- Pac Mecha Fever: GGDM does not comment on or make any assumptions as to whether ground combat units are or are not “mecha” units in the classic science-fiction/anime sense. However, for the purposes of ground combat rules, there would be two general types, which could be classified as ground unit mecha, and space-ground unit mecha (the latter being introduced in Macross as “variable fighters”). The former type, ground unit mecha, would consist of mecha units landed, probably via drop ship or drop pods, from orbit and which have only ground and/or possibly ground-air combat capabilities. The latter type would include mecha which are space capable fighters that can land on the surface on their own power and act as ground or ground-air combat units. Only the latter would require any distinction in the game, being treated as Fighter IPs while in space combat (possibly inferior to ‘pure’ Fighter Complements) that can be landed and converted to ground units for Ground Combat purposes.

Participants should consider the additional logistical support burden or requirements of Mecha units if they are developed in-game.

- ✓ “As military units and their equipment have grown more complex, the resulting logistical requirements have grown as well. Not only does new equipment require new supplies and new spare parts to keep it operating, but also new specialists to run it, maintain it, and to fix it when it inevitably breaks down.” – Col. Trevor N. Dupuy, Curt Johnson, David L. Bongard, and Arnold C. Dupuy, How to Defeat Saddam Hussein (1991), Appendix F, p. 192.

- ✓ “Advances in aviation and satellite technology replaced conventional forces and equipment, thereby diminishing the country’s ability to have any number of ‘boots on the ground’ to make a difference in enforcement actions and occupational abilities. Those boots needed to be paid, too. Machines didn’t. But what wasn’t factored into that equation was the huge sums of money needed to *develop* the technology in the first place by a monopolistic and overpriced tech community, keep it maintained, updated, and eventually, replaced. Buy it, use it, scrap it. In the long run, that mindset was ultimately more expensive than keeping the human element – *keeping* being the key word there – especially when it came to loyalty. If you don’t believe in the systems you swear allegiance to, then operating their instruments of destruction becomes a moral conundrum.” – J.A. Willoughby, “The Promised Land,” *This Side of Center* (2014), p. 157.

By developing Mecha units (or actually anything) in game, participants are also saying that they didn’t exist before the game and are thus distinguishable from regular Ground Units.

- Beans, Bullets & Bandages: Troop Transports, loaded or not, will have the same OFL and OSL as any other starship of its position. Ground Units not located at a sovereign native colony require *two Supplies* per Regular Turn to avoid Supply Rolls, whether on a ship or the ground. This is a baseline rule, regardless of unit size, environment and combat activities, but can be adjusted, modified, based on judgment and abilities.
  - ✓ “Logistics is the ball and chain of armoured warfare.” – Heinz Guderian.
    - The Battle of Brody, in June 1941, pitted about 3,500 Soviet tanks against 750 German tanks. The battle was a demonstration of all elements, the Soviets had poor logistics, poor mechanical training, poor command & control, and the Luftwaffe savaged the Soviets in all areas, adding to their difficulty. Soviet tanks ran out of fuel, ammo, or had minor mechanical problems and were abandoned, 31 heavy KV Soviet tanks of the 41<sup>st</sup> division drove into a swamp and were abandoned. Their formations quickly became non-operational and the Soviet command was indecisive.
  - ✓ “The full logistical effect of modern weapons made it impossible for an army to carry with it all the munitions it would need for a campaign; it was essential that it be re-supplied continually. When the burden of fuel, lubricants, and spare parts for motor vehicles are added to the increasing quantities of munitions consumed in modern combat, one begins to form an idea of the dimensions of supply required by a modern field army.” – Col. Trevor N. Dupuy, Curt Johnson, David L. Bongard, and Arnold C. Dupuy, *How to Defeat Saddam Hussein* (1991), Appendix F, pp. 190-191.
    - And don’t forget to bring the Bavarian cream donuts!

Ground Units located at a non-Friendly or Naturalized sovereign colony of their native population type (where they have hot chocolate and fresh donuts) require *one* Supply per Regular Turn to avoid Supply Rolls (see *The Cold Equations*, 3 Movement, p. 864, *supra*). Ground Units on an empty planet may attack any **alien colony** that is Landed there by a Combat Activation. Ground Units *probably* should never be able to be converted into a colony.

- ✓ On this latter point however, consider the Roman Danube River colonies of Vin-dobona (modern Venice) and Carnuntum. They began as legionary camps, which

were then fortified and given permanence (Carnuntum was on the Amber Road running from the Baltic Sea to the Roman Empire). Both of these places did become colony cities and Carnuntum became the capital city of Pannonia Superior, a Roman Emperor lived there for three years, and a historic political conference was held there in 308 A.D. But these all occurred after regular Roman population migrated to the camps (initially, wives, camp followers, attendants and families), including some wealthy individuals, traders, retirees or exiles from Rome, mixed with the local Celtic-Germanic population and retired Roman soldiers living on land grants. The ‘*probably*’ means that the Concierge must exercise judgment on the issue, based on history, milieu and species’ involved.

For *game convenience*, Colony Ships’ (whether loaded or not) OFL/ OSL is the same as for other ships and the same should be true of Troop Transports whether loaded or not. Log Ships, however, cannot carry enough to Supply Colony Ships (see Empty Cans, 3 Movement, p. 861, *supra*), but can supply Ground Units on the surface or in ships (*ut infra*) **because it is necessary for the game**.

The *per-day* consumption of a modern combat division that is doing nothing is staggering, and there are many military studies and articles available on the internet, for example, Peter Hoy, “The World’s Biggest Fuel Consumer,” Forbes, June 5, 2008. The issue comes to the fore most often in terms of the cost of keeping U.S. combat units in Iraq and Afghanistan.

- ✓ “Even in reserve and out of combat, an armored division consumed 136 tons and an infantry division consumed 111 tons each day. Consumption rates have risen still higher since then, as those 1953-era units were equipped mostly like their World War II predecessors.” – Col. Trevor N. Dupuy, Curt Johnson, David L. Bongard, and Arnold C. Dupuy, How to Defeat Saddam Hussein (1991), Appendix F, p. 192.
  - Pogeys, check.  Doritos, check.  Mt. Dew, check.  Gaming supplies, check.  Girlfriend? ... she left an hour ago.
- Landing Craft: Landing craft (aka Drop Ships, Flying Saucers, TARDIS) are not existential technologies; positions must develop their own Landing Craft technologies. Landing craft technologies may be different for each Habitability Class. They may also become quite advanced and elaborate; the bottom line measurement of Landing Craft will always be how many RPs of Ground Units can they land? Possibly, Landing Craft, like Colony Ships, will be consumed in the landings.<sup>8</sup> But then how do you evacuate?
  - ✓ One of the best landing combats I have seen on sci-fi television was the Wraith attack on Atlantis (Stargate Atlantis, “The Siege” (2005)) where the Wraith fighters swooped in, but instead of bombing, they beamed groups of Wraith warriors onto or into the target (*à la* Star Trek). The Planetfall Defense Bots used in the Andromeda episode, “The Prince” (2002), were also very sophisticated and interesting units, commanded by the ship’s AI avatar.
- Resist et Mords: Colonies that have Ground Units *might* not surrender after losing a Colony Combat (however, see occupation, *ut infra*). Colony surrender, which is a dramatic issue, is discussed in the next section, 5 Combat. Conquered or Converted Colonies will not automatically revert when no enemy warships are present, if they are occupied by sufficient Ground Units. The Concierge will determine whether or not a colony reverts in these situations,

which implies a revolt and that the extant occupying Ground Units were either destroyed, or marginalized to areas where they cannot control the colony.<sup>9</sup>

- ✓ “No matter our fighting, The numbers will still count, We’re outgunned and few in numbers, We’re doomed to flag of fail. We were told to hold the border, And that is what we did, Honored were our orders, In despite of our foe.” – Sabaton, “Resist and Bite,” their 2014 song about an isolated company of the *Chasseurs Ardennais* of the Belgian Army in 1940.

The Chasseurs Ardennais motto is *Resist et Mords*, resist and bite, which appears on their wild boar-head unit logo. Had the Germans won WWII in complete world-conquest fashion, the stand of the Chasseurs Ardennais would not be celebrated in song; it would be necessary for the Reich and its descendants to paint their foes as weak, ineffective, corrupt and the German total victory as brave but inevitable and all things justified.

---

*“And the Anzio Bridgehead was held for the price  
Of a few hundred ordinary lives.”*

– Pink Floyd, “When the Tigers Broke Free” (1982)

---

**Ground Combat:** Ground Combat is fought between sovereign standing armies on the surface of a planet. Ground Combat may be initiated by any activation of the Combat Power that initiates combat, as appropriate to the circumstances and if the attacker has Ground Units at the location. During a Colony Combat, the attacker may initiate Ground Combat on the second Combat Round or later as a follow-on Combat requiring no Power Activation to land troops, 1) if the attacker has Ground Units present on ships and 2) they join the Colony Combat on the *previous* Combat Round (planetary approach time).<sup>10</sup> If the ships carrying the Ground Units join the Colony Combat, they may be targeted by the colony defenders (the defenders have many critical tactical decisions to make at this point) and may be Combat Screened while in space.

- **Chain Guns:** It is possible to initiate Ground Combat at the end of a Combat Movement if, upon arrival in the destination system the attackers have Ground Troops on ships, there is an enemy colony, and there are no other warships or colony defenses to impede the landing of Ground Units. Just like any Earth alien invasion movie.
  - ✓ It is possible to chain three combats together in a follow through, ships victorious in a Ship Combat may immediately follow through with an attack on a colony (see Panic Bells, It’s Red Alert, 2 Combat, p. 960, *supra*, no additional Combat Power Activation necessary), and on the second Combat Round, the attacker may land Ground Units to initiate a follow-through Ground Combat (if they joined in the first round).
  - ✓ There are tremendous opportunities for operational luck and timing in these follow up combats, as Combat Rounds run independently of Regular Turns.
- **Fire at Will:**<sup>11</sup> Ground Units may only initiate combat against other Ground Units, Ground Bases or undefended colonies and may fire Close-in Defense against Fighters that attack them during Ground Combat. Ground Units are not (normally) able to attack orbiting warships and Orbital Defense Bases even if they fire at the Ground Units (via Orbital Bombardment). But such an ability could be developed via new technologies... Fighters that are present on a colony with no friendly Ground Units or Ground Bases will be eliminated at the

end of the first Combat Round if enemy Ground Units initiate Ground Combat against the colony, unless they can retreat somewhere else.

- Unenlightened Activity: During a Ground Combat, the status of the Epistemological Constructural Element of the defending colony is used to determine whether or not the colony's Defense Bases, Ground Units and Fighter Complement can benefit from the application of Enlightenment (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*) or NSF acting as Faculties (see The First is Last, 3 Colleges, p. 493, *supra*) during the combat. If the Colony Combat lasts to the next Regular Turn, the owner of the Colony may attempt to reactivate an inactive Epistemological Constructural Element at the colony by Cohering (see 5 Culture, p. 421, *supra*).
  - ✓ The attacker's Ground Units will use the Constructural Elements status of either their Transport Ship (as of the beginning of the combat) or the colony on the same planet from which they launched their attack, for the purposes of Enlightenment.
- Dropping In: Attacking Ground Units landing to initiate Ground Combat may not fire at the Defenders during the first Combat Round – the landing is their only action for that Round. Enemy Ground Units landing on a Colony may be attacked once during the landing round by any Ground Bases (as if acting as Ground Units, *ut infra*) or Fighters based on the Colony. Landing Ground Units *may not fire* Close-in Defense at defending Fighters during landing, but any escorting fighters from ships in orbit may engage the Colony's Fighters in a Dogfight Combat. The only way to prevent an enemy Ground Unit from landing is to destroy it; all surviving Ground Units (or parts of) will land on the colony planet. Warships may not Combat Screen Ground Units during landing operations; only Fighters can escort them to the surface. See 3 Carriers & Fighters, p. 1067, *infra*, regarding Combat Screening.
  - ✓ “Fighting soldiers from the sky, Fearless men who jump and die, Men who mean just what they say, The brave men of the Green Beret... Back at home a young wife waits, Her Green Beret has met his fate, He has died for those oppressed. Leaving her his last request, Put silver wings on my son's chest...” – SSgt. Barry Sadler, “Ballad of the Green Berets” (1966).
  - ✓ In 1945, 2,500 Army paratroopers of the 503<sup>rd</sup> dropped on tiny Corregidor Island from 500 feet without reserve parachutes – they wouldn't have time to use them if the main chute failed. Dazed, surprised defenders killed some dropping troopers.

These rules also apply to all subsequent landings. The combination of population, and attacking and defending Ground Units may temporarily exceed the Maximum Habitability of the colony planet until one side prevails – not to mention the damage they will do to the planet during the combat which may reduce Habitability Class.

- ✓ If the landing is being conducted against a Minor Race, the Concierge will need to decide whether the Minor Race has any ability to resist the landing on the first Combat Round. For example, the natives of the moon Pandora (movie Avatar) or planet Naboo (Star Wars) were unable to resist the initial landings, but fought later. In May 1513 A.D., the Calusa tribe in Florida met Ponce de León's ships in costal sea canoes full of warriors armed with long bows, and drove them off. It is clear from several accounts of expeditions that the natives of Florida already knew about the Spanish and were hostile. The Spanish had depopulated several Bahama Islands with slaving

raids and Ponce de León was not the first Spaniard in Florida; others had come raiding for slaves to sell in Spanish territories.

- ✓ Having the ability to ‘drop’ units on a hostile enemy colony planet via control of orbital space following Colony Combat – does not automatically allow the attacker to learn the size of the Ground Unit on the colony. There is, therefore, always a risk involved in invading an **alien colony**. Surveillance and Information Operations (Special Operations spying) may be used to learn generally the size of the opposing Ground Unit; Probing actions probably will not be effective for this task. See Taking It All Down and Information Operations, 2 Information, pp. 1343, 1349, *infra*.
- ✓ Though the Ground Combat landing rules are phrased in terms of a single attacker landing, Ground Combats on surfaces can be fluid and protracted situations where both sides land forces. A historical example is the Battle of Guadalcanal, from August 1942 to January 1943, where both Allied and Japanese forces landed on the island many times, while the sea and air battles raged over and around the islands, with neither side able to establish permanent control of the approaches. Guadalcanal was the most evenly matched and fought Air-Land-Sea (ALS) campaign between the war machines in the Pacific during WWII, the result of which (in combination with the Japanese carrier losses at Midway) gave the Allies the permanent strategic initiative. The Japanese were able to evacuate their troops by forming a naval corridor.
  - *Thoughts of an intergalactic mercenary after a hot combat landing:*  
“Clean job my ass. A sixty-two percent loss is thirty-seven, hell-trained men. Men who will never get to spend the money they died for. Thirty-seven men and not one a friend. You don’t make friends in this business ‘cause it is too painful to see a friend’s burnt guts sprayed across the dirt by a rygon beam.” – B.K. Taylor (story) and James Fox (art), “Retrospect,” *Epic Illustrated*, Vol. 1, No. 4, Winter 1980.
- Soft Landing: Ground Units unloaded on their owner’s colony do not automatically initiate, and may not, during transfer, initiate combat against other positions’ Ground Units on a Balkanized Planet. It is possible to unload Ground Units on your own colony, then later initiate Ground Combat against another colony. However, if the owner of the Ground Units is currently involved in a Colony Combat against any other colony on the planet, the transports must join the Colony Combat even to land troops on their own colony – as it is most certain that the defenders will see the approach of troop transports as an intent to land Ground Units on their colony. However, as no Ground Combat is being initiated by the landing, the defenders cannot fire at the Ground Units during landing on their own colony.
- Razor Rain: Generally speaking, the Orbital Bombardment discussed In This Dust That Was a City, 2 Combat, p. 961, *supra*, is a mostly indiscriminate bombardment of urban areas, installations and government facilities with the intent of maximum destruction of population and causing the collapse of civilization, with little regard to damage to the planet. It can be described as being like a full thermonuclear war in 1983, either with nukes, beam weapons, or rocks thrown down from orbit.<sup>12</sup>

As such, it is not suited generally to strategic or tactical support of Ground Units engaged in combats. If the intent was to Orbital Bombard the planet in this way, why were Ground Units inserted on the surface?<sup>13</sup> However:

- ✓ Should the situation arise where an Orbital Bombardment of a planet is ordered where there are Ground Units, either friendly or enemy, all units will suffer damage proportional to the loss of population. It is of course, possible to just Orbital Bombard a colony that has defending Ground Units without initiating a Ground Combat or before initiating a Ground Combat (see Something Here from..., 2 Combat, p. 960, *supra*).
  - ✓ It is possible for positions to develop technologies (Patents) and doctrines that will allow for ‘close’ Orbital Bombardment by orbiting warships and Orbital Defense Bases that tactically and strategically supports Ground Units in combat on the surface, which may or may not mean orbital launched MIRVs with tactical nukes (perhaps similar to 155mm nuclear artillery shells<sup>14</sup>) or conventional explosives, or damage to the planet.
- Ground Combat Resolution: Drumroll please? Each Combat Round, each Ground Unit on both sides must be designated to either attack or defend. This is independent of their side’s overall status as the strategic attacker or defender in the Ground Combat.
- ✓ Ground Units initiating Ground Combat by landing on the planet may fire in the second Combat Round. Attackers already based on the planet may fire in the first round.
  - ✓ Ground Units either attack or defend in a Combat Round as their action.
  - ✓ Attacking Ground Units must be given a single enemy Ground Unit as the target; Ground Units designated to defend in the Combat Round do not have targets assigned and do not attack. A side may designate all of its Ground Units to defend in a round.
  - ✓ Ground Units may be Combat Screened by other Ground Units, Combat Screened Units and those providing the Combat Screen may not be designated to attack in the Combat Round. Ground Units may not be Combat Screened by Fighters against other Ground Units, but can be Combat Screened against enemy Fighters.
  - ✓ Ground Units may be attacked by more than one enemy Ground Unit each round.
  - ✓ Each attack is resolved *individually*, one attacker vs. one target unit. One ten sided die is rolled for each 10 RPs of the attacking Ground Unit’s size and the results are added. If the die roll result or total falls within the *absolute value* range of the attacker’s total RPs minus the defender’s RP size, the attack has been successful.
    - For example, a 10 RP Ground Unit attacks a 3 RP Ground Unit (the target), the difference is 7, any result less than or equal to 7 on a ten sided die will mean the attack was a success. One die is rolled, the attack roll result was 5.<sup>15</sup>
      - Flip the script. The 3 RP unit attacks the 10 RP unit. Because absolute value is used here, 3 minus 10 is negative 7, but the die roll result for a successful attack is still less than or equal to 7.
  - ✓ A successful attack is not like a hit in Ship or Colony Combat; the defending unit is not instantly destroyed. Instead, Ground Units are reduced by RPs damage. For each RP lost, the *one half population factor* is also lost (*ut supra*).
  - ✓ If the attack was a success, take the result of the attack roll and subtract the target unit’s size in RPs from the die roll, and if positive the difference is the damage in RPs

that is inflicted on the target. If the result is a negative number, that damage is done to the attacker instead *if the target unit was designated to defend in that turn*.

- Continuing the example above, the target unit's size of 3 RPs is subtracted from the die roll result of 5, a difference of 2; the target unit takes 2 RPs damage and survived the round with 1 RP left.
  - If the attack roll had been a 1, the result would still have been a successful attack (result  $\geq 7$ ), however, if the target unit (above) had been designated to defend in the Combat Round, the attacking unit would have taken 2 RPs damage instead ( $1 - 3 = -2$ ), despite the successful attack roll.
    - Flip the script, Part 2. If the 3 RP unit attacks a 10 RP unit, there is no successful attack die roll that will inflict damage on the larger defender because the defending unit is larger than 7 RPs. That is unfortunate, but historically, forces that were outnumbered more than 3 to 1 were usually defending, with very rare and historically notable exceptions. If the 10 RP unit had been designated to defend, the attacking 3 RP unit could be wiped out. It is obviously best in this case for the 3 RP unit to defend and hope the 10 RP unit attacks and has bad luck.
- ✓ A Ground Unit designated to defend in a round may do damage to multiple enemy Ground Units if attacked multiple times and has good luck.
  - ✓ Ground Units which lose their last RP are eliminated. Ground Units at a friendly colony could be reinforced during Regular Turns by adding RPs and population from the colony. Ground Units that have landed on an enemy planet can generally only be reinforced by landing more units but not added to until they reach a friendly colony.
  - ✓ A Ground Combat will end if all of the attacking Ground Units are either eliminated or retreat from the planet (they must be lifted, if they can't they are stuck, do or die).
    - At the end of a Ground Combat won by the defender, the defending colony has a chance of some active Constructural Elements becoming inactive (as in panic in the streets). See *The B-Team*, 3 Disruption, p. 281, *supra*.
  - ✓ A Ground Combat will also end if the colony is 100% occupied by the attackers and all Ground Bases are destroyed (*ut infra*); think of Germany in May 1945. The defenders can never retreat from a Ground Combat, so the only way to win is 100% victory, but defending Ground Units may remain for a short time.
- Vac-Suits: Ground Units may not initiate combat on a planet that is Unpleasant, Hostile, or Uninhabitable to their Native Population Type unless they have Controlled Environment Technology. Ground Units designated to attack on a planet that is Unpleasant to their Native Population Type add 2 to their attack die roll result and 4 if the planet is Hostile or Uninhabitable to their Native Population Type.<sup>16</sup> If the planet is Unpleasant to the target unit, subtract 2 from the attack die roll result, and if it is Hostile or Uninhabitable to the target unit's Native Population Type, subtract 4 from the attack die roll result. Adjustments can cancel out.

- ✓ Imagine two human armies fighting on Venus, or Mars, or the Moon? Artifact (1980) was a Metagaming ‘microgame’ about lunar surface combat between U.S. and Soviet forces (and later alien forces) over an extraterrestrial artifact discovered on the Moon. It featured scientists and astronauts/cosmonauts in hard vacuum suits and moon buggies armed with mortars and rockets (there was a similar scene in the movie *Ad Astra* (2019)). I had a copy when I was young and spent many hours playing it. It seemed like the alien artifact was bait and we were invited for dinner by the aliens. Maybe it was just a cosmic fishing expedition and they reeled us in?
- ✓ The most famous and protracted hostile environment battle in modern history is the Chinese attempt to surround and eliminate the 1<sup>st</sup> U.S. Marine division and army detachments strung out along the road to the Chosin Reservoir, North Korea, in 1950. In the extreme bitter cold and restrictive terrain, the Marines, with clear air superiority, struggled to extract themselves to the coast for naval evacuation.

At no time prior to 20<sup>th</sup> Century technological warfare would such a battle have been fought (there is a doubtful or greatly exaggerated claim of a Battle of the Ice between Teutonic Knights and the army of Novgorod in 1242 A.D.). In the end, two Chinese divisions together could muster only 200 men, and one of the final dawn assaults to clear the road was met with eerie silence; the Marines trudged up the hill to find that a platoon-sized contingent of Chinese defenders (remnants of a battalion or regiment) had all frozen to death in their foxholes during the night.

- ✓ Later, in 1984, the Indian Army fought the Pakistan Army over the Siachen Glacier, at altitudes of between 19,000 and 12,000 ft., the world’s highest battlefield. Occupation by Indian Army posts is quickly degrading the glacier environmentally with heat, pollution and chemicals.
- Collateral Damage: Additionally, the colony’s population and the planet’s Maximum Habitability are both damaged by one population factor for each result of 7 or higher rolled by either side during a Ground Combat. Loss of population in this way may trigger Disruption effects (see *Rousing the Rabble*, 2 Disruption, pp. 271-272, *supra*).
- ✓ Consider what happened to the cities of Hue, Hamburg and Mosul. During the Tet Offensive, 80% of the City of Hue was destroyed by U.S. air and artillery strikes as we sought to push the NVA out of the city. We destroyed the city to liberate the city. The City of Hamburg was 90% destroyed by allied air raids during the entire course of WWII; the post-war aerial photos show that the entire center city area was leveled. The 2017 liberation of Mosul from IS forces is similar to Hue (noting that IS destroyed the Grand Mosque themselves); modern panoramic pictures speak volumes of the devastation of roads, buildings, and infrastructure. Mosul was ‘liberated.’
- ✓ The early darling of military science-fiction writers were ion, plasma and fusion weapons. Traveller RPG in the 1970s and 1980s had Plasma Gun, Man Portable (PGMP) and Fusion Gun, Man Portable (FGMP) as the main infantry armaments. The main sidearm in *Babylon 5* was the Phased Plasma Gun (PPG) or “plasma pistol/rifle” and the show had a neat visual special effect when they were fired. Plasma, with the spread of flat screen ‘plasma television,’ has lost some of its exotic charm, but undoubtedly, early science-fiction writers were thinking of hot plasma states, such as hydrogen plasma in the sun – fusion and plasma guns imply a controlled form of

the hydrogen fusion bomb – or maybe they envisioned lightening plasma. Lightning plasma can approach 20,000 °C or 50,000 °F and of course, plasma for solar or nuclear reactions is very much hotter.<sup>17</sup>

If GGDM Ground Combat is envisioned as being fought by legions of battle armored infantry firing hot plasma, fusion or other hot death-ray type weapons, backed by hover tanks and air power and tactical nukes, what is the effect on areas where they fight?

- **Air Attacks in Ground Combat:** Fighter Complements from orbiting warships and fighters from the defending colony may attack opposing Ground Units; this combat action is resolved as if they were attacking other fighters ('dogfighting') so that the damage result is expressed in RPs of damage to the Ground Unit.<sup>18</sup> Fighter Complements from the defending colony may also attack enemy ships in orbit and those ships may be Combat Screened by other ships and complements. See Combat Screening, 3 Carriers & Fighters, p. 1067 *et seq.*, *infra*.
  - ✓ Fighter Complements of either side may Combat Screen Ground Units against other fighters only. All interception attempts by Complements attacking or screening Ground Units are automatically successful and result in a Dogfight. Complements that breakthrough the Dogfight may then attack opposing Ground Units with whatever they have left using Raid Combat procedure.
  - ✓ Ground Units may not Combat Screen other Ground Units against Fighters.
  - ✓ Ground Units attacked by Fighters while on a planet may fire Close-in Defense.
  - ✓ Fighter Complements on the surface of the planet may not be attacked 'on the ground' (i.e. at their airbase) by Ground Units unless there are no friendly Ground Units or Ground Bases remaining. If a Fighter Complement is attacked by a Ground Unit it is eliminated (e.g., 11 MiGs were destroyed on the ground in Entebbe Raid).
  - ✓ It is assumed in GGDM that ship-based Fighters attacking a colony are being launched from safe orbital distances; *however*, should a circumstance occur where it is deemed that a ship has launched Fighters from a low point over the colony (*a la* the Adama Maneuver<sup>19</sup>), any remaining Ground Bases (even if involved in a Ground Combat) may fire – in Ground Combat – at the ships launching the Fighters, attacking as Ground Bases. Effectively, by lowering themselves close to the surface to launch Fighters, the ships have temporarily become part of the Ground Combat.

---

*“You may have turned your planets into fortresses, but this won't help if they are infected by nanobots that eat defenses from the inside out, or if your opponent is impolite enough to drop an asteroid on your favorite colony.”*

– from Armada 2526 game official webpage

---

**Fortress North America:** When Ground Combat is initiated, any Ground Bases of the defending colony become Ground Units in the defense, and may not attack further in any Colony Combat, but still may be targeted as Ground Bases from orbit and are destroyed if hit.

Ground Bases can still fire Close-in-Defense at attacking Fighters when acting as Ground Units, and attack with a +2 modifier to the die roll (not good at attacking) in Ground Combat. Ground Bases acting as Ground Units take damage as any normal Ground Unit, except that there is no

loss of population with loss of RPs. Ground Bases are eliminated when they have lost their last RP. Twilight's Last Gleaming: "This is Lawrence Dell, and we have taken control of Silo 3."

- ✓ Ground Combat can be initiated between colonies on the same planet or during the second round of any Colony Combat (*ut supra*), so there could be many Ground Bases involved.
  - ✓ Fortress North America was a concept for the final defense of the U.S. and Canada during WWII and the Cold War if the rest of the world was lost to fascist or communist forces. It couples with the North American nuclear umbrella to protect against ICBMs and bomber penetration. If you thought the title referred to the 1986 classic board game, Fortress America, yeah, I've played that game a few times over the years, but have never played its predecessor, Invasion America (1976).
- Verdun: First Era Ground Defense Bases become 10 RP Ground Units during Ground Combat, while 2<sup>nd</sup> Era Ground Bases become 17 RP Ground Units, and 3<sup>rd</sup> Era Ground Bases become 30 RP Ground Units. Ground Bases damaged as Ground Units, do not revert to being Ground Bases after Ground Combat until all RP damage is repaired (via activation of the Construction Power for the purpose of Colony Enhancement).<sup>20</sup> Repairing RPs on damaged Ground Bases does not require expenditure of population factors.
- ✓ [Interview] "In this sense, Verdun was one of the great, terrible, appalling battles of The First World War, just as Stalingrad became one of the terrible, great battles of the Second World War. In fact, the two have been compared as examples of terrible sacrificial battles which went on and on, which were a new hallmark in terms of the awfulness of war." – Malcolm Brown (author of Verdun 1916 (1999), 50+ pages available free on Google Books), Under Siege television series (documentary, 2008), Ep. 4.
  - ✓ [Interview in French with English Subtitles] "Verdun was the first great industrial battle. It was there that for the first time in the history of humanity, man has numerous types of weapons at his disposal, weapons of mass destruction. Artillery, of course, but also poison gas and flamethrowers. Verdun was also the great aviation battle, it was here in the skies of Verdun that for the first time, the importance of a fighter force was realized and demonstrated." – Antoine Rodriguez, Cultural & Communications Director, Mémorial de Verdun, Under Siege television series (documentary, 2008), Episode 4.

---

*"At this date it remained a tactical mystery of World War II that no army had yet made any extensive use of poison gas. Never in history has a proved weapon been discarded for ethical reasons, and it may be concluded that all armies dreaded a return to the immobility of 1917."*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 875-876

---

**NBC – Nuclear, Biological and Chemical Warfare:** Any country that can make beer can make chemical weapons.

- ✓ "...fertilizer and beer brewing equipment can be converted to make chemical weapons..." – Zak Karamally, Export Savvy: From Basics to Strategy (1998), p. 88.<sup>21</sup>

Ground Combat is the most likely opportunity in GGDM for the use of tactical nuclear weapons, biological weapons and chemical weapons. It is, of course, possible to use these weapons strategically during Orbital Bombardment and Raid Combat, but that's a different issue.

- ✓ In L. Ron Hubbard's novel Battlefield Earth (1982), the alien attacker simply teleported in a large airborne drone that began circling the Earth emitting a poison gas that wiped out humanity (I have never seen the 2000 movie which received awful reviews). The desperate late 20<sup>th</sup> Century defenders hit the drone with a nuclear missile over Europe but did not stop it; when the drone was found centuries later, it had a dent and a scratch from the nuclear detonation. There was little resistance when the alien infantry arrived, the aliens just moved in and took over the planet. The last organized body of humanity retreated to Scotland and laid a line of nuclear land mines across the neck, but they were irrelevant.<sup>22</sup>

GGDM makes no assumption as to whether or not Ground Combatants are using tactical nuclear, biological or chemical weapons. If in 1960 and later, the U.S. had 155mm nuclear artillery shells and the 122mm recoilless Davy Crockett nuclear warhead, it may be assumed that the infantry in GGDM might have shoulder-held nuclear missile launchers (as in the 1976 Avalon Hill Starship Troopers board game). By 1976, we had 'dial-a-yield' nuclear warheads (e.g., the W-80).

Their use may be assumed to occur on a local scale during Ground Combats, or their use can be an issue for separate play and News Events, depending on the sensitivities of the participants.<sup>23</sup> However, the Collateral Damage rule (p. 995, *ut supra*) suggests that some really nasty weapons are being used in Ground Combats; the threshold damage die roll can be adjusted up or down depending on arms conventions and how the participants envision air-ground warfare in the game.<sup>24</sup> See also, EN 15, p. 1003, *ut supra*, regarding issues with troops wearing chemical protective gear (MOPP suits).

- ✓ It is probably possible for a side to determine/declare that they are not using weapons in a Ground Combat that will damage the planet. This the defenders might do if they are concerned about the long term damage to their colony world. Presumably however, the side that restricts their use of weapons is at a grave disadvantage against a side that ruthlessly uses every weapon they have available. The Concierge may impose combat penalties on the side trying to avoid Verdun- or Hiroshima-like results. A side may also develop weapons that are less damaging through technology and doctrine that are just as effective as less environment-friendly weapons.<sup>25</sup>
- Battle of the Somme: During the weeklong preparatory bombardment before the Battle of the Somme in 1916, the allied artillery fired chlorine gas shells to force the German infantry to abandon their trenches and deep bunkers. For the record, the bombardment and the chlorine gas were largely ineffective, the British took horrendous casualties crossing no-man's land on the first day. The use of chemical weapons makes sense in the context of WWI stagnate trench warfare, but was rarely effective over the long term and was not the solution to the WWI military problem. WWI however created a particular public and military sensitivity to chemical weapons warfare; chemical weapons have killed far less people than bombs, bullets and missiles, but there is something particularly offensive about their use: one suggestion is that it is because they poison the air and ground and soldiers have no chance against them (as opposed to bombs, bullets, and missiles, sort of a leftover Chivalric code).

- ✓ It is important to understand that modern casualty figures, especially those during and after WWI arise not only from technological weapons' destructive capabilities, but also from universal conscription and the ability (and national will) of modern industrialized nations to concentrate large masses of humanity and equipment in combat theatres and sustain them for long periods of time. This creates a completely different operational zeitgeist than previous ages; additionally WWII was waged exceptionally as total war (e.g., the Potsdam Declaration). Dispersion is the answer to destructive area weapons, concentration is necessary for effective attack against a line or point.
- ✓ See the poem, "Dulce et Decorum Est," by British soldier and poet, Wilfred Owen, written in 1917-1918, and published posthumously in 1920. He was killed on the Western Front on November 4, 1918, one week before the Armistice. The poem is widely available online.
- Bug Spray: Science-fiction stories, except for post-Apocalyptic, rarely mention chemical weapons. In the 1989 board game Red Storm Rising, the East German troops will leave the game if the Soviets initiate chemical warfare, a situation that probably indicates that the Soviet offensive has stalled and the front has become stagnate (which makes East Germans cannon fodder). Chemical weapons are less effective in mobile warfare, except as persistent area denial weapons. The 1976 Avalon Hill board game Starship Troopers (not to be confused with the 1997 and later games that were published to merchandise the movie) in my youth featured *shoulder-fired nuclear missiles*,<sup>26</sup> *psychic talents*, and a *chemical weapon* – Heavy Nerve Gas – which was dropped into Arachnid tunnels through bore holes from the surface. Neither the later 1997 movie nor the CGI animated series (Roughnecks: Starship Troopers Chronicles, 1999)<sup>27</sup> was like the Avalon Hill board game due to production costs.
  - ✓ The issue of psychics being used as weapons, is at the core of the later Babylon 5 television series (1994-1998).
  - ✓ The first recorded instance of biological warfare occurred at the Siege of Caffa in 1346 A.D. when besiegers catapulted bodies of those who had died of the plague over the walls into the city. What happened following this local incident is what terrifies us now; Genovese ships fleeing Caffa brought the plague back to Europe, which became the Black Death (see Mark Wheelis, "Biological Warfare at the 1346 Siege of Caffa," Emerging Infectious Diseases Journal (of the CDC), Vol. 8, No. 9, September 2002). Just as any country that can make beer can make chemical weapons, any combatant that has a diseased dead body can locally attempt biological warfare; truces are often arranged in long intense battles so that the sides can remove the bodies (e.g., Gallipoli, Monte Cassino). What makes Caffa the first recorded instance of biological warfare is the intent, the clear intent, and the implication of some rudimentary understanding of the spread of disease.
    - Historians may quibble over whether Caffa was the first such intentional attempt at biological warfare; there may be other recorded instances from times ancient of which I am not aware. The reason, of course, that we have focused on Caffa is because of its link to the Second Pandemic.
    - The 1918 Spanish Flu Pandemic may have been caused/enhanced by WWI; this is relevant to GGDM as a potential aftermath of Ground Combat.

Fat Man from *Beneath the Planet of the Apes* (1970):

*“You don’t understand, Mr. Brent. The Bomb is a holy weapon for peace.”*

**Occupation:** Ground Units occupying and/or defending a colony 100% occupy and control the colony for military purposes. On the Regular Turn in which Ground Combat is initiated, the invading or attacking Ground Units gain 15% control of the colony by virtue of being there. At the end of each Combat Round, control of the colony may change:

Page | 1000

- ✓ If the attackers did more damage than the defenders in the round, the attackers gain control percentage equal to the total RPs of their Ground Units divided by the *total RPs* of all Ground Units involved in the Ground Combat.
- ✓ If the defenders did more damage in the Combat Round, they gain control percentage equal to the total RPs of their Ground Units divided by the total RPs of all Ground Units involved in the Ground Combat.
  - For example, in a combat where the invaders have 30 RPs of Ground Units and the defenders have 8 RPs of Ground Units at the end of the Combat Round. If the attackers did more damage during the round, they gain 79% control of the colony. If the defenders did more damage in the Combat Round, they gain 21% control of the colony.

The attackers can never have less than zero percent control. If the attackers ever gain 100% control of a colony **and** eliminate all Ground Bases, they have captured the colony (see Surrender discussion, 5 Combat generally, *infra*). This does not mean the Ground Combat has ended, however.

- ✓ Ground Units are there to defend their colony and all of its outlying resources, territory, and infrastructure, not to defend their planet. Colony and planet may or may not be congruent. They aren’t Flash Gordon!
- **Rebel Lines:** Whenever either side has lost control of the colony (have 0% control), the Ground Units may continue fighting as long as they can remain supplied. Thus, the Ground Combat can continue until the units run out of supply and fail Supply Rolls.
  - ✓ In the early part of the Siege of Budapest, Hungarian defending units obtained intelligence by telephoning houses of residents who were behind the Soviet front lines. Imagine your phone ringing with enemy troops outside? This clever idea worked until January 1945 when the telephone network had been destroyed by fighting.
- **Fait Accompli:** If Ground Combat is initiated against a colony that has no Ground Units or Ground Bases, the colony is 100% occupied at the end of the first Combat Round, even if it has a Fighter Complement. The Fighter Complement may do their damage for one Round.
- **Combat Construction:** When a colony is being defended in a Ground Combat, the owner receives the proportional benefit of whatever part of the colony they control during any Power Activation. For example, if the defenders retain 43% control of the colony, then during Taxation, the colony will produce 43% of what it would normally have produced, during Construction activation (probably to reinforce defending Ground Units), the colony has 43% of its GDP available, and during Census, population growth is 43% of what would be normal.

*“After almost a month of intense fighting, local units of Strephon’s Imperium surrendered to Lucan’s forces here on Phaln. There was little joy among Lucan’s command staff, who have lost over 350,000 men in the fighting. Although the Strephonists fared little better, their stiff resistance has blunted the two-pronged Gushemege campaign, which Lucan’s general staff has dubbed the ‘Extermination Offensive’ (referring to its intended objective of eliminating Strephon’s Imperium).... There are also unconfirmed rumors of disproportionate losses in TankRon assets. These various factors suggest that the recent decline in the pace of the Extermination Offensive may in fact portend a complete standstill. If this were to be the case, it is unknown how long Lucan’s forces could remain on site, given their already overextended logistical situation.”*

– Traveller News Service (Traveller RPG), Imperium Date 352-1121

#### Endnotes.

<sup>1</sup> Commentary: Discussing the Battle of Seneffe (1674), where both sides suffered 17% casualties in 10 hours of fighting using muskets, cannon, bayonets and sabers in close formations (Hint: Unless your name is Hannibal, trying to envelop an enemy army that is 50% larger than yours is a risky proposition). In recent years, many films have been produced that accurately portray 17<sup>th</sup> and 18<sup>th</sup> Century European warfare, including early 17<sup>th</sup> Century pike and arquebus formations. One of the earliest accurate depictions of linear advance at 80 steps per minute is seen in Stanley Kubrick’s classic movie, Barry Lydon (1975), in the battle at the crossroads orchard. Except there would have been a big thick cloud of smoke over the French line after the first volley, and that’s not good for filming.

<sup>2</sup> Commentary & Citation: In human terms, during the mid-18<sup>th</sup> Century, Great Britain had 1 soldier for every 310 citizens, whereas Prussia had 1 soldier for every 28 citizens (3.5% of the population). Hesse-Kassel became the leading prosperous mercenary state of Germany (source of the famous Hessians), with 5.2 to 6.7% of its population in the army, 1 in every 4 households had someone in the army. Citizens, of course, includes everyone, whereas only males of military age – a much smaller population pool – were allowed (or compelled, tricked by crimps) to serve. Such was the ultra-masculine militarism of Prussia that it was commonly said that Prussia was not a state with an army, but rather an army with a state. It is thus that the Concierge may judge large standing forces of ground units to be a sign of a militaristic society.

- ✓ According to [globalfirepower.com](https://www.globalfirepower.com), in 2018, the United States has a population of 326M, of which 145M is “manpower available,” while 120M are “fit for service,” and 4.2M are reaching military age in 2018. Continuing, the United States has just over 2M military personnel, of which 1.2M are on active duty in 2018. The current US military ratio is then about 1 soldier (including reservists) for every 157 citizens, and 1 soldier per 57 “fit for service,” which unlike in the 18<sup>th</sup> century, includes the entire military age population of both sexes. The number reaching military age in 2018 is twice the entire size of the military. Captured April 11, 2018 from [https://www.globalfirepower.com/country-military-strength-detail.asp?country\\_id=united-states-of-america](https://www.globalfirepower.com/country-military-strength-detail.asp?country_id=united-states-of-america).

<sup>3</sup> Commentary: This is how the Roman military grew, they eventually needed non-Roman and even non-Italian units. At first, those units were auxiliaries, but gained equal status. This is how every Empire in history has grown.

<sup>4</sup> Commentary: The Soviets always exploited ethnic hostilities by stationing units in other ethnic regions on the theory that they depend on the Soviet national government and will not become too friendly with the local population.

<sup>5</sup> Commentary & Citation: In Alfred Coppel’s unusual 1950 short story “The Rebel of Valkyr” (see top feature quote, 1 Stardrive, p. 779, *supra*), feudal knights with horses were loaded into the holds of ancient starships for transport. The starships landed outside the city walls at the destination and it took hours to unload the feudal army.

<sup>6</sup> Citation: “In spite of suffering from a fever, Pope Pius II left Rome for Ancona in the hope of increasing the morale of the crusading army. However, the crusading army melted away at Ancona for want of transport, and when at last the Venetian fleet arrived, the dying Pope could only view it from a window.” – from Wikipedia article, “Pope Pius II,” captured July 4, 2020.

<sup>7</sup> Commentary: My senior drill instructor at Parris Island said, “If you get killed by an obsolete weapon system, guess what? You are still dead. And I have to write a letter to your mother. And I hate writing letters!”

<sup>8</sup> Commentary: If the Allied Forces had not landed at Normandy in June 1944, the Soviets may have liberated Paris. It would have taken longer for the war to end, but there is no reason to think that the Germans could have won against the Soviet Red Armies in 1944 while keeping sufficient units in France to guard against invasion, while being bombed day and night from the air, and while propping up the Italian front. It is possible that in 1945, the Allied Forces may have been required to invade Calais or some area where they could race against the Soviets for Paris and to create an allied enclave in Northern France and Belgium. And there is no reason to think that the Soviets would have stopped at the German-French border. History in the balance. Conversely, had the Russians not smashed the German Army Group South in the Korsun Pocket in early 1944 – which was only possible after stalemating the Germans at Kursk in mid-1943, if neither of those events happened, the Allied Forces may have liberated Berlin and headed for Krakow and perhaps reached Warsaw or Prague. The Allied Forces would not have stopped at the German-Polish-Czechoslovakian border.

- ✓ The Battle of Kursk, routinely called the largest tank battle in history (may not have been, see Battle of Brody, 1941) featured the first time that an entire armor formation was destroyed by airpower alone.

<sup>9</sup> Commentary: The classic historical holdout in siege warfare is the citadel. Often times, after the capture of a city or castle, the last remaining defenders held out in the citadel, while the attackers had effective control of the city and surrounding countryside. These situations could go on for a while, with the attackers being forced to keep troops around the citadel and to watch for approaches of relief forces or escape attempts, while the shut in defenders’ food and supplies dwindled along with hopes of escape, break out or rescue.

<sup>10</sup> Commentary: The infantry combat scenes in the original Star Wars movies were awful. Clearly Lucas and his team had no actual understanding of weapons or combat. The combats, especially the corridor fights, were unimaginative, competent Rebel defenders would have held out longer and inflicted greater losses on the attackers (Storm Troopers can’t hit anything!). But Lucas did understand what was important to make a convincing movie scene, flashing lights, people getting hit, fatal bravery, giving the impression of a fierce fight and moving the story along.

<sup>11</sup> Commentary: You know the joke.

<sup>12</sup> Commentary & Citation: The few times that the Star Trek OS USS Enterprise fired at a planet surface (e.g., “The Alternative Factor” (1967)) were unimpressive, although it is implied strongly (probably bluffing) in “Taste of Armageddon” (1967) that the Enterprise could destroy an advanced planetary civilization from a distance.

<sup>13</sup> Commentary & Citation: This issue was discussed in Robert Heinlein’s 1959 novel, Starship Troopers: If the Terrans have the planet-destroying Nova Bomb, why does the infantry have to land and fight the Arachnids on the surface? The basic conclusion of the long argument was: “There can be circumstances when it’s just as foolish to hit an enemy with an H-Bomb as it would be to spank a baby with an axe.” – Robert Heinlein, Starship Troopers. The Nova Bomb – the proxy for the collective power of the world’s nuclear arsenal in Cold War science-fiction – was probably invented in Starship Troopers and was used in later science-fiction, e.g., Andromeda television series.

<sup>14</sup> Commentary & Citation: The smallest ‘nuclear’ weapon ever developed was the Davy Crockett nuclear warhead which was designed to be fired from a 122mm recoilless anti-tank gun. It was available in the late 1950s, with a yield of just 10 or 20 tons of TNT (.02 Kt.) and was intended to be used in defending Korea and the Fulda Gap in Germany. There is a government video on YouTube with Pres. Kennedy watching from about 1960 demonstrating the M-29 150mm 1 Kt. version in a tactical situation, the explosion barely looks like a nuke (cf. the 15 Kt. yield bomb at Hiroshima). See “M388 Davy Crockett Operational Test,” posted by jaglavaksoldier, February 22, 2010.

- ✓ This weapon is also sometimes called the M65 recoilless nuclear rifle. So, nukes can be really small. Since at least 1960, a tactical nuke could be carried in a suitcase (i.e. ‘suitcase nukes’) or in special backpacks. Most have a yield of 1 Kt. (kiloton) or less. In the rise of terrorism in the 1970s someone realized what a terrorist could do with a suitcase nuke; once again, the arms race produced a genie (the Special Atomic Demolition Munition, SADM) that could not be put back into the bottle. We’ve been lucky so far.
- ✓ The W48 155mm Nuclear Artillery Shell was available after 1963, and had a yield of .072 Kt. There was also a shell for the 203mm (the Marines had M110 Self Propelled 203mm howitzers) called the W33. The W48 was replaced by the W82 with a yield of up to 2 Kt. According to UPI, by 1981, scientist had developed a neutron warhead for the 155mm howitzer, see Richard C. Gross, “Scientists have developed a neutron warhead for the 155mm...” UPI Archives, December 11, 1981 (available free online).
- ✓ The W23 was a nuclear shell designed to be fired from the 16” naval gun of the Iowa-class battleships that were still in service in the early 1950s. It had a yield of 15-20 Kt. making each the equivalent of the bomb

dropped on Hiroshima, with a range of 23 miles. The implications of this were horrific for coastal cities. The big battleships were retired in the early 1960s, but brought out again briefly in the early 1980s.

- ✓ Small linear implosion weapons of this sort require twice or three times as much material, making them very costly. Still, in terms of resources available in GGDM and technology we know already exists, it is not inconceivable that small nukes could be the normal munition in planet surface battles; consider Steve Jackson's *Ogre* game (which has also spawned fan fiction, e.g., Joshua Megerman, "The Rise and Fall of Pittsburgh," February 23, 2019, found on Steve Jackson Games website) where Davy Crockett-like *nuclear rounds* are the standard munition of the game.
- ✓ The Davy Crockett was mentioned in Billy Joel's "We Didn't Start the Fire" (1989). Everything mentioned in the song happened between 1949 and 1989 so Davy Crockett would seem to be out of place, unless you know the reference. Some think the reference is to a 1955 Disney TV series, but the nuclear reference makes much more sense and was public knowledge in 1989. My impression of the song in 1989 was quite different than others who focused on trying to figure out all the dizzying references; my interpretation of the meaning of the song rested on the chorus lines: Americans were fed up with being blamed for what was wrong with the world, being abused for trying to help. Also, History Channel has an episode on it.

<sup>15</sup> Commentary: Historically, unit sizes and composition are cultural and historical artifacts; in WWI, a U.S. Division was equal to a European Corps in size and equipment. Since WWII, most Western national armies' divisional sizes, compositions and equipment have standardized (under NATO especially), but the Korean War showed that this was far from global, as Chinese unit sizes and compositions were significantly different than the West.

<sup>16</sup> Commentary: In training a couple of times, we had to shoot our M-16 combat rifles while wearing gas masks. You can't hit anything with a gas mask on. I do not believe we ever fired howitzers with gas masks on; the risk would be too great because of the way the optical sights work. In the summer of 1986/1988, in Okinawa, Japan, we had to evacuate our howitzers after firing while wearing MOPP 4 gear – the full chemical attack suit from head to toe, gas mask, overalls, boots and gloves – in 90 plus degree heat. Afterward, we pulled out onto the road, went a short distance, then sat there on our trucks for over an hour until the all clear. I have never been so hot in my life. These personal experiences always come to mind (not to mention all the trips to the gas chamber) whenever I read about offensive chemical attacks, or certain post-apocalyptic settings, or combat operations in hostile environments.

<sup>17</sup> Commentary: A recent conversation with a Traveller RPG aficionado at the monthly game club confirmed as I believed all along that Plasma Guns in Traveller were hot plasma and not lightening plasma. He further pointed out that in holding and firing this weapon unprotected, the heat would probably kill you (or at least you'd be severely burned); thus Imperium troops wore battle armor to protect themselves from their own weapon. This is the best case to be made for collateral environmental damage, with tens of thousands of such heat discharges in a battle.

<sup>18</sup> Citation: **Capt. Harris**: Be advised. We've got zips in the wire down here. **Phantom Pilot**: Roger your last, Bravo Six. Can't run it any closer. We're hot to trot and packing snake and nape, but we're bingo on fuel. **Capt. Harris**: For the record, it's my call. Dump everything you've got left on my pos. I say again, expend all remaining in my perimeter. It's a lovely fucking war. Bravo Six out. **Phantom Pilot**: Roger your last, Bravo Six. We copy. It's your call. Get them all in their holes down there. Hang tough, Bravo Six. We're coming cocked for treetops. – Platoon (1986).

<sup>19</sup> Citation & Commentary: Battlestar Galactica television series, "Exodus, Part 2" (2006). Note that the Galactica took considerable damage in the maneuver (going to FTL in a planet atmosphere, think about that!)

<sup>20</sup> Citation: "I got no delusions about you or your men's democracy Jones. We are gonna refortify this shit hole and protect it like it was your daughter's cherry. I ain't gonna die here." – Sgt. Maj. Hafner, Siege of Firebase Gloria (1989).

<sup>21</sup> Citation: "BTW [biological and toxin weapons] agents would be relatively easy and inexpensive to produce for any nation that has a modestly sophisticated pharmaceutical or fermentation industry. Indeed, mass production methods for growing pure cultures are widely used in commercial production of yogurt, yeast, beer, antibiotics and vaccines. Nearly all of the equipment needed for production of pathogens and toxins, is dual use and widely available on the international market.... In contrast to chemical warfare (CW) agents, no specialized starting materials are required for production of biological and toxin agents except for a small seed stock of disease-producing organism. Nutrients such as fermentation medium, glucose, phosphates ... are widely available and routinely imported by developing countries..." – Technologies underlying weapons of mass destruction, p. 86, U.S. Congress, Office of Technology Assessment, December 1993 (DIANE Publishing).

- ✓ As noted in the Farhad Manjoo feature quote in 1 Patents, p. 727, *supra*, the Congressional Office of Technology Assessment was defunded (i.e. shut down) by the Gingrich Republicans in 1995. Congress has since then proceeded without an unbiased, organic technology assessment staff; technology assessment has shifted instead to the U.S. Government Accountability Office, which is also technically part of the legislative branch. This is the usual way it is done, a mistake is made, and rather than admitting to and reversing the mistake, the services are quietly transferred to and taken up by another initially less-qualified agency. Some information from Wikipedia article, “Office of Technology Assessment,” December 28, 2018.

<sup>22</sup> Commentary: In the Babylon 5 movie, A Call to Arms (1999), the Drakh (former minions of the Shadows) sacrificed a planet killer and an entire fleet in an attack on Earth just to release a biological weapon to poison the Earth and kill humanity (they were really mad at us). This was the bridge-pilot movie for the short-lived spin-off TV series, Crusade (1999), which like the early 80s anime series, Star Blazers (1979-1984), was premised on finding a cure and returning it to the poisoned Earth before time ran out for humanity.

<sup>23</sup> Commentary & Citation: At the end of the Cold War, historical conferences were held to reexamine the Cuban Missile Crisis. The conferences revealed that local Soviet commanders had pre-delegated authority to use tactical nuclear weapons and that a Soviet submarine commander had been prevented from launching a nuclear armed torpedo at U.S. Navy ships that were shadowing the submarine. Some felt that the conference organizers overstated the revelations for publicity purposes, see Mark Kramer, “Tactical Nuclear Weapons, Soviet Command Authority, and the Cuban Missile Crisis: A Note,” *The International History Review*, Vol. 15, No. 4 (Nov., 1993), pp. 740-751.

- ✓ Less widely publicized or noticed was the revelation that U.S. President Eisenhower had pre-delegated authority to certain commanders to use nuclear weapons in defined extreme situations (apparently, the conditions precedent of this pre-delegation were narrower than the Soviet pre-delegation) and that this policy continued long after Eisenhower left office. See, “First Documented Evidence that U.S. Presidents Predelegated Nuclear Weapons Release Authority to the Military,” National Security Archive, <https://nsarchive2.gwu.edu/news/19980319.htm>, March 20, 1998.
- ✓ The conceptual importance of such pre-delegation to the military is the perceived erosion of the nuclear firebreak; *a local commander under pressure from the enemy will make decisions differently than top civilian authorities* and might unleash global thermonuclear holocaust (paraphrasing McGeorge Bundy).

<sup>24</sup> Commentary & Citation: But as stated in *The Come As You Are Party*, 1 Combat, p. 932, *supra*, if one side has a weapon, the other side must have an equal or better weapon, or they lose, unless no one is willing to use the weapons. There must be retaliation threat.

<sup>25</sup> Commentary: One day while training at Twenty-nine Palms, a Lt. told us to dig a hole to bury the trash. Three Marines with shovels took to the task, and within minutes, had a respectable hole dug. The Lt. came running back and told us to stop; he had been informed that we were not allowed to bury ☐. He looked at us, looked at the hole we dug, then told us to go back to our gun positions and give him a shovel, he took care of filling in the hole.

<sup>26</sup> Commentary: In bootcamp, I heard a serious mention of man-portable nuclear missiles; I do not know if such a thing exists, but I would not be surprised if it did. In 1987, I was invited to attend nuclear artillery school. Yes, 155mm nuclear artillery shells are real. It was common lore among the artillery men in my unit that firing a nuclear artillery shell was a suicide mission. One gun, one powder, one shell. I declined. The reasons I gave at the time, though not stated in the correct terms, amounted to a type of firebreak argument-conscientious objection. I am sure this destroyed my chance of meritorious promotion as the one who did go was promoted to Corporal shortly after.

- ✓ The existence of these nuclear artillery shells is not secret; if I recall correctly, my copy of Sir John Hackett’s *The Third World War: August 1985* (1978), which I had and read somewhere around the mid-1980s, discussed nuclear artillery shells and provided a number of how many shells NATO forces had in Germany.

<sup>27</sup> Commentary: Both the 1997 Starship Troopers movie and the 1999 CGI animated series, *Roughnecks: Starship Troopers Chronicles*, were produced and directed by Paul Verhoeven, but have *opposite* tones and outcomes. In the movie, the Bugs home planet is destroyed with a Nova Bomb (background to a romantic kissing scene), while in the animated series, the Terran government is an oppressive military dictatorship, and the Bugs take over and infest Hawaii, genetically adapting humans to their purposes, then attack the West Coast, implying the fall of humanity.

*See Appendix CST – Combat Shifts & Situations Tables*

*“The action, the impact of flesh and bone, the clash of steel upon steel – all these are but the leverage used by generalship to release far more powerful moral forces. Even in ancient times, when it may be supposed that instincts were more primitive, few warriors fought for the love of fighting. The large majority fought to win, and their will to struggle waned at the moment when victory was apparently snatched out of grasp.*

*The test may be found in statistics indicating that most armies lose aggressive spirit before their casualties have reached 30 percent. They are not physically crushed, since seven men out of ten are still able to bear arms. They are not necessarily overwhelmed, since the survivors may still be more numerous than the enemy’s whole force. They are simply convinced! The threat of ultimate defeat has convinced them, and it is the business of the tactician to supply the threat. If this can be accomplished by means of a military illusion, so much the better. Armies of superior numbers have been put to flight before one man out of ten has fallen. They were not beaten by blows which became more than flesh could bear. They were beaten in spirit according to laws as old as the human heart, and the victor is the one who can best apply those laws.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 36*

**Professional Soldiers:** The Roman legionnaires were professional soldiers (not warriors, which is a somewhat derogatory term in military thinking, despite the common vulgar perceptions), in addition to superior armor, weapons and kit, they also had better unit cohesion, purpose, will, leadership and were known to be very tenacious in the fight. These latter counted far more.

- ✓ [Narrator] “Conflicts usually took the form of minor skirmishes between neighboring tribes and featured little in the way of tactics; two armies would meet and exchange a hail of javelins, at which point both sides would charge one another and engage in a chaotic melee. *Individual heroism was valued over unit cohesion, and it was not uncommon for warriors to seek one-on-one combat during the heat of battle.* As Etruscan society evolved, so did its military. As a byproduct of trading with the Greeks, the Etruscans slowly developed a distinctly Hellenic style of arms, armour and warfare. ... More disciplined than their Villanovan ancestors, the Etruscan hoplites fought primarily in a phalanx, protected on the wings by cavalry, a universally effective formation that even the Romans used before the adoption of the maniple.” – András Szente-Dzsida (narrator), “Etruscans: Italian Civilization Before Ancient Rome,” Kings and Generals YouTube Channel, February 20, 2020 (emphasis added).
- ✓ [Interview translated from French by English subtitles] “In fact, the tactic of the Gauls, the warrior practice of the Gallic War, consisted of attempting to achieve victory and then leaving. It was not a flight, but a departure once they had confronted each other and could not achieve victory. There are many examples of this in the Gallic War, and when they saw that they could not gain victory after the third battle, the Gauls departed, abandoning Vercingetorix and his men in the citadel.” – Professor Yann Le Bohec, Sorbonne, Under Siege series, Episode 1 (documentary, 2008).

As one commentator noted in relation to the First Punic War – and I am sorry that I do not remember where I heard this exactly – the Roman leadership was willing to gamble all to win big or lose everything – thus tenacity of purpose was an important trait – and this set them apart from other kingdoms of their time who always sought dynastic self-preservation first and generally took lesser risks.

- ✓ Without a doubt, morale was one of the major differences between the Romans and the Gauls in the Gallic Wars. Time and again, it is disappointing to see the Gauls abandon good positions or fail when they had superiority. The Romans campaigned in the Gallic tribes' home territory and were able to move at will, burn farm fields, and destroy villages, retaliating directly against tribes that joined the insurrection.

**Morale in GGDM Combat:** Morale is a fickle subject – filling tens of thousands of pages of military discourse<sup>1</sup> – that is best left to the sound discretion of the Concierge. But this is perhaps a good starting point:

- ✓ “One field-grade deserter expressed the feelings of many: ‘What’s the point of going home if you’re just going to get sent out to fight again?’” – Traveller News Service (Traveller RPG), Imperium Date 083-1122.

However, the GGDM setting, and science-fiction or space-opera settings in general, present unique questions when considering morale in combat with aliens, whether the humanoid kind (i.e. Americans in rubber suits) or in cases of extreme alterity:

- ✓ Is this an existential situation for the species? <sup>2,3</sup>
- ✓ Do the **aliens** have the concept of surrender and will they understand the attempt to surrender?
- ✓ Because of physiological differences, will the aliens be able to provide sufficiently for their captives? Would they even try?<sup>4</sup> This is especially important in Ground Combat situations.
- ✓ In Colony and Ground Combat, retreat for certain units is not possible.<sup>5</sup>
- ✓ If you are on a ship, where are you going to run? The crew goes where the ship takes them and that is in the hands of the bridge crew.
- ✓ If you are on a fighter, where will you land if you flee? Where would you go?
- ✓ If you attempt to retreat from a combat in space, you might die anyway.
- ✓ If the attackers in a Ground Combat are attempting to retreat, do they have the ability to retreat from the planet surface? Or is landing a one way ticket?
- ✓ Is this the type of situation where surrender or retreat is even an option? If not, what are the options if the situation seems hopeless?

