argument tacked on the end.

- ✓ 18 U.S. Code § 2387 states, “Whoever, with the intent to interfere with, impair, or influence the loyalty, morale, or discipline of the military or naval forces of the United States ... (1) advises, counsels, urges, or in any manner causes or attempts to cause insubordination, disloyalty, mutiny, or refusal of duty by any member of the military or naval forces of the United States ... Shall be fined under this title or imprisoned not more than ten years, or both...”

In most parts of the world, Professor Cohn’s article would be called seditious, in many parts of the world, it would not be published. But enshrined in the Constitution of the United States and embedded variously in the laws of most nations of the world (and honored to a greater or lesser extent on whim and circumstance) is the concession that the press is *either* an agency of the government, *or* must be free to speak, even in a seditious manner. This is a choice that each society makes and lives by. Thus where Freedom of the Press, and of Speech, are enshrined in positive law and custom and honored, they shield against governments and officials using threats of sedition to silence anti-government opinions and investigations seeking to expose corruption, influence peddling, fraud and incompetence. When they are not, we know the results already (see also George Orwell, “Freedom in the Park” quote, p. 395, *ut infra*).

- ✓ “The country is rich in oil and diamonds but hobbled by corruption, with grinding poverty, widespread illiteracy and a high infant mortality rate. ... Ms. dos Santos, estimated to be worth over \$2 billion, claims she is a self-made woman who never benefited from state funds. But a different picture has emerged under media scrutiny in recent years: She took a cut of Angola’s wealth, often through decrees signed by her father. She acquired stakes in the country’s diamond exports, its dominant mobile phone company, two of its banks and its biggest cement maker, and partnered with the state oil giant to buy into Portugal’s largest petroleum company.” – Michael Forsythe, Kyra Gurney, Scilla Alecci and Ben Hallman, “How U.S. Firms Helped Africa’s Richest Woman Exploit Her Country’s Wealth,” New York Times, January 19, 2020.

---

*“In 1968 the Viet Cong captured the South Vietnamese city of Hue. After murdering over 5000 of the city’s intelligentsia, the Viet Cong fought US Army and Marine forces for weeks in one of the costliest battles (for US forces) of the Vietnam War.”*

– Franklin D. Miles, [Asymmetric Warfare: A Historical Perspective](#) (1999), U.S. Army War College, Carlisle, Pennsylvania (available free online)

---

**Intelligentsia Proficiency:** The academia and intellectual of society as a class, the intellectuals of each class, and the media systems that give them influence.<sup>6</sup>

- ✓ Merriam-Webster online dictionary at *intelligentsia*: intellectuals who form an artistic, social, or political vanguard or elite. Intelligentsia is a term most associated with socialist, communist, Marxist thought, but is intended here to represent more generally, the collective intellectual and deep thinking of civilization.

Two views of intelligentsia from Wikipedia article, “Intellectuals,” captured October 17, 2018:

- ✓ “Addressing their role as a social class, Jean-Paul Sartre said that intellectuals are the moral conscience of their age; that their moral and ethical responsibilities are to observe the sociopolitical moment, and to freely speak to their society, in accordance with their consciences.” *Id.*
- ✓ “In Marxist philosophy, the social class function of the intellectuals (the intelligentsia) is to be the source of progressive ideas for the transformation of society; to provide advice and counsel to the political leaders; to interpret the country’s politics to the mass of the population (urban workers and peasants); and, as required, to provide leaders from within their own ranks. The Italian Communist theoretician Antonio Gramsci (1891–1937) developed Karl Marx’s conception of the intelligentsia to include political leadership in the public sphere. That, because ‘all knowledge is existentially-based,’ the intellectuals, who create and preserve knowledge, are ‘spokesmen for different social groups, and articulate particular social interests.’ That intellectuals occur in each social class and throughout the right wing, the centre, and the left wing of the political spectrum. That, as a social class, the ‘intellectuals view themselves as autonomous from the ruling class’ of their society. That, in the course of class struggle meant to achieve political power, every social class requires a native intelligentsia who shape the ideology (worldview) particular to the social class from which they originated.” *Id.*

The massacre at Hué during the North Vietnamese occupation in early 1968 is believed or has been considered to have targeted faculty, staff, and students at Hué University as ‘reactionary elements’ with the intent of destroying the intelligentsia of South Vietnam who opposed the communist. Orders and documents, severe procedures and eye-witness accounts decisively place the Massacre at Hué as a preplanned pogrom to do as much damage as possible to Hué in a short period of time. Thus, when a side in an armed conflict considers it an existential, sociocultural conflict, they may deliberately target the opposing intelligentsia. The South Vietnamese engaged in reprisal killings afterward, and artillery, air-strikes and fighting destroyed or damaged 80% of the city.

---

**Eli:** *You know what’s the good thing about no soap?, you can smell a hijacker from a mile away.*

[The hijackers come out of hiding]

**Hijack Leader:** *I am impressed!, this man can smell us from thirty feet away, now what’s that say about our hygiene! – The Book of Eli (2010)*

---

**Medical Proficiency:** The health care systems, including the technology, tradition, and required empathy, alongside social customs such as levels of hygiene, hair, clothing, foods, exercise.

- ✓ “It is clear that we cannot distinguish the sane from the insane in psychiatric hospitals.” – David L. Rosenhan, “On Being Sane in Insane Places,” *Science*, Vol. 179 (Jan. 1973), pp. 250-258.

Rosenhan’s pseudo-patient experiments forever exposed the psychiatric health industry. The industry remains to this day, standing there, hoping that people will forget Rosenhan, stop sending new pseudo-patients, and not notice that psychiatry’s pants have remained down around their

ankles for the last 45 years. It has been repeated much recently that once credibility is lost, it is almost impossible to retrieve, and this goes in law, politics, for professionals or amateurs, and in mental health care. While some procedures were changed as a result of Rosenhan, psychiatry as a whole has made dubious progress in their chosen field. I highly recommend reading the Rosenhan article, which I found available on the internet for free (Wayback Machine),<sup>7</sup> and Richard J. Castillo's companion to the DSM IV, *Culture & Mental Illness* (1997).

Note that mental health is included under the medical proficiency solely because of two factors:

- 1) That medicine was secularized by the Pope in the 14<sup>th</sup> century, and
- 2) Mental health became a field of medical study and treatment in the late Victorian Era (Sigmund Freud was a medical doctor).

Without either of these developments, which placed mental states of humanity within the epistemological realm of medicine in modernity, mental states might well have been included under the Rhetoric or Spirit (or some other) Proficiency or it might have required a separate proficiency perhaps called Life, Humanity, or Human Conditions. Aliens may not share our current worldview.

- ✓ If I had been born a century earlier, I would have been a blip in the infant mortality rate. I nearly was anyway, but mid-20<sup>th</sup> Century doctors figured out what was wrong and knew how to fix it. I have the scar. Although this work is unlikely to be of any importance, the reduction of the infant mortality rates worldwide (one of the most important goals of medicine and nutrition) – it stands to reason – had an incalculable, autocatalytic (or virtuous cycle) effect on human global civilization and is one of the contributing causes of the dizzying sense of acceleration of culture, history, development and technology in the last centuries.

---

*“A nation is a society united by a delusion about its ancestry and by a common hatred of its neighbours”*

– Dean William Ralph Inge, *The End of an Age: and other essays* (1948), p. 127

---

**Nationhood Proficiency:** Nationalism, the sense of the homogeneous group, a people, not just the state, the unified sense of the sovereign and ethnicity.

- ✓ “In the late 20th century, many social scientists argued that there were two types of nations, the civic nation of which France was the principal example and the ethnic nation exemplified by the German peoples. The German tradition was conceptualized as originating with early 19<sup>th</sup>-century philosophers, like Johann Gottlieb Fichte, and referred to people sharing a common language, religion, culture, history, and ethnic origins, that differentiate them from people of other nations. On the other hand, the civic nation was traced to the French Revolution and ideas deriving from 18<sup>th</sup>-century French philosophers. It was understood as being centered in a willingness to ‘live together,’ this producing a nation that results from an act of affirmation. ...

Present day analysis tend to be based in sociohistorical studies about the building of national identity sentiments, trying to identify the individual and collective mechanisms, either conscient or non-conscient, intended or unintended. According to some

of these studies, it seems that the State often plays a significant role, and communications, particularly of economic content, also have a high significance.” – from Wikipedia article, “Nation,” captured November 1, 2018.

Nationhood in GGDM’s interstellar setting is a peculiar thing for participants to explore. It is most like an oceanic nation consisting of widely separated, small islands. It should not be considered to be like a current nation on Earth. But on a certain level, based on human experience, we can assume that all cultures have similar or identical professions, parts, ideas, etc., that there will be identifiable cultural similarities between any two cultures, just as there are differences.

- ✓ Do you imagine that Japan or India doesn’t have professional movie critics? If there is something called art in a society, there are critics. And if a society has technology for making movies, and a concept of art, there are movie critics. But the audience of a critic is limited to those who speak the language of the movie. It is unlikely that the Sentinelese have movie critics, but I am sure they have at least a critic of something.
- ✓ See further Spheres in Six Degrees, 3 Commerce, p. 1220, *infra*.

What I think gets lost in the recounting of WWII is the amazing speed with which the Nazi dream came to a terrible end. It didn’t last a generation; nay, just 5½ years after the invasion of Poland, Germany was in shambles and completely occupied. The allies already had a blue print: The defeat of Napoleon in 1813. The addition of technology, modern arms, existential crisis and national will remade the world into a new norm.<sup>8</sup>

- ✓ “There could be no question on August 6, 1945 that a similar turning point had been reached. For the explosion at Hiroshima gave every indication of being powerful enough to batter down the walls of nationalism – the feudalism of the nineteenth century. Frontiers and fortified belts had already been made anachronisms by twentieth-century bombing planes, and the other barriers could not long stand up against atomic energy. Any doubts on that score were dispelled by announcements that the effectiveness of the new weapon was matched by its economy.” – Lynn Montross, War Through the Ages, (2<sup>nd</sup> Ed. (1946)), p. 951.
  - See EN 9, pp. 402-403, *ut infra*, for full quote.

---

*“This is a good precedent; not because I want to extol the virtues of hanging people to death. Those of us trying to live our lives with rationality and belief in human rights and liberty know that hangings by the state are not a solution. However, we also know that for the moment, this is the punishment for the crime of murder and it would have set a very disastrous precedent if the man had not been punished for his crime.”*

– Saima Baig, [nation.com.pk](http://nation.com.pk), Karachi, Pakistan, February 29, 2016

---

**Police Proficiency:** The monopolistic force that keeps order and physically enforces the criminal laws and public policy.

- ✓ Ms. Baig perfectly summarizes the quandary of policing and punishment.

More pointedly, Max Weber’s “monopoly on the legitimate use of physical force” or “monopoly on violence.” A state is any “...community that successfully claims the monopoly of the legitimate use of physical force within a given territory.” This is the line of struggle, between public perception and tolerance and the police officer’s authority to apply physical violence and give orders to citizens. The ubiquitous presence of video and social media has upset the *status quo* with regard to police actions.

Under what circumstances is the use of force by individuals in our society legitimate? The list is short; self-defense and defense of others in extreme circumstances and, Constitutionally, citizen’s arrest, in *very limited* circumstances. Both of these are merely admissions that the police cannot be everywhere all the time (while ignorance is ubiquitous), and that, given the choice, an exception will be made to prevent serious injury or death.

A significant percentage of the prison population in any country are actual criminals who have committed acts that would be crimes in any country, they are murders, thieves, rapists, kidnapers in all variations, and smugglers and dealers in contraband. When certain regimes are criticized by the media for imprisoning people for their political or religious views, it seems that all prisoners in that country must be political prisoners whose rights are being violated. It took the spurious, *sua sponte* emptying of prisons by the leader of Iraq to remind the world that even in countries with political and religious prisoners, broken judicial and law enforcement systems, a significant part of the prison population are still actual criminals in any place and time.

- ✓ “A thing I would like to know – it is a thing we hear very little about – is what changes are made in the administrative personnel when there has been a change of government. Does a police officer who has a vague notion that ‘Socialism’ means something against the law carry on just the same when the government itself is Socialist? When a Labour government takes over, I wonder what happens to Scotland Yard Special Branch? To Military Intelligence? We are not told, but such symptoms as there are do not suggest that any very extensive shuffling is going on.” – George Orwell, “Freedom of the Park,” Tribune (London, UK), December 7, 1945.

Rhetorical Question: Are people who commit crimes animals before they go to prison or does sending them to prison make them into animals, as Tom Zarek in Battlestar Galactica claimed in “Bastille Day”? Or is this a false dichotomy? Is there a more central question to the entire issue of crime and punishment?

- ✓ Fascinating reading in the sociopolitical evolution and history of modern policing and organized crime are the intertwined stories of Jack Sheppard, Jonathan Wild, and Joseph Blake in early 18<sup>th</sup> Century London; Wild is the archetype modern kingpin.

---

*“If a man has two wives, the one loved and the other unloved, and both the loved and the unloved have borne him children, and if the firstborn son belongs to the unloved, then on the day when he assigns his possessions as an inheritance to his sons, he may not treat the son of the loved as the firstborn in preference to the son of the unloved, who is the firstborn, but he shall acknowledge the firstborn, the son of the unloved, by giving him a double portion of all that he has, for he is the firstfruits of his strength. The right of the firstborn is his.” – Deuteronomy 21:17 (ESV)*

---

**Powers Proficiency:** The way in which powers of society are distributed, balanced, controlled, and transferred, understanding of the nature of political, economic, military and social power.

Succession in monarchy and nobility by primogeniture (in any of its forms and variations) is one of the worst and most disastrous ideas in history.<sup>9</sup>

- ✓ “Primogeniture and ultimogeniture, preference in inheritance that is given by law, custom, or usage to the eldest son and his issue (primogeniture) or to the youngest son (ultimogeniture, or junior right). In exceptional cases, primogeniture may prescribe such preferential inheritance to the line of the eldest daughter. The motivation for such a practice has usually been to keep the estate of the deceased, or some part of it, whole and intact....

The practices are most commonly used by agricultural peoples, especially those *with increasing populations but limited amounts of land*. In such cases it is often important to prevent the partitioning of land into parcels that are too small to support farming. In some cases, the designation of a sole heir has generated territorial expansion by forcing the unwilling sons to fend for themselves, a situation that has obtained at various times among Europeans and the Maori and other Polynesian peoples. In Europe, laws forbidding the partitioning of land and decreeing its devolution upon the youngest or eldest son served as a means of preserving not only the size of the property so affected but also the power and prestige of the aristocracy, which traditionally rested on land ownership. Thus, the practices sometimes governed succession to power and office rather than to tangible possessions.” – Encyclopædia Britannica Online article, “Primogeniture and ultimogeniture,” September 30, 2018 (emphasis added).

Yes, there are some arguments in favor of having immediate hereditary succession, but history over 4,000 years does not support the idea. Primogeniture was sold on a false dichotomy, either succession is determined by primogeniture or there will be civil war for the throne. But even in cases where there was secure succession by primogeniture, there was frequently war for the throne. To let the people decide was dismissed as ludicrous until the monarch or pretenders decided that they needed the people’s support to prevail, at which time they cynically appealed to the people and courted their favor. And this is where modern democracies must take care that the results of democratic governments are superior to those of monarchy and primogeniture systems. When and where they are not, or where the idea is not engrained in the population that democracy is better in the long term, governments become dictatorships, autocracies, and other forms of perversion.

---

*“Although Ramesses III had saved Egypt from conquest, the war was so expensive it drained the Royal Treasury and the tomb builders at the village of Set Maat (modern Deir el-Medina) could not be paid. This led to the first labor strike in recorded history where the workers walked off the job and refused to return until they were fully compensated.”*

– Joshua J. Mark, “Sea Peoples,” Ancient History Encyclopedia, September 2, 2009

---

**Resources Proficiency:** The ability to produce a continuing supply of new resources, store and distribute resources to those who need them, and to find new resources.

- ✓ “Well, the trigger is always that complexity increases to solve problems. Now, before the development of agriculture, people largely solved their problems by moving. They moved about the landscape in search of the resources that they needed, and they usually had a fairly well-established seasonal round where they would go to different resources in different seasons and obtain what they needed to live.... At some point toward the end of the last Ice Age, it appears that human populations were increasing and the option to move around the landscape was being lost. In other words, the landscape was becoming populated with more and more people and so people shifted to reliance more and more on agriculture. And reliance on agriculture seems to be one of the triggers that generates further increase in complexity.” – Joseph Tainter, podcast interview (transcript) on PeakProsperity.com, by Adam Taggart, June 25, 2017.
- ✓ “There are two aspects to the issue that you’ve raised. One is that sustainability requires that people have the ability and the inclination to think broadly in terms of time and space. In other words, to think broadly in a geographical sense about the world around them and the world as a whole, and the state of the world as a whole. And also, to think broadly in time in terms of the near and distant future and what resources will be available to our children and our grandchildren and our great grandchildren. One of the major problems in sustainability and in this whole question of resources and collapse *is that we did not evolve as a species to have this ability to think broadly in time and space*. Instead, our ancestors who lived as hunter-gatherers never confronted any challenges that required them to think beyond their locality and the near term. And so, our species never evolved an inclination to think broadly in time and space.” *Id.* (emphasis added).
- ✓ “The second problem ... is that technological optimists argue that we don’t really [need] to worry about resources, that all we need are free markets and the price mechanism. That as long as there are free markets that whenever resources start to become scarce, the market signals that it’s time to innovate, that there will be rewards to innovation. And so the assumption is that as a resource becomes scarce, people develop – put effort into developing a new resource or finding more efficient ways of using the existing resource or developing new technologies and so forth. This is a hard argument to counter because up until this point, the technological – excuse me – the technological optimists have been correct. We have maintained the most complex society humanity has ever known, and we have maintained it up to this point.... I have argued that technological innovation and other kinds of innovation evolve like any other aspect of complexity. The investments in research and development grow increasingly complex and reach diminishing returns.” *Id.*

The identity, origin, motive, leadership of the Sea Peoples – subject of the feature quote above – remains a mystery. They were defeated at the Battle of Nile Delta by Ramesses III in 1175 B.C. and vanished. But not before contributing significantly to the Late Bronze Age collapse in the Near East and the Palatial Culture collapse in Mycenaean Greece. They were almost the ‘historical accident’ that would destroy Egypt, and were the ‘historical accident’ that destroyed many less powerful cultures, turning their goods and population into loot to be carried off for momentary wealth, and their coastal palaces and cities to rubble. There is a story waiting to be written

by a good epic historical fiction writer, it could rival Dune. Their main contribution to history seems to be a demonstration of the full extent of naval power, though they failed in land warfare against the Egyptians.

---

*“Once you’re a parent, you’re the ghost of your children’s future.”*

– Cooper, *Interstellar* (2014)

---

**Regeneration Proficiency:** The social systems and units for insuring the propagation of the species; the future of the species (aka ‘Next Generation’ Proficiency). This should not be confused with ‘what comes naturally’ – the activation of the Census Power – but...

- ✓ “I have no patience with those who say that sexual excitement is shameful and that venereal stimuli have their origin not in nature, but in sin. Nothing is so far from the truth. As if marriage, whose function cannot be fulfilled without these incitements, did not rise above blame. In other living creatures, where do these incitements come from? From nature or from sin? From nature, of course. It must be borne in mind that in the appetites of the body there is very little difference between man and other living creatures. Finally, we defile by our imagination what of its own nature is fair and holy. If we were willing to evaluate things not according to the opinion of the crowd, but according to nature itself, how is it less repulsive to eat, chew, digest, evacuate, and sleep after the fashion of dumb animals, than to enjoy lawful and permitted carnal relations?” – Desiderius Erasmus, “In Praise of Marriage” (1519).

---

*“There are but two powers in the world, the sword and the mind. In the long run the sword is always beaten by the mind.”* – Napoleon Bonaparte

---

**Rhetoric Proficiency:** “Rhetoric is the art of ruling the minds of men.” – Plato. The traditions and systems by which debate can occur, the public space, consensus, ruling the minds of men; the power of the spoken word over the minds of civilization.

- ✓ “Developing technologies have changed the State of the Union, beginning with its broadcast on radio in 1923 and later on television in 1947.... These technologies shifted the president’s focus from the legislature in front of him to the voting public beyond them. Heightened publicity stoked partisanship, a development emphasized in 1966 with the advent of the opposition ‘response.’ Often delivered in the form of a rebuttal, the out-party’s response allows a partisan critique of the president’s assessment of what is ‘necessary and expedient’ for the Union. Although the response could foster productive argument, in practice neither speaker nor respondent actually engages the other. The opposition speaker writes the response before the president’s speech has been delivered. The opposition party does not so much respond to the president as imagine what rejoinder the waiting audience wants to hear. While the president’s address is directed to the public over Congress’ heads, the opposition response is directed to the public over the president’s head.” – Connor M. Ewing and Charles Zug, “What happened to the State of the Union address? Originally, it helped the president and Congress deliberate.” Washington Post, January 30, 2018.

*“No’ is a complete sentence.” – Anne Lamott*

**Security Proficiency:** The systems and organizations that define, hold and enforce the internal boundaries within the system and the boundary between the system and the external universe.

The Security Proficiency can include in part, the police forces and the military, but is also capable of representing other sorts of boundaries, such as ethnic, class and social mobility boundaries. It also can represent the separation of powers within a system, and is thus related to the Powers Proficiency. It is therefore a neutral term in that sense, basically it is the traffic cop within the system for good or ill.

- ✓ “Social Entropy Theory (Bailey, 1990, 1994) views the social system as an entity that seeks to maintain internal entropy at some optimal level below maximum entropy. The role of the boundary is crucial in this task. The societal boundary must be able to open in the proper manner and at the proper time to ensure that adequate inputs of energy and information can be attained from the environment, that refuse or harmful material can be properly extruded from the system, and that needed exports of matter-energy and information can be moved across the boundary. Conversely the boundary must be able to close in the proper manner and at the proper time in order to ensure that the system remains secure from threats outside in the environment (prohibits harmful inputs), and also guards against the loss of valuable internal resources (prohibits harmful outflows). Thus, the functions of boundary maintenance are fourfold: to open in a manner that (1) ensures needed inputs and (2) ensures needed outputs, and to close in a manner that (3) prohibits harmful inputs and (4) prohibits loss of valuable matter-energy or information through harmful outputs.” – Kenneth D. Bailey, “Boundary Maintenance in Living Systems Theory and Social Entropy Theory,” *Systems Research and Behavioral Science*, Vol. 25, Is. 5, pp. 587-597, January 7, 2009.<sup>10</sup>

*“We also wanted to find out what happened in terms of law, if people came to an impasse. Like sport is ritual war in a very valuable way of redirecting aggression in society. We thought wouldn’t it be great, instead of people going to war, they’d fight it out in Thunderdome. Fight to the death. It had the pageantry of, say, the Law Courts, and the pageantry of church, in a way, because of the kind of religion, a strong enough belief to be a religion, it had to have pageantry to have any meaning. It was a little bit like a circus, and a little bit like a game show – it was all those things combined. Because they’re all, in a way, the same sort of things.”*

– George Miller as quoted by Anne Billson, “George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview,” previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015

**Spirit Proficiency:** Those symbols and systems that represent spirit of the civilization (not to be confused with individual spirituality), pageantry, ritual; the systems for public recognition of individual merit and celebration of important historical dates.

- ✓ “I am Aylia, I am spirit now. Good spirit.” – Clan of the Cave Bear (1986).

Use of “spirit” for a proficiency in GGDM primarily refers to *élan* in keeping with the extremely practical sense of the Proficiencies. It is not, however, simply ‘cheerleading.’ Spirit should not be confused with “spiritual,” which refers to the incorporeal, mystical, supernatural experience, but it is also practical to recognize the reality of a continuity of mysticism and desire for mystical experiences in humanity, thus, Spirit in GGDM likely will include some mysticism.

- ✓ “We all know that there is a farce to the pageantry, that the magnification of this temporary lens is skewed.” – Doreen St. Félix, “The Farce, and the Grandeur, of Black History Month Under Trump,” *The New Yorker*, February 2, 2018.

Pageantry is always a farce to someone; military parades are a farce to the pacifist, victory parades are a farce to the bitter losers, 18<sup>th</sup> century Puritan ministers complained of the secularization of Thanksgiving, that the pending evening feast was a distraction to the flock during the delivery of the Thanksgiving sermon. The thought of my high school graduation ceremony (which I did not attend) seemed a farce to me at 17. The farce of pageantry is the source of much literary satire, and snarky or ironic seasonal television commercials.<sup>11</sup>

- ✓ “In 1921, U.S. President Warren G. Harding received her at the White House to present her with the 1 gram of radium collected in the United States. Before the meeting, recognising her growing fame abroad, and embarrassed by the fact that she had no French official distinctions to wear in public, the French government offered her a Legion of Honour award, but she refused.” – from Wikipedia article, “Marie Curie,” captured October 31, 2018.<sup>12</sup>

Posthumously, she was entombed with her husband at the Panthéon in Paris in 1995, the first female to be placed there on her own merits, followed in 2015 by two heroines of the Resistance.

---

*“A geohistorical look at the concept of spatial justice would take up back to the Greek polis and the Aristotelian idea that being urban is the essence of being political; it would take us through the rise of liberal democracy and the Age of Revolution, and eventually center attention on the urban crises of the 1960s, with its most symptomatic and symbolic moments taking place here in Nanterre.”*

– Edward Soja, “The City and Spatial Justice,” *JSSJ*, January 2009

---

**Urbanization Proficiency:** Civilization flows outward from the cities, resources flow inward from the rural areas, the systems of urban infrastructure, the sense of the city, urban agglomeration.

- ✓ “Thinking about space has changed significantly in recent years, from emphasizing flat cartographic notions of space as container or stage of human activity or merely the physical dimensions of fixed form, to an active force shaping human life. A new emphasis on specifically urban spatial causality has emerged to explore the generative effects of urban agglomerations not just on everyday behavior but on such processes as technological innovation, artistic creativity, economic development, social change as well as environmental degradation, social polarization, widening income gaps, international politics, and, more specifically, the production of justice and injustice.” – Edward Soja, “The City and Spatial Justice,” *JSSJ*, January 2009.

- See also Stellar Synekism discussion, 1 Commerce, p. 1183, *infra*.

*“U.S. material and battlefield supremacy are not irrelevant to the outcome of American wars, but the outcomes in Vietnam and Somalia suggest that trying to understand war outcomes by focusing on the balance of material factors alone is deficient. The above examples argue that political will is the central variable. The aim of this book is to generate a more thorough understanding of the American national will in war.”*

– Jeffery J. Kubiak, War Narratives and the American National Will in War (2014), p. 2

**Will Proficiency:** The authority and legitimacy for the authority to enforce and pursue public and foreign policy, political and cultural will, ‘national will.’

Discussion of ‘national will’ as *a thing onto itself* seems to have peaked in WWII and faded after Vietnam. It is often, at least in democratic countries, nearly indistinguishable from political will, since the vagaries of political winds dictate the course the country will take in domestic and foreign matters. In other countries, especially of authoritarian ideological types, national will has been equated with romantic nationalism and national mysticism.

- ✓ Oddly, there is almost no discussion of ‘national will’ in relation to NASA or any space program. All of the discussions devolve to national security, presence in space, job creation in small high tech businesses, etc. One could certainly argue that the early space race (on both sides) was driven by *national will* during the Cold War.

Perhaps the fading of ‘national will’ as a concept has some to do with the fading of nationalism as a concept, a realization of the dangers of WWII and the Cold War to humanity’s future.

- ✓ The public policy of the legal enforcement of the last will of the deceased – which has had form in every human civilization from the beginning – is not for the benefit of the deceased, but for the benefit of the living, of order and domestic tranquility of society (and it makes good literature and culturally wills meaning into death) in a peaceful succession of ownership, of generations. Some place too much importance on the wrong side of the issue.

At the bottom of it remains will, which is a thing of the living; what will we will to our children?

*“Zathras good at doings, not understandings”*

\*\*\*

*“Zathras used to being beast of burden for others. It is a sad life. Probably will be a sad death. But at least there is symmetry.”*

– Babylon 5, “War Without End” (1996) <sup>13</sup>

## Endnotes.

<sup>1</sup> Commentary: The placement requirements for Cultural Aspect Pieces requires colonization so as to place Friendly Colonies on the Public Space, and if engaged in conquest, a ‘reward’ for progressive Naturalization of aliens. The size of the colonies is irrelevant for this purpose. A position that consists mostly of Converted Colonies (see Colony

Politics, *et seq.*, 2 Order, p. 538, *infra*) will have difficulty in the Public Space and probably will also be fragile in Galactic Space.

- ✓ The ‘sit-n’-spin’ positions (see 2 Taxation & Census, p. 309, *supra*) will probably be fairly stable in this regard if all colonization places in their home system are utilized.

<sup>2</sup> Commentary & Citation: For those familiar with the tabletop tile game Hive (2000), this is sort of a ‘one Hive’ rule on the Public Space, the pieces of a civilization’s consciousness should form an approximate cluster around the central government and Friendly/Naturalized colonies, pieces more than a couple of spaces from the colonies are ‘out on a limb’ and may be lost. On the other hand, a position cannot grow if it never goes out on a limb.

- ✓ I did not consciously emulate the Hive game, but rather, I believe these rules are a natural consequence of thinking about the structure of civilizations simulated by the game rules.

<sup>3</sup> Citation: See full quote, The Campaign Against Expertise excerpt, Colleges, *supra*.

<sup>4</sup> Citation & Commentary: “Guitar culture was pervasive, whether in movie houses (‘Karate Kid’ Ralph Macchio outdueling Steve Vai in the 1986 movie ‘Crossroads’; Michael J. Fox playing a blistering solo in ‘Back to the Future’ and co-starring with Joan Jett in 1987’s rock-band drama ‘Light of Day’) or on MTV and the older, concert films featuring the Who and Led Zeppelin on seemingly endless repeats. But there were already hints of the change to come, of the evolutions in music technology that would eventually compete with the guitar. In 1979, Tascam’s Portastudio 144 arrived on the market, allowing anybody with a microphone and a patch cord to record with multiple tracks. (Bruce Springsteen used a Portastudio for 1982’s ‘Nebraska.’) In 1981, Oberheim introduced the DMX drum machine, revolutionizing hip-hop. So instead of Hendrix or Santana, Linkin Park’s Brad Delson drew his inspiration from Run-DMC’s ‘Raising Hell,’ the crossover smash released in 1986. Delson, whose band recently landed atop the charts with an album notably light on guitar, doesn’t look at the leap from ax men to DJs as a bad thing. ... If there is a singular question in the guitar industry, it’s no different from what drives Apple. How do you get the product into a teenager’s hands? And once it’s there, how do you get them to fall in love with it?” – Geoff Edgers, “Why my guitar gently weeps. The slow, secret death of the six-string electric. And why you should care.” The Washington Post, June 22, 2017.

- ✓ According to other parts of the article, the makers of electric guitars are deeply in debt, e.g., Guitar Center is \$1.6 billion in debt, Fender and Gibson are also in debt and PRS Guitars cut staff; annual guitar sales revenue has dropped about 33% in recent years.
- ✓ Guitar Center has a series of videos of famous guitarists interviews at Guitar Center on their YouTube channel to promote playing guitar to the next generation, e.g., 50 yr. old James Hetfield from 2014.

<sup>5</sup> Commentary: GGDM is something like Eric Clapton’s original “Layla” (1970), a normal song that turned into a famously long studio jam. “Layla” was Pattie Boyd, George Harrison’s wife, whom Clapton later married. Except that there is no Pattie Boyd here.

<sup>6</sup> Commentary: I once read an “intellectual singles” ad from an educated young lady seeking an intellectual male, who commented, “the geekier the better.” No, I did not respond to the ad. It was probably fake filler anyway.

<sup>7</sup> Citation: It is also available free and in English at <https://www.oulu.fi/sites/default/files/content/AOH%20Terveenä%20epäterveissä%20paikoissa.pdf>.

<sup>8</sup> Commentary & Citation: The speed of the times is perhaps shown by the life of French police officer Pierre Bonny; in 1934 he was considered one of the top police investigators in France, despite allegations that he falsified evidence in a case 11 years earlier. By 1944, he had served three years in jail for corruption (1935-1938), founded and led the French arm of the Gestapo (the *Carlingue*) and was executed by firing squad in 1944. Hero to zero in ten years. Information from Wikipedia articles, “Pierre Bonny,” and “Carlingue,” captured November 1, 2018.

<sup>9</sup> Citation: For a very good discussion of the historical origins of primogeniture, I recommend watching Ryan Reeves’ May 28, 2014 video “The Merovingians” on his YouTube Channel.

<sup>10</sup> Citation & Commentary: Medieval Compartmentalization of Europe: “At least the Machine Age, which left so many debts to be paid by wars of the twentieth century, can point a moral for the Atomic Age. *For the basic causes of most of the strife since Waterloo may be traced to the artificial barriers raised by nationalism.* This is no new situation in history. *The same conditions, limited by means of communication, prevailed in the Middle Ages. Europe was divided into thousands of idea-tight little compartments – the fiefs ruled by ironclad lords from behind stone walls.* Traders and travelers had to pay tribute to these petty robber barons, who were not far enough advanced to have thought of tariffs, visas, cartels and customs duties. The state held only nominal authority, and the

serf had no more rights than the domestic animals which shared his miserable hut. *The consequence was stagnation tempered by chaos.*

Then came the invention of gunpowder, one of civilization's greatest blessings. Society at last had found a force powerful enough to destroy the compartments which were imprisoning progress, a force constructive enough to let light and warmth into a continent. Feudal stone walls were battered down by cannon balls, and the Renaissance ushered in a new era of nationalism suited to the communications of the age. There could be no question on August 6, 1945 that a similar turning point had been reached. For the explosion at Hiroshima gave every indication of being powerful enough to batter down the walls of nationalism – the feudalism of the nineteenth century. Frontiers and fortified belts had already been made anachronisms by twentieth-century bombing planes, and the other barriers could not long stand up against atomic energy. Any doubts on that score were dispelled by announcements that the effectiveness of the new weapon was matched by its economy. Although an enormous sum had been spent on the original research, future military costs would not be beyond the reach of small countries." – Lynn Montross, War Through the Ages, (2<sup>nd</sup> Ed. (1946)), p. 951 (emphasis added).

- ✓ Thus, the fief-estate and strict class system of the Middle Ages served as a boundary-control system for commerce, communication, ideas and movement.
- ✓ This text does not appear in the 3<sup>rd</sup> Edition published in 1960, whose end was extensively rewritten to cover the aftermath of WWII, the beginning of the Cold War and the Korean War. Assuming that Lynn Montross did not live in an intellectual vacuum, this text is valuable as an artifact of the early Atomic Age.
- ✓ The ensuing Cold War erased the optimistic idea that nationalism was finished (and thus the text was omitted from the 3<sup>rd</sup> Edition), but it is still a good commentary on historical boundary control. The erasure of post-war optimism is reflected in the last chapter added in the final 1960 Edition: "The sequel in Korea."
- ✓ It is sad that this text did not make the later edition because it contains very many interesting and colorable macro-historical ideas.
- ✓ Montross might now be called a globalist, liberal or urban intellectual elite. Despite the quick fading of post-WWII hopes for the world, in some sense, his vision has come true, beginning with the collapse of the Soviet Union and Warsaw Pact in 1989-1990 and the emergence of the internet. Globalism, multiculturalism, and multinationalism progressed to such a degree that it became a defining issue in the 2016 elections; the result in the U.S. and Europe have been framed by pundits as a nationalist backlash to globalization.

<sup>11</sup> Commentary: I believe that they should discontinue the halftime show at the Super Bowl. Whatever purpose it had has long been worn out, twisted, and deformed. Everything is now a controversy, everything is parsed for political statements, the simple entertainment value is gone; it is now farce, reduced to overdone art (gobbledygook), pretensions, and a nearly unrecognizable mish-mash of the performers' hits. In 2019, if not in previous years, there was controversy about the halftime show weeks *before* the Super Bowl – because it was being held in Atlanta, NFL players had knelt in protest during the National Anthem, and well ... because everyone wanted to make a statement by not showing (thanks to Channel 11, WXIA-TV Atlanta GA for the video news report) or saying something stupid, or accepting the invitation and then having to publically justify it. It is not just the pundits or the politicized climate of the country that made it so, the performers have contributed equally to the demise of the halftime show.

- ✓ The phenomenon of modern media, especially including social media, celebrity media, and politicized news networks and websites, has become like the stock market in the 1920s before the crash of Black Tuesday, 1929: Everyone is doing (in this case, saying) whatever they want because they can, but few realize that the collective effect of it is detrimental to our civilization and most have been slow to take it seriously. The social and internalized individual controls on behavior, thought, and speech (without need for government oversight, e.g., censorship) have slipped away along with respect for intelligence and education. A price will be paid before society adopts to the new technologies and finds, enforces new rules of behavior.

<sup>12</sup> Citation: This situation is repeated on several websites, including <https://history.aip.org/exhibits/curie/ra-dinst1.htm> and Business Insider (<https://www.businessinsider.com/marie-curie-biography-2015-11>).

- ✓ Considering the things that had happened to her, the anti-Semitism aftermath of the Dreyfus Affair, her embarrassing rejection from the Academy, the scandalous articles published about her in the newspapers, she basically told the French government to 'shove it.' She was about science, not awards or politics.

<sup>13</sup> Commentary: I don't care much for humanity nowadays, and humanity never cared much for my company either. I am just a fixture. Thus there is a balance to things, even if negative.

*See Appendix WR – Writ Examples, Land Grant Writ, Naturalization*

*“Every age, every culture, every custom and tradition has its own character, its own weakness and its own strength, it’s beauties and ugliness; accepts certain sufferings as matters of course, puts up patiently with certain evils. Human life is reduced to real suffering, to hell, only when two ages, two cultures and religions overlap... Now there are times when a whole generation is caught in this way between two ages, two modes of life, with the consequence that it loses all power to understand itself and has no standard, no security, no simple acquiescence. Naturally, everyone does not feel this equally strongly.”*

– Hermann Hesse, Steppenwolf (1927)

**Whac-a-Mole:** Solving social problems is like a game of whac-a-mole (or perhaps like sleeping on a lumpy mattress). There is no perfect society and any society that thinks it is perfect has a bigger problem. The most pressing social problems attract the most attention and generate political will and cultural resources to address the problem. The more radical or determinedly the solution is applied, the more likely it will generate unintended consequences and/or create another vexing social problem. Thus, the strategy for solving social problems is one of carefully fencing in the problem, keeping it from spinning out of control, or merging with other problems.

✓ CDIV – Page Not Found!☺

*“A movement is pioneered by men of words, materialized by fanatics and consolidated by men of actions.”* – Eric Hoffer, The True Believer (1951), p. 134

**Fuzzy Groups:** A Fuzzy Group is a specific formation of cultural traits and active Constructural Elements on the Public Spaces that represents a *potential* of the civilization at that time and place; a collusion of circumstances, people, and forces that *might* result in any number of events or developments. Depending on the actual outcome (hindsight), any of the pieces in the formation may be part of the group, may not be part of the group, or any continuum in between.<sup>1</sup>

➤ **Fuzzy Concepts:** A fuzzy group is a fuzzy concept (see Rudolf E. Kálmán feature quotes, 2 The Big Bang, *supra*) in that it describes something meaningful and useful but inexact about the internal processes of the gestalt structure. It provides a forward-looking, proactive name for the game that biographers, journalists and historians have long played in attempting to holistically describe *in hindsight* the personalities, groups, influences and milieu relating to certain seminal events. Fuzzy Groups are both spatial and temporal at the same time; spatial due to the people and influences that converge in a particular location and temporal because of the strings of events and influences leading up to that moment. Inexactitude is at the heart of the Fuzzy Group; the more closely it is defined, the less useful is the concept, e.g.:

✓ “HIEROPHANY (from Greek hiero-, ‘sacred,’ and phainein, ‘to show’) is a term designating the manifestation of the sacred. **The term involves no further specification.** Herein lies its advantage: It refers to any manifestation of the sacred in whatever object throughout history.” – from Encyclopedia.com article, “Hierophany,” captured October 2, 2019 (emphasis added).

- See also discussion of religious structures in GGDM, 4 Fallen to Earth, p. 1553 *et seq.*, *infra*.

Although not quite on point, see Thorngate's Postulate of Consummate Complexity, 2112 Absurd Words, *supra*. G.K. Chesterton is probably the grandfather of modern 'fuzziness':

- ✓ "THE real trouble with this world of ours is not that it is an unreasonable world, nor even that it is a reasonable one. The commonest kind of trouble is that it is nearly reasonable, but not quite. Life is not an illogicality; yet it is a trap for logicians. It looks just a little more mathematical and regular than it is; its exactitude is obvious, but its inexactitude is hidden; its wildness lies in wait." (from *Orthodoxy*, Ch. 6 (1908)). See top of 4 Government Titles, p. 626, *infra*, for a full feature quote.
  - ✓ Fuzzy group theory and fuzzy sets have been part of modern mathematics and coding theory from the 1960s. Since I am admittedly a math moron (or any advanced quantitative logic), baffled by anything past intro algebra (and it is not likely to change now that I am over 50), mathematical theory was not the inspiration for Fuzzy Groups in GGDM, but for all I know, there may be a transferrable application between fuzzy group theory in the real world and GGDM's peculiar macrosocial ideas. I do admit that at least since the 1990s, I had heard of fuzzy logic – I bought a book on it in the 1990s (Bart Kasko, *Fuzzy Thinking* (1993)) but never fully read it (it's now 2019, I should add it to my bucket list). I may have heard of fuzzy logic in 1989-1991 while at Lycoming College. So any understanding I have about fuzzy anything is in the philosophical range (e.g., the Laws of Thinking) and not mathematical. Very sad but sorta true.
  - ✓ Is an emergence or incommensurability (discussed again in Order of Genesis, 1 Order, p. 522, *infra*) a fuzzy sort of thing where the more we try to define it, the less useful it is as a concept?
  - ✓ I never set out to be the 'structuralist of civilizations,' but here I have arrived. It is the seemingly natural and logical result of the question I posed and the task I set for myself long ago. *Because my approach was via a simulation, I more directly address the macrostructure of civilization than macrosociology does,<sup>2</sup> judging by reading Professor Elwell's books.<sup>3</sup>* I would have found it supremely amusing 30 years ago to know that I might one day be called a macrostructuralist, I was not wise as to the end. 'Structuralist of civilizations' is, of course, a made up expertise and a false claim, just like the 'Christian numerologist' huckster mentioned in 3 The Big Bang, p. 15, *supra*.
- Fuzzy Formations: It's a bit ironic that something 'fuzzy' has a specific formation, but it's a necessary concession to the limits of the game format. A Fuzzy Group must consist of:
- ✓ Two identical Proficiencies and one Aspect identical to the one in the center, forming a triangle around, and adjacent to, one Aspect; or
  - ✓ Three identical Proficiencies forming a triangle around, and adjacent to, one Aspect.
    - Thus, it will require at least two Culture Power activations to obtain the cultural traits necessary for a Fuzzy Group – if the Constructural Elements are already activated; planning is also required to make sure adjacent spaces are available on the Public Space.

Finally, at least one of the Cultural Traits Pieces of the Fuzzy Group must be adjacent to a Friendly or Naturalized colony that has an active Ideological Constructural Element and either the Symbolic or Epistemological Constructural Elements active. The colony planet adjacent to the Aspects may or may not be included in one side of the triangle. The Fuzzy Group

formation may be present, but if the active Constructural Elements are not present, there is no Fuzzy Group. Fuzzy Groups may interlock and overlap, share some of the same Cultural Traits Pieces, Fuzzy Groups may come, Fuzzy Groups may go quietly, but the fuzz never fades. The active Constructural Elements used in the formation must be on the same adjacent colony at the same time, however.

- ✓ The competing placement requirements of Cultural Aspect Pieces (see A Bustle in Your Hedgerow, 2 Culture, pp. 365-366, *supra*) and Cultural Proficiency Pieces (see Perfect Proficiencies, 3 Culture, p. 381, *supra*), requires some planning of colony placement on the Public Space, which must also have a Pathway connecting it to a Government Title (see The Claaaw is Our Master, 2 Government Titles, p. 597, *supra*).

Positions should be cognizant when placing Fuzzy Groups, and especially the piece adjacent to the colony, of turnover on the Public Space due to aging of Aspects (see Between the Candle and the Stars, 2 Culture, p. 366, *supra*) or loss of Proficiencies due to Government Title disruption or change or activation of the Census Power (see And the Cradle Will Rock, 3 Culture, p. 382, *supra*). A Disruption Event or *Apostasy* triggered by a Kairotic Moment at the colony that inactivates the required Constructural Elements can also disable, derail, the Fuzzy Group. Thus, like the Cultural Pieces that form them, Fuzzy Groups are a momentary phenomenon.

---

*“There are four emotions that activists often want viewers to feel. These emotions – shock, shame, fear, and anger – are believed to be the catalysts for social change.”*

– from Wikipedia article, “Culture Jamming,” captured August 21, 2019

---

**Actualization:** The purpose of a Fuzzy Group is Actualization; Actualization is the moment when the *potential* becomes **reality**.<sup>4</sup> Actualization of a Fuzzy Group does not require an activation of the Culture Power; Actualization may occur at any appropriate time, and a position may Actualize as many Fuzzy Groups in one Regular Turn as desired or possible. When a Fuzzy Group is Actualized, the Aspect(s) and Proficiencies (the Cultural Trait pieces) making up the Fuzzy Group are removed from the Public Space in exchange for a Writ effect (hint, this is an important cycling or turnover mechanism on the Public Space). Additionally, there is a 50% chance that the Ideological Constructural Element on the colony used will become inactive. Actualizing a Fuzzy Group is *the only way to activate Writs*, which provide the effect.

- ✓ Failure to activate the Writ because of Power Activation failure will cause the Fuzzy Group to fail to actualize and the Cultural Trait Pieces are **not removed** from the Public Space.
  - ✓ A Writ is an official Interpretation, see Official Interpretation list in 1 Dreamtime, p. 130, *supra*. Writs are detailed in the next section.
  - ✓ The Culture Power must be activated to create the Writ initially, activation of the Culture Power is never required to use the Writ unless that is part of the conditions of the Writ Interpretation.
- **Feedback Loop:** It can be assumed within the game that positions create and actualize Fuzzy Groups for an end that they view as positive to their civilization or position in the game,

therefore, there is a parallel to self-actualization (see EN 2, *ut supra*). However, it should NOT be assumed that the actualization of Fuzzy Groups is always to the better of civilization – one only need to look to the actualization of the forces in play in Germany in the early 1930s; it is possible that the Concierge (depending on the game and preferences) could Intervene to actualize a Fuzzy Group and produce non-beneficial results (except for the freeing up of Public Space... with the non-productive loss of pieces) or Intervene to change or add to the results of an otherwise ‘positive’ actualization.

- **Soph-Ants:** Thus, in GGDM, a sophont species without emotions (*alterity!*) might not have Aspects, depending on what you think an Aspect represents, see 2 Culture generally, *supra*. If a position has no Aspects, then the position cannot create Fuzzy Groups, which would be a major drawback in GGDM play. However, if some players wanted to play such a position, there may be other offsetting advantages, for example, most will agree that a major part of entropy in our lives as humans and as a human civilization, arise from emotions and emotional reactions; e.g., such positions may not be affected by *Apostasy* (see Alieney Apostasy, 3 Disruption, p. 283, *supra*) or Kairotic Moments, *infra*. Intellectuals and literary types generally describe human emotion as both a drawback (when leading to unreasonable behavior, disruptive behavior, and illogical conclusions or destructive processes) and a boon (when leading to achievement, greatness, family love and bonding, social stability, belonging), negative and positive emotions can have both effects and are indistinguishable on that level. But it’s what makes us human they say. A position without Aspects should be worked out ahead of time, perhaps the position gains advantages in RP production, less Interventions (entropy can still happen without emotions, a rusting nail has no emotions nor does air in a room) and/or some other benefits (and liabilities) specific to the situation.

---

*“By placing the authority of the Roman state and the imperial office to police and enforce right belief, Constantine created a model that would have a long and ambiguous history. Councils of bishops, ostensibly informed by the Holy Spirit, would henceforth define what was orthodox. Those who chose to believe otherwise would find themselves branded heretics, and excluded from the communion of orthodox Christians. Bishops and theologians would find an almost limitless number of problems to debate – over the relationship of God the Father and God the Son, over the divine nature of Jesus, over what that meant for the status of his mother, and so on. Each solution opened up a whole new set of problems.”*

– Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” Aeon, January 30, 2017

---

**Fuzzy Beliefs:** An article I read (but cannot now find to cite here) that was written in defense of organized religion captured this point perfectly: The article argued (in part) *that most people’s beliefs are a psychological mumbo-jumbo of vague spiritual concepts* and needs organized religion to clarify, organize, strengthen and correct spiritual concepts. Thus, in arguing in favor of organized religion (e.g., churches) the writer had to admit that the natural and normal human spiritual life is a bunch of fuzzy concepts and argue that this is somehow bad for individuals,

families, groups, and civilization and organized religion is the better alternative. This seems like a vaguely Bonhoeffer-like argument and I suppose Plato would agree as well.

- ✓ “The middle and late third century also witnessed the first dramatic outpouring of Christian theological works. Some of these theological works focus on detailing heresies – wrong beliefs – of which there was already a rich variety. Because Christianity centred so much on beliefs rather than ritual behaviours, the policing of what did and did not constitute true and acceptable belief has always preoccupied Christian theologians and been a central dynamic in Christian politics.

The rulings (‘canons’) of the first council of Christian leaders to survive provide more insight into the Christianity of this period. Held in the obscure Andalusian town of Elvira, the council shows us a world in which the gathered church leaders found it necessary to legislate against a large number of mundane activities that they determined were prejudicial to Christian wellbeing. The council decided, for instance, to forbid the holding of certain kinds of public office (such as the office of *duumvir*, effectively the local mayor, as the role might require inflicting punishment or abusing other Christians).” *Id.*, feature quote above.

It is worth noting that following every ecumenical counsel, at least the modern ones, and probably every occurrence from the very first, a faction of the Roman Catholic Church breaks off.

- ✓ For example, following Vatican I in 1869, the Old Catholic Church broke from the Roman Catholic Church and formed the Union of Utrecht;
- ✓ Following Vatican II, in 1962, a group of sedevacantist broke away, some of them formed the True Catholic Church, eventually held their own conclave who elected their own Pope, Pius XIII in 1998 (Lucian Pulvermacher b. 1918 d. 2009, lived in Kalispell, Montana – not to be confused with the 2013 limited television series, “The Young Pope,” featuring a fictional Pope Pius XIII).

This suggests perhaps that the Roman Catholic Church should stop holding ecumenical councils (they have them far less frequently now than in the early centuries)☺; and more importantly, in politics as well as religion, that humans find it easier to believe in *fuzzy concepts* than doctrinal pronouncements; that when fuzzy concepts are clarified, rationalized, and made philosophically consistent, divisiveness and division occurs over the details (e.g., the Marburg Colloquy). This is also consistent with election-year politics. Except in science, engineering, and extremely practical applications where logic, facts and figures are necessary, *humans prefer the fuzzy*.

- Pieces of April: Did Empress Josephine ever really love Napoleon? *Love* is really the ultimate in human fuzzy concepts. How many millions of poems, songs, and other literary works have been written wondering what the significant other is thinking and are they really in love this time? Or what happened to their love? Or passionately professing their new-found love trying to convince the other? Do you know what love is? You do, but no.

Thus, the core problem of exclusive monotheistic religion – see Dream Police, 1 Dreamtime, p. 132, *supra* – is the social version of the very same that has been going on between men and women for thousands of generations since the feeling of ‘love’ was described separately from hetero- or homo- sexual lust and possession of women as sex objects (i.e. ‘permanent bonding’ in anthropology). Since the transference of parental to romantic love began. To a lesser degree, parental love is also questioned periodically, are parents angry to be saddled

with children, do they actually resent their children's success or push them to success to vicariously live what they did not accomplish in their youth?

- ✓ Monogamy, like worshipping the one God, has been taken as a sign of authenticity, as neither existed in ancient Rome who were called unfaithful and polytheistic.

It is thus that one may wonder if God really loves us as the priests have long insisted? We cannot see inside God's head (so to speak) or 'heart' as the old metaphor goes, so God is representative of our unsureness of the affections of both our parents and our romantic love interest. Thus, while Church officials were obsessed with whether individual believers really loved God, they went about insisting that the Abrahamic God loved his creation unconditionally (like a parent), based largely on Noah, Moses and Jesus, even in the face of the destruction of the Second Temple and the Roman genocide and scattering of the tribes.

*“I sang Alleluia in the choir  
I confessed my darkest deeds to an envious man  
My brothers they never went blind for what they did  
But I may as well have  
In the name of the Father, the Skeptic and the Son  
I had one more stupid question*

\*\*\*

*We all had delusions in our head  
We all had our minds made up for us  
We had to believe in something  
So we did.”*

– Alanis Morissette, “Forgiven” (1995) <sup>5</sup>

**The Happy Hurkle:** Happiness is the most basic drive of humanity, both individually and culturally, from the lack of negative stimuli – lack of negative stimuli is a form of happiness – to the more abstract ideals of sapient. If you have to think too hard about that, you are not a human.

- ✓ “Did I request thee, Maker, from my Clay, To mould me Man, did I sollicite thee, From darkness to promote me, or here place?” – John Milton, “Paradise Lost” (1667), Book 10, 743-745.

Everyone has the same singular problem, regardless of how it is phrased and whether they realize it or not: None of us asked to be here. And short of death, we are not allowed to leave. Getting into a car and driving or getting on a space ship and going out there won't change those facts. Our problem is existence. Happiness is a salve.

Some people think that death is the singular thing that all humans have in common (and in fact, all living things); they confuse the symptom with the cause: You cannot die unless you have been alive, here in this universe. Death may be the great equalizer (*omnia mors aequat*), but it is not the cause of the Void, not the problem of humanity.

- **Meta Aspect:** Happiness forms a meta-aspect of all human civilizations and is linked strongly with the supra-legitimacy, security, that is, a lack of external negative stimuli, even if that means taking food from others to avoid hunger – a negative stimuli. Thus it is that security becomes offensive rather than merely a guard of happiness.

- ✓ Meta as a prefix here is used in the usual sense of ‘beyond,’ ‘behind,’ ‘transcendent’ (Merriam-Webster online dictionary at *meta-* prefix at **2:** and **3:**).

Happiness (and its little cousin, love) is the singular obsession of humans individually and because we have convinced ourselves of its existence (mostly without tangible proof), we find it very difficult to explain exactly what it is (or what love is) or why; as G.K. Chesterton observed, “It is very hard for a man to defend anything of which he is entirely convinced.” (*Orthodoxy*, Ch. 6 (1908), see full feature quote, bottom of 4 Government Titles, p. 634, *infra*). G.K. Chesterton was, unsurprisingly, engaged in Christian apologetics, and if the masses are convinced of the existence of happiness, then the function of religion is the mystical happiness of the followers, the connection of petty human need to the greater cosmic order, to raise icons, ideas, images, between us and the Existential Void (e.g., afterlife, ritual burial).<sup>6</sup>

Most religious text is either history or instructions on and discussion of happiness, or both, and literature follows generally in the same pattern. The struggle between religions and denominations, in a solely religious context, exists between happiness and the Existential Void, but of course, various factors of civilization are usually in play.

- ✓ “If all of Dalrymple’s copious writings have a central theme, it is the destructive power of bad ideas. And for Dalrymple, the most destructive bad idea of all, common to utopian political thinking and some schools of psychiatry, is that we can reshape human nature. To reshape human nature means that we can transcend the limitations of our personalities, avoid both the need to take responsibility for our actions and the necessity to make judgments, and above all, eliminate unhappiness.

As Dalrymple points out, the word ‘unhappy’ has been all but banished from the language. Instead, we say that we are ‘depressed’: If someone admits to unhappiness, it might be that his own ill-conduct, foolish or immoral, has contributed to it, but if he is depressed [he] is the victim of an illness, of something which, metaphysically speaking, has fallen from the sky. ...

Elevating ordinary forms of discontent such as winter blues (‘seasonal affective disorder’) and ingrained personality traits like shyness (‘social anxiety disorder’ or ‘avoidant personality disorder’) into psychological disturbances not only allows us to assume that we can have a life free of unhappiness, it also leads to a tendency to medicalize everything.” – John Broening, “Book Review: ‘Admirable Evasions: How Psychology Undermines Morality,’ by Theodore Dalrymple,” *The Denver Post*, June 4, 2015.

- ✓ “A change in the English language attests to this medicalization of ordinary life: The word ‘unhappiness’ has almost fallen out of common parlance in favor of the medical term ‘depression.’ While Dalrymple does not deny that the term has legitimate applications, its overuse subsumes all human dissatisfaction under medical dysfunction.” – Spencer Case, “Doubting Psychology,” [Review of Dalrymple’s *Admirable Evasions: How Psychology Undermines Morality* (2015)], *National Review*, March 21, 2015.
- **Be Fruitful:** Every religion has a creation story in which is described how some supreme being or force or spirit or whatever is the case, put us here. Maybe it also vaguely describes that or how the rest of the universe was created, but the point of all of them is that we were put here. That is all we are really interested in hearing anyway.

All creation stories describe a situation in which our consent is irrelevant which parallels the fact that we are here, were born into this world, into existence, without our consent. This creates a blame-shifting mechanism that absolves our parents of our birth and absolves us when we become parents, because that is just the way life works, the way it was created for some higher purpose that we don't know, and that religion discourages us from guessing at:

- ✓ This blame-shifting mechanism in creation stories is one of the major services religion provides as the agency of the human happiness meta-Aspect.

Since 1982, in a few states, a child who has an inherited genetic defect or disability that was known in his parents before birth can sue his parents for being born. The key for the 'Wrongful Life' case is the foreseeable, preventable 'harm' of being born, and actual harm from being born. The 2018 Lebanese documentary-like fictional film Capernaum tells the story leading to why a 12 year old boy sued his parents for being born into poverty.

On February 7, 2019, the BBC ran a story about an Indian man Raphael Samuel (not to be confused with the British Marxist historian) who is suing his parents for being born.

- ✓ "In a statement, his mother Kavita Karnad Samuel explained her response to 'the recent upheaval my son has created.' 'I must admire my son's temerity to want to take his parents to court knowing both of us are lawyers. And if Raphael could come up with a rational explanation as to how we could have sought his consent to be born, I will accept my fault,' she said." – Geeta Pandey, "Indian man to sue parents for giving birth to him," BBC.com, February 7, 2019.

Anti-natalism is, of course, a secular philosophy and as is well-documented, and long-noted, secularism has replaced religion in most of the world, it is a pillar of modernity. Although most people still vaguely believe in some sort of creation – usually a mish-mash of religious notions with modern science – the retreat of religion has pushed aside the traditional blame-shifting mechanism, bringing us starkly to the edge of the Existential Void.

- Music Utility: When secularization, new technology and evolving technique, and business models, made popular music emergent in the mid-20<sup>th</sup> Century, contrary to and not under the control of established religion, when music became the happiness of new youth in the 1950s and early 1960s, it became a threat to established religion (e.g., it was 'devil music'). "Cos rock & roll is my religion and my law." – Ozzy Osbourne, "You Can't Kill Rock 'n Roll" (1981). Some tried later to reincorporate the new popular music into religion with varied effectiveness – anyone remember Stryper?

- ✓ "Utility is a subjective concept. It denotes 'satisfaction' (or 'happiness' or 'contentment'). It rises if and when an individual increases his or her state of satisfaction. Conversely, if and when someone considers himself in a worse state of affairs, his utility decreases. What is more, utility is an *ordinal concept*, meaning that utility cannot be *measured* in terms of higher or lower utility from the viewpoint of an individual; and changes in utility among different people cannot be *measured*. All one can say is that utility is higher or lower from the viewpoint of an individual. [Murry N.] Rothbard explained why this is: 'In order for any measurement to be possible, there must be an eternally fixed and objectively given unit with which other units may be compared. There is no such objective unit in the field of human valuation. The individual must determine subjectively for himself whether he is better or worse off as a

result of any change.” – Thorsten Polleit, “What Can the Law of Diminishing Marginal Utility Teach Us?” Mises Institute, February 11, 2011 (emphasis in original).

*Constant music, even the kind I like, quickly loses utility.* Within the game of GGDM, even if Happiness is not on the position’s secret Aspect List, it must be considered, like the supra-legitimacy ‘security’ to be hovering in the background above all other considerations of the moment. One might imagine another alien species having a different meta-aspect, but nearly every alternative humans can formulate – work (unless the race is a bunch of bees without free will), cosmic crusade, moral civilization, or whatever other terms are used – generally reduce to the human concept of happiness; that is, if those things were considered meta-aspects of an alien civilization, they would essentially translate to a form of happiness. Perhaps this is because happiness is so vague and poorly defined among humans (the weak case) or because we are simply ‘hard wired’ to seek happiness above all else (the strong case).

- ✓ What is most odd is that I don’t seem to get anything done unless I am angry at the universe. For how many others is this true? What emotes other people? The primitive existential threat reaction, anger and all of the other stress and negative emotions have a relationship to focus that happiness and the joyous can never share. So much more comes from humanity’s negative emotions than positive emotions.
- Neurotic Religion: Is religion possible without being neurotic? Is neurotic religion a modern thing? The late Romans were a bit neurotic about their religion; e.g., the cults, but was it something spread by contact with Abrahamic religions, were the ancient Greeks and Persians neurotic? Now, there are people who will immediately jump in to say that I am assuming without foundation that religion is neurotic – a sort of circular argument – but just go with it for now and follow the line of thought; the idea has been around for a long time, to wit:
  - ✓ “In Obsessive Actions and Religious Practices (1907), his earliest writing about religion, Freud suggests that religion and neurosis are similar products of the human mind: neurosis, with its compulsive behavior, is ‘an individual religiosity,’ and religion, with its repetitive rituals, is a ‘universal obsessional neurosis.’” – from Wikipedia article, “Sigmund Freud’s views on religion,” citing to Peter Gay, Ed., The Freud Reader (1995).
    - “If there is a blurry line between psychology and reductionism, then psychologists have themselves, in part, to blame, because too many of them have been eager and uncritical in their embrace of reductionist accounts of the mind. At the dawn of the 20<sup>th</sup> Century, many people were enamored with the ideas of Sigmund Freud, who treated everything noble in human thought as disguised impulses toward sex and aggression. Unsatisfied desire was supposed to be the source of much – not to say the root of all – evil. Dalrymple alleges that Freudianism is not only false but harmful because it provides a scientific rationale for destructive self-indulgence. ... Today, neither Freudianism nor behaviorism is taken seriously. Psychology students have difficulty understanding how either came to have such sway over ostensibly scientific minds. But the storm hasn’t passed. Dalrymple wants to persuade his readers that the reductionism that gave rise to both remains as entrenched as ever, and may even be gaining ground.”

– Spencer Case, “Doubting Psychology,” [Review of Dalrymple’s Admirable Evasions: How Psychology Undermines Morality (2015)], National Review, March 21, 2015.

- ✓ “Freud famously showed how religion was merely the result of deep-rooted neuroses and before him Karl Marx demonstrated how it was the consequence of socio-economic injustice. In the 20<sup>th</sup> century, BF Skinner contended that it was essentially a kind of cosmic behaviourism, primitive societies justifying and enforcing their ideas of good and bad through concepts of ultimate reward and sanction. Today it is popular to argue that religion is an evolutionary phenomenon, the result of (some combination of) our developing minds, recognising agency, fearing death, and needing social cohesion. This is not an altogether happy history – posterity has been none too kind to Marx’s, Freud’s and Skinner’s theories – but there has, at least, been some sign of progress. The direction of travel has clearly been towards seeing religiosity as something intrinsic to human nature rather than something forced upon it by adverse social, political, familial, or personal circumstances. Such deep roots in human nature, coupled with the fact that demographic data repeatedly show that the religious outbreed the irreligious more or less anywhere you go in the world do rather seem to suggest that religion is unlikely to disappear in the near future.” – Nick Spencer, “It seems religion is not a neurotic accretion on human nature,” The Guardian, January 8, 2011.<sup>7</sup>

Page | 413

A pragmatic view of ancient religious history *is a struggle against neurotic religion* in the form of rituals, offerings and animal/human sacrifices as symbolic acts connecting the people to their deities. In India, it was the evolution away from ancient Vedic sacrificial religions (and the priests who derived their power from it) in stages through Hinduism, Jainism, and Buddhism; in the West, it was the rabbinic struggle in Judaism against the Sadducees (the temple priests), and in this vein, also Egyptian religion and Roman state religion (see Symbolic Constructural Elements, *et seq.*, 1 Constructural Elements, p. 176, *supra*). Once a ritualistic sacrificial religion is established politically in a civilization, what leader can risk opposing it? Any ill event will be blamed on the interruption of the established priestly rituals. Ironically, however, by destroying the Second Temple, the Romans destroyed the Sadducees and forced the Judaism reformation in favor of the rabbinic ideal of prayer and devotion over sacrificial offerings, which carried into Christianity, overwhelmed and outlasted Rome.<sup>8</sup> The neurotic urge still exists even in Christianity, and has been long exploited by the Church.

- ✓ Neurotic Paradox: “The persistence of neurotic ... symptoms or behaviour despite their distressing qualities and the desire of the afflicted person to be rid of them. For example, a man with obsessive-compulsive disorder may wash his hands many times a day until they bleed, and may consider this behaviour unnecessary and maladaptive, or even ridiculous, yet feel compelled to continue doing it, and this appears paradoxical.” – from the Oxford Index, citing to Andrew M. Coleman, A Dictionary of Psychology (3<sup>rd</sup> Ed, 2008).

Arguably every religion began as a ‘cult’ (depending on your definition of cult) of unhappy people that gained mainstream support, respectability, power, and became significantly entwined with, and indistinguishable from, their civilization (no religion instantly began with hordes of followers). There is no riddle here. Those ‘susceptible’ to cults (and radical ide-

logies) are those who want external help in shaping a new meaning, new worldview, in opposition to current prevailing worldview, in which they can find a special place, hold, and internalize as faith rather than on the basis of reason and learning. That is, they don't want to question it and they don't want anyone else questioning or rejecting their beliefs; such a desire naturally links to violence (especially in the mainstreaming process of cult to religion) and in some cases, mass suicides when externally threatened.

- ✓ “One interesting side bar of the investigation of [the Order of the] Solar Temple is knowledge of the demographic composition of the group. Cults are typically perceived as largely consisting of young people, and/or people who are overly susceptible or even stupid. Solar Temple members simply don't fit these stereotypes. The typical member was middle-aged and middle class Swiss and Canadian citizens (Introvigne 1996:3). There were also several persons who were accomplished citizens including Camille Pilet, a recently retired director and international sales manager for the Swiss multinational watch company, Piaget. Other members included Patrick Vuarnet, son of the president of an international fashion company and former Olympic champion Jean Vuarnet, and Robert Ostiguy, mayor of Richelieu, Quebec (Introvigne 1996:3-4). There were reports that Princess Grace of Monaco was involved, but Introvigne disputes that in a press release for CESNUR.” – Jennifer Sloan, University of Virginia, “Order of the Solar Temple,” on the WRSP website (<https://wrldrels.org/2016/10/08/order-of-the-solar-temple/>), updated July 24, 2001.
  - The Order of the Solar Temple was a Neo-Templar cult that committed mass suicides in 1994 and 1995 at several locations, some of the victims may have been murdered.

How many sad post-breakup love songs have vowed never to love again? Is the human need for happiness neurotic – in which case a Meta-Aspect or Supra-Legitimacy can be considered the neurotic core of sapience – or is it more like needing food and water (which almost no one calls neurotic unless it is clearly excessive and harmful)?

- ✓ Addiction (and consumerism) is the modern human neurotic paradox, both individually and as a civilization.
- ✓ Love is the human neurotic paradox, especially when we take the forever vows; what could be more neurotic than humans vowing forever?
  - “How can you help it when the music starts to play, And your ability to reason is swept away, Oh-oh-oh, heaven on earth is all you see, You're out of touch with reality.” – The Main Ingredient, “Everybody Plays the Fool” (1972).

Neurotic religion forms the current human vision of love and mating (just listen to our songs, watch our movies); a neurotic religion (and neurotic paradox) of what we think of as our perfect mate. A particular form of neurosis distinguishes Abrahamic religion from those that came before. The language of religion has crossed over into the language of love songs, e.g.:

- ✓ “There's something in my eyes, you know it happens every time I think about a love that I thought would save me.” – Jim Croce, “Operator” (1972).

Countless thousands of popular love songs – just about every other one – have the ‘personal savior’ theme somewhere in the lyrics, stemming perhaps from late Victorian ideals of the

woman as the gentle savior (‘better half’) of each man through marriage and family. One should not miss the forest for the trees here, it is not surprising that the current version of neurotic religion of the mate are related to both the parental god of the Abrahamic religions and the early adult transference of bonding from parental love care to intimate love mate. This is what anarchist free love ideas sought to separate: neurotic love from sexual intimacy and reproductive drive.

✓ See Leap Into the Void (*sacrificium intellectus*) discussion, 3 Kairotic Moments, p. 1448, *infra*.

- Temple Prostitution: Many, if not most, people ‘confuse’ sex with happiness, just as they do morality with happiness, and sex with morality, and all of it with mortality – in the sense that the boundaries are often fuzzy in life. Sex, like morality, seems simple and wonderful in the idea, but is rarely so in actuality. It is not surprising thus that there is a long practice of temple or sacred prostitution throughout history, granting respectability and support to the prostitutes (sometimes making them priestesses), and control to priests, and intertwining sexual release and satisfaction with ritual and cultural sense of happiness and mystical cosmic transformation.

An attempt to revive this practice in a modern context by the Children of God (aka Family of Love) in the 1970s, called “Flirty Fishing” was ridiculed by those who likely didn’t know (or care about) the history of their own religion: It is probable that the early Israelites learned temple prostitution from the Canaanites and continued the practice. Temple prostitution was also known among the Greeks, the Romans, the Mesopotamians, the Egyptians, the Aztecs – each with their own local meaning and form attached.<sup>9</sup> On the other side, I once read a science-fiction story – and I do not now recall the title – about a society much like ours where there was a profession called ‘socialators’ who were effectively empathic social psychologist and social workers who provided counseling, encouragement and non-gratuitous sex where needed.

✓ “It was that voice, and his hands – pinching my bottom, if I wasn’t careful – that helped me imagine what he must have been like, before. ... I was afraid and a little bit philosophical, so I asked him how he felt about death. ‘I prefer to die than to be weak,’ he said. ‘When you’re old, you’re weak. Sexually. Your knees don’t carry you. What’s the point of living?’” – Nadja Kornith (quoting Gadalla Gubara), “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun ([bidoun.org](http://bidoun.org)), Issue 20, Spring 2010.

- The most common regret of aging is the inability to continue having sex. On the one hand, this must be a truly universal human experience throughout the ages, and in all places, regardless of culture. On the other hand, it is also probably part of our current cultural obsession with sex, sex objectification, sex symbols, heartthrob male and blonde bombshell female celebrities; beyond sex, in old age, we have provided no alternative framework or meaning – only loss remains.
- Fanatics Not from Phili: In the Roman world, if you put a knife to a man’s throat, the reasonable man surrenders. The Romans had never met fanatics before going into Palestine; the fanatic is the quintessential unreasonable man and the one thing the Romans did not understand. Although the end result was disastrous for the Jewish people, Judeo-Christian history

records the lasting triumph of the unreasonable men – the late Roman Empire converted to Christianity and lasted only two centuries more, while the fanatics and unreasonable men continued unabated for millennia beyond.

- ✓ “A reasonable man adapts himself to the world; the unreasonable one persists in trying to adapt the world to himself. Therefore, all progress depends on the unreasonable man.” – George Bernard Shaw.

On the other side of the Abrahamic tree, Muhammed was perhaps the ultimate unreasonable man in the Shaw sense. It is thus that Western Civilization and Abrahamic Tradition contains an underlying veneration for and tolerance of – to varying degrees – unreasonable men and often combined with populism, e.g., Martin Luther, Adolf Hitler. Secularization and science (and the medicalization of mental health) have pushed back – and can be characterized in the sense of a general countermovement – against veneration of the unreasonable man in the West.