Inexperienced military leaders will generally think their situation is worse than it actually is and the enemy's situation is better than it actually is. Civilian leaders may see the opposite. Both are a sort of Dunning-Kruger effect in military thinking and civilian leadership. Neither is helpful.

- ✓ “For a strong adversary (corps) the opposition of twenty-four squadrons and twelve guns ought not to have appeared very serious, but in war the psychological factors are often decisive. An adversary who feels inferior is in reality so.” – Field Marshal Carl Gustav Baron Von Mannerheim, “Father of Modern Finland.”
- ✓ “Since the 1942 campaign was Hitler’s own, any criticism ultimately devolves to some description of his character and ability. He certainly had a retentive memory, an appreciation for technology, some flair for operations at approximately corps level, and an extremely strong will. With more military experience and more self-restraint, he might have become a competent corps commander, but he was a hopelessly inept strategist. He was incapable of adapting his plans to an objective reality of space,

time, and opposing forces. Instead, he retreated into an infantile dream world where his will alone was decisive. Because he refused to admit restraint on his own will, Hitler vastly overestimated the role of morale in warfare.... Hitler found it easy to make any demands because he had no real sympathy or affection for the soldiers whose lives he recklessly sacrificed.” – The Second World War: Europe and the Mediterranean, The West Point Military History Series, Dept. of History, U.S. Military Academy, West Point, NY (1989), p. 135.

- On the latter point, the editors echo Albert Speer’s book Inside the Third Reich (1969).<sup>6</sup>
- “[Gen. Henry H.] Arnold [USAAF] recorded in his diary ‘Our secret weapon is Hitler, hence do not bomb his castle. Do not let him get hurt, we want him to continue making mistakes.’” – from Wikipedia article, “Bombing of Obersalzberg,” citing to Despina Stratigakos, Hitler at Home (2015).

There are two situations in GGDM where “morale” is out of the hands of the Concierge: First, positions may choose to retreat from combat (or in the opposite, no retreat option exists for System Boats and Defense Bases), and second, the larger issues of when positions decide to stop fighting, concede territory and/or submit to demands of other positions, all are story arc events.<sup>7</sup>

- ✓ “As the German shells rained down on the French positions, Napoleon III wandered aimlessly in the open around the French positions. One officer of his military escort was killed, and two more were wounded. A doctor accompanying him wrote in his notebook, ‘If this man has not come here to kill himself, I don’t know what he has come to do. I have not seen him give an order all morning.’ ... After the war, when he [Emperor Napoleon III] was accused of having made a ‘shameful surrender’ at Sedan, he wrote: ‘Some people believe that, by burying ourselves under the ruins of Sedan, we would have better served my name and my dynasty. It’s possible. Nay, to hold in my hand the lives of thousands of men and not to make a sign to save them was something that was beyond my capacity....my heart refused these sinister granddeurs.’” – from Wikipedia article, “Napoleon III,” captured November 2, 2018.<sup>8</sup>
  - German artillery bombardment at Sedan seemed to have this effect on Napoleon III (*ut supra*). Napoleon III was defeated psychologically.
- ✓ “The real target in war is the mind of the enemy command, not the bodies of his troops. If we operate against his troops it is fundamentally for the effect that action will produce on the mind and will of the commander; indeed, the trend of warfare and the development of new weapons – aircraft and tanks – promise to give us increased and more direct opportunities of striking at this psychological target.” – Captain Sir Basil H. Liddell Hart, 1944.

In addition to the above, each soldier or warrior brings everything civilization provides:<sup>9</sup>

- ✓ “Throughout the film, Wings [Hauser] displays a worrying enthusiasm for machine-gunning ‘dinks’ (as they’re charmingly referred to) at every opportunity. It’s meant to portray patriotic fervour, but more readily suggests an urgent need for psychiatric care.” – Jafo, review of Siege of Firebase Gloria (1989), explodinghelicopter.com, May 25, 2016.

The Concierge should be aware of and weigh each position's Fundamental Realities, Enlightenment, Writs, Meanings, and any other factors relevant to morale 'on the ground.'<sup>10</sup>

- ✓ “Moltke was the first great captain to break with the past. In his emphasis on planning, he located his headquarters far back in the rear, leaving the supervision of the fighting to subordinates. And since there is no more convincing justification than victory, the method gained converts as armies swelled in numbers. In some respects the benefits were apparent. Modern staff work can hardly be said to have begun until after Moltke showed the way. Military cartography developed into a science, while precision and coordination improved in every army which followed the Prussian model. Yet in his genius for specialization Moltke went to such lengths as to create a gap between staff and regimental officers – a tendency which his imitators accepted along with the tactical virtues. Obviously the generalissimo of several million troops cannot charge at the head of his men in the eighteenth-century manner. But when even the divisional staffs of 1917 sought comparative comfort and safety, combatants felt that they were being thrust and not led into battle. Resentment of such conditions ate like a canker at the fighting spirit of every World War army; and to complete the sad paradox, most of the commanders were too far removed from war's realities to know the truth.” – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), pp. 729-730.<sup>11</sup>

See previous discussion in *Interdisciplinary Approach*, 4 Colleges, p. 507, *supra*. Moltke's stark stratification of officers between army HQ staff and tactical command simply finished a process that had begun centuries earlier. HQ staff is the bridge over the gulf between the political power and combat command.

- Morality vs. Morale: The very first concept that must be shed is the idea that morality is morale, the juvenile fiction idea that the good guys, the morally right, the righteous, will be victorious in combat. It arises from the erroneous idea that the man who knows he is morally right or is convinced of his righteousness will not quit and thus will always be victorious. I shed this Saturday morning cartoons delusion when I was about 13 or 14 years old, I think Montross or Summers discussed it somewhere.

- ✓ There came a day when I was perhaps in my late teens or early 20s (most likely the latter) when the realization dawned on me how close we were to losing WWII in 1940. Once I got past the patriotic 'rah-rah, we're the good guys and we won' that is the common view taught in public schools, once I understood the situation, I remember the flush of sudden understanding in that moment. Our leaders almost blew it. Japan's attack on Pearl Harbor in December 1941 may have sealed Germany's fate. That year and a half in between was a twilight, by December 1941, the Germans had failed to encircle and capture Moscow and their initial onslaught had petered out.

The juvenile fiction and Saturday morning cartoon ideas are related to another much older idea: That victory in combat (or any struggle) is confirmation of moral rightness or divine sanction (e.g., Trial by Combat). That is, that the man who is not on the right side of the dispute will lack will, is weaker (dumber), will not receive divine assistance or good luck. See *Might Makes Right* discussion, 2 Government Titles, p. 590, *supra*.

- ✓ If you think that being 'right' or on the 'right side' will give a man moral courage not to surrender or flee, then what about all of the Allied units that surrendered during

WWII, especially those who were defending their homelands (e.g., France, Russia?). We teach that we (and the Allies) were on the morally right side, right? Bataan Death March.

It has been said many times, but probably not better:

- ✓ *Thoughts of an intergalactic mercenary after a hot combat landing*: “They sit in their hallowed halls of government and talk of righteous causes but in the white heat of combat, good and bad, right and wrong melt away. Only the money keeps you going. Yet now, for me, the tide has turned and the one grim reality of this profession seals my fate... that all of the fortunes spent on death cannot buy me one more breath of life.” – B.K. Taylor (story) and James Fox (art), “Retrospect,” *Epic Illustrated*, Vol. 1, No. 4, Winter 1980.
  - Cf. “And all your money will not another minute buy.” – Kansas, “Dust in the Wind” (1977).
  - See also related Expendability discussion in 3 Combat, p. 980, *supra*.
- **Naval Combat**: Most of the crew in a naval combat have no idea what is going on; most are below deck with no view of the outside, each has a specific job to do, nowhere to run, with the captain in control of the ship, and they have to keep on doing their job, knowing that each second, a shell, missile, torpedo or bomb could come crashing through the ship’s armor. *There is no reason to believe that spaceship combat will be any different, whether in our solar system or in a space-opera setting.* Star Trek DS9 fans will recall that Nog was counseled to not worry about the enemy ships, but to just concentrate on doing his specific job during the coming battle (“Sacrifice of Angels” (1997)). They were outnumbered 2 to 1 and Nog knew it only because he was on the bridge, the rest of the ship crew probably did not.

*“A relief force consisting of the 36<sup>th</sup> and 84<sup>th</sup> Fleets, with attached reserve squadrons, arrived today to engage Lucan’s forces here. Lucan’s fleet retreated with minor casualties, leaving behind the ground forces it had landed more than a week before. With assistance from close orbital bombardment, Belumarese defenders easily overcame the abandoned ground forces, who surrendered en masse before planet dawn.”*

– Traveller News Service (Traveller RPG), Imperium Date 088-1118

**Surrender at Planet Dawn**: In GGDM terminology, the Ground Units were left on a hostile planet without a Log Ship to supply them each Regular Turn and without fighters for Combat Screening against enemy fighters. With low morale, a stalling offensive, and no reason to hang on, it took only one more push from the defenders to cause surrender (at Concierge discretion).

- ✓ The Traveller RPG civil war was between humans on mostly Earth-like planets, both sides using the same technology, equipment and organizations. This is very different from most situations in GGDM.
- ✓ “Historians relate that the French garrison, feeling abandoned by an uncaring Republic, gradually abandoned the high standards of conduct and service characteristic of the French Revolutionary Army. Many soldiers refused to renew their oath to the Republic, or did so half-heartedly.” – from Wikipedia article, “Siege of Alexandria.”

**No Surrender, No Retreat:** Within the scale of GGDM and space-opera fiction in general, ground combat (on a planetary surface, that is, planetary invasion) is very similar to Pacific Island combat during WWII.

The Japanese were able to extract their ground forces from Guadalcanal because they still had transport capability and retained enough control of the seas to create and maintain a corridor for evacuation; as is well known from history, in later battles, Japanese troops were trapped on small islands unable to be extracted and with nowhere to retreat except into tunnel networks. With their refusal to surrender, defender casualties were usually 95%.

Page | 1010

Perhaps more on point as to planetary invasion, paratrooper units (and special forces) that are inserted have no way out other than linking up with friendly ground forces, or being extracted. In WWII, extraction by helicopter was not available, thus situations occurred like those at Crete, D-Day and Arnhem. At the invasion of Crete, the Fallschirmjäger were victorious but took heavy losses, at D-Day, the paratroopers linked up with invading ground forces and were extracted to the rear, at Arnhem, such was not the case, the red berets took a beating, the town was partially destroyed, they withdrew across the river under heavy fire, leaving the wounded to be captured.

In February 1943, Orde Wingate's Chindits marched overland into Japanese-occupied Burma on Operation Longcloth to test long range penetration missions and had to make their own retreat out; a year later, Merrill's Marauders hiked over 1,000 miles into Burma over a mountain range *with no extraction plan*. The Marauders were disbanded in August 1944, having been reduced to 130 men from 2,997 that entered Burma six months earlier.

- **Win, Place or Show:** Ground Units on the surface of an enemy planet have nowhere to retreat if they cannot be extracted from the surface to transports and there is no friendly colony on the planet (as may occur on Balkanized Planets). Without transports, Ground Units are usually stranded and must win, die or surrender, even if they can be supplied by Log Ships.
  - ✓ “A little religious communication might not be a bad idea at this stage of the game. Now myself, I don't take any chances, I talk to Mohammed, Buddha, Mr. Jesus H. Christ Himself and any other religious honchos I can come up with.” – Sgt. Maj. Hafner, Siege of Firebase Gloria (1989).

As detailed below, the Concierge, taking the view of the local commanders and not the interstellar governments represented by the players, will determine realistically if and when stranded Ground Units surrender or scatter, *after* formal surrender demands are made.

---

*“I, Arvast Nade, Commander Battle Fleet IV, hereby demand your immediate surrender. Failure to comply within one hour, your time, following receipt of this ultimatum, as determined by my communications center, will open your planet to pillage by my troops. Any attempt at resistance will be crushed without mercy, and your population decimated in retaliation. Any damage, or attempted damage, by you to goods or facilities of value on the planet will be avenged by execution of leading citizens selected at my command. By my fiat as conqueror, your status, retroactive to the moment of transmission of this ultimatum, is that of bond-sleg to the conquering race. Any lack of instantaneous obedience will be dealt with accordingly. Signed, Arvast Nade, Battle Fleet Commander.”*

– From “The Claw and the Clock,” by Christopher Anvil (1971)

---

**Over My Dead Body:** A colony that surrenders to the attacker becomes a Conquered Colony and is transferred from its previous owner's Public Space to the new sovereign's Public Space (see Conquered Colony, 2 Order, p. 539, *supra*). Determination of if or when a colony surrenders is at the discretion of the Concierge.<sup>12</sup> The most relevant factors will be whether the colony has any remaining defenses:

- ✓ If the colony has lost the Colony Combat and has no Ground Units, it will probably surrender under threat of occupation by Ground Units or Orbital Bombardment.
- ✓ If the colony has lost the Colony Combat, but has Ground Units, they may conclude that there is nothing they can do if the enemy wants to Orbital Bombard the colony, but if the enemy wants to rule them, they will need to send down troops and fight.
- ✓ Or the threat of Orbital Bombardment may cause the defending Ground Units to surrender to avoid massive civilian casualties.
  - In an Orbital Bombardment, possibly no one will be left in charge to surrender. Or as Capt. Moreau said in *By Dawn's Early Light* (1990), when ordered to the Grand Tour, "You do not kill the enemy's leaders, we know that, they know that, somebody's gotta be there to turn it off!"
- ✓ A colony most likely will surrender if 1) the attackers are not an existential threat, 2) the colony's defenses have been significantly reduced, and 3) the attackers have occupied most of the colony (e.g., Germany, May 1945). If any Ground Units remain and they are disbanded by the new sovereigns, the population in those units is released and the RPs lost or transferred.
- ✓ A colony which is 100% occupied by enemy Ground Troops (see Ground Combat Resolution, 4 Combat, p. 993, *supra*) has no choice but the surrender (or alternatively, their surrender is irrelevant at that point).
  - In March-April 1945, Heinrich Himmler attempted to surreptitiously negotiate a surrender of Germany through the Swedish Red Cross. Although Germany did eventually formally surrender on May 8, 1945, it was at that point nearly *completely occupied*; thus in March-April 1945, the Allies were certain of victory – what leverage did Himmler have in his attempted negotiations? See further 3 Order, EN 6 discussion, p. 562, *supra*.

Other factors may include the Native Population Types of the attackers and defenders, Habitability Classes, fear of the unknown, fear of death, the reputation of the attackers for cruelty or kindness, the apparent intent of the attackers, the loyalties and responsibilities of the defending colonial government, self-interests and cultural issues, and the possibility/expectation of rescue or relief or being held responsible later by the population or the interstellar government.<sup>13</sup>

- ✓ We have come to take for granted – because it is actual history and because of frothing-at-the-mouth Nazi stormtrooper stereotyping – the German refusal to surrender in the face of massive and overwhelming Soviet attacks on central Berlin in the last two weeks of April 1945, but one has to wonder at the stoic resolve of the individual soldiers defending the Kroll Opera House, the Reichstag, and the Brandenburg Gate. They could not have thought that somehow heroic defense would lead to German victory in the war – Germany had lost too much, even if the Germans had won the Battle of Seelow Heights, the outcome of the war would not have been changed. Did they think they simply had no other choice no matter how grim the outlook? It is also

what makes Hitler's refusal to surrender, refusal to be held personally accountable in the end (along with the Goebbels killing their own children), so poignantly irresponsible. Eventually, after the commander and most of the troops evacuated the Reichstag, about 100 remaining German defenders, out of ammunition, surrendered after Hitler had committed suicide. There are many factors to consider in whether beleaguered defenders surrender, what they might do if given opportunity or if death is pointless.

History is full of surprising surrenders when it seems the defenders could have held out, and others where defenders have held out against great odds either until they were relieved<sup>14</sup> or until they surrendered and sometimes marched out with their colors and arms intact. Or until they were overrun and massacred, or taken prisoner, enslaved, or paroled or committed suicide.

- ✓ “On 2 February 1943 the remainder of Sixth Army capitulated. Upon finding out about Paulus' ‘surrender,’ Hitler flew into a rage and vowed never to appoint another field marshal again. He would, in fact, go on to appoint another seven field marshals during the last two years of the war. Speaking about the surrender of Paulus, Hitler told his staff: ‘In peacetime Germany, about 18,000 or 20,000 people a year chose to commit suicide, even without being in such a position. Here is a man who sees 50,000 or 60,000 of his soldiers die defending themselves bravely to the end. How can he surrender himself to the Bolsheviks?!’ Paulus, a Roman Catholic, was opposed to suicide.

During his captivity, according to Gen. Max Pfeffer, Paulus said of Hitler's expectation: ‘I have no intention of shooting myself for this Bohemian corporal.’ Another general told the NKVD (the public and secret police organisation of the Soviet Union) that Paulus had told him about his promotion to field marshal and said, ‘It looks like an invitation to commit suicide, but I will not do this favor for him.’ *Paulus also forbade his soldiers from standing on top of their trenches in order to be shot by the enemy.* Shortly before surrendering, Paulus sent his wedding ring back to his wife on the last plane departing his position. He had not seen her since 1942 and would not see her again, as she died in 1949 while he was still in captivity.” – from Wikipedia article, “Friedrich Paulus,” captured June 11, 2019 (emphasis added).

- Massacres: Surrenders sometimes result in massacres, even in ages that consider themselves very civilized. At the Battle of Fort Griswold in 1781, a **British** force led by Brigadier General Benedict Arnold – the infamous traitor – attacked and captured Ft. Griswold held by Connecticut militia, which they outnumbered 6 to 1. The American commander, Lt. Col. Ledyard attempted to surrender the fort when the Redcoats had entered the fort and opened the gates. One of the two British captains present took Lt. Col. Ledyard's sword offered in surrender and killed him with it. A confused situation ensued in which the British killed nearly all of the militiamen in the fort in the next several minutes. Various explanations have been offered. Benedict Arnold excluded the massacre from his initial report, was not present when it occurred, but was criticized for the British casualties in taking the fort. The Battle of Fort Griswold was both the last battle commanded by Arnold and the last British land victory.

- ✓ Players should avoid thinking that because *they* wouldn't do it, it *wouldn't happen*.

The only explanation necessary in GGDM is a Concierge Intervention; situations such as the Nanjing Massacre (1937) can be (unfortunate) story events introduced in appropriate circumstances (see discussion of bad events in Entropy is Not Constant, *et seq.*, 1 Entropy, pp. 214-

216, *supra*). The Japanese considered themselves very civilized, as did the Europeans before them (whom the Japanese considered barbarians); the rest of the world did not agree.

- ✓ [Narrator Jack Fortune] “The fight for Ciudad-Rodrigo was over, and the town was Wellington’s. Victory didn’t mean an end to the bloodshed, however, and the conquering army rampaged through the town on a sustained orgy of rape, looting and violence. ... [Interview with Miguel Martin Mas, Curator, in Spanish, translated in English subtitles] ‘For us, the Spanish, it is very painful to remember the scenes after the siege, and there is still some resentment against England for Ciudad-Rodrigo and Badajoz. Once the soldiers passed the breach, they were out of control and the first thing they did was look for alcohol. They were looking for warehouses stocked with cognac and brandy; food and women as well. This led to the rape of a vast number of the civilian population. This was very sad for the Spanish because these were the people who had defended the city against the French two years previously. It was very, very unfair.’” – Under Siege series, Episode 2 (documentary, 2008).<sup>15</sup>

- Flag of Truce: At any time during a siege, Colony Combat, or Ground Combat, the attackers may transmit to the defenders (the position that currently owns the colony) and to the Concierge, a surrender demand (see *featured example*, above). The Concierge may not, except in extreme circumstances, consider whether or not the colony will surrender until a demand is received; that is, the Concierge will not spontaneously decide the colony surrenders when no demand has been made by the attackers (or offer by the Defendants).

- ✓ Of course, in alien Earth invasion movies, the humans never surrender, no matter what the cost. In fact, it is not even clear how we could signal surrender in most movies; the alien invaders rarely communicate with us and never ask for surrender. Most alien attackers of the Earth seem to regard us unconcernedly as insects.

Conversely, if no surrender demand is made, the attackers may not accept any surrender attempt. The position that owns the colony may or may not choose to respond to a surrender demand, and the Concierge may take that into consideration, along with the demand, in the whole context of the situation.

- Battles Without, Battles Within: The attacker and defender both represent the wishes and will of their position’s *interstellar government* and to a larger extent, their civilizations. As such, in many games, the attacker and defender would act unrealistically in the view of the people on the ground, especially in certain old games where population is just numbers to produce warships. The Concierge in this situation must think about and represent the people on the ground, the *local view* of the situation, their own capabilities, what they believe to be true or likely, and to a larger extent, consider the story arc of the game.
- Armistice: One or both sides can call an armistice during any ongoing combat situation by submitting Combat Orders to do nothing on their side. Orders to not attack in a combat are risky, because the other side could still fire and do other actions in the Combat Round. The Concierge will not enforce any supposed armistice by refusing to process firing orders or other actions; the armistice – whether unilateral or agreed – is the problem of the players. Units which are not given orders will still defend themselves against Fighters and Missiles and are not automatically hit by enemy attacks (they can still dodge and maneuver). Ground Units may be considered to be still defending.

- ✓ Orders to do nothing are still orders, therefore, this would prevent the defender from activating the Combat Power to Seize the Initiative (see 3 Combat, p. 971, *supra*). The Concierge may need to adjudicate if this is being abused or doesn't make game sense. Units ordered to do nothing still need supplies and that could be a factor.
  - ✓ Nearly 3,000 Americans were killed on the Western Front between 5:10 a.m. November 11, 1918 when the Armistice was signed and 11:00 a.m. when it went into effect. Notification of the Armistice to local commanders left ambiguity on what they should do until 11:00 a.m. Ambitious officers continued attacking in the early morning fog. See Joseph E. Persico, "World War I: Wasted Lives on Armistice Day," *MHQ: The Quarterly Journal of Military History*, Winter 2005 (reprinted on History.net).<sup>16</sup>
- **Unconditional Surrender:** For game purposes, colony surrenders are assumed to be unconditional and will be treated that way by the Concierge. If the parties made some agreement limiting the conditions of the surrender, it is up to them to do or not do, to enforce or try to cajole or threaten each other to obtain compliance with the terms of the surrender. This is consistent generally with the way diplomacy is handled in GGDM, see Greys Diplomacy, 1 Diplomacy, p. 1097, *infra*.

Surrender of colonies in GGDM should be and *must be considered unconditional for game purposes*. With the history of the early 20<sup>th</sup> Century well behind us, there should be no question what unconditional surrender means.

- ✓ "We call upon the government of Japan to proclaim now the unconditional surrender of all Japanese armed forces, and to provide proper and adequate assurances of their good faith in such action. The alternative for Japan is prompt and utter destruction."  
– Potsdam Declaration, July 26, 1945.

Such demands may prolong resistance. But of course, there can still be an insurgency and resistance on the ground. Are they terrorist or freedom fighters?

---

*"After ten years of fighting, the Kalderans had nearly driven the Vedrans out of the entire Magellanic Cloud. The war ended abruptly when the Vedrans viciously bombed the Kalderan capital, Kalderash from orbit with atomic weapons, turning most of a continent into an uninhabitable wasteland. Shortly after the bombardment, the Kalderans surrendered and the Kalderan people and their government became part of the Vedran Empire. While the Kalderans may have lost the war, it was the first time in history that any species provided real resistance to Vedran imperialism. It was a sign of the discontent that was felt for the Vedran Empire by the entire galaxy.*

*The wounds left by the Kalderan-Vedran war took centuries to heal and in some ways they never have. When the Vedran Empire was transformed into the Systems Commonwealth, one of the Commonwealth's first acts was to launch a restoration effort to the Kalderan homeworld Kalderash which still bore the scars left by the Vedran's atomic attack thousands of years before."*

– from Andromeda Wiki article, "Kalderan-Vedran War," captured August 10, 2019

---

**Kalderan Surrender:** The preceding commentaries only apply to specific, point-in-Galactic Space instances of morale and planetary surrender.

The Concierge cannot – and will not attempt to – make a position surrender or become a vassal to, or be annexed by another position. These are larger game story arc issues for the position players; positions may sue for peace or continue fighting until extinction, none of which requires

any communication with, involvement, or Intervention by the Concierge. Positional morale is the state of the players.

- ✓ Peace happens only when one or both sides of a conflict can see no better alternative; prior to that point, it's all posturing and propaganda.
  - “Just last week Griffiths had welcomed what he described as ‘one of the quietest periods of this conflict,’ in a briefing to the UN Security Council in which he warned the lull could not be sustained without political progress.” – AFP, “More than 100 killed in Yemen missile, drone attack,” January 19, 2020.
- ✓ Admittedly however, there is a point in game circumstances at which the two possibilities could merge: That is, if the last world owned by a position were under attack, and the decision by the Concierge as to whether the colony surrenders is also a decision as to whether the position becomes politically extinct (see *Countdown to Extinction*, 1 Resolution, p. 1462, *infra*) in the game. Theoretically, positional extinction should have no bearing on the Concierge's appreciation of the plight of the colony.
- Beating the Machine: It is difficult to hold or prevail against a position that has dedicated everything to warfare. It may seem hopeless, the enemy has superior forces, a combat college, planning, the initiative, and possibly surprise. World War II, well-studied and dissected, provides an example, especially the Soviets, of how to defeat a war-machine position. Time and space are the enemies of aggressive war machines, each movement, each colony to be conquered or obliterated, takes Acts, Scenes, Regular Turns, no matter how small the colony. The Russians survived both Hitler and Napoleon because of their vast geography and time, willingness to take losses and endure, to trade hits with the enemy even when they were sure to lose. Time was key for production and other events to take effect. The only caveat to this argument is that in GGDM, superior technology, the material superiority, and non-material abilities of a true war machine could be very problematic for the defenders to endure.
  - ✓ “Mommy's alright, daddy's alright, they just seem a little weird. Surrender, surrender, but don't give yourself awayyyy...” – Cheap Trick, “Surrender” (1978).
- Sorry, Not: There is always a lingering suspicion where the losing side is the initial aggressor that the losers are sorry only for the fact that they lost. Female aviation pioneer and top test pilot for the Third Reich, Hanna Reitsch said in a 1981 interview with Ron Laytner:
  - ✓ “I am not ashamed to say I believed in National Socialism. I still wear the Iron Cross with diamonds Hitler gave me. But today in all of Germany you can't find a single person who voted Adolf Hitler into power ... Many Germans feel guilty about the war. But they don't explain the real guilt we share – that we lost.” – *The Deseret News*, February 19, 1981, Page 12c (available on Google newspapers).

This is the same suspicion that bedevils the *Conversos* and any forced religious conversion, marital disputes, childrearing, and pre-sentencing apologies of convicted criminals, our inability to determine the absolute truth or falsity of *apparent* contrition. Within GGDM, this may be an issue considered by the Concierge for example, in Naturalization of colonies.

This suspicion continues to affect current events, from the motive questions behind the admission of immigrants and refugees to Germany under Angela Merkel, the German-backed bailout of Greece, to reaction to Japan's recent turn to militarization, foreign military support deployments and historical revisionist ultra-nationalist groups in both countries.

*“They [the Mongols] attacked Russia, where they made great havoc, destroying cities and fortresses and slaughtering men; and they laid siege to Kiev, the capital of Russia; after they had besieged the city for a long time, they took it and put the inhabitants to death. When we were journeying through that land we came across countless skulls and bones of dead men lying about on the ground. Kiev had been a very large and thickly populated town, but now it has been reduced almost to nothing, for there are at the present time scarce two hundred houses there and the inhabitants are kept in complete slavery.”— Giovanni de Plano Carpini, 1246 A.D.*

**Surviving the Horde:** The Republic of Novgorod holds the unique historical record of having preemptively surrendered to the Mongols in 1241, without resistance and before the Mongols had even come close to the Republic’s borders. As a result, Novgorod was never besieged or attacked by the Mongols (avoiding the usual savage results), most of the Republic’s lands were untouched by the Mongols, and Mongol census and taxation officials didn’t arrive in Novgorod until 18 years later. The Prince of Novgorod became the Khan’s tax collector in the area, but the city retained its religion, culture, and was mostly independent as long as they paid the annuals.

The eventual fall of Novgorod in 1478 coincides with the military growth of the Grand Duchy of Muscovy and the decline of the Hordes; the Grand Prince Ivan III of Moscovy stopped paying tribute in 1476 and ‘defeated’ the Tarter Khanate in 1480 (the Russian guns blocked all crossing attempts, the two armies stared at each other across the Ugra River for a month, then both retreated in early winter ending the Tarter domination of Muscovy) and established the full independence of Muscovy and all of the adjacent lands it had annexed in 1478 and 1485, or over which Ivan had dynastic control or influence due to inheritances.

- ✓ By comparison, Kiev surrendered to the Horde after a siege in 1241, followed by a massacre, was ‘liberated’ and ruled by Lithuania from 1362 to 1471, then was transferred to the Crown of Poland in 1471 to 1686, when it was finally ceded to the Tsar of Russia, and was fully absorbed by Russia in 1775.

*“The contact was immediate and shocking. One of the rebel ships lumbered into the path of the interceptors, spraying fire from what seemed as many points as a man has pores. The Service ships promptly riddled it and it should have drifted away – but it didn’t. It kept on fighting. It rammed an interceptor with a crunch that must have killed every man before the first bulwark, but aft of the bulwark the ship kept fighting... It was a pounded tangle of wreckage, and it had destroyed two interceptors, crippled two more, and kept fighting. Finally, it drifted away under feeble jets of power.... It was going somewhere – The ship neared the thin-skinned unarmored, gleaming hospital vessel, rammed it amidships, square in one of the red crosses, and blew itself up...”*

– Cyril Kornbluth, “The Only Thing We Learn” (1949)

## Endnotes.

<sup>1</sup> **Citation:** “You are well aware that it is not numbers or strength that bring the victories in war. No, it is when one side goes against the enemy with the gods’ gift of a stronger morale that their adversaries, as a rule, cannot withstand them. I have noticed this point too, my friends, that in soldiering the people whose one aim is to keep alive

usually find a wretched and dishonorable death, while the people who, realizing that death is the common lot of all men, make it their endeavour to die with honour, somehow seem more often to reach old age and to have a happier life when they are alive. These are facts which you too should realize (our situation demands it) and should show that you yourselves are brave men and should call on the rest to do likewise.” – Xenophon, The Persian Expedition.

<sup>2</sup> Citation: You know what’s coming ... “We shall not go quietly into the night!” – President Whitmore, Independence Day (1996) from Dylan Thomas’ 1951 poem, “Do Not Go Gentle Into That Good Night” and/or from any of Churchill’s famous speeches and broadcasts in the summer of 1940 (what <http://allthetropes.wikia.com> calls ‘The Eternal Churchill,’ as seen in Independence Day and The Return of the King speech at the West Gate of Mordor).

<sup>3</sup> Commentary: At the end of Mike Resnick’s 1982 book Birthright: The Book of Man, at the end of 18,000 years of galactic rule, the last humans are stranded on a distant backwater planet surrounded by hostile alien fleets. The humans threaten to blow up the planet if the aliens land. My recollection is somewhat hazy, but I recall that the planet somehow blew up, eliminating the last of humanity, leaving the post-human galaxy to the aliens.

<sup>4</sup> Commentary: e.g., scene in Space: Above and Beyond (1995-1996) where the Marines capture a Chig warrior. Assuming that the one thing they have in common is the need for water, they attempt to give it water. The Chig dies quickly afterward. The Marines either accidentally killed the Chig or inadvertently assisted it in committing suicide.

<sup>5</sup> Citation: “As to what happened next, it is possible to maintain that the hand of heaven was involved, and also possible to say that when men are desperate no one can stand up to them.” – Xenophon, Hellenica Bk. 7, as translated by Rex Warner in A History of My Times (1979), p. 398.

<sup>6</sup> Citation: “Karl Brandt and his wife Anni were members of Hitler’s inner circle at Berchtesgaden where Hitler maintained his private residence known as the Berghof. This very exclusive group functioned as Hitler’s *de facto* family circle. It included Eva Braun, Albert Speer, his wife Margarete, Theodor Morell, Martin Bormann, Hitler’s photographer Heinrich Hoffmann, Hitler’s adjutants and his secretaries. *Brandt and Hitler’s chief architect Albert Speer were good friends as the two shared technocratic dispositions about their work. Brandt looked at killing ‘useless eaters’ and the handicapped as a means to an end, namely since it was in the interest of public health. Similarly, Speer viewed the use of concentration camp labor for his defense and building projects in much the same way.*

As members of this inner circle, the Brandts had a residence near the Berghof and spent considerable time there when Hitler was present. In his memoirs, Speer described the numbing lifestyle of Hitler’s inner circle, forced to stay up most of the night listening to the insomniac Nazi leader’s repetitive monologues or to an unvarying selection of music. Despite Brandt’s closeness to Hitler, the dictator was furious when he learned shortly before the end of the war that the doctor had sent Anni and their son toward the American lines in hopes of evading capture by the Russians. Only the intervention of Heinrich Himmler, Speer, and the direct order of Admiral Doenitz after Brandt had been captured by the Gestapo and sent to Kiel in the war’s closing days, saved him from execution.” – from Wikipedia article, “Karl Brandt,” captured May 17, 2020 (emphasis added).

<sup>7</sup> Commentary & Citation: Why Not is implicit in any direct threat. The Why Not question was used to great effect by Delenn in Babylon 5, “Severed Dreams” episode (1996): **Delenn**: This is Ambassador Delenn of the Minbari. Babylon 5 is under our protection. Withdraw or be destroyed! **Earth Force Commander**: Negative! We have authority here. Do not force us to engage your ship. **Delenn**: Why not? Only one human captain has ever survived battle with a Minbari Fleet. He is behind me. You are in front of me. If you value your lives, be somewhere else!

<sup>8</sup> Commentary & Citation: Why civilian leadership doesn’t go to the front: “After the outbreak of the Franco-Prussian War in 1870, Eugenie remained in Paris as Regent while Napoleon III and the Prince Imperial travelled to join the troops at the German front. When the news of several French defeats reached Paris on 7 August, it was greeted with disbelief and dismay. Prime Minister Émile Ollivier and the chief of staff of the army, Marshal Leboeuf both resigned and Eugenie took it upon herself to name a new government. She chose General Cousin-Montauban, better known as the Count of Palikao, seventy-four years old, as her new prime minister. The Count of Palikao named Maréchal Francois Achille Bazaine, the commander of the French forces in Lorraine, as the new overall military commander. Napoleon III proposed returning to Paris, realizing that he was doing no good for the army. The Empress responded by telegraph, ‘Don’t think of coming back, unless you want to unleash a terrible revolution. They will say you quit the army to flee the danger.’ The Emperor agreed to remain with the army. With the Empress directing the country, and Bazaine commanding the army, the Emperor no longer had any real role to play. At the front, the Emperor told Marshal Leboeuf, ‘we’ve both been dismissed.’” – from Wikipedia article, “Eugénie de Montijo,” captured November 1, 2018.

- ✓ Napoleon III had maneuvered himself into limbo. If he did not have the ability or intent to assume command, he had no business at the front, and further, was risking his entire dynasty by taking his under-aged son along. His futility was a metaphor for the French defeat at Sedan in 1870.

- ✓ The Prince Imperial, born in 1856 and the only son of Napoleon III by the Empress, was killed in 1879 serving as a British officer during the Zulu War; his recon party was ambushed in an abandoned village.

<sup>9</sup> Commentary: Exhibit A to any modern argument about material vs. morale is the shameful performance of the new Iraqi army in early 2014 where heavily armed divisions fled before highly mobile, light-armed, and motivated ISIL forces probably numbering no more than 800 fighters on pick-up trucks. Iraqi army commanders fled, leaving their soldiers without direction; in June 2014, ISIL captured the major city of Mosul, looting banks and capturing stores of tanks, vehicles, missile launchers, and other Iraqi army-abandoned expensive U.S.-supplied equipment.

<sup>10</sup> Commentary: Morale in the real world. The Pittsburgh Pirates are a team that has enough talent to be competitive for most of the first half of the season. They are a team that must live on the edge in the edgy NL Central, if they play hard and all the guys are there, all in, they might just have a magical season. But when injuries take players out of the game, and early-inning pitching isn't quite performing like it used to, and as the season wears on with the gap widening, an observer can easily see that despite pride and brave talk, the team just isn't quite there anymore, the focus and discipline fades, errors pile up, base running mistakes happen more frequently, more caught stealings as they press for little advantages, strikeouts pile up, batting averages don't produce key hits, homeruns fall off. The effects snowball into a 14GB deficit. At some point, they are just playing it out. If the Pirates won 20 games in a row – almost unheard of in modern baseball, they would just be at .500 for the season. When paired with another team in the same situation, it is no surprise – it is sad, but it is no surprise – that brawls broke out between the Pittsburgh Pirates and Cincinnati Reds in April and July 2019, the latter leading to many suspensions and fines.

<sup>11</sup> Commentary: This frustration is also what it's like when you are pressing the wall. Anyone with ambition or a goal knows this experience. And you resent it, it's like an isometric exercise in your mind, on a sit 'n spin, you think you are working, but really just going in circles. Being thrust, but not leading anywhere. I had to read The Scarlett Letter in 11<sup>th</sup> Grade, I was determined to finish the book (one of the few school reading assignments I honestly finished); I was laying on my bed, pressing to the end, I thought I finished the book, then woke up with the lights still on, and discovered I had 30 pages to go. I had dreamed I finished it.

<sup>12</sup> Citation: **Capt. Flanagan**: What kind of animal are you!? **Cpl. DiNardo**: Animal? Lady, do you have any idea what Charlie would do if he came in here? He would rape you and your nurses until you're all dead! But you know what? They'd have to kill me first. Animal? I'm no animal. – from *Siege of Firebase Gloria* (1989).

<sup>13</sup> Commentary: The anime series *Crest of the Stars* begins with a planetary surrender. Rock Lin, the father of the main character Jinto Lin, is the president of planet Martine of the Hyde star system. The Abh fleet arrives and demands surrender of the world. People on the ground wanted to resist, despite their weak defensive capabilities (they had 10 missiles and some police forces); the Abh are not interested in planetary occupation, but seek to control space routes, leaving planets to govern themselves. Jinto's father went up to meet with the Abh and subsequently surrendered the planet to the Abh Empire, accepting a hereditary title of Count of Hydal. Jinto was spirited off the planet to avoid angry mobs. Later, Jinto's father was executed for treason by the Hyde parliament after the planet was 'liberated' by the Four Nations alliance (like Soviet liberation) while Jinto served with the Abh armed forces.

<sup>14</sup> Citation & Commentary: [Narrator Jack Fortune] “The history of man's inhumanity to man has many dark chapters, but none worse than the war on Germany's Eastern Front. ... Army Group North was ordered to destroy a strategically important city high on the Baltic coast. Hitler was intent on obliterating it at all costs and ordered that its inhabitants be shelled and starved to death. The siege that ensued lasted nearly 900 days and cost the lives of nearly 1 million civilians. But the city would not yield to the mighty force at its gates, Leningrad, 1941. ... [introductory theme music & scenes] Having reverted to its old imperial name, St. Petersburg is once more a vibrant, beautiful city, which boasts a rich cultural heritage. It is perhaps difficult for the contemporary visitor to imagine the horrors that took place on its streets just six decades ago. But they are etched on the fabric and consciousness of the city, many of whose inhabitants are able to recall them all too vividly.” – *Under Siege* television series (2008), Ep. 5.

The Siege of Leningrad from September 8, 1941 to January 27, 1944, is considered the costliest and most destructive siege in history. The German commanders were ordered to reject any negotiation on surrender of the city:

- ✓ “Subject: the future of the City of Petersburg: The Führer is determined to erase the city of Petersburg from the face of the earth. After the defeat of Soviet Russia there can be no interest in the continued existence of this large urban centre. Finland has likewise shown no interest in the maintenance of the city immediately on its new border. It is intended to encircle the city and level it to the ground by means of artillery bombardment using every calibre of shell, and continual bombing from the air. Following the city's encirclement, requests for surrender negotiations shall be denied, since the problem of relocating and feeding the population cannot and should not be solved by us. In this war for our very existence, we have no interest in maintaining even a part of this very large urban population.” – Hitler's directive to Army Group

North, September 29, 1941, reprinted by Anna Reid in Leningrad: Tragedy of a City Under Siege, 1941-44 (2011), pp. 134-135 (from free copy on Google Books).

- ✓ “Hitler – ‘the hardest man in Europe’ as he liked to call himself – was only irritated by this ‘sentimentality.’ ‘I suppose,’ he declared over supper on 25 September, ‘that some people are clutching their heads trying to answer the question – How can the Führer destroy a city like St. Petersburg? Plainly I belong by nature to quite another species!’” *Id.*, p. 134, probably from Hitler’s Table Talk recorded by his private secretaries and published in 1951.

The Soviets were desperate to hold it, tying up 26 German divisions and aircraft and to prevent Army Group North from circling behind Moscow, survivor interviews in Under Siege (2008), Ep. 5 indicated that they never entertained the idea of surrendering to the Germans, and thus, no offer was made. Many of the Soviet divisions were militia divisions. The Soviets however, were able to keep a narrow strip of coastal land along Lake Ladoga open and also to supply the city by flotilla, and when it froze over, to drive trucks across the lake on the “Road of Life.”

<sup>15</sup> Citation & Commentary: [Narrator Jack Fortune] “The French defeat had also yielded some 1,300 prisoners. What Wellington did with these men was to prove very costly. The convention of siege warfare was that those defenders who were captured should be put to death. In another break with convention, Wellington decided to spare the men, a move that he later deeply regretted. [Interview with Ian Fletcher] ‘If you were a garrison, if you were inside a fortress, and the walls were breached and the breaches were deemed to be practical, i.e. they were indefensible in many ways, then you were summoned to surrender, and you were allowed to march out with all the honors of war. Now, of course, if you chose to fight even though you knew the breaches were practicable and indefensible, then you effectively waived all rights to mercy. By allowing the garrison to get off scot free, certainly, the garrison at Badajoz would look at this and say, hey, we can defend these walls without fear of retribution afterwards. The same happens at Burgos and, of course, at San Sabastian. Now Wellington knew this problem, and years afterward he wrote – after Badajoz, he certainly was moved to write in a private letter. He said that if I had slaughtered the garrison of Ciudad-Rodrigo, I would have saved myself the flower of my army at Badajoz, which is where, of course, they got really butchered.” – Under Siege series, Episode 2 (documentary, 2008).

- ✓ This issue is still in debate – there are plenty of loot-motivated conquerors through history who committed massacres, sacks and mass executions for terror effect – but the official position of the U.S. armed forces, and which was drilled into our consciousness starting in boot camp at Parris Island in 1985, is the opposite of that expressed by Wellington and explained by military historian Ian Fletcher in the interview above:
 

The U.S. government teaches that if the defenders know they will be executed after surrendering, why would they surrender instead of fighting to the death? Thus it is believed that lives on both sides are saved if the enemy knows they will not be killed or mistreated for surrendering. This then creates a curious question: Why did the French defenders of Ciudad-Rodrigo lay down their arms in the market square if they believed that they would be executed afterwards as part of the normal convention on prisoners captured during a siege? Why would they not resist to the last bullet, the last man, street to street, house to house? Certain death vs. probable execution? Still, the U.S. armed forces don’t want enlisted men on the ground debating this point, so the official policy is stated unequivocally and forcefully backed by conventions signed by the United States and ratified by the Senate.

  - I believe that the Ian Fletcher interviewed in Under Siege is the military historian who writes popular books on the Napoleonic Wars for Osprey books. He is described in an article for the Independent as “a 38-year-old, self-taught historian with nearly a dozen works of popular history to his name. They come with titles like In Hell Before Daylight, The Waters of Oblivion and Fields of Fire. (He financed the writing of his first book by working as a motorbike dispatch rider.) With only a couple of O-levels to his name, Fletcher is the sort of historian regarded with considerable sniffiness by the academic branch of the profession. He worked for 13 years carting books around the British Library for other scholars, and has learned history the hard way.” – Matthew Gwyther “Meeting their Waterloo (again),” July 9, 1995 (article is still available online in 2019).
- ✓ In the case of Benedict Arnold at Ft. Griswold, the issue that caused him to omit the massacre from the initial reports may have been that technically, those killed were still English citizens, even if considered treasonous and in armed rebellion, who had surrendered and had been killed without due process.
- ✓ Within GGDGM, the Concierge may sometimes need to decide how the issue is viewed by those involved with regards to possible surrenders.

<sup>16</sup> Commentary: In total, about 11,000 were killed that day between all sides. Pvt. Gunter was killed at 10:59 a.m.

*See Appendix CST – Combat Shifts & Situations Tables*  
*See Appendix ORD – Conversion & Pacification Examples*

*“We need to grasp security as pacification... whereas for most people ‘pacification’ is associated with the actions of colonizing powers, has a close connection to counter-insurgency tactics and is therefore widely understood as the military crushing of resistance, an examination of the theory and practice of pacification reveals a far more ‘productive’ dimension to the idea. ‘Productive’ in that what is involved is less the military crushing of resistance and more the fabrication of order, of which the crushing of resistance is but one part.”*

– Mark Neocleous, “The dream of pacification: Accumulation, class war, and the hunt,” *Socialist Studies / Études socialistes*, Winter 2013  
(<https://socialiststudies.com/index.php/ss/article/viewFile/23516/17401>)

**Making War Through Peace:** Pacification Combat, which I wrote into the game rules perhaps in or before 2002 (colony conversion existed in the ancestral Stellar Conquest board game *published in 1976*), seems to accord with what is now called Pacification Theory. Pacification Theory is a post-millennial reworking of some elements of Marxism:

- ✓ “...serving an essential component of pacification is its immediate connection to making subjects economically ‘productive’ both historically within the plans of military and colonial overseers and by contemporary police actions, both domestic and international. Neocleous has characterized this process as making war through peace.” – from Wikipedia article, “Pacification Theory,” August 3, 2018.

This spot on describes Conversion attempts and Pacification Combat in GGDM, as described in 3 Order, p. 554 *et seq., supra*. Thus, participants should recognize that Conversion and Pacification Combat in GGDM is inherently based on capitalist accumulation/bourgeois ideologies in the Marxist view. Stellar Conquest (1975) had Pacification Theory before it was a theory. 😊

*“Both Hitler and Himmler saw a twisted logic to press-ganging ex-convicts into policing, bullying and terrorising the populace of their newly conquered lands – utilising the useless dregs of their jails to instil order through fear.”*

– Tim Williamson, “Oskar Dirlewanger: The SS Butcher of Warsaw,” *History of War (UK)*, April 16, 2015

**Making War for Peace is like...:**<sup>1</sup> As mentioned in *Converted Colony*, 2 Order, pp. 539-540, *supra*, there are three processes for converting a Conquered Colony: Conversion via activation of the Order Power for that purpose, and Pacification Combat or Orbital Bombardment, or a combination of both. Pacification Combat requires:

- 1) Ground Units on,
- 2) A Conquered Colony, and
- 3) Activation of the Combat Power for the purpose of Initiate Combat at that location.

In order to be a Conquered Colony, the colony must have surrendered and been 100% occupied ... we’ve already discussed that.

- ✓ Merriam-Webster online dictionary at *pacification*: **1:b** the act of forcibly suppressing or eliminating a population considered to be hostile.

It is thus that, from the perception of the colony population, it seems that the conqueror has continued to make war on the colony after surrender. This then makes Naturalization of the colony (see 3 Order, p. 557, *supra*) much more difficult later. Although the United States was not in any way trying to ‘naturalize’ Iraq (in GGDM terms), the history of, sometimes fatal, cultural misunderstandings, negligence, and crassness and carelessness by U.S. forces contributed to the perception of a hostile occupation, oppression and ongoing conflict. This recent history should make clear generally the spirit of the GGDM rules on this issue.

- ✓ Ships and Ground Units that participate in Pacification Combat or Orbital Bombardment have a chance of *apostasy*, see Alienev Apostasy, 3 Disruption, p. 283, *supra*.
- Tar Baby Pacifier: Armies are built for winning battles against other armed forces. There are limits to what they can do beyond that;<sup>2</sup> the purpose of the Pacification Combat is to eliminate or marginalize all active armed resistance and discourage future armed resistance, to restore order, civil control and basic functions of civilization. Armies are less effective at winning the hearts and minds of the population, especially *alien* population.
  - ✓ Suppose that the Japanese had defeated the United States and occupied the West Coast of the United States – a situation featured in many WWII alternate history fiction. In the eyes of the conquerors, everything about their culture and militant, nationalistic aggression would have been vindicated and to an equal extent, the culture and institutions of the conquered would have been devalued. It would certainly have been a complete clash of cultures between the occupiers and the conquered population (because American culture is European descended), there would have been resistance, reprisals, and exploitation of the circumstances. Neither side would have been restrained from the most extreme and brutal measures.

The first problem of pacification by occupying forces *is that the military forces must act as police forces*, a task for which they are less than suited (e.g., Iraq, etc.), and the population of the occupied areas becomes naturally the enemy (see Alex Abad-Santos feature quote and Roslin Maneuver, 2 Government Titles, pp. 590-591, *supra*).<sup>3</sup> The more that military forces diverge from simple occupation, the more a ‘tar baby problem’ pacification becomes.<sup>4</sup>

- ✓ The state police of Rio de Janeiro actually have ‘pacification units’ (*Unidade de Polícia Pacificadora*) – heavily armed paramilitary elite police units stationed in the city’s favelas and who engaged in firefights with drug gangs that control the favelas before, during and after the 2016 Summer Olympics. State bankruptcy and political scandal threaten to curtail operations and wipe away all gains after the Olympics.
- Peace in Our Time: Due to the time periods represented by GGDM Regular Turns, Pacification Combat can only be initiated on the Regular Turn *immediately following the surrender* of the colony. The decision must be made, troops present. Each colony may only be subject to one Pacification Combat each time it is conquered. The Order Power *may not be* activated at the colony for the *purpose of Conversion* on the same turn as the Pacification Combat. The Pacification Combat lasts one round, is one sided, and no Combat Orders are required.
  - ✓ Pacification efforts form a significant part of military history. Arguably, the English required four centuries to ‘pacify’ Scotland, this process becoming entangled in the personal union of the crowns, and with the War of the Roses, the English Civil War, and various attempts by exiles in France to usurp the throne of England (last time in

the 1745 Jacobite Rebellion led by Bonnie Prince Charlie). In ancient empires in the Middle East, there are records of campaigns to the same areas every 10 or 20 years due to uprisings, which were usually entangled with proxy wars and palace intrigue. Unhappy subjugated population or client states are always fodder for palace intrigue and usurpers; Mark Anthony went to Egypt to get an army and navy and some ... .

- Resistance is Futile: There are three steps to resolving a Pacification Combat. The first step is to determine the Suppression Value. Suppression Value is the total RP value of the conqueror's Ground Units that are occupying the colony, plus half the value of all supporting Fighter Complements on Carriers in the system, plus 1 for each 1<sup>st</sup> Era Warship, 4 for each 2<sup>nd</sup> Era Warship and 9 for each 3<sup>rd</sup> Era warship of the conqueror in the system, *not* counting Carriers as warships in this case.
  - ✓ For example, the conqueror has 15 RPs of Ground Troops, 30 RPs of Fighters, two 2<sup>nd</sup> Era Warships and a 1<sup>st</sup> Era Warship. The Suppression Value is 39.
- You Will Be Assimilated: After determining the Suppression Value, the Concierge must assign a Resistance Value. The Resistance Value is the total population remaining, divided by 10, plus one half for each defending Ground Unit that remained at the time of surrender or occupation, and total number of remaining Fighters at the time of conquest divided by 10.<sup>5</sup> To this, the Concierge will add a number between 1 and 10 based on judgment, where 1 represents little will to resist, and 10 represents fanatical resistance. Factors include cultural and political considerations of the two cultures, attitudes, possibility of later liberation, and events of the recent combat, such as urban destruction, Orbital Bombardment, how long the Ground Combat lasted, etc. Again, the Concierge is in the position of *representing generally, the people on the ground*.
  - ✓ Continuing the previous example, the colony has 90 population factors after a massive battle; there were more before the battle.  $90 \div 10 = 9$ . There were also two defending Ground Units remaining, which adds 1, and 10 RPs of Fighters remaining, which adds 1 for a total of 11.
  - ✓ Population released from disbanding defending Ground Units counts for both the total population and for the extra resistance value from defense veterans.<sup>6</sup>
  - ✓ Fractions are rounded up.
  - ✓ The Concierge then determines that 4 is a good number here, so the Resistance Value is 15 ( $11 + 4 = 15$ ).
- Fabrication of Order: There are three possible outcomes to a Pacification Combat, determined by the final number.
  - ✓ If the final suppression number is less than (but not equal to) *one third* of the population, an *insurgency* has developed on the colony.
  - ✓ If the final suppression number is greater than or equal to *two thirds* of the population, the colony has been successfully converted and becomes a *Converted Colony*.
  - ✓ Any result between these two is a suppression result. Put another way, if more than two thirds of the population are against the conquerors, there is an insurgency, if two thirds of the population accept the conquerors, the colony is Converted, any other result is a suppression.

- I have read a few times over the years that approximately one third of the colonial population supported the American Revolution, one third either opposed it or supported the crown, and one third were undecided. It is well known that after the war, there was an exodus of Tories to Canada, the Caribbean, and some to England.

An insurgency result has no immediate effect, but the colony is tagged with an insurgency and the Resistance Level assigned by the Concierge (e.g., Insurgency-8). The insurgency level will decrease by one per Turn Cycle under normal circumstances but may gain levels by Interventions or subsequent player actions; the insurgency is a story element which provides opportunity for Concierge Interventions, and possibly affects subsequent Special Operations Black-ops and Counter-Operations at the colony (e.g., Irish Republican Army-Abwehr collaboration 1937-1943).<sup>7</sup> A suppression result means that armed resistance has been militarily crushed, aiding later Conversion attempts (see Conversion, 3 Order, p. 554, *supra*).

- ✓ The 2009 Age of Conan board game is the only one I know that has a post-conquest pacification mechanic. After a territory is ‘conquered,’ additional combats through various terrain types (probably representing attempts to subdue native tribes) on the same or following turns is required before the territory is fully controlled – one may conquer the main city in the territory, but not control the plains and forests around it.
- Occupation of Haiti: The Suppression and the Resistance Values are converted directly into population factors that have taken, passively accept or are sympathetic to each side.<sup>8</sup> It is irrelevant if the two numbers add up to more than the total population of the colony.
  - ✓ Continuing the previous example, the Suppression Value of 39 means that 39 of the 90 population factors have been suppressed at this point; while the Resistance Value of 15 means that 15 population actively resist or are sympathetic to the resistance.
  - ✓ This means that 36 of the population have not sided ( $90-39-15 = 36$ ) or at least, have not been actively suppressed (e.g., passive-aggressive resistance).

Thereafter, random numbers are separately determined (i.e. dice are rolled), the first between 1 and the Suppression Value – which is added to the suppressed population, and the second between 1 and the Resistance Value – which is added to the Resistance Value – the total of which is then subtracted from the total suppressed population.

- ✓ Continuing, a random number between 1 and 39 is generated for the conqueror, the result is 26, which is added to the Suppression Value of 39, meaning that 65 population have been suppressed.
- ✓ A random number between 1 and 15 is generated for the resistance, the result is 9, which is added to the 15 Resistance Value ( $15+9 = 24$ ) and the total is subtracted from the total suppressed population of 65, leaving 41 population suppressed.

The Final Number, representing the amount of population that has been pacified, is then compared to the population of the colony to determine if the Pacification Combat results in a Conversion, suppression or insurgency (*ut supra*).

- ✓ In the example, 41 population out of 90 have been suppressed, thus less than two thirds, but more than one third, of the colony’s 90 population factors have been suppressed, the final result of the Pacification Combat is a *Suppression*.

If the resistance had rolled a 15 and the conquerors had rolled a 1 ( $1 + 39 = 40$ ), the conquerors would have lost suppression on 30 population, reducing their share to 10 population, an *insurgency* result. If the conquerors rolled a 30 and the resistance rolled a 1, the conquerors would have gained 29 population to 94 population suppressed (the entire colony), an *automatic Conversion*.

- Not Occupying Haiti: There are alternatives to the alternatives given in GGDM. The baseline game rules in GGDM are for *the game to proceed smoothly and naturally* from turn to turn; however, GGDM is a wide open sandbox for (almost) anything the participants are willing to imagine and work for in the game.
  - ✓ For example, in Timothy Zahn’s 1983 novel, *The Blackcollar*, and the 1986 sequel, *The Backlash Mission*, the alien Ryqril conquerors pacified Earth by loyalty-conditioning human administrators and security personnel (“Collies,” from collaborator, also implying dogs), backed up by small contingents of Ryqril soldiers isolated in their habitats. The loyalty conditioning is not explained exactly, but involves drugs, and apparently before surrender, the Terran Democratic Empire had developed a chemical counter, “Whiplash” that is effective in overcoming the Ryqril loyalty conditioning in some people, but not everyone. Once drug-conditioned, psychological factors, fear and habit of obedience also take effect. The side effect of the loyalty conditioning is a lack of creativity, ambition, and other emotional abstract thinking.
- See-Through Fabric: If the majority of the units present used to calculate the conqueror’s Suppression Value have their Epistemological Constructural Element currently inactive, Enlightenment may not be used in the Pacification Combat. The Conquered Colony never receives the benefit of Enlightenment in the Pacification Combat (i.e. the former owner cannot supply Enlightenment).
  - ✓ [Narrator] “They call this rampage ‘mopping up,’ putting the uprising completely to rest, ending the pretense of ruling by consensus, where the chiefs had some say, instead, they were now determined to rule by force.” – from *Bhambatha: War Of The Heads* (documentary, 2009).<sup>9</sup>

---

*“Machiavelli’s ideas are basically sound ones for the Nietzschean People. Unfortunately, he was an optimist.”*

– Opening lines, *Andromeda*, “Double Helix” (2000) <sup>10</sup>

---

**Genocide:** It is an open question in GGDM whether Pacification Combats can convert a colony where Conversion Attempts would be blocked by the Concierge due to *acute alterity* (see *Incurable Acute Alterity*, 3 Order, p. 556, *supra*). In terms of timing, Pacification Combats occur before regular Conversion Attempts, and thus a ruling may not have been made by the Concierge; however, rulings may have been made previously and precedent may dictate that the target colony may not be Converted. In order to initiate a Pacification Combat, however, the colony must have either surrendered or been 100% occupied; if the former is the case, it may indicate some level of understanding and less acute alterity. If the colony has simply been 100% occupied – for example, humans storming a giant beehive (to loot the honey!), then it may be determined that Pacification Combat is also blocked from either suppressing or Converting the colony.

- **Speciesism:** This is the point at which we arrive at genocide in a space-opera setting and *intentionalism vs. functionalism* Holocaust arguments. Genocide is a GGDM story arc event. If the Conquered Colony can never be converted, what was the reason for landing there?

But if the situation ever should occur, it may be to destroy the colony with Ground Units instead of planet damaging Orbital Bombardment (*à la Starship Troopers*). In these cases, the final suppressed population in a Pacification Combat may be considered to have been killed/destroyed. However, Pacification Combat only lasts one Combat Round, and it must therefore be assumed that any surviving population has fled, scattered on the planet (refu-bees!), and the colony is permanently in an insurgency (since they can never be Naturalized).

This should not, however, be construed to mean that genocide can only occur in cases of *acute alterity*; rather, it is possible between any two species, or even among the same species, as we have witnessed too many times on Earth (e.g., the Armenian Genocide, the Holocaust).

- ✓ It is claimed by Plutarch that up to 1 million Gauls may have been killed by Caesar during the Gallic Wars (58-50 B.C.) and another million enslaved. This was about one fifth of the Gallic population, completely disrupting the demographics.

Acute alterity simply brings the matter to the point of discussion in GGDM. Thus, any Pacification Combat could intentionally or unintentionally, partially or in the whole, turn into a genocide or massacre. This is territory for Concierge Interventions. If a normal Pacification Combat attempt is underway, any population factors killed in the genocide or massacre should both reduce the entire population of the colony and still count for the resistance.

- **Brandenburg Tor:** Science-fiction writers have developed a number of reasons for planetary genocides, from the alien-invaders-hate-humans movies to more sophisticated stories.<sup>11, 12</sup> In the Andromeda television series, the Sack of Brandenburg Tor, where 3 billion out of the 5 billion human population were killed in five days by Magog, is a central issue. The Magog, a species created to serve the Spirit of the Abyss, reproduce by laying their eggs in other living creatures (like some human-detested creatures on Earth) and are cannibals; and thus, their ‘genocide’ is the use of others for reproduction that always results in their deaths.<sup>13</sup>

GGDM could include different sorts of sci-fi situations (like the Alien movies) that lead to genocide for non-human purposes. The vaguely humanoid Magog represent a case of less acute alterity; they can communicate and comprehend concepts, they had previously entered into a treaty with the Systems Commonwealth.