---

*“When a man asks himself what is meant by action he proves that he isn’t a man of action. Action is a lack of balance. In order to act you must be somewhat insane. A reasonably sensible man is satisfied with thinking.”*

– James A. Baldwin

---

**Human Inaction:** The latter point is perhaps best demonstrated by the anti-Nazi intellectual Kreisau Circle in Germany. They were reasonable men, they were content with thinking about how Germany would be reorganized after the fall of the Third Reich (they were arrested as traitors for assuming Germany would lose the war). But they apparently took no actions.

By slight contrast, the Solf Circle of anti-Nazi intellectuals did take some actions, “Solf and her daughter were responsible for hiding many Jews and providing them with documents for them to emigrate safely” (Wikipedia article, “Solf Circle,” June 23, 2019). And the Solf Circle was the group targeted by the Gestapo for infiltration, whereas the Kreisau Circle was arrested afterward simply because of their links to the Solf Circle. Much of the story of the rise of the Nazis in Germany involves people who talked but didn’t act or who tried to act but were ineffective and amateurish in their resistance; this was well-known by the time that James Baldwin began publishing – his first novel was published in 1953 when he was 29 years old. Certainly, he imputed the same upon the racial discrimination and disparity in the United States, foreshadowing the Civil Rights movement.

However, Helmuth James Graf von Moltke, the leader of the Kriesau group (the name of his family estate where the meetings were held), did take some actions from within Abwehr (contributing to the Destruction of the Abwehr, see 1 Special Operations, p. 1275, *infra*), and tried to become a British intelligence agent, but the British wanted deeds instead of talk (from Wikipedia article, “Helmuth James von Moltke,” citing to Robert Marquand, Christian Science Monitor). So minimal were Moltke’s actions that even the People’s Court was unable to convict him on any bit of evidence, so the infamous judge of that court, Roland Freisler, just made up a new crime (*Id.*, citing to Michael Balfour (1972)), called ‘*de novo* treason’ (treason on the whole, without acts) to get a conviction.

- ✓ “In two letters written to his wife in January 1945 while imprisoned at Tegel, Moltke noted with considerable pride that he was to be executed for his ideas, not his actions, a point that had been underlined a number of times by Freisler.” *Id.*
- Axiom of Human Action: “Action is replacing ‘a more satisfactory state of affairs for a less satisfactory,’ and man must make use of means to attain ends. Means, in turn, are always scarce with regard to the attainment of ends. If means were not scarce, they wouldn’t be subject to economizing, and so there couldn’t be any action – and this is, of course, impossible to believe. It is in this sense that human action is purposeful action – that is, making use of means for attaining certain ends. And praxeology remains unconcerned about the content of certain ends or how concrete ends were motivated.” – Thorsten Polleit, “Human Action Is Purposeful Action,” Mises Institute, August 19, 2011 (available free online), quoting Ludwig von Mises, Human Action (1949), Ch. 1.

This is axiomatically true of Power Activations and Combat Orders in GGDM and of Fuzzy Groups and social movements. The primary control is scarcity of actions. The primary motivation is an unsatisfactory state of affairs. Initially, participants must assume that the state of affairs in the beginning of the game is unsatisfactory to the species, even if not evident, so that they must move out into interstellar space, explore and expand, and make First Contact.

- ✓ “Now Aristotle did believe, I think, that if it could be shown that it was a matter of necessity that men acted in one way rather than another, then our ordinary thought about action and responsibility would be undermined. If human actions were necessitated, there would indeed be something radically wrong with our notions of human action; but, he thought, it was quite certainly false that human actions were necessitated. If this is a correct account of Aristotle, we can see one reason why he does not confront the freewill problem. It is because he thinks that it cannot seriously be doubted that human actions are free from necessitation.” – Bernard Williams, Freedom and The Will (1963), p. 3.
- ✓ “The knowledge that human action is purposeful action has nothing to do with psychology. Stating that human action is purposeful action does not take recourse to assumptions about the actor’s concrete motivation. Non-purposeful behavior is, as far as praxeology is concerned, to be classified as external data, part of the general conditions under which human action takes place. It is outside the scope of praxeology.” *Id.*, Thorsten Polleit.

Praxeology discussions of the axiom of human action is the last thing that any malpractice or securities professional malfeasance (e.g., negligence, failure to supervise) defense attorney wants to hear at trial, because from this, it could be concluded (as a corollary?) that human inaction (even negligence) is also purposeful; the choice, the purpose, the act is not to act when action was necessary. Nor would criminal defense lawyers arguing that their client did not know what they were doing or intend to do what they did, and thus could not have had criminal intent be very happy to hear praxeology arguments in court...

---

*“When taking resolute action, you have to be insane.”*

– dialogue from the Japanese-language tiaga drama series (with English subtitles) *Yae no Sakura* (2013), Episode 1

---

## Endnotes.

<sup>1</sup> Commentary: As an example, the ‘neocons’ referred to in 1 Constructural Elements might, in hindsight, also be considered a historical Fuzzy Group with social and political elements.

<sup>2</sup> Citation: This loops back to the discussion at the top of 2 Culture, *supra*, especially of identifying the internal structures of large distributed systems and careful systems storytelling.

<sup>3</sup> Commentary: That is, I dance in the center of the campfire while others dance around the campfire. This, of course, is a claim that would be made by any serious theorist, Marx and Kant would have said the same.

<sup>4</sup> Commentary: Similarly, there is a concept in humanistic psychology of “self-actualization,” (*à la* Maslow, et al.) which bears some parallels but is not entirely congruent with the concept of Actualization of Fuzzy Groups – either as a game mechanic or to the extent the reader sees it happening in the real world. The primary difference in self-actualization in psychology is that it seems to imply or wish – rather magically – that the ultimate end of human individual development is a high moral/ethical state. In this view, humanistic psychology’s “self-actualization theory,” is the latest version of Ancient Greek philosophy and Abrahamic religion (and perhaps *samsāra*), wrapped in the clothing and language of modern psychology. This is a terribly unrealistic view of humanity (considering the pains the ancients took to establish by reason, morality and perfection, and others to preserve their writing through the ages), but ironically, all of the commonly-stated end goals of self-actualization drive my personal obsession in creating GGDM, the years of development and evolution, and the drive to finish – to actualize – GGDM now – for creativity, knowledge, spiritual enlightenment, and the betterment and survival of humanity (not because that is my basic personality, but because that is what I have been groomed to want).

<sup>5</sup> Citation: “*Jagged Little Pill* received generally positive reviews from music critics. Stephen Thomas Erlewine from AllMusic gave it a very positive review, giving it four-and-a-half out of five stars. He mostly complimented the album’s standout talent saying ‘It’s remarkable that Alanis Morissette’s *Jagged Little Pill* struck a sympathetic chord with millions of listeners, because it’s so doggedly, determinedly insular.’ He concludes, ‘As slick as the music is, the lyrics are unvarnished and Morissette unflinchingly explores emotions so common, most people would be ashamed to articulate them. This doesn’t make *Jagged Little Pill* great, but it does make it a fascinating record, a phenomenon that’s intensely personal.’ Robert Christgau gave it a B+ grade, mainly praising its thematic content: ‘she’s happy to help 15 million girls of many ages stick a basic feminist truth in our faces: privileged phonies have identity problems too. Not to mention man problems.’

David Browne of Entertainment Weekly gave it a middling review, stating that the album ‘is [a hard] swallow. What sounds arresting on a single grows wearing over a full album. Producer-co-songwriter Glen Ballard’s arrangements are clunky mixtures of alternative mood music and hammy arena rock, and the 21-year-old Morissette tends to wildly oversing every other line.’ When listing the album at 45 on the ‘100 Best Albums of the Nineties,’ Rolling Stone commented: ‘*Jagged Little Pill* is like a Nineties version of Carole King’s *Tapestry*: a woman using her plain soft-rock voice to sift through the emotional wreckage of her youth, with enough heart and songcraft to make countless listeners feel the earth move.’” – from Wikipedia article, “*Jagged Little Pill*,” August 21, 2019.

- ✓ Billboard ranked *Jagged Little Pill* the No. 1 album of the 1990s in their December 25, 1999 issue of *Billboard Magazine*. The issue is available for free on Google Books.

<sup>6</sup> Commentary & Citation: Though I have never personally read any Ayn Rand books there probably are some similar threads in GGDM’s philosophies, especially the Existential Void. Her happiness as the ultimate value (Stanford Encyclopedia of Philosophy has a great article on Ayn Rand) is in GGDM terms, functionally just another way of not looking at the Void. I might have agreed more when I was younger than now:

- ✓ “To our surprise, [Brad] Bird’s response was quite candid: ‘Me being the Ayn Rand guy is a lazy piece of criticism.’ ... ‘I’ve read Ayn Rand, and I think young people, particularly when you’re in your early 20s and it’s you against the world, you should absolutely believe in that very, almost strident individualism. But I think, when you become a little older, you see the limits of that; compromise is not a terrible thing always. There’s bad compromise, but there’s good compromise.’” – Brad Bird, quoted in Ryan Lamble, “Brad Bird Responds to Critics of *Incredibles* and *Tomorrowland*,” *Den of Geek*, July 9, 2018.
- ✓ Ayn Rand features in the creation of the Nietzschean race in the *Andromeda* television series, the place where they were created is called Ayn Rand Station which orbits over planet Fountainhead. I recall a scene or two during the series in which Tyr Anasazi is seen reading books by Ayn Rand.
- ✓ However, Ms. Rand arrived at her conclusions about happiness, I am sure my approach is different. Ok, I may have read the Virtue of Selfishness (1964) (or part of it) in my youth; I may have also encountered

echoes of the same ideas when I read Anton LaVey's *Satanic Bible* (1969) in the late 1980s or early 1990s. I recall that I was genuinely disappointed with the LeVey book, I thought he would have something profound to say, he seemed to be obsessed with celebrating his birthday, he made a big deal out of birthdays and the rest was gibberish; whatever I was looking for at that time, the book did not meet expectations.

<sup>7</sup> **Commentary & Citation:** Though “posterity has been none too kind to Marx’s, Freud’s and Skinner’s theories” (*Id.*) (and I don’t think my psychology professor, Dr. Fessler, thought well of B.F. Skinner) they should not be dismissed out of hand, and there is still value in discussing them, like complex television series whose episodes begin with “previously...” I have a selfish motive in pointing this out as I expect my theories to quickly follow those of Freud, Marx, and Skinner, and with considerably less fanfare. Perhaps someone trying to solve a problem a century from now, will find value in GGDM as I did in an obscure 1924 college sociology book by Clarence Marsh Case.

- ✓ Would you go back in time to ancient Greece and tell Plato and Aristotle not to bother with the physics stuff because they are dead wrong and have no chance of figuring it out? Neil deGrasse Tyson might as he stirred up a hornet’s nest by suggesting that philosophy majors make people psychotic, or something like that. Would a physicist from the future come back and tell us not to bother because we have quantum physics dead wrong and no chance of figuring out what happened before the Big Bang? Progress, whether in science, at law, or public policy, requires that we avoid going around in circles reinventing ideas because we don’t know that others before us have already hashed out those arguments; far future post-apocalyptic fiction (e.g., *A Canticle for Leibowitz* (1959), *Thundarr the Barbarian* (1980-1981)) regularly feature the slow progress of rediscovering or reinventing ideas, technology, and knowledge that we take for granted.

<sup>8</sup> **Citation:** “Animal sacrifice is the ritual killing and offering of an animal usually as part of a religious ritual or to appease or maintain favour with a deity. Animal sacrifices were common throughout Europe and the Ancient Near East until the spread of Christianity in Late Antiquity, and continue in some cultures or religions today. Human sacrifice, where it existed, was always much more rare.” – from Wikipedia article, “Animal Sacrifice.”

<sup>9</sup> **Commentary:** The discussion of *temple prostitution* centers currently on India because it is the last place it has recently been in practice. However, don’t be fooled, it has a long history, the Israelites, the Greeks, the Romans, the Mesopotamians, the Egyptians, the Aztecs:

- ✓ “The world of ancient Rome, after all, was one in which initiates of one cult bathed in the spurting blood of a freshly slaughtered bull. Those of another passed the night in temples awaiting divine revelation and sleeping with the sacred priestesses.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” *Aeon*, January 30, 2017.
- ✓ “Having said this, let’s go back to Pre-Columbian Mexico, more specifically, to the golden age of the Aztec empire, between the fourteenth and sixteenth centuries. War was a central factor in the cosmogony of this culture. In fact, because of this focus on war, they managed to rule over smaller groups for a long time. The importance they gave to war was such that they believed that when warriors died, they would go to *Tonatiuhchan*, a heaven that was reserved for those who died in combat or sacrificed themselves, as well as for women who died during childbirth, because they thought their death was just as honorable and required the same strength as going to war. This vision of the world influenced many of their activities, including, of course, prostitution. Aztec prostitutes, also known as *ahuianime*, were mostly associated with *Xochiquetzal*, the goddess of flowers, beauty, love, art, and sex for pleasure, which made her the patron of both artists and prostitutes. This goddess was depicted as a young, beautiful, and cheerful woman who seduced men and inspired the pleasure that’s found in beauty (that’s why she was also associated with art, especially weaving). *Ahuianime* were identified by the way they resembled their patron goddess: unlike the rest of Aztec women, they would wear their hair down or wouldn’t even comb it. They’d paint their faces with a yellowish ink, adorn their bodies with lots of jewelry, and perfume themselves with fragrant herbs and flowers. The sacred link between them and their patron goddess also connected them to the Aztec religion, to the point that they even had a role as priestesses in rituals, especially those involving human sacrifice. This last point is one of the reasons why the Aztec war-centered view of the world gave prostitutes a sacred role as well as protection in their society. More than just giving sexual pleasure, some *ahuianime* were also trained to entertain both soldiers and future victims of human sacrifice with other arts, such as music, dance, cooking, and, according to a research by Geoffrey G. and Sharisse D. McCafferty, some of them even went to war with soldiers to ‘cheer them up’ during battles and motivate those who were scared. Also, during a feast called *Toxcatl*, the *ahuianime*, assuming a role similar to that of *Xochi-*

*quetzal*, had sex with an impersonator of the god *Tezcatlipoca* who was meant to be sacrificed, and afterwards, they were rewarded with all his belongings.” – Andrea Mejía (staff editor), “The Sacred Role Of Prostitution In The Aztec Civilization,” <https://culturacolectiva.com/history/ahuianime-sacred-prostitution-aztec-culture>, November 3, 2017 (emphasis in original).

- ✓ c.f. “But then it all came crumbling down. On an afternoon in early September 2011, a SWAT team of police officers raided the Phoenix Goddess Temple and two affiliated locations in Sedona. It was the dramatic culmination of a six-month undercover investigation into whether the temple was a house of prostitution disguised as a church – a question that first arose after *New Times* published a story in February 2011 accusing it of being a New Age brothel. ... For her role in operating the temple, Elise was charged with more than 100 criminal counts of prostitution, maintaining a house of prostitution, illegal control of an enterprise, money laundering, pandering, racketeering, and conspiracy. When the state looked at a session in the Phoenix Goddess Temple, it saw an often topless practitioner ... giving a seeker ... a sensual coconut-oil massage followed by some sort of sex act that usually included a ‘happy ending.’ ... There is nothing technically illegal about two consenting adults having sex, but since seekers usually left money after their sessions, this was a black-and-white matter of prostitution as far as the state was concerned. Elise maintains that seekers were told before a session that there was no guarantee anything sexual would occur and that any money they decided to leave was purely a gift intended to ‘bless the temple’ and ‘further the ministry.’ To her, the charges and the subsequent criminal trial weren’t about prostitution. It was a battle for religious freedom and the ability to help heal men and women through Tantra.” – Miriam Wasser, “The Trouble With Sex: Why Phoenix Goddess Temple Founder Insists She’s a Priestess, Not a Prostitute,” *Phoenix New Times*, April 13, 2016.
  - Would it be prostitution if the practitioners didn’t receive any tangible benefit or payment for their services? Prostitution for charity and religion? One must assume the State established payment to the practitioners. The mantra of All the President’s Men remains in effect: follow the money trail. I have not heard or read that any woman was charged with prostitution for ‘flirty fishing’ or that they were paid anything material for their evangelistic sexual efforts.

Western civilization has created a *presumption* that no woman wants to be a prostitute or sex worker and that all women who engage in those professions have been forced into it, denied better opportunities, lured by money (which is a sin technically, but one that has been eroded by consumerism and materialism), or are substance abusers. This has been reinforced in the last centuries by scorn of those who practice the professions at the same time that their services, under various disguises (or openly) fulfilled a human need that was not receding – as some thinkers suggested it might when ‘the future’ evolved into a more intellectual or spiritual civilization. Arguments have been made that prostitution, sex work, and other criminal ills (drug use, money laundering, pimping) are only linked because prostitution has been criminalized, scorned, and unregulated (e.g., in some countries prostitution is legal, but it is illegal for a third party to benefit from the proceeds of prostitution, thus criminalizing brothels, pimping and pandering). Like all presumptions, this has not always been the case, it should be challenged regularly: There are women (and men, let’s not be sexist here) who apparently don’t mind the work, or may genuinely like what they do (whether for money or other reasons, such as freedom and rebellion). Technology has provided an additional screen between the sex act and procreation that fed into a mid-20<sup>th</sup> Century sexual liberation.

This is not to suggest in any way that prostitution would be accepted if legalized, stigma would still attach to the business by long tradition, and it would still be a dangerous business and criminal elements would be attracted to the money, stigma and convenience. Additionally, there is still the institution of monogamous relationships that withstood the mid-20<sup>th</sup> century spread of ‘free love’ doctrines (most people don’t know that Free Love was a French anarchist idea – Émile Armand – in the early 20<sup>th</sup> century, but if you think about it for just a moment...) aided by the AIDS epidemic of the 1980s. But any sociologist will point out that we in fact, practice serial monogamy (in and out of marriage), and that less stigma attaches to pornographic film actresses (who also receive money for sex acts, and near-celebrity fame too) and live sexual performers (i.e. dancers, many if not most porn actresses were dancers and/or prostitutes, as are quite a few popular female singers) who are less immediately threatening to a relationship.

- ✓ Did anyone ever get the sense in the 1980s that the Christian fundamentalists were actually deeply pleased and maybe even happy about AIDS? Did they – especially the ones who called Chevy vans ‘adultery wagons’ (probably from the popular 1973 song “Chevy Van” by Sammy Johns) – feel vindicated, vindictive, and supremely righteous, did they think it was divine intervention to save the Christianized ‘nuclear family’ (an early 20<sup>th</sup> century social sciences term that predates nuclear weapons and is thus, not related)?

*“Each society views its own patterns of marriage, family, and kinship as self-evidently right and proper, and usually God-given as well. Much of the current concern about the fate of the modern family stems from this kind of ethnocentrism. If we assume that there is only one ‘right’ family form, then naturally, any change in that particular form will be interpreted as heralding the doom of the whole institution. It is important to recognize, therefore, that there is an immense range of marriage, family, and kinship patterns; that each of these patterns may be, at least in its own context, perfectly viable; and above all, that, the family, like any other social institution, must inevitably change through time, in our own society as in all others.”*

– Ian Robertson, [Society: A Brief Introduction](#) (1989)

**All in the Family:** Fortunately, not every family has an Archie Bunker:

- ✓ “Ants, bees and wasps, known collectively as the hymenoptera, all share an unusual genetic system in which males carry only half the normal number of chromosomes, receiving a single set from their mothers. But a hymenopteran female, in the more conventional fashion, receives one set of chromosomes each from her mother and father. Dr. [William D.] Hamilton [Oxford University] was the first to point out that the unusual genetics of the hymenoptera have the curious effect of making a female more closely related to her sisters than to even her own children, since she shares three-quarters of her genes in common with her siblings, but only half in common with her offspring. As a result, in order to propagate more of her genes into future generations, she can do better by staying in her mother’s nest and helping to raise sisters rather than reproducing herself.” – Carol Kaesuk Yoon, “Social Castes Found to be Not So Rare in Nature,” New York Times Archives, 1993.
  - “Archie was also known for his frequent malapropisms and spoonerisms. For example, he refers to Edith’s gynecologist as a ‘groinacologist’ and to Catholic priests who go around sprinkling ‘incest’ (incense) on their congregation, whereas he referred to incest itself as ‘committing ‘insects’ in the family.’” – from Wikipedia article, “Archie Bunker,” September 8, 2019.

*“‘One thing for sure is that the **social stability contract** that has worked for so long – that the people tolerate the **authoritarian rule** so far as the government warrants economic prosperity and provides good governance – is broken in a big way,’ [Ho-Fung Hung, a professor in political economy at Johns Hopkins University] said.”*

– quoted in Lily Kuo, “‘They’re chasing me’: the journalist who wouldn’t stay quiet on Covid-19,” The Guardian, March 1, 2020 (emphasis added)

**Cohering:** Cohere means to hold together, to bring together in principles, relationships or interests, to be consistent. Cohering in GGDM is about creating asabiyyah (Ibn Khaldun).

- ✓ Merriam-Webster Dictionary at *cohere*: **1a**: to hold together firmly as parts of the same mass; **2**: to hold together as a mass of parts that cohere; **3a**: to become united in

principles, relationships, or interests, **3b**: to be logically or aesthetically consistent;  
transitive verb: to cause (parts or components) to cohere.

Activation of the Culture Power for the purpose of Cohering attempts to change some inactive Constructural Elements (see, 2 Constructural Elements and 2 Disruption, generally, *supra*) to active status on Friendly, Naturalized and Converted Colonies and ships currently located in a system with a Friendly or Naturalized colony (but not Converted Colony). Social stability contract.

It is my sincere hope that GGDM coheres well.

➤ The ‘Getting on the Same Page’ Meeting: When the Culture Power is activated for the purpose of Cohering, the position must inform the Concierge which one of the three Constructural Elements (Epistemological, Ideological or Symbolic) is to be reactivated throughout the position.<sup>1</sup> Additionally, the position must provide the Concierge with a range of RPs that will be spent on Cohering; 1 RP will automatically be spent per two undisrupted Government Titles held by the position, rounded up (so that five GTs will cost 3 RPs) plus a variable number of RPs will be deducted from the Treasury for successful Cohering up to the limit set by the position. The RPs must be in the Treasury at the beginning of the Regular Turn.

✓ For example, a position with four undisrupted Government Titles wishes to Cohere the Epistemological Constructural Element. The initial cost is 2 RPs for the Government Titles, and the position dedicates another 6 RPs to Cohering.

➤ Status Quo Ante: Active and inactive states of Constructural Elements are an over-simplistic game mechanic, a concession to playability, for a very complex and fluid process. See Artifice discussion, 2 Constructural Elements, p. 191, *supra*. The default choice of most populations is the *status quo*, the world they understand and know; thus, Constructural Elements should be active until something occurs that makes them inactive. One possible definition of the active state of a Constructural Element is passive acceptance of the status quo, whatever that might be in a particular situation. Would Russian-speaking colonists on Mars suddenly decide to invent a new language, new dress, and new customs overnight?

By extension, for game purposes, an active Constructural Element could be defined as the ability of the civilization (represented collectively as the position) to expect and cause a particular population group or ship to act in a way consistent with the desires of the position. An inactive state is whatever would cause that not to occur, for example, local resistance, a different view, inability or refusal to act, apathy and indifference, lack of cohesion, lack of structure, confusion, misinformation, or even bad maintenance, poor manufacturing.

➤ Money Can’t Buy You Love: Unlike in fiction, conspiracy theories, or historical hindsight, the invisible hands that shape public perception are often daft and ham-fisted, and public funds have not solved many social problems. Each inactive Constructural Element of the type chosen at a Friendly, Naturalized or Converted (but not Conquered) Colony, or on a *ship* (or System Boat) owned by the position located in a system with a *Friendly or Naturalized Colony* that has that Constructural Element currently inactive, will be checked to determine if it becomes active again; this will produce variable results throughout the position.

✓ Prior to each Cohering attempt at a colony or ship, a check will be made to see if the Cohering attempt fails due to inactive Constructural Elements (see Power Off, 2 Constructural Elements, p. 193, *supra*), i.e. the target colony or ship fails to obey the Power Activation.

- A failed Cohering Attempt due to inactive Constructural Elements is like trying to parent a teenager who doesn't hear anything you are saying, or trying to instruct someone who does not want to hear or doesn't care. Everyone has experienced the frustration of trying to get through walls; 'talk to the hand.' You just have to keep trying, especially in parenting.
  - ✓ The base chance for any inactive Constructural Element of the type chosen to change back to active is 30%;
    - 10% is added if the position has a Unitary Structural Government Title *and* no currently disrupted Government Titles,
    - 5% is subtracted if the target colony is a Naturalized Colony and 10% is subtracted if the target colony is a Converted Colony,
    - 5% is added if the position has a number of endowed Colleges equal to the number of undisrupted Government Titles, *and* there are no currently un-endowed Colleges.
    - Checks will be made in random order at each ship and colony that currently had the chosen Constructural Element *inactive* until stopped by running out of funds or when all target Constructural Elements are checked.
    - Enlightenment can be applied to Cohering attempts and applied to either check (see 2 Colleges generally, *infra*).
- Cohering Casino: The percentages offered in this game, especially as to social issues, are at best a guess, a number mainly for the purpose of creating a suitable game result. Considering interstellar culture, 20-35% seems appropriate. In wargame design, especially well-studied historical periods and battles, the effectiveness, or combat power, of a unit in battle vs. the enemy can be reduced to a qualitative analysis (see QJM and TNDM, *The Problem of Immersion*, 1 Culture, pp. 352-353, *supra*) – for example, a qualitative analysis article I read once that described why Pompeii could not have won the Civil War against Caesar. The qualitative analysis process has been fairly perfected by military professionals, but even there, there are still a lot of judgments that go into the numbers crunching. In the situations discussed in this game, we are on far less solid ground than military science. As in a war-game, players must accept that the Law of Large Numbers<sup>2</sup> will operate, and that 'luck' (i.e. outlier results) will run both ways in the short term.<sup>3</sup>

In a Unitarian government structure, it is not that other or dissenting opinions don't exist, but just that they are less likely (it seems) to be heard publically. At the bottom of this process is that there are simply too many factors that act on public opinion or perception – opinion is often shaped or driven by micro-events reported in the daily news cycle – so the game has to pick a few of the big ones to act as modifiers. The Concierge is free to *carefully* modify as suited to the situation. For example, regardless of your religious beliefs, the execution of a troublesome heretic, possibly Essene, probably Aramaic-speaking preacher in Palestine, was of relatively small importance in the Roman Empire on that day, would have occupied between 15 and 20 seconds on the evening news, and most certainly did not seem at the time to have the vastly outsized importance attributed to it by Christians and subsequent history.

- You Can't Always Get What You Want: One RP will be subtracted from the Treasury for every three ships or 100 Friendly or Naturalized population factors affected by Constructural

Elements that are activated as a result of Cohering this turn. Fractions will be rounded up at the end of the process such that one extra RP might be taken to satisfy the rounding.

Funds dedicated to Cohering cannot be used for any other purpose on the turn of Cohering, even by Power Activations that come later in the Regular Turn Action processing sequence. Funds not used will be returned to the Treasury for the next turn.

- ✓ Continuing the previous example, the position had dedicated 6 RPs to Cohering *after* paying the initial 2 RPs for Government Titles. These funds cannot be used for any other purpose during the Regular Turn. During the Cohering checks, Friendly Colonies containing 57, 60, 80, 120, and 100 population factors have their Epistemological Constructural Element reactivated, and a Carrier and two Cargo Ships have their understanding of things corrected (probably by the local *Chekist*<sup>4</sup>). Thus, 317 populations on five colonies, and three ships were Cohered, costing 5 RPs, a very good result (even at 35% unless there were a lot of inactive ECE to check)! All of the other checks failed or possibly no further checks were needed, the results in any case were random. The remaining RP is returned to the Treasury at the end of the turn processing. The checks would have also stopped if the Cohering had run out of funds.
  - The preceding example does not account for the possibility that a number of colonies or ships may have refused or failed to obey the Cohering Culture Power activation due to inactive Constructural Elements. Failed attempts cost nothing regardless of the cause.
- **Bridge Repair:** “Never let the urgent things get in the way of the important things.” – Coach Kay Yow. With all that is happening and being plotted turn by turn, some inactive Constructural Elements may seem only a minor worry. It is a problem that can sneak up on players, like a bridge that looks safe and normal on top, but has significant rust and concrete deterioration underneath. Constructural Elements will suddenly become a problem, like cracks in a bridge, when a planet that produces a quarter of the position’s RPs during Taxation fails to pay their taxes due to having three inactive Constructural Elements. Or when ships don’t move when ordered, interfering with vital defense, trade and new colonization.

---

*“Americans have often fought bitterly about how large our safety net should be and about the precise forms it should take. But once the country commits to a fundamentally more generous, decent safety net, it becomes an accepted part of society. Poverty, disease and misfortune that had been accepted as normal became rejected as cruel. Once we stopped allowing 10-year-olds to work in factories and fields, we didn’t go back on it. Once we outlawed 80-hour work-weeks at miserly pay, we didn’t reinstate them. Once we made health insurance and Social Security a universal part of old age, we didn’t repeal them.”*

– David Leonhardt, “A Vote for Conscience and Courage,” *The New York Times*, June 27, 2017

---

**Social Safety Net:** Liberal policies, especially those costing resources into an indeterminate future – i.e. social safety nets – are based on a perception of abundance, even an illusion of superabundance.

This perception or illusion is part of modernity in the West; in previous times when resources were scarce, conservative and even bigoted views prevailed and served as justification in those scrabbling for domestic subsistence.

Modern liberal thinking has been the process of unraveling deep-seated status quo preservation views, i.e., traditional families, nuclear families, religious views, phobias and racism that placed barriers between the haves and have-nots, judgments of a person's worth based on their hereditary economic class and personal wealth, traditional labor relations, attitudes considered heartless by progressives and sentimentalists, etc.

- ✓ “[Lane] Kenworthy argues that over the long term, U.S. welfare and social policy will become more generous as liberal policymakers expand old programs and create new ones and their conservative opponents fail to wholly undo them. Eventually, he said, he is confident that the country will offer its citizens universal health care – despite the likelihood that Republicans will retrench Obama’s reforms.” – Max Ehrenfreund, “Why the Republican plan to repeal Obamacare is so extraordinary,” *Washington Post*, January 17, 2017.
- ✓ A slightly different view: “It is a lot harder to dismantle a bad system than to put it in place. The new beneficiaries treat their newfound largesse as an eternal entitlement. Hence efforts to return to the *status quo ante* of 2010 is treated like a cruel and heartless return to the dark ages.” – Richard A. Epstein, “Memo to GOP – It’s too late for a full scale Obamacare repeal,” *The Hill* (blogs), June 28, 2017.

Now, if you are thinking along with me ... I have asserted previously that interstellar societies have potentially infinite resources available to them. It follows then, that except on local levels where resources might be scarce during certain times, overall, it is expected that the abundance of current modernity would continue and very likely, interstellar civilization would be liberal, especially as to progressive social programs and safety nets.

- ✓ See also Illusion of Superabundance and Great Chinese Famine discussion, 4 Commerce, p. 1231, *infra*.
- Liberal: In these commentaries and throughout GGDM, the terms ‘liberal’ and ‘liberalism’ are of the meaning in the United States during my lifetime, the general understanding of such held by normal people; but liberal doesn’t mean the same in all places and times:
  - ✓ “However, the term ‘liberal’ does not have the same political connotation in all English speaking countries. In Australia it has the opposite connotation to that which it enjoys in the US. While social liberalism is generally associated with the Labor Party, the Liberal Party is a conservative party whose name is based on their objective to liberalise the market economy within Australia. In the UK, the Liberal Democrats occupy the political centre between the rightist Conservative and the leftist Labour parties, though the term ‘metropolitan elite’ is frequently used in reference to Labour politicians too.” – from Wikipedia article, “Liberal Elite,” captured September 23, 2018.

I personally have no sense of what ‘liberalism’ means in other places now, but I learned when I was young that certain hand gestures that are harmless in the United States (like the OK signal) are taken as insulting in other countries or even in other places within the same country (e.g., Winston Churchill’s V signal in *Darkest Hour* (2017)). Politics is probably like

that too; in England, I would automatically be considered a “Republican” (i.e. those in favor of abolishing the monarchy) – an even dirtier term there than here currently (but I would be historically excused there because I am an American).

**The Bargain:** Progress necessarily implies movement or change toward a goal, ideal, or defined/known or anticipated end point. Without an end point, even if it is only in the mind of the observer, it is just movement without purpose (that is, *non-teleological movement*). Progress can be good or bad, but curiously, is rarely neutral because it is relative to the observer; for example, the progression of a cancer is almost never considered positive, but one could construct a situation where it is positive to someone, for example, the impatient heirs or the undertaker.

Social progress implies that the population, or a significant part of the population believes their society (or more broadly, civilization) is not perfect, and that they expect society – politically and culturally – to move toward some *ideal future*. Thus a utopian society must believe that no further social progress is necessary or possible, and that any change would destroy the perfect society. See *The Devil’s Argument*, 1 Entropy, p. 216, *supra*.

The concepts of progress in a civilization are linked very strongly to *ideology*, which one might define as a set of ideas on what constitutes progress – it would be difficult to imagine otherwise.

- ✓ “[Sen. Bernie] Sanders, [Pete Buttigieg] said, would prioritize ideological purity and pie-in-the-sky policy proposals, while doing nothing to remedy the country’s political divisions.” – Reid Wilson and Max Greenwood, “Buttigieg sounds alarm after Sanders wins Nevada,” *The Hill*, February 23, 2020.
- ✓ Empirical science and technology are almost *inseparable* from modern concepts of progress (and core to modernity), thus another 2020 Democratic candidate is running TV adverts promising to “end the war on science” by the incumbent administration.<sup>5</sup>

There is never agreement on what exactly constitutes social progress; the devil is always in the details, as they say. In the current Western political spectrum (in the U.S. at least), liberals are usually most associated with social progress and grand futures and ideals. Conservatives are not anti-progress, as is sometimes claimed (those few who actually are, are called reactionaries or regressives), but they disagree on what constitutes progress and on the pace of change.

- ✓ “This suggests opposition to humanities degrees is based more on prejudice than on actual job prospects. And it’s also often linked to politics, according to [Matt] Gabriele [at Virginia Tech]. The right-wing media has spent decades demonizing university professors and students; some conservatives seem to fear humanity professors in particular will indoctrinate students or intimidate budding conservatives.” – Noah Berlatsky, “Are millennials really to blame for the decline in the liberal arts?” *NBC Think*, October 10, 2018.
- ✓ “The tragedy is that society ...keeps drumming the genius part out. The problem is that our culture has engaged in a Faustian bargain, in which we trade our genius and artistry for apparent stability.” – Seth Godin.

Everyone thinks there is something that could be positively changed, bettered, or improved about their own lives and about the society or milieu in which they live, everyone wishes something was different or had not happened. Progress happens whether we want it or not; for example, we get older whether we want to or not.<sup>6</sup> Since death is the known end point of living, aging is con-

sidered progress (that is, the phrase “age progression” is not nonsensical in our language). Progress exists simply because we are sapient. All living things die, not all living things are sapient; if there is no understanding of the relationship between living, the passage of time, and death, or even what is death, then aging is just change, the passage of time, without ‘progress.’

Progress is therefore the default state of sapience. But the direction of progress is dictated by what a society considers important; for example, in a cleric-ruled civilization, progress might be defined by creation of a religious state, religious control of critical institutions and the economy, and individual adherence to the ideals, rituals and doctrinal purity of the religion. For example, the South China Morning Post ran an article titled, “Indonesian TV censorship: cartoons cut, athletes blurred as conservative Islam asserts itself and broadcasters fear sanctions,” on December 31, 2017. The title says it all very clearly, what is happening there, the article that followed is just details. The current Western civilization is based on legitimate secular authority but the goals and ideals against which we define social progress arise from our religious past.

Current Western civilization rests on a bargain, it might be called The Bargain, between liberal drift and oligarchic drift. Every civilization has bargains, and they are usually multisided, interlocking multiple bargains. In the West, The Bargain is that oligarchic drift is tolerated and considered somewhat beneficial as long as a liberal drift counters it – that is, if the social safety net is maintained and expanded and the appearance of social progress continues,<sup>7</sup> and the government and courts operate to curb the biggest abuses of both, then business and personal wealth accumulation will be tolerated, encouraged and allowed<sup>8</sup> to influence and dominate the systems.

- ✓ “Multivariate analysis indicates that economic elites and organized groups representing business interests have substantial independent impacts on U.S. government policy, while average citizens and mass-based interest groups have little or no independent influence. The results provide substantial support for theories of Economic-Elite Domination and for theories of Biased Pluralism, but not for theories of Majoritarian Electoral Democracy or Majoritarian Pluralism.” – Martin Gilens and Benjamin I. Page, abstract of “Testing Theories of American Politics: Elites, Interest Groups, and Average Citizens,” Princeton University, pub. September 18, 2014.
- ✓ “The theory of ‘biased pluralism’ that the Princeton and Northwestern researchers believe the U.S. system fits holds that policy outcomes ‘tend to tilt towards the wishes of corporations and business and professional associations.’” – Zachary Davies Boren, “Major Study Finds The U.S. Is An Oligarchy,” Business Insider, April 16, 2014.

Each nation has a tolerance balance; when the oligarchic drift goes too far, a more socially progressive government is empowered, when it is thought that liberal and progressive forces (most recently, “liberal globalization” is the conservative term of derision) are ascendant, *sometimes* the conservative oligarchic drift takes power. But the Bargain cannot be violated.

- ✓ “First, I do think we have to remember ... how many people were lifted out of poverty around the world. I think that the reason that we have seen a rise in populist nationalism and a backlash against globalization is because of the way that it was ... mismanaged in terms of its impact on certain community. I mean, Brexit, for example, is an example of the backlash. And that is because what ... a lot of policymakers forgot is that right around them in their own backyard ... there was an impact that was not being addressed. That is, I think one of the mistakes. ... the other is, you have to go

back to the financial crisis and the extent of the financial crisis. Often, when you have big shocks ... not all the ramifications are felt right away. Some of it comes with a delayed reaction. And I think ... the new sort of sentiment of being anti-E.U., anti-globalization has to do with the fact that inequality has widened in the last decades, and nothing was done about it. We were just moving ahead and thinking about the stock market. ... it's a wakeup call. It's a wakeup call to say, OK, what has gone wrong? How do we reset capitalism? What should be the policies that are more distributive, without losing sight of the benefits of globalization? ...we are ... advocates of free trade and free markets, because we think that that is where the economic benefit is for everyone. But we also have to take into account the pitfalls ... where it needs to be reset and reformed.” – Roula Khalaf, Editor of the Financial Times, Amanpour & Company, PBS, June 8, 2020 (from CNN rushed transcript).

Within GGDM, the tension is this: I have argued regarding the relationship of abundance, modernity and liberalism; I have argued here about a balance tension between oligarchic drift and the perception of social progress. I have also argued elsewhere about the probable great expense of starships, the necessity of starships to hold together an interstellar civilization, and the potential for tyranny and exploitation, and even coup and rebellion by those who crew the starships; the tension between the vast ground populations and the ‘starship elite’ minority who holds the power above and beyond.

- ✓ “The proliferation of billionaire and super-rich political candidates is partially a function of the collapse of the campaign finance legal regime enacted after Watergate. As political parties seek candidates with deep pockets, rising wealth inequality is leaving the super-rich with even more excess wealth, and much of American political culture continues to assume that, due to their success, billionaires are uniquely qualified to solve complicated domestic and international problems.” – Paul Blumenthal, “Bloomberg’s Presidential Bid Comes Amid A Golden Age For Super-Rich Politicians,” Huff Post, November 30, 2019. (Hint: The Roman Republic had the same problem.)
- Secular Revolution: The secular revolution in religious philosophy is that any religious leader or speaker can be stripped of mystical trappings and treated, examined, and criticized as any other philosopher (e.g., Jesus Christ). This tends to infuriate fundamentalist believers. Consider the following disclaimer by Avi Sion:
  - ✓ “Needless to say, the following comments are not an attack on Buddhism, but an attack on the rhetoric of Nagarjuna. Buddhism is not well served by such games. I think of Nagarjuna whenever I read v. 306 of the *Dhammapada*, ‘He who says what is not... and he who says he has not done what he knows well he has done... sinned against the truth.’ For me, he is just a philosopher like any other; his interest in Buddhism is incidental (as is his saintly status in the eyes of many).” – Avi Sion, Paradoxes and Their Resolutions: A Thematic Compilation, FN 99, p. 208.
- Cultural War: Politics can be defined as proxy for culture war. There is ample evidence in our time that many believe this to be true, both in our country and over much of the world; everything is a culture war and one side or both are itching to fight, looking for the right ‘events’ (even if contrived) to push their narrative. The more extreme a group’s political views, whether right-wing fall-off-the-cliff whackos, or left-wingnut looneys, the more likely it is that they believe they are involved in a culture war, which politics is one component.<sup>9</sup>

- ✓ “There is an ominous dark cloud of self-seriousness, legalism, and binary thinking that threatens to suck the Gospel life and joy out of nearly everything. The culture wars, worship wars, confessional and missional wars have made religious life about as morose as a 15-stanza hymn sung too slowly.” – Rev. Craig Donofrio and Rev. Bill Cwirla (“The Manly Doctors of Divinity”), from godwhisperers.org

This entire process, taken as a whole, is what is called in law an *adversarial system*, a truth-finding process where truth is discovered by both sides presenting their best (and opposing) cases. In this view, the actions of politicians are always seen as *playing to their base*, some do it with nuance and subterfuge, others are more ham-handed.<sup>10</sup> In GGDM, this adversarial process will play out on an interplanetary and interstellar scale between conflicting Conflict Checks in Government Titles, competing Power Activations priorities, and later among the spheres of different technologically-advanced species. This is the stuff of space-opera trope and nascent interstellar culture.

- ✓ There is a difference between being a partisan and an ideologue: The former requires loyalty to a party, to a fault; while the latter requires loyalty to an idea, to a fault.
- Losing Coherence: There are plenty of tools in GGDM for participants to introduce local cultural drift and political fragmentation (see Human Drift-course discussion, 3 Entropy, p. 246, *supra*). As a historical example, consider the cultural, religious and political fragmentation of the Mongol Empire in a century, aided by rivalries between the hordes, the devastation of the Black Death, and contact with Islam and Christianity. The rivalries between Mongol groups became religious wars between Hordes that had adopted different religions.

If participants wanted to introduce a society to the game that does not, for example, have oligarchic drift, they would have to look outside of our time and outside of Western Civilization for inspiration. Perhaps the Northwest Native American *potlatch ritual* might be construed as an anti-oligarchic cultural practice; where prestige gained from the potlatch has religious and cultural significance greater than what was given away in material wealth.<sup>11</sup>

Whatever direction the participants decide their society or the game might take, should be considered in terms of belief systems, for everything we do is backed by our beliefs and meanings. If you wanted to develop a non-oligarchic society, what would be required? In some ways, modern philanthropy by billionaires somewhat counters the perception of wealth accumulation for its own sake detached from social progress. If a non-oligarchic society did exist in the game, what other changes would exist, would it curtail liberal social progress?

---

*“Phillips’ argument is that it takes time for a newly dominant state to use all its resources efficiently, which he defines as ‘..high output or return per unit investment’ (1979: 140). Efficiency ... though, leads to inflexibility in resource allocation. The mechanism is this: a newly dominant state controls a large territorial base, but has not yet developed (or come to depend on) complex institutions that will derive a significant return for this resource base. In such situations, a large proportion of the new resources will always be used in non-critical or low return ways.... But through time social and political institutions emerge that use this resource base more fully (in Phillips’ terminology, ‘efficiently’). Eventually, most resources are allocated to support of ‘efficient’ institutions ... leaving no reserves or flexibility in resource allocation.”*

– Joseph Tainter, *The Collapse of Complex Societies* (1988), p. 55

---

**Conquest by Entitlements:** Though formulated to describe the process of Mesoamerican culture, this description applies to the history of the United States. The closing of the Western Frontier in 1896 was no small matter; thereafter the ability of the United States, absent an imperialist policy (e.g., The American Empire of 1898-1945), to make up deficits by expansion, was limited to the space and resources within the borders of the United States and what could be imported, which is where the globalization became important concerns.

- ✓ *Entitlements* in the United States and other Western countries have *locked down resources today and into an infinite future*, hampering reserves and flexibility.

The entitlements problem is the modern version of a classic quandry, except that in the modern nuclear-armed, globally enmeshed world, overt military conquest is a deprecated option:

- ✓ “When population in the Preclassic became sufficiently dense that productivity fluctuations were a matter of serious concern, the solution to each local group so affected must have been obvious: raid neighboring groups to make up a deficit. Since the only alternative over the short-term was famine, the development of warfare ... was entirely expectable. Long-term solutions included agricultural intensification and the establishment of a hierarchically managed economy. These were not permanent solutions, however, for the archaeologically-evident pattern of population growth indicates that, with each establishment of a higher-capacity production system, population simply rose further. The military option must have been perpetually tempting.” – Joseph Tainter, *The Collapse of Complex Societies* (1988), p. 171.<sup>12</sup>

By this analysis, the United States and Western civilization has reached a kind of maturity that suggests collapse may occur, unless outside resources are obtained, by which is meant, possibly from space. Entitlements and infrastructure problems may be the best and deepest sounding argument for space exploration and exploitation, to wit:

- ✓ “However, Tainter is not entirely apocalyptic: ‘When some new input to an economic system is brought on line, whether a technical innovation or an energy subsidy, it will often have the potential at least temporarily to raise marginal productivity’ (p. 124). Thus, barring continual conquest of your neighbors (which is always subject to diminishing returns), innovation that increases productivity is – in the long run – the only way out of the dilemma of declining marginal returns on added investments in complexity. And, in his final chapters, Tainter discusses why modern societies may not be able to choose to collapse: because surrounding them are other complex societies which will in some way absorb a collapsed region or prevent a general collapse; the Mayan and Chacoan regions had no powerful complex neighbors and so could collapse for centuries or millennia, as could the Western Roman Empire – but the Eastern Roman Empire, bordered as it was by the Parthian/Sassanid Empire, did not have the option of devolving into simpler smaller entities.” – from Wikipedia article, “Joseph Tainter,” captured November 22, 2018, quoting *The Collapse of Complex Societies* (1988).

I did not expect this discussion to become one supporting space exploitation, I surprised myself with the intellectual turn of the argument. But it makes sense in the context of the resource- and diminishing-returns arguments leading to the collapse of classical civilizations; the next frontier – the only resource and living space available, is out there. Return to the top and read it again. ☺

*“Much of the news coverage attempted to explain why anyone would have been tempted by Singer’s scheme. A common attribute among the defendants was that many were rich, but not ultra-rich. According to The New York Times, college admissions at certain elite American universities had become so selective that a family would have to make a minimum donation of \$10 million to inspire an admission committee to take a second look at their child. And even for families of such means, there would be no guarantee of return on investment, while Singer was selling certainty. ... The Los Angeles Times explained that there was probably also a social signaling element at work, in that admission to an elite university based purely upon an applicant’s apparent merit publicly validates both the child’s innate talent and the parents’ own parenting skills in a way that an admission coinciding with a sizable donation does not.”*

– from Wikipedia article, “2019 college admissions bribery scandal,” captured July 2, 2019  
 13[Full Quote]

## Endnotes.

<sup>1</sup> Commentary: In a case I worked on, corporate counsel sent an email to an employee who was the subject of a subpoena from the state attorney general to appear and testify; in the email the employer’s attorney wanted to have a “getting on the same page meeting,” meaning he wanted to insure the employee didn’t tell the whole truth (i.e. suborn perjury) during testimony before the state attorney general on the loss of taxpayer funds in investments.

<sup>2</sup> Citation: Investopedia at *Law of Large Numbers*: “The law of large numbers, in probability and statistics, states that as a sample size grows, its mean gets closer to the average of the whole population.... In statistical analysis, the law of large numbers can be applied to a variety of subjects. It may not be feasible to poll every individual within a given population to collect the required amount of data, but every additional data point gathered has the potential to increase the likelihood that the outcome is a true measure of the mean.... If a person wanted to determine the average value of a data set of 100 possible values, he is more likely to reach an accurate average by choosing 20 data points instead of relying on just two. For example, if the data set included all integers from 1 to 100, and sample taker only drew two values, such as 95 and 40, he may determine the average to be approximately 67.5. If he continued to take random samplings up to 20 variables, the average should shift towards the true average as he considers more data points.”

- ✓ “The LLN [Law of Large Numbers] is important because it guarantees stable long-term results for the averages of some random events. For example, while a casino may lose money in a single spin of the roulette wheel, its earnings will tend towards a predictable percentage over a large number of spins. Any winning streak by a player will eventually be overcome by the parameters of the game. It is important to remember that the law only applies (as the name indicates) when a large number of observations is considered.” – from Wikipedia article, “Law of Large Numbers,” October 6, 2018.

<sup>3</sup> Commentary: The choices that designers make. In the card game *Race for the Galaxy* (2008), it is possible sometimes to conquer/colonize two planets in a turn, but it’s never possible to put down two developments in a turn (thus, when you fall behind in a developments race, you will likely never catch up). This was, of course, a choice by the designer that speaks to the perception that even with advanced technology, it is faster and easier as a process to gain planets than to advance social developments. Likewise, in *Race for the Galaxy* there is no individual ability to choose to both develop an ability and conquer/colonize a planet in the same turn – you can do one or the other and hope that someone else plays the other phase – this might have been an interesting use of prestige points, but it clearly was rejected by the designer. If there is a great designer of this universe, our problems are the design choices that were made; one must wonder at the alternatives.

<sup>4</sup> Citation: “‘We will resist to the end,’ the KGB colonel said. ‘We’ll show them how Soviet soldiers can fight!’ ‘I admire your spirit, Comrade Colonel.’ He walked over to the corner and picked up a rifle. ‘Here, you may take this to the front yourself.’ ‘But—’ ‘Lieutenant Gasporenko, get the colonel a driver. He’s going to the front to show the Americans how Soviet soldiers fight.’ [Gen.] Andreyev watched with dark amusement. The *chekist* could not back down.” – Tom Clancy, *Red Storm Rising* (1983).

<sup>5</sup> Citation: “But while Ms. Thunberg is merely hammering home the science – that 97 per cent of peer-reviewed climate studies agree with the scientific consensus that manmade global warming is real – Ms. Seibt appears to have

more interest in ideology. Alongside her interest in climate denial, she has voiced concerns about immigration and feminism, and has previously spoken at events run by Germany’s far-right AfD (Alternative for Germany) party. She has denied being a member of the far-right group, but previous reports suggest she is or has been a member of the party’s youth wing.” – Harry Cockburn, “Anti-Greta: Far-right groups trying to turn teenager into climate change-denying version of Greta Thunberg,” *The Independent*, February 25, 2020.

<sup>6</sup> Commentary: Sometime after 2000, or maybe around 2010 at the grocery store I witnessed a 30<sup>ish</sup> female leading a much older male through the store; she was teaching him how to shop for groceries. I got the impression somehow that he had just got out of jail, probably had served a long time. Think about it, if a person went to jail in the late 1970s or in the 1980s and served 30+ years, how different the world was when they were released?

<sup>7</sup> Commentary & Citation: I once read that Chief Justice Earl Warren did not do what President Eisenhower wanted. Conservatives in the United States have consistently sought to pack the court with conservative and pro-business justices as a long term ‘cure’ to what they perceive as a tide of liberalism. But “the only thing new in the world is the history you do not know” (Pres. Harry Truman) and the close of the latest Supreme Court term with two newly-appointed conservative Justices points to some moderation of the new conservative bloc, much to the dismay of the current President’s backers, e.g., Jacqueline Thomsen, “Conservative justices surprise court watchers with swing votes,” *The Hill*, July 2, 2019. And the Constitution, Article 3, grants U.S. judges ‘life terms,’ specifically:

- ✓ “‘Article III federal judges’ ... serve ‘during good behavior’ (often paraphrased as appointed ‘for life’). Judges hold their seats until they resign, die, or are removed from office.” – from Wikipedia article, “United States federal judge.”

This protects them from being removed for political reasons (you can bet President Trump would try to fire them)...

<sup>8</sup> Commentary: There are some arguments that can be offered in favor of individual wealth accumulation. For example, promotion of the arts, available money for business investments, incentive to individual innovators and inventors, management and job creation, and so forth. Because accumulation of wealth in the West has not been any difficulty for the last few centuries, these are often *weaker* arguments compared to the arguments in favor of curbing individual wealth accumulation. But they are sufficient, in combination with a general sense of wellbeing in the population (and wealth sharing through taxation), to prevent a full scale revolt against the wealthy elites.

<sup>9</sup> Commentary: Religion, advertising, publishing, college campuses, public school curricula and textbooks, television programming, criminal law, internet and twitter trolling are among the others.

<sup>10</sup> Citation: “There are three criteria for every decision we make: It has to be moral, ethical and legal. Ethical, you have to follow the rules, legal you have to follow the law, and moral you have to follow what you know to be right. And either way, that’s just not right. You’re not going to use ... whether it’s the military, the National Guard, or the police forces to clear peaceful American citizens for the President of the United States to do a photo-op. There is nothing morally right about that.” – Adm. William McCraven (Ret.), *Morning Joe*, MSNBC, June 5, 2020.

<sup>11</sup> Commentary & Citation: However, even ‘Big Man’ systems can lead to poor or strange consequences, to wit:

- ✓ “The indigenous societies of Melanesia were typically characterized by a ‘big man’ political system in which individuals gained prestige through gift exchanges. The more wealth a man could distribute, the more people in his debt, and the greater his renown. Those who were unable to reciprocate were identified as ‘rubbish men.’ Faced, through colonialism, with foreigners with a seemingly unending supply of goods for exchange, indigenous Melanesians experienced ‘value dominance.’ That is, they were dominated by others in terms of their own (not the foreign) value system; exchange with foreigners left them feeling like rubbish men.” – from Wikipedia article, “Cargo Cult,” citing to Theodore Schwartz (1976).
- ✓ In any foreign contact, colonial setting – such as possibly any situation in GGDM – the value system of a ‘non-oligarchic society’ can be overwhelmed or corrupted by foreign cargo, contact and exploitation. Traveller RPG had the concept of ‘novelty technological items,’ which were usually high tech items on lower tech or indigenous worlds that were left behind or were bought and imported at great expense, which could not be duplicated locally, and whose technology was not fully understood. Consider for example, a solar-powered charger and flashlight on Endor; among the Ewoks it would be a religious artifact upon which they might build a cult concept of light and enlightenment. Traveller didn’t do well at explaining or exploiting this, but it was there for players who understood. The other danger of non-oligarchic, big man systems is the possible confusion of wealth, indebtedness, with social good and leadership: Does the son of the ‘big man’ get to rape the daughter of the ‘rubbish man’ because of the indebtedness of wealth distribution? I have often wondered if something like this might have played in the rape of Lucretia.
  - ‘Rubbish man reaction’ may also adequately describe how one feels when a non-parental, and even non-related other (especially another who is much wealthier) gives them expensive gifts or is

constantly buying for them (with the implication of such being unearned, i.e., not employment bonuses and expected to be unrequited). I am not sure if this has ever been identified in psychology, but it is a useful tag for the concept. It is also an internal fight between the appearance of social graciousness in accepting, not embarrassing the gift-giver or causing personal conflict, and feeling terrible, inferior inside for doing so and impossibly indebted to the other.

<sup>12</sup> **Citation:** See 2 Government Titles, EN 9, p. 604, *infra*, for full quote.

<sup>13</sup> **Citation:** “Much of the news coverage attempted to explain why anyone would have been tempted by Singer’s scheme. A common attribute among the defendants was that many were rich, but not ultra-rich. According to The New York Times, college admissions at certain elite American universities had become so selective that a family would have to make a minimum donation of \$10 million to inspire an admission committee to take a second look at their child. And even for families of such means, there would be no guarantee of return on investment, while Singer was selling certainty. ... The Los Angeles Times explained that there was probably also a social signaling element at work, in that admission to an elite university based on ... apparent merit publicly validates both the child’s innate talent and the parents’ own parenting skills in a way that an admission coinciding with a sizable donation does not. In turn, others examined why certain universities had become so selective in the first place. The Atlantic pointed out that college seats are not scarce in the United States, except at a handful of universities which became selective on purpose: ‘Scarcity has the added benefit of increasing an institution’s prestige. The more students who apply, and the fewer students who get in, the more selective an institution becomes, and, subsequently, the more prestigious. And parents are clawing over one another to get a taste of the social capital that comes with that.’ Arizona State University (ASU) president Michael M. Crow described the ‘crisis of access to these social-status-granting institutions’ as a full-blown ‘hysteria.’ It was alleged in court filings that one of the defendant parents had named ASU as a university they were specifically trying to avoid; the non-selective university has been the ‘butt of jokes’ in American television shows for many years, as well as the 2015 film *Ted 2*. The inevitable result, according to Newsweek, was that the most elite institutions had created a situation in which purely meritocratic admissions had become impossible because they were already turning away too many overqualified candidates – former Harvard president Drew Gilpin Faust had once said, ‘we could fill our class twice over with valedictorians.’

HuffPost explained that such anxiety barely exists in Canada, whose four-year universities do not show such extreme disparities in selectivity and prestige, and in turn, most Canadian employers do not rigidly discriminate between job candidates based upon where they graduated. In contrast, selective American universities have evolved into gatekeepers for the highest echelons of certain socially prestigious and financially lucrative industries like law and finance. University of Oklahoma history professor Wilfred M. McClay told Newsweek: ‘I’m not going to pretend there isn’t a difference between Harvard and Suffolk County Community College, but I think this situation where the Supreme Court is made up entirely of Harvard or Yale Law School graduates is wrong. The thing driving the current scandal seems to be that ultimately parents were willing to do anything to game the system to get their kids these advantages, not because the education was better but because the legitimization of social position would be better.’” – from Wikipedia article, “2019 college admissions bribery scandal,” captured July 2, 2019.

- ✓ “[Sciences Po] was founded in 1872 to promote a new class of French politicians in the aftermath of the French defeat in the Franco-Prussian War of 1871, and has since educated, among others, 32 heads of state or government, 7 of the past 8 French Presidents, 3 past heads of the International Monetary Fund, heads of international organizations (including the UN, UNESCO, WTO, IMF, EP and ECB), and 6 of sitting CAC 40 CEOs. The school is also the alma mater of numerous intellectual and cultural figures, such as Marcel Proust, René Rémond, Paul Claudel, and Raymond Aron. ...

Due to its prominent alumni, its selectivity and its alumni’s high profile, Sciences Po is broadly perceived as an elite institution. However, it has been criticized, along with the *École nationale d’administration*, for creating in France an oligarchy that is out of touch with reality, ‘...blinkered, arrogant and frequently incompetent people.’ ...

The institution is partly state-funded, and some, especially institutes of political studies in the provinces, have accused it of receiving a disproportionate share of public money. ... Critics have accused Sciences Po of prioritizing access to professional networks over education and expertise. ... Sciences Po has also been accused of being unduly helped by the media. ‘Almost every French newspaper is run by an alumnus of Sciences Po,’ and most of the journalists in France are alumni from Sciences Po, so it would give the school ‘an unparalleled media coverage’ and permit it to ‘cultivate a culture of secrecy’ about its internal affairs. ... The journalist Ariane Chemin stated in 2013 that, because so many journalists come from Sciences Po, the school has an undue good public reputation.” – from Wikipedia article, “Sciences Po,” captured July 2, 2019.

## The Printing Revolution

Extracted from Wikipedia article, “Printing Press” on December 8, 2017

The Printing Revolution occurred when the spread of the printing press facilitated the wide circulation of information and ideas, acting as an ‘agent of change’ through the societies that it reached.<sup>1</sup> (Eisenstein (1980))

The invention of mechanical movable type printing (by Gutenberg et al, approximately 1436 C.E.) led to a huge increase of printing activities across Europe within only a few decades. From a single print shop in Mainz, Germany, printing had spread to no less than around 270 cities in Central, Western and Eastern Europe by the end of the 15th century. (“Incunabula Short Title Catalogue” British Library. Retrieved 2 March 2011.) As early as 1480 C.E., there were printers active in 110 different places in Germany, Italy, France, Spain, the Netherlands, Belgium, Switzerland, England, Bohemia and Poland. From that time on, it is assumed that “the printed book was in universal use in Europe.” (Febvre, Lucien; Martin, Henri-Jean (1976))

In Italy, a center of early printing, print shops had been established in 77 cities and towns by 1500. At the end of the following century, 151 locations in Italy had seen at one time printing activities, with a total of nearly three thousand printers known to be active. Despite this proliferation, printing centres soon emerged; thus, one third of the Italian printers published in Venice.<sup>2</sup> (Borsa 1976, p. 314; Borsa 1977, p. 166–169)

By 1500, the printing presses in operation throughout Western Europe had already produced more than twenty million copies. In the following century, their output rose tenfold to an estimated 150 to 200 million copies. (Febvre, Lucien; Martin, Henri-Jean (1976))

European printing presses of around 1600 were capable of producing about 1,500 impressions per workday. (Pollak, Michael (1972)) By comparison, book printing in East Asia, did not use presses and was solely done by block printing.<sup>3</sup> (Needham 1965, p. 211<sup>4</sup>)

Of Erasmus’ work, at least 750,000 copies were sold during his lifetime alone (1469–1536). (Is-sawi 1980, p. 492) In the early days of the Reformation, the revolutionary potential of bulk printing took princes and papacy alike by surprise. In the period from 1518 to 1524, the publication of books in Germany alone skyrocketed sevenfold; between 1518 and 1520, Luther’s tracts were distributed in 300,000 printed copies. (Duchesne 2006, p. 83)

The rapidity of typographical text production, as well as the sharp fall in unit costs, led to the issuing of the first newspapers which opened up an entirely new field for conveying up-to-date information to the public. (Weber 2006, pp. 387f)

The printing press was also a factor in the establishment of a community of scientists who could easily communicate their discoveries through the establishment of widely disseminated scholarly journals, helping to bring on the scientific revolution.<sup>5</sup> Because of the printing press, authorship became more meaningful and profitable. It was suddenly important who had said or written what, and what the precise formulation and time of composition was. This allowed the exact citing of references, producing the rule, “One Author, one work (title), one piece of information.” (Giesecke, 1989; 325) Before, the author was less important, since a copy of Aristotle made in Paris would not be exactly identical to one made in Bologna. For many works prior to the printing press, the name of the author has been entirely lost.<sup>6</sup>

Because the printing process ensured that the same information fell on the same pages, page numbering, tables of contents, and indices became common, though they previously had not been unknown. The process of reading also changed, gradually moving over several centuries from oral readings to silent, private reading. Over the next 200 years, the wider availability of printed materials led to a dramatic rise in the adult literacy rate throughout Europe. (Peck, Josh)

The printing press was an important step towards the democratization of knowledge.<sup>7</sup> (Malte Herwig, 2007; Howard Rheingold, 2009) Within 50 or 60 years of the invention of the printing press, the entire classical canon had been reprinted and widely promulgated throughout Europe (Eisenstein, 1969; 52). Now that more people had access to knowledge both new and old, more people could discuss these works. Furthermore, now that book production was a more commercial enterprise, the first copyright laws were passed to protect what we now would call intellectual property rights. On the other hand, the printing press was criticized for allowing the dissemination of information which may have been incorrect.<sup>8</sup> (Julia C. Crick; Alexandra Walsham (2004); Nick Bilton (2010))

A second outgrowth of this popularization of knowledge was the decline of Latin as the language of most published works, to be replaced by the vernacular language of each area, increasing the variety of published works. The printed word also helped to unify and standardize the spelling and syntax of these vernaculars, in effect ‘decreasing’ their variability.<sup>9</sup> This rise in importance of national languages as opposed to pan-European Latin is cited as one of the causes of the rise of nationalism in Europe.

A third consequence of popularization of printing was on the economy. Printing press was associated with higher levels of city growth. (Jeremiah Dittmar, 2011) Publication of trade related manuals and books teaching techniques like double-entry bookkeeping, increased reliability of trade and led to decline of merchant guilds and rise of individual traders. (Prateek Raj, 2017)

---

<sup>1</sup> Commentary: Some people think of things and forget to write them down. Some other people write stuff down and forget to think.

<sup>2</sup> Commentary: Italic Type was invented and used by a Venetian printer, Aldus Manutius around 1500. He also left his mark on the printed comma and semi-colon, and vigorously reprinted the lost classical and ancient works for the first time. His Aldine Press continued until the end of the 16<sup>th</sup> Century, about 100 influential years.

<sup>3</sup> Commentary: Note that a movable type press was known to the Song Dynasty in the 13<sup>th</sup> Century C.E., but as is discussed later, many East Asian inventions, predating those in Europe, were restricted, abandoned and lost, only to be re-imported from Europe later. This is part of a process known as the East-West Technological Inversion.

<sup>4</sup> Citation & Commentary: “The outstanding difference between the two ends of the Old World was the absence of screw-presses from China, but this is only another manifestation of the fact that this basic mechanism was foreign to that culture.” – Needham, 1965.

✓ “Chinese paper was suitable only for calligraphy or block-printing; there were no screw-based presses in the east, because they were not wine-drinkers, didn’t have olives, and used other means to dry their paper.” – Duchesne, 2006, Man, 2002. The introduction of European olives (and other fruits) to China and other places, is an example of another macro-historical process, the 400-year Columbian Exchange.

<sup>5</sup> Commentary: For example, Kepler’s “Conversation with Galileo’s Sidereal Messenger,” quoted previously in 2 Sidereal Stage, was published in 1610 in response to Galileo’s *Sidereus Nuncius*, also published in 1610. This is the book that got Galileo embroiled in the famous controversy with the Church – because he said that celestial bodies, specifically the moon, had mountains, irregularities, like the Earth, and was not a perfect spherical heavenly body. Independent observations by others soon confirmed his claims; this begins the necessity of independent verification to scientific claims. Francis Bacon published his famous book, *Novum Organum Scientiarum*, around 1620 C.E.

<sup>6</sup> Commentary: And here would be an interesting point for discussion. It is implied that the loss of the author's name is inherently bad. But it is not clear why this is? What is important about the author's name if we still have the written work? The importance of authorship in printed works, both for reference and for the commercial value of the name, arising from the printing revolution parallels generally the egocentric, individualism drift of Western Society and later, civilization globally, in the last 500 years, the first technological empowerment of individualism. Before the printing press, could modest Erasmus have put or even envisioned his name on 750,000 works?

<sup>7</sup> Commentary: I admit that when I read the story of Diderot, I was disappointed that he signed the letter of submission and gave oral deposition against his publisher and printer to escape incarceration in 1749. He also swore not to write any further offensive materials. But maybe he was crazy like a fox. Diderot, through his writings and his 20 year labor, the *Encyclopédie* (banned in 1759), began to wrestle the privilege of knowledge and learning away from the elite and wealthy, the aristocracy, and royalty and hereditary nobility, and to redefine the notion of the nation. He also gained the odd patronage of and strange friendship with the enlightened despot, Catherine the Great of Russia, which probably restrained the French persecution of Diderot since his entire library was her property and he was her caretaker in France. He started the information age, which is now a ubiquitous reality of governments everywhere, thanks in large part to the U.S. Government – first with the need for machines to calculate the Census and naval gunfire tables, and later, ARPANET (U.S. DoD research network), which morphed into the internet.

<sup>8</sup> Commentary: Yes, Mr. President, American media can print whatever stories they want, without your approval.

<sup>9</sup> Commentary: The Great Vowel Shift began in the English language around 1350 and continued through the period of the printing revolution, into the 17<sup>th</sup> Century. The printing press was brought to England around 1470. Because printing standardized spellings and punctuation, while oral pronunciations shifted, many English words are not printed on paper the way they are pronounced by native English speakers.

*“The cause returned is, the slave absented himself, and departed from his master’s service, and refused to return and serve him during his stay in England; whereupon, by his master’s orders, he was put on board the ship by force, and there detained in secure custody, to be carried out of the kingdom and sold. So high an act of dominion must derive its authority, if any such it has, from the law of the kingdom where executed. A foreigner cannot be imprisoned here on the authority of any law existing in his own country: the power of a master over his servant is different in all countries, more or less limited or extensive; the exercise of it therefore must always be regulated by the laws of the place where exercised.*

*The state of slavery is of such a nature, that it is incapable of now being introduced by Courts of Justice upon mere reasoning or inferences from any principles, natural or political; it must take its rise from positive law; the origin of it can in no country or age be traced back to any other source: immemorial usage preserves the memory of positive law long after all traces of the occasion; reason, authority, and time of its introduction are lost; and in a case so odious as the condition of slaves must be taken strictly, the power claimed by this return was never in use here; no master ever was allowed here to take a slave by force to be sold abroad because he had deserted from his service, or for any other reason whatever; we cannot say the cause set forth by this return is allowed or approved of by the laws of this kingdom, therefore the black must be discharged.”*

– Lord Mansfield (William Murray, 1<sup>st</sup> Earl of Mansfield), King’s Bench, 1772, judgment on Writ of Habeas Corpus issued in the matter of *Somerset v Stewart*, 98 ER 499 <sup>1</sup>

**Writs and Rights:** *Somerset* was a major test of slavery in the Courts of Justice, Kings Bench. Mr. Somerset was freed, as no law of the Kingdom supported his detention. Slavery was abolished in England by the Slavery Abolition Act of 1833.

- ✓ In later rulings and commentary however, Lord Mansfield seemed to equivocate and back away from his ruling in *Somerset* creating confusion as to its precedential value at Common Law.

However, there were enormous humanitarian and economic issues and repercussions with how the 1833 abolition was accomplished; chiefly that *slave owners* were compensated by the government for their freed slaves (making many of them very rich) and second, that the freed slaves were required to continue working – without compensation – for their prior owners for a period of time after.

- ✓ The freed slaves were neither compensated by their former owners or the government for their lifetime of slave labor, thus entrenching for generations wealth disparity between former owners, former slaves, and their descendants.
- ✓ Further, the Act exempted slaves in territories owned by the East India Company, where slavery was finally abolished by the Indian Slavery Act of 1843 (probably because competitors complained that slaves gave the East Indian Company an unfair advantage).

- ✓ Finally, the British did not abolish debt-bondage, such that many slaves freed instead became debt-bonded, indentured servants to their former masters.

There were two paths to go in ending slavery; the rule of law (e.g., England) or the rule of force (e.g., The U.S. Civil War). We know how slavery ended in the U.S. where it was *entrenched* as positive law in the highest legal document of the nation, The Constitution; the drafters were certainly aware of the 1772 *Somerset* opinion as the case garnered great notoriety.

- ✓ Because of the way the issue was resolved in the United States – the Civil War – the slave holders were not compensated for emancipation of the slaves (the government did not ‘purchase’ the slaves to free them) and the South was ruined, not only in capital losses, but also male population loss in war casualties (the legendary impetuous for Western Frontier mail-order brides) and infrastructure damage. Some call that justice. The slaves were also not compensated, nor was the issue likely raised at that time. Many of them ended up working for the same masters, but under slightly different arrangements (e.g., sharecropping).

Carl Sagan in *Cosmos* expressed the view that Athenian ‘democracy’ was a hypocrisy in view of limited participation and Athenian slavery. This was not a new or novel view, this same idea must have occurred to intellectuals when the U.S. Constitution was ratified with a provision allowing slavery to exist, “It’s like déjà vu all over again,” as Yogi Barra said. Thus, it might also seem, in the macro-historical sense, or ‘grand scheme of things,’ an epic cycle of pragmatic ethics completed when democracy reasserted in the West and clashed with and eventually abolished the age old institutions of slavery. The Athenian issue was finally resolved 2,000 years later, where democratic republic exist, slavery is a dark hypocrisy:

- ✓ The only way to say that a democracy claiming to have equal rights before the law and basic humanity can have slavery is to say that slaves are not humans, not citizens. This is the basis of modern racism in the U.S. (and elsewhere most likely); it also requires willful ignorance and abrogation of empirical evidence to the contrary.
- ✓ Whenever someone says that X would not happen anymore because people’s beliefs and/or the social system has changed, *that is pragmatic ethics* by implication.