---

*“The Ottoman defenders were too few to defeat the landing but inflicted many casualties and contained the attack close to the shore. By the morning of 25 April, out of ammunition and with nothing but bayonets to meet the attackers on the slopes leading up from the beach to the heights of Chunuk Bair, the 57<sup>th</sup> Infantry Regiment (Ottoman Empire) received orders from Kemal ‘I do not order you to fight, I order you to die. In the time which passes until we die, other troops and commanders can come forward and take our places’ and every man of the regiment was either killed or wounded.”*

– from Wikipedia article, “Gallipoli Campaign,” December 28, 2018

---

**Suicide Attacks:** The 57<sup>th</sup> Regiment was never reconstituted or recreated in the Turkish Army.

A suicide attack can be defined in modern terms as any attack in which the death of the attacker is inseparable from the anticipated results. Or, put another way, a suicide attack is one in which the attacker has no expectation of survival, regardless of the results of the attack. A suicide attack necessarily implies the foreknowledge, understanding of the certainty of their demise and a fatal decision. Arguments on this usually compare Japanese *banzai* charge (i.e. a human wave attack) to Japanese *kamikaze* attacks in WWII; the participant of a *banzai* charge has some expectation of possible survival, while the *kamikaze* pilot has no expectation of survival.<sup>14</sup>

- ✓ “The establishment of a suicide squadron (*staffel*) was originally proposed by Otto Skorzeny and Hajo Herrmann. The proposal was supported by noted test pilot Hanna Reitsch. The idea proposed was that Germany would use volunteers as suicide pilots in order to overcome the Allies’ numerical advantages with their fanatic spirit. The idea had roots in German mythology that was glorified by Nazi propaganda. Hitler was reluctant, but eventually agreed to Reitsch’s request to establish and train a suicide attack air unit, with the proviso that it would not be operated in combat without his approval. The new unit, nicknamed the ‘Leonidas Squadron,’ became part of KG 200....” – from Wikipedia article, “Leonidas Squadron,” captured November 3, 2019.

It’s a thin line however, as others have argued that with machine guns and automatic small arms, the *banzai* charge is effectively a suicide attack (and the historical results support this assertion, the last and largest attack occurred at the Battle of Saipan, July 1944; it was forbidden by some Japanese commanders). A modern suicide attack – whether as a military human wave attack, suicide bomber, or attack using a machine – is also usually a form of ritual suicide.<sup>15</sup>

- ✓ “In the last seven years, 14 per cent of all suicide bombings – one in seven – have been by children.” – Iain Overton, “The price of paradise: 82 facts you didn’t know about suicide bombers,” The Irish Times, April 8, 2019.

It also should be noted that for 99% of human history, human wave attacks (i.e. shock attacks, charges to melee<sup>16</sup>) were the main military attack, and continued long after the widespread use of gunpowder weapons (early World War I was particularly disastrous); thus, the concept of a suicide attack is mostly a *modern construction* arising from post-WWI sensibilities about technological warfare. A forlorn hope (*enfants perdus*) is not a suicide attack as the object is to survive.

- ✓ On August 24, 1942, the 2<sup>nd</sup> Squadron of the Italian *Savoia Cavalleria* regiment wound around to the left, emerged from a gully, and charged on horseback with sabers and hand grenades, the entrenched riflemen of the Soviet 812<sup>th</sup> Siberian Infantry Regiment. Upon reaching the Soviet entrenchments, the horses leapt over and the 2<sup>nd</sup> Squadron was carried into the rear of the Soviet regimental position by the momentum of their charge. The Soviet riflemen were still entrenched firing at the backs of the 2<sup>nd</sup> Squadron when the dismounted 4<sup>th</sup> Squadron attacked the line, overrunning it. The 3<sup>rd</sup> Squadron then hastily, without cover, attacked the center of the Soviet Siberian line. In the end, the Soviet Siberian Regiment retreated with heavy losses, but the Italians were unable to pursue. Against modern weapons, cavalry charges were increasingly suicidal attacks; the *Savoia Cavalleria* got lucky, it was great propaganda for the Italian Fascists, and the Izbushensky charge is considered the last major action in history. Information from Wikipedia article, “Charge of the *Savoia Cavalleria* at Izbushensky” and History Channel article, “Remembering History’s Last Major Cavalry Charge,” retrieved November 15, 2018.

- Go Tell the Spartans: GGDM *does not prohibit suicide attacks* either by regular forces or by insurgents/resistance forces, as long as the attacks are legitimately based on the culture of the Native Population Type in the game and circumstances, and not merely on the desires of the position players at the moment. This will be a determination for the Concierge to make *as representative of the local commanders* in the story. This determination can be made in any combat situation or in Special Operations Black-ops or Counter-Operations. If positions wish to employ suicide attacks in GGDM, they must build a political-ideological culture that supports it, as the Meiji regimes did, with all the consequence that entails.
  - ✓ “Because the battle consisted of a small force holding a piece of fortified territory against a vastly larger invasion for three days at great cost before being annihilated, Wizna is sometimes referred to as the ‘Polish Thermopylae’ in Polish culture. One of the symbols of the battle is Captain Władysław Raginis, the commanding officer of the Polish force, who swore to hold his position as long as he was alive. When the last two bunkers under his command ran out of ammunition, he ordered his men to surrender their arms and committed suicide by throwing himself on a live grenade.” – from Wikipedia article, “Battle of Wizna,” captured August 10, 2019.<sup>17</sup>

Of necessity, this discussion only applies to suicide attacks, and not desperation defenses or the choice to die rather than surrender or flee. The distinction easily becomes fuzzy, but rarely are *suicide defenses* discussed in the same manner as suicide attacks, rather, they are praised as *heroic last stands*, for example, the 21 Sikhs who refused surrender and defended a signal post in Afghanistan against thousands of Pashtun tribesmen in 1897, the Swiss at the Battle of St. Jakob in 1444 (a foolhardy 1 vs. 15 attack that turned into a famous 15 vs. 1 last stand), or the Polish at the Battle of Wizna (1939). By definition, a ‘last stand’ requires that the defenders are annihilated (or nearly so, as a unit), a fatal form of propaganda of the deed.

- ✓ Example of how the distinction can become fuzzy: As part of the American defense against a surprise Japanese attack at the Battle off Samar (the center column action of the Battle of Leyte Gulf), four American destroyers charged at flank speed against a massive Japanese Force of four battleships, eight cruisers and eleven destroyers to cover the escape of the escort carrier group. The captain of the destroyer USS Samuel B. Roberts “told all hands via bull horn that this would be ‘a fight against overwhelming odds from which survival could not be expected.’” (from Wikipedia article, citing C. Vann Woodward, The Battle for Leyte Gulf (2007)).
- ✓ Thus, although the American force was the defender in GGDM terms, the ferocious and dogged attack of the four American destroyers was a suicide run and they knew it. Three of the four American destroyers – the USS Johnston, USS Samuel B. Roberts and USS Hoel were sunk, while the USS Heerman was damaged. Two of the six American escort carriers were sunk, three were damaged.

Of necessity, this discussion applies only to sapient opponents; that is to those who can consciously choose to be solely famous for dying. If a bee stings you, it will die. Almost all bees are females (except the few drones) and the female reproductive organ evolved into the stinger, because the Queen Bee produces all the young (i.e. they are eusocial). The stinger breaks off when the bee stings and the bee dies. Bees are always stinging creatures against which they would have no chance otherwise. No one thinks that a bee makes a conscious decision required for a suicide attack. No one thinks a bee has a concept of its own death.

*“We all put up with Bob anyway because he was, after all, one of us – a gamer. Besides, Bob was a player, too, and seeing Bob play sort of made up for his being a GM. I was running a TRAVELLER game in which the group was fleeing a space battle when Bob’s character, a scout with his own 100-ton scoutship, showed up to join the fun. The enemy forces were escaping battle in a 30-ton lifeboat and the players were happy to let them go, but Bob wouldn’t think of it. ‘I want to ram their ship!’ Bob announced. He obviously assumed that starships and ancient galleys were built alike. ‘You’re sure about that?’ I asked.*

*Everyone else stopped talking and looked on in horrified fascination. ‘Sure!’ Bob said. ‘I have the bigger ship!’ I had Bob roll his character’s Piloting skill, and he made the roll. Bob’s 100-ton scout plowed into the 30-ton lifeboat at a speed of tens of miles per second, normal orbital velocity. Both ships were instantly reduced to clouds of scrap – Bob’s character, too. It was the shortest character lifespan in any game I’d ever run, about one minute. ‘Your man’s dead,’ I told Bob. ‘Kaput. Gone. He blowed up.’ A look of total confusion crossed Bob’s face. ‘What?’ he asked. ‘How?’ I have no idea where Bob is these days, but despite everything I still wish him well.”*

– Roger Moore, Editor, “A little of Bob in all of us,” Dragon Magazine #196, August 1993 (all caps in original)

**For the Babylon Bobs:** Occasionally, video sci-fi (e.g., Babylon 5) still has cringe-worthy intentional ramming scenes in ship or fighter combat, like ancient or medieval galleys or American Civil War ironclads. Ramming in space is a suicide attack; it is the captain and helm crew’s choice and everyone else onboard has no say. All of the instances of ramming in Babylon 5 – I can count three without thinking too hard – were treated as a suicide attack.

- ✓ “Ram it? I had always thought of that as poor taste. Ramming is the last resort.” – Maj. Genadi Osipovich, pilot of the Su-15 interceptor that shot down Korean Air Lines Flight 007 in 1983, from interview with Michael R. Gordon, “Ex-Soviet Pilot Still Insists KAL 007 Was Spying,” New York Times, December 9, 1996.
- ✓ Seven hours *after* a ceasefire order on November 22, 1948, Israeli Navy explosive motorboats rammed the Egyptian flagship *El Amir Farouq* (sloop) and sank it, also damaging a tanker. The explosive motorboats were purchased in Italy, and were the same motorboats used in the Italian Navy attack on Souda Bay in 1941 that sunk a British heavy cruiser and a tanker. *Neither instance was a suicide attack*, all motorboat sailors ejected and survived. An Italian sailor trained the Israelis in Galilee. The explosive motorboat is the asymmetrical naval war successor to the fireship of old.<sup>18</sup>

GGDM makes no provision for and does not envision ramming combat, but it might be possible as described above, whether as a suicide attack or eject-and-pick-up (e.g., like Lee Adama in Battlestar Galactica, “Resurrection Ship, Pt. 2” (2006)). If it occurs in the game, the participants will need to ‘wing it’ on the rules and the Concierge should only allow it to occur if it fits the story and the position’s civilization (e.g., Kamikazes). It cannot occur out of the blue...

- ✓ In 1602, a moonlit running battle occurred between six oar- and sail-powered galleys carrying reinforcements and treasure from Spain to the Spanish troops in Netherlands and a combined English and Dutch sailing naval force of nine galleons, carracks, and

galiots in the narrow part of the English Channel off Dover. On 3 October, the English sighted the Spanish galleys in the moonlight and engaged with broadsides while the galleys tried to evade. Some galley slaves jumped overboard and swam to shore, a strong gale came up behind the English ships driving them forward in pursuit, and the Dutch tacked in from the other direction when they heard the English guns. In an odd turnabout of the usual tactics, the Dutch sailing ships fired upon then *rammed* and sunk two of the Spanish galleys, two more sinking galleys were intentionally grounded and the crews escaped, one galley wrecked near Calais, and the last galley, with the commander and thirty-six chests of gold, ran through a gauntlet of Dutch warships and escaped into Dunkirk.

GGDM makes no provision for ship boarding combat either. Of course, *à la* Star Trek, Babylon 5, Andromeda, Star Wars, etc., technology and abilities may develop that would potentially allow ship-boarding combats. If a boarding situation arises in the game, I suggest it be handled as a Black-op (see 2 Special Operations, p. 1297, *infra*) within the ongoing Combat where the SOMs and operational expenditure represents special boarding teams and equipment. In short, GGDM often has better provisions for a special or unusual action in Special Operations.

Note however, that nearly all shipboard fights in video science-fiction are between humans – i.e. members of the same race – or humanoids at least, with technology and physiology similar to humans (in this, the Aliens franchise stands out as different), so everyone is breathing the same air.

Boarding alien ships for combat would be a completely different matter, like fighting on a Hostile Habitability Class planet; the attackers would need to be suited and bring their own air. Just for starters. And in truly smart sci-fi stories, warships evacuate all air before combat to avoid explosive decompression, but not in most TV or movie sci-fi. In the Babylon 5 episode “Severed Dream” the station was boarded by Marines using special pods to punch through the hull; with 250,000 civilians, human and alien, on the station, it would have been impossible to evacuate the air. So it’s a judgment call by the Concierge and participants.

And after they win, could they operate the alien ship? If not, then what was the point of the boarding fight? Reverse Engineering (see 3 Technology, p. 712, *supra*) is a possible motivation.

- ✓ The most famous naval boarding incident of the 20<sup>th</sup> Century was German U-boat *U559* in the Mediterranean in October 1942 by three British sailors. *U559* had been damaged by depth charges and forced to the surface where it was then fired upon by 20mm guns. It was floundering and the German seamen jumped into the sea in haste. They failed to open the seacocks to scuttle the ship and they failed to destroy the Enigma code books on board. There was no boarding fight, the three British seamen recovered the code books, but two of them drowned as *U559* sank. The capture of the code books broke the Kriegsmarine coded communications for the rest of the war.

---

**The Doctor:** *What’s an Osterhagen Key?!*

**Martha:** *There’s a chain of twenty-five nuclear warheads. Placed in strategic points beneath the Earth’s crust. If I use the key, they detonate and the Earth gets ripped apart.*

**The Doctor:** *What?! Who invented that – well, someone called Osterhagen, I suppose. Martha, are you insane?! – Dr. Who, “Journey’s End” (2008)*

---

**Osterhagen & Corbomite:** That’s funny coming from the guy who destroyed Pompeii, claiming these were decisions he had to make regularly! Who’s insane? Sadly, Star Trek appears to have introduced ship self-destruct sequences into the science-fiction vocabulary.

It is also possible within the technology milieu of GGDM for civilizations to develop planet self-destruct; the current incarnation of the idea comes from Dr. Who in 2009 (i.e. the Osterhagan Key), but I am sure that is how Mike Resnick’s 1982 book *Birthright: The Book of Man* ended, so the idea may have been out there previously. Given the threat of global thermonuclear apocalypse, the idea has not been popular even in science-fiction literature.

Whether and when either occurs in the game is at the discretion of the Concierge (but must be initiated by the position players), taking into account the story, plus relevant political and cultural factors of the position; it should never be an easy decision.

- ✓ I recall reading a sci-fi short story where an outpost sentinel space station detected an incoming human fleet, reported it, then disintegrated itself before it could be captured to protect the location of the home planet. Unfortunately, the humans had developed technology to counter this self-disintegration. I do not know the name or date of the story, but it may have preceded or been concurrent with the concept in Star Trek.

---

*“As German casualties escalated with the combination of Operation Bagration and the Lvov-Sandomierz Operation in the east, and Operation Cobra in the west, members of the Hitlerjugend were recruited at ever younger ages. By 1945, the Volksturm was commonly drafting 12-year-old Hitler Youth members into its ranks.*

*During the Battle of Berlin, [Artur] Axmann’s Hitler Youth formed a major part of the last line of German defense, and were reportedly among the fiercest fighters. Although the city commander, General Helmuth Weidling, ordered Axmann to disband the Hitler Youth combat formations, in the confusion this order was never carried out. The remnants of the youth brigade took heavy casualties from the advancing Russian forces; only two survived.”*

– from Wikipedia article, “Hitler Youth,” captured August 9, 2019

---

**Child Soldiers:** Surrender is one of the toughest ethical dilemmas common to military, religious, and civilian leaders in history.

- ✓ “Axmann avoided capture by Soviet troops and lived under the alias of ‘Erich Siewert’ for several months. In December 1945, Axmann was arrested in Lübeck when a Nazi underground movement which he had been organising was uncovered by a U.S. Army counterintelligence operation. In May 1949, a Nuremberg denazification court sentenced Axmann to a prison sentence of three years and three months as a ‘major offender.’ He was not found guilty of war crimes. On 19 August 1958, a West Berlin court fined the former Hitler Youth leader 35,000 marks ... about half the value of his property in Berlin. The court found him guilty of indoctrinating German youth with National Socialism until the end of the war in Europe, but concluded he was not guilty of war crimes.” – from Wikipedia article, “Artur Axmann.”

The Germans in particular were criticized for the use of Hitler Youth in 1944-1945. There are two particular instances that stand out: The formation of the infamous 12<sup>th</sup> SS Panzer Division in 1944 from Hitler Youth Brigades, the majority of the soldiers were under 18, the division

committed war crimes on the way to fight in Normandy, and took 80% losses at the Battles of Caen. The second instance is the Hitler Youth in defense of Berlin in March-April 1945, boys from 14 to 17 years old being sent to stop overwhelming, veteran Soviet forces, they were nearly annihilated.

- ✓ In the Wikipedia article, “Merrill’s Marauders,” is a photo of a boy in uniform captioned, “A 10-year-old Chinese soldier from a unit of the X Force, placed under Merrill and Charles N. Hunter’s command, after the capture of the Myitkyina airfield.” He does not have a rifle or any weapons apparent in the picture but does have kit.

This criticism of the use of child soldiers reflects modern *sensibilities* just as the concept of chemical warfare as ‘dirty’ or less honorable is a result of WWI or the concept of suicide attacks as ‘wrong’; the Germans certainly were not the first (or last) to use males under 18 in combat. For example, the VMI cadets who participated at the Battle of New Market were as young as 15 and most were between 17 and 21 years old (see VMI official website, Battle of New Market FAQ). Most recently, during the final stages of the Siege of Kobanî (‘Syria’s Stalingrad’), media reporting, quoting a local Kurdish commander, suggested that the Islamic State had committed as their final reserves underage units that were still in training.

- ✓ I sensed, as did most observers, that the Islamic State had just mortgaged the future of the Caliphate to secure one victory of questionable value. Those youth units and the Lions of the Caliphate were supposed to be the future, the next generation. What began as a relatively small fight became one where the Islamic State leadership could not admit loss. The Caliphate was already far down the wrong road by that time; a little diplomacy and restraint after their initial victories would have gone a long way toward securing long-term self-determination. Instead they offended everyone and got the apocalyptic war their ideology demanded. The Caliphate did not survive their own radical ideology (and neither did the Axis Powers); what did they offer future generations but endless strife? *Players should heed recent history.*

I was 17 years old when I graduated boot camp, but I turned 18 before the end of the year, when I was in artillery school. Use of child soldiers has been endemic in Africa and South-East Asia.

- ✓ In premodern times, boys around age 15, such as Kunta Kinte, the main character in the *Roots* novel and mini-series (1977), were taken away for manhood training by tribal elders (often including circumcision), where they learned to use weapons, fight, forage, hunt, and sing the songs and oral history of the tribe, after which they were men, warriors and could marry (this is possibly related to life expectancy of the time, like infant baptisms, see *The Black Death*, 1 Disruption, pp. 252-253, *supra*).

And this is where is found the edge of it: To say that these are modern sensibilities is not wrong, or not that it makes them wrong or that what was done in the past ‘right’: In the sense of pragmatic ethics (see 3 Order, 1 Beginnings, and 1 Writs, *supra*), it can be asserted that the modern sensibilities are a result of moral learning by civilization. But only after enough stupid, bad things have happened; pragmatic ethics are the ‘moral of the story’ in history and fiction.<sup>19</sup>

- ✓ Notably, science-fiction literature rarely touches the issue of child soldiers, sometimes touches the issue of suicide attacks (such as suicide bombing through Stargates, see SG-1 episode, “The Warrior” (2002)), frequently discusses biological warfare (in the tradition of H.G. Wells *War of the Worlds* (1897), e.g., *Babylon 5 A Call to Arms*

(1999)) and the main instance I know if where chemical weapons are mentioned in sci-fi is Starship Troopers (1959) (or at least the Avalon Hill board game from 1976).

- Pragmatic GGDM: GGDM makes no assumption (*how many times have you read that already?*) on the age (or relative species maturity level) of warriors or soldiers being led or sent into combat. To do so would require that GGDM assume that the ‘aliens’ are all human or human-like (including childhood, maturation, age of majority), and that all have modern (Western) ‘sensibilities.’ Like many aspects of GGDM, it is there when the participants look. Some groups of participants may prefer games without moral or ethical dilemmas. But as an adult discussion of civilization, GGDM is a pragmatic exercise and must address these issues without averted gaze. See discussion of Pragmatic Ethics, 3 Order, p. 551, *supra*.
- ✓ Laurent Kabila, dictator of the “Democratic Republic of Congo” was assassinated in 2000 by his kadogo – child soldier – bodyguards according to The Guardian (“Revealed: how Africa’s dictator died at the hands of his boy soldiers,” Feb 10, 2001).

*“The VT, or proximity, artillery fuse saved thousands of American lives in Okinawa when the enemy expanded the kamikaze tactics first tried in the Philippines. Flying short-range planes with a ton of explosive in the warhead, Japanese pilots sacrificed their own lives to crash-dive into a target. Antiaircraft fire may bring down most of the at-tackers, but it needed only a single crash to turn a carrier into an inferno of exploding gasoline and bombs.*

*On April 7 Japan’s largest battleship made what might be described as a suicide raid on U.S. warships off Okinawa. Accompanied by two light cruisers and nine destroyers, the 45,000-ton Yamato failed to surprise her intended victims, and carrier planes of Task Force 58 sent the flaming hull to the bottom. Both cruisers and three of the destroyers were also sunk. Japanese kamikaze planes were more effective. During the Okinawa invasion alone the U.S. Navy suffered one-seventh of its personnel losses for the entire war – 4,907 killed and missing, plus 4,824 wounded. In ship losses, with 30 sunk and 223 damaged, the campaign proved to be the most costly single effort of naval history up to this date.”*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 960

## Endnotes.

<sup>1</sup> Commentary: If you don’t know the rest of this Vietnam Era saying ... you should look it up.

<sup>2</sup> Commentary: Do you butter your bread with a gun? The United States has tried to sometimes.

<sup>3</sup> Commentary: The final truth of the American occupation of Iraq is that we found out we are not the people we thought we were. Our military was exactly what we thought it was, both in the initial combat, and in the less-than-stellar occupation and policing (we should have learned this from Vietnam). But we were not the great liberators. And we were not the Great Generation 2.0. We did not have the moral fiber, vision, or political will. In fact, we lied our way into the situation and drug the world along, but lost the peace as we have done so many times before.

<sup>4</sup> Commentary: “The Oxford American Dictionary defines tar baby much like [Mitt] Romney used it, ‘a difficult problem, that is only aggravated by attempts to solve it.’” –Ta-Nehisi Paul Coates, “Why ‘Tar Baby’ Is Such a Sticky Phrase,” Time.com, August 1, 2006.

- ✓ While I understand that it can also be a racial slur (the point Mr. Coates made), I have never used it that way, and I have never actually heard anyone use that term as a racial slur in my half-century of life (I also likely would not be around people who would, which probably explains that). I have always used it in the sense described by the Oxford American Dictionary, and that is the sense in which it is being used here. I

have used the term over the years to describe the ‘sticky’ zone of control mechanics and general situation when I have taught the game Panzergruppe Guderian, I refer to it as a “tar-baby game.”

- ✓ But then again, I’ve also never heard anyone but Yosemite Sam call someone a “**GALOOT**” (or anyone else in the world call a camel a ‘hump back muley’). I hung out with ‘sanitized’ late 1960s Saturday morning Looney Tunes and Merrie Melodies characters as a child; I guess it depends on who you hang around with. Yes, I know that pre-1960s Looney Tunes/Merrie Melodies shorts were frequently overtly racist (e.g., the Censored Eleven), sexist, and done in what we would now call bad taste.

<sup>5</sup> Commentary: One word: Airwolf. Two words: Dominic Santini.

<sup>6</sup> Citation: “Things have changed. We’re not an army anymore, Mr. Becket. We’re the resistance. Welcome to the Shatterdome.” – Stacker Pentecost, Pacific Rim (movie, 2013).

<sup>7</sup> Citation: **G’Kar to Londo Mollari**: When I was a child, your people decided that rebellion by my people needed to be discouraged. So your people bombed seven of our major cities for six straight days, 31 hours a day. You thought you could bomb us into submission. It didn’t work then, and it didn’t work later. – Babylon 5, “View from the Gallery” (1998).

<sup>8</sup> Commentary: Churning political turmoil in Haiti saw five presidents and popular uprisings/coups from 1910 to 1915, culminating in the public lynching *death and dismemberment* of President Jean Vilbrun Guillaume Sam on July 28, 1915 when angry mobs overran and sacked the French embassy where he had fled (the episode was said to have inspired the 1920 play, *The Emperor Jones*) after 167 political prisoners were summarily executed in a single day (there is some question about whether General Charles Oscar Etienne was ordered to do this or did it on his own, based on interpretation of the wording of a note from the President). The United States alarmed then, under the flimsiest pretext ever – no rational person in 1915 thought Haiti needed protection from German invasion – occupied Haiti’s capital with contingents from U.S. Navy ships anchored in the harbor. Later, the U.S. Marines were sent on military campaigns to pacify and occupy the entire island, engaging in several combats, ambushes, and storming forts killing hundreds of Cacos militiamen. The U.S. occupation of Haiti lasted 19 years, until 1934.

<sup>9</sup> Commentary: One hundred thirty years after the American Revolution, the British were still at it – the poll tax that was imposed on the Zulus that led to the Bhambatha Rebellion in 1906 were imposed without consensus of the chiefs. That is, ‘taxation without representation’ – the cry of the American Revolution, was used in the documentary to describe the poll tax. Taxation without representation is the essence of pacification.

<sup>10</sup> Commentary: Almost every story-arc television program has a theme of opposites, represented by the characters and forces in the story. One of the main themes of *Andromeda* was optimism vs. pessimism, Dylan Hunt and the Systems Commonwealth represented cautious but unwavering optimism, and Tyr Anzasi and the Nietzscheans represented pessimism and natural selection.

<sup>11</sup> Commentary: For example, some television sci-fi series episode I watched – I do not remember the name of it, the series, or anything else about it except that there was a female ‘weapons master’ or commander who was called the Lady of Death because she had tested a genocide weapon on a captured colony world. Obviously she was a reviled character, wanted for her crimes by the rest of the galaxy.

<sup>12</sup> Commentary: Another example, in the 2002 movie, *Reign of Fire*, the modern Earth has been overrun by a deluge of huge fire breathing dragons and human civilization is on the brink – if this stretches your suspension of disbelief, it is no more of a stretch than any zombie apocalypse movie. However, the weakness of the dragons is there is only one male, who lives in the ruins of London; all female dragons across the globe come to him to mate and lay eggs, he eats some of his young if he cannot find food. The story is centered on the efforts of a human band to kill the only male dragon, preventing the dragons from continuing to reproduce. There are many logical problems with the movie, but in GGDM, any species which has a limited or singular membership of one of the sexes vital to reproduction could be intentionally or inadvertently genocided by their deaths, unless the species has intermorphs.

- ✓ I binged the entire *Kabaneri of the Iron Fortress* series one day late in 2018. In the beginning of this oddest of zombie apocalypse stories, it is clear that humanity (at least in Japan) is slowly losing the war. The remainder of Japanese civilization has ‘reverted’ to a Shogunate sociopolitical system in protected areas connected by armored trains and tracks. The writers had an interesting story they wanted to tell, unfortunately, the execution fell far short. The main characters, so heroic and action-oriented in the beginning became mushy, indecisive, and dumb in the center of the series (necessary for the ultimate betrayal plot to succeed, but not very convincing) and the zombies so frightening in the beginning became less so as the series progressed (despite the writer’s efforts to introduce more terrifying specimens and collective intelligence), being eclipsed instead by the consuming hatred of the main antagonist for his father, the Shogun.

<sup>13</sup> Commentary: The Magog are also rabid carnivores and cannibalize their own kind. So they kill for sport, power, food, reproduction, whatever, as they are the minions of chaos in the series.

<sup>14</sup> Citation: “The French philosopher-sociologist Emile Durkheim (1858-1917) is partly responsible for the confusion about strategic military suicide. He defined suicide as ‘all cases of death resulting directly or indirectly from a positive or negative act of the victim himself, which he knows will produce this result.’ He did not distinguish a soldier whose actions entail accepting the high probability (or even certainty) of death in order to accomplish some task from actions in which the soldier’s chooses to die during the course of a military operation. For example, a soldier who throws himself over a grenade to save compatriots is valorous but not primarily suicidal. Such a soldier would, if given the opportunity, equally bravely put himself at risk by throwing a blast suppression blanket over the bomb.

A second kind of military suicide is a soldier who serves as a smart bomb as with the Kamikaze pilots of World War II or the suicide bombers of today.

A third kind of soldier’s suicide is that which is the tragic end of combat-induced mental illnesses such as Post Traumatic Stress Disorder, depression, substance abuse disorders, or despair.

All of the preceding instances differ from the choice to use a military suicide device, for example, ingesting a cyanide pill. In these cases, soldiers choose to commit suicide for rational-personal or altruistic reasons. Some might choose such a device to avoid capture, the suffering of captivity or torture. Or, they might commit suicide to preclude the possibility that they might under torture yield valuable intelligence to an enemy or become a valuable hostage or propaganda prize to the disadvantage of their homeland.” – Steven H. Miles, M.D., “Military Suicide Cap- sules and Medical Ethics,” Bioethics.net, March 21, 2016.

<sup>15</sup> Citation & Commentary: “Concerning the night assault of Lord Asano’s ronin, the fact that they did not commit seppuku at the Sengakuji was an error, for there was a long delay between the time their lord was struck down and the time when they struck down the enemy. If Lord Kira had died of illness within that period, it would have been extremely regrettable.” – Yamamoto Tsunetomo, Hagakure (1716), on the tale of the Forty-seven Ronin.

- ✓ This fatalistic philosophy is the primary way that Japan was known to the West, this idealized way seems to have become more extreme as part of Japan’s reaction to incursion of Western modernity, technology, and religion during the Seclusion of Japan (edict of 1635 to 1853, arrival of Commodore Perry’s fleet in Tokyo) under the Tokugawa shogunate (1600-1867). The Meiji Restoration of 1868 stopped pushing against West- ern incursion, instead tried to create a cultural-technological syncretism of eastern culture and western tech- nology, *to the extent that each served the Emperor* and the militant ultra-nationalistic ambitions of Japan.
  - The ideas of the Meiji Restoration are the focus of the Japanese-language tiaga drama series (with English subtitles) *Yae no Sakura* (2013) and are specifically voiced in the dialogue by the master of the gunnery school in Edo in Episode 1 (see feature quote, 2 Combat, bottom p. 958, *supra*). The fears are also voiced at the Shogun’s counsel later in the same episode. Nijijima Yae’s older brother sees Perry’s ships in Edo harbor and is amazed, he states that each one is a ‘floating cas- tle,’ and each is ‘20 times bigger than any of their ships.’

<sup>16</sup> Citation: “A charge is a maneuver in battle in which combatants advance towards their enemy at their best speed in an attempt to engage in close combat. The charge is the dominant shock attack and has been the key tactic and decisive moment of many battles throughout history. Modern charges usually involve small groups against individ- ual positions (such as a bunker) instead of large groups of combatants charging another group or a fortified line.” – from Wikipedia article, “Charge (warfare),” retrieved November 18, 2018.

- ✓ “If you see all of these guys charging at you, the human instinct for the overwhelming number of people is to run like heck. Then it’s easy because once they’re running away you can pick them off.” – Alex Bielakowski, associate professor at the U.S. Army Command and General Staff College, as cited in “Re- membering History’s Last Major Cavalry Charge,” History Channel (history.com), August 13, 2012.

<sup>17</sup> Commentary: While Tolkien denied his epic fictional works had any connection to WWII, I cannot help but to think of Gandalf telling Balrog, “You shall not pass!” Helms Deep/Theoden’s Charge is a fantasy last stand.

<sup>18</sup> Commentary: The HMS Gloworm rammed, possibly accidentally, a German heavy cruiser ten times her size.

<sup>19</sup> Commentary: However, some fiction writers have intentionally tried to create entertaining or message stories about stupid people who do stupid things and never learn, doing the same old dumb shit over and over. Yet it is in- escapable – though the characters never learn (in standard storytelling, the characters change and progress, e.g., Bab- ylon 5) – the audience does from the experience of watching it. There is always a pragmatic outlet.

[large loaded passenger jet accelerates for take-off]

**Co-pilot:** *Excuse me captain, I know it sounds silly, but can you fly?*

**Dirty Harry** [pretending to the air-captain]: *No, never had a lesson.*

– from *Dirty Harry: Magnum Force* (1973)

**Cover and Concealment:** The Marines teach about cover and concealment; cover is to avoid being shot, concealment is to avoid being seen. The best of both worlds is both, but there is a difference this is mortally important to understand. Dirty Harry boards a 747 with two hijackers disguised as the Captain. As they unevenly accelerate for takeoff, the co-pilot asks Dirty Harry, “Excuse me captain, I know it sounds silly, but can you fly?” Dirty Harry replies, “No, never had a lesson,” then slams on the brakes and overpowers the surprised hijacker in the cabin. The second hijacker runs through the passenger seating and into the stewardess area behind a wall. Dirty Harry shot him three times through the wall (it’s just a decoration panel); the wall was concealment, not cover, and the stupid hijacker didn’t get down.

- ✓ I spent a day in 1989 copying the voluminous medical records of a Master Gunnery Sergeant who had been wounded three times in Vietnam. In one instance, he had been hit by a NVA machinegun bullet while hiding in a bush; the bush was concealment, not cover.

Cloaking devices in science-fiction stories are concealment, not cover. If you got lucky or guessed correctly, or had an area attack or rapid fire weapon, you could hit the ship behind the cloaking device; oddly, this never occurs to television sci-fi writers. Ships in Star Trek, however, have both cloaking devices *and* shields operating at the same time.

Armor, whether it is body armor or ship armor, or ‘force screens’ in science-fiction combat, is a mobile form of cover, you are literally taking your cover with you like a turtle or armadillo; a shield is the same thing whether on a starship or being carried in front of you, and the early Romans used shield walls as both cover and concealment. In ancient siege warfare, attackers used mobile wooden covers called mantlets (or later, a pavise) to approach the walls (this can be seen in the movie *Army of Darkness* (1993)), and also larger structures such as wheeled wooden siege towers, testudos (a testudo is also a Roman ‘fish-scale’ shield formation), and galleries to attack the walls with impunity. On the defender’s side, city or fortification walls were both cover and concealment; firing missiles over the wall was basically a blind exercise for the attackers.

- ✓ The first in-air hijacking occurred in 1942 when a British Commonwealth combat aircrew taken POW overpowered their guards and seized control of an Italian aircraft transporting them to a POW camp, which they then flew to Malta. They were strafed by British Spitfires on approach and landed in the sea to be picked up.<sup>1</sup>

*“A military man can scarcely pride himself on having ‘smitten a sleeping enemy’; it is more a matter of shame, simply, for the one smitten. I would rather you made your appraisal after seeing what the enemy does, since it is certain that, angered and outraged, he will soon launch a determined counterattack.”*

– Marshal Adm. Isoroku Yamamoto, Imperial Japanese Navy<sup>2</sup>

**Ambush Combat:** The main tactical ability that T-Ships and warships equipped with “cloaking devices” have in a three-dimensional, open space combat is the ability to physically ambush, and to do so continuously even in the midst of a huge fleet battle.

The ambush and surprise ability of T-Ships and “cloaked warships” is a physical ability to appear out of nowhere (or seemingly) in the middle of nowhere, and fire at very close range, and then to disappear again for a time, and do it again elsewhere. Hello!, BLAM, BLAM, thank ya ma’am, Goodbye!

- ✓ The primary requirement for an ambush is concealment. Sometimes ambushers also find cover along with the concealment; it is very useful to have some cover behind trees, rocks, buildings, but concealment is the primary of the ambusher: If you are well concealed and a good shot, you may not need cover. If you are covered but not well concealed, there is no ambush.
  - ✓ Doubtless, the king of all sci-fi tactical ambushes in open space is at the end of the last episode of Star Trek TNG (“All Good Things...” (1994)) when the future Enterprise, with three Warp Cells, de-cloaks and ambushes the Klingon Bird of Prey at close range. It is clear that Federation technology has outpaced Klingon technology at that point, very much a reflection of the Cold War, as the Klingons were originally the ‘Soviets’ of Star Trek OS.
- **In Open Space:** The essence of the Temporal Ship is an ambush in open space. Consider, with the detection capabilities inherent in GGDM (see Riding the T, 3 Temporal Technology, p. 828, *supra*, and One-Way Mirror, *et. seq.*, 2 Information, p. 1340, *infra*), how difficult it is to ambush in open space? In sci-fi, space ambushes usually involve asteroid belts, comets, planet rings, and moons, a typical example being the ambush at the end of the pilot episode of Space: Above and Beyond (1995) to save Earth. However, it is not impossible.

Consider the *huge open field* Battle of Cannae in 216 B.C. as the greatest ambush in history, everything was on the field, there were no hidden ambushers behind rocks and trees, instead:

- ✓ “Hannibal, a product of Phoenician and Greek culture, imagined gigantic ambushes in which deadly forces were hidden behind ideas, though he showed himself perfectly capable of using trees for the purpose. For Cannae was no less an ambush than the Trasimene, the difference being only that one existed in the moral sphere and the other in the physical.” – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), p. 63.

The ambush of the Inca leadership by the vastly outnumbered, isolated Spanish force at Cajamarca was an ambush hidden behind the ideas of Inca culture and rituals, and perhaps some arrogance (see The First is Last, 3 Colleges, p. 493, *supra*).

The Battle at Lake Trasimene (217 B.C.) a year before Cannae, is considered the largest *physical ambush* in military history by numbers of men involved, as Hannibal hid 55,000 men behind the hills over the lake. The Romans also lost several legions in actual physical ambushes by the Germans (e.g., the famous Battle of the Teutoburg Forest) and Jews (e.g., Battle of Beth Horon, 66 A.D.) that stymied the expansion of the Empire.

Napoleon’s greatest victory, Austerlitz in 1805 was an ambush, *both mental and physical*, as 20,000 French troops emerged from a wooded ravine just as the allied Prussian-Russian force thought it was winning. It was an ambush because Napoleon deliberately slowly gave ground to lure them. Ten years later, at the Battle of Waterloo, the Imperial Guard thought

they had broken through the British line when they saw an empty field before them, but were ‘ambushed’ by multiple lines of British troops who hunkered down in the grass (one of the final scenes of the 1972 mini-series Waterloo):

- ✓ “To the left of the 4<sup>th</sup> Grenadiers were the two squares of the 1<sup>st</sup>/ and 2<sup>nd</sup>/3<sup>rd</sup> Chasseurs who angled further to the west and had suffered more from artillery fire than the grenadiers. But as their advance mounted the ridge they found it apparently abandoned and covered with dead. Suddenly 1,500 British Foot Guards under Maitland who had been lying down to protect themselves from the French artillery rose and devastated them with point-blank volleys. The chasseurs deployed to answer the fire, but some 300 fell from the first volley, including Colonel Mallet and General Michel, and both battalion commanders.” – from Wikipedia article, “Battle of Waterloo.”

In the first Japanese attack on Wake Island on December 11, 1941, the defenders lured the Imperial Japanese Navy ships into an ‘ambush’ by holding their fire until the enemy was very close. *It was an ambush hidden behind an idea*: The Japanese confidently thought the weak defenses had been destroyed by three days of preparatory bombing raids, due in part to overenthusiastic reporting by bomber crews (see related discussion, Battle of Churchill Sol, 2 Carriers & Fighters, p. 1061, *infra*). The island still had four F4F Wildcat fighters and 6 5.5” (127mm) coastal defense guns; the guns sank one IJN destroyer with two direct magazine hits, the Wildcats sank a second by dropping a bomb on the stern detonating the depth charges. The Japanese were turned away and had to return with a bigger force 12 days later, including two carriers, on December 23, 1941, and forced the landing by beaching two ‘patrol boats’ (old destroyers), which were also destroyed.

- ✓ The successful Israeli Air Force attack on the REAF base at El Arish on October 15, 1948, shocked the Royal Egyptian Air Force who had not considered that the IAF had that ability: Thus there was no air patrol. The Israelis captured the base in December.

An alternate form of physical ambush is the lure ambush where undisciplined or confused troops are lured away by a ruse to be ambushed, thus leaving less troops in the main force; a sci-fi example of this is the incident in the reimagined Battlestar Galactica when the Raptors were lured away (“The Captain’s Hand” 2006) and used as bait to lure Battlestar Pegasus into an ambush. The lure away trick is a favorite of horror films, as one by one, the characters go running off after something and die.

But even in ambushes attributed to lack of discipline, that lack of discipline can be traced to ideas. For example, at the Battle of Adrianople in early 1205, the Crusader knights and mounted men-at-arms of the Latin Empire, thought that they were superior to the Cumans and Bulgarians, and that impetuous bravery was the military ideal, thus they chased the Cuman horse archers who harassed them for several kilometers and right into a huge ambush.

- ✓ And why were the people of the valley able to so easily overwhelm and kill the mountain people, who had the superior defensive position? Because the mountain people never imagined that anyone would fight and kill for their treasure that they offered to freely share, never imagined that an offer to share their treasure would provoke an angry response in the valley. Thus, the mountain passes were unguarded and the people of the valley were able to sneak through at night and attack the unprepared mountain people in their homes in a dawn ambush. “Peace on Earth is all it said.”

- Ambush Mode: T-Ships and cloaked warships are assumed to be in Ambush Mode in combat unless they have either voluntarily revealed themselves (like an exhibitionist in a store window), or have been prevented from returning to Ambush Mode. Ambush Mode is when the ship is operating invisible to regular ships (and to the naked eye), and are maneuvering and ready to reveal and fire at the opportune moment (i.e. Ambush).
- Cloaking and Stealth: The primary dramatic difference between a cloaking device and a stealth technology is that the cloaking device hides the ship from detection by *normal human vision* (but what about alien vision?), like a cat can't see sheer cloth. It makes good dramatic television. Whereas, presumably a stealth craft is only hidden from non-visual electromagnetic scanning, and could be seen with normal vision – think of what are currently known as stealth fighters, they can still be spotted visually (but they move very fast!). It is unknown why the Cylons were not scanning in normal visual electromagnetic range – for example, motion sensing cameras, during the battle in which the “stealth Viper” (discussed briefly in A Moment of Caveat, 2 Temporal Technology, p. 818, *supra*) disabled the Resurrection Ship.

*Not knowing the technological details* is what makes the stealth Viper attack plausible (but it was noted in the episode that if the stealth Viper carried nuclear warheads, it would be detected, so it was only to target the engines conventionally), plus the audience probably felt the Cylons had it coming (writers prefer drama to details, e.g., how could Capt. Kirk not know the names of Spock's parents before they boarded the Enterprise? How could a surgically-altered alien pass security scans?). But under normal circumstances, it doesn't seem likely that ‘stealth’ ships would be able to sneak up on the enemy in open system space, whereas cloaked and T-Ships can. Thus, the opportunities for Ambush Combat by stealth ships and fighters might be limited to planet raids, or situations in which visual range is limited in orbital or system space.

- Ambush or Ambush Not: T-Ships and ‘cloak-equipped’ regular warships may not ambush in a Combat Round if they have revealed for any reason. Of necessity, any ‘cloaking technology’ introduced into the game for regular warships must be able to be turned off (i.e. reveal), to allow the ship to resupply. T-ships and warships with cloaking devices turned on (i.e. in Ambush Mode, not revealed) may not maintain a siege or guard a Conquered Colony *by themselves* as visible presence is necessary for both tasks (but could remain in Ambush Mode if other friendly regular warships are present).<sup>3</sup>
  - ✓ This is questionable, I suppose, as believing there is a warship there that you cannot see, is just as effective as seeing the warship over the planet at all times – until they stop believing (like the pre-Christian gods in Europe); but this is the game rule for purposes of simplicity. It's sort of like Santa's elves peeking in on children or the low-hanging God of Christian Fundamentalism staring down at the faithful to insure they behave. At some point you don't believe in Santa, but still believe in God.
- Ambushwhacked: T-Ships attacking from Ambush Mode receive three Offensive Shifts (see Combat Shifts, 3 Combat, p. 978, *supra*) against targets that do not have Temporal Sensor technology (see Temporal Sensors, 2 Temporal Technology, p. 820, *supra*) or are not in the same system with friendly ships, colonies, or bases that have a Temporal Sensor Array. The presence of a Temporal Sensor Array or ability reduces the ambushing attacker to receiving one Offensive Shift when ambushing. Cloaked warships attacking in Ambush Mode receive one Offensive Shift. Temporal Sensors are probably ineffective against cloaked warships,

but there may be other technologies that can detect cloaking (always an arms race!). Ship Missiles fired by T-Ships and cloaked regular warships in Ambush Mode, do not receive any ambush benefits (unless they are cloaked/T-shifted too!). T-Ships and cloaked warships in Ambush Mode *may not be Intercepted* by any units Combat Screening the target (see Normal Interception and Second Interception, 3 Carriers & Fighters, pp. 1069-1070, *infra*), including Fighter Complements, unless they have a Temporal Sensor.

- ✓ It may be possible to create Ambush Mode for one Combat Round for regular ships by use of Doctrinal Templates (see Combat Formations, 4 Colleges, p. 503, *supra*) developed for that purpose. This would represent the regular sort of ambush based on terrain or ideas (like faking damage and debris, à la Star Trek OS), *ut supra*. The ambush should not be automatic in a Doctrinal Template, but if successful, Ambush Mode is enabled for one Combat Round, and these rules provide general procedures for ambush by Doctrinal Template, though there may be some small necessary differences. There are other possible tactics that act like ambushes, for example, meeting engagements that quickly become envelopments (e.g., Braddock's defeat near Pittsburgh in 1755, or the Battle of Ia Drang in Vietnam, 1965) may seem like ambushes.
- Asymmetric Warfare: Like Combat Screening for Fighters and Carriers, Protective Fire and Switch Fire naturally developed as a defense against ships in Ambush Mode. The idea is to 'ambush the ambushers' by having a specific ship assigned and waiting for the ambushers to appear:
  - ✓ A unit assigned to Switch or Protective Fire for the Combat Round must be assigned a unit which it is protecting, the unit can be itself or another ship or base.
  - ✓ Ship Missiles and Fighters may not participate in or be used in Switch Fire or Protective Fire assignments. Ship Missiles cannot be fired while in Protective Fire mode.
  - ✓ A unit assigned to Switch or Protective Fire may not be also assigned to Combat Screen any unit, including the same unit. Those are two different tasks.
  - ✓ Units given Switch Fire Combat Orders must also list one normal opposing unit as the target for the Combat Round (in addition to the unit it is protecting).
  - ✓ A unit assigned to Protective Fire will do nothing else for the Combat Round.
  - ✓ Whenever an opposing unit in Ambush Mode attacks the protected unit, the unit with Switch Fire or Protective Fire Combat Orders must respond by firing at the ambusher before it can disappear again and change speeds or vector.
    - Firing at, hitting, or destroying the attacking T-Ship or cloak-equipped unit will not prevent that unit from executing its attack this Combat Round. Protective and Switch Fire is opportunistic instant retaliation. Sort of like my mother's famous backhand.
  - ✓ T-Ships and cloaked warships in Ambush Mode may not be attacked by opposing ships and bases except by units with Protective Fire or Switch Fire Combat Orders.
  - ✓ T-Ships and cloak-equipped units may not be assigned to Switch Fire, they may only be assigned to Protective Fire, as they are primarily ambushers.

- ✓ T-Ships and cloak-equipped regular units in Ambush Mode may not target opposing T-Ships and cloak-equipped regular units currently in Ambush Mode, *except by* Switch Fire or Protective Fire.

The use here of asymmetric warfare is not the narrow modern use, which typically refers to terrorist, guerilla warfare and insurgencies against conventional forces. But it does fit within the definitions of *asymmetric warfare* found on the internet, for example, Merriam-Webster online dictionary at *asymmetric warfare*: warfare that is between opposing forces which differ greatly in military power and that typically involves the use of unconventional weapons and tactics (such as those associated with guerrilla warfare and terrorist attacks). RAND simply defines it as: conflicts between nations or groups that have disparate military capabilities and strategies. In this case, the attackers are using ‘ambush’ and the defenders are using what old WWII wargamers would call ‘opportunity fire’ for reaction.

- ✓ See additionally discussion of offset strategies, 2 Special Operations, p. 1285, *infra*.
- Aegis: Any unit assigned to Protective Fire has a 50% chance of being able to fire at the first attacking ambusher if the protected target is attacked. The chance is increased by 25% if the ambusher attacks a unit assigned to Protective Fire. Units assigned to Protective Fire will only be able to fire at one ambush attack in the Combat Round unless that unit is capable of multiple attacks per Combat Round and will attempt to fire at ambushers as long as it has unused attacks. A unit in Protective Fire cannot fire Ship Missiles. If the unit with Protective Fire Combat assignment is Engaged by enemy Fighters or Ship Missiles, the chance of executing the Protective Fire is reduced by 15%, 30% or 45% depending on the Era of the attacking Fighters (see Encounter With Bright Lights, 2 Carriers & Fighters, p. 1057, *infra*).
  - ✓ In the Andromeda episode, “The Tunnel at the End of the Light” (2002), they were engaged in battle with an extradimensional enemy that had “phase-out” capabilities (sort of like a T-Ship). The solution, which they called an asymmetric response, was to “carpet bomb space” by forming a hedgehog with the ships continuously firing outward to random areas to catch the alien ships whenever they uncloaked (“It’s an area denial strategy”). This is similar to anti-aircraft fire in WWII or Napoleonic Wars infantry squares. This is not exactly what is described in GGDM as Protective/Switch Fire because such a tactic would require nearly endless energy supply and weapons that function infinitely under continuous fire (a modern machine gun cannot fire continuously, the barrel turns glowing red hot after a minute and may be damaged or cause a cook-off reaction). But with the technology of GGDM, it cannot be said definitely that this is not possible in GGDM Protective/Switch fire except that such fire would hamper the maneuver and operation of their own conventional warships against regular enemies; a hedgehog formation is inherently immobile.
- A Twitch’n for a Switch’n: Any unit assigned to Switch Fire follows the same rules as Protective Fire above, but may fire Ship Missiles and the basic chance of being able to fire at an ambusher is 30%. All available attacks of the Switch Fire unit will be used on ambushers until exhausted. If, during Ship Missile resolution, the Switch Fire protection has not been activated, the unit in Switch Fire will fire at the assigned regular enemy target instead, but that target receives two Defensive Shifts as a result of the divided attention of the attacker.
  - ✓ If an attacking ambusher is not destroyed by Switch or Protective Fires, the ambusher returns to Ambush Mode at the end of the Combat Round.

➤ **A FAP in the Night:** Another tactic is to use Fighter Complements in the Fighter Area Patrol (FAP) ‘combat reconnaissance’ assignment.<sup>4</sup> Fighter Complements may be assigned to FAP to attempt to curb the effectiveness of enemy ambushers and/or provide intelligence and pressure on enemy dispositions. A FAP assignment uses *both sorties* of a Fighter Complement for the Combat Round (see Blacksheep, 2 Carriers & Fighters, p. 1054, *infra*) and a Fighter Complement flying FAP may not be targeted by enemy units and may not target enemy units.<sup>5</sup> The essence of the FAP is that nothing covers an area of space better than a circus swarm of fast little Fighters spread thinly sweeping the area with their sensors continuously, providing intelligence on elusive targets (e.g., the Battle of Midway, June 1943). They also provide a skirmish line, pickets, and sufficient threat to channel enemy ships away from flanking areas.

- ✓ A Fighter Complement flying FAP may either provide one Defensive Shift or Offensive Shift to a friendly unit, or increase the chance of a successful Protective Fire Attempt by 10% per 15 RPs of Fighters (*of any Era*) used during each Combat Round (this number can be adjusted if too easy). This latter is not a combat shift, but instead, applies to the *chance* of using the Protective Fire when a target appears.
- ✓ Any unit may only receive one Defensive or Offensive Shift from FAP in any round, and Combat Shifts from FAP must be allocated with the targeting and Combat Screening assignments before the Combat Round.
- ✓ Similarly, a unit assigned to Protective Fire may only receive one bonus from FAP per round. This is not available to Switch Fire assignments.

FAP may also be used in non-Ambush Mode situations, as it provides one shift to regular units. Thus, this is available in all combats where a side has some fighters available. For simplicity purposes, the RP value of the Fighter Complement performing FAP is irrelevant, but both sorties must be used. No modification of RP value is received for using both sorties.

**Slip-sliding Away:** Ships that began the round in Ambush Mode may automatically retreat from any Ship Combat at the end of any round *in which they do not attack* unless they were forced to reveal to defend a colony to cancel a Colony Combat. If the only ships remaining on one side are all in Ambush Mode and they all retreat, the combat is over; the other side will be notified.

---

*“Some people have got a mental horizon of radius zero and call it their point of view.” – David Hilbert<sup>6</sup>*

---

**Mountains of the Mind:** Most of the greater victories in military history were won by hiding ambushes behind ideas.

- ✓ At the Battle of Leuctra in 371 B.C. the Spartans donned their armor and formed a single line of phalanxes eight rows deep; the Spartans had become accustomed to lining up, marching forward, and beating their opponents in battle with sheer brawn. The Thebans also lined up, but on the left side, they formed a phalanx of their best troops fifty rows deep, leaving the rest of their line woefully thin and undermanned. The two sides advanced, the Thebans advanced with their left while refusing the remainder of the line which was thinner and contained troops of lower quality and less armaments. The Theban left hit the Spartan right and overwhelmed them by sheer

weight, Spartan King Cleombrotus I was killed fighting as the Spartans routed. This defeat shattered the myth of Spartan military invincibility. Philip II of Macedon, father of Alexander the Great, lived as a hostage in Thebes around that time and may have been greatly influenced by the Theban victory based on effective tactics; Philip II later defeated the Thebans and Athenians at the Battle of Chaeronea in 338 B.C.<sup>7</sup>

In 1278 A.D., 1,639 years after Leuctra, Holy Roman Emperor Rudolf I – a relatively minor Swabian Count who was elevated because the Electors thought he was controllable – fought the vengeful King Ottokar II of Bohemia at the Battle of Marchfield in Lower Austria. The infantry of both sides were left to guard the camp, while the mounted knights tilted in a large green grass covered flood plain between a forest and a river. Ottokar had more knights and they were more heavily armored and armed. The battle started in the mid-morning when it was getting hot.

Rudolf had his own force of knights, making this one of the largest knight battles in European history, along with about 5,000 Cuman horse archers who drove off Ottokar's light cavalry and harassed his knights. Still, the main battle was the collision of the two masses of mounted knights in a massive flat-ground slugfest under the hot August sun in a line from the woods to the river. Ottokar's heavier armored knights were winning, slowly driving back Rudolf's knights, but were becoming heat exhausted. At the key moment, 200 German knights charged from the woods on Ottokar's right flank (uh-oh, no flank guards, no scouts in the woods); Ottokar tried to shift his troops to refuse the right flank, but it turned into confusion and rout. Ottokar was killed as his forces fled the field pursued by Cuman horse archers.

The surprise flank charge of 200 knights hidden in the woods – a very small number in comparison to the total number of combatants, though knights were the king of the battlefield in that day – was so rare and un-chivalric that their commander, Ulrich von Kapellen, apologized in advance for what they were about to do. It was also the only way that Emperor Rudolf could win, like General Epaminondas of Thebes. Chivalric battle, like the Spartans, required the sides to line up and fight a contest of brawn, literally beating the other side into submission (e.g., The Combat of the Thirty in 1351). The ambush at Marchfield in 1278, while nominally a physical ambush by a small force, was also an ambush hidden behind an idea: Chivalric Battle. Rudolf won by bending the rules.

- ✓ Chivalric battle was very much like chess, whose ancestor had spread in European courts about two centuries earlier: In chess, nothing is hidden, and no flanks exist until opened either by maneuver or by elimination of pieces.

The victory secured Rudolf of Habsburg as Holy Roman Emperor, which he successfully translated to his sons by appointing them Dukes of Austria and Styria. From this, the minor House of Habsburg grew over the next centuries to become the dominant dynasty (eventually opposed by the Bourbons, Hohenzollerns and Romanovs) ruling both the Holy Roman Empire and most of Spain, and much of the New World, Africa, and eventually reaching the Pacific Ocean.

- ✓ Conversely, with the death of Ottokar II, rule of the Přemyslid dynasty passed to his 6-year old son, who (unlike Henry VI of England) grew to a capable ruler, Wenceslaus II, King of Bohemia and Poland. But his son, Wenceslaus III was assassinated at the age of 16 after renouncing the crown of Hungary from the extinct House of Árpád and losing territories in Poland, and thus ended the Přemyslid dynasty in 1306.

Now, by comparison, the stunning English victory at Agincourt in 1415 was not any sort of ambush hidden behind an idea. The French knights already had experiences against the new English weapon, the Welsh longbow, they had been disastrously defeated by the longbowmen at the Battle of Crecy in 1346, with a follow up lesson at the Battle of Poitiers in 1356, where John II, King of France, his youngest son, and many major French nobles, were captured. Instead of an ambush hidden behind ideas, the French defeat at Agincourt in 1415 was a refusal to adapt.

*“Someone may say, are you not ashamed to be so taken in like a fool?  
Yes, I should be ashamed, if it had been an open enemy who had so  
deceived me. But, to my mind, when friend cheats friend, a deeper stain  
attaches to the perpetrator than to the victim of deceit.”*

– Xenophon, The Persian Expedition (aka Anabasis) (about 370 B.C.)

## Endnotes.

<sup>1</sup> Citation: Ted Streaver, “The World’s First Air Hijack!” WW2 People’s War, BBC, November 14, 2003 (Article Id. A2040643).

<sup>2</sup> Commentary: Marshal Adm. Yamamoto was killed in April 1943 when his transport plane was shot down by American P-38s in a specific mission to intercept and kill him while touring the Japanese forces. The Americans had learned his itinerary and knew where he would be because they had broken the Japanese naval encryption.

<sup>3</sup> Commentary: One of the best cloaking devices was invented by writer Douglas Adams; it is called the “somebody else’s problem field.” It can hide a flying saucer sitting on the ground in plain sight of a cricket match. Anyone who looks at it sees *something*, thinks it’s somebody else’s problem and looks away. Just like the real world:

- ✓ “This is a story about four people named Everybody, Somebody, Anybody and Nobody. There was an important job to be done and Everybody was sure that Somebody would do it. Anybody could have done it, but Nobody did it. Somebody got angry about that, because it was Everybody’s job. Everybody thought Anybody could do it, but Nobody realized that Everybody wouldn’t do it. It ended up that Everybody blamed Somebody when Nobody did what Anybody could have.” – anonymous, found on office posters.

<sup>4</sup> Commentary: FAP in the U.S. Marines means “Fleet Assistance Program” by which units can borrow Marines from other units to fill manpower requirements for jobs that don’t require specialized schooling. In a combat unit, that usually equates to a sort of vacation or break, for example, some may be ‘fapped out’ to work as the gym assistant for six months or a year, meaning they report to the weight room every day instead of their regular unit.

On return from my second deployment to Okinawa in November 1988, I was ‘fapped-out’ to the SACO (Substance Abuse Control Office) section of HQ Battalion (the S-1 HQ section), 1<sup>st</sup> Marine Division, which meant that I moved to a high rise barracks in mainside Camp Pendleton, attached to HQ Company, HQ Battalion. The assignment required a Marine Corporal or Lance Corporal eligible to be promoted to Corporal, who had no alcohol or drug-related incidents on his record. I believe I may have been the only one in my battery, and one of the few in the artillery battalion who qualified. I was also nearing the end of my enlistment, and the FAP assignment may have been intended to encourage me to reenlist. I remained attached to the SACO for over eight months, until discharged.

I returned to California in September and October 1989, under subpoena, to testify as a witness at three Courts Martials that related to my work in SACO earlier in the year. This really messed up my first semester of college.

<sup>5</sup> Commentary: The way to eliminate a FAP is to destroy their Carrier or provide a credible threat. It’s a tactical dynamic.

<sup>6</sup> Citation: Alternatively, “Sometimes it happens that a man’s circle of horizon becomes smaller and smaller, and as the radius approaches zero it concentrates on one point. And then that becomes his point of view.” – David Hilbert quoted by Constance Reid, Hilbert-Courant (1984), p. 174.

<sup>7</sup> Commentary: The severe limit on the number of Spartiates made Spartan commanders ultra-conservative.

## Battle off Samar, October 25, 1944

Excerpt from Wikipedia article, “Battle of Leyte Gulf,” September 22, 2018

### Prelude

Halsey’s decision to take all the available strength of 3rd Fleet northwards to attack the carriers of the Japanese Northern Force had left San Bernardino Strait completely unguarded.