---

*“Red white and blue, gaze in your looking glass,  
You’re not a child anymore,  
Red, white, and blue, the future is all but past,  
So lift up your heart, make a new start, And lead us away from here”*

– Styx, “Suite Madame Blue,” (1975)

---

**It is Written:** A Writ is a formal written document (usually legal) which expresses the intent of the issuer (usually one with sovereign or judicial authority) in the form of a command or mandatory process (a warrant is a type of writ, and is more commonly known and usually associated with criminal judgment, whereas writ continues to be used in civil judgment and appellant procedure).

A Writ must also necessarily contain the identity of the issuer and by what authority it is issued. From that may be deduced larger issues, such as the basis of that authority (hereditary, popular,

derived), the philosophical and social beliefs of the issuing authority and those supporting the authority (actions of authority are necessarily an expression of those backing the authority); and an identity of who we think we are, what kind of people are we?

**Who Are We?:** A Writ is an official Interpretation issued by a position using an activation of the Culture Power for the purpose of Issue Writ, which, through the use of the inherent sovereign power of the issuing position, develops and/or exercises a cultural ability that tends to define or becomes part of the overall cultural identity of the ruling native population type of the position (that is, does not include conquered or converted population and may not include naturalized population).

- ✓ For example, if the members of a nation (or at least those supporting the current state) proactively tend to think of themselves as ‘a caring, compassionate, charitable’ people, then the actions of the state will eventually reflect it (or else the state loses legitimacy) with the development of organizations and/or an exercise of authority that is compassionate, caring, and/or charitable (in their view).

When the two factors come together – 1) the internalized sociocultural identity of those who grant and support the authority and 2) the exercise of the sovereign power of the state – that is the essence of the Writ Interpretation.

- **Nothing Fuzzy About It:** The *issuance* of a Writ does not require the actualization of a Fuzzy Group. All that is required is the activation of the Culture Power for the purpose of Issuing Writ costing two Acts. Additionally, as described later, a Writ may not be used as an Interpretation to satisfy any of the Power Activation Interpretation requirements *on the Regular Turn it is issued*.
- **Tabula Rasa:** Activation of the Culture Power for the purpose Introduce Writs does not depend on Constructural Elements and thus cannot fail due to inactive Constructural Elements. One activation of the Culture Power for the purpose of Issue Writs allows a position to issue a number of Writs equal to or less than the current number of undisrupted Government Titles. This is not the same as activation of Writs which are limited by the number of Fuzzy Groups that a position can, and is willing to, actualize in a Regular Turn and activation of the Culture Power for the purpose of Issue Writs is not required to activate established Writs.
- **Behind the Bookshelf:** As mentioned in *A Bustle In Your Hedgerow*, 2 Culture, pp. 365-366, *supra*, a Writ improves the chances of exposing the Aspect with which it is associated, especially on Regular Turns where the Culture Power is activated to Expose Aspects and a Writ associated with that Aspect is also activated. I can see you scheming now...
  - ✓ “Before we had pundits and memes and Twitter rants, books were the chief vessel for sharing new ideas. Some of these books have helped sparked [sic] full on rebellions, with people marching in the streets and overthrowing entire governments. Some have inspired major policy changes, or shifts in cultural perception. All of them have made a profound difference in the world. And yes, I know that Thomas Paine might not carry quite the same punch these days. But these are the books that have inspired people to revolt for generations. Some of them are frightening relevant to our modern world, but all of them prove that the written word can make a real, tangible difference.” – Charlotte Ahlin, “10 Books That Inspired Revolution, Because The Written Word Is A Powerful Tool,” *bustle.com*, November 11, 2016.

*“Those who are out there protesting believe a grievous religious injustice has been done. Those at the top may have other reasons, those following do not.... However, one thing is a fact: the complete failure of the government to establish the writ of the state.”*

– Yasmeen Aftab Ali, “Cost of Politically Expedient Procrastination,” Pakistan Today, November 27, 2017 <sup>2</sup>[Definition]

## Endnotes.

<sup>1</sup> Citation: See, <http://www.commonlii.org/int/cases/EngR/1772/57.pdf>.

<sup>2</sup> Citation & Commentary: The ‘Writ of the State’ seems to be an elusive term peculiar to Pakistan, or at least to Pakistan’s media, as I have found usage in articles from 2014, 2015, and 2017 in Pakistani media but nowhere else. The nearest to a definition that I have found – being on the outside looking in through a peephole – is the following:

- ✓ “Writ is like respect, it has to be commanded, not demanded. Unfortunately, the state in Pakistan has been weakened to an extent that it has become a burden. Only the writ of the khakis is intact; that is why their role keeps expanding.... In a democratic order, writ of the state is established with the support of the masses.... In non-democratic set-ups, coercion is used to establish the writ of the state, but in return the basic needs of the citizens still have to be met.... Manipulated democracy is the worst form of government. Politicians who gain power through tainted ballots cannot establish the writ of the state as they misuse the same apparatus to stuff the boxes.... An abusive state has neither writ nor respect; service to the people is the only way to respectability.” – Dr. Farid A. Malik, “The Writ of the State,” The Nation (PK), October 7, 2015.
- ✓ Although Dr. Malik compares writ to respect, in the end he treats them separately, thus indicating that while they have the same properties, writ is not synonymous with respect; writ of the state then appears to mean some sort of legitimacy in Dr. Malik’s analysis.

---

**Habeas Corpus Monkey-us:** Animal rights activists have attempted to use *Habeas Corpus* cases to free animals kept privately, in laboratories or zoos, the latest example being the New York court case by Nonhuman Rights Project for two privately-held chimpanzees (June 8, 2017, the Appeals Court ruled that chimpanzees are *not persons*, see discussion of personhood, *Alien Persons*, 2 Diplomacy, p. 1110, *infra*). Similarly, in the 9<sup>th</sup> Circuit, a case brought by PETA was argued (with much tongue-in-cheek humor and many in-court puns) as to whether Naruto, “a free-living crested macaque who snapped perfectly framed selfies in 2011 that would make even the Kardashians proud” (Linda Wang, “No monkeying around: Court weighs if animal owns its selfies,” Associated Press, July 12, 2017) holds copyright on selfies it snapped with a camera that have been published in a British wildlife book. The case sought royalties on the selfies for a wildlife fund.

**Form of the Writ:** Writs are created by the players and submitted to the Concierge with the position’s Actions. The Writ must contain the following elements when it is sent to the Concierge:

- **Issuer:** The Writ must contain the identity of the issuing position.
- **Power:** The Writ must contain the name of the Power to which it relates, whose activation may be used to activate the Writ. Note that the Culture Power must be activated to introduce the Writ, but the Writ itself may be subsequently activated by another Power indicated on the Writ.
- **Aspect:** The Writ must contain a specific Aspect to which it relates. The Aspect chosen for the Writ must be part of the Fuzzy Group that is *actualized* to activate the Writ. Note that having and/or activating a Writ containing a specific Aspect slightly increases the chances of successfully exposing that Aspect for the remainder of the game (see *A Bustle in Your Hedgerow*, 2 Culture, pp. 365-366, *supra*).

Some well-known historical examples:

- ✓ Where anti-Semitism has long been established, political parties and governments have easily ‘pushed the buttons’ to arouse anti-Semitism for political and economic purposes (e.g., see the Black Death discussion, 1 Disruption, p. 252, *supra*);
- ✓ Where patriotism (a relatively modern concept) exists, governments and political parties can arouse nationalism (or maybe the other way around, since the two are so bound), especially when combined with a perceived threat to cultural identity and religious beliefs (see *Romantic Nationalism*, *National Mysticism*, 3 Government Titles, p. 618; see also Hermann Goering’s comments, 6 Diplomacy, EN 13, p. 1180, *infra*).

History often develops a problem with relation to Aspects: the Scottish Wars of Independence evokes in the modern reader ideas of nationalism and patriotism that simply did not exist at the time; it is certain that the Scottish participants did not feel nationalism or patriotism in the way that we do, they were fighting for feudal loyalties, feudal realms within, and

against foreign invaders (whom their leaders invited by making Edward Longshanks Lord Presumptive of Scotland), not Scotland as a nation-state, and once this is understood, much of what happened – on all sides – begins to make sense. The key Aspects transition from feudal realm to modern nation-state is the transition of the population from feudal subjects and burghers to modern citizens (Subjects & Citizens, 2 Government Titles, p. 599, *infra*).

- **Proficiency:** The Writ must contain a specific Proficiency to which it is related. The named proficiency must be part of the Fuzzy Group that is *actualized* to activate the Writ.<sup>1</sup>
  - ✓ Writs are part of the process of defining Aspects in GGDM. Is a perception the same as an Aspect? For example, the ‘perception of a crime wave’ has been a major driving force in politics for a very long time, with various governmental reactions ranging from indifference to draconian, it was the impetuous for the creation of modern regular police forces (e.g., the perception of a crime wave in early 18<sup>th</sup> Century London). But reaction to the perception is what drives socio-politics, ranging from a concern for order and orderly worldview to personal fear of being the victim of a crime. Fear makes people willingly fork over tax dollars for police and military protection, which then becomes a Proficiency (18<sup>th</sup> Century London established the Police Proficiency College). Thus, a roundabout link is established between Aspects and Proficiencies through the need to solve a perceived problem (e.g., Joseph Tainter’s complexities).

- **History:** The Writ must be based on a specific historical event (in the game) or on a Fundamental Reality or existing Government Title of the issuing position; i.e. it must have some context in the game and that context must be reasonably related to the Aspect and Proficiency chosen for the Writ. This also serves to preserve in-game historical circumstances.

Since there are three different basis for the history of a proposed Writ, creative and engaged players should not find it difficult to cite a historical basis for the Writ. The Writ is part of the story of the position.

- **Body:** The body of the Writ contains a statement which is deemed to be absolutely true or false at the time the Writ is activated (regardless of what the players believe is true).
- **Directive:** The Writ must have an effect when it is activated, and that effect is part of the Writ. The effect must bear a strong relation to the rest of the Writ.

This is what the Writ is all about, this is where the rubber meets the road. Good Writ writers will start with the Directive and work backwards, just as politics often starts with what we want to do and builds a rationalization to do it through debate, campaigns for office, and events. A Writ is a mandate to do something.

- ✓ For any object (sovereign ship or colony) to be affected by a Writ, the target must have an active Ideological Constructural Element at that moment. See Body Politic, 2 Constructural Elements, p. 191, *supra*. This will not block Writ activation, however.
- **Conditions Precedent:** Certain social, historical, or cultural conditions must exist for the Writ to be activated. These conditions will be part of the Writ and will be checked upon activation of the Writ. If the conditions do not exist, then the Writ activation will fail, but again, the Concierge may choose to construe the requirements somewhat liberally but refuse to accept patent nonsense. The most useful Writs are the ones with predictably recurring conditions.

*“The overlap in the Venn diagram of things that men hate for women to wear and the things that I love to wear, it’s almost a full overlap on the Venn diagram, which is unfortunate for me.” – Mindy Kaling*

**Venn Diagram:** One way to visualize Writs is as a Venn diagram where the Directive is the overlap area in the middle. Returning to the Hazy Overlapping Middle discussion in 2 Culture, p. 370, *supra*, the Fort Douaumont situation offers some elements of a potential Writ:

- ✓ [Interview] “To the French public, this was a great victory. [Fort] Douaumont was a great symbol. It was of no military significance whatsoever, but it was a symbol. It had to be recaptured. And it was seen in France as being a great victory. In Germany, it was seen as a terrible defeat. The reality is, it didn’t matter tactically. It was all about perception.” – Major Gordon Corrigan (British Army, Gurkha Rifles), Under Siege television series (2008), Episode 4.

In the previous discussion, Fort Douaumont was identified as a nominal Symbolic Constructural Element of the French sovereign and national identity that became also an Aspect of the moment during the Siege of Verdun in 1917.

- ✓ Notably, Constructural Elements are not part of the Writ format, but of course, play their part in Power Activations and Fuzzy Groups which can affect the Writ.

*As a historical basis for the Writ*, the Aspect might be whatever was associated with it in 1917 during the defense of Verdun, it would be related to the Combat Power, the Proficiency might be Nationhood, Security, Spirit, depending on the slant of the Writ’s directive. Conditions Precedent might either be an ongoing Ground Combat in defense of a Friendly colony or a recent successfully concluded defense of a Friendly colony in Ground Combat.

**Michael:** *My father made him an offer he couldn’t refuse.*

**Kay:** *What was that?*

**Michael:** *Luca Brasi held a gun to his head, and my father assured him that either his brains or his signature would be on the contract.*

– from *The Godfather* (1972)

**Negotiable Instrument:** Because the Writ is not published, and because the Writ cannot be activated on the Regular Turn it is issued, there is some time for the Concierge and issuing position to work out the balance and finalize the form of the Writ, if it is not acceptable as first issued. The Writ must be finalized before the next Regular Turn of the issuing position so that it can be available for activation on the position’s next turn. There is a limit, given that the Concierge is involved in tasks running the rest of the game, to how much negotiation will be allowed to finalize a Writ. The Concierge reserves the right to ultimately reject the issuance of the Writ if no consensus can be formed. In the rare event that a Writ is rejected, no compensation will be made to the issuing position.

- **Suspended Writ:** At the judgment of the Concierge, a Writ may be suspended at any time. A suspended Writ may not be activated and **does not** enhance the chances of exposing the Aspect to which it is associated (see *A Bustle In Your Hedgerow*, 2 Culture, pp. 365-366, *su-*

*pra*). A Writ will be suspended when it is no longer legitimate to the position, when it is being abused, or any other game reason. For example, a Writ that is closely tied to a Government Title (e.g., in the History section, *ut supra*) may be suspended if the Government Title is disrupted, abandoned, or voluntarily removed, however, it is also possible that such a Writ might continue with the current Titles long after the originating Title is lost to history.

- ✓ For example, the Writ of Habeas Corpus was invented by early legislatures and judges to curb the abuses of the absolute monarchy. If democracy fails, what happens to the Writ of Habeas Corpus?

Page | 441

Writs may also be suspended during or after a Reformation (and rarely) following a Kairotic Moment. A previously suspended Writ may also be restored by the Concierge, it does not ‘disappear’ upon suspension (it is instead, deprecated).

---

*“The Moving Finger writes; and, having writ, Moves on: nor all your Piety  
nor Wit Shall lure it back to cancel half a Line, Nor all your Tears wash out a  
Word of it” – Edward Fitzgerald, Rubaiyat of Omar Khayyám <sup>2</sup>*

---

**White Wash:** Should anyone ask me to change GGDM, especially to retract some of my statements, to make it softer, more acceptable for educational or palatable for public purposes, this would be my answer also. Should anyone consider altering my work after I have passed, “*The Moving Finger writes; and, having writ, Moves on...*”

If you want to add your own pre-apology insulation commentary, to distance yourself, to disparage me before presenting or discussing my work, feel free, that’s on you. But don’t whitewash my words. It seems likely to me that Omar Khayyám (1048 to 1131) was pressured to not publicly express his rational religious skepticism, and putting himself in God’s place, probably asked what if the fanatics asked God to change the world he created? The portion of the Rubaiyat of Omar Khayyám quoted above is likely what he imagined as God’s answer, and therefore, his answer to the same demands.

- ✓ **The Doctor:** You can let me do this! **River Song:** If you die here, it’ll mean I’ve never met you! **The Doctor:** *Time can be rewritten!* **River Song:** Not those times. *Not one line!* Don’t you dare! It’s OK. It’s OK, it’s not over for you. You’ll see me again. You’ve got all of that to come. You and me, time and space. You watch us run! – Dr. Who, “Forest of the Dead,” (2008) (emphasis added).

**Holy Writ:** Writs are secret and will not be published or shared with any other position. As such, it is necessary that the Concierge stand as the final, unquestioned judge and interpreter of Writs. The following are some rules and factors to be considered when a Writ is submitted:

- **Consistency:** A Writ must be internally consistent and reasonable, and make sense to the Concierge within the current context of the game. Specifically, there must be a reasonable relationship between the Power, Aspect, Proficiency, History, Body, Directive, and Conditions Precedent in the Writ. There must also be a specific relationship between the Body and the Directive. The Writ is a whole package, woven of threads of a civilization.
- **Cultural Identity:** One test of the Writ will be whether the Writ as a whole constitutes an expression of cultural identity, and that it is generally consistent with the other established identity factors of the position, such as Government Titles and Fundamental Realities.

- **Circular Conditions:** A Writ may not satisfy its own condition precedent by activation; the conditions must be present before the Writ can be activated. A Writ may not use the activation of another Writ as a condition precedent. Finally, a Fundamental Reality or any effect from a Fundamental Reality may not serve as a condition precedent to a Writ, thus, Writs are of limited use in counteracting unfavorable Fundamental Realities.

*“The bell in the Independence Hall tower rang at 9 a.m., and Mark Sanford took a deep breath. He grabbed a giant check for ‘one trillion dollars,’ stood next to a tiny wooden lectern, and asked me if I was ready for him to kick off a news conference announcing his bid to challenge President Donald Trump in the 2020 Republican primary. It didn’t really feel like a news conference. I was the only reporter there. ...*

*And when it began, the only others around besides his two aides were a family 30 yards away with a selfie stick and a group of students from Paris who wanted to know why he had such a big check. (Answer: It represented the burden of the national debt.) ... He shot me a peace sign, packed up his giant check, and headed for Harrisburg.”*

– Anna Orso, “Mark Sanford kicked off his presidential campaign against Donald Trump in Philly. One person showed up.” Philadelphia Inquirer, October 16, 2019

**Cost of the Writ:** The activation cost of each Writ is the simultaneous *successful* activation of the appropriate Power and the actualization of a Fuzzy Group (not a Zietrice) composed of the Aspects and Proficiencies as indicated on the Writ. See 4 Culture, p. 404, *et seq., supra*. The Concierge recognizes that the actualization of a Fuzzy Group is a considerable cost. Additionally, there must also be a cost in resources (i.e. RPs) for each Writ effect. A lot of people talk about doing this or that, but without the commitment of resources, it’s all just lip service:

- ✓ “With the people and facilities we have today, we could put a human on the Moon or even on Mars within the next 10 years, if only we invest in it. But grandstanding, lofty promises, and a dearth of funding will yield the same results they always have: a nation whose greatest dreams go unfulfilled. What we can accomplish as a species is limited only by what’s physically possible and what we invest in it. Our ambitions to venture beyond low-Earth orbit are achievable, but only if we make it so. Unless there’s a plan to increase NASA’s funding to sufficient levels to send humans to worlds beyond our own, America is never going to get there.” – Ethan Siegel, “Sorry America, We’re Not Going Back to the Moon,” Forbes, December 19, 2017.

The Concierge will take into account the balance of the cost and effect of the Writ. Players and the Concierge may agree on other creative costs-effect arrangements for a Writ (for example, environmental pollution) which make sense in the context of the game.

- ✓ Failure to activate the Writ either because of Power Activation failure or by not meeting the Conditions Precedent (*ut supra*, p. 439) will cause the Fuzzy Group to fail to actualize and the Cultural Trait Pieces are *not removed* from the Public Space.

*“This day, much against my will, I did in Drury Lane see two or three houses marked with a red cross upon the doors, and ‘Lord have mercy upon us’ writ there; which was a sad sight to me, being the first of the kind that, to my remembrance, I ever saw. It put me into an ill conception of myself and my smell, so that I was forced to buy some roll-tobacco to smell to and chew, which took away the apprehension.” – Samuel Pepys Diary, June 7, 1665<sup>3</sup>*

*“Methought it lessened my esteem of a king, that he should not be able to command the rain.” – Samuel Pepys Diary, July 19, 1662<sup>4</sup>*

## Endnotes.

<sup>1</sup> Commentary & Citation: Reputation for extreme proficiency can sometimes be a liability: In the Man in the High Castle series, the Resistance knew the truck driver must be an infiltrator spy because the truck escaped from the raid on the resistance headquarters and the Nazis were never ‘sloppy’ so they must have intended the truck to escape. This is not a new shtick in movies, I have seen or heard this reasoning before; it could be applied in the game story – especially insurgencies and Special Operations – if the participants are feeling devious.

<sup>2</sup> Citation: The *Rubaiyat of Omar Khayyám* is an English translation of the poems of Omar Khayyám (1048 to 1131) a Persian polymath poet, mathematician, skeptic, and astronomer who lived in Greater Khorasan.

<sup>3</sup> Citation & Commentary: “Then to the King’s Theatre, where we saw *Midsummer’s Night’s Dream*, which I had never seen before, nor shall ever again, for it is the most insipid ridiculous play that ever I saw in my life.” – Samuel Pepys Diary, September 29, 1662. Shakespeare was not loved by all; Mr. Pepys’ diary gives us an honest, clear window into what many contemporary people may have thought of his plays and works; it helps to dampen the symbolic glow applied by high school and college English literature instructors.

- ✓ Shakespeare died in 1616, *Midsummer Night’s Dream* was written in about 1595/1596.
- ✓ Samuel Pepys’ reaction to *Midsummer Night’s Dream* is rather comical considering that he is a man of many mistresses and dalliances, certainly not a man of propriety, but more one of lecherousness. He recorded his extramarital encounters in detail and in code in his diaries, a practice of many prominent men which obsessive historians have labored over the last century to decode.

<sup>4</sup> Commentary & Citation: Taken out of context, the reader cannot determine whether this was stated seriously or with sarcasm or humor by Mr. Pepys (1633-1703), but it works either way.

- ✓ I once heard or read a story about King Cnut the Great (995-1035 A.D.), whose foppish and fulsome courtiers whispered to him that he was the most powerful king in the world and that he could even stop the tides on command. King Cnut (not one to suffer fools, surely) had his throne carried down to the beach, upon which he sat and commanded the waves to cease. When they did not, he had the courtiers executed for lying to the king. Perhaps this story was circulating in some form in the time of Samuel Pepys, or his comment is sarcasm about the claims of divine right of kings, divine province of kings, current in his time, an idea which originated probably with James IV of Scotland, and reached its height during the long reign of Louis XIV of France, during Samuel Pepys’ life.
- ✓ Ironically, a few days after I located this Pepys quote, there was an article reporting that the state media of North Korea suggested either that the weather parted for the North Korean leader or that the leader of North Korea can control the weather, in relation to his recent pilgrimage up Mt. Paektu (see, Kim Hjelgaard, “North Korea’s Newest Claim: Kim Jong-un can control the weather,” USA Today, December 11, 2017). The New York Post referred, that same day, to the claim that Kim Jong-un climbed the 8,700 ft. Mt. Paektu as “Big Fat Dictator tells Big Fat Mountain Climbing Lie,” reporting the same nature and weather claims, adding that the mountain (an active volcano) showed “joy” and “warm welcome” to the “illustrious leader.”
  - Personality cult is just obnoxious. No writ can cure that social ill. But Mad Max can.

*See Appendix CON – Writ & Construction Example*  
*See Appendix WR – Writ Examples, Land Grant Writ, Naturalization*

---

*“A book is made from a tree. It is an assemblage of flat, flexible parts (still called ‘leaves’) imprinted with dark pigmented squiggles. One glance at it and you hear the voice of another person, perhaps someone dead for thousands of years. Across the millennia, the author is speaking, clearly and silently, inside your head, directly to you. Writing is perhaps the greatest of human inventions, binding together people, citizens of distant epochs, who never knew one another. Books break the shackles of time – proof that humans can work magic.” – Carl Sagan*

---

*“The older I grow, the more I am convinced that there is no education which one can get from books and costly apparatus that is equal to that which can be gotten from contact with great men and women” – Booker T. Washington*

---

**My Voice In Your Head:** Since it is impossible for us to have contact with the great persons of history, the voice in our head from reading the book must suffice. It is somewhat sad that our primary public education relies on politically correct secondary sources (called ‘textbooks’) and that reading the actual works, and having as instructors some people who are actually writing the next works, is reserved now for college and especially, graduate school.

- ✓ As for me, my ears ring more than half the time. I wish all those voices in my head would slow down so I can comprehend; it sounds like music played at hyper-speed.

**Writ of Error:** A Writ is not a ‘quick fix’ for a problem in the game. A Writ may not be activated on the Regular Turn it is issued, even if the Power listed in the Writ is the Culture Power or the Power listed on the Writ is otherwise activated. One activation of the Culture Power may not be used to both introduce Writs and activate a Writ whose listed Power is the Culture Power; those are two separate actions. It is not necessary that the Power listed on the Writ be activated in the Regular Turn it is introduced, the only required Power Activation is the Culture Power, to introduce the Writ.

- **Writ of Extent:** A Writ may not be used as an Interpretation to satisfy the Interpretation requirement of any Power Activation on the Regular Turn it is introduced. Thereafter, the proper activation of the Writ (by actualization of the Fuzzy Group) may satisfy the Interpretation requirement for *any one* activation of the Power to which the Writ is tied, on the Regular Turn that they are activated together. If the Writ cannot be activated because the conditions precedent are not met, then the issuing position will have to use a News Event to satisfy the Interpretation requirement for the Power Activation. One should be provided just in case.
- ✓ Use of Writs from time to time has an additional effect of defeating ‘card-counting’ players who may be using News Events to track other position’s Power Activations.

---

*“A reader lives a thousand lives before he dies, said Jojen. The man who never reads lives only one.”*

– George R.R. Martin, *A Dance with Dragons* (2011)

---

**Writ of Prohibition:** A Writ, emulating from the sovereign power of the nation-state (i.e. position), necessarily only applies to the native and naturalized alien population factors of the position issuing the Writ at the time of the activation. Writs will never *beneficially* apply to Conquered or Converted populations (but can be used to their local detriment), however, it is possible that Writs may beneficially apply to Naturalized populations, depending on circumstances.

- A Writness to History: Writs never expire in the sense that once they are created, they are permanently part of the game and part of the history of the issuing position; however, it may be that the conditions precedent for the Writ become impossible, or that the Writ becomes no longer useful for whatever reason.
  - ✓ For example, no one would claim the right of *jus primae noctis* (a likely fiction in any case) but it is remembered here and there, most recently in the movie Braveheart (1995). And *tithe* to the Church is now voluntary, whereas in the past, it was collected as a tax. You do pay taxes either way, it's just a matter of to whom?
  - ✓ The exception to this rule is Articles of Incorporation, which is a Special Writ used to create Corporations and MegaCorporations. Those Special Writs do expire like a Royal Charter, see 1 Corporations generally, *infra*.

Writs, once accepted, are unchangeable, and also cannot be copied or 'stolen' by others (since they are secret, and since they apply to a particular issuing nation-state). Unlike Patents, there are no 'pregame' or 'existential' Writs allowed.

- A Cultural Writness: Writs are primarily an Interpretation of the cultural identity of the civilization represented by the sovereign power of the position. As such, the effect of Writs should be primarily cultural and internal to the position, and can only apply to the eligible populations controlled by the position when the Writ is activated.

Therefore, Writs may not be used to instantly create new colonies where none existed previously, or to create instant huge warfleets (or ships, defenses, or Technological Devices), and may not be used to create new technologies, which are the sole province of the Patent process. Writs cannot be used to change the natural laws of the universe and may not be made to act like or substitute for another type of Interpretation (which is like using a wish to get more wishes, it would tear a hole in the universe). Writs are not *dues ex machina*, see Keep the Sand in the Sandbox, *et seq.*, 2 Dreamtime, p. 147, *supra*, for guidance. The Concierge will immediately reject, or at least look very sternly upon (and you don't want that...!), any attempt to 'abuse' the Writs Interpretations in these ways.

- An Unbearable Writness of Being: The effects of Writ activation on the previous turn may be used in some circumstances to satisfy a legitimacy requirement of a Government Title (meaning that the government must continue to support the Writ to remain legitimate). A well-crafted Writ may be used to increase RPs and/or population over the long term; while Writs that create instant wealth and population will be suspect and *may not* be accepted.

But there are some historical precedents, most notably the Expulsion of the Jews from Spain in 1492 via the Alhambra Decree which accomplished one of the greatest robberies in history by forcing the Jewish population to leave Spain, prohibiting them from taking with them any gold, silver, or minted money, or other items of high value. The expelled population was forced to sell land and anything they couldn't carry away at very cheap prices or just leave it behind to be taken by the locals, the Church, and the government. But Spain paid a deep and

lasting price for this in loss of skilled workers and population; the Sultan of the Ottoman Empire was so delighted that the Ottoman Navy was sent to transport the exiles to Greece.

Similarly disastrous was the French Edict of Fontainebleau in 1685 which caused the flight of the large French Protestant (Huguenots) population to England, Prussia and the Low Countries, who benefited from the influx of human capital. Conversely, situations such as the Nazi Plunder of Europe are more appropriately covered in the Looting rules (see, Looting, 3 Commerce, p. 1210, *infra*).

---

*“I find television very educating. Every time somebody turns on the set, I go into the other room and read a book.” – Groucho Marx*

---

**Alternate Writs:** There are many valid views of nearly any subject; all views contain a version of or a part of the truth. Technologies and special abilities allow players to ‘break’ the basic rules of the game. Most modern games consist of a set of baseline rules, where special abilities and/or technologies (or skills or spells) can be developed (or acquired) by players at a cost (hence the strategy is making the right choices); the eventual acquisition of which gives players a ‘special ability’ which amounts to an exception to the rules. Another way to think of Writs, then, in a game-mechanical view, is that they allow positions to ‘grant’ to themselves a (secret) special ability (with the necessary consent and oversight of the Concierge, at a cost) which they design, create, invent, and customize.<sup>1</sup> The constant against which all Writs are measured is a standard *cost*, in the form of a Power Activation required (a Power Activation shouldn’t be for the sole purpose of using the Writ, which is wasteful), a Fuzzy Group actualization, and some RPs.

---

*“It is what you read when you don’t have to that determines what you will be when you can’t help it.” – Oscar Wilde*

---

**The Print Revolution:** The print revolution is so fundamental to the current state of human civilization that players must undoubtedly assume that some similar process has occurred in the pre-history of any Major Race before the game. Again, it may be possible to construct a situation where technology developed absent widespread literacy, consumerism, and availability of information; but the base assumption must be that a print and information revolution preceded the 1<sup>st</sup> Era of the game (see Childhood’s End, 1 Eras, p. 754, *infra*).

✓ If you skipped it, you should read The Printing Revolution excerpts, this section.

---

*“The books that the world calls immoral are books that show the world its own shame.” – Oscar Wilde, [The Picture of Dorian Gray](#) (1890)*

*See Appendix PUBS – Expansion of the Public Space Selected Summary*

*“Third culture kids have a unique place in any society to which they belong. Theirs is a confusing and quite often debilitating condition. They are confronted with cultural walls or pitfalls at every turn. Unable to completely relate to their parent’s culture and yet at the same time labelled as ‘different’ from the mainstream culture they are encouraged to belong to, they are basically cut adrift and left to float in a sort of ‘twilight zone’ state. They form a cultural hybrid, a blend of cultures that can be interesting, but also confusing and frustrating to them. This condition is exacerbated growing up in a country like Canada.” – Nick Voci, The Vancouver Sun, April 22, 1994 <sup>1</sup>*

**Third Culture:** The Merriam-Webster online dictionary article, “What is a Third Culture Kid,” defines a third culture kid as “a child who grows up in a culture different from the one in which his or her parents grew up.” The concept seems to fall somewhere between an emergence and a cultural xenogenesis. This term, for example, could have been used to describe the first and second generations of Native Americans who grew up on Tribal Reservations and went to government-run English-speaking public schools (à la Frank Waters’ The Man Who Killed the Deer (1942)). The term could apply to largescale future shock, culture shock, or more mundane situations, such as orphans adopted to another country, immigrants whose parents arrived from Old Europe, people who moved to different parts of the world with their parents during their youth, or children with multicultural parents.

“Third Culture” is a term that is used in many unrelated contexts, and thus you may have heard it before; “Third Culture Kids” is however, a specific usage enough to be defined by Merriam-Webster dictionary. Another use of ‘Third Culture’ is provided by Edge, to wit:

- ✓ “The third culture consists of those scientists and other thinkers in the empirical world who, through their work and expository writing, are taking the place of the traditional intellectual in rendering visible the deeper meanings of our lives, redefining who and what we are. It is a large enough umbrella to also include the ‘digerati,’ the doers, thinkers, and writers, connected in ways they may not even appreciate, who have tremendous influence on the emerging communication revolution surrounding the growth of the Internet and the Web.” – from Edge.com “About” page, <https://www.edge.org/about-edgeorg>, captured October 31, 2018.<sup>2</sup>

Bernays’ digital ‘invisible hands’ but impliedly, the humanities ‘non-empirical thinkers’ – religious, philosophical and literary intellects – are excluded and to be replaced. In all cases, ‘third’ is a term intended to differentiate whateveritis from whateveritwas, e.g., the people of the Renaissance might just have called themselves the ‘Third Age of Mankind’ (a tag line from the television show, Babylon 5) instead of Renaissance, if they had the mind to do so. Instead they went with classical ages (the old world), middle (the Middle Ages) and new spring (the Renaissance).

**Zeitrice:** A Zeitrice (“zeit-trice”) is an inside out or reversed Fuzzy Group consisting of *three Aspects and one Proficiency* having the same triangular arrangement as described previously for Fuzzy Groups (see Fuzzy Formations, 4 Culture, p. 405, *supra*), but instead, a Symbolic Constructural Element is required on an adjacent Friendly or Naturalized Colony plus one active Ideological or Epistemological Constructural Element.

There is only one form of the Zeitric formation; a Zeitric *cannot be formed* by use of two Aspects and two Proficiencies. Using three legally-placed Aspects, a Zeitric may be somewhat more difficult to form than a regular Fuzzy Group. A Zeitric represents potential profundity.

- ✓ “Zeitric” is a nonsense word formed from “zeit”—German for time, era (invoking Zeitgeist), and “trice” an obsolete English noun meaning, “brief instant” (as a transitive verb, “hoist, pull” a sail), imported into English from Dutch in the 15<sup>th</sup> Century. See Merriam-Webster online dictionary at *trice*. One favorite made up game word is Scott Pardee’s game title “Chebache” which is **C**hess, **B**ackgammon and **C**heckers. It’s a good game.
  - ✓ Merriam-Webster online dictionary at *profound*: **1a**: having intellectual depth and insight, **2b**: coming from, reaching to, or situated at a depth, **3a**: characterized by intensity of feeling or quality.
- In a Trice: The ‘actualization’ of a Zeitric is by the process of Reification. Reification is the process by which something abstract becomes concrete and real (e.g., Frank Elwell, “a reification of method over substance”).
- ✓ Merriam-Webster online dictionary defines *reify* as: to consider or represent (something abstract) as a material or concrete thing; to give definite content and form to (a concept or idea).

Reification, the process of *reifying*, is a word primarily encountered in psychology. Probably the best psychology examples of the process of reification are paranoia and phobias. Fear, especially irrational fear, is the world’s best reification agent. This is the operating principle of tyranny, terrorism, criminal extortion, politics, and psychological warfare.

*Reification does not require a Power Activation.* Whenever a Zeitric is Reified, all of the pieces forming the Zeitric are removed from the Public Space and a special type of News Event called an Exposé’ (“ex-pos-say” not to be confused with Exposing “ex-pos-ing” Aspects or exhibitionism<sup>3</sup>) is posted. The Exposé’ does not require and is not related to any Power Activation, *may not be used* to satisfy the Interpretation requirement of any Power Activation, as it is not a direct result of a Power Activation, but is still an official Interpretation as a News Event. An Exposé’ is always a non-adverse News Event – it cannot directly affect any position except the issuer. The Exposé’, like a Special Bulletin, *is static*, it cannot be modified by any position after it is issued.

A Reification, game mechanically, is a fusion of a Fuzzy Group and News Event. One of the primary differences between an Exposé’ and a News Event is that the former costs the position pieces from the Public Space, like an Actualization.

- Reification: Whenever a position desires to Reify a Zeitric, a proposed Exposé’ News Event must be sent with the position’s Actions. The Exposé’ will not be posted, and will not take effect, until **after** the Concierge has processed the position’s Regular Turn actions (therefore may require some guessing and prediction). Each position may Reify one Zeitric per Regular Turn, but will likely only do it a few times during the game, or possibly not at all. There is no requirement that any position submit an Exposé’ during the game, rather, it should come as a natural result of thinking about the game, in the game.

Religion (or at least Christianity) as it is practiced today, is really about reification of the mystical, divine spiritual – the challenge of making the abstract concepts of divinity ‘real’ in

the daily lives of ‘the flock.’ This is quite the opposite of pre-Judeo-Christian mythopoeic religions (Greek, Roman, Egyptian, Mesopotamian mythologies) which projected (deified) the natural world, and the worst and sometimes best of human behavior and family relationships onto pantheons of deities, in order to exemplify and justify their existence.

- ✓ See *More Than a Feeling*, 1 Temporal Technology, p. 808 *et seq.*, *infra*, for further discussion of mythopoeic thought.

---

*“Diary of a madman  
Walk the line again today  
Entries of confusion  
Dear diary, I’m here to stay.”*

– Ozzy Osbourne, “Diary of a Madman” (1981)

---

**Dear Diary:** Diaries and daily journals (and private letters) are the Exposé’ of history up to the late 20<sup>th</sup> Century, e.g., Joseph Stilwell, Samuel Pepys, Erasmus, Albert Einstein, Anne Frank.

- ✓ “This apparently inconsequential diary by a child, this ‘*de profundis*’ stammered out in a child’s voice, embodies all the hideousness of fascism, more so than all the evidence of Nuremberg put together.” – Jan Romein in his article “Children’s Voice” on *Het Parool*, April 3, 1946.

The habit of personal daily journalism has fallen off in recent decades; what will in the future tell historians about our private, personal thoughts? Where will we tell our personal stories for posterity, after all of the characters have gone home?

---

*“The unexamined life is not worth living.” – Socrates*

---

**Diary of a Madman:** The Exposé’ News Event is the deep think or deep blue statement by the position during the course of the game. Like a Writ, an Exposé’ must have specific form and parts:

- ✓ *The Place*, the Exposé’ must begin with a list of the Aspects and Proficiencies to be used in Reification (using coordinate locations on the Public Space).
- ✓ *The Facts*, nothing but the Facts (e.g., *Dragnet* (1951-1959)). The Exposé’ must contain an enumerated list of current facts about the position which are to be exposed. The Exposé’ must reasonably relate to one or more **Fundamental Realities**, in addition to any other game facts, however, the ‘reasonably related’ qualifier is a liberal judgment call by the Concierge. The facts should be written in simple sentences, in the present tense, without qualification (‘no ifs, ands or butts’). These facts must be verifiable by the Concierge looking at the issuing position’s information and Public and Diplomatic Space (see *Diplomatic Spaces*, 2 *Diplomacy*, p. 1116, *infra*); the facts can only relate to the internal information of the position. Reference may be made to Galactic Space if absolutely necessary, but the Exposé’ is entirely an internal matter.
- ✓ *The Dirt*, the Exposé’ must include a blurb for publication as the News Event. The blurb should be written in a faux investigative reporting style if possible and must expose the facts in the previous section, which, when published, will become public

knowledge. The section can be written in a slightly tabloid style if desired, it can have a headline, it can be written in character if that works, be creative and fun with it, but not deceptive and useless.

There is some artistic license to dressing up the facts for the Expose' blurb but not such as to obscure the facts for the audience – the other positions – who do not have access to the internal information of the issuer. The blurb cannot be used by the issuer to dodge or mitigate the exposure of facts required by the process of Reification.

- **Spinning Top:** The Facts presented in the Expose' must be Absolutely True for game purposes and must also be literally true. Within this, there is room for maneuver, however.
  - ✓ For example, the statement, 'The Three Eyes *does not have four Government Titles.*' The Concierge can look and verify this as objectively true at that moment. But as a statement in the game it is not very informative, because it still means that the position must have one, two or three Government Titles; it does not mean however that the position has five Government Titles because if it has five Titles, then it has four Titles as well. See Crack in the Temple, 1 Beginnings, p. 27, *supra*.
    - That is, if I have five one-dollar bills, then it is both true that I have one dollar bills and that I have four one-dollar bills. It may also be true that I have six one-dollar bills, but that is uncertain, and not indicated by the statement (however, in GGDM, a position may not have six Government Titles by operation of the rules).

The point of an Expose' in the real world is to publically expose objective facts – usually facts that someone wants to remain hidden – and to draw conclusions therefrom – which process is intended to lead to positive change. If it turns out that there is nothing there, then the investigative journalist moves on to something else; thus in GGDM play, the Expose' should involve minimum gamesmanship with the facts, which would be a form of bad faith (or even fraudulent) toward the game.

Because the Concierge verified the facts in the Expose', players can take them as true (at least at the moment of publication) and thus the Expose' constitutes 'free intelligence' to the other positions in the game. However, the Expose' should – most importantly – also enhance play of the game overall by providing facts to work with in making the story; as mentioned in Red Purge, 3 Dreamtime, p. 161, *supra*, an adverse News Event (affecting another position) can be and is frequently a 'shot in the dark.'

- **The Little Secret:** The final part of the Expose' is an effect that the position desires from the Reification. This part *will not be published*, it is between the position and the Concierge only. The Reification must contain a single, restricted, one-time effect that is *reasonably related* to the effort and cost of the Reification, the Aspects and Proficiencies used, and especially the Facts that were exposed in the News Event. The effect should apply only to the position that issued the Expose'; it cannot be used to *directly affect* another position.
  - ✓ **However**, acts done by every position every turn indirectly affect other positions (e.g., see the James D. Fearon "Security Dilemma" feature quote, 2 Combat, top p. 964, *infra*). Thus, the Expose' may and probably will indirectly affect other positions by the resulting change to the issuing position.

Each Expose' is a singular, one-off, non-repeatable event, unlike a Writ which can be activated any number of times during the game. Thus the effect of the Reification can be a little more or a little different than the scope of the Writ, but should not be abused.

- ✓ For example, suppose that the Warren Commission investigation had come to the conclusion that Soviet leader Nikita Khrushchev had initiated or been somehow involved in the assassination of U.S. President John F. Kennedy? *If* that were thought to be true, what choices follow? *If* the government thought that a foreign power had been involved in the assassination of the President of the United States, what could they do? They can either expose it publically or hide it. *If* the information were made public, a situation would be created where the Soviets would be called out on account which may very well lead to war, as one would expect if the leader of one country is assassinated by the services of another. Thus, the truth had to be suppressed to avoid confrontation and possible war. The truth of one murder would be hidden so that everyone else, and future generations, could live. The generational war cycle would be broken; this was the second act of the Cuban Missile Crisis (with the Bay of Pigs being the opening prelude). A drama is three acts.

*If humanity is considered one position* in GGDM terms, and issued the Expose' (representing the 'real' conclusion reached by the Warren Commission), then the sudden removal of Nikita Khrushchev on October 12, 1964 (i.e. the removal of a Government Title without disruption) might be the secret Reification effect of the Expose'.

- Khrushchev was ousted less than 11 months after the assassination of President Kennedy, plotting had begun in March 1964, about the time that his possible involvement might have become known to the West. Or maybe it's just a historical coincidence, like the Protestant Coincidence.
  - Calling out the Soviets in 1964 would have been counterproductive to the containment strategy:
    - "But I would like to record my conviction that problem is within our power to solve – and that without recourse to any general military conflict.... Soviet power, unlike that of Hitlerite Germany, is neither schematic nor adventunstic. [sic] It does not work by fixed plans. It does not take unnecessary risks. Impervious to logic of reason, and it is highly sensitive to logic of force. For this reason it can easily withdraw – and usually does when strong resistance is encountered at any point. Thus, if the adversary has sufficient force and makes clear his readiness to use it, he rarely has to do so. If situations are properly handled there need be no prestige-engaging showdowns.... For those reasons I think we may approach calmly and with good heart problem of how to deal with Russia." – George Kennan, U.S. Ambassador to the Soviet Union, Long Telegram, February 22, 1946.<sup>4</sup>
- Edge of Reality: After the Expose' is posted, there is a 5% chance that each Fact in the Expose will add one Monad to the Public or Diplomatic Spaces (see Diplomatic Spaces, 2 Diplomacy, p. 1116, *infra*) of the issuing position and a 3% chance that each Fact will allow

one Monad in the issuer's Public or Diplomatic Spaces to be swapped to a new location in the other space (that is, from Public to Diplomatic, *vice versa*).

- ✓ A separate die roll is made for each fact for both possibilities. So one die roll is made for each Fact for the possibility of adding a new Monad, and one die roll is made for each Fact for the possibility of moving one Monad.
- ✓ The chances are not added together, each roll to add a new Monad has a separate 5% chance and each roll to be allowed to move a Monad has a separate 3% chance of success. If you had 5 Facts in the Exposé', the chances *would not be* 25% and 15% for each Fact; they would be 5% and 3% for each of the five rolls.
- ✓ Adding or moving Monads allows the issuing position to slightly reshape their reality and/or slightly expand their reality that is represented by the Public Space. It is the choice of the issuing position where the Monads are moved or added and whether on the Public Space or on a Diplomatic Space.
- ✓ New Monads can be placed adjacent to any Monad on any 'edge' of the Public or Diplomatic Space and any Monads to be moved must currently be empty and maybe moved to any 'edge' location on the Public or Diplomatic Space.

As the edges of the Public Space and Diplomatic Spaces wrap around to meet as discussed above, see also *Over the Edge*, 1 *The Sidereal Stage*, p. 108, *supra*, players should be cognizant that they are actually just inserting Monads into a circle at the locations that appear to be edges when seen in a flat top-down projection. Thus, they may inadvertently push things on the Public or Diplomatic Space out of adjacency.

- ✓ See discussions, *Shared Spaces*, 2 *Diplomacy*, p. 1118, and *Mental Space*, 3 *Reformation*, p. 1402, *infra*. Exposé', colony Conversion and Naturalization (4 Order), Technological Era advancement (1 Eras), and Reformation (3 Reformation) are the only means to add Monads to the Public Space.

The chance of being able to receive new Monads is nominal in any case. Don't bet your grocery money on those odds! Thus the possibility of adding or moving Monads should not enter into the Concierge's judgment about the balance of the Exposé'. When it happens, it's a bonus. Positions may use Enlightenment for rerolls in this case (see 2 *Colleges* generally, *infra*).

- **Point of Know Return:** The entire Exposé' will be subject to approval by the Concierge, however, the standards of approval by the Concierge will be liberal because this sandbox, this story is for the players. Like other News Events, posted Exposé' form a history, standard or *stare decisis* against which later Exposé' (and position actions) may be judged. Like Special Bulletins posted by the Concierge, Exposé' may not be subsequently altered by follow-up News Events posted by other positions, nor may it be subject to Diplomatic Protests.
  - ✓ The Exposé' represents the argument that some normally secret game position information must be sometimes made public for the purpose of cohering the game story. The carrot is what the position may gain by doing so, and what the game may gain in enjoyment. An Exposé' can function in a manner similar to an Aspect, except on the scale of the game story. The Concierge may sometimes – carefully – accomplish the a similar end with creative Prose Interventions Special Bulletins.

- ✓ Within the design process of GGDM, the Expose' is a strange creature feature; unlike much of the rest of GGDM, the Expose' was not directly intended to simulate something in civilization, instead, *it is a creature solely of the game mechanics*. Simply, one day 10 or 15 years ago, I thought, what if I reversed the Fuzzy Group? The development then became a sort of Writ, sort of News Event called the Expose'.<sup>5</sup> The name, Expose', does suggest that something related to the real world is being simulated, but with a unique GGDM cant. There are probably some examples of real world Expose' in GGDM; I am no journalism student, but perhaps the 1991 Peter Marin feature quote at the bottom of 2 Culture, p. 374, *supra*, is an example.

*“Is man at heart any different from the spider, I wonder: man thoughts, as limited as spider thoughts, contemplating now the nearest star with the threat of bringing with him the fungus rot from earth, wars, violence, the burden of a population he refuses to control, cherishing again his dream of the Adamic Eden he had pursued and lost in the green forests of America...”*

– Loren Eiseley, “The Hidden Teacher” (1969)<sup>6</sup>

#### Endnotes.

<sup>1</sup> Citation: Quoted in Merriam-Webster online dictionary article, “What Is A ‘Third Culture Kid?’”

<sup>2</sup> Commentary: In 2018, I sent Edge.com an email asking what they considered the “second culture” so that I could understand their systemic basis for the “third culture” claim. I received no response. Of course. From this, I might conclude that they have no basis and that it’s just a sexy hollow term for the claims they are trying to make.

<sup>3</sup> Commentary: Or as the old saying goes, ‘about as accidental as an exhibitionist’ fly being open’!

<sup>4</sup> Commentary: The Long Telegram is one of the most important, original historical documents available to the public without blackouts. It is well worth reading in its entirety, we need to read it again and think about it. The document is available free online from the National Security Archives. General Patton, one of the main proponents of attacking the Soviets – who insisted that he could have captured Berlin and Prague before the Soviets, had died in December 1945 under circumstances that conspiratorial types consider suspicious. The British had gone as far as to begin operational planning (“Operation Unthinkable”) for an attack on the Soviets on July 1, 1945. By early 1946, cooler heads had prevailed, and the containment began: “To speak of possibility of intervention against USSR today, after elimination of Germany and Japan and after example of recent war, is sheerest nonsense. If not provoked by forces of intolerance and subversion ‘capitalist’ world of today is quite capable of living at peace with itself and with Russia.” – George Kennan, U.S. Ambassador to the Soviet Union, “Long Telegram,” February 22, 1946.

✓ “Self-preservation is not a bad foundation for victory...” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 454.

<sup>5</sup> Commentary: The Expose' was rewritten and repurposed in 2018 and moved from 4 Culture to 4 Writs. Originally, an Expose' was vaguely a part of the process of Reformations and Kairotic Moments, both of which were also completely rewritten in 2018. The original Expose' did not fit into the rewritten Reformation rules.

<sup>6</sup> Citation & Commentary: **Doctor Who**: Exactly. The forest. It’s in all the stories that kept you awake at night. The forest is mankind’s nightmare. – Dr. Who, “In the Forest of the Night” (2014).

✓ Picture Pandora, the lush habitable moon of a gas giant orbiting Alpha Centauri in the movie Avatar (2009). Loren Eiseley may have had influence on it... testing, testing for echoes. Echoes. Echoes.

**Excerpt of Washington Post, Daily 202 article, July 24, 2017**

**Featuring quotes from Tom Nichols book, *The Death of Expertise: The Campaign against Established Knowledge and Why It Matters* (2017)**

[Tom] Nichols, a professor of National Security Affairs at the U.S. Naval War College in Rhode Island, believes the “death of expertise and its associated attacks on knowledge fundamentally undermine the republican system of government.”

“The abysmal literacy, both political and general, of the American public is the foundation for all of these problems. It is the soil in which all of the other dysfunctions have taken root and prospered, with the 2016 election only its most recent expression,” Nichols writes. “Americans have increasingly unrealistic expectations of what their political and economic system can provide. This sense of entitlement is one reason they are continually angry at ‘experts’ and especially at ‘elitists,’ a word that in modern American usage can mean almost anyone with any education who refuses to coddle the public’s mistaken beliefs. When told that ending poverty or preventing terrorism is a lot harder than it looks, Americans roll their eyes. Unable to comprehend all of the complexity around them, they choose instead to comprehend almost none of it and then sullenly blame experts, politicians and bureaucrats for seizing control of their lives.”

Professionals in every industry report that laypeople increasingly challenge their know-how. “No area of American life is immune to the death of expertise,” writes Nichols, who worked for the late Republican senator John Heinz (Pa.) early in his career. “Doctors routinely tussle with patients over drugs. Lawyers will describe clients losing money, and sometimes their freedom, because of unheeded advice. Teachers will relate stories of parents insisting that their children’s exam answers are right even when they’re demonstrably wrong. Realtors tell of clients who bought homes against their experienced advice and ended up trapped in a money pit.”

... “What I find so striking today is not that people dismiss expertise, but that they do so with such frequency, on so many issues, and with such anger,” Nichols laments. “It may be that attacks on expertise are more obvious due to the ubiquity of the Internet, the undisciplined nature of conversation on social media, or the demands of the twenty-four-hour news cycle. But there is a self-righteousness and fury to this new rejection of expertise that suggest, at least to me, that this isn’t just mistrust or questioning or the pursuit of alternatives: it is narcissism, coupled to a disdain for expertise as some sort of exercise in self-actualization.”

*“In Persia and China they [the Mongols] were soon overthrown and absorbed, and they lasted longer in Russia only because the environment suited a return to barbarism. Unlike the armed zealots of the Prophet, who gave more than they took, and who came in time to be praised by the vanquished, the men of Jenghiz Khan appear little better than bandits and slave drivers. The world of the thirteenth century might have benefited by the spread of Chinese culture, but the Mongols themselves had derived only lessons in the craft and guile of conquest. Except for the sword they came empty-handed, and within a few generations they followed the Goths and Vandals into that limbo awaiting the conqueror who has nothing to offer save force.”*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 157 <sup>1</sup>

**Nothing to Offer:** The Islamic State, like their forebears, e.g., the Mahadist State of Sudan (1885-1899), quickly followed the Goths and Vandals and the Dodo... The problem with the Islamic State is that they failed to convince anyone who wasn't already convinced, they added only the force of arms to arguments and medieval religious fantasy that the intelligent majority considered suspect and/or had repudiated. Those under their rule just nodded and hunkered down, hoping to survive the apocalyptic battle sought (and obtained) by the extremist.

- ✓ “Groups like ISIL can't destroy us, they can't defeat us. *They don't produce anything.* They're not an existential threat to us. They are vicious killers and murderers who perverted one of the world's great religions.” – President Barak Obama (2015) (emphasis added).

Religious fundamentalism is a state of conviction into which more moderate people wander over time due to events and their perceptions. Religious fundamentalist rarely convince anyone who isn't already a religious fundamentalist; thus they are usually arguing instead to reassure themselves. The more extreme their fundamentalism, the less convincing their arguments. For those who are not wandering in that direction, their arguments have one of two usual effects, depending on the environment: Either they impel others to try the things they are arguing against – that is, in the opposite way, or they create fear and intimidation in non-fundamentalist when fundamentalist have power.

- ✓ Failure to convince people under your rule without resorting to naked threat or force of arms is a failure of legitimacy leading to failure of sovereignty, see 2 and 3 Government Titles generally, *infra*. At what point does 'sovereignty' become hostage-taking of entire populations? See The Day I Became History discussion, 5 Government Titles, p. 643, *infra*. See also Pacification Theory discussion top of 6 Combat, p. 1020, *infra*.
- **The Hordes:** The story of the Hordes is much more complicated than presented by Montross and anyone familiar with the intricate and protracted history of the Hordes in Russia, the Middle East, and China may be repulsed by gross oversimplification. Montross, of course, was trying to make a sweeping point in a macro-historical sense and it does appear to be true that the Hordes did very little to spread traditional Chinese culture or technology; the Hordes fragmented and fought each other, many converted to Islam, some converted to Christianity,

those in China became Buddhist, and some of the later intra-Horde fighting were tinged with religious conflict.

The Vandals, on the other hand, disappeared much more quickly; the Vandals were Arian Christians who took over significant Roman territories in North Africa and were intolerant of other religious beliefs, but soon found themselves on the wrong side of both the power struggles with the Byzantine Empire and religious struggles against Trinitarians and Orthodoxy, while their successive leaders lacked the drive and ingenuity of the great King Genseric.

*“But when I have allowed that they may debate these subjects in their holes and corners, to pass an idle hour, it is to the orator none the less that I shall entrust and assign the task of developing with complete charm and cogency the same themes which they discuss in a sort of thin and bloodless style.”*

– Marcus Tullius Cicero, *Of Oratory* (55 B.C.), Bk. 1 (trans. E. W. Sutton and H. Rackham) from Patricia Bizzell and Bruce Herzberg, *The Rhetorical Tradition* (1990), p. 208

**Orator of Military History:** Among the plethora of excellent military history writers of the latter half of the 20<sup>th</sup> Century, Lynn Montross, historical writer for the U.S. Marine Corps, is the most underappreciated, unrecognized Western post-World War II military historian. The influence of his work can be seen in Dupuy & Dupuy’s *Encyclopedia of Military History*, including Montross-like commentary sections and the same L.K. Hartzell illustrations used in *War Through the Ages*. According to the University of Syracuse special collections, he corresponded with popular American Civil War history author Bruce Catton.<sup>2</sup> I began reading Mr. Montross’ *magnum opus* (3<sup>rd</sup> Ed.) when I was 15 years old, and had read it three times by the time I graduated high school (i.e. not reading the books I was supposed to be reading). It is probably the seed of my peculiar macro-intellectual view.

I still marvel at his monumental work of macro-historical prose, whose style and tone is said to have been influenced by Edward Gibbon’s *The History of the Decline and Fall of the Roman Empire* (pub. 1776-1789). His historical voice, his analysis, have a polished, ethereal quality that is both grand, sweeping, and also pragmatic and practical. He was a wordsmith. Aspiring writers as well as macro-historians, military historians and military cadets should read Montross.

Lynn Montross, in a sense, seems to be Cicero’s orator in the field of military history.

- ✓ “Wordsmith,” first used in 1873 according to Merriam-Webster, was probably coined to equate writing to the other working professional crafts, a problem confronted by Robert E. Howard, see THINKING AS RECREATION, 5 Fallen to Earth, p. 1578, *infra*. It is a term still commonly used in law firms referring to letter- and legal-brief writing.
- **Empirical History:** Trivia-obsessed empiricism is the dominant history today; trivia being easily confused with the search for ultimate causes. Like the social sciences, early 20<sup>th</sup> Century historians felt conformist pressure to become strictly empirical to become respectable.<sup>3</sup> Six years after Mr. Case’s comments (see *Aspects of Sociology 2 Culture*, p. 371, *supra*), J.B. Bury dismissed non-empirical history, so ‘the struggle is real’ as the millennials say:
  - ✓ “I may remind you that history is not a branch of literature. The facts of history, like the facts of geology or astronomy, can supply material for literary art; for manifest

reasons they lend themselves to artistic representation far more readily than those of the natural sciences; but to clothe the story of human society in a literary dress is no more the part of a historian as a historian, than it is the part of an astronomer as an astronomer to present in an artistic shape the story of the stars.” – J. B. Bury, “The Science of History,” Selected Essays, 1930 (text available on Google Books).

It might be fair to say that Lynn Montross (who is quoted throughout GGDM) was a writer first and historian second. His historical narrative is sweeping, and often assumes the reader is familiar with the facts from other sources; e.g., I did not obtain any great understanding of the (confusing) events of the Thirty Years War from reading War Through the Ages in high school, my understanding began to develop with the factual chronological presentation in Dupuy & Dupuy’s Encyclopedia of Military History. Whether or not this is a damning criticism of Montross is another issue; but it probably explains generally his lack of popularity and appreciation in the modern military and historical cohorts.

- ✓ Professor Elwell has essentially accused modern data- and questionnaire-driven sociology of the same, of being “thin and bloodless.” The legacy of GGDM might be similar to that of Lynn Montross. In the microsociology, social psychology, data-manipulation, questionnaire-design (see Frank Elwell feature quotes, 3 Fallen to Earth, pp. 1529, 1539-1540, *infra*) cohorts of sociology, I and my opus might be considered to be something else first – perhaps primarily a science-fiction game design, pseudo-scientific mysticism, or humanist philosophy first – and macrosociology second, as an afterthought (if at all). Thus, GGDM will not be taken seriously by professional sociologists as a work of or anything similar to macrosociology.

---

*“Towards the end of the third century, an emperor named Diocletian (r. 284-305) had finally proved able to stabilise imperial government after 50 years of regime change and violence. In 293, he established a college of four emperors, all senior generals unrelated to one another except by marriage. The idea was to ensure that one emperor would always be on hand to deal with any outbreak of violence and to prevent rebellion or civil war. Diocletian intended for himself and his senior colleague to retire, after which their junior partners would bring two new emperors into the imperial college to replace them. The goal was to ensure a handover of power at a convenient and peaceful moment so that the framework of government would remain undisturbed. But Diocletian’s intentions were thwarted by rivalries, in which Christianity played an important role.”*

– Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” Aeon, January 30, 2017

---

**College Bound:** A College is the entire recognized, organized body of knowledge and professional organization in a civilization dedicated to advancement of a particular purpose. A College is also the social and government recognition of the body of knowledge and professions, sanction, and a resource commitment. A Writ is not required to found or Host a College.

- First Lesson: In addition to the normal references to institutions of higher education, Merriam-Webster online dictionary provides the following at *college*: **1:** a body of clergy living

together and supported by a foundation, and **4**: company, group, specifically: an organized body of persons engaged in a common pursuit or having common interests or duties.

- ✓ The Oxford Living English Dictionary has the following at *college*: 2: An organized group of professional people with particular aims, duties, and privileges.
  - ✓ McMillan online dictionary at *college*: 2 [countable] used in the names of some organizations whose members belong to a particular profession, especially a medical profession.
  - ✓ Finally, the KJV Dictionary, taking its definitions from the Webster's American Dictionary of the English Language (1828) offers the following in part at *college*: “In Russia, the denomination, college, is given to councils of state, courts or assemblies of men intrusted with the administration of the government, and called Imperial college; the college of foreign affairs; the college of war; the admiralty college; the college of justice; the college of commerce; the medical college. In Great Britain and the United States of America, a society of physicians is called a college. So also there are colleges of surgeons; and in Britain, a college of philosophy, a college of heralds, a college of justice, &c. Colleges of these kinds are usually incorporated or established by the supreme power of the state.” This is the College in GGDM.
- Foundation: Colleges must be Founded by an activation of the Culture Power for that purpose, which costs *three Acts and a Scene*. Each activation of the Culture Power for the purpose of Founding a College may only be used to Found one College.

At the time of Foundation, a position must provide the following basic information: College Mission, Initial and Per Turn Endowment, and Host Colony location. This information taken together forms the College Charter; each Charter must be unique. The Scene used in the Foundation must be on the planet where the proposed Host Colony is located. A College Charter is not an ‘official interpretation’ in the game (i.e. it is not a Writ) and thus cannot be used to satisfy the Interpretation requirement of the Culture Power Activation.

- ✓ As Taxation only requires three Acts, while activation of the Culture Power for the purpose of College Foundation requires *three Acts and a Scene*, if the two Powers are activated in the same Regular Turn, Taxation will occur first and may provide the funds necessary for College Foundation. But there is a possibility that one or more colonies may fail the Taxation Power Activation then ... uh oh! In the Marines, we used to call this ‘kiting a check,’ i.e. writing a check and hoping it doesn’t hit the bank before the next paycheck is direct deposited.

Foundation of a College is the most expensive Power Activation in GGDM. All else comes before, including Census and Taxation (see *Clockwork Universe*, 3 *The Streams of Time*, p. 90 and *Life, Taxes, Death, and Taxes*, 1 *Taxation & Census*, p. 296, *supra*). It is also taxing in RPs to endow Colleges. Whether it is the best expenditure of resources for the position is a long-term strategic question.

While it is possible to Found a college by use of an Expose’ (maybe Hari Seldon explaining to Emperor Cleon I that the Galactic Empire is doomed) if the stars align correctly – check with the Sidereal Astrologers College first – the College will still need a simultaneous Initial Endowment. Although GGDM does routinely allow players to create ‘something from nothing,’ Founding a College with Initial Endowment from an Expose’ would require a very big

Expose’ and the *careful* judgment of the Concierge. See *The Little Secret*, 4 Writs, p. 450, *supra*.

- ✓ A College Charter is not a Writ, it does not have Writ form or Writ function game mechanically (see Writs generally, *supra*), nor does it have an expiration like an Article of Incorporation (a Special Writ, see *Someone Stole the Stage*, 1 Corporations, p. 1247, *infra*). Admittedly there may be some conceptual overlap. While the College Charter does have a form and rules, it is not an ‘official interpretation’ and does not need to be ‘accepted’ by the Concierge as long as it is in correct form (see *Official Interpretation and Flavors of Fact*, 1 Dreamtime, pp. 130, 134 respectively, *supra*).
- **Mission:** The Mission of the College must be definable in game terminology. Each College may only have one Mission, and the Mission must be one to three words naming a Power, Aspect or Proficiency, Constructural Element, or some other game-specific term, such as “ships,” “defense bases,” “orbital shipyards.” The first three are commonly called Power Colleges, Proficiency or Aspect Colleges, and Constructural Colleges, respectively, while the latter are called Special Colleges.<sup>4</sup>

Colleges are typically named by their Mission, for example, the “Combat College”<sup>5</sup> (Power College) or the “Police College” (Proficiency College) or the “Ship College” (Special College), whatever the case may be; a position may not have Colleges with duplicate Missions.

- ✓ From the movie, *John Paul Jones* (1959): In Paris, Benjamin Franklin said to John Paul Jones, “These are honors few people have achieved. (referring to his medals) Nevertheless, in this kingdom and as of now, quadrants of nobility take precedent over ability, courage, or for that matter, intellect.”
- ✓ ...Later, John Paul Jones is ‘loaned’ to the Russian Empress as a naval ‘advisor.’ Rear Adm. John Paul Jones follows the Russian Chamberlin through the ante-chamber outside the court of Russian Tsar Catherine the Great; the ante-chamber is full of men in high ranking military uniform. John Paul Jones’ assistant (looking around) said: “There are a lot of generals and admirals!” (clearly wondering why the Empress of Russia needs their assistance with so many military men standing around). Chamberlin: “They’ve never heard a shot fired, save for a salute given on her Imperial Majesty’s birthday. *Boudoir* promotion.”
- **Humanities:** Could a position Found a Special College named after itself, as the name of the position is a specific game term? It would be difficult to argue against it when we have this vast group of pre-interstellar academic disciplines called the Humanities. To wit:
  - ✓ “The humanities can be described as the study of how people process and document the human experience. Since humans have been able, we have used philosophy, literature, religion, art, music, history and language to understand and record our world. These modes of expression have become some of the subjects that traditionally fall under the humanities umbrella. Knowledge of these records of human experience gives us the opportunity to feel a sense of connection to those who have come before us, as well as to our contemporaries.” – from “What are the humanities,” Stanford Humanities Center, Stanford University, captured November 23, 2018.

Just substitute the name of an alien sapient species. See meta-consciousness discussion, In the Mirror, I Meta Me, 2 Constructural Elements, p. 195, *supra*.

- **Endowment:** The Endowment is the initial and ongoing resource commitment to the College. A College with no Endowment does not generate anything and will eventually “close” if not Endowed for three consecutive Regular Turns (i.e. “bankrupt”).
  - ✓ The Initial Endowment is the commitment of resources (RPs) currently in the Treasury to fund the College. Obviously, the Treasury must have sufficient funds for the Initial Endowment and those RPs are subtracted from the Treasury at the time of Foundation.

---

*“An institute for advanced research with no funds for research. It’s a provocative concept.” – Dr. Harry Wolper (Peter O’Toole), from Creator (1985)*

---

**Campus Life:** While Colleges do represent the entire body of professional knowledge and commitment on a particular subject or group of subjects throughout a civilization; Colleges do need a “place,” a Host Colony (aka “campus colony”).

- ✓ The colony designated to Host a College must be a Friendly or Naturalized Colony (see Colony Politics, 2 Order, p. 538, *infra*) with at least ten population factors.
  - ✓ An eligible colony may Host any number of Colleges as long as it has ten population factors *for each*.
  - ✓ The location of a College on a Host Colony has no effect on the colony as the College is publicly funded by the interstellar government, except that a colony Hosting a College may never voluntarily remove population such that it has less than ten population factors per College hosted (i.e. minimum population is locked).
  - ✓ A colony does not become a “specialized colony” (see 4 Expansion, p. 925, *infra*) by Hosting a College, but it is possible to create “specialized” College Host colonies.
  - ✓ If the Host Colony of a College is captured, operation of the College is suspended, but no funds are lost from the current Endowment. If the Host Colony is recaptured, operation of the College re-commences on the next turn. If a Host Colony cannot be recaptured within three Regular Turns (Turn Cycles), the College will “close” and half of the Endowments will be lost, while the other half are returned to the Treasury.
  - ✓ Ownership of Colleges is non-transferable as the College is related to (and a product of) the specific cultural milieu and the interstellar government that created it.
- **Frat House Flop:** The ten population factors per College is a somewhat arbitrary – no – actually is an obviously arbitrary baseline. In fact, any removal of a large percentage of population from a colony hosting a Capitol, College, MegaCorporate Headquarters or any colony with a large industrial and shipbuilding output, should result in “brain drain” of that colony.
    - ✓ Merriam-Webster online dictionary at *brain drain*: the departure of educated or professional people from one country, economic sector, or field for another usually for better pay or living conditions.

Brain drain is almost impossible to quantify and because of the dualistic nature of the representative structures in this game, the effects of brain drain (aka ‘capital flight’) are better left to Concierge Interventions than some convoluted section of rules. Historical examples include the expulsion of the Jews from Spain, mass emigration to the New World, flight of the

German Intellectuals from Nazi Germany, exodus of the Huguenot craftsmen from France, and the current exodus of professionals from India. Ghost towns remain.

- ✓ “The Host World of a College must have an active Epistemological Constructural Element; if it becomes inactive, the operation of the College is suspended.” (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*).

Although the rules do not require that the Host World must have an active Epistemological Constructural Element at the time of Foundation of the College, it would be a sub-optimal situation, since Cohering is random (see Money Can’t Buy You Love, 5 Culture, p. 422, *supra*). An inactive Epistemological Constructural Element (among others) may however, prevent Cohering Attempts at the Host World of the College, a snowballing effect.

---

*“But there is little discussion of the way that massive college costs effectively keep students beholden to their parents throughout college and, with massive debt, potentially far beyond that. ‘Students are infantilized by the university and by their parents,’ [Matt] Gabriele [at Virginia Tech] says. ‘They’re not treated like they’re financially independent.’ A big part of being an adult is being financially responsible for yourself – which is impossible for young people struggling to find work while paying loans and healthcare costs. All of which means they have less financial independence and are more at the mercy of their parents when choosing majors.”*

– Noah Berlatsky, “Are millennials really to blame for the decline in the liberal arts?” NBC Think, October 10, 2018

---

**Student Loans:** At the end of each Regular Turn after Foundation, *whenever actions are processed for the position*, the College will operate automatically (positions cannot choose not to operate an Endowed College, except by skipping their Regular Turn) and the “Per Turn” Endowment (provided on the Charter) will be subtracted from the current Endowment of the College.

- ✓ Therefore, to continue operating the College, additional resources (RPs) will need to be committed to the Endowment by activation of the Culture Power for the purpose of *replenishing the Initial Endowment up to its original level*.
- ✓ A College can never be ‘over-endowed,’ that is the Initial Endowment serves as the limit for future endowment replenishments.
- ✓ Activation of the Culture Power for the purpose of Endowing Colleges requires one Act and may be used to Endow *any number* of Colleges in a single Regular Turn.
- ✓ A position with multiple Colleges should specify which College Endowments are to be replenished.
- ✓ Activation of the Culture Power for the purpose of Endowing Colleges allows a position to add RPs to the Endowment of *any number* of previously-founded Colleges in the same Regular Turn. The RPs are immediately subtracted from the Treasury, which must have sufficient funds and RPs committed to Colleges cannot be retrieved.
- ✓ If the Treasury is insufficient to meet endowments in a Regular Turn, all RPs will be taken and distributed approximately equally to the Colleges listed. A position might

intentionally do this if it simply wants to dump all remaining RPs into the Colleges (but cannot meet all of their Initial Endowments) to keep them running and wait for Taxation to replenish the Treasury later.

Colleges can seem like a ‘black hole’ into which the Treasury flows. Positions are encouraged to think of them in the very long term.

RPs committed to the Endowment of a College do not need to be located on the Host World of the College to replenish the Endowment (i.e. do not count against turn GDP of the Host World).