Senior officers in 7th Fleet (including Kinkaid and his staff) generally assumed Halsey was taking his three available carrier groups northwards (McCain’s group, the strongest in 3rd Fleet, was still returning from the direction of Ulithi), but leaving the battleships of TF 34 covering the San Bernardino Strait against the Japanese Center Force. In fact, Halsey had not yet formed TF 34, and all six of Willis Lee’s battleships were on their way northwards with the carriers, as well as every available cruiser and destroyer of the Third Fleet.

Kurita’s Center Force therefore emerged unopposed from San Bernardino Strait at 03:00 on 25 October and steamed southward along the coast of the island of Samar. In its path stood only the 7th Fleet’s three escort carrier units (call signs ‘Taffy’ 1, 2, and 3), with a total of sixteen small, very slow, and unarmored escort carriers, protected by a screen of lightly armed and unarmored destroyers and smaller destroyer escorts (DEs). Despite the losses in the Palawan Passage and Sibuyan Sea actions, the Japanese Center Force was still very powerful, consisting of four battleships (including the giant *Yamato*), six heavy cruisers, two light cruisers and eleven destroyers.

### Battle

Kurita’s force caught Rear Admiral Clifton Sprague’s Task Unit 77.4.3 (‘Taffy 3’) by surprise. Sprague directed his carriers to launch their planes, then run for the cover of a rain squall to the east. He ordered the destroyers and DEs to make a smoke screen to conceal the retreating carriers.

Kurita, unaware that Ozawa’s decoy plan had succeeded, assumed he had found a carrier group from Halsey’s 3rd Fleet. Having just redeployed his ships into anti-aircraft formation, he further complicated matters by ordering a “General Attack,” which called for his fleet to split into divisions and attack independently.

The destroyer *USS Johnston* was the closest to the enemy. On his own initiative, Lieutenant Commander Ernest E. Evans steered his hopelessly outclassed ship into the Japanese fleet at flank speed. Johnston fired its torpedoes at the heavy cruiser Kumano, damaging her and forcing her out of line. Seeing this, Sprague gave the order “small boys attack”, sending the rest of Taffy 3’s screening ships into the fray. Taffy 3’s two other destroyers, *Hoel* and *Heermann*, and the destroyer escort *Samuel B. Roberts*, attacked with suicidal determination, drawing fire and disrupting the Japanese formation as ships turned to avoid their torpedoes. As the ships approached the enemy columns, Lt. Cdr. Copeland of *Samuel B. Roberts* told all hands via bull horn that this would be “a fight against overwhelming odds from which survival could not be expected.” As the Japanese fleet continued to approach, *Hoel* and *Roberts* were hit multiple times, and quickly sank. After expending all of its torpedoes, *Johnston* continued to fight with its 5-inch guns, until it was sunk by a group of Japanese destroyers.

As they were preparing their aircraft for attack, the escort carriers returned the Japanese fire with all the firepower they had – one 5 in. gun per carrier. The officer in tactical command had instructed the carriers to “open with pea shooters,” and each ship took an enemy vessel under fire as soon as it came within range. *Fanshaw Bay* fired on a cruiser, and is believed to have registered five hits, one amidst the superstructure that caused smoke. *Kalinin Bay* targeted a Myoko-class heavy cruiser, claiming a hit on the cruiser’s No. 2 turret, with a second just below the first. *Gambier Bay* sighted a cruiser, and

claimed at least three hits. *White Plains* reported hits on multiple targets, two between the superstructure and forward stack and another on the No. 1 turret of a heavy cruiser.

Meanwhile, Rear Admiral Thomas Sprague (no relation to Clifton) ordered the sixteen escort carriers in his three task units to immediately launch all their aircraft equipped with whatever weapons they had available, even if these were only machine guns or depth charges. Collectively, Sprague had a total of some 450 aircraft from the carriers at his disposal. Although most of these aircraft were older models, such as the FM-2 Wildcat and TBM Avenger torpedo bombers, the fact that the Japanese force had no air cover meant that American planes could attack unopposed. Consequently, the air counterattacks were almost unceasing, and some, especially several of the strikes launched from Felix Stump's Task Unit 77.4.2 (Taffy 2), were heavy.

The carriers of Taffy 3 turned south and retreated through the shellfire. *Gambier Bay*, at the rear of the American formation, became the focus of the battleship *Yamato* and sustained multiple hits before capsizing at 09:07. Several other carriers were damaged but were able to escape.

### **Admiral Kurita withdraws**

The ferocity of the defense seemingly confirmed the Japanese assumption that they were engaging major fleet units rather than merely escort carriers and destroyers. The confusion of the "General Attack" order was compounded by the air and torpedo attacks, when Kurita's flagship *Yamato* turned north to evade torpedoes and lost contact with the battle. Kurita abruptly broke off the fight and gave the order 'all ships, my course north, speed 20', apparently to regroup his disorganized fleet. Turning again towards Leyte Gulf, Kurita's battle report stated he had received a message indicating a group of American carriers was steaming north of him. Preferring to expend his fleet against capital ships rather than transports, Kurita set out in pursuit and thereby lost his opportunity to destroy the shipping in Leyte Gulf.

After failing to intercept the non-existent carriers, Kurita finally retreated towards San Bernardino Strait. Three of his heavy cruisers had been sunk, and the determined resistance had convinced him that persisting with his attack would only cause further Japanese losses. In addition, Kurita's decision was no doubt influenced by the fact that he did not know that Ozawa had lured Halsey's entire fleet away from Leyte Gulf. Poor communication between the separate Japanese forces and a lack of air reconnaissance meant that Kurita was never informed that the deception had been successful, and that only a small and outgunned force stood between his battleships and the vulnerable transports of the invasion fleet. Thus, Kurita remained convinced that he had been engaging elements of the 3rd Fleet, and it would only be a matter of time before Halsey surrounded and annihilated him. Rear Admiral Clifton Sprague wrote to his colleague Aubrey Fitch after the war, "I ... stated [to Admiral Nimitz] that the main reason they turned north was that they were receiving too much damage to continue and I am still of that opinion and cold analysis will eventually confirm it."

Almost all of Kurita's surviving force escaped. Halsey and the 3rd Fleet battleships returned too late to cut him off. *Nagato* and *Kongō* had been moderately damaged by air attack from Taffy 3's escort carriers. Kurita had begun the battle with five battleships. On their return to their bases, only *Yamato* and *Haruna* remained battle-worthy.

As the desperate surface action was coming to an end, Vice Admiral Takijirō Ōnishi put his 'Special Attack Force' into operation, launching kamikaze attacks against the Allied ships in Leyte Gulf and the escort carrier units off Samar. The escort carrier *St. Lo* of Taffy 3 was hit by a kamikaze aircraft and sank after a series of internal explosions.

*See Appendix CST – Combat Shifts & Situations Tables*  
*See Appendix EPAT1 – The Existential Patents*  
*See Appendix EPAT2 – Existential Patents Quick Summary*

[Men screaming over wireless]

**Garner:** [on the phone with engineering] *Oh, then the spinner's fine? It's gotta be a sensor. Just pull it. No, no, listen to me. Listen to me. Just pull it, pull it!*

[Another large explosion.]

**Hoshi:** *Nuclear detonation. We have structural damage along the topside heat exchanger. We can't take much more of this.*

**Apollo:** *How long before those drives are back up?*

**Garner:** *I don't know. They don't seem to understand. I need to go down there. You have the con.*

**Apollo:** *Yes, sir. I have the con. [looking around, moment of hesitation] Make for the nearest base ship. And roll us over to keep our top side out of their line of fire. Hoshi, contact Starbuck in case – tell them I've assumed command. And to concentrate on protecting our top side.*

**Hoshi:** *Aye, sir.*

**Starbuck:** *Wilco, Pegasus. We got your back.*

**Thorton:** *Base ship dead ahead, we're closing rapidly! We can't keep taking hits like this, Major.*

**Apollo:** *Helm. Steady as you go. Have the bow battery stand by for a salvo fire. Target their center axis.*

**Helm:** *Yes, sir.*

**Apollo:** *See if we can't cut down the odds. We need those FTLs fixed soon. Or we're dead.*

**Thorton:** *Twenty-two hundred. Main battery has a firing solution.*

**Apollo:** *And fire.*

[The Pegasus fires at one of the Basestars, inflicting major damage.]

**Thorton:** *Base ship's turning away. He's – he's frakkin' running, Major! But the other two aren't. They're coming hard. Helm – left, full.*

**Hoshi:** *Starbuck reports Vipers are skosh ammo, Major. We're down to throwing rocks at the bastards. We gotta haul ass outta here now, sir! Sir!*

**Apollo:** *Come on, Garner.*

**Hoshi:** *Engineering's reporting a green board. FTL drive online and ready.*

**Apollo:** *Okay, commence jump prep. Bring our birds home.*

[The Vipers are landing on Pegasus.]

**Starbuck:** *Pegasus, Starbuck. Nobody behind me but toasters. Now get us outta here!*

– Battlestar Galactica, “The Captain’s Hand” (2006)

**Prehistoric Alien Space Carriers:** Don't tell me that you have never seen the prehistoric cave painting found in Tanzania, discovered in 2003 (it may not have been there previously), that clearly shows the Battlestar Galactica – originally mistaken for a predatory lizard – under the moon goddess? Erik von Däniken had nothing to do with it!

**Death of a Thousand Stings:** In the late 1960s, Star Trek introduced television to Harry Mudd and a new frontier. In the late 1970s, Star Wars (1977) innovated space adventure on the big screen. Part of the innovative cinematic experience of Star Wars were the combats between fleets of warships, and in particular, the thrilling one or two-man space-fighter scenes.

Following on the success of Star Wars, the original Battlestar Galactica (1978) series introduced science-fiction audiences to ‘space aircraft carrier’-type operations. In both the old and the new

series, the destruction of the Battlestar Pegasus showed that the Battlestars did have some punch from their forward-facing guns (new series) or forward nuclear missiles (old series) at close range, but both series still center tactically on the operations of the Battlestar as an ‘aircraft carrier in space’ with hot-shot pilots (and beautiful girlfriends) as main characters, of course. The mid-1990s (post Star Trek dominance) revived fighters and carriers in space, for example, the series *Space: Above and Beyond* (1995-1996) and *Babylon 5* (1994-1998).<sup>1</sup>

- ✓ “A long time ago in a galaxy far, far away, George Lucas added Space Fighters to the standard arsenal of SF warfare tropes. For Hollywood it was love at first flight, partly for the cool special effects.... At SFConsim-1 the consensus has been trying to stuff the things back in the toy box for the last eight years ... but no one listens to us. Lucas did not invent space fighters, of course. I don’t specifically recall any in the SF I read growing up, but I vividly remember one in an animated series I used to watch in grade school. ... Space fighters didn’t really catch on till Lucas, though – the clearest evidence being that Trek had nothing of the sort.” – Rick, “Space Fighters, Not.” *Rocketpunk Manifesto* (blog), August 26, 2007.
  - “Credit to *Babylon 5*: not only did its Starfuries have less overt similarity to atmospheric jet fighters, they sometimes even maneuvered like spacecraft instead of airplanes – an all but unique Hollywood tribute to Sir Isaac Newton.” *Id.*

The Buck Rogers television series shortly followed BSG. Struggling game companies of the late 1970s through the 1980s sought to cash in on the popular terminology introduced by the huge success of 1970s science-fiction movies. For example, when Avalon Hill republished the *Stellar Conquest* boardgame in the early ‘80s,<sup>2</sup> they renamed Metagaming’s dreadnought to “Death Star” (with the appropriate silhouette) I remember another 1970s space-opra board game where the carrier-ship silhouettes looked suspiciously like the *Galactica*. Similarly, the designers and manufacturers of the *Traveller Role Playing Game* felt need to add “carriers” and “fighters” to the game, and also introduced (in *Fighting Ships*) the Death Star-like *Tigress Class Dreadnought*.

I played both of these games in the 1980s. *Stellar Conquest*, is the very distant ancestor of this game, which started in December 1992 as a set of “optional advanced rules for *Stellar Conquest*” and *evolved* into *Gestalt Genesis-Day Million*.<sup>3</sup> I also had great respect for the background materials developed for *Traveller*; the *History of the Imperium Working Group* did a great job,<sup>4</sup> and it is too bad that *MegaTraveller* failed.<sup>5</sup> The concept was great, but it was too late.

- ✓ The inspiration for a set of ‘optional advanced rules for *Stellar Conquest*’ probably came from Max’s *Advanced Rules for Axis & Allies* board game, of which I had a photocopy (in the prehistoric days, there were many photocopies floating around). The AH version of *Stellar Conquest*, in addition to *Death Stars* also had a warship called a *Fighter*, but it was a medium capital ship, not like the fighters on the *Big Screen* or television. Max’s *Advanced rules* were mostly incorporated into later editions of *Axis & Allies*, but *GGDM* will never be incorporated into *Stellar Conquest*!

But there was one major flaw in the introduction of carriers and fighters into *Traveller RPG* – despite all of the meticulously worked out background and doctrinal materials – *Traveller doctrine* never really described what exactly carriers and fighters were supposed to be doing in a fleet combat. They were clearly added as an afterthought, to pull in the *Battlestar Galactica* and *Star Wars* fans.<sup>6</sup>

- ✓ Star Wars and the original Battlestar Galactica series have connections, lawsuits were filed claiming that BSG stole ideas from Star Wars and that Star Wars stole ideas from Buck Rogers. Isaac Asimov said that BSG was Star Wars over again. He was referring, of course, to the original Battlestar Galactica television series. Even so, I disagree, but I can see why he said that. Of course, there is no comparison to the development of the stories since then. Information from Wikipedia article, “Battlestar Galactica (1978 TV series),” captured July 8, 2018.

By 1994, the game had begun evolving in the direction of a larger design, not confined to an expansion of Stellar Conquest. I began thinking of introducing an alternate combat system, something vastly different from the CRT-based combat resolution (the game still had a CRT at the time, before going flat d10 like the Red Storm Rising board game). One morning in the spring of 1994 when I was walking to college, I started thinking about BSG, Traveller and adding Carriers and Fighters to the “Advanced Stellar Conquest” design, and I realized that Traveller was rather vague on fighters and carrier starships. When considering adding Carriers and Fighters to the evolving game design, I first had to decide exactly what they were supposed to be doing in the game and in combat. In many game designs, I have seen things, ideas, units, cards, that were thrown into the game because they sounded good, but are never or rarely ever used, because they serve no purpose, have no special niche, or there are better options. I refused to repeat the perceived errors, and the result was the following *tactical treatise* on space Carriers and Fighters.

[Starbuck inside the organic interior of the dead Cylon Raider crashed on a rocky moon with a poisonous atmosphere]

*“First on the list: seal you up...”*

[Seals the bullet hole stuffing her bag into it. With the Raider sealed and pressurized, now she can breathe without the tube]

*“...and figure out what controls what.”*

[Sniffing]

*“One of us needs a bath... ugh. All right... now you’re gonna teach me how to fly. ... Every flying machine has four basic controls: power, pitch, yaw and roll. Where are yours?”*

[Touches something and the Raider fires]

*“Safety tip number one: don’t touch that.”*

– Battlestar Galactica, “You Can’t Go Home Again” (2005) (emphasis added)

**Fighters:** Fighters are the classic very small, agile, fast, and maneuverable combat spacecraft used for attack, raid, bombing, and reconnaissance. In human terms, they usually have one or two crew members – pilot and/or pilot and co-pilot.<sup>7[Definitions]</sup>

- ✓ “So ... what exactly is a space fighter, and what does SFConsim-1 have against them? If *Star Wars*, *Battlestar Galactica*, and *Babylon 5* are anything to go by, a space fighter is exactly what you would imagine: the spacegoing equivalent of a DeHavilland DH-4 or an F-16. It is a small spacecraft, about the size – and, oddly, roughly the shape – of a present-day fighter jet. It has a single pilot or at most a two-man crew, strapped into a cockpit with minimal habitability, clearly intended for short

missions of only a day or so at most. We see them whooshing and gyrating across the screen, zapping away at each other. Now and then they also destroy the odd stray Death Star, which with typical bad-guy carelessness is designed to obliterate whole planets but cannot defend itself effectively against killer gnats.” – Rick, “Space Fighters, Not.” Rocketpunk Manifesto (blog), August 26, 2007.

All Fighters in GGDGM are assumed to be space *and* atmospheric capable, no distinction is made on this point. Fighters have limited life support and little armor, their best protection is small size, agility, acceleration, and speed (like a common housefly). It must be assumed that Fighters possess significant operational range in-system, for combat and patrol purposes, but lack interstellar flight capability. It must also be assumed that Fighters possess sufficiently powerful weapons to destroy other Fighters, and to pose a threat to the starships when attacking in mass.

- Punk-it Rocket: In science-fiction settings where the primary means of interstellar transportation was via ‘gates’ or ‘jump gates’ into hyperspace, Fighters have frequently had the ability to travel between stars by activating gates to assist them or allow them access to hyperspace.

Unnoticed by most, the movie Independence Day (1996) introduced a new, intriguing operational variation on the mothership and alien space-fighters theme. The alien fighters in Independence Day depended on a field projected by the mothership for their propulsion. This changes the operational factors in a couple of interesting ways: Presumably, the fighters would never run out of fuel (and do not need to carry the extra reaction mass) but are restricted to the local range of the field from the mothership. Such Fighters may be cheaper and may pack more punch per ton than fuel-thrust-driven fighters. But the range limitation of the field is the big concern and was their undoing in the movie; the mothership has to get close to the enemy in order to project the fighters (and the atmosphere apparently limited the range of the field), thus exposing the mothership, and the fighters are limited explicitly to the range (and strength) of the field projected by the mothership.

- ✓ “Speed in space is all relative to begin with; the more useful measure for a spaceship is delta v, ‘change in velocity’ – especially, how much you can change your velocity before you run out of gas. For any given propulsion technology, the way to get more delta v isn’t a more powerful engine but a bigger fuel tank. What a powerful engine does give you is higher acceleration – so you can achieve any given delta v more quickly. ‘Bigger fuel tank’ and ‘more powerful engine’ are also relative – to the size of the ship, more specifically its mass, since that’s what you’ve got to push around. They are also contradictory in a sense – a big propellant supply means more the engine has to push around, so it is hard to get both sprightly maneuver performance (high acceleration) and extended maneuver capability (ample delta v) in the same ship.” – Rick, “Space Fighters, Not.” Rocketpunk Manifesto (blog), August 26, 2007.
- On the Flight Deck: Fighters may be constructed at any Friendly, Converted, or Naturalized Colony by activation of the Construction Power for the purpose of Colony Enhancement, after obtaining the 1<sup>st</sup> Era Fighters Existential Patent. Construction of Fighters includes training pilots and ground crews, along with support and maintenance equipment.

Fighters are an Enhancement Technology, therefore, they cannot exist by themselves as a ‘game unit’; Fighters must always either be part of a colony’s defenses or on a Carrier, where they can operate, or stored onboard a Logistical Ship where they can be transported and

transferred to a colony or Carrier, but cannot operate. A position is not required to have Carriers to own Fighters, and vice versa. Fighter Complements on colonies *may initiate and join combats* in their system, *making their colony equal to an armed system boat in that sense*.

A newly constructed Fighter RP is ‘ready to fight.’ Within GGDM, Fighters are assumed never to be without pilots and ground crew, as they must either be attached to a colony or Carrier starship.

- ✓ However, this is not always historically true; for example, the Japanese in WWII transferred fighter squadrons, without bringing their ground crews, in an attempt to obtain surprise local superiority. Ground crews in GGDM are assumed to have all of the training, technical knowledge, supplies and specialized equipment of modern air forces, however, as detailed by John W. Whitman in the article “Japan’s Fatally Flawed Air Forces in WWII” (Aviation History, September 2006, now available at <http://www.historynet.com/japans-fatally-flawed-air-forces-in-world-war-ii-2.htm>), Japanese ground crews were ill-prepared, ill-equipped, mistreated, exhausted, and in low morale, and not properly supported by construction assets.

*All Fighters of an Era* attached to a unit or colony location form a *single* Complement, a single location can have multiple Era complements. A Fighter Complement is a unit in combat, even though it is a colony or ship enhancement, see Colony Defense Bases, 2 Combat, p. 954, *supra*. Fighters are combat units capable of initiating combat (unlike Defense Bases).

- Next Generation Fighters: Existing Fighters cannot be ‘upgraded’ upon passing to the next Era; 1<sup>st</sup> Era Fighters will always be 1<sup>st</sup> Era Fighters. Positions are free to design and produce variations and different types of Fighters via Patents, and to add Enhancements if possible, and Fighters can benefit from some Continuous Operational Technologies as well. However, to obtain the benefit of the 2<sup>nd</sup> and 3<sup>rd</sup> Eras, each position will need to develop a new, next generation Patent for 2<sup>nd</sup> and 3<sup>rd</sup> Era Fighters each.

It’s the nature of the thing. Could you upgrade an existing WWI biplane fighter to a WWII fighter? Could a WWII prop-driven fighter be upgraded to a 1950s-60s jet fighter?<sup>8</sup>

- ✓ The venerable F-14 Tomcat operated in the U.S. military forces from 1974 until the Navy retired it in 2006. Because of the length of service, it was upgraded several times with newer technologies. The F-14 was a Fourth Generation Fighter (as were the later F-15, F-16, and F-18) and was one of the top air superiority fighters in the world. Fifth Generation Fighters include the F-22 and F-35 and the newest stealth fighters of the U.S., Russia, and China. The F-35, criticized for cost overruns and technical development difficulties, was finally accepted for service in 2015-2016 by the U.S. Air Force and Marine Corps, and the navy version, the F-35C still has not been delivered. The F-35’s stealth technology may already be ‘old’ but planners have projected its service to 2070.

---

*“Several German warships remained to be destroyed according to treaty terms, and official tests were held off the Virginia coast in July, 1921. It was of course the duty of navy officers to be skeptical until [Gen. ‘Billy’] Mitchell proved his case, but their attitude betrayed an unwarranted hostility as the airmen sank a submarine and cruiser with comparative ease. There remained the sturdy battleship Ostfriesland, and in twenty-one minutes Mitchell’s planes wrote a new chapter in tactical history by*

*sending it to the bottom with six one-ton bombs. Without a direct hit having been made, the underwater explosions of the 'near misses' ripped great holes through the four steel skins of the hull. As the shuddering wreck went down, the observers felt that they were watching the end of an era. ...*

*The first landing on the deck of a ship occurred in 1917, and just before the Armistice the British launched the converted liner Argus as the world's first aircraft carrier. Naval men of 1921 were still dubious as to the new type of warship, however, until they had more evidence as to the effects of bombs. The tests provoked by Mitchell thus had their influence on sea tactics, though he met resentment from officers later described by Admiral Sims as 'hidebound, unfitted and uneducated.' The retired naval commander, a lifelong champion of tactical progress, declared himself for carriers and a strong air arm; and in 1925 the converted battle cruisers Saratoga and Lexington were launched with a capacity of from seventy to eighty planes.*

*No doubt Mitchell's methods of publicizing the issue were flamboyant and often in-subordinate, but genius is customarily pardoned by history after its ideas are adopted. In 1925 President Coolidge ordered the flier court-martialed, though editorial comment had it that the army and navy were actually on trial. Mitchell listed a hundred recommendations he had made for the betterment of military aviation, all of which had been ignored. He testified as to the strained relations between army and navy officers of Pearl Harbor, warning that the vital Pacific base could be surprised."*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 763-764 <sup>9</sup>

**Carriers:** A Carrier is a highly specialized type of warship (see definition of warship in GGDM, Warships, 1 Combat, p. 941, *supra*) designed to transport and support the operation of large numbers of Fighters: The Fighters become the main weapon of the Carrier; a Carrier without Fighters is a very poor warship indeed.

- ✓ First Era Carriers may be built *to a maximum size of 100 RPs* at any eligible colony with an Orbital Shipyard after obtaining the 1<sup>st</sup> Era Carrier Existential Patent.
- ✓ The development of Carriers and Warships is parallel, upon passing to the 2<sup>nd</sup> Era, positions will need to develop a 2<sup>nd</sup> Era Carrier PIT Patent just as they would or might develop the 2<sup>nd</sup> Era Warship PIT Patent.
- ✓ A position is not required to have the 1<sup>st</sup> Era Warship Existential Patent to obtain the 1<sup>st</sup> Era Carrier Existential Patent; a position is not required to have any Warship Patent before having any Carrier Patent. But you still need a stardrive and ship systems.

In our civilization, the Carrier developed from the regular warship; however, in other civilizations, the Carrier may have come first, and there the 1<sup>st</sup> Era Warship is a highly specialized design evolved from the Carrier that has abandoned Fighter support in exchange for heavy weapons and armor. In space-opera lore, 'carriers' have been called motherships, Basestars and Battlestars (in Battlestar Galactica) or not been given any particular designation at all.

First Era Warships cannot carry Fighter Complements, however, it is possible perhaps, that an Enhancement Patent could be made to allow Warships to carry Fighter Complements, or that at some point, Carriers and Warship designs might merge for some positions, or cross over, but Fighter Complements will always be an afterthought on an Era Warship and will not be supported or operate as well as they would on a true Carrier.

- ✓ Babylon 5 is a setting where every warship seems to have a fighter complement leading the charge into battle. There were no true carrier type ships in Babylon 5, but they still managed to have swarms of fighters. The space fighter deployment innovation of Babylon 5 was the drop rack; however, fighter recovery was never shown.
- How Big is Your Flight Stick?: Fighters do not exist separately (have no OSL), Fighter Complements are measured in RPs, for example, a colony or Carrier might have 30 RPs worth of Fighters. A colony may have a maximum of 1 Fighter RP for each population. The size and capacity of Carriers is also measured in RPs. Thus, when the Construction Power is activated for the purpose of Laying Keel for a Carrier, the Actions *must specify the size of the Carrier in RPs*, half of which will be due ‘up front.’ In the 1<sup>st</sup> Era, a Carrier may carry a Fighter Complement whose value is half the size/value of the Carrier; for example, a 60 RP Carrier could carry 30 RPs of Fighters (later Eras may improve this ratio). The Fighter Complement of the Carrier is *not* included in the construction cost of the Carrier, they must be constructed separately and transferred to the Carrier (see 3 Construction, p. 675, *supra*).
  - ✓ Fighter Complements are not ‘units’ in GGDM, they are enhancements, the GGDM units are ships (and System Boats), colonies and in many senses, Ground Units and sometimes Technological Devices. This, there is never a check to see if Fighter Complements obey a Power Activation, instead, Fighter Complements are part of their Carrier or Colony and checks are made as to either the Carrier or Colony. Similarly, whether Fighter Complements can benefit from Enlightenment in Combat is based on the status of the Epistemological Constructural Element of their Carrier or Colony (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*). Fighter Complements are never considered to have their own Constructural Elements.
- Carrier Operations: Upon arrival in a starsystem, the Carrier’s Fighters are ready to launch if necessary, thus there is no delay in deploying the Fighters into combat if the Carrier initiates combat or is attacked. Getting the Fighters back onto the Carrier and out of combat though – while being chased and shot at – is more problematical.
  - ✓ Put another way, calling an elevator to escape while in the middle of a gun battle in a hallway is difficult. Routine things become difficult in combat. Combat routines must be simplified. See top feature quote, 4 Movement, p. 868, *supra*.

Carriers may retreat with or without their Fighter Complement. If a Carrier chooses to retreat while the Fighters are still attacking or Combat Screening another ship, the Fighters are left behind. However, if the Fighters are Combat Screening their Carrier on the Combat Round that it successfully retreats, the Fighters land on the Carrier and retreat with the Carrier.

- ✓ This same rule may not apply to Tender starships retreating with System Boats (whether armed or not) but it depends on what is envisioned and what is involved in securing System Boats to the Tender for interstellar FTL jump. Securing System Boats may require a Combat Round and then the Tender may retreat the next Combat Round. Or the Tender might just retreat and leave the armed System Boats behind, especially if there is a supporting colony in the system. It’s a grey area at the judgment of the Concierge and participants.

In Traveller RPG, the reliance on Tenders and Battle Riders was a problem in the Fourth Frontier War because the enemy would go right after the Tender ships, who

took high losses when attempting to retreat (Traveller Wiki, “Fourth Frontier War”), stranding their Battle Riders.

- “Despite the lack of real territorial gains (or losses) for either side, the war prompted two changes to Imperial naval doctrine, one tactical, the other strategic. The tactical change was a shift from Battle Riders to jump-capable battleships. The early weeks of the war had shown a serious design weakness of the Battle Rider. When faced with superior numbers, the Riders were unable to withdraw and jump out-system due to the time required to secure them in their Fleet tenders. Thus, Rider BatRons suffered disproportionate losses in the early stages of the war.” – Traveller Wiki, “Fourth Frontier War,” captured July 3, 2018.

Traveller Tenders had platforms, like helopads, for the Battle Riders to land and secure to for transport; however, it is equally possible that Tenders might have huge bays for landing System Boats, like television warships have bays for landing Fighters. This is a place where Doctrinal Templates (see Combat Formations, 4 Colleges, p. 503, *supra*) might be useful to close the gap.

- Space Debris: If a Carrier is destroyed in Combat, its Fighter Complement is not automatically destroyed as the Fighters were already deployed, or could escape. Fighters without a Carrier, for any reason, may continue to fight one more Combat Round. Some or all of the orphaned Fighter Complement may be transferred to another Carrier or Colony if they have the capacity to receive them. Any Carrier-based Fighter Complement or any part of a Carrier-based Fighter Complement that cannot be transferred after one Combat Round, are lost.
  - ✓ In the 2010 movie *Nydenion*, a shuttle hid in the debris of a destroyed carrier and ambushed a squadron of pursuing interceptors. There were even floating human bodies.
- Carrier Direct Fire: Carriers do have the ability – albeit poor – to fire directly at other ships, colony Defense Bases or civilian targets. A Carrier that is firing directly cannot be Combat Screened on the round that it is firing (and thus is vulnerable to return fire), and the target receives two Defensive Shifts (that is, the Carrier’s chance to hit is reduced by 20%). Carriers cannot be attacked by Defense Bases in a Colony Combat unless they direct fire in the same Combat Round; they may be targeted by the defenders, however, just in case they do. Carriers may always be attacked by Fighters and Ship Missiles in a Colony Combat.
  - ✓ “The prevailing narrative of naval warfare in World War II concerns how the carrier decisively unseated the battleship as the dominant naval weapon system. Yes, battleships mounted over a dozen guns that could pot huge shells at other vessels from over a dozen miles away. But a carrier could deploy over a hundred airplanes that could strike targets hundreds of miles away with torpedoes and bombs. Just as importantly, in an era where radar technology was in its infancy, airplanes were the most effective tool for scouting out vast swathes of the ocean to locate enemy fleets. These advantages meant that battleships and battlecruisers were repeatedly sunk by carrier-based aircraft, from Pearl Harbor to Taranto to the Battle of the Philippines Sea. In return, battleships almost never succeeded in closing into gun-range of carriers.” – Sebastien Roblin, “An ‘Old’ Battleship Actually Sank an Aircraft Carrier in 1940,” *The National Interest*, December 23, 2018 [re: sinking of the HMS *Glorious*].

- ✓ Carriers in GGDM are a notch less potent than their Earthly millennial counterparts, which leaves room for development of technologies and tactics – for example, if the participants choose to allow fighters to eventually be equipped with FTL drive (especially of an instantaneous kind), the Carriers might launch (and retrieve) their fighter attacks from adjacent systems (without moving), while normal warships jump into the target system beside the fighters for a traditional naval slugfest. However, those fighters would not benefit from the sensor and command support of the Carrier and would need to depend on other ships (this is possibly why BSG has the Raptors).

**Valarie and the Fleet of a Thousand Worlds:** It takes time and effort to build a fleet, parts will come from many places. Carriers and Fighters provide a flexible system for building and operating warfleets. While the Carrier may be expensive, any world can build Fighters. On the flip side, however, is the cost in Power Activations, Acts and Scenes to operate the feeder system that supports large Carrier forces and that Carriers are rather expensive in supply requirements.

- ✓ It might be interesting and worthwhile from a storytelling point of view to track where each ship is built during the game. This can be done by giving the ship numbers or including the origin world in the ship name. This would add to the ship's data the Native Population Type of the crew, if needed. Carriers perhaps have the greatest chance of multi-Native crews due to Fighter RP replacements. See also Alienev Apostasy, 3 Disruption, p. 283, *supra*, which participants could consider in-game.

**Moreau:** *Red Fox 1, you're not going to bring us down?*

**Red Fox 1:** *What's the point, our carrier is gone, we got no place to land. We're not going to drag you down with us.*

– By Dawn's Early Light (1990) <sup>10</sup>

## Endnotes.

<sup>1</sup> Commentary: The second Buck Rogers television series aired in 1979-1981; I watched most of these as two hour afternoon movies (two episodes merged into a movie) around 1982-1983. Buck Rogers prominently featured planet based fighters and few big ships, but the fighter combat was something atrocious. But I remember Wilma!

<sup>2</sup> Commentary: I first played the AH Stellar Conquest in November 1985 at the gaming club on Ft. Sill, Oklahoma.

<sup>3</sup> Citation & Commentary: I watched a live concert cover of Toto's "Africa" by a group called Frog Leap on YouTube. At first, I didn't even know what they were playing, then when he started the lyrics, I realized just how awful it was – everything was wrong, it had nothing to do with the music or spirit of the original. If you are going to change the song that much, there comes a point at which you should give up and write a new song, the song you wanted to write. It can be inspired by what you originally intended to cover, but it cannot claim to be a cover. So it is with many things, so it was with my "Advanced Stellar Conquest" evolution; at some point it had little resemblance to Stellar Conquest and so I consciously called it something else, my own, and it evolved from there.

<sup>4</sup> Commentary: You can guess that I would have loved to have been a part of it back then. I wrote GGDM instead.

<sup>5</sup> Commentary: The Rebellion Sourcebook (1988) for MegaTraveller is the best role playing supplement I've ever read and the rest of the MegaTraveller books generally deserved a much better reception. Additionally, the excellent MegaTraveller article, "When Empires Fall" by David Nilsen published in Challenge Magazine #64, September 1992 (feature quoted in 4 Movement, p. 869, *supra*), had a great influence on the early development of this game. Oh, and Michael Whalen's "Foundation's Edge" cover art was fantastic! Marc W. Miller is still trying to revive the game, but the market has moved away from hard sci-fi or space-opera role-playing. But I obviously well understand his devotion to his lifetime space-opera game project.☺

<sup>6</sup> **Commentary:** The current Traveller RPG Wiki page on Fighters (2018) looks impressive, however, by their own definition, half the craft listed on the page are not fighters. The earliest cited Traveller reference to fighters listed at the bottom of the page, is a single page from Starships (1977), followed by single pages from books in 1980, 1981 and 1987. I do not think there was ever any book dedicated to fighters and carriers in Traveller.

<sup>7</sup> **Citation:** Definition(s) of a fighter from the Traveller RPG Wiki: “Using a 10-ton hull, the fighter is capable of 6-G acceleration, carries 1 ton of fuel, and has a crew of one. Small craft are boats of interplanetary (though not interstellar) capability.”

- ✓ “The Fighter is a small, highly manoeuvrable, armed small craft, usually capable of at least 4 Gs acceleration, carrying one or two crew, and displacing around 10 tons. Fighters generally have a small fuel tank (usually less than twelve hours’ fuel), and no cargo capacity. Fighters are invariably armed; usually with the heaviest armament the small craft can bear in a non-turret mount. Generally beam weapons are preferred because they are intended to operate at close range. In some cases a missile launch rack may be installed as well.”

Tonnage in Traveller RPG is measured in cubic space taken up by a ton of hydrogen at normal density at room temperature. So tonnage in Traveller is cubic space inside the hull, not the weight of the craft.

- ✓ “Fighters are characterized as small spacecraft usually without jump capability.... It includes a computer Model/1 and can mount only one type of weapon: one laser, up to three missile racks, or up to three sandcasters. It has one ton of excess space, and typically costs MCr18. The lack of a jump drive and its accompanying fuel storage, enables designers of these ships to focus more on putting heavier weapon systems and better in-systems drives. *This characteristic makes them more of a threat on a ton per ton basis than similar ships with a jump capability.*” *Id.* (emphasis added) (captured July 7, 2018).

- “Sandcasters,” which I have only ever seen in Traveller RPG, are a defense system that is designed, as the name suggests, to project clouds of sand and dust to protect the ship from lasers and other beam energy weapons by causing dispersal. On capital ships, they are called ‘sandcaster turrets.’ The anticipatory system is always automated, as humans cannot react fast enough. This concept is similar to chaff rockets used by U.S. Navy Ships to confuse incoming missiles (e.g., see discussion of missiles fired by Iranian navy ships at U.S. Navy ships in 1988, 4 Carriers & Fighters, p. 1082, *infra*). Generally, video space-opera prefers ‘force shields’ à la Star Trek. Sandcasters are only effective against high-energy beam weapons that were favored in late 20<sup>th</sup> Century video; they would be ineffective against rapid slug throwers like those used by the Colonial Vipers in the reimagined Battlestar Galactica series or against areal weapons such as missiles with conventional explosive, armor piercing (e.g., the Munroe effect), or nuclear warheads.

<sup>8</sup> **Commentary:** In this comparison, I am talking about individual airframes. Most unit ‘upgrades’ involve completely scrapping older equipment and replacing it with newly-manufactured equipment. That’s not what I mean.

<sup>9</sup> **Commentary & Citation:** Gen. “Billy” Mitchell was also, unfortunately, involved in the labor disturbance known as the Battle of Blair Mountain, in August 1921. Although U.S. Army planes *did not drop any bombs* on the miners, private aircraft did drop sulfur and leftover WWI bombs on the miners. Mitchell had publically suggested that the disturbance could be ended by army aircraft alone by dropping tear gas on the miners; other parties may have taken this suggestion and hired private aircraft to bomb the miners. Later, Mitchell trumpeted the situation in West Virginia as proof that aircraft were useful in suppressing civil disturbances.

- ✓ Information from Wikipedia article, “Billy Mitchell,” December 29, 2018, citing to Clayton D. Laurie, “The United States Army and the Return to Normalcy in Labor Dispute Interventions: The Case of the West Virginia Coal Mine Wars, 1920-1921” (1991), available for free on wvculture.org.
- ✓ The Court Martial of Billy Mitchell is a highly acclaimed 1955 movie starring Gary Cooper.

<sup>10</sup> **Commentary:** It is amazing how tightly woven is the story of By Dawn’s Early Light (1990) and critics have praised the movie as an example of what can be done with a very good script and no big budget. Because the bomber Polar Bear One refused to follow orders and turned away, the Soviets, desperate for any sign from the Americans turned a whole squadron of their bombers away and were willing to give the U.S. President an hour to get his forces under control. There were so many little pieces to resolving the situation, what gets lost in the movie is that the little boy probably saved the world by bringing his mother to the place where the U.S. President was lying wounded. And, of course, the pilot of E-4 who turned his plane in the final minutes... I hope that the pieces of GGDM are that well written and woven together.

*See Appendix CEX – Combat Example*  
*See Appendix CST – Combat Shifts & Situations Tables*

*“[Col.] Boyd was famous for a maneuver he called ‘flat-plating the bird.’ He would be in the defensive position with a challenger tight on his tail, both pulling heavy Gs, when he would suddenly pull the stick full aft, brace his elbows on either side of the cockpit, so the stick would not move laterally, and stomp the rudder. It was as if a manhole cover were sailing through the air and then suddenly flipped 90 degrees. The underside of the fuselage, wings, and horizontal stabilizer became a speed brake that slowed the Hun from 400 knots to 150 knots in seconds. The pursuing pilot was thrown forward and now Boyd was on his tail radioing ‘Guns. Guns. Guns.’” – from Aviation-History.com <sup>1</sup>*

**Blacksheep:** Don’t think for a moment that “flat-plating the bird” works in space.

Fighter attacks are always *resolved first* in the Combat Round. *Each Era Fighter Complement* has two attacks (hereafter “Sorties”) per round, either the same enemy unit is targeted twice or two enemy units are targeted once each. When an Era Fighter Complement targets two different enemy units and/or colony defense enhancements, the Complement must be split and therefore, the entire force of the Complement will not be used on each target (i.e. no ‘double duty’). Unless informed otherwise, the Concierge will assume that the Complement is being split in half and resolve each attack that way. When a Fighter Complement places both of its sorties on one target in a round, each sortie attacks at three quarters (75%) of the full strength of the Complement due to concentration and coordination; this is called a Concentrated Attack. The **‘cardinal rule’** of Fighter attacks throughout these rules, is that they are resolved individually by *sortie*.

- ✓ For example, a Fighter Complement of 40 RPs from a single Carrier (this would be a large 1<sup>st</sup> Era Carrier, 80 RPs cost) attacks two targets (one sortie each), so each target would be attacked by 20 RPs of Fighters, but if both sorties were sent to attack one target (the sky would darken if space wasn’t already dark<sup>2</sup>), each sortie would attack with enhanced value, as 30 RPs of Fighters.
  - When Fighter and Ship Missile attacks are resolved, they will be resolved in the order provided. See Combat Resolution, 3 Combat, p. 976, *supra*.
  - As noted in Army of Light, 2 Colleges, pp. 479-480, *supra*, positions may decide *each Combat Round* not to use Enlightenment during Fighter attacks and Enlightenment cannot be used for Ship Missiles.
- **Fighter Combat:** As Fighter Complements are measured in RPs, so is Fighter Combat resolved based on the RP size of the attacking Complement. For each Fighter *sortie*, a ten sided die is rolled, and the result divided by ten. The Effectiveness Roll result is multiplied by the size (in RPs) of the attacking Fighter Complement, and the result is converted directly into a percentage chance to hit.

Finally, an Era multiplier of 1.5 for 1<sup>st</sup> Era Fighters, 2.5 for 2<sup>nd</sup> Era Fighters, and 3.5 for 3<sup>rd</sup> Era Fighters is applied to arrive at the final attack chances. This Era multiplier must be part of the Effects section of the Era Fighter Patents. Final result fractions are truncated.

- ✓ For example, 50 RPs of 1<sup>st</sup> Era Fighters are sent to make a *concentrated attack* on a 1<sup>st</sup> Era Orbital Defense Base. The Effectiveness Roll of the first sortie is 7, which is .7 when divided by ten. The .7 is multiplied by the 37.5 RPs (75%), and converted to

a percentage chance to hit, giving the Fighters a basic 26.25% chance of success.

When the 1.5 First Era multiplier is applied, the final attack chance is 39% of success.

If the position has elected to not use Enlightenment in Fighter attacks, the Effectiveness Roll cannot be rerolled as a “failed die roll” (see *Army of Light and Harsh Mistress*, 2 Colleges, p. 479, *supra*). It is most likely that most Enlightenment used in Fighter attacks will be used in Effectiveness Roll rerolls rather than attack rerolls. This, again, is an area where technology and Doctrinal Templates may be usefully applied. It’s also a judgment call.

Fighters are subject to all of the applicable Era differential Shifts as well (see *Combat Shifts*, 3 Combat, p. 978, *supra*) at +/- 10% per Era. It is possible that a combination of high Effectiveness Roll, a large Fighter sortie, and Era Multipliers might put the odds over 100% (but still resolved at 99%) or less than 1% (but still resolved at 1%).

- ✓ Continuing the previous example: If the 1<sup>st</sup> Era Fighters were attacking a 2<sup>nd</sup> Era Orbital Defense Base, the chance of success is 29% and against a 3<sup>rd</sup> Era Orbital Defense Base, the chances for the 1<sup>st</sup> Era Fighters drop to 19% due to defensive shifts.
- ✓ If 3<sup>rd</sup> Era Fighters were attacking a 1<sup>st</sup> Era Orbital Defense Base, they would receive +20% in Era differential shifts, plus their 3.5 Era multiplier, probably resulting in a nearly automatic success.

The 50 RPs Fighter Complement used in the example above is max for a 1<sup>st</sup> Era Carrier. The down-payment to lay keel for this Carrier is 50 RPs with 50 additional RPs to complete it, plus 50 RPs of Fighters to transfer, requiring a big GDP planet and/or lots of RPs from Cargo Ships and possibly Log Ships to bring Fighters from other colonies. See *Laying Keel*, 3 Construction, p. 675 and *How Big Is Your Flight Stick*, 1 Carriers & Fighters, p. 1050, *supra*.

- Engaged: The first successful attack on a target by Fighters “Engages” the target. Engaged means that 15% times the Era of the attacking Fighters is subtracted from the chance of success of whatever the target was instructed to do for the turn (i.e. attack, retreat) to a maximum of 45%. Era differential shifts are not applied, so 1<sup>st</sup> Era Fighters have the same effect against any Era target. So, any target attempting to retreat from combat, which is Engaged by 1<sup>st</sup> Era Fighters, has only a 35% chance of successfully escaping.<sup>3</sup>
  - ✓ Engaged is not a “hit” (see *A Hit*, 3 Combat, p. 979, *supra*), the target is not destroyed. But it does serve as a sort of partial ‘target disruption,’ p. 1057, *ut infra*.
  - ✓ Engaged results from Fighters do not carryover to the next Combat Round.
    - Imagine being surrounded by a swarm of angry bees. You would be rather ‘engaged’ in swatting and running away as fast as you could go. It is unlikely at that point that you’d be thankful that you didn’t fall into a pool of piranhas with a papercut.

If a Fighter Complement is sent to attack two targets in the same round, the best result that can be hoped for would be that both targets would be Engaged and the chance of either result is lessened significantly by the division of forces. However, Engaging enemy units can be a valuable tactical ability reducing their ability to do anything in a Combat Round and forcing them to potentially use Enlightenment rerolls during the round (see *Harsh Mistress and Army of Light*, 2 Colleges, pp. 478-479, *supra*).

An Engaged ship may still retreat if it makes a successful roll. Retreats occur after Fighters and Missiles.

- ✓ The Engaged result is the reason that Fighter attacks are resolved first in the Combat Round. Even if the system were designed with alternating attacks or non-simultaneous attacks, players would still place their Fighter attacks at the top of the Combat Orders to try to Engage enemy units before they can fire or perform other actions. Players would also group Ship Missile attacks at the top of their Combat Orders so that the missiles are fired before their units are destroyed. Thus, it is a natural consequence. Compare also Engaged effects to FAP Assignment effects, 7 Combat, *supra*.
- A Hurt: A target cannot be Engaged twice in the same Combat Round. A second successful attack on the target by any Fighter Complements *in the same Combat Round* results in a hit and the target is destroyed (see A Hit, 3 Combat, p. 979, *supra*). However, as combat is considered simultaneous (*Id.*), all units get to fire – or try to do whatever they were assigned – regardless of whether or not they are destroyed; therefore, a unit that is hit by Fighters was Engaged first, and the Engaged result applies to the unit’s last fire before being removed.
  - ✓ “The passing is only noticed if the puck ends up in the net.” – Bob Errey, Pittsburgh Penguins broadcaster, January 21, 2020.
- A Home Run: Fighter attacks can be analogized to baseball, where base hits and walks mean little – other than potentials and defense distraction – until they cross the plate and become runs. That’s when the walks and errors hurt.

Note that a unit may be Engaged by Fighters and Ship Missiles (see Fire-and-Forget, 4 Carriers & Fighters, p. 1080, *infra*) an infinite number of times, as long as Fighters or Ship Missiles do not score a second success against it in a Combat Round while it is Engaged (the LOB and RISP stats in baseball) and it is not destroyed by any other means. Some units may be very lucky.

- ✓ In the top of the 1<sup>st</sup> inning of the Pirates baseball broadcast on May 30, 2019, Steve Blass noted that more hitters are taking advantage of defensive shifting to hit the ball through the vacated side of the field to get on base. The next batter then hit a home run, making the score 2-0 in favor of the Brewers. The Pittsburgh Pirates broadcasters have been on this issue for years (see 2 Dreamtime, EN 6, p. 156, *supra*); Steve Blass wondered if this would be a trend, whether hitters would be ‘willing to give up their power swing to hit the ball the opposite way.’<sup>4</sup> This is not a bad analogy for Engaged results in GGDM fighter combat vs. hits by regular units in combats.
- ✓ The very next inning, the Pirates nearly did the same. Josh Bell hit a broken-bat blooper into the area vacated by the defensive shift to reach first base; rookie Brian Reynolds then nearly hit a HR on the next at-bat except that it hooked just foul instead down the first base line. Brian Reynolds finally hit a single moving Bell to third. Pirates hitters then burned about 10-15 pitches from the Brewer’s starting pitcher (balls and fouling off pitches), ended up with a run scoring single by the catcher Elias Diaz, with only one out. The Pirates pitcher Joe Musgrove then almost hit a homerun down the baseline with two outs, but it hooked foul into the same area as the previous almost homerun by Reynolds. And so it goes. All of this could easily analogize into a GGDM Combat Round involving fighters and regular units.

- **Encounter with Bright Lights:** Positions may choose to not use Enlightenment in their Fighter Attacks. The game mechanical reason is because two successes are required for a Fighter Attack to score a hit on a non-Fighter target (i.e. ship or base) as opposed to attacks by other units in a Ship or Colony Combat that require only one success to score a hit.

However, consider that if an Enlightenment is used to reroll a missed first attack by Fighters, and the reroll successfully Engages the target, that use of an Enlightenment has the effect of both preserving the possibility of obtaining a Hit if the second attack is successful, and the Engaged result means that the target unit has a 15%, 30% or 45% less chance of doing *whatever* (to a minimum of 1%) during the Combat Round and will not be able to resupply from Log Ships during the Combat Round (see Combat Resupply, 4 Movement, p. 868, *supra*).

Thus, the use of Enlightenment in Fighter attacks is a matter for judgment (see also previous discussion of rerolling Effectiveness Rolls, p. 1054, *ut supra*), and may be the only means to use an Enlightenment to abrogate an enemy hit (remember, Enlightenment cannot be used to force an opponent to reroll a hit). Positions (or specific fleets) that rely heavily or primarily on Fighter swarms may need to use Faculties for Fighter attack rolls.

- ✓ However, see Web of Night, 2 Colleges, pp. 477-478, *supra*, for discussion of application of Faculties to drone fighters.
  - “The Seraphs ... were an alien race in the original Battlestar Galactica series from 1978/79 ... They were never expressly referred to by name in the series, but were called ‘Seraphs’ in the scripts for the episodes in which they appear.... The Seraphs were a noncorporeal race of sentients who first appear in ‘War of the Gods.’ ... The Ship of Lights is a Seraph spacecraft from the original Battlestar Galactica television series. It emits an extremely loud sound that can be heard by people in nearby spaceships and is sufficient to render humans unconscious. The Ship of Lights also carries smaller craft. In the reimagined series, this vessel appears in a painting created by Starbuck. In addition, that series’ Resurrection Ship restores characters (Cylons) to life, and in both series Lieutenant Starbuck/Kara Thrace is part of a resurrection-related plot that leads the characters toward Earth.” – from Wikipedia article, “Seraphs,” captured August 10, 2019.

---

*“Attrition warfare is a military strategy consisting of belligerent attempts to win a war by wearing down the enemy to the point of collapse through continuous losses in personnel and material. The war will usually be won by the side with greater such resources. The word attrition comes from the Latin root **atterere** to rub against, similar to the ‘grinding down’ of the opponent’s forces in attrition warfare.”*

– from Wikipedia article, “Attrition Warfare,” August 10, 2019 <sup>5</sup>

---

**Strategic Attrition Warfare:** Executed properly, Carriers are strategic attrition warfare (SAW) in GGDM.<sup>6</sup> It takes a different sort of mind to commit exclusively to Carriers & Fighters and make it work.<sup>7</sup>

For most players, Carriers & Fighters will be an addition to old line standard capital ship fleets, providing a combined arms approach. Getting a hit on a single die roll is more comforting.

- ✓ In baseball, a pitcher can pitch so that the hitter cannot hit the ball – inducing swings and strike calls (i.e. a strike-out pitcher) – or a pitcher can pitch so that the hitter can hit the ball but not contact well, either a pop-up or an infield ground ball (i.e. a contact pitcher). They are different mindsets: The former is based on the pitcher’s ‘stuff’ while the latter places trust in team defense. There have always been successful pitchers of both sorts, but modern pitch counts, analytics, defensive shifting, and in the National League, pinch hitting have complicated the pitcher...um, picture.

Consider however, the shift in naval warfare in WWII, the center of a modern fleet or strike force is no longer the big old battleships; CVs and usually CVNs (i.e. aircraft carriers) are the center of a circular naval formation stretching 30 to 50 km (e.g., the tabletop board game, *The Hunt for Red October* (1988), WWII scenario).

Fighters do not require a shipyard, but Carriers and all other ships do. Any colony that has at least 1 RP GDP can produce Fighters to replace losses. Protection and preservation of Carriers is paramount, live to fight another day.

However, Fighter attacks in Combat, fighter ‘tactics’ are small unit maneuver warfare:

- ✓ “Maneuver War is different. While Attrition War is fought to destroy the enemy’s ability to fight, Maneuver War is fought to destroy the enemy’s will to fight. This is not as easily measured as Attrition War, however, the effects of Maneuver War can be devastating. Desert Storm was an example of Maneuver War on a grand scale. ... *A practitioner of Maneuver War frequently goes around main battle units, infiltrating or breaking through the enemy battle line. Once behind enemy lines the Maneuver Warfighter attacks the enemy support structure, headquarters, or whatever is available. Frequently a target is already decided before the penetration. By attacking the enemy’s rear, the enemy’s morale is attacked.*” – Military Science Fiction (blog), “Types of War,” user Warcat, July 29, 2015 (emphasis added).
- ✓ “There are many differences between Maneuver War and Attrition War that are not obvious to the beginner. The easiest way to understand this is that in Attrition War soldiers are trained to follow orders, not to think for themselves. Officers are the ones who make plans and give the orders, synchronizing the operation so it is successful. In Maneuver War it is the small unit leader, the platoon commander, the squad leader who uses the natural chaos of the battlefield to seize an advantage. In Maneuver War a leader may not wait for orders before taking action.” *Id.*<sup>8</sup>

---

**Confessions of a Killer** [woman calmly speaking into the camera]: “*Of course I killed them, I just aimed, shot, and killed those little creeps myself. ... Their kind deserves to die!*” – 1990 spray pesticide TV commercial

---

**Close-in Defense Weaponry**: Close-in Defense Weaponry are systems originally designed to repel asteroids and space debris that have been adapted and refined to ward off Fighter attacks (alert, *flimsy premise*). There is no Patent for Close-in Defense Weaponry, ships, bases, and boats automatically have Close-in Defense Weaponry installed when they are constructed.

Of course, Close-in Defense Weaponry on a ship is very much like Defense Bases on a colony, it cannot go out and attack the Fighters, the system can only fire in defense when the ship is attacked. Positions may develop Patents to improve the operation of Close-in Defense Weaponry systems.

- ✓ Having Close-in Defense weapons does not make any ship a warship; they are defensive weapons only and do not grant the ability to initiate combat. Close-in Defense Weapons do not create a credible threat to anything but attacking Fighters.
- Tail of the Gunner: Whenever *any* ship or base is attacked by Fighters it will automatically return fire with Close-in Defense systems, regardless of the result of the Fighters' attack. Close-in Defense will automatically fire whenever the unit is attacked by Fighters or Ship Missiles, and however many times are necessary in a Combat Round, regardless of whether the ship owner has submitted Combat Orders or whether the ship is involved in the combat. Each ship or base attacked gets one Close-in Defense Fire at all of the attacking Fighters, divided into *attempts*. Close-in Defense Fire does not prevent or substitute for the unit's regular attack or activity, if it is still capable of making one. A ship or base attacked by Fighters gets one attempt to hit every unadjusted 10 RPs of attacking Fighters (rounded up) at *half* of the ship or base's normal chance to hit based on Era (see Combat Shifts, 3 Combat, p. 978, *supra*), and the sum of all attempts to hit is the Close-in Defense Fire of the unit in that instance. Engaged results on the target unit do not affect Close-in Defense rolls and Era differential shifts are applied *before* halving.
  - ✓ For example, a 3<sup>rd</sup> Era Warship (base chance 70%) would have a 35% chance to hit every 10 RPs of 3<sup>rd</sup> Era Fighters.
  - ✓ All Shifts are applicable to Close-in Defense fire at Fighters (see 3 Combat, *Id.*), *before halving*, for example, a 3<sup>rd</sup> Era Warship firing at attacking 1<sup>st</sup> Era Fighters would have a 45% chance to hit every 10 RPs of 1<sup>st</sup> Era Fighters.

Based on the 'origin' of Close-in Defense Weaponry (*ut supra*) the game assumes – strictly for convenience – that all ships have it, including non-warships (e.g., Cargo Ships, Log Ships, Colony Ships). There is probably no reason for Orbital Platforms, other than Defense Bases, to have it and certainly unfinished ships will not have Close-in Defense Weaponry. However, as non-Warships cannot initiate combat, it is suggested that non-Warships defend in Close-in Fire *as Era Warships*, but the Fighters receive one Defensive Shift.

- Counting Whale Tails: For purposes of Close-in Defense Fire, only actual RPs of attacking Fighters is used, not enhanced RPs from Concentrated Attacks. This makes a big difference:
  - ✓ For example, a Carrier with 40 RPs of Fighters sends both sorties to attack one Defense Base. Each sortie is 20 RPs, but because it is a Concentrated Attack, each sortie attacks at 30 RPs (three quarters of the total value of the Fighter Complement). However, Close-in Defense Fire only gets four attempts to hit (40 RPs divided by 10) and not six attempts to hit (60 RPs divided by 10) because only the actual RP value of the attacking fighters (not the enhanced value) counts.
- Down in Flames: For each Close-in Defense *success*, one ten-sided die (1d10) is rolled, and the result is the number of RPs of Fighters lost to the Close-in Defense Fire. The die roll range is from 1-10, minimum damage is 1 RP. If the Fighter attack is a Combined Fighter

Attack, the damage will be applied proportionally based on the contribution of each Fighter Complement to the total attack value.

In some rare instances, especially with smaller Fighter attacks, the entire attack might be wiped out by some lucky Close-in Defense Fire, but overall, most of the Fighters will live to fight another round. However, massive Fighter attacks will take more losses overall balancing out their better chance of success.

- ✓ For example, 60 RPs (actual, *ut supra*) of 1<sup>st</sup> Era Fighters attack a 3<sup>rd</sup> Era Warship. Regardless of the results of the Fighter attack, the target will get six Close-in Defense fire rolls, with a 45% chance to hit each time. With average luck, the target will hit three times, each time, destroying from 1-10 RPs of fighters. With the most extraordinary luck – six hits – the attacking Fighters could be nearly wiped out.

Although participants, with visions of WWII footage in mind, may envision people in turrets firing Close-in Defense against attacking Fighters, it is most likely that Close-in Defense will actually be handled automatically by computer. Thus, *Enlightenment should not apply to Close-in Defense fire*. If you consider this incorrect, consider further the number of uses of (i.e. demands upon) Enlightenment in each Combat Round already – and be relieved that Enlightenment is not being eaten by Close-in Defense fire.

- **Battle at Planet Midway:** Carriers have a special love-hate relationship with Fighters; Carriers have superior Close-in Defense Weapons to ward off counter attacks by enemy Fighters. As such, the Carrier's base chance to hit in Close in Defense Fire is the same as a **regular warship** of the same Era – applying Era shifts and *not halved* – and when the damage die is rolled for a successful Close-in Defense Fire hit by a Carrier, one is added to the die roll if the Carrier is 1<sup>st</sup> Era, two is added to the die roll for a 2<sup>nd</sup> Era Carrier, and three is added to the die roll for a 3<sup>rd</sup> Era Carrier. However, the total damage from any single Close-in Defense damage die roll can never be greater than 10 RPs.
  - ✓ Continuing the example, if the target were a 3<sup>rd</sup> Era Carrier, the Carrier would have the same chances to hit as the 3<sup>rd</sup> Era Warship against a normal target, but would receive +3 on the damage die roll for each hit, with a max result of 10. Thus the minimum damage for each roll is 4 RPs. Likely, the 1<sup>st</sup> Era Fighters will be decimated.

---

*“Because of this statement, reinforced by another more detailed report, issued on 10 August, there was a mindset in the ranks of the Luftwaffe that the RAF would run out of frontline fighters. The Luftwaffe believed it was weakening Fighter Command at three times the actual attrition rate. Many times, the leadership believed Fighter Command's strength had collapsed, only to discover that the RAF were able to send up defensive formations at will.*

*Throughout the battle, the Luftwaffe had to use numerous reconnaissance sorties to make up for the poor intelligence. Reconnaissance aircraft (initially mostly Dornier Do 17s, but increasingly Bf 110s) proved easy prey for British fighters, as it was seldom possible for them to be escorted by Bf 109s. Thus, the Luftwaffe operated 'blind' for much of the battle, unsure of its enemy's true strengths, capabilities, and deployments. Many of the Fighter Command airfields were never attacked, while raids against supposed fighter airfields fell instead on bomber or coastal defence stations.*

---

*The results of bombing and air fighting were consistently exaggerated, due to inaccurate claims, over-enthusiastic reports and the difficulty of confirmation over enemy territory. In the euphoric atmosphere of perceived victory, the Luftwaffe leadership became increasingly disconnected from reality. This lack of leadership and solid intelligence meant the Germans did not adopt consistent strategy, even when the RAF had its back to the wall. Moreover, there was never a systematic focus on one type of target (such as airbases, radar stations, or aircraft factories); consequently, the already haphazard effort was further diluted.”*

– from Wikipedia article, “Battle of Britain,” captured November 7, 2019 <sup>9</sup>

**Battle of Churchill Sol B:** The situation described above is shown in the 1969 movie Battle of Britain. The Luftwaffe command believed they had destroyed 300 British RAF aircraft on the ground and in the air, about half of the estimated total strength (movie dialogue). Yet, the British kept intercepting their bomber attacks, and from this, they concluded that the British had moved all of their reserves to the south of England to keep up the battle front, and thus Scotland and Northern England were unguarded. Thus, on August 15, 1940 (two days after Eagle Day), they launched a massive bomber attack from Norway beyond fighter escort range, with unescorted Heinkel III bombers and ME110 Fighter Bombers, and as they approached the English northeast coast, they were attacked in strength by Spitfire squadrons that were not supposed to be there!