- ✓ “Millennials, we’re told, are shallow careerists who don’t understand the value of a liberal arts education. The truth though is that in many cases it’s not students who are abandoning the arts and humanities, it’s their parents. And thanks to skyrocketing college costs, parents arguably have more power over their kids’ choices than ever before. The number of English majors has fallen by almost 50 percent since the end of the 1990s. And many writers, like history professor Benjamin Schmidt at the Atlantic, have expressed concerns in recent years that the next generation of students doesn’t understand the importance of a broad, liberal arts education. When I started asking people about this phenomenon on social media, however, I heard a different story. People were reluctant to go on the record for fear of embarrassing their parents or straining their relationships. But current and former students told me their parents had absolutely forbidden them to pursue interests in the humanities, on pain of losing financial support.” *Id.*, feature quote *ut supra*.
- Dynamic Sessions: There is a dynamic between the Initial and Per Turn Endowment of Colleges and activations of the Culture Power to Endow Colleges. The smaller the Initial Endowment, the more that later activations will be required to replenish the College, but conversely, less RPs will be required each time. Larger Initial Endowments will require more RPs each time, but less Power Activations later. Per Turn Endowments also regulate the frequency of the need to replenish Colleges.

The intent is that a College Endowment should be automatically completely replenished, so the determination of the Initial Endowment level is very important. The Concierge may also decide that Colleges can be replenished to any amount (reducing somewhat the importance of the Initial Endowment level) to a minimum of what is needed for one Regular Turn of College function (this would be offset by more required activations of the Culture Power due to smaller Endowments). This could change game play significantly.

- ✓ “It’s about the relentless economics in which we came of age and the lasting skepticism those economics have, I believe, instilled in us. Take our \$1 trillion-plus in student loan debt. No one told us that our education would be part of a massive cash grab orchestrated by high education fat cats. Once this becomes clear, however, you start to question other things as well. It’s not a coincidence that the first generation to carry so much debt so young is the one that occupied Wall Street (as well as a few old hippies, it must be said)...

Just as millennials were supposed to be entering the workforce, we were hit with the biggest financial crisis since the Great Depression. We were sold on the idea that getting a so-called good education would set us up for success in the working world. We could have everything our parents had, if we only followed their example and pulled

ourselves up by our bootstraps. They were giving us the map to financial freedom, and most of us listened. It might have worked, too, if the price of that education didn't rise to become completely unaffordable at the same time unemployment doubled from five percent to 10 percent. But our student loans didn't go away just because the job market did; instead of being given the roadmap to financial freedom, we were given a map that drove us straight into a trap. While our income potential declined, basic living expenses didn't, and it set our generation back years from where we 'should have been.' From where we were told we would have been." – Catherine Baab-Muguirra, "Failure to launch: Why so many American millennials feel adulthood is a lie," NBC Think, July 8, 2018.

*"It's a damn poor mind that can only think of one way to spell a word! That quote, ascribed to Andrew Jackson, might have been the motto of early English spelling. The concept of orthography (a term that derives from the Greek words orthos, meaning 'right or true,' and graphein, meaning 'to write') was not something that really concerned people until the introduction of the printing press in England in the second half of the 15<sup>th</sup> century. From then on, English spelling became progressively more uniform and has remained fairly stable since the 1755 publication of Samuel Johnson's Dictionary of the English Language (with the notable exception of certain spelling reforms, such as changing 'musick' to 'music,' that were championed by Noah Webster)."*

– from Merriam-Webster online dictionary Editor's Note at *orthography*

**Amended Charter:** The Charter for the College cannot be changed except by Amending the Charter (aka changing the tune). This includes the Host Colony; if the Host Colony is lost for any reason, and cannot be regained, it may be necessary to Amend the Charter to Host the College on a new Host Colony before the College "closes." Any change in the Faculties or per turn use of the Endowment would also require an Amended Charter. A College Charter may only be Amended if the College currently exists, "closed" Colleges cannot be "re-founded" by activation of the Culture Power for the purpose of Amending the Charter. Activation of the Culture Power to Amend a Charter requires two Acts and one Scene on the Host World to Amend one Charter.

- **New Mission:** Amendment of the Charter should not allow a College to change its Mission because a College represents the entire body of knowledge and professionalism on a subject across civilization. It is not impossible however, but the implications would be profound. One possibly relevant historical example, the 18<sup>th</sup> and 19<sup>th</sup> century decline (and near extinction) of the teaching of classic rhetorical theory in primary education; to be replaced by teaching standardized grammar, spelling and composition in primary school – for social cohesion and to integrate immigrant populations (my rhetorical theory class was in graduate school). This is the classic problem of human history, in 1377, Ibn Khaldun called it 'asabiyyah' (social cohesion) and wrote about nomads and city dwellers. In some other cases, charitable organizations, schools and businesses whose original purpose has been achieved, or became non-viable, have successfully rebranded themselves with a new mission or model (e.g., the non-profit March of Dimes mission evolution and name changes in 1958 and 1976). It is suggested that any change of College Mission by Amendment should at least bear relationship to the previous mission and be a special event in that position's story arc.

*“Slowly I began to realize that the bells and the confinement, the crazy sequences, the age-segregation, the lack of privacy, the constant surveillance, and all the rest of the national curriculum of schooling were designed exactly as if someone had set out to prevent children from learning how to think and act, to coax them into addiction and dependent behavior” – John Taylor Gatto*

**Gradgrind:** John Tyler Gatto is the nightmare sort of problem for any institution. If a non-educator had made the same criticisms, they would have been dismissed with, “Well, he’s not a public school teacher, so he doesn’t know what it’s like.” But they named him Teacher of the Year.

Just as GGDM will be by sociologists, philosophers, professors, public intellectuals, and game designers (if they think it matters). It’s the same reaction that we hear to any criticism of the police; you are not a police officer, you don’t know. But Mr. Gatto was not only a public school teacher, but they gave him an award, said he was the best. To say he is wrong is in some degree, to repudiate their own award criteria. I can imagine stunned silence and furious seething reaction to his award acceptance speech after which he resigned.

John Gatto’s ‘realization’ follows more than a century after Dickens’s satire and produces U.S. Marine Corps training-depot ready high-school graduates. I was one. Dickens-style satire of fact-based, utilitarian education systems were the staple of dystopian and totalitarian state of the future science-fiction stories well into the 1970s at least, and can even be seen in traces now.

- ✓ “Again and again, the trouble with the ‘utilitarian economist and Commissioners of Fact’ satirized by Dickens is not so much their basic aims as the detailed arrangements they thought necessary to achieve them – the fanatical tidy-mindedness which had so little sense of freedom, the room for free movement that we need as organic, sentient beings. ... Why did Dickens dwell so much on the educational forms taken by the new fanaticism? Partly because it was there, among the young, that one could see most strikingly how the still plastic human being was forced into an iron mould; partly because the schooling systems favored by go-ahead cotton masters were themselves like living satires on Utilitarianism in practice, even before Dickens had recreated them in the mode of satire. The Gradgrind model school with its regimen of pure fact is in no way an allegory or symbol of what a cult of fact would run to if carried to an extreme. ...

The fact is that the first two chapters of the novel are an almost straight copy of the teaching system in schools run by the two societies for educating the poor. In the Manchester Lancastrian School a thousand children were taught in one huge room, controlled by a kind of military drill with monitors and a monitor-general, and taught by methods derived from the Catechism. Groups of facts, mechanically classified, were drummed in by methods that might have been meant to squash forever the children’s urge to find out or understand anything for themselves.” – David Craig, Senior Lecturer, University of Lancaster (now listed as Professor Emeritus on the University website), Introduction for Charles Dickens’ Hard Times (The Penguin English Library edition), May 1968, pp. 21-22.

- ✓ Note 2 to the Introduction: “No doubt in practice the Bell or Lancaster kind of schooling system tended to loosen up somewhat. Once inspectors began to visit

schools from 1840 on, they found that great numbers of them, so far from being over-organized, were filthy, battered, stinking holes, with dozens of pupils absent and the teachers often reading the papers or dozing. But the utilitarian systems were at the same time in full swing. The rigidly ranked hundreds of children can be seen in prints (e.g., Mary Sturt, *The Education of the People*, 1967, plate 2a; Brian Simon, *Studies in the History of Education, 1780-1870*, 1960, plate opp. p. 129). The Bell and Lancaster systems, in Dr. Sturt's judgment, 'dominated the educational scene' for the first thirty years of the nineteenth century and 'the results of their work and rivalry endured beyond that ... The system of instruction became continuously more elaborate and more inhuman.' Middle-class opinion was quite solidly in favour: the Lancastrian system was copied in Edinburgh High School, discussed approvingly in the House of Commons, and picked out for praise in the *Edinburgh Review* (Stuart, op. cit., pp. 21, 31; Frank Smith, *A History of Elementary Education 1760-1902*, 1931, p. 74). The atrocious punishments and the more ludicrous drills are the worst side of what was an earnest attempt to do something about the barren wilderness of elementary education but, as with the New Poor Law, the tidying-up was done at the expense of humanity, e.g., the reading and writing drills, including the kind of catechism satirized by Dickens were 'elaborate methods for destroying meaning' which, according to one inspector, caused the children's 'faculties' to be 'stunted in their growth and they sink into inert listlessness.' The utilitarian systems were also aimed at reinforcing the *status quo*: Lancaster used to set his best pupils to write rebuttals of Tom Paine's arguments and defenses of revealed religion (Sturt, op. cit., pp. 21, 31-2)." *Id.*, pp. 317-318.

- See discussion of context and Pink Floyd's *The Wall* (1979), *Wall of Understanding*, 2 Dreamtime, p. 152, *supra*.

The U.S. Marine Corps uses the Lancastrian system to drill 'knowledge' into recruits' heads in basic training (a highly regimented, isolated shock treatment for kids just out of high school), and continues to try (with less success) in later training during the Marine's enlistment. 'Understanding' is a lower level priority in Marine Corps basic training; factual knowledge and effectiveness at doing are naturally emphasized.

- ✓ Such training is, of course, necessary for what Marines do. In terms of understanding the problem, it is important to understand the combat organization nature of the U.S. Marine Corps, and the nature of combat operations. The process was potentially reinforced historically by the experience of 'McNamara's Morons' (discussed in 4 Colleges, p. 502, *infra*) in the late 1960s; I went to boot camp just a generation later.

---

*"In college I learned how to learn from other people. As far as I was concerned, writing in college didn't consist of what little Annie had to say, but what Wallace Stevens had to say. I didn't come to college to think my own thoughts, I came to learn what had been thought."*

– Annie Dillard quoted by Lawrence Malcolm, "Lunch with Annie Dillard," April 30, 1982 (free online)

---

**Bobbing Lights:** I wish I had figured that out in college 25 years ago. I was a non-traditional student and as you can imagine, quite full of my own thoughts. GGDM was begun before then and I spent considerable college time (and over the summers) working on GGDM.

Inactive Constructural Elements have no effect on activations of the Culture Power for the purposes of Endow Colleges (*ut supra*) or Doctrinal Template (see Combat Formations, 4 Colleges, p. 503, *infra*), as they are non-localized Power Activations.

- ✓ Activations of the Culture Power for the purpose of *Founding Colleges* or Amending Charter are subject to the *Host World's* Constructural Elements and might fail due to inactive Constructural Elements. If the attempt to Found a College fails, no RPs are taken from the Treasury for the Initial Endowment and the position can try again later.
- **Non-Traditional Students:** I have thought that ‘traditional student’ is a mistake anyway. They graduate high school and immediately go to college. They come into the freshman undergraduate year with a high school attitude (e.g., “Why do I have to go to school, why can’t I just do whatever?”), pushed by parents, family and society, and they bring the high school attitude to college with them. That is, they show up with a few inactive Constructural Elements and don’t do what they are supposed to do, leading to wasted RPs.☺

Non-traditional students are those who want to be there, who have worked their way back to college, or at least, had a couple of years of mental separation from high school, instead of more of the same. The question is frequently asked, “why are non-traditional students happier?” The answer is in front of you. In terms of value for educational dollar, non-traditional students get much more. But are still, ironically, treated as children by the system (*ut supra*).

---

*“Asymmetric Advantage: an asymmetric advantage goes beyond a normal advantage of knowledge into the realm of having asymmetric information and knowing things others do not. ... Asymmetric advantage is based on knowing something that creates value or has an edge that others don’t. An asymmetric advantage is protected and maintained through the distinctions between knowledge of a concept vs. actually being able to do it.”*

– Mike Shell, “Asymmetric Advantage,” *Asymmetry Observations* ([asymmetryobservations.com](http://asymmetryobservations.com)), captured June 26, 2019 <sup>6</sup>

---

**Asymmetric Advantages:** Human talent in all endeavors is one of those most elusive and hotly-debated topics and the favorite subject of biographies, history lessons and literary fiction.

Sometimes it is argued to be genetic, biological sex, or bio-developmental (e.g., pitch perception, relative and perfect pitch may be tied to a lobe in the auditory cortex which is slightly enlarged, if you don’t have it by the time you are four years old, you will likely not be a musician); sometimes the argument is based on environmental factors (talent seems to run in families or groups), and a whole lot of it involves actual interest, will (tied to approval, sanctioning and the sublime) and a lot of effort – no one gets a free ride in any *merit- or market-based system*, children of professional sports stars, famous actors or writers often try to follow but don’t make it, don’t live up.

- ✓ For the converse, see discussion of the Affair of the Poisons and Prince Eugene of Savoy, 3 Special Operations, p. 1308, *infra*.

The effect, regardless, is that people who have talent, skill and have developed it through learning, practice and encouragement, seem to be taking a shortcut, seem to grasp important concepts intuitively, while the rest of us are still trying to figure out what is the problem or where to start – rather akin to some sort of emergent behavior or an alpha particle escaping the potential energy well, suddenly appearing outside (i.e. quantum tunneling). They can ‘feel’ their subject in the way that a mathematician feels – almost *groks* – the processes and equations, that a fighter pilot feels his combat jet, that Wolfgang Amadeus Mozart felt his music, or as the analogy went, the way that Wesley Crusher in Star Trek TNG had an intuitive feel for warp fields (ST TNG: “Where No One Has Gone Before,” (1987)). They have perhaps an asymmetric advantage.

The degree of personal difficulty in learning something has long been associated with talent or lack of talent, for example, in fantasy stories where the student learns quickly and exceeds the master, e.g., Ged in Ursula K. Le Guin’s Wizard of Earthsea (1968), Sauron and the Elven-smiths and the Númenórean in the Lord of the Rings works, Red Sonja and the Sword Master in the 1985 movie, or even Paul Atreides in Dune (1965).

- Talent: Merriam-Webster online dictionary at *talent*: **1a**: a special often athletic, creative, or artistic aptitude, **b**: general intelligence or mental power: ability, **2**: the natural endowments of a person, **3**: a person of talent or a group of persons of talent in a field or activity, **5** *archaic*: a characteristic feature, aptitude, or disposition of a person or animal.

- ✓ “The toughest thing I know of in baseball is evaluating talent.” – Steve Blass (World Series Pitcher and Pirates Broadcaster), June 22, 2019.

Talent is sometimes not called by name, but other words are substituted for it; it is perhaps in the sense of 5 above that Robert E. Howard used ‘race’:

- ✓ “Howard’s attitude towards race and racism is debated. Howard used race as shorthand for physical characteristics and motivation. He would also employ some racial stereotypes, possibly for the sake of simplification.” – from Wikipedia article, “Robert E. Howard.”

- Family Business: I was intrigued many years ago when I heard in a science history documentary about the Swiss family Bernoulli who produced eight highly regarded (or genius or ‘academically gifted’) mathematicians over three successive generations in the 17<sup>th</sup> and 18<sup>th</sup> Centuries. And I thought, ‘Wow, isn’t that interesting?’ Was it genetic? Was it environmental? Was math just the family business?
  - ✓ Because of their long outsider status and transient lifestyle, children of circus performers have traditionally learned the craft from their parents. I suppose that now there is some place you can go to school to learn to become a circus high wire act, but that would be a modern invention. Karl Wallenda was born into an old circus family and learned his craft from his first employer (sort of an apprenticeship). While countless families have plied the circuses for generations as their business, the Wallendas are the most famous family act in modern times. The current Wallenda family, who performed at the last show ever of the Ringling Brothers and Barnum & Bailey Circus in 2017, is now in the seventh generation.

The Bernoulli family also includes notable astronomers, physicists, painter, architect, designer, geographer, art historian, archeologist, and social campaigner. This is the family after which the Bernoulli Numbers, Bernoulli Distribution, and Bernoulli Principle are named.

Similarly, the Dupuys represent at least *three generations* of military officers, military historians and analyst;<sup>7</sup> and of course, the phenomenon is best known in music, e.g.:

- ✓ The three generations of the Doruzka family (David Vaughn, “Three generations of a Prague musical family talk to Radio Prague,” December 31, 2007, [www.radio.cz](http://www.radio.cz)),
- ✓ In the United States, three generations of Hank Williams,
- ✓ In classical music, the Bach family,
- ✓ In jazz, the Marsalis family of New Orleans,
- ✓ In film, three generations of the Newman family (JPW, “Generation music: 6 incredible families who rocked history,” WhizzPast, October 18, 2013),
- ✓ And sometimes all the siblings of a single familial generation emerge as a group of highly-talented individuals, e.g., The Jackson 5, the four Brothers Gibb (i.e. the Bee Gees and Andy Gibb the solo artist – with lots of help from his already successful older brothers).

Page | 467

As frequently though, children have no feel or desire for the business that their parents understand intuitively, do not show good judgment or follow on (e.g., King Gaiseric’s family).<sup>8</sup>

- ✓ It’s a maddening thing, for example, the descendants of Napoleon Bonaparte have not shown any special ability nor did his brothers who tagged along (except possibly Lucien); certainly nothing has been shown that approaches the energy, intuition and intellectual ferocity of Napoleon up to about 1810. What made Napoleon Napoleon?
- Flipping the Switch On: The Pittsburgh Pirates (and most other small market professional sport teams) have talented players, even star players. However, their pool of talent (even in the minor league farm system) is just a few ticks below the pool of talent in other teams in larger markets against which they compete every year. I have watched the Pittsburgh Pirates for at least 15 to 20 seasons now. They generally begin well, sometimes even surprising themselves and the broadcasters.

But the determining question of any Pirates season is when, at what point in the season, do they ‘fall off the table’? The later it occurs in the season, the better the end. It is not a question of *if*, but *when* they fall off the table – baseball’s annual journey from hero to zero, as in zero games left to playoff elimination. The Pirates broadcasters do their best to put lipstick on a pig – like recent White House press secretaries – but that’s what it is really. At some point in the season, they begin backsliding; the small tenths of a percent in talent begin to take their toll over the course of 50 or 100 games.

In the recent years when they reached the Wild Card game in the playoffs, the Pirates have held their own into mid-August before significantly losing ground (sometimes with a drop off before or after the All-Star Game and then a resurgence), in other years, they begin falling off in mid-June and never really recover. I am sure this happens to every team (two teams play for the World Series title, 28 other teams fail at some point) and this is the reason behind the number of games played in a MLB season, but it is particularly pronounced with the Pittsburgh Pirates. Baseball (and other pro sports) has tried to remedy the competitive balance problem somewhat by instituting a ‘luxury tax’ on big market teams, instituting salary caps to prevent big market teams from simply buying championships, changing the trade deadline, and the draft lottery where the teams with the worst records receive the first picks

in the first round of the draft. There are even compensation picks in later drafts for failure to sign previously drafted players (like an Enlightenment reroll, see 2 Colleges generally, *infra*).

In 2019, the Pirates fell off the table starting immediately after the All-Star Break; they had fought their way to 2.5 games back going into the All Star Break, but then lost 11 of 13 games to teams ahead of them in the NL Central following the All Star Break. Pirates broadcasters frequently discussed on the air the sudden failure of the Pirates, Joe Block pointed out that the four days off for the All Star Break doesn't account for it, and Bob Walk commented that it was like someone flipped a switch, adding that a switch has two directions (obviously thinking of a standard wall light switch), and a switch can be flipped back on.

Going into action on July 26, 2019 against the NY Mets, the Pirates were 46-56, ten games under .500. With 60 games left in the season, the Pirates would need to win 36 of the remaining 60 games to finish with a winning record of 82 wins, the current projection is 73 wins, 89 losses. And that mediocrity, winning just six more games than they lose in the last 60 games, isn't going to make the playoffs. The 2019 team has shown flashes of greatness, perfection but that is not going to happen this year or any year. The small percentages long-term caught up with the earlier brilliance. The trading deadline is July 31, 2019 at 4:00 p.m.

As of the morning of August 8, 2019, the Pirates were 3-21 since the All Star Break and 14 GB; the Pirate's official MLB website headline finally used the word 'freefall.' I noticed over time that the broadcasters talked less and less about the game in front of them, and filled air time talking about other – more fun, silly – baseball-related topics. I watched part of the game on August 7<sup>th</sup>, and the broadcasters hardly talked about the game; the Pirates were completely non-competitive.

- ✓ The effect of the development and use of (or failure to use) Enlightenment in GGDM (or life even) over the course of the game (see 2 Colleges generally, *infra*), is the same as those *small percentage differences in talent* and depth between teams over the course of a sports season, whether it is accounted for by individual *arete* or by cohesion, team psychology, or the elusive 'why factors' – sometimes a team tumbles into a losing streak and you wonder about the team psychology, has defeat and failure become inevitable in their minds? The Colleges in GGDM allow positions to decide where, to what areas, they want to apply their *small percentages* of extra talent.
  - GGDM, whatever it is, is my personal College of meagre talent.
- The Flipped Side: The flip side of gains in small percentages is the cost-benefit analysis and diminishing marginal returns. At what point does adding more decimals to  $\pi$  add little to the understanding? In the common vernacular, this is saying that at a point, more is sometimes less (or in sports, 'less is more, don't try to do too much'). This question has long been asked as GGDM developed into its final form – the final acceleration toward  $c$  has been one of gains in small percentages: At what point does adding more to this conversation (and btw, attorneys are frequently guilty of saying too much in oral arguments before judges) result in diminishing marginal returns – in both the business and psychology sense?<sup>9</sup> I had to decide, and you the reader will decide: Game, treatise, or gigantic bore? How many rerolls do I get?

*“For it is a paradox of this strange corps that former slaves should eventually have acquired a power over their masters which may be compared only to the prerogatives claimed by the Praetorians of Ancient Rome. As their influence grew, the Janissaries made and unmade sultans with supreme insolence, while over a period of three centuries fully half of the Ottoman grand viziers came up from their ranks. Originally trained as foot archers, they adopted the arquebus early in the sixteenth century. Yet the brains of these military monks proved more valuable than their brawn, since they were virtually recognized as the staff college of the Ottoman army.”*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 220 <sup>10</sup>

## Endnotes.

<sup>1</sup> Commentary: The full copy of War Through the Ages (2<sup>nd</sup> Edition) is available *for free* on archive.org through the digitallibraryindia (Public Library of India) collection in searchable PDF/A format and Kindle .mobi format (their Kindle conversion, however, did not come out well and is not recommended) as of October 2018.

- ✓ Note that there are significant differences, especially in the history of WWII, between the 2<sup>nd</sup> Edition published in 1944 and the Revised (i.e. 3<sup>rd</sup> Edition) published in 1960; the final chapters were expanded and rewritten in the final edition. Most of the chapters up to WWI are unchanged or only have small edits between the editions. Mr. Montross died in 1963 and thus his history ends with the Korean War, the last chapter in the 3<sup>rd</sup> Edition.

<sup>2</sup> Commentary: In early 2019, I accidentally discovered, to my astonishment, by Google search that his papers are in collection at Syracuse University. The collection comprises of 14 boxes taking up 7 feet of shelf: “American military historian, author. Collection contains correspondence, scrapbooks, notes, manuscripts, and published material. Correspondents include Bruce Catton, H.L. Mencken, and Francis E. Walter.” – abstract from collections webpage.

<sup>3</sup> Citation & Commentary: “British journalist and military theorist B. H. Liddell Hart asked [Heinz] Guderian to say that he had based his military theories on Liddell Hart’s; Guderian obliged. ... Guderian’s memoirs remain popular to this day. The favourable descriptions started with the British journalist and military theorist Liddell Hart, who described Guderian as one of the ‘Great Captains of History,’ in a book published by the mass-market Ballentine Books in 1957.” – from Wikipedia article, “Heinz Guderian,” citing (for the first sentence) to Pier Battistelli, Heinz Guderian: Leadership, Strategy, Conflict (2011).

Quid pro quo between the historical figure and the admiring historian? Do you think this hasn’t happened before? Still, continuing historical analysis always has the last laugh:

- ✓ “Guderian was a capable tactician and technician, leading his troops successfully in the Invasion of Poland, the Battle of France and during the early stages of the invasion of the Soviet Union, especially in the advance to Smolensk and the Battle of Kiev. [Russell A.] Hart writes that most of his success came from positions of such strength that he could hardly lose: he was never able to accomplish victory from a position of weakness. Hart adds his deficiencies outweighed his strengths, such as deliberately creating animosity between his panzer force and the other military arms, with disastrous consequences. [Guderian’s] memoirs omitted mention of his military failings and his close relationship with Hitler. James Corum writes in his book The Roots of Blitzkrieg: Hans von Seeckt and German Military Reform that Guderian was an excellent general, a first-rate tactician and a man who played a central role in developing Panzer divisions, irrespective of his memoirs.” Wikipedia, *Id.*

<sup>4</sup> Commentary: The first three Colleges in 1996 were the War College, Social College, and Industry College. They were constructed as tables with cumulative investment levels and technology-like abilities.

<sup>5</sup> Citation & Commentary: “When the new White House chief of staff, then a Marine general, John Kelly received a knock on the door in November 2010, he became the highest-ranking military officer to lose a child in combat... The Kellys’ legacy of service is not unusual among military families. This type of lineage has led to generations of

flag officers, fathers and sons who reunite while deployed, and families who bear the loss of a war America has forgotten we are fighting... It's a lot easier to go along with the president's plans for military action when it's someone else's sons, daughters, or parents doing the fighting... Who serves when not all serve? ...In the United States, perhaps the strongest predictor of military service is having a family member who served – allowing for extended family members, it averages to about 80 percent of new recruits across the services... The military draws many recruits from the same communities and the same families, isolating those in uniform from society and vice versa. In essence, the self-selection dynamics have created a 'warrior caste.'" – Amy Schafer, "The Warrior Caste," *Slate Magazine*, August 2, 2017.

- ✓ "Even when his own men displayed the spirit of the age, Caesar needed only his personal sway to quell the mutiny. He put the malcontents to shame by calling them 'citizens,' for the designation which was once a Roman's greatest pride had become a term of contempt among professional soldiers. Rome at last had acquired military spirit." – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), p. 81.
  - Thus, in the Masada television mini-series (1981, Part III) when Legate Lucius Flavius Silva (misnamed in the movie as "Cornelius Flavius Silva") yelled, "Citizen, get out of my seat!" at Pompeius Falco (a political usurper), it was not a complement. Or a kindly request even.
  - Caesar's insult had not gone out of fashion 2000 years later: "Wolseley, who had been led to believe that his expedition was the initial phase of the British conquest of the Sudan, was furious, and in a telegram to Queen Victoria contemptuously called Gladstone '...the tradesman who has become a politician.'" – from Wikipedia article, "Charles George Gordon," citing to Mark Urban.

<sup>6</sup> Citation: See 3 Information, p. 1364, *infra*, for full feature quote.

<sup>7</sup> Commentary & Citation: Col. R. Ernest Dupuy died at 88 years old on April 25, 1975. He was General Eisenhower's acting director of public relations, and it was he who first broadcast the official announcement on June 6, 1944, that the D-Day landings had begun ("Col. R. Ernest Dupuy, 88, Dead; Publicist and Military Historian," *NYT Archives*, April 25, 1975, available free online). His son, Trevor N. Dupuy served in Burma in WWII while his father was serving Eisenhower, also achieved the rank of Col. and later, he also served under General Eisenhower in the Supreme Headquarters Allied Powers Europe. Col. Trevor N. Dupuy pioneered Qualitative Analysis of military operations, the Dupuy Institute he founded still exists (see <http://www.dupuyinstitute.org>); he died in 1995 at age 79.

- ✓ "Trevor came by his interest in military history through his father, R. Ernest Dupuy, who was a prominent military historian and a career army officer. Trevor wrote, 'I was brought up by my father to be both a soldier and a military historian. To him the two were inseparable, and that is the way it has always been for me.' His writing career began in 1952, when the Army reinstated the teaching of military history in ROTC courses, and Trevor received a faculty appointment at Harvard University as a professor of Military Science and Tactics. Because there was no text, Trevor asked his father to help him write a textbook to be used by his students. They each wrote a chapter every two weeks, and each week Trevor mimeographed the new chapter to distribute to his students. By the end of the academic year, the father and son had completed the two-volume textbook, *Military Heritage of America*, the first of many such endeavors. From 1960 to 1962 Trevor worked for the Institute of Defense Analysis." – Susan Rich, biography page for Trevor N. Dupuy at The Dupuy Institute website (<http://www.dupuyinstitute.org/tndupuy.htm>).
- ✓ Arnold C. Dupuy is the son of Trevor N. Dupuy, and is also an analyst. He is listed as co-author with Trevor N. Dupuy in *How to Defeat Saddam Hussein* (1991). The 'about the author' section of "Cyber-Energy Infrastructure Vulnerabilities in the Hybrid Warfare Environment: Some DOD Mitigation Efforts," *Information & Security*, Vol. 39, states that he has 25 years of military experience in the active duty and reserves, and is an assistant adjunct professor at Virginia Tech (CV available in PDF on site).

<sup>8</sup> Commentary: On a personal level, my mother was studying undergrad psychology, sociology, and education while I was in kindergarten and first grade, and spoke to me freely about whatever she thought I could understand (and I also sat quietly in the back of a few classes when she couldn't find a babysitter). GGDM is something however that my mother would never have imagined. I don't do it in memory of my mother, but rather, it's just what I do naturally, what I am, what I want to do.

<sup>9</sup> Citation: "The Law of Diminishing Marginal Utility states that all else equal as consumption increases the marginal utility derived from each additional unit declines. Marginal utility is derived as the change in utility as an additional unit is consumed. Utility is an economic term used to represent satisfaction or happiness. Marginal utility

is the incremental increase in utility that results from consumption of one additional unit.” – Reviewed by Will Kenton, “Law Of Diminishing Marginal Utility,” Investopedia, updated June 24, 2019.

- ✓ *Utility is satisfaction and happiness*, see Thorsten Polleit quote, Music Utility, 4 Culture, pp. 411-412, *supra*. Constant music playing, even music I like, loses utility after an hour or so, it becomes either annoying or I begin not noticing it, depending on my mood and what I am doing (and the music volume).
- ✓ “The Law of Diminishing Marginal Returns states that, at some point, adding an additional factor of production results in smaller increases in output. For example, a factory employs workers to manufacture its products, and, at some point, the company operates at an optimal level. With other production factors constant, adding additional workers beyond this optimal level will result in less efficient operations.” – Reviewed by Will Kenton, “Law of Diminishing Marginal Returns,” Investopedia, updated May 22, 2018.
- ✓ “The law of diminishing marginal utility, as developed by Carl Menger (1840–1921), is *axiomatic* in nature; that is, it is *irrefutably true*. In mainstream economics, however, this fundamental economic law is typically interpreted as resting on psychology, namely the law of satiation of wants. Such an interpretation, however, does not actually conceive the law of diminishing marginal utility as a fundamental economic law – which has truth value irrespective of time and place – but as a fleeting explanation of certain economic phenomena, which may or may not hold in a given situation. Given the importance of the law of diminishing marginal utility for economic theory and policy, it is important to keep advertising that the law of diminishing marginal utility is *irrefutably true* – because it follows from the axiom of human action. For ignoring this truth leads to fallacious and erroneous conclusions, and eventually to false economic theory and economic policies.” – Thorsten Polleit, “What Can the Law of Diminishing Marginal Utility Teach Us?” Mises Institute, February 11, 2011 (emphasis in original).
- ✓ C.f. “According to the Law of Diminishing Returns (also known as Diminishing Returns Phenomenon), the value or enjoyment we get from something starts to decrease after a certain point. Let’s say we go to an amusement park and ride our favorite roller coaster five times in one day. The first time is exhilarating. The second and third times are also exciting. But after the fourth or fifth ride, we start to feel sick and bored – we’ve had enough. The law of diminishing returns also applies to performance. Although it’s important to study for an exam or practice for a game, there is a limit to how much time and energy we can invest and still expect to see an improvement. If we practice too much we’ll start to feel burned out and may even start performing poorly.” – AlleyDog.com (psychology student website), “Law Of Diminishing Returns” (unattributed, undated), retrieved June 26, 2019.
  - Diminishing Returns Phenomenon is why binge-watching or even listening to the music app or radio all the time is not good. I find that I rarely can watch more than two or three episodes of a show that I am interested in watching in a day or two days. I frequently cannot watch an entire baseball, hockey or football game, I get bored or tired-eyes, after-dinner sleepy. I like to think about what I watched; the more I watch in a short time, the less enjoyable, and the less I get out of it. If I watch a movie, I’ll think about it for a day or two before I watch another, and frequently it is subsequently mentioned, commented on or quoted in GGDM. This argues in favor of the original weekly schedule of television programs in the pre-binge watching internet streaming service days. Yet, I have known co-workers who came to work each week and said they binge-watched an entire season of this or that show in a day or over a weekend! Similarly, my attention to music wanes after a few songs have played, even though I like the songs being played, at some point, it is just background noise, and sometimes is even annoying if I am trying to type (I like to actually, actively listen to my music). I remember when I was young we’d have the radio on all day long, sometimes it was just noise, other times I’d actively listen to it.
  - See discussion of sublime, Something Sublime, 3 Culture, p. 380, *supra*.

<sup>10</sup> Commentary: On July 3, 2018, while reviewing the Wikipedia article on Carl von Clausewitz, I noticed a quote from Lynn Montross’ War Through the Ages, linked back to the Lynn Montross biographical article that I started in 2005. I believe that this is the first time I have ever seen a Lynn Montross quote outside of GGDM (there is no Wiki-quote page). I also started Wikipedia biography pages for Harry Summers and William Ledyard Rogers in 2005, the latter of which has been extensively expanded by Wikipedia users. Another user started the biographical article for Trevor N. Dupuy a little over a year later (early 2007) and linked the name in the Montross article.

*See Appendix AGE – Aging Out*

“If everyone is thinking alike, then somebody isn’t thinking.”

– George S. Patton, Jr.

“Where all think alike, no one thinks very much.”

– Walter Lippmann, The Stakes of Democracy (1915)<sup>1</sup>

**Knaves:** Or in the converse: “If there were neither fools nor knaves in the world, everyone would be of one mind” – Spanish proverb cited by Joseph Addison in “Mischiefs of Party Spirit” (1711). So, if everyone isn’t thinking like me, it must be the fools and knaves in the world! ☺

**Foresight:** Foresight acts as a kind of ‘do-over’ in comparison to what the actor would have or might have done ‘blindly’ in the situation without it. In the Tetris-like falling tile game Hashira, there is a ‘preview’ on the right side of the next three tile set that will enter the board. It acts as sort of a rear view mirror for what is coming up behind, allowing the player to make better decisions on where to place the current falling tile group – sort of a do over before the deed is done. Seeing what is coming next helps maximize play on the board or avoid ‘mistakes’ when I have the choice between similar tiles in two sets or deciding which tile is on top when they land. The result is an improvement in play by small percentages early in the game; however, the preview is less useful as the game progresses, after the board is about half filled, there isn’t time to look at the previews (due to space and speed) and it also doesn’t help any when the computer is cheating, skewing the ‘random’ tile generation (you can’t play tiles that the computer refuses to give you). That is, it is a question of when you fall off the table and the board fills up.

- ✓ Foresight allowed human ancestors to survive in situations in which they would otherwise have perished, even animals have foresight, anticipating the seasons, the movement of prey, when to seek shelter based on behaviors and sensory input coded as instinct. Humans’ foresight went beyond instinct to intuition, discernment, expression of understanding in the form of the myth.
  - Hindsight is foresight after the fact.☺
- ✓ A level of foresight that seems almost magical, impossible, is called *second sight*, e.g., “Patton had developed tank warfare into an art, and understood how to handle tanks brilliantly in the field. I feel compelled, therefore, to compare him with *Generalfeldmarschall* Rommel, who likewise had mastered the art of tank warfare. Both of them had a kind of second sight in regard to this type of warfare.” – *Generalfeldmarschall* Albert Kesselring.
- ✓ This is a potential area of effect if psychic abilities are introduced to the game, see discussion Farsight, 3 Information, p. 1362, *infra*: Psychic abilities might be an Enlightenment.

A strong theme of post-WWII science fiction literature was the concept that the world – human civilization – needed a ‘do-over,’ a big red reset button. How could this be accomplished in fiction? You know already. As Vernor Vinge commented in 1983:

- ✓ “To write a story set more than a century hence, one needs a nuclear war in between ... so that the world remains intelligible.” Big - red - reset button.

- See The Vinge Rule, 2 Technology, p. 705, *infra*, for full feature quote.

Nuclear wars, alien invasions, and to a lesser extent, meteors (thanks to the then evolving understanding of the extinction of the dinosaurs) or other cosmic catastrophes (e.g., Planet Mongo in Flash Gordon), were the natural available reset buttons both to restart current civilization from scratch and to avoid having to address seemingly infinite exponential technological progress.

Because, how else would civilization get a ‘do-over’? Continue reading...

---

*“So if we buy the sociological trends that our ambition and happiness wane in our middle age – key years for promotion to senior levels – then are younger and much older leaders best? Not really. A 2011 study found that while there is a correlation between wisdom and effective leadership, there is no correlation between wisdom and age – or between age and effective leadership.”*

– Kristi Hedges, “Why You’re Losing Ambition As You Age,” Forbes Magazine, July 16, 2014 (available free online)

---

**Faculties:** In economic terms, the marginal utility of living wanes in middle age. Each time Regular Turn actions are processed for the position, Colleges will automatically attempt to produce Faculties. Faculties are the effects of the College on society, empowering the position to act, or to act more effectively, to achieve superior results. Faculties include the training of the next generation, the dissemination of knowledge and understanding throughout society.

Faculty as used in GGDM, relates most closely to the Merriam-Webster online dictionary definition of *faculty* at **1**: Ability, Power and more specifically, **1a**: innate or acquired ability to act or do. Any apparent references to the teaching profession in the context of the game rules for Colleges is intentional lexical irony.

- ✓ Read it on a t-shirt: “Irony is the opposite of wrinkly.”

And since we are here....

- ✓ Merriam-Webster online dictionary at *culture*: **2**: the act of developing the intellectual and moral faculties especially by education; **4a**: enlightenment and excellence of taste acquired by intellectual and aesthetic training, **4b**: acquaintance with and taste in fine arts, humanities, and broad aspects of science as distinguished from vocational and technical skills; **5a**: the integrated pattern of human knowledge, belief, and behavior that depends upon the capacity for learning and transmitting knowledge to succeeding generations.
  - ✓ “Think of what we learned from parents, from people who have experience. You’re learning from generations that lived before us. It makes you feel you are part of a continuum. You’re not just here alone, so it makes you a deeper person and maybe even gives you that great thing called wisdom.” – Doris Kerns Goodwin, Master Class video trailer.
- **My Generation:** At the **end** of each Regular Turn, each College will attempt to generate Faculties if the College’s Host World is not captured and if enough Endowments remain to fulfill the current Per Turn Endowment of the College. Faculties are received for each successful College Try. The number of College Tries allowed for each College is the total population of

the position (including Converted, but not Captured populations) divided by the total number of colonies, divided by ten.<sup>2</sup>

- ✓ So, a position with 300 eligible population on five colonies, gets six College Tries per College per turn ( $300 \div 5 \div 10 = 6$ ).

The chance of success of each College Try is the Per Turn Endowment (RPs) divided by the total number of colonies divided by ten (or put another way, 1 RP per Turn Endowment per colony equals a 10% chance of success).

- ✓ So, a College with a 10 RP per Turn Endowment and five colonies would have a 20% chance of receiving a Faculty for each College Try.

Note that the math here rewards urbanization and stability; expanding and establishing new colonies, and conversion of colonies, can dilute the chances significantly.

‘Faculties’ are therefore the ‘game unit’ of Enlightenment in a position’s civilization; just as RPs are the non-monetary economic unit of the game. And like RPs, Faculties are considered to both exist generally throughout the civilization and are simultaneously applicable locally, within limitations, to accomplish the task at hand (quantum mechanics again...).

- **Tuition & Tenure:** Regardless of how many Faculties are received, the *per-turn* Endowment is subtracted from the Endowment of the College each Regular Turn it operates. All Faculties generated by a College are kept in a “class” for that College and a running tally is kept on each College’s current Charter. Immediately prior to Faculty generation (i.e. College Tries) each Regular Turn (or Turn Cycle if Regular Turn Actions are not submitted or processed) after the operation of Institutes and Enlightenment, half of the Faculties in each College’s ‘class’ will retire (i.e. ‘age-out’ like RPs in the Treasury). Faculties in a College’s ‘class’ are not immediately lost if the College’s Host Colony is captured or if the College ceases to function or closes for any reason, but of course, without replenishment, they will eventually dwindle away, losing half each Regular Turn. Or put another way, the half-life of a Faculty is one Regular Turn if not used.

- ✓ Old math teachers never die, they just reduce to their lowest common denominator.

---

*“Without ambition one starts nothing. Without work one finishes nothing. The prize will not be sent to you. You have to win it. The man who knows how will always have a job. The man who also knows why will always be his boss.”*

– Ralph Waldo Emerson

---

**Echoes of Aristotle:** Emerson was perhaps echoing Aristotle: “for he that can foresee with his mind is naturally ruler and naturally master, and he that can do these things with his body is subject and naturally a slave.” (*Politics*, 1:2, 2) Assuming the translation is meritorious, it appears that Aristotle was arguing in favor of slavery as a natural state of some part of humanity, and separation of the mind and body, as Carl Sagan argued in the *Cosmos* television series.

I can imagine in Europe before the 20<sup>th</sup> Century when there was both a class division in education and classical education was preeminent – at least among the upper classes – that Aristotle’s quote above was widely known and was purposed for justification of hereditary rule and nobility

over less educated or uneducated workers and peasants. This is one of the reasons possibly for the 20<sup>th</sup> Century decline in classical education.

Unfortunately, the justification also became a sense of entitlement and a right to be useless (see Arrears in Aristos discussion, top of 2 Entropy, p. 234, *supra*) while the print and industrial revolutions gradually changed society and social attitudes over three centuries. The reactionary hereditary nobility and aristocracy failed to understand or even foresee their own doom:

- ✓ “When enough nobles forgot that their positions were not guaranteed by invisible forces... the Imperium was doomed” (Dave Neilson, see full feature quote starting the *Noblesse n’oblige plus* and *Nobless Oblige* discussion, 4 Movement, p. 869, *infra*).

The nobility of France, England, Russia, Germany, Italy, were lost and we know the results.

➤ **Discipline & Distractibility:** Discipline is what happens when it is no longer about you; it is a vital part of unit (in the military) or social cohesion (aka ‘asabiyyah’). And parenting.

- ✓ When you live by a philosophy, whether it is the dictates of a world religion or Kantian Imperatives, it is no longer about you. If you are being true.

Ayn Rand may argue about the virtue of selfishness, but no one who matters has ever argued the virtue of being undisciplined. Discipline is selfless focus.

- ✓ “What lies in our power to do, lies in our power not to do.” – Aristotle.

The argument can be made that, unfortunately – with regard to GGDM, a huge sprawling overreaching, over-ambitious simulation game – I have not shown much ‘design discipline.’<sup>3</sup> I have allowed myself to be led wherever, dragged along, by the dog I walk.<sup>4</sup>

- ✓ “Quality is not an act, but a habit” – Aristotle.

I blame the spirits of Victor Hugo, Charles Dickens, Leo Tolstoy and Fyodor Dostoevsky.☺

- ✓ “‘The neurotransmitter dopamine has repeatedly been associated with increased cognitive flexibility in the past,’ says Dr. Erhan Genç from the Bochum Department of Biopsychology. ‘This is not fundamentally bad but is often accompanied by increased distractibility.’ ... Whether someone tends to postpone tasks or tackle them directly depends on the individual’s ability to maintain a specific intention to act without being distracted by interfering factors. Dopamine could be crucial here. In previous studies, the neurotransmitter has not only been associated with increased cognitive flexibility but also seems to make it easier for information to enter the working memory.” – Ruhr-University Bochum, “How procrastinators and doers differ genetically,” ScienceDaily, July 11, 2019.<sup>5</sup>

---

*“Talent is relative, effort is not. They love this guy because he works hard and every day you know you will get everything he’s got.”*

– Pittsburgh Pirates broadcaster, May 7, 2019

---

**Enlightenment:** The success or failure of any action or the successful resolution of any situation depends on the quality of the people ‘on the ground,’ that is, the people who are actually involved in performing, leading, or evaluating the task.

Enlightenment in GGDM should not be confused with the historical era from which the term derives its more general application here. Enlightenment are that package of qualities that lead to what professional sports calls execution (effort) and talent.

- ✓ “Praxeology also emphasizes that human action is personal action. In other word[s], every economic and social behavior must be ultimately traced back to the actions of individuals. There is no ‘collective mind’ or collective entity that takes action independently of the actions of the individual members comprising the collectivity. When we say that Germany invaded Poland, or when we say that the government established a social security program, or that Apple is launching a new iPad, these expressions are all shorthand to describe the actions of *individual persons* within those organizations. That emphasis on personal action is often called methodological individualism. This concept may seem obvious but, in the mid-nineteenth century, it was common to believe in collective spirits embodied in ‘the nation’ or, under Hegelian and Marxist influence, in other collectivities such as ‘the bourgeoisie’ or ‘the proletariat.’” – Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” alertandoriented.com (blog), April 13, 2016 (emphasis added).
  - See also discussion of Nationhood Proficiency, 3 Culture, p. 393, *supra*. As part of the de-Nazification of Germany in 1945, the message to the German people was ‘you did this.’ Not Germany did this.
  - See discussion of Romantic Nationalism and National Mysticism, 3 Government Titles, p. 618, *infra*.

Like our daily lives – each of us – the daily life of a civilization consists of attempting, starting and/or completing or not completing innumerable tasks. “No man is an island,”<sup>6</sup> that is, each of us carries with us, to our daily tasks, our part in the life of civilization, all of the mental tools and cultural baggage, and material goods (logistical support) and services of our times, our culture, our civilization, for good or ill. This is the reason – will, discipline, training, equipment, cohesion,<sup>7</sup> purpose, leadership,<sup>8</sup> heroics – settled upon by military historians that explains why, for example, Greeks and later Roman armies were able to defeat opposing forces many times their size, or why 180 Spaniards were able to capture the *Sapa Inca*.<sup>9</sup> It is this package, this bundle of qualities – the wisdom pool of civilization distilled into the individual<sup>10</sup> – that individuals on the ground carry to their daily tasks or into any situation that are the Enlightenment.<sup>11</sup> Ultimately, daily lives, the course of our lives and civilizations are about decision making and outcomes.<sup>12</sup>

- ✓ Consider the opposite case: In *The Book of Eli* (2010), Carney sent a pack of vicious, undisciplined illiterates to find a specific book with predictable results and mayhem.
- ✓ Christine Hensler, John Kaag and David O’Hara have argued in *The Chronicle of Higher Education* that the emphasis on STEM (which Carl Sagan championed in *Cosmos*<sup>13</sup>) which became pronounced around the turn of the millennium with the push for gender equality in STEM fields, has come at a cost of decrease in humanities education which has contributed to current social problems in lack of leadership, sexual harassment, and other ills.<sup>14</sup> Christine Hensler notes, that other than philosophy and religious studies, there is an equal opposite gender gap in the humanities and humanities teachers – mostly women – are not well paid in public education.
  - See 2 Culture, EN 11, pp. 377-378, *supra*.

- Pool of Radiance: All of the Faculties currently in the “classes” of all of a position’s Colleges are part of an imaginary pool called The Enlightenment (similar to the Treasury as an imaginary pool of RPs available to the central interstellar government). These Faculties are available for use to affect die-rolling situations during the turn and/or to operate Institutes (see Institutionalized, *et seq.*, 3 Colleges, p. 487, *infra*).

Whenever a position intends to use Faculties to affect die rolls, they must be assigned in the Regular Turn Actions submitted, in other words, the decision to use or apply Faculties to die-rolling situations that might occur during the turn must be made *before the turn is processed* (i.e. foresight, because of the way the game processing operates). Faculties designated to affect die rolls are not available for operation of Institutes during the same Regular Turn.

- ✓ The Enlightenment is a singular, unique game object, and should not be pluralized in GGDM (e.g. “Enlightenments”). Additionally, Faculties, as game units, should not be called “Enlightenments,” as it blurs the concepts in GGDM play.
- Nightlight: Faculties designated to support die rolls in the position’s Regular Turn Actions are subtracted one from each College’s class until enough Faculties are gathered to satisfy the Faculty commitment. Faculties will be taken from the oldest College first, and then one by one to the newer Colleges, until all Colleges have given one Faculty, and if more are needed, the process starts again with the oldest College. Whenever a Faculty is used for a reroll, it is expended, removed. Faculties are designated to support a specific Power Activation.
  - ✓ Faculties from classes of *suspended Colleges* remain available until they ‘age-out.’

Enlightenment is about doing in the game. Because Enlightenment must be designated for either specific Power Activations or Combat Rounds, they cannot be used to affect non-Power Activation effects of the game, such as Reformations, Kairotic Moments, or News Events or usually acts of other positions, hostile or otherwise.

- Web of Night: Faculties must be applied to specific die-rolling situations. So, for example, Faculties cannot be used to affect Census and Taxation, but can be used to affect the Loading of population on Colony Ships, or to affect Combat.<sup>15</sup> Enlightenment can only be used to affect situations occurring on the Public Space – remember that the Public Space at any moment also includes all places in the Galactic Space where the position currently has ships or sovereign populations located. Besieging a Host Colony has no effect on Faculties from either Colleges located there or any other College. Similarly, Faculties from a College have no special effect on or any extra meaning to the colony Hosting the College.

About 20 or 30 years ago, I heard the term “the why factor” in an intro sociology class in relation to group cohesion, an exploration of why some groups cohere well and others do not. The term does not seem to be current in use, searches for the term in relation to sociology or group cohesion come up empty of useful results, and the top results are all related to a BBC program, with one entry for a Workforce Institute book.<sup>16</sup> Still, the ‘why factor’ term as I heard it decades ago fits well into the idea of Enlightenment use in GGDM and possibly was the inspiration. In this sense, GGDM Enlightenment – in the form of leadership and depth of understanding – is the local group cohesion and informal structure, why it gets the job done.

A die roll in GGDM should be thought of as representing the collective result of hundreds of small activities, tasks, and actions, sometimes over an extended time period (sort of like at

bats, pitches and plays collectively in a baseball season). Occasionally, a die roll may represent the result of a momentary act by one or two individuals in a crucial situation (like in a baseball game). Thus, GGDM's scale is different from what is commonly seen in science-fiction movies and books where individual heroic characters drive the action (see related discussion in *Buzzing Lightyears, et seq.*, 4 *The Streams of Time*, p. 101, *supra*).

Faculties are assumed to come from and apply to the position's sapient, biological population, especially in reroll situations. Because of so many unknown and currently unknowable, speculative possibilities, GGDM makes no comment on whether or when Faculties apply to tasks performed solely by machines or artificial intelligences (the question of what is 'artificial' about a machine's intelligence is another interesting issue), for example, can Faculties be applied to Hazard Rolls for purely robotic Scout Ships (see *Then Never Comes*, 3 *Expansion*, p. 907, *infra*), or must we assume that Scout Ships have a biological sapient crew? What if Fighters (see *Fighters*, 1 *Carriers & Fighters*, p. 1046, *infra*) are just sophisticated drones? There may be a tendency for technology in the game to develop in the direction of crewless warships and machine interstellar combats; participants will need to decide what this means in the game.<sup>17</sup>

- ✓ See discussion of Scout Ships as drones, *Imperial Interstellar Scout Service*, 3 *Movement*, p. 855, *infra*.
- ✓ See also *The AI Problem* (excerpts), *Corporations*, *infra*.
- **Vampire Suicide:** In life, there are (usually) no “do-overs” when it matters, but what if you didn't do it wrong to begin with? What if there was a ‘back’ or ‘undo’ button on the Keyboard in the Sky? (Norman Spinrad, 1990). For each Faculty used, the position gets one reroll of a failed die roll as if it never occurred.<sup>18</sup>
  - ✓ **Lain(w):** I can delete their memory of being peeped on. I can delete the information. **Deus:** Sure. Try it. You were born to be able to do it. **Text:** Deleting... – Serial Experiments Lain, from Lain Wiki, “Layer 08 Script,” captured December 1, 2018.

The Enlightenment reroll will be applied to the first failed die roll. A position may only reroll each die rolling situation *once*, at the moment a die roll fails, no matter what kind of die roll it is, or whether or not the die roll is important. Multiple Faculties may be committed to situations where there may be multiple die rolls, but whether used or not, any committed Faculties are not available to operate Institutes. Unused Faculties will be returned to the Classes at the end of the turn, before aging is processed. Faculties committed to Combat, used or not, **will not be returned** at either the end of the Round or at the end of the Combat.<sup>19</sup>

- ✓ “Any object – ship or colony planet – that does not have an active Epistemological Constructural Element may not (50% chance) be able receive the effects of College Faculties (whether for use in die rolls, including Combat, or Institutes on that colony).” See Skool Tyne, 2 *Constructural Elements*, p. 190, *supra*.

This should not be confused with failure to obey Power Activations due to inactive Constructural Elements, e.g., the unit may obey the Power Activation but be unable to receive the effects of College Faculties, a different function. One of the most significant possible uses of Enlightenment is to reroll situations where a ship or colony (i.e. unit in the game) fails to

obey or execute a Power Activation due to inactive Constructural Elements (see 2 Constructural Elements, p. 193, *supra*). Thus, Enlightenment can somewhat offset inactive Constructural Elements, but then will not be available for later in the Regular Turn. It's a hard life.

➤ Harsh Mistress: “Failed die roll” in GGDM means any die roll result that is less than the optimal, best possible result. Thus for any die roll where the result determines the value of X (rather than hit or miss, success or failure), whenever the result is not within 10%<sup>20</sup> of the best possible X (e.g., funding rolls in Research Attempts), a Faculty will be used to reroll and the result of the reroll, even if worse than the original, will be applied. Positions should thus take care in committing Faculties to rerolls in situations where the die roll is to determine a value and an optimal result is not required or worth the risk or expenditure of Faculties.

- ✓ In situations where the die roll is to determine a success or failure, hit or miss, or whether or not a colony or ship will obey the Power Activation (see Power Off, 2 Constructural Elements, p. 193, *supra*), with no other possible result in between, the failure is a “failed die roll” which will trigger a reroll using available Enlightenment.
- ✓ In situations where the die roll is to determine the value of X (*ut supra*), Enlightenment can be a harsh mistress (something courted or beloved, but a harsh respondent) as only optimal results prevent rerolls and the rerolled result can be worse than the original.
  - “Jerry’s [aka Lucifer] brother [Yahweh] was speaking. So who’s complaining? You want I should put on my Jesus hat and prove it? The fact that some of them make it proves it ain’t too hard – Seven point one percent in this last batch, not counting golems, Not good enough? Who says? The old boy in the black hat [Loki] said, I count anything less than fifty percent a failure.” – conversation between Yahweh and Loki after the Rapture in Robert Heinlein’s Job: A Comedy of Justice (1984).

➤ Army of Light: Application of Enlightenment in combat is the same as for any other situation. All participants in the combat may commit currently available Faculties with the orders sent for each Combat Round. As explained in Relativity, 2 The Streams of Time, p. 85, *supra*, combats operate semi-independently of Regular Turns, that is, combats operate on their own schedule and may continue for many Turn Cycles, depending on how quickly the participants wish to resolve the combats. As a result, it may be possible for a fresh set of Faculties to be supplied to a combat after each Regular Turn by each side.

Faculties assigned to Combat carry to the end of the combat, see Combat Resolution, 3 combat, pp. 976-977, *supra*; unused Enlightenment *is not lost* at the end of each Combat Round. Faculties used in combat *may never be used to affect the other side’s die rolls*, that is Faculties cannot be used to make the opposition reroll a successful die roll in combat or Special Operations,<sup>21</sup> thus, Faculties may not be helpful while executing retreats from combat (that is, zagging when you should have zigged).

- ✓ The key then is creating game situations where die rolls are necessary – even in situations where the basic rules do not allow die rolls – so that Faculties can be used. For example, some technology or doctrinal template (see Combat Formations, 4 Colleges, p. 503, *infra*) could be introduced where the retreating player gets what Dungeons & Dragons used to call a “saving throw” if hit. The downside of this is, the demand for Faculties increases drastically.

However, in Fighter attacks in Combat, the position may decide each Combat Round that Faculties committed to Combat will *not be used* for Fighter attack rerolls – *this is simply a game mechanical concession* as Fighter Combats use lots of die rolls and are processed first in the Combat Round, therefore, could easily use all of the Faculties committed to the Combat Round before the other ships execute their attacks. This may be an important decision.

- ✓ See Encounter With Bright Lights, 2 Carriers & Fighters, p. 1057, *infra*.
- ✓ Enlightenment should not be applied to Ship Missile attacks, see Fire & Forget, 4 Carriers & Fighters, p. 1080, *infra*.

Inactive Constructural Elements do not affect actions or die rolls in Combat except that inactive Epistemological Constructural Elements may affect application of Enlightenment to individual units in the Combat.

- ✓ At the Battle of New Orleans, Lt. Col. Mullins' 44<sup>th</sup> Regiment was charged with bringing ladders and fascines needed for the British attack on the elevated American breastworks. He bypassed them and was not present to lead his unit in battle. When the British columns arrived before the American lines, they were stranded in a kill-zone, unable to effectively attack without ladders, taking heavy losses standing there. Lt. Col. Mullins was blamed for the loss and was court-martialed and cashiered.

---

*“Although events like the Bay of Pigs, Cuban Missile Crisis, and the Space Race have typically dominated the narrative of the Cold War in current history textbooks, the 1983 nuclear false alarm similarly holds importance in assessing Cold War tensions. If Petrov would have made a different decision – determining that the United States intentionally planned to attack the Soviet Union – it is likely that the false alarm would have initiated nuclear war. Petrov ultimately prevented nuclear disaster and appeased some tension during already grave times.”*

– Madeline Bradshaw, “1983 Nuclear False Alarm,” Stanford University, November 9, 2017 ([large.stanford.edu](http://large.stanford.edu))

---

**Three Minutes:** I am happy to see a young person who understands the gravity of what has been so quickly forgotten.

Thanks to Soviet Officers Col. Stanislav Petrov (on September 26, 1983) and Vice Adm. Vasili Arkhipov (Cuban Missile Crisis, 1962) and many others who had to exercise human judgment, *within three minutes or less* (and no do-overs!) to avoid potential nuclear war during the Cold War – you are here reading this today.

- ✓ Vasili Arkhipov was the second in command on the Soviet Foxtrot-class submarine B-59 in October 1962 and refused to agree to launch a nuclear torpedo at two pursuing U.S. Navy destroyers that were harassing them, which certainly might have started WWII (see pre-delegation of nuclear weapons authority, 4 Combat, EN 23, p. 1004, *infra*). The fact that nuclear weapons were even considered for such a trivial matter (in the big picture) is evidence of the level of tension during the Cuban Missile Crisis. Oddly, Vice Adm. Arkhipov was also, the previous year, the executive officer onboard the Soviet submarine, K-19, aka Widowmaker (e.g., movie, K19: The Widowmaker, 2002; Vasili Arkhipov was fictionalized as Captain 3<sup>rd</sup> Rank Mikhail

“Misha” Polenin), when it suffered a near nuclear meltdown (i.e. runaway nuclear reactor) on its maiden voyage.

- ✓ Col. Stanislav Petrov was the duty officer during the September 1983 Soviet Nuclear False Alarm Incident, when Soviet sensors incorrectly indicated that ICBMs were coming toward the Soviet Union from the United States. It was actually a reflection off clouds.

He was suspicious that the system was only showing the approach of a few missiles when the expected attack would have involved hundreds of incoming missiles. He had only a few minutes to decide whether to alert his superiors, reaction time was a critical element of the nuclear defense or deterrence. We all know, of course, the United States will not launch a first strike ... but he could have been wrong. Maybe the missiles were real and his doubts were expected to allow the missiles through to their targets? He could have been very badly wrong. He was reprimanded later for not taking proper notes during the crisis. But because he was right, and the world was still there, they could not find his conduct wrong.

To put this in context, the nuclear war movie, *The Day After*, aired on November 20, 1983; Nena’s protest song, “99 Luftballons,” was released in Germany in the summer of 1983, and the television mini-series, *World War 3* aired in two nights in January 1982. Tom Clancy’s *Red Storm Rising* was also published in 1983. I remember all of them. November 1983 was also the time of the infamous Operation Able Archer.

I was in 11<sup>th</sup> Grade. My town probably would not have been the target of a strike in any case, but wouldn’t have mattered because 40% of the U.S. population lived within 300 miles of my house and the entire North East and the Great Lakes cities are within 400 miles, probably representing half of the U.S. population. Do the math.

---

*“The name we use for the period implies an answer to the question: If we call those events ‘The Butlerian Jihad,’ we side with the historians who define as ‘great’ those individuals who move the mass of humankind in a new direction; if we use the term ‘The Great Revolt,’ we ally ourselves with those who see ‘leaders’ as simply the front rank of a humanity moving in the direction the masses determine.” – Willis E. McNelly, The Dune Encyclopedia (1984)*

---

**A Long Time Ago:** In 1985, my white-haired 12<sup>th</sup> grade English teacher (who probably went to college in the early 1950s, the time when science-fiction musings were becoming fact) informed me that I could not do a book report on *Dune* (1965) because science-fiction isn’t literature. I was stunned by such a statement – since I had no doubt that science-fiction was literature, though I’d never thought about it and could not have provided a definition of literature if asked. I was hardly in any position to argue (in hindsight, I don’t think he liked me much either), such is the oppressive power of teachers over students.

- ✓ Merriam-Webster online dictionary at *literature*: **1a(1)**: writings in prose or verse especially: writings having excellence of form or expression and expressing ideas of permanent or universal interest.

Even though Professor McNelly had begun writing essays arguing the science-fiction genre is literature in the 1960s, published his main book, *Science Fiction: The Academic Awakening* in

1974, and published anthologies in 1971, 1972, and 1975, consistent with the observations of Thomas Kuhn, the old guard was never convinced. A sci-fi “*Butlerian Jihad or Great Revolt*” against the English literary establishment – like the Beat Generation vs. Poetry Establishment (see feature quote and Beat Down, 1 Culture, pp. 357-358, *supra*)?

*“The acquiring of culture is the development of an avid hunger for knowledge and beauty” – Dr. Jesse Bennett <sup>22</sup>*

## Endnotes.

<sup>1</sup> Commentary & Citation: Compare Patton and Lippmann quotes. Patton would have been about 30 years old in 1915 and probably might have read Lippmann’s book, read about it, or heard about it.

<sup>2</sup> Commentary: By the way, Peter Townsend, and *his* generation, are old history.

<sup>3</sup> Commentary & Citation: I am perhaps using the term design discipline in the sense of restraint. A Google search for the term ‘design discipline’ on December 8, 2018 generates results headed by Design for Business East website ([www.d4be.org.uk](http://www.d4be.org.uk)) defining the Design Disciplines as Architecture, Engineering, Exhibition and Display, Fashion & Textile, Graphic, Interior, Multimedia, Packaging, and Product Design fields. Game design is not included! Darn. But the following may be applicable to the discussion of GGDM as a design:

- ✓ “In their previous work, the authors have demonstrated that the discipline of design has been superseded by a condition where conventionally set design disciplines have dissolved. In this age where design is typified by fluid, evolving patterns of practice that regularly traverse, transcend and transfigure historical disciplinary and conceptual boundaries, the authors have argued that globalization and the proliferation of the digital has resulted in connections that are no longer ‘amid,’ cannot be measured ‘across,’ nor encompass a ‘whole’ system. In short, this ‘disciplinary turn’ has generated an ‘other’ dimension – an alternative disciplinaryity. Moreover, this reliance on the ‘exhausted’ historic disciplines has become obsolete as the boundaries of our understanding have been superseded by a boundless space / time that we call ‘alter-plinarity.’ The fragmentation of distinct disciplines has shifted creative practice from being ‘discipline-based’ to ‘issue- or project-based.’ Consequently, this paper presents a manifesto for the future design discipline that emphasizes disposing carefully of what you know, teaching what you do not know whilst always taking design seriously, protecting us from what we want, objecting to sustaining everything, designing without reproach, ensuring that objects are invisible but designed with care and within history whilst exploring design as an idea rather than an ideal.” – Paul A. Rodgers (Lancaster University, UK) and Craig Bremner (Charles Sturt University, AU), abstract from “The Concept Of The Design Discipline,” *Dialectic*, Vol. 1, Is. 1, Winter 2017 (Michigan Publishing, University of Michigan Library).
- ✓ Arguments about the division of disciplines and classes are about boundary control, and who is let in is determined by degree- or certification-granting institutions, government regulations, and professional, trade, and scholarly organizations. See discussion of Asymmetric Advantage, De-Mystification, 3 Information, pp. 1364-1365, *infra*. Fortunately, my Game Designers Union Card fell into the shredder one day.

<sup>4</sup> Commentary: I have personal experience at this: In 3<sup>rd</sup> Grade that I thought I could take the St. Bernard for a walk, the dog walked me wherever she wanted to go, and I could only try hang onto the leash.

<sup>5</sup> Commentary: Closing the circle. I have always had *very good memory*, my memory was described as encyclopedic in my youth, and I have always had good *cognitive flexibility* within a range that didn’t include math. My cognitive flexibility has seemed to mature with age, round out, but my memory has lost its edge in recent years. I also seem to be more easily *distracted* which I have felt is a result of fading *discipline* as I age, but on the other hand, I seem to as I have aged, been able to imagine and hold together *holistic understanding* better than in my youth.

- ✓ As Dr. Genç said (*ut supra*) it’s not fundamentally bad, but the distractibility has been an issue of debate in the final edit of GGDM. I discover some new, fascinating angle or line of thought, reading and thinking about it for days or a week. I get frustrated that I am not making straightforward or linear progress in editing through the last sections, yet at the end of the ‘distraction’ evolution, the new discovery has worked

into GGDM and developed a new aspect of the game. So I can't say it's bad being distractible, but it is frustrating.

- I read a very short science-fiction story once where alien invaders were coming to Earth and the world's top bio-geneticist was tasked with designing a superhuman warrior race to defend the Earth. Unfortunately, the old fellow got distracted and instead ended up designing a fly that could fly through the open half of a half-open window.
- ✓ It is distinctly possible that I am addicted to games like Freecell and computerized Mahjongg (and the falling tile game Hashira) because they are focus games – any game that involves timed puzzle solving is a focus training device. I can have incredible focus while playing, for a few minutes, whereas in completing tasks, I often feel distracted. I also usually do not feel (and get frustrated) that I play well at the game club, I get too distracted by the interactions and socialization whereas I used to play very well in PBEM games.

<sup>6</sup> Citation: “No man is an Island, entire of itself; every man is a piece of the Continent, a part of the main.” – John Donne, Devotions Upon Emergent Occasions (1624).

- ✓ “Mel Gibson often describes the character as a sort of a closet human being who denied his humanity because he thought it wasn't conducive to survival. And we said, well this is really a story about Max coming out of the closet. And because it's a story like that, it has a softer nature. ...

And Mel Gibson suddenly said to me in Mad Max 2, he said you know what he is? He's a closet human being. And it really pretty well sums up Max for me. He's someone who denies his humanity, and sometimes it's going to come out, somehow. So I think he's sort of a pretty sad figure from that point of view. And yet, you have a sense that he's wise enough to learn. He finally learns, slowly, that you can't live by yourself. You're part of the community, like it or not. That we're all sort of vaguely responsible for each other, and he sort of understands that. There are purposes outside of the individual's life or existence. I think [Max] somehow understands that, and it probably makes him more compassionate – at the end of Mad Max 3, at least. That might be the difference; maybe he has compassion ultimately, in spite of doing all these sort of fairly brutal things.” – George Miller as quoted by Anne Billson, “George Miller Talks about Mad Max, Heroes & Tina Turner: The 1985 Interview,” previously unpublished interview published on Multiglom: The Anne Billson Blog, May 12, 2015.

<sup>7</sup> Commentary & Citation: Every military person knows the military version of the Why Not question discussed in 2 Disruption, p. 269, *supra*. It's called fragging. The answer to the Why Not question in military terms is unit cohesion, discipline, will or purpose, duty, acceptance of authority and chain of command. In these senses it is not greatly different than the answers to the question in civil society, but under different, more extreme circumstances. The most memorable fragging scene occurred in the movie The Siege of Firebase Gloria (1989) as a result of the unfit commanding officer whose condition and incompetence made him a danger to his command facing enemy attack, such that there was no answer to Why Not and the tough-as-nails Sgt. Maj. soon arranged his medevac exit.

<sup>8</sup> Commentary: A leader is the most civilized person in any situation, but not necessarily the most civil person.

<sup>9</sup> Commentary: And here, the reader is asked to divorce any moral indignation and view the subject objectively, that is, I am not condoning what was done by anyone to anyone, merely, I am objectively discussing qualities of a civilization. One reason that has been offered for the fall of the Aztec Empire to a handful of Europeans (leading an army of local tribal allies) is that the Aztecs just didn't comprehend the concept of total war, whereas, the Spaniards came from a culture emerging from and a land devastated by centuries of genocide and religious warfare. Another, more potent reason is smallpox, which neither culture understood; and is incidentally, the only major disease we have eradicated from the wild.

<sup>10</sup> Commentary: In litigation, I have seen economic expert reports that, on an autocatalytic or virtuous circle (positive feedback loop) theory, assigned greater economic or currency value to parenting services of college-educated parents. This is a contested subject in economics, but the implication of greater value to the children (in long term results) from college-educated parents is clear. There are many articles easily found on the internet discussing the economic value parents impart on their children, for example, “The Economics of Stay at Home Moms,” (Investopedia, Forbes Magazine, May 10, 2011) discussing salary value or “Tiger moms and helicopter parents: The economics of parenting style” (Matthias Doepke, Fabrizio Zilibotti, Vox [CEPR's Policy Portal], October 11, 2014), discussing parenting styles choices and education value in the context of economic inequality.

<sup>11</sup> **Commentary & Citation:** Or consider the opposite: “The violence and dissonance of their lives is all they need. They only want to be what they are; unproductive, destructive, stolid. They simply exist. They simply ... are.” – Denny Daley (art by Michael Saenz), “Punk Zone,” *Epic Illustrated*, October 1981, p. 67.

- ✓ Sounds like the town where I grew up, a sleepy dying river city that can only hold onto long lost glory days (and old mansions turned into apartment buildings), whose natural resources are gone, suffering from severe brain drain, a place where progress is retarded at every turn by unenlightened entrenched interests despite the fact that everyone knows things must change; they only want to be what they are, stupid, pedestrian, backward, selfish, and shortsighted and forgotten by the world. The only thing going on in center city now, which was vibrant and bustling in my youth, are politicians, drug dealers, and bored kids who have nothing better to do than drive around in circles all night. Not an encouraging sign.
- ✓ The first meaning of the word “punk” that I learned, as an early 1980s teen, was rotted, decayed wood (Merriam-Webster online dictionary, **3** punk (n) at **1**) while logging firewood with my grandfather, rotted wood was described as being “punk”; this at the time I was hearing about music called punk rock and being called a punk from time to time. Thus, punk became associated with rot, and I eventually formed the idea that punk – as in youth and music – meant social decay. My view is more nuanced now, but the base idea remains that what we call sapience, humanity includes strongly a desire to be more than what we are individually and collectively, and that non-sapient animals – and we cannot know what they may want – are incapable of being more than what they are – can they want to be anything? This remains the most basic view of humanity globally.