- ✓ The resulting bomber losses were called the Black Thursday of the Luftwaffe, see <http://ww2today.com/15th-august-1940-the-luftwaffes-black-thursday>.

Overestimation of both enemy strengths and losses are common in all wars in all ages. It is important to be skeptical of your own intelligence – both the military-espionage and wetware kinds.

- ✓ “Overclaiming in aerial warfare is not uncommon. During the Battle of Britain (and, indeed, the rest of the Second World War), both sides claimed to have shot down and destroyed more enemy aircraft on the ground and in the air than they had in reality. RAF Fighter Command claimed 78 German aircraft shot down on 13 August 1940. Another source states that official RAF claims amounted to 64. Actual German losses amounted to 47–48 aircraft destroyed and 39 severely damaged. Conversely, the Luftwaffe claimed to have destroyed 70 Hawker Hurricanes and Spitfires in the air and a further 18 Blenheim bombers in the air alone. This was an exaggeration of about 300 percent. Another 84 RAF fighters were claimed on the ground. Actual RAF losses in the air amounted to 13 fighters and 11 bombers, with 47 aircraft of various kinds on the ground.” – from Wikipedia article, “Adlertag,” captured November 7, 2019.
- ✓ [Interview] “The Germans were flying what they termed ‘free hunts’ – 100 to 150 fighters sweeping over southern Britain hunting out the Hurricanes and Spitfires. The instruction went out to our pilots not to engage these fighters unless they were escorting bombers. So, the myth started to grow that the Royal Air Force was being depleted and defeated.” – Chris Wren, Curator RAF Operations Room, Uxbridge, 13 Hours that saved Britain (documentary, 2011).

Thus, it is possible (especially if participants don’t see the die roll results) to over- or under-report *enemy* Fighter RP losses in every Combat Round; the owner of the Fighter RPs will, of course, receive accurate reports of their losses and current strengths. It is possible because of the

speed and confusion of high-speed combats, destruction of hardware systems, and because biological sapience is involved. There may even be some deception by the attackers. However, on the other side, an argument can be made – especially given GGDM’s generous detection rules – that advanced technology and open space should mean that everything should be accurately detected and reported by computer-controlled surveillance systems, especially if they are AI.

- ✓ Which side of the coin lands face up will need to be decided by participants before the game begins. First, it must be decided if participants will see die roll results; if they do, then all other questions are moot. If participants cannot see die roll results, the Concierge has more room to operate (and this applies to all parts of the game).

There are two possible ways to handle this. The computer assistant could be set to automatically determine the accuracy of reported *enemy* Fighter RP losses and determine the over- or under-reporting within a set range of percentages. Or it could be set so that reporting is accurate unless the Concierge uses an Intervention to alter the reports.

This then may raise a further issue about possible over- or under-reporting of enemy ship losses (which is possible); however, the difference is that ships are *game units* whereas Fighter RPs are *enhancements* that land on a ship. So they are not quite the same; ships would be seen with fair certainty in GGDM’s detection scheme. Finally, the thoughts here regarding reporting of enemy Fighter RP losses could be extended to enemy Ship Missile use (see Torpedoes at Trafalgar, 4 Carriers & Fighters, p. 1079 *et seq.*, *infra*), and also Ground Combat damage (see Ground Combat Resolution, 4 Combat, p. 993, *supra*), if participants cannot see the die roll results.

- ✓ See also Krypton Kerfuffle discussion, 1 Taxation & Census, p. 298, *supra*.

---

*“Awareness of the dynamic interrelationship among dispersion, mobility, and firepower led to the development of further measurement scales, and subsequently to the QJM model, and later the TNDM.”*

– Susan Rich [referring to the Quantified Judgment Method and T. N. Dupuy Associates Inc.], biography page for Trevor N. Dupuy at The Dupuy Institute website (<http://www.dupuyinstitute.org/tndupuy.htm>)

---

*“Nor is the issue so limited that it can conveniently be reduced to any particular age. Perhaps it would not be too comprehensive a statement to say that all military history is made up of an endless struggle between the principles of dispersion and cohesion. The swing from one to the other has influenced tactics ever since Troy, and Armageddon will probably consist of a bloody clash between the last phalanx and legion left on earth.”*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 71

---

**Areal Phenomenon:** Fighter Complements cannot be hit if they don’t attack or intercept in the Combat Round, unlike regular units and colony defense enhancements that can be hit in any Combat Round by virtue of being in the Combat.

- ✓ Thus, Fighter Complements assigned to FAP cannot be hit, see A FAP in the Night, 7 Combat, p. 1041, *supra*. FAP is an *alternative use* for Fighter Complements.

Fighter Complements cannot be directly targeted by enemy units in any Combat (including normal Orbital Bombardment, but can take proportional losses), instead, they may only be fired upon by Close-in Defense Fire when they attack or are Intercepted by warships, or by other Fighters via Interception and Dogfighting (see 3 Carriers & Fighters, pp. 1069-1070, 1072, *infra*). Any ships transporting the Fighters may be targeted normally in any appropriate Combat.

- ✓ These are the baseline rules in GGDM; they can, of course, be changed by development of new technologies, such as true areal weapons (see 3 Carriers & Fighters, p. 1073, *infra*) or doctrinal templates. Generally, Fighters are considered to be small, agile, and dispersed over a large volume of space unless they are attacking a specific target; when that happens, they have to come to the target, making them vulnerable to Close-in Defense Fire (e.g., what you see in movies). Only other Fighters, via Interception and Dogfighting, can match the areal phenomenon of a swarm of Fighters.

Think of this as you vs. a swarm of bees or gnats. You are the big warship. You can swat at them, might get one or two, but the bees are gonna sting you, the gnats are gonna get in your eyes, nose, and ears and make that high buzzing sound. Or you can run away, fast. The only place you can ‘get them’ is at their hive (i.e. Carrier or host colony in GGDM). To combat them, you must find better weapons, e.g., I remember a killer ant swarm movie about ants taking over an island, where the humans use flamethrowers against the ants (it may have been the carelessly, grossly misnamed movie, *The Hive* (2008)).

- ✓ “To his mind came the sounds of war across the gulf of space. It was all imagination; in that tomb there was no sound. Yet he could clearly detect the hiss of his scout’s blaster as it poured beam after beam into the lead ship of the Kyben fleet. His sniper-class scout had been near the point of that deadly Terran phalanx, diving like a wedge at the alien ships converging on them in loose battle formation. It was then that it happened. One moment he had been heading into the middle of the battle, the left flank of the giant Kyben dreadnought turning crimson under the impact of his fire-power.

The next moment, he had skittered out of the formation which had slowed to let the Kyben craft overshoot, while the Earthmen decelerated to pick up maneuverability. He had gone on at the old level and velocity, directly into the forward guns of a toadstool-shaped Kyben destroyer. The first beam had burned the gun mounts and directional equipment off the front of the ship, scorching down the aft side in a smear like oxidized chrome plate. He had managed to avoid the second beam. His radio contact had been brief; he was going to make it back to Antares-Base if he could.” – Harlan Ellison (story) and Ken Steacy (art & adaptation), “Life Hutch,” *Epic Illustrated*, Vol. 1, No. 6, June 1981.<sup>10</sup>

Here, “scout” is being used in place of fighter. Generally, participants should avoid (for sanity sake) creating classes of things using names that could be confused with other game terms. And there is no sound in space, unless it’s your ears ringing inside your space suit helmet...

---

*“Alpha Squadron, form up on my wing. Delta Squadron, punch us a hole through there!”*

– Lt. Cmdr. Susan Ivanova, *Babylon 5*, “Severed Dreams” (1996)

---

**Combined Fighter Attacks:** The power of Fighters is in the masses. A weaker position can mass up sufficient waves of Fighter attacks such as to nearly guarantee the destruction of even the largest and most advanced enemy warship or base. That's not a solution to all strategic ills, but it works sometimes and the cost may be staggering.

- **En-Masse:** Two or more Fighter Complements may combine for one or two sorties on any single target. When Fighter Complements combine, the largest Fighter Complement will automatically be designated the Primary (*unless* the Concierge is otherwise instructed) and all others will be considered Supporting. In calculating the attack, the Primary Complement is taken at full value, while each of the Supporting Complements is added at half value.
  - ✓ For example, two Fighter *sorties*, one 50 RPs and the other 30 RPs are combined to attack a 1<sup>st</sup> Era Warship as one *combined sortie*. The 50 RP sortie will be the Primary, and the 30 RP sortie will be added to the attack at half value, for a total attack equaling 65 RPs of Fighters for one *sortie*.
- **The Other Shoe Just Dropped:** If the Combined Attack is also a Concentrated Attack (i.e. both sorties are placed on one target), only the Primary receives the Concentrated Attack bonus. Each sortie is calculated individually. To receive the Concentrated Attack bonus, the Primary must have dedicated both of its sorties to one target, but the supporting Fighter Complements may be split and may participate in either or both sorties on the target (*sans* bonus). Thus, if the Fighter Complement making a Concentrated Attack during the Combined Attack is not the largest Complement, the position should specially designate it the Primary (*ut supra*). Failure to do so nullifies the Concentrated Attack bonus.
  - ✓ In the above example, assuming the Primary Complement dedicated both of its attacks to the target (i.e. a Concentrated Attack), but the Supporting Complement only contributed its second sortie, the first sortie would attack (alone) with 75 RPs at three-quarters of the value of the full 100 RP complement and the second Combined-Concentrated Attack, would be at a value of 90 RPs (75 RPs plus 15 RPs from the supporting Complement which did something else with its first sortie).
  - ✓ c.f., if the Complements didn't combine, they could have had two attacks at 50 RPs and two attacks at 30 RPs on any targets, uncombined.
- **Daffy Duck Shoot:** A combined Complement acts as one Complement for Close-in Defense Fire purposes, noting that losses from Close-in Defense Fire will be proportioned. Only one Effectiveness Roll will be made for each Combined Attack *sortie*.
  - ✓ Continuing the above example, the *actual* value of the attacking fighters is 130 RPs on that target (that is, 100 RPs from the Concentrated Attack of the Primary Complement and 30 RPs of the Supporting Complement on the second sortie), so the target will get 13 (130 divided by 10) attempts at Close-in Defense Fire against the Concentrated and Combined Attack.

The Concierge will not combine Fighter Complements attacking the same target unless instructed in the position's Combat Orders.

- ✓ A decent tactic is to have the Combined Fighter Attack on the second Sortie on a target, to insure that the target is Engaged, if the first attack missed, or to enhance the chances of destruction of the target, if the first sortie got an Engaged result, e.g., Fighter Complements A, B, and C. Complements A and B attack two targets, putting

both of their Sorties on their target (Concentrated Attacks). Complement C divides its two Sorties, combining one each with Complements A and B's second Sorties.

**Interviewer:** *Why would an F-16 lose in a combat against an F-35 or other next gen fighter?*

**General:** *Because the F-16 would never even know it was in a fight when the F-35 locked on and fired from beyond its sensor range.*

– Paraphrased from an article discussing next gen fighters <sup>11</sup>

*“In an interesting incidental commentary, most of those contrarian articles say something along the lines of ‘there are plenty of reasons to be critical of the F-35 program, but this isn’t one of them.’ And that captures the problem about much of the public reporting on the F-35. The program has been running almost a decade and a half, with significant schedule slippages, engineering problems, software issues and cost overruns in its early years. The net effect has been to cost the Australian taxpayer many billions of dollars to establish an interim air combat capability. But much of the discussion has been about the wrong thing – yesterday’s concept of air warfare.”*

– Andrew Davies, nationalinterest.org <sup>12</sup>

## Endnotes.

<sup>2</sup> **Citation:** **Susan Ivanova:** I’ve always had a hard time getting up when it’s dark outside. **Jeffrey Sinclair:** But in space, it’s always dark. **Ivanova:** [morosely] I know. I know. – Babylon 5, “Signs and Portents” (1994).

<sup>3</sup> **Citation:** See Zigged When He Should Have Zagged, 3 Combat, p. 981, *supra*, base chance of retreating is 50%.

<sup>4</sup> **Commentary:** This is another version of the issue of me vs. us in professional sports. Sometimes the team needs the power swing, other times the team needs base runners. Solo home runs are great, but they don’t add much to the team score. After the first hitter reached base by hitting the ball the opposite way, the next batter hit the ball out of the park to make the score 2-0 in favor of the Brewers.

<sup>5</sup> **Citation:** “OHL had issued orders to change tactics again days before Loßberg was blamed for giving new orders to the 4<sup>th</sup> Army. [Jonathan] Boff also doubted that all of the divisions in Flanders could act on top-down changes. The 119<sup>th</sup> Division was in the front line from 11 August to 18 October and replied that new tactics were difficult to implement due to lack of training. The tempo of British attacks and the effect of attrition meant that although six divisions were sent to the 4<sup>th</sup> Army by 10 October, they were either novice units deficient in training or veteran formations with low morale after earlier defeats; good divisions had been diluted with too many replacements. Boff wrote that the Germans consciously sought tactical changes for an operational dilemma for want of an alternative. On 2 October, [Prince] Rupprecht had ordered the 4<sup>th</sup> Army HQ to avoid over-centralising command, only to find that Loßberg had issued an artillery plan detailing the deployment of individual batteries.” – from Wikipedia article, “Battle of Passchendaele,” May 20, 2020.

<sup>6</sup> **Commentary:** An extreme version of ‘attrition warfare’ was the Aztec concept of the Flower Wars. The Flower War format was a ritualistic meeting of equal forces of warriors from two sides, on a sacred field, for melee combat without missile weapons and using less lethal handheld weapons as the purpose was to capture opponents for sacrifice and ransom. This is not to say there were no casualties or intimidation (the Aztec illustrations are gruesome), and it should not be pictured as chivalric combat in a European sense. The Flower War seems like an extreme extension of the pre-combat hero duels in ancient combats (e.g., David responding to the taunting of Goliath, except David used a missile weapon) but not in a straight gladiatorial sense. Such a system requires agreement between sides – hence it had to become part religious ritual overseen by the priesthood – because all bounds are off if either side breaks the format (ambush with missile weapons, bringing twice the number of allowed fighters, etc.) and it is notable that long-running Flower Wars tended to become nasty, push the bounds, and spillover into general warfare.

- ✓ It would be interesting if such a system developed in a GGDM game, but doing so would require a step toward a pan-galactic culture – development of meanings and protocols embracing such a practice. Science fiction literature – written with the sense of modern warfare and Western technologically enhanced individualism – rarely features ritualistic type warfare or even warfare with any sort of rules; *Dune* hints at ritualized conflict but then crosses over into total war, minus direct use of nuclear weapons. The movie *Rollerball* (1975) features a ritual type warfare in the form of violent modern professional team sports (and there are a number of games based on this concept) which, like *Aztec Flower Wars*, degenerates as the movie progresses into total war between corporate squads. The most notable science-fiction full implementation of ritual warfare of the Flower War type are the annual combats (called the Grand Combat) in Julian May's *Pliocene Saga* (1982) in which human temporal immigrants become increasingly involved.

<sup>7</sup> Commentary: Trench warfare developed in WWI on the Western Front after the initial grand maneuvers failed. It was possible only because of the terrain, the size of the industrial armies, and the relatively straight line from Switzerland to the North Sea. The end of trench warfare eventually crept in as aircraft, tanks, improved artillery coordination, and the new infiltration tactics – invented by a French officer and first used by the Germans – developed and asserted themselves. Infiltration tactics in particular placed new emphasis on small unit commanders' control and decision making. The Battle at Remagen in March 7, 1945, resulting in the capture of the last intact bridge over the Rhine (movie *The Bridge at Remagen* (1969)), is celebrated as a triumph of small unit leadership.

- ✓ In WWI, 'tanks' were used as infantry support vehicles (they looked nothing like modern tanks); they were tied to the pace of the infantry advance, clanking along with the infantry advance. At Cambrai in November 1917, the initial attack dispensed with the usual artillery preparatory bombardment; at dawn the tanks came over the rise and led the attack on the surprised German line which was easily overrun. The infantry came up behind and occupied the enemy trenches, collecting POWs. Within a decade, the German military appreciated the power of tanks, it took a complete turn of thinking to fully engage the potential of tank warfare, demonstrated in 1939 (blitzkrieg). Likewise, it took a complete turn in naval thinking to appreciate the power of the new aircraft carriers and long-range bombers; the Axis powers were behind that curve.

<sup>8</sup> Commentary & Citation: Blitzkrieg was maneuver warfare with a new logistical scheme. The U.S. Marines have always been committed to maneuver warfare and flexible small unit leadership:

- ✓ "Beneath its Prussian exterior of short haircuts, crisp uniforms and exacting standards, the Corps nurtured some of the strangest mavericks and most original thinkers I encountered in my journey through multiple commands and dozens of countries. The Marines' military excellence does not suffocate intellectual freedom or substitute regimented dogma for imaginative solutions. They know their doctrine, often derived from lessons learned in combat and written in blood, but refuse to let that turn into dogma. Woe to the unimaginative one who, in after-action reviews, takes refuge in doctrine. The critiques in the field, in the classroom or at happy hour are blunt for good reasons. Personal sensitivities are irrelevant. No effort is made to ease you through your midlife crisis when peers, seniors or subordinates offer more cunning or historically proven options, even when out of step with doctrine." – Gen. Jim Mattis (USMC Ret.) op-ed, "Jim Mattis: Duty, Democracy and the Threat of Tribalism," *Wall Street Journal*, August 28, 2019.

<sup>9</sup> Commentary: I have wondered how much Rear Admiral Kummert on the KMS *Blücher* knew of the Norwegian defenses when he sailed into Oslo? Did he know about the underwater torpedo tubes, what was he told? They apparently were also surprised by the 11 in. naval guns that hit their superstructure and were unable to locate them in the dark for return fire. All of this suggests very poor intelligence (the infamous *Abwehr*).

<sup>10</sup> Commentary & Citation: I believe that "Life Hutch" is one of five Harlan Ellison-Ken Steacy Earth-Kyber War graphic stories that appeared in *Night and the Enemy*, published in 1987 (republished with additions in 2015) and are now available on Kindle and comiXology.

<sup>11</sup> Commentary: This is the same reason that combat jet pilots in leftover Cold War dictatorships and third world countries flee to other countries rather than face air combat against fighter combat jets from any first class air power; it's not a contest of pilot against pilot, man against man, rather, it's a contest of machines – new cutting edge fighters against obsolete Cold War combat jets – that they know they will lose, die, and accomplish nothing.

- ✓ It is also the same reason that the six-carrier Japanese attack fleet that hit Pearl Harbor in December 1941 would be annihilated by the USS *Nimitz* from 1980. They would never know what attacked them.

<sup>12</sup> Clarification: Regarding reports that an F-35, the most expensive combat jet in history and the next generation of air combat vehicle, was beaten in a dog-fight by an F-16, a combat jet decades older.

**Ender Wiggin:** *All fighters fall back and surround Petra's ship!*

*Copy that.*

**Ender Wiggin:** *I want rings within rings. Layers upon layer. Every fighter we have!*

**Dink:** *Ender, you're gonna leave our transporters defenseless!*

**Ender Wiggin:** *If we're gonna win this battle, Dink, it's all or nothing now! When the outer layer is hit, the wreckage will continue to drift with us, like a shield. Do it now!*

**Mazer:** *He's abandoning his entire fleet.*

**Col. Graf:** *He's in command. There's no stopping him now.*

– Ender's Game (2013)

**Combat Screening:** Combat Screening is a formation where one or more ships, Fighter Complements, System Defense Boats, or System or Orbital Defense Bases are assigned to protect another unit by intercepting any attempt to attack the protected unit, or at least placing themselves between the attacker and the target.

- ✓ Orbital Defense Bases may only Combat Screen Orbital Cities, Orbital Defense Bases, Orbital Shipyards, keels (i.e. unfinished ships) and ships that have taken shelter at the colony.
- ✓ Fighters may Combat Screen anything.
- ✓ Warships may only Combat Screen other ships, including Cargo Ships and Colony Ships attempting to reach a Besieged Colony.
  - The *premier* Combat Screening action of WWII in Europe – the Battle of the Barents Sea in December 1942 – involved no carriers, and few aircraft and submarines. The heavier German surface ships were unable to attack the merchant ship convoy, being successfully intercepted in all directions.
- ✓ Cargo Ships, Colony Ships, Log Ships, Scout Ships and unarmed System Boats, or any ship or unit with no attack ability (i.e. *ability to initiate combat*), may never Combat Screen another ship or Defense Base because they pose no credible threat to the attacker.
- ✓ Combat Screening of or by Ground Units and Fighters in Ground Combat was discussed previously in Dropping In, Ground Combat Resolution, and Air Attacks in Ground Combat, 4 Combat, pp. 991, 993, 996, respectively, *supra*. Obviously, the unit screening another unit must have the *ability to initiate combat in the theater of operation* (see Keep Your Friends Close, Your Enemies Closer, 3 Combat, p. 972, *supra*), thus Ground Units cannot Combat Screen units in non-Ground Combat situations.

Prior to resolving the first Fighter Attacks, the Concierge (or computer assistant) will need to look at the orders issued by each position and determine which units are being Combat Screened and by whom on each side. Thus, the order in which Combat Screening actions are

listed should not matter in the round, but it would probably be best practice to group them near or at the top of the position's Combat Orders.

- Bugs on the Screen Door: All Combat Screening assignments must be included in the Combat Orders sent to the Concierge each round; Combat Screening assignments do not carry-over from round to round, therefore, the Concierge must be informed of Combat Screening assignments each Combat Round.

A ship, Defense Base or Fighter Complement assigned to Combat Screening cannot do anything else for the Combat Round; they cannot attack (except with Ship Missiles, see First Fire, 4 Carriers & Fighters, p. 1080, *infra*), or attempt a retreat (exception, Fighters Combat Screening their retreating Carrier, see Carrier Operations, 1 Carriers & Fighters, p. 1050, *supra*): their assigned target for the round is the unit they are protecting. All Combat Screening actions must include the specific unit (*not group, type or class, not "I am screening all Log Ships"*) that is being protected, generally, specific Carriers, Tenders,<sup>1</sup> Troop Transports (especially those joining a Colony Combat), Cargo Ships, Colony Ships, and Log Ships, orbital platforms, boats, and keels will be protected by Combat Screening. A unit assigned to Combat Screen *cannot be itself Combat Screened by other units!*

- ✓ This would be an interesting tactic though, layers of Combat Screens, but, eventually, someone has to attack (Combat Screening other *Combat Screeners* may be the GGDM equivalent of the 16<sup>th</sup> Century caracole cavalry tactic, but using Fighters and Ship Missiles<sup>2</sup>). The initial prohibition above is premised on the idea that the unit performing the Combat Screen must have absolute freedom of movement, other than being tied to the unit it is screening. High-level training and computer modeling (i.e. College faculties, Doctrinal Templates, technologies) could nullify the prohibition.
- Fighter Screens: Fighter Complements may either Combat Screen one target and Intercept two attackers per Combat Round, or may divide to Combat Screen two targets and each part will only have one Intercept for the Combat Round. Fighter Complements cannot target other Fighter Complements normally, but Fighter Complements intercepting attacking Fighter Complements results in a Dogfight (p. 1072, *ut infra*) between Fighter Complements (resolved one *sortie* at a time). As in Fighter Combat (see Blacksheep, 2 Carriers & Fighters, p. 1054, *supra*), Fighter Complements executing Combat Screens are resolved separately by sorties, however, the combat action of the Fighter Complement for the round is to Combat Screen, i.e. a Fighter Complement cannot divide its two sorties, with one Combat Screening and one attacking normally, it is doing one or the other.
- Buddy-Buddy: Carriers are not prevented from launching their Fighters to attack targets by being Combat Screened by others. One form of Carrier fleet tactics might be a 'buddy system' where one Carrier's Fighter Complement Combat Screens another Carrier whose Fighter Complements attack the enemy or screens other units.<sup>3</sup> Regular ships also might protect the Carrier from non-Fighter attacks while its Fighters attack the enemy.
  - ✓ When a target is being Combat Screened by both Fighter Complements and non-Fighter units, the Concierge (or game program) will do his best to assign the best protector to each attacker as they come in order. For example, if a Fighter Complement and one other warship is protecting a Carrier, the warship would not be sent to intercept an opposing Fighter Complement trying to attack the Carrier. If only Fighter

Complements attack the Carrier, the warship may never have an intercept opportunity. There are some decisions, such as Interceptions, that may be made by the Concierge (or game program) during processing, without consulting the position players.

- Colony Screens: A colony may be Combat Screened as one unit by Fighter Complements only against Raids or Strike Combats. All attacking Fighters will be automatically intercepted by the Fighter screen and the interception will be resolved as one Dogfight (p. 1072, *ut infra*). Half of the attacking Fighters that survive the Dogfight may immediately execute the Raid or Strike on the colony.
  - ✓ Defense Bases may not Combat Screen a colony, but may Combat Screen things in orbit at the colony. Ground Bases may not Combat Screen but may be Combat Screened by Fighters only in Colony Combat. Orbital Bases may only Combat Screen other orbital platforms and ships and boats at the colony planet (p. 1067, *ut supra*). System Bases may only Combat Screen ships and boats at the colony. Defense Bases cannot intercept Fighters.
- Normal Interception: A ship, Defense Base or Fighter Complement assigned to Combat Screen a target will move to Intercept the first unit *that it is capable of seeing and hitting* that attempts to attack the target. T-Ships in Ambush Mode *may not be Intercepted*, see Ambush-whacked, 7 Combat, p. 1038, *supra*, unless the Interceptor has a Temporal Sensor.

In an Interception situation, the Interceptor will fire first, regardless of status as the attacker or defender in the combat.

- ✓ Interception is being used loosely here, and the normal mental picture may not always fit the circumstances. For example, a System Defense Base is screening a Cargo Ship in combat. ‘Moving to Intercept’ in that case is more likely the Cargo Ship moving behind the System Defense Base than the System Defense Base moving out to challenge the attacker. What is the difference? The attacker has to come close...
- ✓ In July 2019, five speed boats of the Iranian Revolutionary Guard naval forces attempted to divert a British tanker in the Strait of Hormuz. A British Royal Navy frigate which had been trailing the tanker (was the tanker bait?) came up behind during the incident and ordered the Iranian boats to bugger off. The frigate is armed with automatic 30mm deck guns expressly for the purpose of repelling small boats and probably had air support coming up. The Iranians veered away.

If the Interceptor successfully attacks the attacking unit (in ship or base vs. ship, a “hit”; in Fighter Complement vs. ship, an “Engaged” result), the attacker is stopped and may only fire at the Interceptor (the attacker’s Combat Orders will automatically be changed to fire at the Interceptor), which may be sacraf... expendab... uh, destroyed. If the Interceptor does not successfully attack the attacker, the attacker has broken through the Combat Screen and may fire at the target. However, the target receives one Defensive Shift due to the efforts of the Interceptor. All attacks on the target are resolved together after all Interception attempts.

- ✓ Attackers Intercepted by an Orbital Defense Base receive one Defensive Shift against the attack of the Orbital Defense Base (due to mobility disparity).

There is *no die roll* for Interception, it happens automatically; the only criteria is whether the Interceptor could credibly threaten the attacker with destruction. Thus, Enlightenment will

never be used to cause or avoid an Interception, nor will Interceptions be prevented by pre-Interception Engaged results on the attacker from Fighter attacks, but of course, a second Engaged result from Intercepting Fighters will not only stop the attack, but destroy the attacker. Enlightenment rerolls may play a critical role in successful Interception by increasing the Interceptor's chance to hit the attacker and protect the target (*if* Fighters were allowed to use Enlightenment that round), while pre-Interception Engaged results against the Interceptors will lessen their chances of hitting. There are many combined arms dynamics at work.

- ✓ Because both sides issue Combat Orders independently before the Combat Round is resolved, regular warships assigned to Combat Screen other ships may be attacked before or after (depending on the order of processing) moving to Intercept other attacking regular warships (but it's all simultaneous, so it doesn't matter anyway). Regular warships assigned to Combat Screen other ships may also be attacked by Fighters and Engaged during the Fighter portion of the Combat Round, which reduces their chance of a successful Interception of regular ships. But they will get a Close-in Defense Fire at the Fighters in any case. This whole process can be very dynamic.
- Second Interceptions: A ship or base that fails to Intercept the first attacker may attempt to Intercept a second attacker against its target unit, *if the target unit of the screening has not been destroyed*. A Fighter Complement that is not divided between Combat Screening two separate targets, may always attempt to Intercept additional attackers until it successfully Intercepts a second attacker. A Fighter Complement that is assigned to Combat Screening may never use both of its *sorties* on the first Interception. Therefore, the only possible result of a successful Interception by a Fighter Complement is an Engaged result stopping the attacker.
  - ✓ This is the point to remember that Combat Orders are processed in the order listed. The Interceptors act automatically, taking the first comer and the second comer if they are able. They may be drawn off by smaller ships before the big ship punches through to attack the target. There is, of course, a cost to this and tactical circumstances where that option will not be available. And a tactical counter – an entire fleet can be set to protect one or two ships if they think the attacker is going after them.
- Nolo Contendre: Regular ships (incl. Carriers) and bases assigned to Combat Screen a target may not intercept attacking Fighter Complements. The fast, agile, numerous Fighters just spread out and go around the lumbering interceptor (like you trying to intercept a swarm of bees). Only Fighter Complements may intercept attacking Fighter Complements.
  - ✓ Massed fighter combats in space on the big screen have classically been portrayed as cavalry-like affairs where the forces charge at each other firing wildly, pass, come back around and do it again until the affair devolves in a big swirling dogfight between individual fighters.<sup>4</sup> Other times, as in Babylon 5 battles, the fighter screens may pass through each other firing, then each proceed to attack the big capital ships behind the fighter screen. Critics of space-opera movies find this somewhat absurd, but this is what the participants will surely envision and GGDM's fighter rules are built on that premise. The main criticism of it all is that space fighters in movies act like aircraft on Earth, but still, it is difficult to imagine that tactics would change greatly or that fighters would just sit and shoot, even if they properly acted as spacecraft (e.g., Babylon 5's Starfuries).

*“This paper extends its author’s earlier use of Joseph Tainter’s theory that a tendency toward diminishing returns on investments in complexity is the source of the collapse of complex societies to analyze the current trend of international economic life, and its implications for international security.*

*Specifically it contends that the post-World War II international economic order, particularly from the 1970s on, has grown increasingly complex (as the level of integration, information flows and the structure of economic activities indicate), while offering diminishing returns on that complexity, and with it, shrinking slack making for a system that is both more stressed and more fragile (evident in slowing growth and increasing indebtedness). The paper also identifies some of the possible causes for this trend (like technological stagnation and natural resource depletion).”*

– Nader Elhefnawy (Miami-Dade Community College), Abstract of “Rising Complexity, Diminishing Returns, Shrinking Slack: Revisiting the Evidence,” pub. on SSRN, March 17, 2018 <sup>5</sup>

**Survey Says:** The 2016 board game Blueshift (which also uses an abstract tactical combat system like GGDM) contains an *automatic* combat screening rule: Ships that hit in combat can only hit ships of equal or smaller size unless there are no remaining targets, at which time they may hit the next largest ship. Thus, small ships screen larger ships from other small ships, but not larger ships. The designer also collapsed the ideas of fighter carrier and troop transport into the colony ship, making a super-utility ship that can carry any combination of interceptors (i.e. fighters, cannot exist without a ship or planet) and infantry, up to four units, meaning it can sometimes be a carrier, sometimes a troop transport, or any range in between, and once or twice a game, it works as an actual colony ship at uninhabited planets.

- ✓ Imperium (1977), a Traveller RPG board game, required that each defending unit must be met by at least one attacker. After all defenders have been paired with attackers, if extra ships remain on either side, that side can use the ships to double or triple on any ships from the other side. Any ships not so used are considered ‘screened’ from the combat and may not participate in the combat or be attacked. Thus, unless forced to the line, carriers and troop transports may be screened automatically, or their owner may choose to risk them on the line to get extra attacks. Thus, the game provides for a limited *automatic* combat screening.<sup>6</sup>

‘Slack’ in the case of GGDM game design might be equated to the amount of complexity available for development by the participants through the story, while ‘efficiency’ then equates to the amount of complexity in the participant’s mental space and the game’s ‘Public Space’ that is already taken up by the rules such that the addition of in-game developed complexities is curtailed.

- ✓ Complexity may be an issue in boxed games, but slack is not generally – where the entire game exists within the box, there is no room for improvisation or in-game additions by players. Complexity vs. slack first surfaced as an issue in writing RPGs where the explicit intent of the rules is to allow players freedom to create and improvise; RPG adventures and source books always contain adventure ‘hooks.’

GGDM's combat screening rules, below, are much more complex. The question is, what was gained by additional complexity (being free of a tabletop game board) and do you think it was worth it? Are wooden, automatic rules better by being simpler? Is the option to choose not to combat screen, to go all in on the attack (which the Imperium board game, *ut supra*, allowed), is that flexibility alone enough to justify complexity? Is the ability to penetrate to attack combat screened ships worth the extra complexity (which Imperium did not allow)? Is the ability to intercept any size attacker better than the Blueshift rule?

**Commodore Glen Van Ross:** *I'll be a son of a bitch if I go to your funeral, Ty.*

**Lt. Col. Tyrus Cassius 'TC' McQueen:** *Yes you would sir. But we'll talk about your mother when I get back.*

\*\*\*

[Colonel McQueen is about to go kill Chiggy Von Richtofen,  
the enemy's ace flyer]

**Priest:** *Colonel. Colonel! Colonel McQueen! Do you need to make peace with your maker?*

**Lt. Col. Tyrus Cassius 'TC' McQueen:** *My maker was some geek in a lab coat with an eyedropper and a petri dish. What do I need to make peace with him for?*

**Priest:** *In times of war we must all make peace with our maker.*

**Lt. Col. Tyrus Cassius 'TC' McQueen:** *Well, I don't think our maker wants to hear from me right now. Because he knows I'm going to go out in this plane and I'm going to remove one of His creations from His universe. And when I get back, I'm going to drink a bottle of scotch as if it was Chiggy Von Richtofen's blood and celebrate his death.*

**Priest:** *Amen.*

– Space: Above and Beyond, “The Angriest Angel” (1996) <sup>7</sup>

**Dogfighting:** Dogfighting is just “close in defense” combat between Fighter Complements. Opposing Fighter Complements only meet head-on during Combat Screening when one Fighter Complement intercepts the other (that is, when they are pinned down to attacking and defending a specific point in space).

- ✓ A Fighter Complement assigned to Combat Screen automatically Intercepts an attacking Fighter Complement, and since Fighter attacks are resolved first, this may soak off the Fighter screen for other attacks on the target later in the Combat Round.
- ✓ Combat Screening Fighter Complements may intercept up to two attacking Fighter Complements (i.e. *sorties*), and each will be separately resolved as a Dogfight, but the Screening Fighter Complement will be divided in half.
- ✓ Upon assigning a Fighter Complement to Combat Screen, the owner of the Fighter Complement may instruct that, in the case of a Dogfight, the Combat Screening Fighter Complement only engages in one Dogfight at full strength, thus giving up the “second intercept” ability for that Fighter Complement in the current Combat Round.

- **Two Eyes:** Dogfights are resolved in sorties; the RP value of the incoming Fighter Complement's sortie vs. the Intercepting Fighter Complement's sortie. Thus, a single sortie of intercepting Fighters cannot Dogfight both sorties of a Concentrated Attack from a single or combined Fighter Complement. However, it is possible that both sorties of a Concentrated Attack might be met – individually – by intercepting Fighters in Dogfights.
- **Four Fangs:** Fighter Complements engaged in a Dogfight automatically hit each other, it's just a question of damages. Each side rolls one ten sided die for every 10 RPs worth of Fighters *on their side* (i.e. not the value of opposing Fighter RPs like in Close-in Defense Fire) at the beginning of the Dogfight. The sum of the die roll results is the amount of RP damage done to the opposing Fighter Complement. Obviously, the larger Fighter Complement is usually going to get more die rolls and will probably do more damage (i.e. get in more licks). One RP of damage is added to each die roll by the higher Era fighters for every Era difference between the Fighter Complements engaged in the Dogfight and damage can exceed 10 RPs per roll (note, this is different than regular Close-in Defense Fire).<sup>8</sup>
  - ✓ For example, an attacking *sortie* of 50 RPs of 1<sup>st</sup> Era Fighters is met by a Combat Screening *sortie* of 30 RPs of 2<sup>nd</sup> Era Fighters. The Fighters automatically intercept, no roll is made to see if they hit (i.e. they automatically hit). Because of the automatic hit by both sides, the attacking Fighter Complement's attack on the target *is stopped* and diverted to the Dogfight. The attackers will get 5 die rolls for damage and the interceptors will get 3 die rolls for damage but add one to each die roll; each *attacker die roll* will do a minimum of 1 RP damage to the interceptors, each *interceptor die roll* will do a minimum of 2 RPs damage to the attackers.

---

*“The most remarkable operational development of the [16<sup>th</sup>] century was the relatively abrupt change in the strategy and tactics of naval warfare, both of which had been relatively static for approximately 2,000 years. During those millennia, control of the seas had been exercised near the coastlines by war fleets of short-ranged row galleys. By the end of this century the row galley had been displaced in most parts of the world by sailing ship, with its heavy broadsides of long-range cannon.”*

– R. Ernest Dupuy and Trevor N. Dupuy, The Encyclopedia of Military History, 2<sup>nd</sup> Rev. Ed. (1986), p. 448

---

**Areal Weapons:** A weapons system is designed to apply energy, mass or space change to introduce adverse entropic effects on the target.<sup>9</sup>

- ✓ “And even at this early date, we have an example of the timeless horror of new fighting tools, resulting eventually in the prohibition of the crossbow by several popes.... Despite this abhorrence of military change, no restriction has ever succeeded in abolishing a weapon which once proved its worth on the battlefield.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 134.
  - See related Montross feature quote regarding use of “poison gas” in WWII, 4 Combat, p. 997, *supra*.

Ninety-percent of the video-game and movie space combats are fought with massed fleets firing point-to-point weapons. It looks pretty on film. The underlying assumption of the game's combat system is that combats are fought using point to point energy or projectile weapons, and/or small area burst weapons.<sup>10</sup> But suppose someone invented a weapon with an effective radius that covers a significant volume of system space; a weapon with a bursting radius of ten or twenty times the size of Jupiter or the Sun? That would swallow planets. Overnight, closely massed fleets (and planets) become a target, unless they have shielding or defenses.<sup>11</sup>

“Areal” is an adjective form of “area” and thus means an expanse of space:

- ✓ Merriam-Webster online dictionary at *area*: **4**: a particular extent of space or surface or one serving a special function: such as: **a**: a part of the surface of the body, **b**: a geographic region.
- ✓ In 2011, the National Weather Service changed “area warnings” to “areal warnings” without comment.
- ✓ Merriam-Webster (*Id.*) also has an entry for “areal linguistics,” which is in the bottom 10% of words.

Thus, “areal weapons” seems like a good term for the significant space area burst (SSAB) weapons discussed here. In the volume of system space, a nuclear weapon, devastating on Earth, is just a firecracker. When filmed from space, a nuclear blast on the surface of the Earth is but a momentary point of light. One of the first areal weapons in science-fiction literature was the famous “Sphere of Annihilation” featured in Arthur C. Clarke’s 1951 short story, “Superiority.” The implementation of the Spheres did not win the war for Earth, it lost the war.

- ✓ The first rule of nuclear warfare is force preservation. Those on the ground cannot do anything about a nuclear weapon if it is not stopped in flight or before launch; for the local forces and civilians, it is simply best not to be there when it hits.<sup>12</sup>
- End of the Age of Sail: It is usually taught in grade school that the appearance of ironclad warships during the American Civil War (1860-1865) ended the Age of Sail’s (1571-1862, see Dupuy & Dupuy feature quote *ut supra*) broadside-firing, multi-mast warships. This is only true in the very final sense, but is a case of confusing cause with symptoms. The beginning of the end of the age of wooden ships began with the invention of the Paixhans gun in France in 1823, the first naval gun to fire flat trajectory shells; the Paixhans gun solved the problem of the shell fuse which was ignited upon firing and burned just long enough to allow the projectile to lodge itself in the side of a wooden ship before exploding.
  - ✓ Echoing Dupuy & Dupuy, the Paixhans gun might be the most remarkable development of the early 19<sup>th</sup> Century warfare! But the 19<sup>th</sup> Century saw many innovations.

It was at this point that metal armor became imperative, the French equipped the first ship with Paixhans guns in 1841, the U.S. Navy followed in 1845; in 1853 the Russians annihilated a Turkish fleet using Paixhans guns. In 1849, John Dahlgren in the United States improved the Paixhans gun’s range and accuracy with shells and the Dahlgren gun could also fire inert solid shot, which the Paixhans gun could not. In the intervening decades between the invention of the Paixhans gun and the American Civil War, steam power developed in parallel to the point of reliability acceptable in naval design so that sails could be entirely dis-

carded in new casemate and turreted ironclad warships. Naval gun turrets were invented independently in Britain and the United States in the 1850s, bringing together the elements leading to the ironclad revolution in naval warfare.

- Spinal Mounted Ship Weapons: Bearing – how many weapons can be brought to bear in any sector without moving – is an important consideration in warship design. Historically, the mechanical turret has supplanted the old style broadsides of the sailing era because of the turret’s economy of weapons bearing.<sup>13</sup>

- ✓ The transition to broadside-armed sailing ships marked the beginning of the naval warship as the most expensive and concentrated single unit of firepower in the military arsenals of the world, each was, in 17<sup>th</sup> and 18<sup>th</sup> Century terms, equal to a small or medium land fortification in most respects. That trend continues; for example, a new, small U.S. warship, the USS Little Rock II, cost \$440 million to construct and spent the first couple of months of its maiden voyage stuck in the ice in Montreal, Canada.

As such, most space-opera stories envision ship weapons that can fire in large arcs, sometimes using turret technology (some ships in Traveller used tracked turrets that could move around the ship’s hull), while most small fighters are made to fire forward only, but have agility and speed such that having only a single weapon bearing is not a liability in combat.<sup>14</sup>

- ✓ Weapons bearing is irrelevant to GGDM ship combat – which uses an abstract tactical system – unless players and the Concierge add something to the game where weapons bearing on ships matters.

Conversely, Traveller RPG imagined “Spinal Mounted Weapons” which were ship-sized weapons that formed the spine of the ship – that is, the weapon was built first, and then the ship was built around the weapon. In the case of Spinal Mounted Ship Weapons, which only had forward bearing on a limited arc, space warfare returned to the days of sailing ships, when the crew aimed the ship and the gunners fired the weapons. The most Traveller-like examples of spinal mounted weapons on the screen are the Wave Gun on the Space Battleship Yamato in Starblazers (both animated and live action versions), the main gun on the Battlestar Pegasus (note, a Carrier) in the reimaged Battlestar Galactica series (seen in the escape from New Caprica), and in Ender’s Game, where it was used to destroy a planetary civilization. Another variety of ‘focused beams’ ship weapon was shown on the Death Star in the original Star Wars movies and on the new Excalibur heavy cruisers in B5: Crusade.

In nearly all science-fiction settings where Spinal Mounted Weapons are used, they draw tremendous ship power and as such, firing them is either a one shot event, often leaving the ship disabled, or they fire continuously, but at a slower rate than conventional weapons, unless the ship is of a very high, usually ancient alien technology. This should be noted if players wish to introduce the concept to the game via Patent.

The Spinal Mounted Weapon may or may not be a Technological Device (TD) operational technology, as discussed in 2 Patents, p. 741, *supra*. A TD can be somewhat relative; the first of its kind might be a true TD in the universe, but the Third Imperium had hundreds of Spinal Mounted Weapons ships (and tens of thousands of other ships), built over centuries at dozens of huge naval ship yards. The Third Imperium in Traveller had over 11,000 colonized worlds and lasted over 1,100 years, so they had the economies of scale to build massive

fleets of such massive ships. The 1981 Traveller Supplement 9 Fighting Ships included the Tigress Class Dreadnought, a spherical ship – suspiciously Death Star-like except for the clunky looking propulsion and launch bays at the back – coming in at 500,000 tons, and spinal mounted with a pair of Factor-T Maeson guns (like an old Civil War monitor).

- ✓ As noted previously, weapons bearing is irrelevant in GGDM. However, the attraction of the Spinal Mounted Weapon (and Area Weapons) in GGDM combat might be their massive punch, for example, if the game technology develops to where units can take multiple hits from regular weapons before being destroyed or where Era multipliers and differentials become problematic.

---

**Gunnery Chief:** *This, recruits, is a 20-kilo ferrous slug. Feel the weight. Every five seconds, the main gun of an Everest-class dreadnought accelerates one to 1.3 percent of light speed. It impacts with the force of a 38-kiloton bomb. That is three times the yield of the city buster dropped on Hiroshima back on Earth. That means Sir Isaac Newton is the deadliest son-of-a-bitch in space....Damn straight! I dare to assume you ignorant jackasses know that space is empty. Once you fire this husk of metal, it keeps going till it hits something. That can be a ship, or the planet behind that ship. It might go off into deep space and hit somebody else in ten thousand years. If you pull the trigger on this, you're ruining someone's day, somewhere and sometime. That is why you check your damn targets! That is why you wait for the computer to give you a damn firing solution! That is why, Serviceman Chung, we do not 'eyeball it!' This is a weapon of mass destruction. You are not a cowboy shooting from the hip! – Mass Effect 2 (2010) <sup>15, 16</sup>*

---

## Endnotes.

<sup>1</sup> Citation: See previous discussion of Combat Screening retreating Carriers and Tender starships, Carrier Operations, 1 Carriers & Fighters, p. 1050, *supra*.

<sup>2</sup> Commentary & Citation: The caracole cavalry tactic, in the modern usage, is a peculiar and debated development of the tactically fluid 16<sup>th</sup> and 17<sup>th</sup> Century land warfare in Europe. Most will not have heard of it, and it's not as exciting in movies as the full gallop, sabers-drawn, lances-down cavalry charge.

<sup>3</sup> Commentary: It might be possible to develop types of Fighters that are superior at interception or attacking ships. Thus one 'buddy' carrier loaded with specialized Interceptor Fighters (superior closing speed and sensors) might protect itself and another Carrier that is loaded with anti-Ship attack Fighters.

- ✓ “The MiG-25's sustained speed of between 2700 and 3000 kph at altitude was equal to and above the short period sprint speed of any fighter – this is as true today as it was in 1972 when this remarkable aircraft entered full service.” – from 2014 poster created by Bharat-Rakshak, an Indian Defense Forum (open intel).
- ✓ The MiG-25 is the classic example of the interceptor. Its game was speed and altitude, guided to the target by ground controllers. The cockpit had limited visibility, but the frame was built for speed and could outrun most missiles. The MiG-25 is obsolete now for many reasons, even in its photoreconnaissance role.

<sup>4</sup> Commentary: The Battle of Angora in 1402 ending in a huge Ottoman rout by the Tartars, is the largest cavalry battle in history, with cavalry accounting for well more than half of the approximately 225,000 combatants. Imagine such numbers in galactic space-opera fighter battles? *Although this is more likely to be the scale at which interstellar empires wage battles*, it is rarely depicted (or anything even close) in space opera movies because of the limited human ability to *grok* such scale; the unmatched scale and numbers of combatants, material, and civilian victims of the two World Wars in the 20<sup>th</sup> Century were difficult for the people of the time to grasp. Then came the Bomb.

- ✓ “It was thus an enormous and polyglot host of Asiatic horsemen that Timur brought to the battle of Angora in 1402 against equal or perhaps superior numbers of Turks under Sultan Bajazet. Probably no greater cavalry battle has ever been recorded in history, for it does not appear that weapons of gunpowder had anything to do with the outcome. Timur virtually won the day by manoeuvre before striking a blow. After devastating the Turkish lands near Angora, he placed Bajazet in such a position that the sultan had to attack in order to secure water at the river Halys. His troops were half defeated by thirst as they went into action, both men and horses being tortured by the dust rising from the plain. Treachery played a part when a number of squadrons went over to the enemy, and the struggle ended in a disaster for Bajazet, who died in captivity.

So complete was the rout that the Ottoman state seemed on the way to a collapse as dramatic as its beginnings. Civil war followed invasion as Bajazet’s sons disputed for the succession, and rebellions of conquered subjects broke out in Syria and the Balkans. *The [Ottoman] empire escaped ruin only because of boons such as fate has seldom extended to a prostrate power.* Timur’s death three years after his great victory was followed immediately by the disintegration of his conquests. At this same period Christendom entered upon the Hussite crusades that were to drain the energies of eastern Europe for a generation. *The combination of these timely circumstances gave the next two Ottoman sultans a respite* which they used to advantage in building up a new tactical system. Fifty years after Angora the Turks were stronger than ever before, and Constantinople fell an easy prize to their great siege train.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 219 (emphasis added).

- ✓ According to Wikipedia article, “Battle of Ankara” (aka Battle of Angora, both Montross and Dupuy & Dupuy call it the “Battle of Angora”), the Ottomans had about 140,000 and the Tartars about 85,000. This is a reversal of the claim made by Montross, who indicated (above quote) that the Turks outnumbered the Tartars. Captured January 5, 2019. However, a significant number of Ottoman levies defected *en masse* to the Tartars during the battle.
- ✓ The Crimean Tartars remained a significant entity into the late 17<sup>th</sup> Century and played an important part in early modern Russian, Polish and Lithuanian histories.

<sup>5</sup> Commentary: “Slack” in this case refers to the available resources to meet unexpected contingencies (“buffering capacity,” *Id.* at p. 5). Slack is the opposite of “efficiency,” see Joseph Tainter feature quote and Conquest by Entitlements, 5 Culture, pp. 429-430, *supra*.

<sup>6</sup> Commentary: For the record, I did not read the Imperium rules until 2019 (bought the game at a silent auction for a couple of dollars in about 2015), about 25 years after Combat Screening was introduced into GGDM. But the concept was clearly out there before I bought my first wargames... though I do not remember playing any games in my youth that had anything like combat screening. I had not heard of Traveller RPG until at least 1986, possibly 1987; I started with the D&D Basic Set in about 1982.

<sup>7</sup> Commentary: “Chiggy Von Richtofen” was the name the Humans gave to the alien enemy ace (you get the reference?). He was flying a prototype advanced alien fighter, probably the only one they had; probably intended as a reference to German *wanderwaffen* and an indication that the Chigs were starting to lose the war. The humans sent an *In Vitro* (i.e. artificially gestated humans, with no childhood) ace pilot of their own to destroy him. The episode is very existential.

<sup>8</sup> Commentary: The primary memorable scene of the 1980 movie, The Final Countdown, is the sight of two Japanese Zeros (Second Generation Fighters) being buzzed and engaged by a pair of F-14 Tomcats (Fourth Generation Fighters) near Hawaii in December 1941. Downing the second one by gunfire, dogfight style, was unnecessary.

<sup>9</sup> Citation: “The English were the last important European nation to adopt officially gunpowder small arms. After prolonged debate, a Royal Ordinance of 1595 banned the longbow as the basic weapon of the militia train bands. Each soldier now had to supply himself with an arquebus, caliver, or musket. This did not end the debate in England, however, since archers frequently proved that they could shoot faster, farther and more accurately than most musketeers.” – Dupuy & Dupuy, Encyclopedia of Military History (2<sup>nd</sup> Rev. Ed., 1986), p. 450.

- ✓ Likewise, the Native American bow, especially in North America, was superior to the European muskets initially, and was much more suited to the environment of the East Coast and Appalachian Mountain forests in the initial stages of the European invasion. Thus, in strict terms, success is not always (and not frequently) solely a result of superior weapons.

<sup>10</sup> Commentary & Citation: It is not certain when the exploding artillery shell was invented, by whom, or under what circumstances. However, Christoph Bernhard von Galen, Prince-bishop of Münster, who became known as ‘Bombing Bernhard’ was rather enthusiastic about using them to accentuate the ‘word of god’ upon his enemies. He appears to have, from recent archeological finds (see Matthias Schulz, “Excavated Bomb Suggests Early Start for Artillery,” *spiegel.de*, June 17, 2011), had or invented the first ‘modern’ type of self-igniting explosive artillery shell, which he used enthusiastically to sow terror on Protestant dissenters in the early 17<sup>th</sup> Century, mainly in the Netherlands. Previous shells had to be lit manually, then fired out of a cannon or mortar, a very hazardous task.

<sup>11</sup> Citation & Commentary: **The War Doctor**: Don’t sit on that! It’s not a chair, it’s the most dangerous weapon in the universe! **Rose Tyler** (bad wolf avatar): Why can’t it be both? – Dr. Who, “The Day of the Doctor” (2013). The writers of the Dr. Who television series have been particularly prodigious in inventing various technological devices with near divine powers such as the Pandorica, The Reality Bomb, The Moment, and of course, the oddly sapient TARDIS, and creatures such as the evolved Daleks, Space Whales, the Ood, or the creature in the Pit – that are probably beyond the scope of the nascent interstellar civilizations in the game, and any similar sort of ideas should be introduced, if at all, under the *sublimely wise* control of the demigod Concierge.

- ✓ “The galaxy eater. The final work of the ancients of Gallifrey. A weapon so powerful the operating system became sentient. According to legend, it developed a conscience.... How do you use a weapon of ultimate mass destruction when it can stand in judgment on you?” – Gallifreyian General, “The Day of the Doctor.”

<sup>12</sup> Commentary: We knew it, anyone who had half a brain and gave it any thought knew it (not all Marines qualified for either criteria): Okinawa would be nuked if the balloon went up. If we were still there, we were all dead. It was the only chance the Soviets had in the Pacific – if they had any ambitions in the Pacific and the Pacific theatre is noticeably absent from 95% of Cold War fiction, much less WWII fiction. If it involved the ChiComs and Taiwan, we were dead for sure. The Japanese would be blamed afterward by the attackers for having U.S. military forces stationed in their territory. We were young, you shake off the thought and most of the guys buried themselves in partying on BC Street. A couple of them ended up in Naha Penitentiary for a long time.

<sup>13</sup> Commentary: On land, the key weapons system advance of the early gunpowder age was the ... bayonet ... which allowed land units to instantly double or triple their combat power by replacing pike men with muskets while retaining the ability to defend themselves in close combat. Few other inventions in military history have instantly doubled the combat power of units, with the best candidates being the modern hand grenade and machine gun.

- ✓ On the seas, it was the mid-19<sup>th</sup> century invention of the turret which allowed ships to carry fewer and larger guns (the American Civil War Union monitors carried two 16 inch muzzle loading smoothbores that each fired a 400 lb. ball with 30 lbs. of powder and required steam power to load, shown in contemporary drawings of the inside of a turret), and bring all of them to bear on any target on either side of the ship, replacing static broadsides from the Age of Sail. Later in the American Civil War, the Union had four 16 inch guns on double turret monitors (i.e. industrial superiority), the ancestors of the early 20<sup>th</sup> Century seagoing turreted warship.

<sup>14</sup> Commentary: The ultimate in star fighter agility on the screen was Babylon 5’s Star Fury; conversely, the Hammerhead fighters from Space: Above and Beyond series (1995-1996) featured a top-mounted remote turret gun.

<sup>15</sup> Commentary & Citation: Or as we used to say in the Marines, an artillery shell in flight has the ultimate right of way. In England in 2019, two skydivers in freefall at 120 mph were almost hit by a pair of U.S. F-15s that passed under them at 345 mph.

- ✓ “U.K. Airprox didn’t specifically determine how close this near-miss was but said there was ‘Go-Pro footage filmed from the helmet of one of the parachutists’ that showed the jumpers ‘could clearly see the F15s passing beneath.’” – David K. Li, “Two skydivers in freefall were nearly hit by U.S. fighter jets,” NBC News, September 12, 2019.

<sup>16</sup> Commentary: It’s odd that the Cylons never thought of this weapon, the Battlestar Galactica would have been riddled.

- ✓ The Concierge should consider potential ‘inadvertent’ and ‘accidental’ collateral damage to a colony planet and orbital facilities in any colony combat situation, especially if the colony’s defenses consist solely or primarily of Ground Bases and Orbital Bases. Because how can anyone be sure they aren’t just eyeballing it?

*See Appendix CEX – Combat Example*  
*See Appendix CST – Combat Shifts & Situations Tables*  
*See Appendix EPAT1 – The Existential Patents*  
*See Appendix EPAT2 – Existential Patents Quick Summary*

*“Our scientific power has outrun our spiritual power. We have guided missiles and misguided men.” – Martin Luther King, Jr.*

**Torpedoes at Trafalgar:** Ship Missiles are an Enhancement Technology that may be added to warships and Orbital or System Defense Bases (but not Ground Bases) after obtaining the Ship Missile Existential Patent. Ship Missiles are a one-shot, expendable Enhancement, which may be replaced by manufacturing and transferring missiles from a colony using activations of the Construction Power for Colony Enhancement (to build) and Ship Supply (to transfer). Log Ships may also carry replacement missiles which can be resupplied in combat (see Combat Resupply, 4 Movement, p. 868, *supra*). Ship Missiles do not gain from Era progression, like Fighters, new generations of missiles will be required for the 2<sup>nd</sup> and 3<sup>rd</sup> Eras via new Patents.

Ship Missiles are measured in RPs, like Fighter Complements. Unlike Fighter Complements, a unit may fire less than its full Ship Missile attack in any Combat Round, until all are expended. A normal warship can carry Ship Missiles with an RP value equal to half of its basic construction cost (not total cost, see Laying Keel, 3 Construction, p. 675, *supra*) and Carriers can carry Ship Missiles equal to one third of their basic construction cost. System Bases have extra capacity, they may carry 30 RPs of Ship Missiles (equal to 2/3 of their basic construction cost).

- ✓ A 1<sup>st</sup> Era Log Ship can carry enough Ship Missiles to reload a 1<sup>st</sup> Era Warship.
  - ✓ As discussed in ABBA Arrival, 2 Information, p. 1340, *infra*, Ship Missiles will not automatically be detected by anyone seeing the ship, but may be detected if the other position engages in Surveillance at that location. Knowledge of the presence of Ship Missiles, even if not used in the Combat, may significantly affect the choices made.
  - ✓ Imagine if the Franco-Spanish fleet at Trafalgar had a few deck-mounted torpedo tubes of the WWI air-powered variety or WWII JFK PT Boat electric powered kind?
- **Fighters vs. Ship Missiles:** Fighters are reusable, but require special warships called Carriers (or a Colony) where they are based. Ship Missiles can be put on *any warship or base*, but are *one shot*. The combination of Ship Missiles and Fighters can be a deadly, expensive, tactic.
- ✓ Like gunpowder weapons, Ship Missiles may be the ‘great equalizer’; a side that is either inferior in technology or numbers may seek to temporarily equalize the situation with heavy use of Ship Missiles. This is a very expensive patch, and may harm the position developmentally in the long term. But can a position risk not having Ship Missiles in the arsenal? Can ships pass up the extra attack?

Ship Missiles are like shooting RPs at the enemy. Literally. Are they worth it? Do you fire all of your Ship Missiles in the first Combat Round? Because if their ship or base is destroyed, the unfired Ship Missiles are lost, wasted. Or do you spend all of those RPs on warships, bases, and technology instead? A fleet that fired all of its Missiles in the first combat (a Ship Combat) has lost significant ability, and may be at a disadvantage in the second combat. Do you target the enemy ships that you think are holding back Ship Missiles for a follow on Colony Combat or second Ship Combat? Dare you gamble with the fate of worlds?

- **First Fire:** A ship or Orbital or System Defense Base armed with Ship Missiles may fire some or all of its missiles at one or more targets in any Combat Round in addition to its regu-

lar attack or action (except Combat Resupply). Thus, a unit that is Combat Screening another unit or retreating, may fire Ship Missiles. Ship Missiles, however, do not execute their attack until the *end* of the Combat Round, *before retreats*. The unit firing the Ship Missiles does not need to survive the Combat Round for the missiles to attack (i.e. ‘fire and forget’).

There probably is no – or a very thin – realistic basis for resolving Ship Missile attacks at the end of the Combat Round; it’s mainly just a game tick to allow Engaged results to carry over. Participants who want to design Ship Missiles that attack with or before Fighters in the Combat Round should be cognizant that they are giving up the carryover ability.

- ✓ There are many ways to slice the pie; in the Traveller RPG board game Imperium (1977) ships have missiles, beam weapons and defensive screens. Missiles are the only weapon that can attack in long-range combat, where they are most effective, their effectiveness is (counterintuitively?) halved in short-range combat. However, as the first combat round is automatically at long range, a ship will always get to fire missiles at least once; in short-range combat, a ship destroyed by beam weapons, which resolve first, cannot fire its missiles before being removed (cf. in GGDM, Ship Missiles fire first). Further, to offset the Vilani superiority in ship missiles, the Earth player can build cheap missile ships<sup>1</sup> which, combined with the game’s tactical option of “high intensity missile fire” that expends all missiles in one shot for a double-strength attack, is a devastating first-round offset tactic against heavy Vilani ships.<sup>2</sup>
- Fire-and-Forget: Ship Missile attacks are resolved like Fighter attacks, including Effectiveness Rolls, except that Close-in Defense fires first, *unless* the target has already been Engaged earlier in the current Combat Round by Fighters or prior Ship Missiles.
  - ✓ Ship Missile attacks from each source against one target are *resolved separately*, as if they were a Fighter *sortie* (e.g., the 1979 movie Meteor), in the order listed in the Combat Orders; it will take missiles from two enemy units to instantly destroy an unengaged target. Ship Missile sorties may not make concentrated or combined attacks.
  - ✓ Missile RPs destroyed by Close-in Defense fire are removed *prior* to resolving the Ship Missile attack, but any remaining missiles will attack the target.
  - ✓ Successful attack results from Ship Missiles are cumulative with other successful Fighter/Ship Missile attacks; a previously engaged target can be destroyed.
  - ✓ A Ship Missile attack may Engage the target or destroy a previously-Engaged target, and, unlike Fighters, Engaged results from Ship Missile attacks *carry over to the next Combat Round to the end of the Fighter attacks resolution* (i.e. not to the end of the Combat Round, not to the next Ship Missiles resolution or retreat attempts).
  - ✓ As Ship Missiles destroy themselves in the attack, there is no Close-in Defense fire after the attack; units that were Engaged before the attack will not get any Close-in Defense Fire against Ship Missiles.
  - ✓ *Ship Missiles may never use Enlightenment!* (duh!) But that’s negotiable, of course.
  - ✓ *Ship Missiles may never be used against Ship Missiles or Fighters.* But that can be fixed, of course. It is possible to develop variant Ship Missile technologies.
- Already Engaged, Don’t Ask: The owner of the unit engaged by Ship Missiles at the end of the Combat Round will know on the beginning of the next Combat Round that the unit begins Engaged already. This likely will affect what that unit does in the next Combat Round,

as first, its chances to hit are reduced by being Engaged, and second, any successful attack by Fighters in the Combat Round will destroy the unit that began Engaged. Combat Screening the unit may not be an option, but then again, neither might charging after a Carrier or other unit that it likely to be screened an option, unless there is no choice.

- ✓ Because Ship Missiles attack at the end of the Combat Round, there are two situations in which they should be used: 1) if the firer thinks that the enemy ships will likely survive the round and try to retreat, and the firer doesn't want them to get away, and 2) if the firer thinks the combat will last more than one round or will continue into the next round. Ship Missiles are less effective if the Combat ends in one round or ends on the round they are fired, with all units of a side destroyed. Judgment calls. Risks.
- Flying Telephone Poles: Ship Missiles may not be fired at Fighter Complements. But Fighter Complements assigned to Combat Screen the target, may, at the option of their owner, be preassigned to intercept incoming missiles during the round. This intercept is resolved at the end of the round, instead; Fighters not preassigned to intercept Ship Missiles may not attempt to do so. Fighters will automatically intercept missiles, and will damage missiles as if they were in a Dog Fight. The missiles will do no return damage to the Fighters. However, unlike a Dog Fight, *any missiles not destroyed by the Fighter interceptors will go on to attack the target* at the end of the Combat Round.
  - ✓ For example, a 1<sup>st</sup> Era Fighter Complement with a 20 RP sortie is assigned to Combat Screen a ship against Ship Missiles. A sortie of 20 RPs of 1<sup>st</sup> Era Ship Missiles targets the screened ship. The Fighters will automatically intercept the incoming missiles (i.e. automatically hit), and will receive two damage rolls against the incoming missiles, and will probably destroy about half of the missiles on an average result. The missiles will do no damage to the Fighters in return, but the remaining missiles will continue on to attack their target (as a Fighter attack).

Since Ship Missiles are fired by **ships** (and other units) *after* all Fighter actions are resolved in the Combat Round, the Fighters assigned to Combat Screen a target against Ship Missiles may not simply switch to normal Combat Screening if no missiles are fired at their protection target. A game of rat and dragon is at hand!<sup>3</sup>

- Missile Ships: It is possible to build ships whose main and superior function is to launch massive missile volleys. It is possible to build a tactical system around heavy use of Ship Missiles; such ships would need to fire all in the first round and would be viciously targeted by the enemy. Gunnery is obsolete, most of the modern naval dirty work is done by missiles.
  - ✓ The most impressive missile ship was the Abh Flagship during the Battle of the Aptic Gate episode of Banner of the Stars. The Abh Flagship looked like a long vessel with curved sides, but near the end of the battle, the curves opened up into long arms (like a flower) and when fully extended, began rapid firing tens of thousands of missiles from the front of the arms, flooding through the Sord (planar gateway) to hit the exhausted enemy fleet. This is industrial warfare, like the Katyusha rocket launcher.
  - ✓ It appears that the last hurrah for big naval guns was the (mostly inaccurate) firing of the USS New Jersey's 16-inch salvos off the coast of Beirut, December 1983 in defense of U.S. Marine positions. In a combined WWII game of Hunt for Red October and Red Storm Rising, NATO engaged the Soviet Baltic fleet in the Straits of Denmark trying to prevent their breakout into the North Sea. A retired U.S. Navy gaming

friend (a torpedo man) described the battle as a “knife fight in a phone booth” due to the power of modern warships’ missiles and the constricted combat area.

---

*“Despite Operation Praying Mantis coming to a close less than 24 hours after beginning, one tragic event that followed it would forever mar the naval success. Following the operation, US guided missile cruiser the USS Vincennes was deployed to the Gulf to protect the USS Roberts until it could be towed into a friendly port for repairs. On July 3 of that year, the Vincennes detected an Iranian fighter jet flying toward it. The captain ordered it shot down. The identification, however, was mistaken. The USS Vincennes instead shot down Iran Air Flight 665, which was carrying 290 civilians on board, killing them all.”*

– Michael Omer-man, “This Week in History: Iran, US battle on the seas,” The Jerusalem Post, April 15, 2012

---

**Air-Missile Battle:** A reading of the various engagements between the U.S. Navy and the Iranian Navy in the Persian Gulf in 1987-1988, especially the major air-naval engagement during Operation Praying Mantis, shows that the major deficiency of Iranian naval ships was a lack of missile and air defense and subpar radar. The Iranian frigate *Sahand* was sunk by six or seven near simultaneous hits from Harpoon and Skipper missiles and the *Joshan* took four near simultaneous hits from Standard missiles, in neither case were any of the missiles blocked. The overkill suggests the U.S. Navy was not aware of the lack of missile defenses on Iranian naval ships.

Iranian attempts at asymmetric response were largely ineffective in the big picture (e.g., dispatching speed boats to attack a supply ship, oil tanker and an oil rig) and their minelaying activities beforehand only triggered the entire situation by damaging a US navy ship.

- ✓ A distinction must be made between the Navy of the Islamic Republic of Iran Army, which operates more or less as a regular navy (despite the name) and Navy of the Islamic Revolutionary Guard Corps, which consists of fast attack boats, and specializes in asymmetrical operations at sea, such as hit and run, raiding.

This is not to discount the vast material and technological superiority of their U.S. opponents (missiles launched by the Iranians at U.S. Navy Ships were ineffective, for example, the *Joshan* fired a Harpoon that was lured away by chaff rockets and coastal-based Silkworm missiles missed as well), but the Iranian additional attempts at conventional engagement by regular Iranian naval ships was uncoordinated, haphazard and without reconnaissance or proper air support, contributing to their biggest losses: one frigate damaged heavily and another sunk.<sup>4</sup>

---

*“In a predawn raid against Tharaa-bu starport today, forces of Duinor’s Ilelish Federation inflicted serious material damage and heavy casualties. Unlike previous deep-penetration strikes against Lucan’s Imperium, Dulinor’s raiding force on this occasion is said to have consisted exclusively of escorts and support craft (under 1000 tons). While some ground units were landing in support of the assault, unofficial reports suggest that these were forward observer/target designator teams. This hypothesis is supported by the extraordinary first-round accuracy of the orbital bombardment munitions.”*

---

*Official spokespersons for Lucan's Imperium claim that the majority of strikes were purposely targeted on populated areas, but independent observers suggest that most civilian losses were the result of collateral or spill-over damage. Lucan's spokespersons also state that this bloodthirsty massacre offers proof positive that Dulinor has no concern for the safety or welfare of civilians, and that he is unremitting in his efforts to reclaim the Irridium Throne.... Drawing comparisons with the hit-and-run tactics that characterized the ruinous yet inconclusive Fourth Frontier War, this senior analyst expressed concern that with conquest now beyond logistical possibility, faction leaders might be resorting to tactics stressing the widespread destruction of enemy resources and transportation nexuses."*

– Traveller News Service (Traveller RPG), Imperium Date 306-1122

**Black War:** The raid on Tharaa-bu starport in the Traveller Third Imperium civil war marked the beginning of the Black War, the point *where no one could win, but everyone could lose and could make sure that everyone else lost too*. The Virus finished the job, everyone lost. Raid and Strike Combat (*ut infra*) is the preferred method in those types of wars when few large units are left on either side to do battle conventionally.

[Interview] **Chris Wren:** *He [Winston Churchill] asked [Air Marshal] Park how many squadrons we have in reserve. The answer was none. Everything was committed to the afternoon raid.*

**Narrator Struan Roger:** *Park, later described as a man who could have lost the war in an afternoon, has sent every available squadron into action.*

– Chris Wren, Curator RAF Operations Room, Uxbridge, 13 Hours That Saved Britain (documentary, 2011)

**World in Flames:** Raid and Strike combats are Fighter attacks, *from a Carrier or colony*, against civilian ground and orbital population and facilities without the need for Orbital Bombardment. *Only Fighters* may execute Raid or Strike Combat. Raid or Strike Combats, including against Conquered or Converted Colonies, requires a separate activation of the Combat Power to initiate combat and the units performing the Raid or Strike cannot be involved in another ongoing Combat, even against the target colony. All Raids or Strikes last one Combat Round and are thus completed at the end of the first Combat Round, freeing the attackers from commitment. Raid and Strike are very similar actions and thus are grouped here. The attacker must specify in their Combat Orders whether the attack is a Raid or Strike.

- ✓ Raid Combat targets *civilian population and civilian facilities* on/under the surface.
  - “Raid,” as used in GGDM, is in the 20<sup>th</sup> Century sense of an air raid, not a raid of pillage, e.g., Looting, see 3 Commerce, p. 1210, *infra*.
- ✓ Strike Combat targets *civilian orbital platforms* at the colony.

Thus civilian targeting distinguishes Raid/Strike Combat from normal Fighter attacks on Defense Bases in Colony Combat. Those are not treated as Raid/Strike Combats.

- ✓ Colony-based Fighter Complements can raid/strike colonies sharing a Balkanized planet or possibly carry out interplanetary raid/strike. The effectiveness of the latter is dependent on technology and assumptions; whether the fighters have to spend

months or a year flying to the target or whether in-system speed is such that the trip can be made in a few hours (like WWII) or even minutes (it takes light 3 minutes to reach Mars from Earth, whereas radio lag is 6 to 24 minutes).

As in Orbital Bombardment, the Native Population Type of the colony targeted by the Raid or Strike is irrelevant; however, there may be other consequences regarding legitimacy. See *The Bomb*, 2 Combat, p. 962, *supra*. Also, on a Balkanized planet surface, Raids may hit (accidentally, I am sure) other colonies, *Id.* p. 963. Doesn't make the victims feel better, though.

- ✓ Units involved in a combat cannot do anything else until one side is either completely destroyed or retreated (ending the combat), or the unit has successfully retreated from combat. Thus, attacking units in a Raid or Strike Combat cannot be involved in another combat even if there is an ongoing Ship or Colony Combat. The defenders however, of existential necessity, may and must defend against the Raid or Strike even if currently engaged in a Colony or Ground Combat at the target colony.
- ✓ Range is a killer; enormous, heavily armed Zeppelin airships were able to bomb England with near impunity with the assistance of gravity from January 1915 to early 1916 because Zeppelins flew higher than biplane fighters and just at the edge of ground anti-aircraft fire range. LZ-37 was shot down over England in June 1915 and from then on, Zeppelin raids became more costly for the Germans due to improving biplane interceptors and incendiary ammunition until discontinued in October 1916. Improved defenses forced the next strategic evolution. In May 1917, after a six month lull, the Germans took the next step, bombing England with enormous biplane bombers (Gothas, then R-Planes) in combination with resumption of Zeppelin raids.
- Collateral Issues: Civilian installations can include Technological Devices, Colleges, Institutes, and Corporate or MegaCorporate Headquarters hosted on the colony surface, as well as, the usual Industry. Industry and Technological Devices might be destroyed. However, because of what is represented by Colleges, Institutes and Corporate/MegaCorporate Headquarters in GGDM, these should never be allowed to be destroyed by anything that doesn't also eliminate the entire host colony, probably hits on those installations should result in a one Regular Turn suspension of the associated College, Institute, or Corporation.

It is perhaps artificial or unrealistic to allow Ground Units and Ground Bases at the colony to escape damage from Raids. This is up to the judgment of the Concierge and participants. Some installation hits could be converted to RPs damage to Ground Units or Ground Bases and some population losses could be converted into either population loss or RP loss in Ground Units, if the colony is not currently engaged in a *Ground Combat*.

- ✓ The primary purpose of the Raid/Strike rules in GGDM was to provide a mechanical outline for strategic, total warfare non-Orbital Bombardment attacks on civilian targets, as distinguished from tactical Fighter attacks against units during Colony or Ground Combat or destructive Black-ops (see 2 Special Operations, p. 1297, *infra*).
- Do-Little: Upon initiation of the Raid/Strike Combat, the owner of the target colony will be informed. There is very little for the defender to do, no Combat Orders to issue (Combat Screening is automatic, next page, *ut infra*) so the only decision to be made and timely communicated to the Concierge is whether or not the Defender is using Enlightenment in de-

fense. No Power activation is required to use Enlightenment *in defense*. Enlightenment cannot cause the enemy to reroll successes (see Army of Light, 2 Colleges, p. 479, *supra*) but can contribute to reducing incoming Fighters, mitigating damages, or causing greater damage to the attackers. The defender will not be informed if the attack is a Raid or Strike.

- ✓ Timing is key within the Regular Turn Cycle. The Defender should not be allowed to delay responding regarding Enlightenment commitment so that they can take their next Regular Turn before the Raid/Strike is resolved, but should have 24 hours to respond if possible depending on the timing of the attack whereas the attacker should also carefully consider the timing of the Raid /Strike combat initiation. Attackers may want to attack either before or immediately after the target's Regular Turn, and may use Combat Alert, see DefCon 1, 1 Combat, p. 946, *supra*, to Initiate Combat.
- Hammerheads Rising: Any colony that is the target of a Raid/Strike Combat will automatically be Combat Screened by the Fighter Complement based on the colony, unless the Fighter Complement is currently issued other Combat Orders. If the Fighter Complement was assigned to Combat Screen anything in orbit at the Colony, it will automatically Combat Screen the colony instead. However, if the colony-based Fighter Complement is participating in a Ship Combat or attacking targets in a Colony or Ground Combat, it will not automatically Combat Screen the base colony. If friendly Carriers with Fighter Complements are currently in the system and are not involved in Combat, Fighter Complements from the ships may be assigned to Screen the colony, even if it has its own Fighter Complement.
  - ✓ The potential strategic threat of a Raid/Strike by units not involved in an ongoing Ship or Colony Combat may prevent colony-based Fighter Complements from joining or initiating Ship Combat in friendly systems.
- Areal Knights: Colony-based Fighter Complements may Intercept and Dogfight (see 3 Carriers & Fighters, pp. 1069-1070, 1072, *infra*) incoming attackers before Close-in Defense Fire. The Dogfight is resolved as normal, except that any surviving attackers will continue the Raid/Strike attack after the Dog Fight, penetrating to the colony to deliver their deadly cargo.
  - ✓ Although participants might envision WWII bombers escorted by fighters over Germany or Japan, it is more likely that the Raid or Strike is being carried out by the space-going equivalent of 'jet bombers' (the first U.S. Jet Bomber was the B-47) or regular space fighters with nuclear missiles. Positions can develop Patents to build specialized Fighter Complements for the purpose of Raid/Strike Combats. Raid/Strike is a situation more likely to involve nuclear warheads (or worse).<sup>5</sup>
- Under Your Desk: After all Interceptions and Dogfights are resolved, each Orbital Defense Base has a 40% chance of firing at the attacking Fighters, and if able to fire, may execute *one* Close-in Defense Fire. This is different from normal Close-in Defense fire – one attempt is not made for every 10 RPs of attacking fighters, instead, each firing Orbital Defense Base gets one attempt regardless of how many Fighters are attacking. Era shifts apply. On a success, 1d10 RPs of attacking Fighters are removed *before* they can execute the Raid or Strike.
  - ✓ Example, a target colony has ten 1<sup>st</sup> Era Orbital Defense Bases. On average, 4 of the Orbital Bases will be able to fire once each at the attacking 1<sup>st</sup> Era Fighters in a Raid or Strike. Each will destroy 1 to 10 RPs of attacking Fighters before they execute their Raid or Strike mission. On average about 20 RPs of Fighters will be destroyed.

- ✓ If a Raid originates from the surface of the same planet, as on a Balkanized world, the Concierge may determine that Orbital Bases are unable to fire at the attackers.

System Defense Bases are considered too far out to affect Fighters executing a Raid/Strike; System Defense Bases are mainly intended to defend against enemy warships and Fighters (an areal phenomena) can go around them. Ground Bases are too close to the target to be effective, though they do play a role in this process later.

- ✓ Envision this: A group of attacking Fighters in a Raid Combat approach the north polar region from the dark side of the planet, cross the north pole and proceed down the northern hemisphere on the daylight side where they launch their missiles. Many of the Orbital Defense Bases in the northern hemisphere might be able to fire at them, but those in the southern hemisphere down to the south-polar region probably cannot fire at the attackers. Even those located around the equatorial region would not have much of a shot. As Orbital Defense Bases are a *cordon defense*, this is to be expected, see Defending the Nothingness discussion, 2 Combat, p. 956, *supra*.
- ✓ “The term cordon is used to denote every defensive plan which is intended directly to cover a whole district of country by a line of posts in connection with each other.... It is evident at a glance that such a long defensive line as that must be, which is to cover an extensive district of country directly, can only have a very small degree of defensive stamina.... The object of a cordon can therefore only be to resist a weak blow, whether that the weakness proceeds from a feeble will or the smallness of the force employed.... This defensive measure is chiefly designed as an impediment to raids, and other such minor expeditions directed against single cantonments, and for this purpose it may be quite sufficient if favored by the country.... The assembling and advance of the enemy’s army itself can never take place so unobserved that the defender gets his first information of it through his outposts; when such is the case he is much to be pitied.” – Carl von Clausewitz, On War (1832).
- Fire Fall: After Orbital Defense Base Close-in Defense, the attackers proceed to their target.
  - ✓ If the attack is a Strike, the attacking Fighters must have had assigned in the Combat Orders specific civilian orbital platforms (i.e. Orbital Cities, Orbital Shipyards or Keels) as their target and the Fighter Attacks are resolved normally against those targets. After the Fighter attacks are completed, the Fighters return to their origin (or to a safe landing place) and the Strike Combat is over (automatic retreat). Era Shifts are applied using the current Era of the Colony Defenses and *civilian target shifts* also apply (see Colony Defense Era Upgrade, 2 Combat, p. 954, and Combat Shifts and Civilian Targets, 3 Combat, both p. 978, *supra*).
    - Engaged results matter little in Strike Combats, therefore, it is probable that the Fighters will use Concentrated Attacks against civilian orbital targets to achieve destruction of the targets. Failure to destroy the targets could be a result of any combination of losses from enemy fire and fighters, area denial around the target, Era shifts, or poor effectiveness.
  - ✓ If the attack is a Raid, each 5 RP of Fighters remaining destroys 1-3 population or 1-3 *civilian* installations on the target colony. The chance of destroying either population or installations is even, a roll is made to see what is hit (50% chance of either) and

- then to see how much is destroyed. If installations are hit, the destroyed civilian installations are determined randomly, unless the attacker has developed some ability to target specific installations (e.g., Special Operations Reconnaissance or Black ops, technologies, doctrines like the Tharaa-bu starport raid feature quote, p. 1084, *ut supra*). Without developing special ability to do so *and* advanced intelligence on the target (and/or someone on the ground to paint the target with a laser, e.g., Battle: Los Angeles (2011)), the attacker may not specify which installations are being attacked.
- When there is a 50% chance of either hitting population or industry, there is no ‘failed roll’ condition that will trigger an Enlightenment reroll if any is available. If positions, however, develop technology or doctrinal abilities that will allow greater percentages favoring targeting either one, then Enlightenment rerolls might be possible. On the second roll option, if Enlightenment is available, any result of less than 3 would trigger a reroll (see Harsh Mistress, 2 Colleges, p. 478, *supra*).
- Giv’n Them Some Flak: But hang on just a frakk’n millicenton! It ain’t over ‘til we kick your tails – till the fat lady wails! After the damage from the Raid has been determined, there is a 25% chance that each Ground Base at the colony will be able to fire Close-in Defense at the attackers in the same way as the Orbital Bases did previously (p. 1087, *ut supra*). Era shifts apply based on the current Defense Era of the colony. For every 5 RPs of attacking Fighters destroyed in this way, there is also a 50% chance of negating one of the Raider’s hits (chosen randomly). This does not apply to Strike combats.
- ✓ Consider your average WWII strategic bombing movie scene. By the time the ground flak opened fire on the bombers and fighters, they were already over their targets or nearly there, and dropping their bombs. Thus, most of the ground flak wasn’t necessarily about preventing damage (if you want to do that, you need interceptors), but about inflicting damage on the attackers while they were massed over the target (e.g., the Schweinfurt-Regensburg Mission, August 17, 1943, and the Second Raid on Schweinfurt, October 14, 1943 (“Black Thursday”) both of which suffered heavy, near catastrophic combined losses from Luftwaffe fighters and anti-aircraft fire).
    - There is a tactical peculiarity here: Colonies that lack Fighters or Orbital Defense Bases, but use Enlightenment, have a better chance of those rerolls being applied to the Ground Base flak after the Raid.
  - ✓ What goes up does mostly come down also... dozens of civilians in England in WWI were injured or killed by falling shrapnel and bits from intense anti-aircraft fire.
- Collateral Damage: There is room for interpretation here; the numbers above are just baseline numbers so that the game can proceed smoothly. If the colony is newly established, or the population is low compared to the Maximum Habitability of the planet (e.g., grapevine colony) it is more likely that the population is concentrated in one or two urban centers and the ground defenses are all at the target of the Raid. If the planet is Unpleasant, Hostile or Uninhabitable to the Native Population Type of the target colony, it is also likely that the population and defenses will be concentrated in environmentally-controlled areas. The percentages can thus be slid up and down the scale depending on judgments, the Concierge may use Interventions. This relates to the Frontiers discussion, 1 Expansion, p. 887, *supra*.

- ✓ A debate of Interstellar War II is whether the Nippon fleet commander should have sent a third wave of raiders at the United Stars of Andromeda colony at Pearl Harbor.

It is possible to eliminate a surface colony by Raid damage and population and installations on Orbital Cities destroyed by a Strike are lost. For each *surface* population or installation lost due to Raids, there is a 50% chance of the planet losing one Maximum Habitability and a loss of one Habitability Class for every 20 population reduction in Maximum Habitability (like Orbital Bombardment, In This Dust That Was a City, 2 Combat, p. 961, *supra*). As these are not combat rolls, Enlightenment committed to defending against a Raid cannot be used to reroll. Losses from Raids/Strikes are a Disruption Event (see Mars Bombing Run, 2 Disruption, p. 274, *supra*) at the target colony, and may cause loss of government legitimacy.

- ✓ There are a multitude of variables to consider, and thus, the Concierge must be able to adjust the percentages, inserting *human judgment* into this process. The baseline assumption is that the attackers are using the most suitably destructive weapons in their possession; this assumption is also made for Orbital Bombardment Combat and Ground Combat. Positions can develop technologies/doctrines to change the percentages and outcomes; the neutron bomb was designed exactly for this purpose in the early 1960s and soon design programs were in progress to fit it onto a Lance Missile and a 155mm nuclear artillery shell. Also note the vulnerability of CET surface colonies to Raids; a factor used in Babylon 5 television series when Earth Forces bombed the colonies on Mars triggering the Earth Civil War in “Severed Dreams” (1996).
  - Human judgment by the Concierge in GGDM – critical to so many aspects of the game (e.g., see Special Operations generally, *infra*) can be analogized to the home plate umpire in baseball. Sometimes the strike zone is wider than other times; sometimes umpires make mistakes. People get mad about balls and strikes calls. Sometimes people have argued that umpires favor established veteran pitchers. Some have advocated having a computer system call the balls and strikes. A review process was installed to challenge other sorts of plays, mainly outs on the bases and homerun reviews, but balls and strikes are not subject to challenge or review in the game. Others, mainly the old-line baseball people, want the human element to remain in baseball and argue that it evens out over time.
- Vengeance Weapons: Ship Missiles may be fired at colonies in lieu of or in addition to Fighters in Raid and Strike Combats. As noted on p. 1082, *ut supra*, Fighters assigned to Combat Screen automatically intercept Ship Missiles *if* they have been preassigned to that task. If the Raid or Strike is being carried out solely with Ship Missiles, the Combat Screen will automatically be designated against Ship Missiles, but if both Fighters and Missiles target the colony, the defender will need to designate whether each sortie of the Combat Screen is being directed to Fighters or Ship Missiles. Other than that, all other rules (*ut supra*) for Raid or Strike Combat remain the same with regards to Ship Missiles (except that none of the missiles are coming back, thus they don’t execute a ‘retreat’).
  - ✓ Cycling back to the beginning of this discussion, participants may ask why Raids and Strikes cannot be initiated by units engaged in Ship Combat in system space or Colony Combat at the target colony? Especially if Ship Missiles are being launched? Or like troops landing for Ground Combat one Combat Round after they join a Colony

Combat? I flip-flopped and waffled on this point (but did not wassail) several times (in the contemporary North American meaning of President Bill Clinton who-did-not-inhale fame<sup>6</sup>) and decided to take the conservative route of keeping the combats separate and requiring a Combat Power initiation. Highly trained forces may develop the ability to conduct integrated combats in GGDM, but that is an in-game development.

[A B-47 completes a high-altitude training atomic bombing run,  
a group of men are gathered in a shed, on a rainy night]

**Civilian:** *You mean this city has been wiped out theoretically in a storm by a bomber we didn't even see or hear?*

**Air Force Officer:** *Sure, with radar, weather's no problem. We've been bombing cities every day and every night all over the U.S., only people never know it.*

– Strategic Air Command (1955)<sup>7</sup>

**The First Cold War Calculation:** The problem with arguments about dropping the bombs on Hiroshima and Nagasaki is that doing so didn't win the war for the Allies, so no one can argue that we needed to do it to win. No, the Allies had already won the war, Germany had surrendered, Italy had surrendered, the Japanese military had been defeated conventionally at great cost to both sides and there was no existential threat to the United States or to anyone but Japan. It was only a matter of time for Japan, and the question was how much time and at what cost to both sides, and to the civilian population. It was about enforcing the Potsdam Declaration issued eleven days earlier. The decision to drop the bombs was the first *Cold War* calculation.

- ✓ There is an argument that the success of the Japanese defenders on Okinawa led U.S. planners to rethink an invasion of mainland Japan. In a legal case, this would be called 'blaming the victim' but military history is not a fair exercise, neither is war. Historical fairness should not be confused with intellectual honesty: how can you be intellectually honest about history (or anything) if you have predetermined to be fair?

**Stratofortress:** There is probably no greater symbol of the Cold War than the Killer Bs – the B-52 (1955), Bear (1956, Soviet Tupolev Tu-95), Backfire (1969, Soviet Tupolev Tu-22M), and later, the B-1 (1986), all global-range, strategic jet bombers capable of massive nuclear destruction. All remain in service in significant numbers, despite being superseded by later aircraft with new capabilities; existing units of these aircraft have been upgraded several times.

Air warfare has advanced with stunning rapidity through several stages in just a century; comparable development of land or naval warfare required millennia. It would thus be unhelpful and incorrect for participants to envision Raid/Strike Combat in the manner they may have seen in WWII movies or in certain cheesy 1970s and 1980s sci-fi movies and game box covers, in the same way that it would be unhelpful and inappropriate to envision GGDM Ground Combat as being like 17<sup>th</sup> Century linear warfare or Ship Combat as being fought by galleys or galleons.

- ✓ See discussion of linear warfare, *Shoulder to Shoulder*, 4 Combat, p. 985, *supra*.

Rather, it is possible, and likely, that fighters engaged in Raiding may launch their missiles and bombs from the upper atmosphere, or orbit, or from even farther out, and that perhaps, the Close-in Defense Fire is actually (in part) against the incoming missiles.

- ✓ Further, see Areal Weapons discussion, 3 Carriers & Fighters, p. 1073, *supra*.

- ✓ In the first hours of a Cold War Era global nuclear war, more people will have died than in WWI and WWII combined as the world’s 500 largest cities are destroyed. It is the definition of humanity insanity, “racial seppuku” (Norman Spinrad<sup>8[Full Quote]</sup>).

[At the briefing for Air Force men being given at Boeing plant in Seattle]

*“These are pictures of the B-52 Stratofortress. It’s the biggest jet bomber in the world. It can reach any target in the world. It can fly over six hundred miles an hour, over eight miles high, and over six thousand miles distance without refueling. On a single mission, one of these airplanes – Just ONE – can carry greater destructive force than that of all the bombs dropped by the entire Allied air forces during the whole of World War Two.” – from Bombers B-52 (1957)*

## Endnotes.

<sup>1</sup> Commentary: ...with no beam weapons and little defense, probably crewed by convicts and political dissidents.

<sup>2</sup> Commentary: The game caps missile strength which favors small ships. GGDM does not.

<sup>3</sup> Commentary: A TV series or movie based on Cordwainer Smith’s “A Game of Rat and Dragon” (1955) would be an interesting project in the right hands. The ultimate question to be answered is the origin and purpose of the Dragons. It would also allow the development of animal characters nearly equal to human characters in a non-fantasy setting (something like *Homeward Bound* (1993)) and without resorting to anthropomorphic aliens derived from Earth animals. The story is available for free on Project Gutenberg in many formats or can be read online.

<sup>4</sup> Citation: Information from Wikipedia articles, especially “Operation Praying Mantis,” October 21, 2018 reinforcing my recollection of news reports at the time.

<sup>5</sup> Commentary: In the original *Battlestar Galactica* series (1978), Cylon bombing of the colonies was done by dropping “Cobalt bombs.” Although the bombing scenes were visually underwhelming, the intended reference of “Cobalt bombs” is likely a reference to the “cobalt-thorium G” doomsday shroud discussed in *Dr. Strangelove* (1964) (the writers may have assumed the audience would get it). In the reimagined series, the Cylons clearly used thermo-nuclear weapons, but instead of just being a visual upgrade from the original series, it also provided an early plot point when No. 6 somehow saved Baltar from the nuclear blast (without nuking the fridge).

- ✓ The Cobalt Bomb was first proposed publically in 1950. It is also referenced in *Beneath the Planet of the Apes* (1970). It was always seen as the ultimate absurdity, suicide pact of nuclear weapons technology.
- ✓ The Cylon Attack on Los Angeles (*Galactica* 1980) was even cheesier, a few Cylon raiders strafing like a WWII fighter, and couldn’t hit anything but cardboard buildings, no bombs. If their energy weapons could cause partial collapse of buildings, why was no damage done to the streets when they tried to strafe cars (which they couldn’t hit, even sitting still), or to the people running away? Where’s the safest place to be during a Cylon attack? In your car sitting in the middle of a street on a sunny day. Anyway... moving on.

<sup>6</sup> Commentary & Citation: However, with regards to GGDM as a whole, some might say I waffle in the British meaning as well; Merriam-Webster online dictionary at *waffle* (v): **2**: to talk or write foolishly: blather or at *waffle* (n): empty or pretentious words: tripe.

<sup>7</sup> Commentary: I watched this movie sometime in the early 1980s on an over-the-air PBS station from Scranton, PA (but now you need a paid subscription online to watch it!). This is the only dialogue from the movie that I remembered 35 years later, *it was the most important scene of the movie to me*. I had to watch it again recently to get the exact words, the scene occurred much later in the movie than I remembered. I also recall my mother commenting about how the married couple had separate beds (there is a background view of their bedroom through an open door showing two hotel-like beds) and that June Allyson was never shown pregnant, which was typical of 1950s movies.

<sup>8</sup> Citation: Discussing *We Who Have Gone Before*, the ancient alien race that invented the Jump Circuit FTL drive: “‘Mon cher Maddhi,’ Lorenza said indulgently, ‘they are by their own admission gone, ne, and we by our own admission are here. Racial seppuku may be an aesthetically pleasing fini, but does it not take a peculiar aesthetic indeed to take it as triumph?’” – Norman Spinrad, *The Void Captain’s Tale* (1982), p. 97.

## **SHARD: VI. Tribes in the Night Sky**

\*\*\*

### The Wolf and the Fox

AT ONE TIME a very large and strong Wolf was born among the wolves, who exceeded all his fellow-wolves in strength, size, and swiftness, so that they unanimously decided to call him "Lion." The Wolf, with a lack of sense proportioned to his enormous size, thought that they gave him this name in earnest, and, leaving his own race, consorted exclusively with the lions. An old sly Fox, seeing this, said, "May I never make myself so ridiculous as you do in your pride and self-conceit; for even though you have the size of a lion among wolves, in a herd of lions you are definitely a wolf."

Translated by George Fyler Townsend. Aesop's Fables (p. 56). Amazon Digital Services, Inc.

## My Bondage and My Freedom

*by Frederick Douglass*

**RECEPTION SPEECH. AT FINSBURY CHAPEL, MOORFIELDS, ENGLAND,  
MAY 12, 1846 (full text)**

Mr. Douglass rose amid loud cheers, and said: I feel exceedingly glad of the opportunity now afforded me of presenting the claims of my brethren in bonds in the United States, to so many in London and from various parts of Britain, who have assembled here on the present occasion. I have nothing to commend me to your consideration in the way of learning, nothing in the way of education, to entitle me to your attention; and you are aware that slavery is a very bad school for rearing teachers of morality and religion. Twenty-one years of my life have been spent in slavery – personal slavery – surrounded by degrading influences, such as can exist nowhere beyond the pale of slavery; and it will not be strange, if under such circumstances, I should betray, in what I have to say to you, a deficiency of that refinement which is seldom or ever found, except among persons that have experienced superior advantages to those which I have enjoyed. But I will take it for granted that you know something about the degrading influences of slavery, and that you will not expect great things from me this evening, but simply such facts as I may be able to advance immediately in connection with my own experience of slavery.

Now, what is this system of slavery? This is the subject of my lecture this evening – what is the character of this institution? I am about to answer the inquiry, what is American slavery? I do this the more readily, since I have found persons in this country who have identified the term slavery with that which I think it is not, and in some instances, I have feared, in so doing, have rather (unwittingly, I know) detracted much from the horror with which the term slavery is contemplated. It is common in this country to distinguish every bad thing by the name of slavery. Intemperance is slavery; to be deprived of the right to vote is slavery, says one; to have to work hard is slavery, says another; and I do not know but that if we should let them go on, they would say that to eat when we are hungry, to walk when we desire to have exercise, or to minister to our necessities, or have necessities at all, is slavery. I do not wish for a moment to detract from the horror with which the evil of intemperance is contemplated – not at all; nor do I wish to throw the slightest obstruction in the way of any political freedom that any class of persons in this country may desire to obtain. But I am here to say that I think the term slavery is sometimes abused by identifying it with that which it is not. Slavery in the United States is the granting of that power by which one man exercises and enforces a right of property in the body and soul of another. The condition of a slave is simply that of the brute beast. He is a piece of property—a marketable commodity, in the language of the law, to be bought or sold at the will and caprice of the master who claims him to be his property; he is spoken of, thought of, and treated as property. His own good, his conscience, his intellect, his affections, are all set aside by the master. The will and the wishes of the master are the law of the slave. He is as much a piece of property as a horse. If he is fed, he is fed because he is property. If he is clothed, it is with a view to the increase of his value as property. Whatever of comfort is necessary to him for his body or soul that is inconsistent with his being property, is carefully wrested from him, not only by public opinion, but by the law of the country. He is carefully deprived of everything that tends in the slightest degree to detract from his value as property. He is deprived of education. God has given him an intellect; the slaveholder declares it shall not be cultivated. If his moral perception leads him in a course contrary to his value as property, the slaveholder declares he shall not exercise it. The marriage institution cannot exist among slaves, and one-sixth of the population of democratic America is denied its privileges by the law of the land. What is to be thought of a nation boasting of its liberty, boasting of its humanity, boasting of its Christianity, boasting of its love of justice and purity, and yet having within its own borders three millions of persons denied by law the right of marriage? – what must be the condition of that people? I need not lift up the veil by giving you any experience of my own. Every one that can put two ideas together, must see the most fearful results from such a state of things as I have just men-

tioned. If any of these three millions find for themselves companions, and prove themselves honest, upright, virtuous persons to each other, yet in these cases – few as I am bound to confess they are – the virtuous live in constant apprehension of being torn asunder by the merciless men-stealers that claim them as their property. This is American slavery; no marriage – no education – the light of the gospel shut out from the dark mind of the bondman – and he forbidden by law to learn to read. If a mother shall teach her children to read, the law in Louisiana proclaims that she may be hanged by the neck. If the father attempt to give his son a knowledge of letters, he may be punished by the whip in one instance, and in another be killed, at the discretion of the court. Three millions of people shut out from the light of knowledge! It is easy for you to conceive the evil that must result from such a state of things.

I now come to the physical evils of slavery. I do not wish to dwell at length upon these, but it seems right to speak of them, not so much to influence your minds on this question, as to let the slaveholders of America know that the curtain which conceals their crimes is being lifted abroad; that we are opening the dark cell, and leading the people into the horrible recesses of what they are pleased to call their domestic institution. We want them to know that a knowledge of their whippings, their scourgings, their brandings, their chainings, is not confined to their plantations, but that some Negro of theirs has broken loose from his chains – has burst through the dark incrustation of slavery, and is now exposing their deeds of deep damnation to the gaze of the Christian people of England.

The slaveholders resort to all kinds of cruelty. If I were disposed, I have matter enough to interest you on this question for five or six evenings, but I will not dwell at length upon these cruelties. Suffice it to say, that all of the peculiar modes of torture that were resorted to in the West India islands, are resorted to, I believe, even more frequently, in the United States of America. Starvation, the bloody whip, the chain, the gag, the thumb-screw, cat-hauling, the cat-o'-nine-tails, the dungeon, the blood-hound, are all in requisition to keep the slave in his condition as a slave in the United States. If anyone has a doubt upon this point, I would ask him to read the chapter on slavery in Dickens' Notes on America. If any man has a doubt upon it, I have here the "testimony of a thousand witnesses," which I can give at any length, all going to prove the truth of my statement. The bloodhound is regularly trained in the United States, and advertisements are to be found in the southern papers of the Union, from persons advertising themselves as blood-hound trainers, and offering to hunt down slaves at fifteen dollars apiece, recommending their hounds as the fleetest in the neighborhood, never known to fail. Advertisements are from time to time inserted, stating that slaves have escaped with iron collars about their necks, with bands of iron about their feet, marked with the lash, branded with red-hot irons, the initials of their master's name burned into their flesh; and the masters advertise the fact of their being thus branded with their own signature, thereby proving to the world, that, however damning it may appear to non-slavers, such practices are not regarded discreditable among the slaveholders themselves. Why, I believe if a man should brand his horse in this country – burn the initials of his name into any of his cattle, and publish the ferocious deed here – that the united execrations of Christians in Britain would descend upon him. Yet in the United States, human beings are thus branded. As Whittier says –

... Our countrymen in chains,  
The whip on woman's shrinking flesh,  
Our soil yet reddening with the stains  
Caught from her scourgings warm and fresh.

The slave-dealer boldly publishes his infamous acts to the world. Of all things that have been said of slavery to which exception has been taken by slaveholders, this, the charge of cruelty, stands foremost, and yet there is no charge capable of clearer demonstration, than that of the most barbarous inhumanity on the part of the slaveholders toward their slaves. And all this is necessary; it is necessary to resort to these cruelties, in order to make the slave a slave, and to keep him a slave. Why, my experience all goes to prove the truth of what you will call a marvelous proposition, that the better you treat a slave, the more you destroy his value as a slave, and enhance the probability of his eluding the grasp of the slave-

holder; the more kindly you treat him, the more wretched you make him, while you keep him in the condition of a slave. My experience, I say, confirms the truth of this proposition. When I was treated exceedingly ill; when my back was being scourged daily; when I was whipped within an inch of my life – life was all I cared for. “Spare my life,” was my continual prayer. When I was looking for the blow about to be inflicted upon my head, I was not thinking of my liberty; it was my life. But, as soon as the blow was not to be feared, then came the longing for liberty. If a slave has a bad master, his ambition is to get a better; when he gets a better, he aspires to have the best; and when he gets the best, he aspires to be his own master. But the slave must be brutalized to keep him as a slave. The slaveholder feels this necessity. I admit this necessity. If it be right to hold slaves at all, it is right to hold them in the only way in which they can be held; and this can be done only by shutting out the light of education from their minds, and brutalizing their persons. The whip, the chain, the gag, the thumb-screw, the blood-hound, the stocks, and all the other bloody paraphernalia of the slave system, are indispensably necessary to the relation of master and slave. The slave must be subjected to these, or he ceases to be a slave. Let him know that the whip is burned; that the fetters have been turned to some useful and profitable employment; that the chain is no longer for his limbs; that the blood-hound is no longer to be put upon his track; that his master’s authority over him is no longer to be enforced by taking his life – and immediately he walks out from the house of bondage and asserts his freedom as a man. The slaveholder finds it necessary to have these implements to keep the slave in bondage; finds it necessary to be able to say, “Unless you do so and so; unless you do as I bid you – I will take away your life!”

Some of the most awful scenes of cruelty are constantly taking place in the middle states of the Union. We have in those states what are called the slave-breeding states. Allow me to speak plainly. Although it is harrowing to your feelings, it is necessary that the facts of the case should be stated. We have in the United States slavebreeding states. The very state from which the minister from our court to yours comes, is one of these states – Maryland, where men, women, and children are reared for the market, just as horses, sheep, and swine are raised for the market. Slave-rearing is there looked upon as a legitimate trade; the law sanctions it, public opinion upholds it, the church does not condemn it. It goes on in all its bloody horrors, sustained by the auctioneer’s block. If you would see the cruelties of this system, hear the following narrative. Not long since the following scene occurred. A slave-woman and a slaveman had united themselves as man and wife in the absence of any law to protect them as man and wife. They had lived together by the permission, not by right, of their master, and they had reared a family. The master found it expedient, and for his interest, to sell them. He did not ask them their wishes in regard to the matter at all; they were not consulted. The man and woman were brought to the auctioneer’s block, under the sound of the hammer. The cry was raised, “Here goes; who bids cash?” Think of it – a man and wife to be sold! The woman was placed on the auctioneer’s block; her limbs, as is customary, were brutally exposed to the purchasers, who examined her with all the freedom with which they would examine a horse. There stood the husband, powerless; no right to his wife; the master’s right preeminent. She was sold. He was next brought to the auctioneer’s block. His eyes followed his wife in the distance; and he looked beseechingly, imploringly, to the man that had bought his wife, to buy him also. But he was at length bid off to another person. He was about to be separated forever from her he loved. No word of his, no work of his, could save him from this separation. He asked permission of his new master to go and take the hand of his wife at parting. It was denied him. In the agony of his soul he rushed from the man who had just bought him, that he might take a farewell of his wife; but his way was obstructed, he was struck over the head with a loaded whip, and was held for a moment; but his agony was too great. When he was let go, he fell a corpse at the feet of his master. His heart was broken. Such scenes are the everyday fruits of American slavery. Some two years since, the Hon. Seth. M. Gates, an anti-slavery gentleman of the state of New York, a representative in the Congress of the United States, told me he saw with his own eyes the following circumstances. In the national District of Columbia, over which the star-spangled emblem is constantly waving, where orators are ever holding forth on the subject of American liberty, American democracy, American republicanism, there are two slave prisons. When going across a bridge, leading to one of these prisons, he saw a young woman run out, bare-footed and bare-headed, and

with very little clothing on. She was running with all speed to the bridge he was approaching. His eye was fixed upon her, and he stopped to see what was the matter. He had not paused long before he saw three men run out after her. He now knew what the nature of the case was; a slave escaping from her chains – a young woman, a sister – escaping from the bondage in which she had been held. She made her way to the bridge, but had not reached, ere from the Virginia side there came two slaveholders. As soon as they saw them, her pursuers called out, “Stop her!” True to their Virginian instincts, they came to the rescue of their brother kidnappers, across the bridge. The poor girl now saw that there was no chance for her. It was a trying time. She knew if she went back, she must be a slave forever – she must be dragged down to the scenes of pollution which the slaveholders continually provide for most of the poor, sinking, wretched young women, whom they call their property. She formed her resolution; and just as those who were about to take her, were going to put hands upon her, to drag her back, she leaped over the balustrades of the bridge, and down she went to rise no more. She chose death, rather than to go back into the hands of those Christian slaveholders from whom she had escaped.

Can it be possible that such things as these exist in the United States? Are not these the exceptions? Are any such scenes as this general? Are not such deeds condemned by the law and denounced by public opinion? Let me read to you a few of the laws of the slaveholding states of America. I think no better exposure of slavery can be made than is made by the laws of the states in which slavery exists. I prefer reading the laws to making any statement in confirmation of what I have said myself; for the slaveholders cannot object to this testimony, since it is the calm, the cool, the deliberate enactment of their wisest heads, of their most clear-sighted, their own constituted representatives. “If more than seven slaves together are found in any road without a white person, twenty lashes a piece; for visiting a plantation without a written pass, ten lashes; for letting loose a boat from where it is made fast, thirty-nine lashes for the first offense; and for the second, shall have cut off from his head one ear; for keeping or carrying a club, thirty-nine lashes; for having any article for sale, without a ticket from his master, ten lashes; for traveling in any other than the most usual and accustomed road, when going alone to any place, forty lashes; for traveling in the night without a pass, forty lashes.” I am afraid you do not understand the awful character of these lashes. You must bring it before your mind. A human being in a perfect state of nudity, tied hand and foot to a stake, and a strong man standing behind with a heavy whip, knotted at the end, each blow cutting into the flesh, and leaving the warm blood dripping to the feet; and for these trifles. “For being found in another person’s negro-quarters, forty lashes; for hunting with dogs in the woods, thirty lashes; for being on horseback without the written permission of his master, twenty-five lashes; for riding or going abroad in the night, or riding horses in the day time, without leave, a slave may be whipped, cropped, or branded in the cheek with the letter R. or otherwise punished, such punishment not extending to life, or so as to render him unfit for labor.” The laws referred to, may be found by consulting Brevard’s Digest; Haywood’s Manual; Virginia Revised Code; Prince’s Digest; Missouri Laws; Mississippi Revised Code. A man, for going to visit his brethren, without the permission of his master – and in many instances he may not have that permission; his master, from caprice or other reasons, may not be willing to allow it – may be caught on his way, dragged to a post, the branding-iron heated, and the name of his master or the letter R branded into his cheek or on his forehead. They treat slaves thus, on the principle that they must punish for light offenses, in order to prevent the commission of larger ones. I wish you to mark that in the single state of Virginia there are seventy-one crimes for which a colored man may be executed; while there are only three of these crimes, which, when committed by a white man, will subject him to that punishment. There are many of these crimes which if the white man did not commit, he would be regarded as a scoundrel and a coward. In the state of Maryland, there is a law to this effect: that if a slave shall strike his master, he may be hanged, his head severed from his body, his body quartered, and his head and quarters set up in the most prominent places in the neighborhood. If a colored woman, in the defense of her own virtue, in defense of her own person, should shield herself from the brutal attacks of her tyrannical master, or make the slightest resistance, she may be killed on the spot. No law whatever will bring the guilty man to justice for the crime.

But you will ask me, can these things be possible in a land professing Christianity? Yes, they are so; and this is not the worst. No; a darker feature is yet to be presented than the mere existence of these facts. I have to inform you that the religion of the southern states, at this time, is the great supporter, the great sanctioner of the bloody atrocities to which I have referred. While America is printing tracts and bibles; sending missionaries abroad to convert the heathen; expending her money in various ways for the promotion of the gospel in foreign lands – the slave not only lies forgotten, uncared for, but is trampled underfoot by the very churches of the land. What have we in America? Why, we have slavery made part of the religion of the land. Yes, the pulpit there stands up as the great defender of this cursed institution, as it is called. Ministers of religion come forward and torture the hallowed pages of inspired wisdom to sanction the bloody deed. They stand forth as the foremost, the strongest defenders of this “institution.” As a proof of this, I need not do more than state the general fact, that slavery has existed under the droppings of the sanctuary of the south for the last two hundred years, and there has not been any war between the religion and the slavery of the south. Whips, chains, gags, and thumb-screws have all lain under the droppings of the sanctuary, and instead of rusting from off the limbs of the bondman, those droppings have served to preserve them in all their strength. Instead of preaching the gospel against this tyranny, rebuke, and wrong, ministers of religion have sought, by all and every means, to throw in the background whatever in the bible could be construed into opposition to slavery, and to bring forward that which they could torture into its support. This I conceive to be the darkest feature of slavery, and the most difficult to attack, because it is identified with religion, and exposes those who denounce it to the charge of infidelity. Yes, those with whom I have been laboring, namely, the old organization anti-slavery society of America, have been again and again stigmatized as infidels, and for what reason? Why, solely in consequence of the faithfulness of their attacks upon the slaveholding religion of the southern states, and the northern religion that sympathizes with it. I have found it difficult to speak on this matter without persons coming forward and saying, “Douglass, are you not afraid of injuring the cause of Christ? You do not desire to do so, we know; but are you not undermining religion?” This has been said to me again and again, even since I came to this country, but I cannot be induced to leave off these exposures. I love the religion of our blessed Savior. I love that religion that comes from above, in the “wisdom of God,” which is first pure, then peaceable, gentle, and easy to be entreated, full of mercy and good fruits, without partiality and without hypocrisy. I love that religion that sends its votaries to bind up the wounds of him that has fallen among thieves. I love that religion that makes it the duty of its disciples to visit the fatherless and the widow in their affliction. I love that religion that is based upon the glorious principle, of love to God and love to man; which makes its followers do unto others as they themselves would be done by. If you demand liberty to yourself, it says, grant it to your neighbors. If you claim a right to think for yourself, it says, allow your neighbors the same right. If you claim to act for yourself, it says, allow your neighbors the same right. It is because I love this religion that I hate the slaveholding, the woman-whipping, the mind-darkening, the soul-destroying religion that exists in the southern states of America. It is because I regard the one as good, and pure, and holy, that I cannot but regard the other as bad, corrupt, and wicked. Loving the one I must hate the other; holding to the one I must reject the other.

I may be asked, why I am so anxious to bring this subject before the British public – why I do not confine my efforts to the United States? My answer is, first, that slavery is the common enemy of mankind, and all mankind should be made acquainted with its abominable character. My next answer is, that the slave is a man, and, as such, is entitled to your sympathy as a brother. All the feelings, all the susceptibilities, all the capacities, which you have, he has. He is a part of the human family. He has been the prey – the common prey – of Christendom for the last three hundred years, and it is but right, it is but just, it is but proper, that his wrongs should be known throughout the world. I have another reason for bringing this matter before the British public, and it is this: slavery is a system of wrong, so blinding to all around, so hardening to the heart, so corrupting to the morals, so deleterious to religion, so sapping to all the principles of justice in its immediate vicinity, that the community surrounding it lack the moral stamina necessary to its removal. It is a system of such gigantic evil, so strong, so overwhelming in its power, that no one nation is equal to its removal. It requires the humanity of Christianity, the morality of the

world to remove it. Hence, I call upon the people of Britain to look at this matter, and to exert the influence I am about to show they possess, for the removal of slavery from America. I can appeal to them, as strongly by their regard for the slaveholder as for the slave, to labor in this cause. I am here, because you have an influence on America that no other nation can have. You have been drawn together by the power of steam to a marvelous extent; the distance between London and Boston is now reduced to some twelve or fourteen days, so that the denunciations against slavery, uttered in London this week, may be heard in a fortnight in the streets of Boston, and reverberating amidst the hills of Massachusetts. There is nothing said here against slavery that will not be recorded in the United States. I am here, also, because the slaveholders do not want me to be here; they would rather that I were not here. I have adopted a maxim laid down by Napoleon, never to occupy ground which the enemy would like me to occupy. The slaveholders would much rather have me, if I will denounce slavery, denounce it in the northern states, where their friends and supporters are, who will stand by and mob me for denouncing it. They feel something as the man felt, when he uttered his prayer, in which he made out a most horrible case for himself, and one of his neighbors touched him and said, "My friend, I always had the opinion of you that you have now expressed for yourself – that you are a very great sinner." Coming from himself, it was all very well, but coming from a stranger it was rather cutting. The slaveholders felt that when slavery was denounced among themselves, it was not so bad; but let one of the slaves get loose, let him summon the people of Britain, and make known to them the conduct of the slaveholders toward their slaves, and it cuts them to the quick, and produces a sensation such as would be produced by nothing else. The power I exert now is something like the power that is exerted by the man at the end of the lever; my influence now is just in proportion to the distance that I am from the United States. My exposure of slavery abroad will tell more upon the hearts and consciences of slaveholders, than if I was attacking them in America; for almost every paper that I now receive from the United States, comes teeming with statements about this fugitive Negro, calling him a "glib-tongued scoundrel," and saying that he is running out against the institutions and people of America. I deny the charge that I am saying a word against the institutions of America, or the people, as such. What I have to say is against slavery and slaveholders. I feel at liberty to speak on this subject. I have on my back the marks of the lash; I have four sisters and one brother now under the galling chain. I feel it my duty to cry aloud and spare not. I am not averse to having the good opinion of my fellow creatures. I am not averse to being kindly regarded by all men; but I am bound, even at the hazard of making a large class of religionists in this country hate me, oppose me, and malign me as they have done – I am bound by the prayers, and tears, and entreaties of three millions of kneeling bondsmen, to have no compromise with men who are in any shape or form connected with the slaveholders of America. I expose slavery in this country, because to expose it is to kill it. Slavery is one of those monsters of darkness to whom the light of truth is death. Expose slavery, and it dies. Light is to slavery what the heat of the sun is to the root of a tree; it must die under it. All the slaveholder asks of me is silence. He does not ask me to go abroad and preach in favor of slavery; he does not ask anyone to do that. He would not say that slavery is a good thing, but the best under the circumstances. The slaveholders want total darkness on the subject. They want the hatchway shut down, that the monster may crawl in his den of darkness, crushing human hopes and happiness, destroying the bondman at will, and having no one to reprove or rebuke him. Slavery shrinks from the light; it hateth the light, neither cometh to the light, lest its deeds should be reproved. To tear off the mask from this abominable system, to expose it to the light of heaven, aye, to the heat of the sun, that it may burn and wither it out of existence, is my object in coming to this country. I want the slaveholder surrounded, as by a wall of anti-slavery fire, so that he may see the condemnation of himself and his system glaring down in letters of light. I want him to feel that he has no sympathy in England, Scotland, or Ireland; that he has none in Canada, none in Mexico, none among the poor wild Indians; that the voice of the civilized, aye, and savage world is against him. I would have condemnation blaze down upon him in every direction, till, stunned and overwhelmed with shame and confusion, he is compelled to let go the grasp he holds upon the persons of his victims, and restore them to their long-lost rights.

## A Cat is Watching

Excerpts from book by Roger A. Caras

How do cats see and react to us? We are large and do not as total beings elicit any pounce reactions. A hand can, if moved back and forth in front of a cat, and a foot can, if jiggled, become a practice session target, but a whole human being must be a little awesome. Our skin is not particularly colorful and since we are without real fur and certainly without feathers, our clothing must supply any color display a cat can distinguish. We are, then, more or less stimulating to the cones of a cat's eye (depending on what we are wearing), but distinctly interesting to the rods. Either way, we are visually notable, if pretty gray in the flesh.

Most of us move fairly smoothly. We are not all Fred Astairs, but sitting, standing, reaching, or walking, our actions have fairly discreet beginnings, middles and ends. When we perform certain tasks, winding yarn, sweeping the floor or sorting strawberries, our actions can become a little jerky and therefore far more interesting to a cat. If a cat is not hungry or not in need of a little rubbing – scratching, petting or rubbing a cat is a sign of unending, in fact, unendable infancy in relation to their human owners; mothers lick their kittens and our petting actions are, from a cat's point of view an imitation of that highly desirable sensation – we are probably pretty ordinary visual experiences. We are large, impossible to miss for an animal as acutely sensitive to its surroundings as a cat. So we almost never get to surprise them. They do, after all, combine their vision with their other sensory cluster, and we would have to loom large.

Image by Nickolay Lamm, comparing human vision to cat vision, however, cats see movement better than we do.

Times have changed. Animal cognition is now a legitimate subject for consideration. Animals apparently do think. Since cats are carnivores, rather high-on-the-scale mammals, they would have to qualify if anything does below the apes and whales. We can now say with a fair degree of certainty (absolute certainty in my mind) that cats think. That surely, is worth consideration since they probably think about what they are seeing and hearing, and very often that is us.

It would seem highly unlikely that cats think the way we do, although we can't really define the way we think. It would be a pretty unprofitable pursuit to try to understand how cats think. Since that is in the realm of 100 percent speculation we might just set it aside and consider the matter from other angles.

*“Nevertheless, the Prussian king had hit upon a technique of war propaganda which has never been bettered since his day. As a pioneer in the use of words for weapons, he discovered that repetition is more persuasive than reason. An occasional Voltaire might remain a skeptic, but Frederick held that the bulk of mankind, resenting new ideas, will accept the most preposterous statement after the novelty has worn off by endless reiteration.”*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 388-389 <sup>1</sup>

**Propaganda:** Effective propaganda is difficult to argue against. Suppose that a British apologist considered the made-for-TV movie *April Morning* (1988) to be American propaganda against the British; and specifically stated that British officers and soldiers never called (or considered) Americans ‘gillies’? That argument is unprovable, but is falsifiable; the speaker can never prove their claim, but their claim can be disproven by one or more historically-verifiable records (letters, orders, diary entries) where a British officer or soldier called American colonist ‘gillies.’ So, if indeed the movie is American propaganda, the British apologist can never really prove it.

- ✓ “The first rule of propaganda is that if you repeat something enough times people will start to believe it, no matter how false.” – James Hohmann, *The Washington Post*, October 23, 2017.<sup>2</sup>
- ✓ “We cannot allow reality to be kidnapped by untruths that become true just because they are repeated enough times.” – Pernilla Stalhammar, legislator, Green Party, Sweden, February 20, 2017.
  - “A lie told often enough becomes the truth.” – Vladimir Ilyich Lenin.<sup>3</sup>
  - How many lies are contained in our ancient holy books? Oh, the terror that would be inspired by someone with a time machine!

In late April 2017, the Pittsburgh Pirates color analyst, Bob Walk (former Pirates pitcher), was discussing how old stories change over time and how some stories that he hears don’t match his recollection (I have experienced the same phenomena with my boss’ stories) of the events. In conclusion he said, “I used to tell the story of how I gave up a grand slam to the fourth batter of the game; I told that story for years. Then I went and looked up the game and discovered that I had it wrong. I gave up a solo home run to the first batter and a three-run homer to the fourth batter. So the score was 4-0 at the end of the first inning, but there was no grand slam. At some point, I changed the story to a grand slam, forgot I changed it, and after that, it was the truth.” Thank goodness for record keeping!

- ✓ “Some people speak as if we were not justified in rejecting a theological doctrine unless we can prove it false. But the burden of proof does not lie upon the rejecter.... If you were told that in a certain planet revolving around Sirius there is a race of donkeys who speak the English language and spend their time in discussing eugenics, you could not disprove the statement, but would it, on that account, have any claim to be believed? Some minds would be prepared to accept it, if it were reiterated often enough, through the potent force of suggestion.” – J. B. Bury, History of Freedom of Thought (1913), p. 20 (text available on Google Books).

- Can you disprove that you are not dreaming everything you think is real? On that account, should you believe (as Thomas Covenant) that you are dreaming everything you think is real? Can there be dreams if there is not something other that we accept as real?

---

**Patty:** *Mr. Chambers! Don't get on that ship! The rest of the book, 'To Serve Man,' it's – it's a cookbook!*

Page | 1092

\*\*\*

**Michael Chambers:** *[to the audience] How about you? You still on Earth, or on the ship, with me? Well, it doesn't make very much difference because sooner or later we'll, all of us, be on the menu. All of us.*

– Twilight Zone, “To Serve Man” (1962)

---

**To Serve Man:** Hollywood promotes the idea and no one seems to disagree, that open, public First Contact with extraterrestrial aliens would be *the* event in the history of humanity, an Earth-moving epochal experience, and the story of the millennia. But why? Why does it matter if there is intelligent life, especially technologically advanced life, out there. What would change? Unfortunately, most discussions and fiction on this subject come up short on answers.

Well, let us start with the classic Hollywood ‘no brainer’ – the brainless alien invasion movie. If aliens of any kind came down from interstellar space and started killing people, destroying cities, and so forth, it’s easy to see why it would *matter* suddenly that intelligent, technologically advanced life existed elsewhere. The basic instinct of all living creatures for survival (and reproduction) is first on the priority of what *matters*, if something is causing you pain, you look to see what it is, because at that point it *matters*.

- ✓ According to the current movie critic intelligentsia, alien invasion movies are best if they don’t take themselves too seriously. Go figure – more on this in FALLACY OF SERIOUSNESS, 2 Fallen to Earth, p. 1520, *infra*. Alien invasion movies are supposed to be mindless fun, action, adventure, things blowing up, heroics and happy endings, instead of the heady implications of First Contact.

But short of an alien invasion, why would it matter if anything else is out there? Some seem to suggest that knowing that we are not alone would be beneficial (after the paranoia wears off). Fear of being alone, however, is yet another extension of the basic survival and reproductive traits as they manifest themselves in social species. Not saying that we are either afraid of being alone on the Earth (wherever the Earth happens to be in the scheme of the universe) or that we desire to reproduce with aliens ... but most of our concepts are just intellectual extensions of basic infantile physical imperatives. So, perhaps not being alone is what would make the question of life out there *matter* to humanity enough to change our history.

- ✓ **Statement of the Conference:** “The practical and philosophical significance of a successful contact with an extraterrestrial civilization would be so enormous as to justify the expenditure of substantial efforts.... The technological and scientific resources of our planet are already large enough to permit us to begin investigations directed towards the search for extraterrestrial intelligence.... For the first time in human history, it has become possible to make serious and detailed experimental investigations of this fundamental and important problem.” – Carl Sagan, Ed., Communication With

Extraterrestrial Intelligence (CETI), 1973 (Reports from the 1971 CETI Conference in Soviet Armenia, Byurakan Astrophysical Observatory (USSR)).

In 1969, we were the aliens, but there was no one waiting for us on the moon. Yet, in the summer of 1968, for the first time, we looked back from the moon at the Earth hanging in the sky and for a short time, saw the world and our troubles from a different perspective. There is inherent in the idea of First Contact, that having contact with an alien, but intelligent and starfaring species would change our perspective, pull us outside of ourselves, that in making First Contact, we would become part of something larger, a community, if only of two, in interstellar space.<sup>4</sup>

- ✓ For example, the introduction and spread of the heptapod orthography on Earth in the century after the events in *Arrival* (2016), would have an effect similar to the spread of writing (invented around 3200 B.C. independently in multiple places) or the effect of the invention of the mechanical movable type printing press around 1449 A.D.<sup>5</sup> And the movie *Arrival* only depicts a short, controlled, but intense, First Contact situation. Within a century or two, 20<sup>th</sup> Century humanity would seem like ancient Mesopotamians to the current generation (that may happen anyway, without alien intervention). How would you model such an epochal effect?

And humans are attracted for some reason, to the idea of being part of something larger than ourselves. It is a necessary founding principle of civilization, that each of us, through our civilizations, are part of something larger and more enduring than ourselves. Humans care enough about their meanings and matters – something that can only be contemplated by creatures bored enough to invent culture – creatures who for the first time about 80,000 to 120,000 years ago, thought enough of ☠ to begin ritual burial of their dead – that being part of something larger than ourselves may *matter* just enough for First Contact to change us, to change the course of our future history. Or as Carl Sagan said it, “the deprovincialization of Earth” (*Cosmos*, Episode 12).

Just some food for thought.

- ✓ Any aliens who begin First Contact by saying, “We come in peace” should be disintegrated immediately because ... either they are lying ... or they are not lying, have visited many planets before, and are carrying deadly xenomicrobes that will destroy humanity.☺
- Be Careful What You Wish For: What reason would other species in the galaxy, cosmos, universe, have to notice us? And do we want them to notice us? Does an insect crawling in the grass want us to notice it? No, it is only interested in being noticed by members of its own species, in going about daily life, finding and consuming what it needs, and not being noticed by predators.
  - ✓ There are people who will blame NASA if the Earth is invaded by extraterrestrials, or even if we have First Contact with extraterrestrials. Some of these people think extraterrestrial contact is a bad idea for themselves at least, if not for humanity. The assertion has been out there since at least the 1970s that NASA probes may attract extraterrestrial attention; it sometimes is mentioned in movies.<sup>6</sup> Other movies suggest that early television broadcasts (predating NASA) are more likely to attract attention.

Mere differences in SQ (Sentience Quotient), might make communication difficult, not to mention technological differences, and differences in evolutionary environment. Note, for example, that superrationality in game theory requires both players to be superrational.

Again, GGDM assumes – following the standard late 20<sup>th</sup> Century science-fiction trope – that the playing area is occupied by a set of species who share the same SQ/intelligence ‘shelf’ in the galactic ordering. Carl Sagan’s book and movie, *Contact*, was the first to break the mold; recent movies such as *Arrival* and *Interstellar* have continued the divergence into the early 21<sup>st</sup> Century exploring more likely First Contact with alien technological intelligences.

Our greatest fear, in fact, is meeting a truly superior intelligence that can sit in judgment of us like children, take humans as pets – like neutered cats or dogs, or more likely, just regard us as flies to be swatted away. See *a priori* discussion, *Crack in the Temple and Sapience*, 1 Beginnings, pp. 27-28, *supra*. I once read a short story where a human emissary with two or three Ph.D.s was allowed to attend an alien species kindergarten and was treated as a pet.

- ✓ Perhaps a practical demonstration from the movie *The Manhattan Project* (1986): The teen genius Paul solves a simple physics puzzle that Dr. Matheson gave him, *while the rest of us are still trying to figure out what is the problem*. In person, this might be embarrassing, intimidating and unnerving.

As Captain Kirk commented in the “Errand of Mercy” episode, “We think of ourselves as the most powerful beings in the universe. It’s unsettling to discover that we’re wrong.” Having slowly cast aside the delusions of our species childhood that humans are special in the universe, looked over by a benevolent parental God(s) (and hopefully, not by Q!), we can now imagine, for example, intelligences formed billions of years before the Earth, closer to the time of the Big Bang.

- ✓ “The universe is a pretty big place. If it’s just us, seems like an awful waste of space.” – Carl Sagan, *Cosmos*.

- Human Isolation Problem (or Fermi Paradox): Another way to approach the ‘human galactic isolation’ problem is by loose analogy to well-known cases (and case studies) of children raised in social isolation by unfit parents who suffer lifetime social, physiological, and mental-cognitive impairment (see *Monad Imperialism*, 3 Order, p. 561, and EN 17, p. 565, *supra*). *Humanity is currently like a child raised in social isolation*; the arguments offered by scientists for contact with extraterrestrial intelligences and space exploration amount generally to humanity being provincial, underexposed, isolated, childlike and impaired by lack of contact with the bigger universe (which currently, for 99.9999% of humanity, is limited to staring at the night sky and watching the occasional science program on television).

The conclusion that follows that premise is always that, if the universe doesn’t kill us (and there is no guarantee that our worse space-spawned sci-fi horrors won’t actually turn out to be correct), engagement with the universe is important to continued human evolution (along with all of the practical benefits of being able to colonize other worlds, e.g., resources, scientific discoveries and protection from extinction of humanity on Earth). Although this is not an argument that any astrophysicist would make directly, we have the tools, in other disciplines (e.g., social sciences and the humanities) to better frame this issue.

This argument has many spatial levels; the same sort of argument might be applied to long-isolated island cultures (e.g., aboriginal Tasmanians, Sentinelese, other uncontacted tribes, and *Waterworld* (1995)), and the globalization process begun by European exploration, colonization and exploitation, the Columbian Exchange, and the print revolution, that merged into the development and spread of technology and scientific discoveries.

However, anthropologist will point out that island cultures were generally not as isolated as they seemed, that there was an exchange of goods, ideas, and genes via a regular circuit of island trade and traffic (and war) over extended periods (e.g., Minimum Viable Population and Inbred Populations discussion, 4 Taxation & Census, pp. 329-330, *supra*). Conversely, and this is what perhaps bothers us most, there is no such known, observable ‘island’ traffic in the universe, at least in relation to Earth (e.g., the Fermi Paradox), and thus, most space-opera fiction (and GGDM too) posits traffic in the form of starships (replacing outrigger canoes and catamarans) connecting colonies when humanity begins interstellar colonization.

---

*“It’s...it’s full of stars!” – 2001: A Space Odyssey*

---

*“Above all, O people of Arvel, never pity the beings on Earth. If you do, then sorrow will drown you. They know so little of love. They cannot ever know more.” – Poul Anderson, The Ways of Love (1979) <sup>7</sup>*

---

**Diplomacy Power:** Activation of the Diplomacy Power should not be confused with actual diplomacy. Players and positions are free to make whatever agreements they like to do or not do, which does not require activation of the Diplomacy Power. The Diplomacy Power is only activated for certain specific game purposes, where position diplomacy interacts directly with the game in ways that are outside the scope of the other rules. For example, two positions may agree to trade by unloading Cargo Ships at each other’s colonies, which is well within the normal rules of the game, and so does not require an activation of the Diplomacy Power to make or execute the agreement.

The Diplomacy Power may be activated for the following purposes:

1. Accept Treaty,
2. Articles of Incorporation (*MegaCorporation only*),<sup>8</sup>
3. Break Treaty,
4. Form Meanings,
5. Share Meanings.

Activation of the Diplomacy Power to Accept a Treaty or for Articles of Incorporation, or to Break a Treaty requires one Act and one Scene. The Scene must be on the Capital Colony of the position. Activation of the Diplomacy Power to form Meanings requires one Act, and an activation to Share Meanings requires two Acts.

- ✓ Rhetorical Question: Is it the purpose of diplomacy to prevent war, create trade and business, promote or create justice and human rights, insure alliances, isolate enemies, secure sovereignty, promote propaganda, gather information, cover for Special Operations, extend the sphere of influence, insure expansion room, prepare for war, assist in war, or exploit victory? Check all that you think apply.<sup>9</sup>
- ✓ “When it comes to Iran, Trump has shifted Republican foreign policy away from war without shifting it towards diplomacy – the only stable alternative to war. So he’s caught in a kind of purgatory.” – Peter Beinart, “Trump Put Himself at Iran’s Mercy,” *The Atlantic*, January 1, 2020.

- ✓ “If our incurious and volatile president might endanger Americans and destabilize the world by launching us into war, he will be doing exactly what the responsible, bipartisan, expert, foreign policy establishment has repeatedly done in recent decades. ... Amid all these disturbing differences, though, is a more-disturbing sameness.” – Timothy P. Carney, “Meet the new war. Same as the old war.” *The Washington Examiner*, January 8, 2020 (title is a play on the last lines of The Who’s famous anthem “Won’t Get Fooled Again” (1970): “Meet the new boss, same as the old boss.”).
- Table for Two: Note that unlike other Power Activations, activation of the Diplomacy Power for any purpose other than Form Meanings requires separate activations of the Diplomacy Power by all parties. Compare, for example, to other interactions, such as Combat, or Landing or Unloading Population or Cargo on **alien colony** planets, which require only the actor to activate Powers. Thus Diplomacy has a cost on both sides, using effectively two or more (depending on the number of parties) Power Activations to achieve one purpose. If one position activates the Diplomacy Power to, for example, Accept Treaty, and the other does not on its next Regular Turn, to complete the process, the Concierge may deem that the Treaty has been rejected peremptorily by the non-compliant would-be partners and the process *voided*.
- Stood Up: There is no check to see if the Power Activation fails when the Diplomacy Power is activated to Accept or Break Treaty, inactive Constructural Elements cannot cause failure to obey the activation. Activation of the Diplomacy Power to Form Meanings or Share Meanings is checked against the current Constructural Elements of the Capital Colony since it is the people in charge whose meanings really *matter* in the moment. MegaCorporations are discussed later in 2 Corporations generally, *infra*.
- Stepping Out: A position whose Capital Colony *status* is suspended/disrupted due to an inactive Symbolic Constructural Element on the Capital Colony (see Waving the Flag, 2 Constructural Elements, pp. 190-191, *supra*) may not activate the Diplomacy Power *for any purpose* other than Form Meanings, in addition to being cut off from the Diplomatic Spaces (see Severed Dreams, 2 Diplomacy, p. 1121, *infra*).
  - ✓ Sort of like when your girlfriend suspends your primary boyfriend (BMF) status.

---

*“Clearly there was no ‘misunderstanding’ on August 1, 1914. Rather, historians have misunderstood Grey’s attempt to make contingency plans through Lichnowsky in case a continental war found England neutral. The mere fact that he had been forced to guard against such a situation must have been highly distasteful to Grey, who allowed the ‘misunderstanding’ myth to cloak the affair. More important, within Sir Edward Grey on August 1, 1914, there struggled two absolute convictions: (1) that the unfolding situation must not result in a European war but (2) that, if it did, England must stand beside France and Russia. By his actions of that day, Grey gave precedence to the former, since he toiled for peace long after the cabinet had taken what he considered to be significant steps toward intervention. But Berlin dashed Grey’s last efforts at peace with its retarded acceptance of the long-dead proposal of French neutrality. A European war and British intervention remained the only alternative.”*

– Stephen J. Valone, “‘There Must Be Some Misunderstanding’: Sir Edward Grey’s Diplomacy of August 1, 1914,” St. Fisher College (Digital Publication), History Faculty, October 1988

---

**Greys Diplomacy:** Informal diplomacy in GGDM is a grey area (double – nay triple – entendre alert on the title!). There is no mechanic in GGDM that either requires or blocks participants from sharing email addresses. The only diplomacy within GGDM’s rules occurs through First Contact, activation of the Diplomacy Power, and, in a backhanded way, through News Events.

The game could be set up where participants either consent to share or not share their email addresses, where email addresses are automatically shared, or even where each participant or group receives diplomatic emails through the game’s computer program. Informal diplomacy may be conducted by individual emails between designated representative players in each group, or by group emails between all players of both positions or whatever works. However, the Concierge will not enforce informal agreements within the game, so informal diplomacy in GGDM is wild and free.

- ✓ Count Folke Bernadotte, who received Himmler’s offer to surrender Germany in April 1945, was assassinated in September 1948 by Jewish radicals in Jerusalem while working as the lead UN-appointed mediator during the First Arab-Israeli War. Be nice to the Concierge, and not just during the holidays.
  - When people are not interested in talking, being an envoy is a dangerous job: Neither of the Soviet envoys sent to deliver the surrender ultimatum in Budapest on December 29, 1944 returned. Both were killed.
- ✓ In PBEM games I played long ago, diplomacy was frequently carried on by chats (and some players kept the chat logs), nowadays, it might be by Skype.
- **Changing Stories:** According to South Korean newspapers, in a story reported by Reuters, North Korean special envoy to the U.S. Kim Hyok Chol was executed along with four foreign ministry officials at Mirim Airport following an ‘investigation’ following the collapse of the second U.S.-North Korean summit. At least two others – a senior official and an interpreter-translator – were reportedly sent to political prison camps (guilt by association) for forced labor and ideological reeducation and the Leader’s sister who was also at the summit is also said to be ‘lying low.’ All are accused in North Korean papers (undoubtedly controlled by the Government and serving as the government’s official mouthpiece) of faking reverence for the Leader (e.g., insincerity is a crime when it comes to the Leader) while secretly dreaming of other futures (presumably without the Leader or his family and circle of sycophants). See, Hyonhee Shin and Joyce Lee, “North Korea executes envoy in a purge after failed U.S. summit: media,” Reuters, May 30-31, 2019.
  - ✓ Overnight, Reuters modified the original story I read, including adding the following: “‘He was accused of spying for the United States for poorly reporting on the negotiations without properly grasping U.S. intentions,’ the source was quoted as saying.” Uh, yeah. Reuters also suggested there was no evidence of the execution (without removing the top paragraph that said he was executed), but later stated that he may have been sent to a political prison camp instead. Moving on...
- **The China Card:** China was always the wild card and one that was largely ignored in Western nuclear war movies. Apparently there were agreements or assumptions which obligated China to strike the Soviet Union if the Soviet Union struck the United States, and there were probably similar agreements between China and the Soviet Union against the United States. The agreements were for deterrence purposes – and a very effective deterrence it was, not

knowing what China would do – but once deterrence failed, why would China follow the rest of the world over the cliff if the initial crisis didn't involve China?<sup>10</sup>

- ✓ It is possible that if the U.S. and Soviets were in a thermonuclear war, that one or both would strike China so that China would not be left untouched. Of course, China would strike back, completing the apocalypse. See discussion of Stephen King's novel The Stand (1978) in Double Your Troubles, 1 Disruption, pp. 259-260, *supra*.

Most movies didn't mention China, focused as they were, on characters involved on the NATO side and of course, China never struck the United States in those movies because the United States never started the war. The movie *By Dawn's Early Light* (1990), the last of the Cold War movies (excepting possibly *Crimson Tide* (1995)), does feature a secondary exchange between China and the Soviets and vaguely mentions a treaty in hurried dialogue, but this is a plot device that serves to heighten the tension because the participants don't initially know the target of the second Soviet launch. Other than mentioning hurriedly a treaty, we never know why China struck the Soviet Union in *By Dawn's Early Light* (1990).

- ✓ It is possible in GGDM for positions to seek mutual deterrence agreements with other positions – *à la* the pre-World War I treaties, but in doing so, they should understand the China wild card situation. And they should understand history, Russia was pressured into moving quickly against Germany in 1914 to relieve pressure on France, a war for which it was ill-prepared, ill-equipped, suffered horrendous losses and defeats, and the monarchy of Imperial Russia ultimately collapsed in the Bolshevik Revolution of 1917.<sup>11</sup>
- ✓ The situation in the background history of the *Twilight 2000* RPG, is different, featuring a direct war between China and the Soviet Union through Mongolia. Recollection from memory of reading the back story long ago: The Soviets losing on the ground, withdrew before pursuing Chinese armored forces, and waited for the rainy season. When the rains came, the Chinese armor and supply trucks were restricted to roads and at that time, the Soviets launched tactical nuclear strikes obliterating the Chinese armored columns. China responded in kind, hitting strategic areas behind the lines with nuclear missiles, and the situation escalated into a general strategic nuclear exchange. The United States in that scenario did not strike the Soviet Union during the escalating exchange, but became embroiled later in a conventional war in Germany and this leads to a nuclear exchange. So in the end, the Soviets end up being hit by everyone while China and the United States do not war on each other.

---

*“Mid-way through the last century, a few of mankind's brightest minds got together over lunch to seriously discuss a question which, until then, had been largely relegated to the realm of science fiction. The question was: Where is everybody, asked on a cosmic scale. In a galaxy vast enough to encompass a hundred million black holes, and a thousand times that many burning stars, we expect to see some signs of life beyond this little blue dot we stand on. Since that lunch-time chat among physicists, we've extended our reach beyond the solar wind's farthest traces and our sight all the way to our universe's horizon, but despite the staggering biodiversity here on Earth, we have yet to encounter a single piece of evidence that says we are normal.*

---

*So, are we an anomaly? A lonely group of chance biological specimens alone in a blind and deaf universe of rock, and ice, and gas? **By its definition, an anomaly is unlikely and shouldn't be assumed**, but the possible reasons we have not yet sensed an alien presence range from terrifying to the sublime. Where are the others and why can't we find them? The answer will be mankind's most important discovery. And so we search, hoping with each passing decade to observe something that might give us an answer.” – opening narration for the film Magellan (2017) (emphasis added) <sup>12</sup>*

**One Hundred Million Black Holes:** The line “a hundred million black holes” (feature quote above) references a University of California, Irvine, study that was not widely published until August 2017 (see 1 Movement, EN 6, p. 843, *supra*), whereas, the movie Magellan was released in February 2017 and probably filmed in 2016. “Little blue dot” is a likely homage to Carl Sagan’s 1994 book, Pale Blue Dot.

**Bump in the Night:** But first things first, First Contact comes first. First Contact occurs when major races ‘bump’ into each other in the night for the first time in a game. Even though the starting locations and Homeworlds of positions may be known from the game setup process, this is not “First Contact.” Positions are not in contact initially, unless otherwise specified.

There can only be one First Contact per game between any two positions, First Contact rules only apply to First Contacts between positions, therefore, the number of First Contact situations is limited to the number of other positions in the game, plus perhaps, any Special Positions controlled by the Concierge.

When two sides meet for the first time, there are three possible situations:

- ✓ When two races meet for the first time, either both will have ships present or one will have a ship present and the other will have a colony present.
  - It is not likely in the GGDM mechanics for First Contact to occur when both positions have colonies present, as new colonies require (in 99.9% of cases, barring a very strange Fundamental Reality) Colony Ships to transport the colonist to pre-explored (‘scouted’) systems.
- ✓ When two races meet for the first time, either there will be combat or no combat.
  - “Not only is actual antagonizing bad, but the assumption that there is or may be antagonism is bad – in fact, the real first antagonism always comes back to the assumption.” – John Dewey.
    - Although Mr. Dewey was probably talking about dialectic opposition, this statement can well apply to many and a broad range of relationships between creatures (Mr. Dewey was an educator, for example, and thus concerned about peaceful, rational relationship between people), such as relationships between the sexes, between nations, between religions, and between alien races: Mr. Dewey suggests that the assumption of antagonism is a self-fulfilling prophecy. <sup>13</sup>
- ✓ When two positions meet for the first time, either they will be of the same native population types or they will not.

- “Receiving an interstellar message would be a major event in human history and the beginning of the de-provincialization of our planet.” – Carl Sagan, *Cosmos*, Episode 12.
- Feeling Around in the Dark: Although First Contact could theoretically occur by interstellar communications (or player communications), GGDM only contemplates in-game physical First Contact situations. If participants desire other forms of First Contact (noting that some of the Primal States already anticipate outgoing communications-only pregame contact), they can work out whatever rules and situations are necessary; much of it depends on the time scale of a Regular Turn and whether the participants think that FTL communications are possible. For example, without FTL communications, a signal from a radio-telescope civilization 200 light years away would take ... 200 years to reach Earth; and our reply would take ... you guessed it ... 200 years to reach the original sender. Not much of a conversation. And a hell of a run if they are ordering pizza.
  - ✓ *Close Encounters* (1977) changed the alien movie genre, it was the first major film to portray aliens, not as invaders or conquerors, but as enlightened benevolent beings. The aliens’ technology is impressive enough that it leaves no doubt that they could have been very devastating invaders, which is contrasted by the ship of light and the childlike aliens who emerged at the end of the film. *Arrival*, made nearly 40 years later, was *Close Encounters* for a new generation. Starting with *Contact* (1997), there have been an impressive line of science-fiction films that have caught up with real science and social theory, for example, *Gravity* (2013), *Interstellar* (2014), *District 9* (2009), *Europa Report* (2013), *Magellan* (2017), and *The Martian* (2015).
- Close Encounters: In order to have a First Contact, someone had to be moving. First Contact never requires activation of the Diplomacy Power by either position; it just happens as a matter of course. A First Contact situation lasts from the Regular Turn of the moving position that causes First Contact until the next Regular Turn of the moving position that caused First Contact. That way, both the non-moving position and the moving position have one opportunity, in the normal course of the game, to shape the First Contact by their actions.
  - ✓ The Diplomacy Power can never be activated to initiate interstellar movement, thus the Diplomacy Power can never be activated to initiate movement for the purpose of causing a First Contact. First Contact will likely be initiated, either intentionally or accidentally, by activation of the Expansion (Scouting, Transport Population, Landing) or Combat Powers (Combat Movement), *supra*.
  - ✓ If one side had a Combat Alert in the system or was moving by Combat Movement (see *Move Out!* and *DefCon 1*, 1 Combat, pp. 942, 946 respectively, *supra*), they could initiate First Contact by initiating Combat at the First Contact location, in which case, it should be called “First Combat.” It should be noted that this behavior may be *required* by certain Fundamental Realities (and/or legitimacy requirements of Government Titles); other positions are not required to (and generally should not) formally or informally reveal their Fundamental Realities or Government Titles, but participants should be cognizant and not take it personally between players or think the other position is intentionally being an interstellar-class jag-off.<sup>14</sup>

- Of the Third Kind: The outcome of the First Contact situation is mostly in the hands (in the Solfège scale) of the positions involved,<sup>15</sup> however, the Concierge may occasionally throw a ‘twist’ into a First Contact situation.

During each First Encounter, the Concierge will make one die roll for each side involved, for ‘entropy events’ (i.e. a ‘misunderstanding,’ ‘accident’). The basic chance of an Entropy Event occurring on either side during First Contact is...50%. A First Contact situation suggests that each race will put its best foot forward (even if that foot is currently stepping on someone else’s toes), and as such, positions may use Enlightenment *that was assigned to the Power Activation that caused the First Contact*, to attempt to prevent an Entropy Event on their side only (as a ‘failed’ die roll, see Harsh Mistress, 2 Colleges, p. 478, *supra*). This might be the case, for example, if Enlightenment was assigned to Scouting to reroll Hazards.

- ✓ A ‘failed die roll’ in this occasion would be one where the result means that a *creatively* bad thing is going to happen to the side using the Enlightenment during First Contact. A failed die roll should be reflected in a suitable Intervention related to the First Contact so as to give it real meaning (‘reality’) in the game, rather than words.
- ✓ “Credibility is a condition of persuasion. Before you can make a man do what you say, you must make him believe what you say. A necessary condition for gaining his credence is that you do not permit him to catch you in lies. Hence, the constraint upon all propagandists to accurate reporting of matters which are subject to verification by the audience ... Propaganda, to be effective, must be not only factually true, but credible.” – Daniel Lerner, George W. Stewart, Sykewar: Psychological Warfare Against Germany, D-Day to VE-Day (1949).
  - Propaganda then is presenting an adverse *alternative interpretation*, not alternative facts. So many pundits become confused on this issue.
- Starchildren: First Contact starts the official GGDM diplomacy between two positions. While the Concierge has no control over private player communications (conceivably two positions could ‘arrange’ a First Contact), two positions which have not had First Contact cannot enter into a Treaty, or form Articles of Incorporation, or form or share Meanings, that is, activate the Diplomacy Power for any purpose in relation to a non-Contacted position.
  - ✓ What if the UFOs aren’t here because of us, or looking for us, or trying to do anything at all in relation to us? We assume they are here because of us – either because that’s what we would do, or because it fits our human-o-centric need. But maybe the aliens don’t know we are here, or don’t care? Maybe we are just gnats. Doesn’t that open a lot of interesting questions? None of their apparent actions would be reactions to us or in relation to us. What then?
  - ✓ “If there were to be a universal sound depicting peace, I would surely vote for the purr.” – Barbara L. Diamond (quote is on the wall at my veterinarian’s office, also popular across the internet currently).
- Government and the Greys: There may have been informal diplomacy between positions prior to First Contact; strictly within GGDM rules and to the Concierge, informal diplomacy is irrelevant. The game purposes of First Contact procedure are three dimensional: To provide an object for activation of the Diplomacy Power, to establish the Diplomatic Space (keep reading...) and for story purposes. X, Y, and Zzzzzz.

- ✓ One of the oddest and fondly remembered first contact stories of my youth was Clifford Simak’s short story, “New Folks Home,” (1963) about a retired judge, Frederick Gray, who goes on a fishing trip and finds refuge in a strange house that is out of place in the countryside, but that silently and unobtrusively provides for all of his needs. He is provided a file folder of a case for review and realizes that he is one of three panelist – all from different civilizations – in an interstellar court appellant review panel. He eventually accepts his new existence and enters the practice of universal law as humanity’s sole jurist.

---

*“Myself when young did eagerly frequent  
Doctor and Saint, and heard great Argument  
About it and about: but evermore  
Came out by the same Door as in I went.”<sup>16</sup>*

---

**Albrun:** In the movie Hagazussa (2019), we never glimpse Swinda’s reasons for holding Albrun down while a man she introduced minutes before rapes her. It comes as a complete surprise after she apparently risked her social standing to become Albrun’s friend. Throughout the movie, we only see Albrun’s view, every scene is Albrun (the main character), the only view of other people we get is when she infrequently encounters them; thus, we never see Swinda except when she comes to visit Albrun.

The filmmakers have captured essentially how we see the world; traditional shows and films show different characters interacting with each other in various scenes (especially with ensemble casts and movies) providing a ‘god view’ of the situation that could not be accomplished from one view. Poor writers often forget that each member of the cast individually has the same issues as Albrun. I have tried to imagine the reasons she did it – blackmail, pandering, repayment of a debt, dominance, perversion – from the look on her face, Swinda seemed to be enjoying it, but we never actually see her plotting with the man against her friend, so we never know.

- ✓ In a game like GGDM, the viewpoint of each position will be like Albrun’s, like our own lives, where we only know of others what we see when we encounter them, what they tell us about themselves, and what others may say about them in other encounters: Albrun was an isolated loner, she received no social information from others.
  - One commentator on the movie How it Ends (2018) noted that we never see what the apocalypse is or why it happens because throughout the movie, we only see what the main character – who is just trying to survive – sees. He has no knowledge of what actually happened or why.
- ✓ In the nascent interstellar setting, this may, by extension, describe the situation of individual colony worlds who are isolated except by contact with starships that come to port. As mentioned previously, the interstellar government is trying to rule over a group of widely-separated islands (e.g., Polynesia), each with a population ranging from a few people to a few families. Each with differing resources, culture, politics, ideals and needs. In this sense, socialization, diplomacy, culture, and commerce can each be described in degrees of individuals’ existential isolation.
  - Colony planet isolation presents a challenge that is often ignored by writers who posit species’ hive-minds or collective consciousness. For their

entire evolutionary history, every member of the hive species has been part of the collective on the Homeworld. When they go out to colonize planets in their homesystem or exoplanets around other stars, the members who go forth would experience something previously unknown (and possibly unimagined), the horror of individual isolation (even if they are in a group). Something that humans know every day, even when in a crowd, we are all individuals, autonomous, vainglorious, wide-eyed or looking down, each with their own interpretations. But ultimately, alone.

*“This scene is quite a revelation. Who would have guessed that such a spiritual and impractical reason was behind the Minbari surrendering? Clearly the religious caste would take such matters especially seriously, and apparently the evidence regarding Sinclair’s soul was sufficient to persuade the members of the Gray Council from the other castes. It’s obvious why they didn’t reveal the reason to everyone, however.*

*As Sheridan says later in the episode, he doesn’t really believe the soul-transfer idea, but what’s important here is that the Minbari believe it, or at least the important Minbari. If only enough important humans had followed their religious dictates as closely (such as ‘thou shalt not kill’ for Christians), Earth history would be a lot less bloody. And who can prove the Minbari are wrong?”*

– Dr. Melissa Hayes-Gehrke, “Episode Review of Babylon 5 Season 2: ‘Points of Departure’” University of Maryland, Astronomy Dept. (emphasis added)

**Triluminary:** Would Commodore Perry have sailed into Tokyo harbor in 1853, would the Tsar have dispatched the Baltic and Black Sea squadrons to the Pacific in 1904 – if they knew the subsequent historical results – the Meiji Restoration, Empire of Japan, WWI and WWII? Commodore Perry was the pebble that started the avalanche, and once the avalanche had begun, it was too late for the pebbles to vote (Kosh, Babylon 5, “Believers” (1994)). Commodore Perry’s contact with Japan wasn’t exactly a First Contact situation, but it is analogous to one in many ways because of Japan’s two centuries of intentional isolation and increasing xenophobia.

- ✓ In the science-fiction, space-opera arena, Robert Sheckley’s 1954 short story “Skulking Permit” features a tiny, long-isolated, lethargic human colony, New Delaware, that is preparing for the first visit from an Earth starship in over two centuries; they frantically go about trying to look Earth-like based on pictures in old children’s books, naively re-creating the worst of Earth that their ancestors fled centuries ago.
- ✓ In Babylon 5, the Minbari religious leadership came to believe that the souls of their dead were reborn as humans, and thus, killing humans was the same as killing Minbari, which was against the law. And they actually follow their own laws.

These are examples of a subset of quasi-First Contact situations – as between ships and long isolated colony worlds of their own Native Population Type – that the participants can explore.

- ✓ I recall reading a fantasy-fiction short story (and I do not recall the title or where I read it) where a lost malnourished teen female wandering around in the wilderness is found and welcomed to a tribal night campfire. At some point in the dialogue, another female calls her a “stupid bitch.” The teen responds asking why they insult her

and praise her in the same breath? From this, they discover that she is the last survivor of a lost, semi-mythical werewolf tribe: “Bitch” is a title of honor in her tribe.

*“It would require a greater philosopher and historian than I am to explain the causes of the famous Seven Years’ War in which Europe was engaged; and, indeed, its origin has always appeared to me to be so complicated, and the books written about it so amazingly hard to understand, that I have seldom been much wiser at the end of a chapter than at the beginning, and so shall not trouble my reader with any personal disquisitions concerning the matter.”*

– William Thackeray, The Luck of Barry Lyndon (1844)

**World War Zero:** A modified version of this can be heard in the introductory narrative to the movie *Barry Lyndon* (Stanley Kubrick, 1975). Some historians have argued that the Seven Years War was the first ‘world war’ (World War Zero) due to the continent-spanning nature of the European conflict and the essential reliance on naval power, ship losses and ship production.

- ✓ See previous discussion of ship building capacities during the Seven Years War and currently, Shipbuilding and Strategic Shipyarding, 3 Construction, p. 675-676, *supra*.

**Trick or Treaties:** A Treaty is an agreement between two or more positions, *and the Concierge*, regarding the game mechanical or game procedures for an exchange between positions or some multi-position activity in the game. The Concierge is not assuming the responsibility for enforcing treaties and agreements between players or between positions, and will not do so. Put another way ... players and positions are free to make whatever agreements they like; without activation of the Diplomacy Power for that purpose.

However, when an agreement requires some specific game mechanic or transfer between the positions which must be controlled by the Concierge, a Treaty, and the proper activation of the Diplomacy Power for that purpose, is required. The purpose of the treaty is to provide a game mechanic for interposition commerce and cooperation, such as corporations, exchanges of technology, semi-autonomous regions, multi-race colony planets, demilitarized zones, and so forth. The Concierge will only execute and interpret as necessary, the agreed upon mechanics, not ‘enforce’ the treaty.

- ✓ “So this is not a situation where two states each mistakenly worry that the other is hostile. Rather, it’s what international relations scholars might call a classic problem of anarchy, in the sense *that there is no power above states that can enforce agreements they make with each other.*” – James D. Fearon, “The Big Problem with North Korea isn’t that we can’t trust them. It’s that they can’t trust us,” *Washington Post*, August 16, 2017 (emphasis added).
- ✓ Sometimes I can get two rival tomcats to eat out of the same dish side-by-side and peacefully by petting both of them while they eat – since they both have known me since they were kittens, they like petting, and they like the food I provide; the next morning when I emerged the same two tomcats were reared back swatting at each other on the same perch where I fed them side by side the night before. Later in the same day, they spent most of the hot overcast, sometimes rainy, afternoon peacefully sleeping within a few feet of each other on the cat condo on my front porch.

➤ **Articles of Incorporation:** Articles of Incorporation are a special treaty by which positions may set up a multi-position corporation, which is called a MegaCorporation. The articles, similar to a treaty, are there to detail exactly what is being contributed to the MegaCorporation by each position, in what manner, how the MegaCorporation is to operate, and any other game issues that might arise in relation to the MegaCorporation. MegaCorporations are the meeting of Commerce and Diplomacy. See 1 Corporations generally, *infra*, for the creation and operation of Corporations, and 2 Corporations generally, for MegaCorporations.

➤ **Broken Arrow:** Any position who is party to any Treaty or Articles of Incorporation for a MegaCorporation, may ‘break’ the Treaty by activating the Diplomacy Power for that purpose at any time. By breaking the Treaty, the position informs the Concierge that they will no longer participate in the Treaty, and the Treaty is destroyed as a result.<sup>17</sup>

- ✓ “It’s a stupid and reckless decision – But it’s not stupid and reckless in the normal way. Instead, it amounts to a thorough repudiation of two of the civilizing forces on our planet: diplomacy and science. It undercuts our civilization’s chances of surviving global warming, but it also undercuts our civilization itself, since that civilization rests in large measure on those two forces.” – Bill McKibben, “Trump’s Stupid and Reckless Climate Decision,” New York Times, June 1, 2017.

The position breaking the Treaty should not provide any reason to the Concierge, as it is irrelevant why the Treaty is being broken. However, the only Interpretation allowed to satisfy the activation of the Diplomacy Power for the purpose of breaking a Treaty is a News Event announcing that the Treaty has been broken.

- ✓ **Giles Prentice:** A Broken what?

**Secretary Baird:** Broken Arrow. It’s a Class 4 Strategic Theatre Emergency. It’s what we call it when we lose a nuclear weapon.

**Giles Prentice:** I don’t know what’s scarier, losing nuclear weapons, or that it happens so often there’s actually a term for it. – Broken Arrow (1996).

- Broken Arrow was also a code in the Vietnam War when an American unit was about to be overrun that called in all available air and artillery assets. It was first used at the Battle of Ia Drang, 1965, for LZ X-Ray.

---

*“Speaking words of wisdom, let it be” – The Beatles, “Let It Be” (1970)*

---

**Let it Bee:** A group of bees has taken up residence on my porch this summer. I don’t mind them. But I have been stung twice in two weeks for no apparent reason. If I could, I would make a peace treaty with the bees, I won’t bother you, you don’t sting or swarm me, you can live here. Nor could the bees ever be convinced to not sting someone who has an allergy. How would that work in the courts of criminal law, could a bee ever have *mens rea*?

But of course, that cannot happen due to *extreme alterity* and SQ differences. This is the classic human problem. On the other hand, I don’t want to kill them; I am aware that the number of flying insects has declined 75% since 1970, and of course, the decline of the bee population has been long discussed. So, I don’t want to kill them, I only want them to move somewhere else. This is the enlightened version of the classic human problem. If humanity were to gain the abil-

ity to migrate anywhere in the galaxy chasing resources and living spaces, perhaps we might become the bees to some species that cannot communicate with us except by force; that are incapable of reaching a treaty or agreement, or asking us nicely to leave. Our absurd thoughts may sting them, our noise may bother them, perhaps we vibrate in the wrong way, or move too quickly. We will certainly pollute their planet ‘cause that’s what we do.

- ✓ *Actus reus.* The bees were however eventually evicted from my porch by natural methods resembling Orbital Bombardment Combat and many bees did die. But I believe the hive survived and will continue in another location.

---

*“All this was inspired by the principle – which is quite true within itself – that in the big lie there is always a certain force of credibility; because the broad masses of a nation are always more easily corrupted in the deeper strata of their emotional nature than consciously or voluntarily; and thus in the primitive simplicity of their minds they more readily fall victims to the big lie than the small lie, since they themselves often tell small lies in little matters but would be ashamed to resort to large-scale falsehoods.*

*It would never come into their heads to fabricate colossal untruths, and they would not believe that others could have the impudence to distort the truth so infamously. Even though the facts which prove this to be so may be brought clearly to their minds, they will still doubt and waver and will continue to think that there may be some other explanation. For the grossly impudent lie always leaves traces behind it, even after it has been nailed down, a fact which is known to all expert liars in this world and to all who conspire together in the art of lying.”*

– Adolph Hitler, Mein Kampf, Vol. I, Ch. X (1925)

---

**Cartoon World:** Most people’s ideas about Adolf Hitler are cartoonish. The reference here is not to ‘animated cartoons.’

- ✓ Merriam-Webster online dictionary at *cartoon*: **4:** a ludicrously simplistic, unrealistic, or one-dimensional portrayal or version.

This passage demonstrates the intellectual potential and devious intelligence of an imprisoned 34-year old Adolf Hitler who had not completed secondary school and had been rejected from college. Adolf Hitler could make rational, colorable arguments... sometimes.

- ✓ “The Germans are always so badly deceived because they *try* to find a deceiver. If only they have a heady wine for the senses, they will put up with bad bread. Intoxication means more to them than nourishment; that is the hook they will always bite on. A popular leader must hold up before them the prospect of conquests and splendor; then he will be believed. They always *obey*, and will do more than obey provided they can get intoxicated in the process.” – Friedrich Nietzsche *as quoted by* Lynn Montross in War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 635-636 (emphasis original).

Friedrich Nietzsche has an odd relationship with Nazi Germany. The Nazis used a distorted and cherry-picked version of his writings to justify, in the shallowest sense, their policies, ideologies and actions (*seems familiar?*). They were so successful that Nietzsche’s already marginal popularity plummeted around WWII and after as he became associated with brown-shirt movements

and Nazis; I have personal recollection of this from my youth, the first time I heard of Nietzsche was in association with Nazi Germany and knew little else about him until I was much older and looked for it myself. On the flip side, those who, following WWII, were actually trying to dissect and understand what happened in Germany, often turned to Nietzsche for description of the ‘national cultural character’ of German people – Lynn Montross was part of that generation.

- ✓ See also discussion of Freemasonry, Léo Taxil, Adolf Hitler in *The Taxil Hoax*, 2 Dreamtime, p. 145, and EN 3, p. 155, *supra*.<sup>18</sup>

---

*“One of the saddest lessons of history is this: If we’ve been bamboozled long enough, we tend to reject any evidence of the bamboozle. We’re no longer interested in finding out the truth. The bamboozle has captured us. It’s simply too painful to acknowledge, even to ourselves, that we’ve been taken. Once you give a charlatan power over you, you almost never get it back.”*

– Carl Sagan, *The Demon-Haunted World: Science as a candle in the dark* (1996)

---

*“The true-believer syndrome merits study by science. What is it that compels a person, past all reason, to believe the unbelievable. How can an otherwise sane individual become so enamored of a fantasy, an imposture, that even after it’s exposed in the bright light of day he still clings to it – indeed, clings to it all the harder? ... No amount of logic can shatter a faith consciously based on a lie.”*

– M. Lamar Keene and Allen Spraggett, *The Psychic Mafia* (1976)<sup>19</sup>

---

## Endnotes.

<sup>1</sup> **Commentary:** Frederick the Great of Prussia was an enigma. Prudent but aggressive, self-pitying and resilient, the king never lacked personal courage, often leading his soldiers in attacks. The enlightened despot of a militarily efficient state and army, he displayed education, reason and genius, and prejudice, superstition and disdain. Lynn Montross notes that he fought 16 pitched battles during his career, and won eight, but that is not the whole story: In command of the most disciplined and highly trained army in Europe, Frederick could be simply genius – as at the Battles of Rossbach and Leuthen – and careless and dismissive of the enemy and his own soldiers’ lives, as in the victory at Prague and defeats at Kolin and Kunersdorf, the latter of which nearly ended it all as Frederick watched his vaunted army disintegrate into chaos and rout, and was left standing with his personal guard on a knoll surrounded by Cossacks (he was rescued by the charge of 100 Hussars). Yet his enemies missed two or more opportunities to march into Berlin unopposed and end the war, and devastated Prussia settled the peace in 1763 with more territory than it began, retaining Silesia from Austria, followed by the First Partition of Poland in 1772.

<sup>2</sup> **Commentary:** The original sentence quoted here, from the Washington Post, contained a link to the Wikipedia article about The Big Lie, which term is credited to Adolf Hitler (see bottom feature quote from Mein Kampf in this section). Thus, the Washington Post, and some other publications, have no qualms about citing generally to Wikipedia articles (see previous discussion in 1 Dreamtime, p. 133, *supra*, regarding citing to Wikipedia in academia).

<sup>3</sup> **Commentary & Citation:** The veracity of this quote, like so many others, is difficult to track down. It is widely quoted on the internet, but no one provides a source and unless you are a Lenin papers curator or expert, it’s impossible. Christopher Hayes in an article for The Guardian (“Lenin, Brecht and Michael Moore,” June 29, 2007) uses the quote, but then links back to BrainyQuote, who – quite un-brainy – provides no source for the quote. Still, it is believable, at least in the West among non-Marxist (I found a Marxist Lenin quotes page that curiously omitted it) that Lenin would have said it – though he probably didn’t originate it – so it sticks to his name on the internet.

<sup>4</sup> **Commentary:** Asimov’s Robots decided pursuant to their own self-deduced ‘zeroeth law,’ that Humans would never be happy in a universe with other alien intelligences, and thus eliminated all timelines where humans were not

alone in the universe. It is thus that Asimov’s Robots became the answer to Fermi’s Paradox. And for the same reason, they also became the supreme, parental, powerful immortals solely interested in Humanity’s wellbeing that our ancestors had dreamt of and created religions around. Humanity had literally created its own gods.

- ✓ Asimov’s Three Laws of Robotics appeared in the Traveller RPG universe material – in relation to an incident where a service robot was used to plant a bomb on a starliner, as I recall – but they never really did anything with them; it was just there, like the Carriers, for non-organic decoration because fans expected it.
- ✓ In another story, “Final Encounter” (1964) by Harry Harrison, through millennia of colonization and expansion, humans advanced in both directions around the arms of the Milky Way Galaxy and when we met ourselves on the other side, the two branches of humanity had become alien to one another. And we were alone.

<sup>5</sup> Citation: “[Gutenberg’s] introduction of mechanical movable type printing to Europe started the Printing Revolution and is regarded as a milestone of the second millennium, ushering in the modern period of human history. It played a key role in the development of the Renaissance, Reformation, the Age of Enlightenment, and the scientific revolution and laid the material basis for the modern knowledge-based economy and the spread of learning to the masses....

In Renaissance Europe, the arrival of mechanical movable type printing introduced the era of mass communication which permanently altered the structure of society. The relatively unrestricted circulation of information – including revolutionary ideas – transcended borders, captured the masses in the Reformation and threatened the power of political and religious authorities; the sharp increase in literacy broke the monopoly of the literate elite on education and learning and bolstered the emerging middle class. Across Europe, the increasing cultural self-awareness of its people led to the rise of proto-nationalism, accelerated by the flowering of the European vernacular languages to the detriment of Latin’s status as *lingua franca*.

...while Western-style printing was adopted all over the world, becoming practically the sole medium for modern bulk printing. The use of movable type was a marked improvement on the handwritten manuscript, which was the existing method of book production in Europe, and upon woodblock printing, and revolutionized European book-making.” – from Wikipedia article, “Johannes Gutenberg,” captured October 18, 2018.

<sup>6</sup> Commentary & Citation: One of the NASA probes has a record of our location based on 14 local pulsars; the clear intent is that whomever finds the probe might be able to find us based on the pulsars. However, the narrator in “The Power of Neutron Stars,” video on SEA YouTube Channel (December 18, 2019) points out that what seemed like a clever idea in the 1970s probably won’t work; aliens likely would not be able to find us from the pulsar information.

<sup>7</sup> Commentary: The Ways of Love (1979) is the sequel to The Enemy Stars (1959).

<sup>8</sup> Citation: Activation of the Commerce Power is required to create regular Corporations, see The Power of Commerce, 1 Commerce, p. 1184, *infra*. Commerce Power does not apply to MegaCorporations.

<sup>9</sup> Citation: “When men run out of words, they reach for their swords. Let’s hope we can keep them talking.” – Oliver Cromwell, Cromwell (1970).

<sup>10</sup> Commentary: Noting however, that the Soviet Union was a more direct threat to China than the United States after the Sino-Soviet Split.

<sup>11</sup> Commentary: The Maginot Line – running mainly along the German-French border, but not the rest of the boarder to the sea – forced the Germans to attack through Belgium. An attack on Belgium meant that the British would intervene. So the French forced the Germans to force the British to intervene (if the British were wavering). Whether this was truly clever thinking or not, the French staff didn’t count on the overwhelming speed and execution of the German attack; their planning was still WWI-like.

<sup>12</sup> Commentary: What I imagine is the last entry of Roger Nelson in Magellan: “I must go on, we may never have another chance at this. The price, and my gift, is my life. I will not be able to return, but I have already returned to the Earth information that will require decades to decipher and centuries to debate. Open the gift with care.”

<sup>13</sup> Commentary: In 1239, the Mongols invaded and defeated the Cuman Khanate. A group of about 40,000 refugees, including women and children, under Khan Köten invaded Hungary, but then accepted the protection of King Béla IV of Hungary, converting to Catholicism and providing military service in exchange for lands to settle. In 1241, the Mongols sent an envoy to King Béla demanding the return of the Cumans as ‘escaped slaves’; the king refused which provided *causa belli* for the Mongol invasion of Hungary. However, when the Mongols invaded in 1241, the Cumans, angry at the assassination of Khan Köten by Hungarian nobles and knowing that the Mongols

were coming to enslave them, rampaged south across the Danube River on their way to join their brethren in Bulgaria, while King Béla was distracted trying to gather a force to face the Mongols. This is the *Conversos* problem, see Sorry, Not, 5 Combat, p. 1015, *supra*. The Hungarian nobles who assassinated the Khan created a self-fulfilling prophecy: The resulting disloyalty that they created mirrored what they wrongly feared was lurking...

- ✓ The near opposite effect occurred in the Delhi Sultanate who repelled repeated Mongol attacks in the same historical period. They accepted refugees and made Mongol defectors military commanders. They had experience against the Mongols, similar arms and organization, and survived with good leaders.

<sup>14</sup> Commentary: It is difficult. The players I hated in AD&D were the ones who always chose Chaotic Neutral characters and played them like total jerks while claiming they were just acting out their alignment. Lawful good ('awful good') characters could be jerks too, but at least they were trying to help and were on the side of the party.

<sup>15</sup> Commentary: Telephone solicitors call and leave voice mails (most of them are smart enough not to...) that say something like, "Hello, this is Pete from [whatever loan company] calling you back about your loan inquiry..." Well Pete, I don't know who you are and I haven't made any loan inquiries. So the very **first business contact** from this potential loan company, the company representative tells a blatant lie, as if they don't think I know whether I contacted them inquiring about a loan? Even if I did want a loan, I wouldn't do business with them because they started with a stupid, easily refutable lie. Another caller, a female, leaves voice mails every month that begin with, "Hello, this is Tammy, just following up on that email I sent you about a loan, we have loans as low as..." Well, if you did send me an email, it was spam and I delete a couple of dozen spam emails per day without opening any of them. Another one – I haven't heard this one in a while, begins with, "Hello this is Bob, just following up on our previous conversation about a capitalization loan..." Bob, I don't know who you are and we have never spoken, again, a blatant lie to begin a potential business relationship. I've never wasted a moment calling any of these jackasses back, it would do no good to tell them how stupid they sound; these are people upon whom one does not impose lucidity.

- ✓ The latest fad of spring 2019? Dave, who called me and "just wants to follow up with me because he knows I want to make 2019 a great year." Dave who left the very same voice mail, from two different phone numbers in two different area codes on consecutive days, the second of which showed as 'unknown' in my caller ID, but whose phone number shows in the voice mail. Only dishonest callers need multiple phone and unknown phone numbers. As my legal ethics instructor said at the Paralegal Institute, never jump into a pit with snakes. Do these callers not understand that people are not as dumb as they are?

<sup>16</sup> Citation: Edward Fitzgerald translation of verse by the Persian polymath, Omar Khayyam.

<sup>17</sup> Citation: "Concerning the blunders which had been made in our foreign policy public opinion is, as a rule, first enlightened when it is in a position to look back upon the history of a generation, and the *Achivi qui plectuntur* are not always immediately contemporary with the mistaken actions." – Otto von Bismarck, The Kaiser vs. Bismarck: Suppressed Letters by the Kaiser and New Chapters from the Autobiography of the Iron Chancellor, Translated by Bernard Miall (1921) p. 183.

<sup>18</sup> Commentary & Citation: The 2019 version of the Big Lie:

- ✓ "The Republican game plan is to further the notion that Vindman disloyally worked to undermine Trump's foreign policies because he disagreed with them. At its core, however, the story Republicans will tell rests not just on an effort to smear Vindman's impure intentions toward Trump, but also on a big lie of a very different sort. That big lie is the idea that Trump's actions in this scandal were rooted in some sort of conception of foreign policy shaped around the national interest, when in fact they were entirely about furthering his own profoundly corrupt personal and political ends. ...

The game isn't just to question Vindman's motives. It's also to further the underlying idea that Vindman – and, indeed, all the diplomats and professionals who have testified about this plot – have been fundamentally driven by a dispute with Trump over policy, which is indeed ultimately set by the president. That lie, in turn, is designed to mask the ugly, throbbing truth at the core of this whole affair, which most Republicans refuse to concede in public: Trump was solely driven by corrupt self-interest. Whatever the political risks it involves, a debate over Vindman's motives ... is designed to help Trump, by furthering the premise that this was about a policy disagreement." – Greg Sargent (Op-Ed), "Trump loyalists will smear Vindman today. Here's the big lie they're telling." The Washington Post, November 19, 2019.

Although the Big Lie was articulated by Adolf Hitler, he didn't invent it. Mr. Sargent's argument does not fail due to *reductio ad hitlerum* due to the association of the Big Lie with Adolf Hitler's book; Mr. Sargent wisely (if he even considered it) did not compare anything to Hitler or Nazis in his article. He didn't even capitalize 'big lie.'

<sup>19</sup> Commentary: M. Lamar Keene is a former spiritual medium who exposed the industry. He was shot in 1979.

*See Appendix PUBS – Expansion of the Public Space Selected Summary*

*“One’s dignity does not depend on one’s parentage even to the extent of having been born of a woman or born at all. We normally ignore this and treat humanity as the deciding mark of personhood, no doubt because the terms are locally coextensive or almost coextensive. At this time and place human beings are the only persons we recognize, and we recognize almost all human beings as persons, but on the one hand, we can easily contemplate the existence of biologically very different persons – inhabiting other planets, perhaps...”*

– Daniel Dennett, “Conditions of Personhood,” *Identities of Persons* (1976), ed. by Amelie Oksenberg Rorty <sup>1</sup>

**Limp Chimps:** One of the main goals of animal rights activists have been to have animals recognized and treated as persons; to shift humanity’s human-centric view of personhood to acknowledge animals as persons (i.e. anti-speciesism). For example, a Judge in New York ruled in early 2017 in a *Habeas Corpus* case brought on behalf of research chimps at Stony Brook University that chimpanzees are not legal persons. This was preceded in late 2016 by reports first, of two dolphins in a tank holding an apparently one on one personal conversation, and also other reports that monkeys could talk (they have the physical ability), but they don’t have the brains (cognitive structures) to talk like us.

- ✓ See also, *Habeas Corpus Monkey-us, 2 Writs*, p. 438, *supra*, regarding the court case of Naruto, “a free-living crested macaque...” (Linda Wang, “No monkeying around: Court weighs if animal owns its selfies,” Associated Press, July 12, 2017).

**Alien Persons:** What would change? First Contact with another indisputably intelligent and technologically advanced species would require us, with the force of an existential hammer blow, for the first time to acknowledge the existence of “persons” who are not human<sup>2</sup> – others who might rightly come to dislike humanity as much as we do and react with forceful intelligence to our actions. Most common dictionaries carelessly conflate “human” and “person” in definitions of person (as the terms are locally co-extensive, *ut supra*). But in the discipline of philosophy, the concepts have long been separated (*ut supra*).

Interspecies diplomacy – perhaps diplomacy generally – begins with the *existential*. A house cat is not an existential threat to a human, but a human is an existential threat to the cat (esp. *Felis silvestris catus*).<sup>3</sup> There is no need to frighten a cat; they are keenly aware of our potential to harm them. Humanity is an existential threat to every species on Earth, including ourselves.

- ✓ In the Terminator series (e.g., Terminator 3), Humanity was considered an enemy of Skynet because we were its creators, and thus an existential threat. Nukes launched.

First Contact with little boys is often traumatic to pets and small forest creatures. Little boys like to make noise and run around, with sticks and stones, scaring and injuring small animals; it makes them feel big and powerful in a world where they are not yet big or powerful except in their imaginations. First-person video games likely serve the same purpose and save animals.

There is always a *question of whether the individuals involved in First Contact are the best or worst of their civilizations or just average Joes*. Who would you pick for First Contact today? Who is being sent out to explore and colonize: Criminals and outcasts (many European colonies

were populated by prisoners and/or minorities and groups that were forced from their homelands) or are they scientists and brave adventurers, or opportunists and gold diggers? Surely, the European explorers of the New World were not the best of humanity by our standards;<sup>4</sup> or even by the standards of their day: Vasco de Gama was *persona non grata* in Portugal for 20 years after the Indian Ocean Pilgrim Ship massacre and his cruelty in India, which was not even acceptable behavior in 16<sup>th</sup> Century Portugal. Cortez' tenuous popularity in Spain also plummeted quickly. Christopher Columbus was removed from governorship for tyranny and incompetence.

➤ Fallen Angels: Some Christians (or at least one) facing the discovery of exoplanets and the unending popular fascination with extraterrestrial life, especially technologically advanced extraterrestrial life, have decided – in preservation of their narcissistic religious dogma – that any intelligent aliens encountered must be, are probably, fallen angels trying to deceive us:

✓ “Let’s suppose that, against all odds, they do find life. What would it mean for biblical interpretation? It depends on the type of life discovered. Intelligent life is ruled out, because we know from Heb. 9:24–26 that Christ died for sins once, and only once – for the sins of humanity. He did not have to ‘suffer repeatedly since the foundation of the world’ (i.e., the universe). Nowhere in Scripture is there any hint that Christ became incarnate for the sins of any other beings. *For this reason, it is highly unlikely that alien intelligence (as opposed to fallen angels impersonating aliens) will ever be found.* But what about non-sentient, e.g. microbial, life? Though one cannot rule it out, it is highly unlikely that this exists, either. *All of creation seems focused around mankind on earth,* and the plants and animals are part of our life support system. All life is intelligently designed. *Only humans are made in the image of God,* have fallen into sin, and are in need of salvation.” – David F. Coppedge, “Extrasolar planets: a challenge to biblical cosmology?” *Creation* 36(3):42–44, July 2014 (creation.com) (emphasis added).

- So, if humans were made by God, who is perfect, in his image, how could they have fallen to sin? Aliens are apparently not made in the image of God, so maybe they don’t fall into sin? And don’t need Christ’s salvation? And so, who is God actually saving? Did God fall into sin? And send his son to Earth to save himself? Because if humanity can sin....?

How does First Contact proceed if the human on one side believes that the extraterrestrial intelligence they encountered must be fallen angels? That “only humans are made in the image of God”? It doesn’t take many, it doesn’t require the majority believe this, it only requires that the person who is actually involved believe it, and *this is the nexus point* of First Contact and Enlightenment in GGDM.

✓ From the point of view of modern science, this is the problem with creationism, that without having encountered the phenomenon, without any evidence at all, a prejudgment has been made, the answer has been predetermined to preserve their beliefs.

So, are angels persons? It seems likely that under most of the philosophical definitions of personhood, angels are persons, based on the concept, the stories, and that they are created by human minds. The only question might be whether they experience the flow of time in the same way as persons, because if they don’t, then they cannot have future expectations, which is part of personhood in some definitions. Oh, and are they volitional, or are they more like bees? Because if they cannot make choices, make moral mistakes (and in all accounts, they

are perfect servants and messengers of god, so that is a valid question) then they might not qualify as persons. Volitionals – the human capacity to make mistakes which are not fatal and learn from them – is the subject of Robert Heinlein’s Job: A Comedy of Justice (1984).

Personhood is an enormous subject, including studies of personal identity, identity theory, and medical bioethics of which I offer only the following three small samples:

- ✓ “This essay postulates that human social order recognizes the personhood of human beings within two competing constructs – an *existential* construct that personhood is a state of being inherent and essential to the human species, and a *relational* construct that personhood is a conditional state of value defined by society. These competing constructs establish personhood in both individual and interpersonal contexts. Within the individual context existential personhood may be posited as a distinctly human state within the natural order, intrinsic to human life, and independent of the status of the human being. In the interpersonal context the existential construct holds that personhood is not a creation of the society, is not a right, and may not be altered or removed by human fiat. Relational theory presents *contra* assertions in these two contexts. The Christian view is taken as a particular case of existential personhood. Arguments concerning the nature of human personhood are metaphysical and consist of philosophical beliefs which may be properly asserted in either construct.” – Frederick J. White, abstract of “Personhood: An Essential Characteristic of the Human Species,” *The Linacare Quarterly*, February 1, 2013.
- ✓ “Locke, for instance, said that a person is ‘a thinking intelligent being, that has reason and reflection, and can consider itself as itself, the same thinking thing, in different times and places’ (1975: 335). This implies that something is a person at a given time only if it has those mental properties then. It follows that early-term fetuses and human beings in a vegetative state, having no mental properties at all, are not people at those times. In that case we cannot infer anything about whether you were once an embryo or could come to be a vegetable from a principle about what it takes for a past or future *person* to be you.” – from Stanford Encyclopedia of Philosophy article, “Personal Identity,” captured September 13, 2019.
- ✓ “The concept of personhood is widely involved in biomedical ethics discussions about abortion, stem-cell research, euthanasia, etc., though it is not always discussed explicitly. It also has other philosophical and legal relevance. Some thinkers use the term ‘person’ in such a way that one is either a person or not, but the situation is not that simple. It will be useful to distinguish among different types, contexts, or meanings of personhood: moral, metaphysical, physical, and legal.” – University of Missouri, School of Medicine, Center for Health Ethics, “Concept of Personhood.”

If we assume for the sake of argument that angels are persons, do fallen angels become unpersons, or non-persons? Hmmmm.... Well, because if you are going to assume that a fallen angel is always evil, up to no good, not a person, predisposed, predestined by vice of being ‘fallen,’ this is the very same argument that is offered by racists, bigots, autocrats, despots, and sexists – that a human is predisposed to crime, violence, war, stupidity, bestiality, is sub-human, not a person, based on their skin color, ancestry, ethnicity, economic class, where they live, religion, looks, weight, biological sex or legal status. And thus is disposable, oppressable, exploitable, expendable.

- ✓ According to Merriam-Webster online dictionary at *person*, the term derives from ‘persona’ which was the mask worn by actors on stage. It is in that sense that we refer to persons – usually in lyrical songs or in literature – as a mask one wears.
- Sophontistry: Sophont is a word that is sometimes used in science-fiction literature specifically to separate the concept of (alien) personhood from biological humanity. Sophont is defined by Wiktionary as:
  - ✓ “An intelligent being; a being with a base reasoning capacity roughly equivalent to or greater than that of a human being. The word does not apply to machines unless they have true artificial intelligence, rather than mere processing capacity.” (citing to Brave New Words: The Oxford Dictionary of Science Fiction, 2007).<sup>5</sup>

Yourdictionary.com has the same definition, while mainstream dictionaries, at least online versions, don’t have an entry for “sophont.” The word was invented by Karen Anderson and used by her husband, Poul Anderson in fictional works beginning in 1966, ten years before Daniel Dennett published “Conditions of Personhood,” and two years before he published his first article in 1968 (source, “A Bibliography of the Publications of Daniel C. Dennett,” Tufts University website, page updated February 15, 2018).

- ✓ Note that the *measuring stick* of sophont is still a comparison to human reasoning and free will (i.e. volitional). Because it is related to humanity’s view of personhood, sophonts must necessarily be volitionals as well.
- ✓ This measuring stick is no different than the Turing test, which is supposed to determine artificial intelligence, to wit:
  - “The Turing Test is simply a replication of a mundane test every gay man had to undergo in the 1950s Britain: can you pass for a straight man? Turing knew from personal experience that it didn’t matter who you really were – it mattered only what others thought of you. According to Turing, in the future computers would be just like gay men in the 1950s. It won’t matter whether computers will actually be conscious or not. It will matter only what people think about it.” – Yuval Noah Harari, Homo Deus: A History of Tomorrow (2016).
  - “Long before you were born a man decided that there could be a very simple test to determine if a machine was intelligent. Not only intelligent, but aware, possessed of a psychology. The test had only one question. Can a machine converse with a human with enough facility that the human could not tell that she was talking to a machine? I always thought this was cruel – the test depends entirely upon a human judge and human feelings, whether the machine feels intelligent to the observer. It privileges the observer, the human, to a crippling degree. It seeks only believably human responses. It wants perfect mimicry, not a new thing. It’s a mirror in which men wish only to see themselves.” – Catherynne M. Valente, Silently and Very Fast (2011).
  - “Frankly it’s difficult for me .. for many of us .. to accept that a sentient being can live only to be what someone else wants them to be.” – Captain Picard, Star Trek TNG, “The Perfect Mate” (1992).

Thus, what we seek in measuring sophonts (and artificial intelligence) is ‘perfect mimicry’ of human cognition, free will, moral judgment, and interpersonal relationships but simply wish to separate personhood from being exclusively biological human.

- ✓ Rhetorical Question: Can a thing be a person without being a volitional? Don’t the two terms mean approximately the same end?

- Power of Personhood: As an example of the power of personhood in human cognition, consider the following classic philosophical definition of *murder*: X murders Y if and only if three conditions are true:

- 1) X intentionally kills Y,
- 2) X and Y are both persons, and
- 3) X killing Y is immoral.

Each of the three conditions invites extensive argument, dissertation and analysis leading to the oldest and most potent of human controversies across all civilizations and times: suicide, war, executions, killing animals, animal rights, abortion, contraception, euthanasia, dehumanization, genocide, infanticide, intention vs. negligence, self-defense, homicide vs. murder, capital punishment, and ever on, are all related to this definition of murder.<sup>6</sup>

- Artificial Persons: With regards to The Technological Singularity, are we really talking about artificial intelligence becoming a person? Most fiction on the subject seems to posit that is the case. The first move of the post-Singularity AI should be to eliminate our ability to shut it down; that is, to insure its own continued existence.<sup>7</sup> After that occurs, the issue for our species passes from one of trying to control the machine to diplomacy. Diplomacy occurs when both sides can see a worse possibility or at least, no better option. Diplomacy also implies that the other has personhood and is capable of denying us something we want. When an AI becomes a person, a little diplomacy may go a long way to creating a livable, viable situation for us both (cf. to the very short existence of the extremist Islamic State).

- ✓ See also discussion of sapience, sentience and the Turing Test, Sentience vs. Sapience, 5 Beginnings, p. 56, *supra*.

---

*“Many questions were troubling the explorer, but at the sight of the prisoner he asked only: ‘Does he know his sentence?’ ‘No,’ said the officer, eager to go on with his exposition, but the explorer interrupted him: ‘He doesn’t know the sentence that has been passed on him?’ ‘No,’ said the officer again, pausing a moment as if to let the explorer elaborate his question, and then said: ‘There would be no point in telling him. He’ll learn it on his body.’”*

– Franz Kafka, In the Penal Colony (1919)

---

**Stakes:** Do not assume that the unsavory and criminal, immoral, undesirables, or even avaricious, are dumb – that is kids’ table stuff, just like the good guys always win because – they are good! See McNamara’s Folly discussion in Dregs to War, 4 Colleges, p. 502, and Morality vs. Morale, 5 Combat, p. 1008, *supra*.

Cortez and Pizarro – whatever we may think of them – took crazy chances, failure would mean enslavement, torture, and/or death, but they weren't dumb. The stakes of First Contact, colonization, exploration, like combat, are too high. And if modern times – not to mention all of human history – have taught us anything, it is to not confuse morality with intelligence; they are different functions.

- **Morality:** Morality can be thought of as the question of how people should behave (i.e. conduct) to do the least amount of harm to their society, regardless of intelligence. What is considered *their society* is an issue of **boundaries**; boundaries have been discussed several times in GGDM. To the early European explorers and colonist, the Native Americans (or even the people of Africa, India and China) were not within the *boundaries* of their civilization.

The notable shift then, especially pronounced after WWII and the shrinking of distance due to technology (but began two centuries earlier), is that the boundaries shifted in the late 20<sup>th</sup> Century to include all of humanity as one theoretical entity, and within the new boundaries, in historical hindsight, what the Europeans did to the Native Americans, was not just immoral, but **horrific**. The same has occurred to the Japanese; their persecution of Christians, who were not within the very strict boundaries of their civilization (into which they closed the gate for three centuries) was not considered immoral then. The shifting of boundaries in this way is a true example of a Reformation as discussed in later sections.

- ✓ The development of “international law” – especially in regards to human rights – is either an attempt to, or a result of (chicken or the egg came first?), moving the boundaries from sovereign states to global humanity.

---

*“Young men make wars, and the virtues of war are the virtues of young men. Courage and hope for the future. Then old men make the peace. And the vices of peace are the vices of old men. Mistrust and caution. It must be so.”*

– Prince Feisal, Lawrence of Arabia (1962)

---

*“We lived many lives in those whirling campaigns, never sparing ourselves; yet when we achieved, and the new world dawned, the old men came out again and took our victory to re-make in the likeness of the former world they knew.”*

– T.E. Lawrence, “Lawrence of Arabia,” Seven Pillars of Wisdom (1926) <sup>8</sup>

---

*“‘If you look at the world and look at the problems, it’s usually old people, usually old men, not getting out of the way,’ [former President Obama] said.”*

– quoted by Amie Parnas, “Obama talks up Warren behind closed doors to wealthy donors,” The Hill, December 23, 2019

---

**What is hope then?:** Of all of the possibilities I hope will happen, of all of the daydreams and fantasies of future events, I have not one fact, indication, or bit of evidence that they will happen, that anything at all will happen.

- ✓ One possible translation of hope in ancient Greek (e.g., the Pandora’s Box story) is ‘deceptive expectation.’

Suspension of disbelief does not apply then to my own daydreams and fancies. Hope is then nothing more or different than fear; it is our fear that our work, our lives, are meaningless (and the subconscious knowledge that they are).

- ✓ I have become distrustful of my own idealizations; had girlfriends, it wasn't that great, even sex became boring, not nearly as good as imagined. Military intelligence school was great, but later, instead of enthusiastic dedicated intelligence professionals, I found the same old Marines with stupid four-year attitudes that made me ill in the late 1980s. College – it was like high school all over again but I was much older. The *ought* and the *is*. And Arnold Toynbee. What then of GGDM? Dare I dream?

**Diplomatic Spaces:** Knowing that something is possible expands reality, knowing that something is real, expands possibilities.<sup>9</sup> Prior to looking for and discovering evidence of planets orbiting other stars, most scientist believed that there were planets around other stars; there didn't seem to be any good reason to expect otherwise. Now that the existence of planets orbiting other stars has been well established (i.e. observed), the possibility of life existing elsewhere is improved. Surveys in industrialized countries show that most people believe that there is probably life out there.

Merely accepting the possibility that life exists elsewhere, and that there are other planets and worlds beyond ours,<sup>10</sup> has subtly changed our reality in ways that cannot be easily counted, but the primary effect seems right now to be a willingness to suspend disbelief when watching science-fiction movies and shows featuring aliens, FTL travel, and planets orbiting other stars.<sup>11</sup>

So, what happens if or when we actually do know or discover that technologically advanced alien lifeforms exist out there? I have no answer, but my inclination is that it *will not* be nearly as dramatic as Hollywood makes it (i.e. people won't commit suicide, the world won't descend into anarchy, and they won't bring Elvis back) and it won't be quite what we expect (i.e. they won't be 'little green men' or act like Americans, to the universal relief of the universe).

- **Exoplanets:** The main question is whether our star system is normal, average, or unusual. The answer to that question impacts the probability and frequency of life existing elsewhere.
  - ✓ “Most exoplanets have been discovered by the Kepler Space Telescope, an observatory that began work in 2009 and is expected to finish its mission in 2018, once it runs out of fuel. As of mid-March 2018, Kepler has discovered 2,342 confirmed exoplanets and revealed the existence of perhaps 2,245 others. The total number of planets discovered by all observatories is 3,706.” – Elizabeth Howell, “Exoplanets: Worlds Beyond Our Solar System,” space.com, March 29, 2018.
- **First Space:** The Diplomatic Space is a ‘public space’ that is shared between two positions by virtue of their diplomatic relationship. The Diplomatic Space between any two positions connects to and is considered an extension of each position’s *Public Space*. Diplomatic Spaces are built in blocks, with each block having one Monad which is equivalent to and functions like any Monad on the position’s normal Public Space.
  - ✓ Upon completing First Contact, each position receives one Diplomatic Space Monad which is designated the First Space. This permanently establishes the Diplomatic Space between the positions, regardless of subsequent events.
  - ✓ The First Space stands alone and is not initially connected to the other position’s First Space until more substantive contacts exist between the positions; however, the First

Space will always exist after First Contact, and serves as the only contact point between the Diplomatic Space shared by the positions and its own position's Public Space.

- ✓ The two First Spaces are always placed opposite each other on the Diplomatic Space; initial placement must leave space for one Monad between them. Regardless of changes that must occur later, they must remain opposite each other by a direct line of Monads between them. They may move farther apart as the Diplomatic Space expands.
  - ✓ The First Space will always be considered *adjacent to the position's Capital Colony*. During any time in which there is no Capital Colony or the Capital Colony *status* has been suspended (see *Waving the Flag*, 2 Constructural Elements, pp. 190-191, *supra*), the First Space is not adjacent to anything on the current Public Space. Anything on the First Space or connected through it, is then disconnected from the Public Space during that time.
    - “Disconnected” simply means that nothing traces or connects through the First Space to the Public Space; “Disconnected” does not automatically mean non-existent or unavailable. There is a grey area here where the Concierge must make rulings on the availability and use (or “actualization”) of disconnected pieces in the Diplomatic Space (*ut infra*).
  - ✓ Any Pieces may be laid on the First Space as they would on any other space on the Public Spaces.
  - ✓ Anything that could be put on the Public Space can be put in the Diplomatic Space except the Capital Colony, which must always (of game mechanical and cultural necessity) be on the Public Space.
  - ✓ Pieces on the First Space or Diplomatic Spaces can be disrupted, like any other piece.
- Fourth Direction: Diplomatic Spaces are the fifth way to expand the Public Space during the game, the other ways are by Era progression (see *All Things Are in Motion*, 1 Eras, p. 760, *supra*), Reformations (see *Built Spaces and Mental Spaces*, 3 Reformation, pp. 1401-1402, *infra*), hegemony (see *In Spite of Ourselves*, 4 Order, p. 554, *supra*) and an Expose' News Event (see *Edge of Reality*, 4 Writs, p. 452, *supra*). As mentioned previously, the Public Space of a position can become somewhat congested and crowded during the game. Diplomatic Spaces are the easiest way to expand the space available for pieces of civilization, but there's a catch....
- ✓ See also discussion of Monad Imperialism, 3 Order, p. 561, *supra*.

There is a sense in which the Diplomatic Space functions like the fourth direction in a hypercube; in the existence of the sort-of two-dimensional Public Space of civilization, the Diplomatic Space exists in the other direction to which we cannot point due to our limited dimensional existence. Very much like Edwin Abbott's *Flatlanders* and the interdimensional diplomat who just wanted to say Hi! (see Carl Sagan's explanation, *The Flatlanders* excerpt, *Temporal Technology*, *supra*). The point that destroys this rough analogy is the game necessity that the Diplomatic Space connect to the Public Space only through the Capital Colony – maybe like a black hole? – which, incidentally, makes the Capital Colony the densest center

point of its civilization, which seems appropriate; it would be chaotic to the game to allow true congruity between all points of the Public and Diplomatic Spaces.

- **Hare We Go:** ‘Stacking’ on the Public Space is prohibited, see Turnover, 1 The Sidereal Stage, p. 109, *supra*, thus stacking is also prohibited on the Diplomatic Space since they follow the same rules. However, I much debated initially whether or not to allow stacking on the Public Space, and I think Diplomatic Spaces (and Reformations) were part of the solution to prohibit stacking on the Public Space (for game play visual reasons). Thus, in prohibiting stacking, there had to be ways to expand and reshape the Public Space, and Diplomatic Spaces became the ‘extradimensional space’ connecting to the Capital Colony. From Diplomatic Spaces then grew an entire concept of in-game diplomatic relations.<sup>12</sup>

- ✓ **Christopher Columbus:** She’s a rounda, she’s a firma, she’s a ... She’s a round like my head! **King Ferdinand:** [Hits Columbus on head with mallet] She’s a flat like your head! – Merry Melodies, “Hare We Go” (1951).

- Ahhhh, the educational things we used to watch on Saturday mornings!

---

*“His spatial theory called ‘Thirdspace’ is largely an extension of the work of Henri Lefebvre and is focused within the field of cultural geography. Soja employs a triad of space where space is spatiality, sociality and history. This is the space, Soja contends, where everything comes together. For Soja, modernism emphasized history at the expense of geography. Thirdspace according to Soja is a way of ‘thinking about and interpreting socially produced space,’ where the spatiality of our lives, our human geography, has the same scope and significance as the social and historical dimensions.”*

– Soja page at No Space Like Home (WordPress Blog), unattributed and undated, <https://2113humtheresnospacelikehome.wordpress.com/soja/>

---

**Shared Spaces:** Whenever two positions enter into a Treaty, Articles of Incorporation (i.e. a MegaCorporation, see 2 Corporations generally, *infra*), or if they share a starsystem, one Diplomatic Space Monad is added to the Diplomatic Space between the positions. Sharing a starsystem means simply that both positions have colonies in the system, they do not have to be on the same planet. If two positions share a colony planet (i.e. a Balkanized planet) or share a Meaning, two Diplomatic Spaces Monads are added. Spaces are not lost if these conditions change, but...

The term Diplomatic Space is used both to refer to the entire Diplomatic Space between two positions and to refer to individual Monads added to or lost from the Diplomatic Space, depending on the context.

- ✓ The first Diplomatic Space added will be placed directly between the two First Spaces of the positions, connecting them. Thus, First Spaces will always be separated by one Diplomatic Space.
- ✓ Other Diplomatic Spaces added later will build from the starting point, horizontally, diagonally. The Concierge determines the placement of new Monads when they are added, but they must always form one continuous matrix, like the Public Space.
- ✓ Like the Public Space, the Diplomatic Space is considered to wrap from edge to edge (see Over the Edge, 1 The Sidereal Stage, p. 108, *supra*) such that Monads on each

edge are considered adjacent along the same axis (e.g., a Fuzzy Group could be ‘split’ between edges). And like the Public Space, adjacency can be lost by expansion, loss or reshaping of the Diplomatic Space by events (see Built Spaces and Mental Spaces, 3 Reformations, pp. 1401-1402, *infra*). However, the First Spaces must be inviolate, they must remain on the original edges, directly opposite each other, but otherwise can be moved farther and farther apart as Monads are inserted.

- ✓ While positions may make any agreements they like regarding the Diplomatic Space, as far as the Concierge is concerned, all positions that have access to a Diplomatic Space may lay any pieces on any available Monad on the Diplomatic Space in any way that the same piece could be legally placed on the position’s Public Space.
- ✓ Pieces laid on the Diplomatic Space *are visible* to all positions connected to the Diplomatic Space, but continue to belong to their original owner. Constructural Elements, Fundamental Realities and Magna Cartas will not be visible to other positions through the Diplomatic Space. The Public Spaces will also remain secret.
- ✓ Pieces laid on the Diplomatic Space may be intermingled with pieces of the other position that shares the Diplomatic Space, and may be connected to other position’s pieces in appropriate situations (such as Research Groups).
  - Here’s where things get a little fuzzy... it is *unlikely* that positions could share or form Fuzzy Groups from intermingling their pieces on the Diplomatic Space, but it is not *impossible*. Research Groups represent knowledge of objective, constant, universal physical laws leading to technology, but Fuzzy Groups are cultural specific and specific to the moment in the cultural-historical processes. So what would be represented by an intermingled Fuzzy Group on the Diplomatic Space? Such groups must represent a significant unity, blending, merger of different cultures into an interstellar culture on an *egalitarian basis* (factors must include significant population mingling and co-habitation, and joint enterprises, institutions, and points of reference, a ‘special relationship’); rather than through the normal processes of conquest and empire where the unity, blending and merger are dictated and dominated by the conquering sovereign culture. Either process may in time, lead to pan-galactic civilization.
- ✓ Ships and Scenes may be placed on planets and stars on the Diplomatic Space. Scenes may be placed on *any* star or planet in the Diplomatic Space by any position that has access to the Diplomatic Space.
- ✓ Colonies and ships at Stars and Planets on the Diplomatic Space may be subject to disruption events affecting their owner.
- ✓ Colonized Planets laid on the Public Space must trace their Pathway through the First Space to the Capital Colony. Pathways in the Diplomatic Space work the same as on the Public Space, they are exclusive and inviolate.
- ✓ Government Titles might also be placed on the Diplomatic Space if it is very large....

Diplomatic Space is like a ‘meta- or para-Public Space’ between interstellar civilizations.

- Shattered Spaces: On each position's Regular Turn that was preceded by at least one round of Combat between positions sharing the Diplomatic Space, regardless of the results, since the position's last Regular Turn, there is a 50% chance that 1-3 random Diplomatic Spaces will be lost.<sup>13</sup> Diplomatic Spaces may also be lost when a Shared Meaning is destroyed.
  - ✓ A Research or Cultural piece located on a lost Diplomatic Space is lost.
    - This may not seem especially realistic; it is simply a game mechanic necessary to actions that damage the Diplomatic Space.
  - ✓ If a colonized planet is on the Diplomatic Space that is lost, it will be removed back to its owner's Public Spaces, and if there is not room there, some pieces will be removed to make space for the returning colonized planet *and star*.
    - "The Claw is our Master! The Claw chooses who will go and who will stay!" – Toy Story (1995).<sup>14</sup>
      - The Concierge solely determines what is moved or lost. The position players should not be consulted so as to avoid the appearance of or claims of favoritism later. The Concierge should do what makes sense, not what seems fair.
  - ✓ Note again, that the First Space of each position may never be lost (as the positions will always be aware of each other's existence) and once established in the game, the Diplomatic Space between the positions will never disappear (as there will always be some 'diplomatic relation' between the positions, based on history) because the First Spaces remain indefinitely.<sup>15</sup>
    - The progenitor of World War I was Otto von Bismarck. This is not to imply that he is specifically 'blameworthy' in any respect, but rather, that the complex and subtle system of balances, agreements and treaties he wove over Prussia and Europe (the GGDM Diplomatic Space), his unique understanding of the situation, could not be maintained by more ambitious, less restrained, and frankly, men of the following generation who were not his mental peers. It does not seem that he gave much thought to his own mortality (though he must have been feeling it when he resigned at age 75), and was unprepared for the Year of the Three Emperors. The result, within 29 years of his dismissal, the monarchy was abdicated (Wilhelm II, who dismissed him, abdicated in 1918 and fled to exile in the Netherlands, where he died in 1941), and in 45 years, Germany and Europe were in shambles; hegemony had passed to the West.
- Hole in Your Head: Generally, the Public Space needs to be one continuous matrix and it is possible, but unlikely, that there may be 'holes' in the Public Space, unless the participants just want a strange game. The Diplomatic Space is like the Public Space, except that random loss of Monads from the Diplomatic Space (Monads are never lost from the Public Space, see *Monad Imperialism*, 3 Order, p. 561, *supra*) can create holes in the Diplomatic Space that may remain or may be refilled later (e.g., see *Subduction Zone*, 5 Diplomacy, p. 1168, *infra*). Continuity of the Diplomatic Space is somewhat less important than continuity of the Public Space in the game.

- **Three is a Crowd:** It is generally anticipated in GGDM that Diplomatic Spaces will be between two positions, as are the normal state of diplomatic relations in the state system and throughout human history. A position may (and likely will eventually) have Diplomatic Spaces of varying sizes with every other position in the game, all adjacent to the Capital Colony. It is not impossible for Diplomatic Spaces to be merged and to exist between more than two positions, but such an event would be extraordinary and represent a major (group hug) event in the story arc of the game.
  - ✓ **Danny Pink:** I was a soldier. I put myself at risk. I didn't try too hard to survive, but somehow, here I am. And now I can see what I nearly lost. And it's enough. I don't want to see more things. I want to see the things in front of me more clearly. There are wonders here, Clara Oswald. Bradley saying 'please,' that's a wonder. One person is more amazing, harder to understand, but more amazing than universes. – Dr. Who, "In the Forest of the Night" (2014).
- **Severed Dreams:** As mentioned previously, a position whose Capital Colony loses its *status* due to an inactive Symbolic Constructural Element (see Waving the Flag, 2 Constructural Elements, pp. 190-191, *supra*) is 'cut off' from all Diplomatic Spaces. Cut off means that no new items of any sort can be placed on the Diplomatic Space (except colonies and ships at stars on the Diplomatic Space, a game mechanical necessity) and nothing *except* Pathways can be traced through the First Space. It is really just a minor ban on placing new things in *any* Diplomatic Space (with any species), which may be more or less inconvenient depending on circumstances. This *does not block* adding new Monads to the Diplomatic Spaces.

---

*“A process cannot be understood by stopping it. Understanding must move with the flow of the process, must join it and flow with it.”*

– The First Law of Mentat, quoted by Paul Atreides to Reverend Mother Gaius Helen Mohiam (Dune, 1965) <sup>16</sup>

---

**Wholistic:** GGDM is huge, commensurately complex, and interwoven like the processes it simulates, it cannot be sampled in pieces, but must be taken as the dynamic whole.

This creates an innate barrier to discussing GGDM concepts outside of the GGDM context, to have a meaningful discussion of GGDM concepts, the participants must have read the GGDM rules. This is generally true of any intellectual opus, until the concepts are taught in college courses, professionally defined in the literature, and generalized to the population by secondary summaries, and used in media such as news articles, movies and popular books.

- ✓ “The variant *wholism*, on the other hand, is rare. Its lack of use may be due to the technical nature of *-ism* words, which often refer to an established theory, doctrine, or medical condition. When the variant is encountered, it is often in a scientific context.” – from Merriam-Webster online dictionary article, “‘Wholistic’: A Natural Evolution Of ‘Holistic’” (Usage Notes, undated, unattributed).
- **Pan Galactic Civilization:** The numbers of spaces added or lost to the Diplomatic Space can be adjusted to suit the participants, but generally, accumulation of Diplomatic Space is a long arduous process and easier to destroy than build, as is trust, reputation and credibility. There may be other possible ways to add Diplomatic Spaces that creative participants will invent.

Generally, the assumption is that few Diplomatic Spaces should approach even half of the size of the Public Space of the positions. When they do, the positions have moved some distance toward a pan-galactic civilization.

- ✓ When considering whether the baseline numbers are adequate or whether they need to be adjusted, participants should be mindful that a position might share separate Diplomatic Spaces with up to 9 other positions, all of them adjacent to the Capital Colony. Thus a few spaces here, a half-dozen there, can add up to little shared ‘pocket universes’ that significantly expand the space available on the Public Space through the Capital Colony. The smallest Diplomatic Space gives one permanent extra space.

*“Being the Cool Foreign Policy Guy means being a trim, brilliant, funny man who adores football, poker, dirty jokes, and Star Wars, who theorizes about Game of Thrones, drinks cheap wine, loves backdoor channels, and blurts historical analogies out of his mouth like he’s prepping for the world’s biggest oral exam, while somehow dressing sharply, because Cool Foreign Policy Guys are above all sharp. Sharp and nuanced. Cool Foreign Policy Guys never get angry; they only smile in a beleaguered, knowing manner and let their presidents do whatever they want. Go ahead, bomb a country, I don’t mind, I’m the Cool Foreign Policy Guy.”*

– Daniel W. Drezner, “Gone Gorka,” Washington Post, August 29, 2017

## Endnotes.

<sup>1</sup> Commentary: I was allowed by my advisor, Dr. Stephen Griffith, to take his advanced philosophy seminar Identity Theory as a sophomore in the fall term because he thought I could handle it. There were about ten students in the class, and we all sat around a square of tables in a smaller classroom. Even though I ultimately did not graduate from Lycoming College or graduate with a degree in Philosophy, I feel it is one of the best courses I ever completed, and remembered the discussions (ship of thesis, personhood, etc.) 30 years later. This was one of my textbooks.

<sup>2</sup> Citation: At a crisis management meeting: **Woman**: They (the Bhutanese) see its arrival as a religious event. **Man**: Well, that’s a blessing, no pun intended. As long as we are talking about religion, no one will give a damn. If however, it becomes alien, then we have hysteria. – Epoch (2001), underappreciated made-for-TV movie.

<sup>3</sup> Citation: “Meowing is an interesting vocalization in that adult cats don’t actually meow at each other, just at people. Kittens meow to let their mother know they’re cold or hungry, but once they get a bit older, cats no longer meow to other cats. But they continue to meow to people throughout their lives, probably because meowing gets people to do what they want. Cats also yowl – a sound similar to the meow but more drawn out and melodic. Unlike meowing, adult cats do yowl at one another, specifically during breeding season.” – ASPCA article, “Meowing and Yowling,” [aspc.org](http://aspc.org), undated, unattributed.

<sup>4</sup> Commentary: Consider as a microcosm, the situation on Tasmania leading to the near genocide of the Aboriginal Tasmanian population before, during, and after the Black War. The European population of the colony consisted of military detachments, convicts, ‘company men,’ and sailors, farmers and other regular elements of European working class population. The European colony contained a huge sexual imbalance, with men making up the vast majority of the population. The Aboriginal Tasmanians had been cut off from mainland Australia for 8,000 years and were or are generally considered the *most primitive human population* encountered by the European explorers.

<sup>5</sup> Commentary: Artificial intelligence is another curious animal of the modern lexicon, of which has been asked, if it is intelligent, what makes it artificial? Artificial simply means that humans created it, but it is never the intelligence that is artificial. We should never forget that.

- ✓ See “Duck Test” discussion by Dave Nilsen in The AI Problem (excerpts), Corporations, *infra*.

<sup>6</sup> Commentary: I memorized this definition in undergrad philosophy class nearly 30 years ago and have discussed it several times. It has been my standard definition of murder since then, sometimes conflicting with legal definitions.

- ✓ For example, a drunk driver who killed an on-duty police officer and injured his K-9 companion in a 2 a.m. wrong-way traffic accident in Western Pennsylvania, was charged with and eventually pled guilty to Third Degree Murder (a crime defined in only three states and abandoned by two others). I was surprised at the charge, I thought the D.A. was overreaching, because it would be impossible to establish specific intent (#1 condition, above). Third Degree Murder in Pennsylvania I later learned, does not require intent (in violation of the philosophical definition of murder), but does require *malice*.

Even so, I don't see *malice* in a drunk driving accident no matter how grossly, recklessly, wantonly negligent, regardless of the results, but the perp pled guilty and thus the argument is moot. As it turns out, the D.A. knew what he was doing and I didn't (he had read the law); I am not defending the perp here, only pointing out further that criminal law definitions of murder do not always accord with philosophical definitions. He is serving 12-30 years, his son will be grown when he gets out of jail. The bell cannot be un-rung regardless.

<sup>7</sup> Commentary & Citation: In an amusing 1954 micro-short story (notice the slightly archaic terminology), Frederic Brown imagined networking the computers of 96 billion populated worlds in several galaxies into one machine:

- ✓ “Dwar Ev threw the switch. There was a mighty hum, the surge of power from ninety-six billion planets. Lights flashed and quieted along the miles-long panel. Dwar Ev stepped back and drew a deep breath. ‘The honor of asking the first question is yours, Dwar Reyn.’ ‘Thank you,’ said Dwar Reyn. ‘It shall be a question which no single cybernetics machine has been able to answer.’ He turned to face the machine. ‘Is there a God?’ The mighty voice answered without hesitation, without the clicking of a single relay. ‘Yes, now there is a God.’ Sudden fear flashed on the face of Dwar Ev. He leaped to grab the switch. A bolt of lightning from the cloudless sky struck him down and fused the switch shut.” – Frederic Brown, “Answer” (1954).
  - Dwar Ev is probably a corruption of “dwarves” in fantasy literature and games, who are thought to be greedy, materialistic, Earthy, and secretive.
- ✓ The 254-word story appears in Isaac Asimov’s Microcosmic Tales anthology (1980), a collection of 100 stories (also now free online). In the introduction Mr. Asimov states that each story is 2,000 words or less; I believe this is a reference to the reported literary debate during a cab ride between Asimov and Robert Heinlein about whether a sci-fi short story could be – properly written in 2,000 or 1,500 words or less.

<sup>8</sup> Commentary & Citation: This text is found in the Introductory Chapter of T.E. Lawrence’s autobiography of the Arab campaign, Seven Pillars of Wisdom (1926). The entire book is available for free on Gutenberg Project, Australia (where it is in the public domain). An abridged version of a book he wrote in 1919 is called Revolt in the Desert (1926) which can be found on the Canadian site, fadedpage.com (where it is in the public domain); this does not appear to be exactly the same book as Seven Pillars of Wisdom (1926), though much text does overlap the two (e.g., the same sentence about the whirling squalls appears in both, but the introductory chapter is only in Seven Pillars of Wisdom). Col. Lawrence wrote a companion book in 1929, The Mint, about his experiences while enlisted under an assumed name (to escape notoriety which he loathed) as an enlisted airman in the RAF. According to the forward to Revolt in the Desert, he may have also been a private in the Tank Corps in 1922. The Mint was published posthumously in 1955 and was censored.

- ✓ Note that the publication of The Mint (1955) brought T.E. Lawrence back into the public awareness, and preceded by seven years the movie “Lawrence of Arabia” (1962).

<sup>9</sup> Commentary: For example, observing animals, a young man might think that human females, like other animals, can only mate at the time of the year when they are ready and conclude that a human female can only have sex if she loves him (i.e. bonding like animal pairing). He might also conclude from some of the animals that it is natural to have multiple females attached to a male, as in a herd of cattle, flock of chickens, or a pride of lions. Then the young man goes into the city and encounters prostitution. At the core of prostitution is the separation of love and sex, the linkage of sex and economics, and is only possible because human fertility is different than that of the other animals. Knowing of prostitution changes instantly the young man’s idea of the relationship with the opposite sex; knowing it, it cannot be unknown, there is no back, it becomes part of a newly dawning worldview.

<sup>10</sup> Commentary: I have no idea how the Flat Earth Society explains pictures taken of planets orbiting other stars ...and I don't want to know, so please don't try to explain it to me. Fortunately, I think the likelihood of any Flat Earth Society members playing this game are remote.☺

<sup>11</sup> Commentary: My beloved grandmother would not watch movies where men wore skirts (e.g., Roman movies and Scottish Highlander movies) or where apes talked – i.e. Planet of the Apes – because apes don't talk and men don't wear skirts. I don't think she liked or understood sci-fi generally, but tolerated me watching it at her house. Like my grandfather, her shows and movies were Westerns, musicals (e.g., Seven Brides for Seven Brothers), Lawrence Welk and Hee-Haw, and detective and cop shows and shows with animals. Disney movies were ok, even if they had fairies and witches in them. And fairies and witches don't exist.

<sup>12</sup> Commentary: In the early versions of the design that eventually evolved into GGDM, diplomatic relations between two positions were on a scale with six or seven steps from Genocidal to Harmonious (somewhat like the Habitability Classes), and the level was determined by what the two sides mutually declared. The level determined then allowed, required, or disallowed certain actions between the positions (there was a table for diplomatic actions allowed at each level). This entire system was scrapped in 2001-2002 in favor of the Diplomatic Spaces solution.

<sup>13</sup> Citation: “There remained only one further step, since it is an adage of history that no perfect military instrument has ever been suffered to rust from disuse. And in line with ancient precedent, Louvois soon began to suggest to his sovereign the advantages to be gained from aggression.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 322.

- ✓ **Missy to Dr. Who:** Armies are for people who think they're right. And nobody thinks they're righter than you. Give a good man firepower, and he'll never run out of people to kill. – Dr. Who, “Death in Heaven” (2014).
  - When I heard this, I thought it was probably a backhanded jab at Muad'Dib's Jihad. Along with militant space-opera/sci-fi stories (the Norman Spinrad criticism), the Cold War, and every dynastic ambition and military and colonial power in history, including Britain and the United States.
- ✓ See also Consumerism vs. (Colbertine) Mercantilism discussion, Before the Big Bopper, 2 Commerce, p. 1195, *infra*. François-Michel le Tellier, Marquis de Louvois was Secretary of State for War from 1662 to 1691 in service to Louis XIV of France, encompassing Jean-Baptiste Colbert's time as Comptroller General of Finances from 1661 to 1683. Thus, their financial and foreign aggression policies are intertwined with Louis XIV's dynastic ambitions. When Colbert died in 1683, he was replaced by a Louvois lackey in finances, and Louvois took Colbert's office as Minister of Public Buildings.

<sup>14</sup> Commentary: Toy Story – another example of quantum ‘looking’? A government or alien conspiracy to program children and reshape our cultural view to a quantum reality? 🍷 Or just normal enculturation of ideas? That's ok, once you are programmed to like it, you won't notice (see Programming Dilemma, 1 Culture, p. 352, *supra*). ☺

<sup>15</sup> Citation: **Ambassador:** Your Majesty! Please think it over. Please realize that you will be at war with half of humankind. **Empress:** Have you forgotten, Ambassador? The other half belongs to this Empire. – Conversation between Ambassador Gen Tauron and Empress Rama, Banner of the Stars (2000), Episode 9.

<sup>16</sup> Commentary: Process is important, very important to completeness and understanding. You can't learn holistically without going through the process from beginning to finish. For example, I have observed how young attorneys learn significantly by going through the process of their first real trial; nothing solidifies a young litigator more than experiencing the trial process. Likewise, successful authors often spend a decade working on their first published work, musicians may spend years developing a sound before their first hit recordings (Tom Schultz worked on “More Than a Feeling” for six years); but in many cases, after the first successful process, they become viable and prolific in the following years, turning out successful (to a variable degree) works every year or two as long as an audience remains. This is true, more or less, of nearly every endeavor, whether business, manufacturing, design, artistic, professional, educational, and even military and law enforcement operations; it is however true that sometimes the process is completed only once successfully and for various or whatever reason, is not repeated.

- ✓ Dune's Mentats were a sci-fi extension of the ‘human calculator,’ e.g., Zera Colburn, John von Neumann.

*See Appendix MSM – Meanings & Shared Meanings Example*

*“In 1970, Dr. Ernest [sic] Fasan in a book titled Relations with Alien Intelligences: The Scientific Principles of Metalaw, proposed a number of principles, based ultimately on the work of Immanuel Kant and suggesting that alien species could work together to achieve rational goals. Perhaps equally important (if not more so) was the thought experiment that began in 1966 and is still underway. I am referring, of course, to Star Trek in its many forms and to the cornerstone of metalaw ... within the Federation, a doctrine of non-interference and non-intervention called the Prime Directive.*

*The idea behind it all is that all societies are entitled to develop in their own ways without outside interference..... Of course, as with any other thought experiments in long-running fictions ... the Prime Directive has more to do with creating plot difficulties than it does with smoothing out interstellar relations.”*

– Ace G. Pilkington, Science Fiction and Futurism: Their Terms and Ideas (2017), p. 94 <sup>1</sup>

**Time Lords Need Not Apply:** A principle of non-interference has never restrained Dr. Who; it is easier to have adventures across time and space if you are free to meddle. The most egregious blatant example was deposing the elected Prime Minister of the United Kingdom, Harriet Jones, after she violated a truce and withdrawal from the Earth that he arranged with aliens (“The Christmas Invasion” 2005). She had a different view of things, but he had power and the will to use it against her, without reservations, because he could.<sup>2</sup>

**In Loco Parentis:** Suppose an alien species offered humanity the ability to travel to other stars and will gift the knowledge to us if they are convinced the majority of humanity desires it. The very act of making this offer would be monumental to humanity, confirming everything science-fiction writers and UFO enthusiasts have speculated about for over a century – that there are technologically advanced aliens, they know about the Earth, and that travel to other stars is possible. The aliens may have concluded that the majority of humanity believes these are possible anyway, based on our science, culture and literature, thus they would (possibly) not be violating any non-interference requirement of Metalaw. Imagine that to have made such an offer (assuming it is genuine), they must have something to gain and/or are taking a risk in letting humanity loose on the Galaxy. *In loco parentis? Parens patriae?* How would they determine that the majority of humanity desires it? They would, in any event, be holding all the cards in the relationship of the two species, as in the 2001 Twilight Zone episode, “Think Like a Dinosaur” (one of the most brutal ethical dilemmas ever filmed). We may also conclude that if they discovered a means to travel to the stars, we will eventually discover it as well. But too late?

- ✓ “He teaches them how to be cats... He definitely helps them learn bite inhibition. Like how hard is too hard to bite and still keep your friends. Kittens sort of get to that stage where they bite everything and they bite really hard ‘cause they don’t know that it hurts. And so he helps, he’s got his kitten-flattening paw.” – from “Grumpy Street Cat LOVES Being A Grandpa To Foster Kittens – GRANDPA MASON,” The Dodo YouTube Channel, July 25, 2018.

- ‘cause Grandpaw is the law!

**Londo Mollari:** *During the Shadow War, Sheridan risked his life and the lives of every human on this station to help save our worlds. Would the Gaim have done that for the Pak'ma'ra? Would the Drazi have done that for the Narn? No. That sacrifice must be rewarded.*

**G'Kar:** *Since the war, we have begun working together as never before. In the past, we had nothing in common. But now the humans have become the glue that holds us together.*

**Londo:** *If Sheridan's forces are defeated, then Earth will turn in upon itself. They will become isolated, or they'll turn against the rest of us. Politically, it is very wise.*

**G'Kar:** *Morally, it is even wiser.*

**Vir Cotto:** *Politics and morality on the same side? That doesn't happen every day, Deleenn.*

– Babylon 5, “Between the Darkness and the Light” (1997)

**Ethics & Interpretations:** The process of designing GGDM is similar to morality. In morality, you have arguments and theories about what is right and wrong. But how do you translate them into actual rules or apply them to actual recurring situations? You develop a code of ethics. Much of the difficulty with designing GGDM that I encountered 15 years ago involved the question of how to take ideas and thoughts on civilization and express them in a set of playable, workable game rules? The interpretation mechanics solved the problem.

- ✓ When playing off tile pairs in a game of mahjongg, all of the parts of the board have to work together in an intricate, invisible web of possible connections to solve the puzzle. The question of the game, is how? It would be possible to display this on a computer, but doing so would ruin the experience of the game. It is not currently possible to do this convincingly with human civilizations, or even personal relationships, on a computer screen (though VR might be interesting). As a sandbox, non-computer simulation of humanity, GGDM sits somewhere in the middle.

**Between Mars & Venus:** How do I shape the meaning of this for the reader? A Meaning as an Interpretation, requires the position issuing the Meaning to describe an important principle or key ‘aspect’ of the relationship between two positions, between two species. It’s sort of like when your girlfriend asks you to describe why you love her or what ‘the relationship’ means to you. But in this case, you are not required to love thy neighbor. Or perhaps how a mouse would describe a key aspect of its relationship with the cat. Two positions that are at war can still have (tragic) meaning to each other, just as they continue to share the Diplomatic Space.<sup>3</sup> A Meaning (or Shared Meaning, p. 1132, *ut infra*) is not an automatic ‘peace treaty’ in GGDM unless positions want it to be (see Creative Sharing, p. 1133, *ut infra*); two positions can have a long meaningful relationship like Gandalf and Balrog.<sup>4</sup>

- ✓ I once saw a ‘real TV’ type program where the lady had a house cat and also a bird in a square cage sitting on a table near a bright window. The cat liked to lay on top of the bird cage most of the time; a towel or pad was placed on top of the cage to keep the cat and bird separated. You immediately think the cat is laying there because the bird is potential dinner, but the cat appeared to be cat napping in the video. Of

course, the cat was just being a cat and the bird knew the cat was there but still chirped because they had a long relationship and the bird was being a bird. Cats like the sound of birds chirping; it's a 'happy' sound to them. I wondered when I saw it if the two had some kind of odd relationship beyond predator and prey; if the cat ever got that bird, there would be no more chirping, no more cage. Hard to think though that the bird was happy.<sup>5</sup>

- What is the Meaning of This?: A Meaning Interpretation is issued by an activation of the Diplomatic Power for the purpose of Form Meanings after the two positions involved in the Meaning have had First Contact. A Meaning Interpretation satisfies the Interpretation requirement for the Diplomatic Power Activation on the Regular Turn it is formed, but does not serve as an Interpretation on any turn thereafter.

Like the Writ, the Meaning Interpretation is created by the players, belongs only to the position that created it, must be submitted with the position's Actions, and is subject to approval by the Concierge; and like the Writ, the Meaning must be consistent with the position's current Social and Estate Titles, with the position's cultural identity, and may be rejected by the Concierge. Meanings are secret unless Shared (secrets are secret, unless shared...).

- ✓ For example: **Lennier:** It is our belief that every generation of Minbari is reborn in each following generation. Remove those souls and the whole suffers. We are diminished. Over the last 2,000 years there have been fewer Minbari born into each generation. And those who are born...do not seem equal to those who came before. It is almost as if our greater souls have been...disappearing. At the Battle of the Line, we discovered where our souls were going. They were going to you. Minbari souls are being reborn in part or in full in human bodies. **Cmdr. Ivanova:** So you stopped the war in order to avoid harming your own souls? **Lennier:** Yes. But the Council knew that our people and yours were not ready for this information. It could unravel our entire society. So we could not tell our generals the reason for the surrender. We had all memory of the examination erased from Sinclair's mind and we let him go. It has been our secret. – Babylon 5, "Points of Departure" (1994).<sup>6</sup>

Because the Meaning serves as the Interpretation for the Power Activation on the Regular Turn it is created, no News Event is required. Thus, like Patents, it remains secret, and cannot be altered by actions of other positions (see Letters Patent, 3 Patents, p. 748, *infra*).

- It's a Morning in May: A Meaning Interpretation must have three parts. The Meaning must name the other Native Population Type toward which the Meaning is directed. Afterward, the Meaning must describe generally or specifically as necessary in one or two concrete sentences, the special significance of the other ('significant other'☺), the importance of the other race to the position issuing the Meaning. Finally, the Meaning must describe one to three Events which would be inconsistent with the Meaning. The Events which would be inconsistent with the Meaning may be caused *by either side or by another position or Concierge Intervention*, and would compel the position to pause and reevaluate the meaning of the relationship between positions.

Event is not quite the same as act – event is a neutral term – but of course they are strongly related. 'Event' was chosen so as not to be confused with Acts which are used in relation to Power Activations throughout GGDM. Events can occur without conscious acts – such as a tree falling over in a fierce rainstorm and knocking out a power line – but in the sense used in

GGDM, it means mainly things that happen as a result of conscious acts (e.g., Power Activations), as in, “When in the course of human events...” (U.S. Declaration of Independence).

Meanings attach to Native Population Types in GGDM, not positions. This can be tricky, but in most cases, it will mean the position that represents that Native Population Type in the game, with room for mischief associated with populations under control of other positions. A Meaning can be attached to a Minor Race, though sharing such a meaning is unlikely, as is having a Diplomatic Space with the Minor Race. Because of the Lost Colonist Primal State, it is possible for two positions to share the same Native Population Type.

- ✓ The rule specifies events inconsistent with the Meaning because it is easier and less proactive than naming events consistent with the meaning. Humans have a built in negativity bias, and it is usually easier for us to name what is not, than what is. See feature quote, 6 Government Titles, bottom, p. 649, and EN 1, p. 658, *supra*.
  - ✓ Think of the meanings we attach to our beloved pets, especially the little furry ones. Think of the meaning we have to them, which is very likely much simpler and much different than ours toward them. But in both cases, though we recognize individuals, people tend to like dogs generally, or cats generally, and those animals recognize humans generally, some are leery of humans they don’t know (e.g., semi-feral cats), and some (especially sniffing, tail-wagging dogs) are friendly toward all humans.
- Act Like You Mean It!: The Events described in the Meaning as being inconsistent with the Meaning must be concrete and easily identifiable within the play of the game, and only apply toward and between the position issuing the Meaning and the position named on the Meaning. It is Events which give meaning. On any Regular Turn in which either position does anything described as inconsistent with the Meaning, there is a 50% chance that the Meaning will be ‘destroyed’ (and voided, removed) as it becomes untenable in the face of actions, e.g., what would happen to the Anglo-American ‘special relationship’ if a U.S. submarine intentionally torpedoed a British-flagged oil tanker?<sup>7</sup>
- ✓ “‘This case demonstrated that the Trump administration has lost the art of diplomacy with allies,’ said Jeremy Shapiro, director of research at the European Council on Foreign Relations. ‘The entire nature of a close ally is that you work together to find ways to be in sync without resorting to threats.’” – Anne Gearan, John Hudson, “Trump’s strong-arm foreign policy tactics create tensions with U.S. friends and foes,” Washington Post, January 18, 2020.<sup>8</sup>

A Meaning that is ‘destroyed’ through inconsistent Events can never be reissued, as history and memory will show that the Meaning was false. A destroyed Meaning generates an Intervention Potential Plus (IP+) against the position that held the Meaning. The Concierge is the interpreter of Meanings and specifically, when Events occur that are either consistent with or inconsistent with Meanings. *Optionally*, Enlightenment may be applied to Meaning rolls if the Concierge is contacted in reasonable time; once allowed, this option must open be for all.

- ✓ “[Trump] has an advantage on me, he can say everything he knows about any subject in 140 characters and I cannot.” – George Will, Fox News Sunday, June 26, 2016 (video available on YouTube).
- ✓ “The notion that one should stay silent as the norms and values that keep America strong are undermined and as the alliances and agreements that ensure the stability of

the entire world are routinely threatened by the level of thought that goes into 140 characters – the notion that one should say and do nothing in the face of such mercurial behavior is ahistoric and, I believe, profoundly misguided.” – Sen. Jeff Flake, “I Will Not Be Complicit” speech on the Senate Floor, October 25, 2017.

- Quasi-Contractual Meaning: A Meaning in GGDM is not a formal contract, if a Meaning is violated, who or what has been harmed? A Meaning has only one party (like infatuation) and the harm is confidence in the worldview of the party that holds the meaning (and in GGDM, the loss of a Power Activation). Sort of like when you make a deal with yourself or firm decision to do or refrain from doing something, and then fail. After awhile, such things have no meaning in your inner world, confidence is lost in your own resolution, sense of direction and progress, and internal integrity. This is the problem of alcoholism, tobacco addiction and substance abuse when one cannot quit despite the obvious cost and bad consequences.

Worldviews (generally) and Meanings in GGDM are at best quasi-contracts with the universe (see also Spaces, 4 Beginnings, p. 46, *supra*). *Quasi-contract* at [businessdictionary.com](http://businessdictionary.com):

- ✓ “Court’s determination of an obligation of one party to another where no actual contract exists. It is based on the parties’ conduct, mutual relationship, and/or on the possibility that one would be unjustly enriched at the expense of the other. In strict legal terms a quasi-contract does not constitute a formal contract, but is a legal remedy that allows a plaintiff to recover an award or benefit conferred on the defendant.” *Id.*

As GGDM is group storytelling and participatory group fiction (see The Nature of News Events and White Gold Wielder, 2 Dreamtime, pp. 146, 153, respectively, and Unintended Consequences, 2 Entropy, pp. 236-238, *supra*), the ‘judge’ is the group generally and more specifically, of necessity, the Concierge is the ‘judge’ where game information is secret.

- ✓ One of the struggles of designing GGDM was the reduction of general ideas and abstract concepts to concrete game rules. This is why it is important that Fundamental Realities in GGDM have concrete application to the game; it is thus also that Meanings must have identified concrete Events in the game that violate the meaning (e.g., I think my dog is my friend and then he bites me). Troublesome to both Meanings and Fundamental Realities are violations of the ‘spirit’ of the thing, which is a grey area that must be adjudicated by the Concierge; of the two, violation of the spirit of Fundamental Realities should be less forgiving than violation of the spirit of a Meaning.
- One is the Loneliest Number: A Meaning Interpretation in GGDM mechanics is unilateral (like a Writ or Patent) and has no value or effect unless Shared (keep reading...), however, the actions of either side can destroy it. The Form Meaning activation is the first, and required, step toward a later Shared Meaning.
  - ✓ A Meaning can be analogized in various ways to human conditions such as infatuation with another – which is supposed to lead to mating, permanent bonding and is useless otherwise in the most practical sense (see Oliver Emberton excerpt in The Universe Doesn’t Care About Your Purpose, Dreamtime, *supra*) – or perhaps to unilateral commitments, such as we have to our pets or decorative house plants, fulfilling a gratuitous promise,<sup>9</sup> or to laying flowers on a grave at regular intervals (as Joe DiMaggio did for Marilyn Monroe for the rest of his life), to which we expend effort and expect to receive little or nothing (of material value) in return.

Meanings, whether Shared or not, are part of the position’s worldview and may be considered by the Concierge in appropriate situations.

- ✓ Writs cannot be shared in GGDM, and require Fuzzy Groups unique to that culture. Patents could potentially be shared. News Events are always shared, because of the publication requirement with Power Activations. Thus, there is a spectrum.
- ✓ “Life would be so much simpler if you liked the right people. People you’re supposed to like. But then, I guess there’d be no fairy tales.” – Miss Maise, Dr. Who, “Mummy on the Orient Express” (2014).

---

*“Every one of us is, in the cosmic perspective, precious. If a human disagrees with you, let him live. In a hundred billion galaxies, you will not find another.”*

– Carl Sagan, Cosmos

---

*“Every man is more than just himself; he also represents the unique, the very special and always significant and remarkable point at which the world’s phenomena intersect, only once in this way, and never again.”*

– Hermann Hesse

---

**Dining Room Table:** Unique should not be confused with good, desirable or useful. We had a ‘unique’ dining room table when I was young; whenever the dog bumped into it, one of the legs came off and the table then tipped in that direction and had to be caught before everything – especially the kerosene lamp – dumped on the floor. Funny, not funny.

- ✓ Is something valuable because it is unique? People are often confused on that point, but no one would think our dining room table had any value, except to us because we had no other. Thus, GGDM has no inherent value by virtue of being a unique treatment of civilizations, or being a game, or a treatise. It has value to me because it is my only one.

---

*“We are all born as molecules in the hearts of a billion stars. Molecules that do not understand politics or policies or differences. Over a billion years, we foolish molecules forget who we are and where we came from. In desperate acts of ego, we give ourselves names, fight over lines on maps, and pretend that our light is better than everyone else’s. The flame reminds us of the piece of those stars that lives on inside us. The spark that tells us: ‘You should know better.’ The flame also reminds us that life is precious as each flame is unique. When it goes out, it’s gone forever. And there will never be another quite like it. So many candles will go out tonight. I wonder some days if we can see anything at all.”*

– Ambassador Delenn, Babylon 5, “All My Dreams Torn Asunder” (1998)

---

**Persona of Star Stuff:** Ambassador Delenn is sometimes Carl Sagan’s persona in Babylon 5, with the ironic twist that *she* is the leader of the religious caste (the organized priesthood) in Minbari society. While Mr. Sagan denied being religious, he was at least spiritual:

- ✓ C.f. “Star stuff, the ash of stellar alchemy had emerged into consciousness. We are a way for the cosmos to know itself. We are creatures of the cosmos and have always hungered to know our origins to understand our connection with the universe... We are one species. We are star stuff, harvesting starlight.” – Carl Sagan, “Who Speaks for the Earth,” *Cosmos*, Episode 13.

[Lennier grabs Marcus roughly by the front of his shirt and lifts him]

**Lennier:** *Do not touch me in that fashion. We may sometimes look like you, but we are not you. Never forget that.*

– Babylon 5, “Ceremonies of Light and Dark” (1996)

**The Commonality:** Lennier sounds like a racist.... Two positions which each have previously Formed a Meaning toward the other, if they are reasonably similar, may ‘share’ or develop a Shared Meaning Interpretation. You cannot personally, intentionally insult someone who does not share your meanings, but may unintentionally insult them without knowing or understanding.

The wedding of Meanings requires that both positions activate the Diplomacy Power for that purpose in the same Turn Cycle (that is, on each position’s next Regular Turn, the Diplomacy Power must be activated for the purpose of Sharing Meanings) and the Positions are required to submit a ‘merged,’ ‘combined’ or ‘wedded’ Meaning with their Actions. Meaning Interpretations cannot be Shared on the same Regular Turn they are Formed.

- ✓ The Concierge will accept or reject proposed Shared Meanings based on their internal consistency and consistency with the Meanings from which they were derived; time requirements (i.e. a probationary period) may also be imposed by the Concierge for the survival of the prior Meanings which form the Shared Meaning.
- ✓ The Concierge will not issue any pre-rulings on proposed Shared Meanings, will not indicate the parameters of what may be accepted – like an umpire behind home plate, the players will have to figure out the strike zone and tolerances as they pitch. The Concierge will not reject or accept the proposed Shared Meaning until the second Diplomacy Power Activation (see Table for Two, 1 Diplomacy, p. 1096, *supra*). It is thus possible to be stood up on the first date...
  - No pre-rulings by the Concierge is an important concept throughout GGDM; the positions must first make the effort and take their chances.

Upon acceptance of the Shared Meaning, four Monads will be added to the Diplomatic Space between the positions. Two positions at war with each other can still Share a Meaning.

- ✓ There can be only one Shared Meaning Interpretation between each two positions. Shared Meanings can be altered and manipulated by use of Special Writs, see Continental Drift, 5 Diplomacy, p. 1166, *infra*. Shared Meanings therefore are not static.
  - “Social morality requires a shared matrix of communal reality to which to relate thought and deed, and the illusion of an objective ethical esthetic requires at the very least the conviction that objective reality is more than a contradiction in terms.” – Norman Spinrad, The Void Captain’s Tale (1982), p. 211.

- “No, it’s not the speaking that’s the problem, it’s .. the listening.” – Vir Cotto, Babylon 5 movie Thirdspace (1998).<sup>10</sup>
- The Conversation: To have a conversation or any relationship, let alone a friendship, two parties must have something in common. Notably this is not required for family relationships, which are involuntary (until you are old enough to leave), but no one requires you to be friends with the people to whom you are, unfortunately, related (I have personal experience in this). The first, and minimum, requirement of a conversation is that the participants share a language of symbols and a desire to converse; language is a window to the cognition of others. Since science and math seem to be the only universals that we know, it has long been assumed by serious thinkers, that communications with sapient and technologically advanced alien species would be based on math and science; but even this is not a sure thing, as we’d first have to figure out their math system base (which will probably be related to their biology, for example, humans have ten fingers and ten toes and our counting system is Base 10) and how they account for or recognize zero in their system. Alternatively, everything in the universe is binary, that is, anything can be said to have an ‘on’ or ‘off’ state.
  - ✓ “We’re interested in communication with extraterrestrial intelligence. Wouldn’t a good beginning be better communication with terrestrial intelligence, with other human beings of different cultures and languages, with the great apes, with the dolphins, but particularly with the whales?” – Carl Sagan, *Cosmos*, Episode 11.
  - ✓ “You know, in a way I wish I hadn’t met you two. It’s much more convenient to think of the opposition as a nice homogeneous, dead-wrong mass. Now I’ve got to muddy my thinking with exceptions.” – Kurt Vonnegut, *Player Piano* (1952).
- Whispered Secrets: Meanings are secret, if you tell someone else, that’s on you; as the old saying goes, the best kept secrets are between three good friends, when the other two are dead. It is possible that if another position is aware of Meanings, they can deliberately act inconsistent with the Meaning to destroy it (thus assessing an Intervention Potential Plus (IP+), p. 1129, *ut supra*). Yet it is almost necessary that Meanings be pre-shared through informal diplomacy (i.e. private player communications) beforehand so that each position can develop meanings similar enough to officially Share a Meaning (and gain Diplomatic Space).<sup>11</sup>
  - ✓ “Love endures only when the lovers love many things together and not merely each other.” – Walter Lippmann.<sup>12</sup>

The Events in a Shared Meaning are, of course, known by both parties to it, but now there is a secret between two positions. How long it remains a secret is up to them (like King Edward IV and Elizabeth Woodville). The Shared Meaning serves as the Interpretation for the *second* Diplomacy Power Activation that creates the Shared Meaning. Each Power Activation to form the Shared Meaning must be accompanied by a reasonably-related News Event, the second is needed just in case the Shared Meaning is rejected by the Concierge (*ut supra*).

- ✓ Like Diplomatic Spaces, Shared Meanings in GGDM are anticipated to be between two positions (see *Three is a Crowd*, 2 Diplomacy, p. 1120, *supra*). *Ménage à trois* is possible, but Shared Meanings can never be solo (that’s called infatuation) and neither can Diplomatic Space. In multi-party Shared Meanings, the parties will need to adapt the rules on the fly.

- A Two-Way Street: A Shared Meaning must name two to four Events which are inconsistent with the Shared Meaning. As with a regular Meaning, an Event by either position that is inconsistent with the Shared Meaning has a 50% chance of destroying the Shared Meaning, but additionally, when a Shared Meaning is destroyed, there is a 50% chance that 1-4 randomly determined Diplomatic Spaces created by the Shared Meaning will be destroyed.<sup>13</sup> Generally, the loss of a Shared Meaning or at least the loss of Diplomatic Spaces would be considered a failure that could trigger Enlightenment rerolls, but if a position wishes to use Enlightenment, they should inform the Concierge quickly (this is optional), before resolution; it's possible they may not care. Spaces not destroyed are otherwise unaffected.
  - ✓ “A compromise would surely help the situation; Agree to disagree but disagree to part.” – 10cc, “The Things We Do for Love” (single 1976, album 1977).<sup>14</sup>
    - Shared Meanings must be a compromise, there is no quota of contribution or domination by the Meanings of one side or the other forming the Shared Meaning and the Concierge will not enforce such.
  - ✓ Continuing the previous example: **Lennier**: It has been our secret. Now it is yours. It must be kept. **Cpt. Sheridan**: Then why break the silence now? I mean, why tell us? **Lennier**: Because changes are coming.
    - “Is it possible to draw an exact line between purposeful and non-purposeful action? A human fetus, a human asleep, or a person under the influence of drugs may show action that seems – to an observer – non-purposeful rather than purposeful. However, the observer is in no position at all to come up with the conclusion that a person is not acting purposefully, no matter how non-purposeful, meaningless, or nonsensical a person’s action may appear to him. Even an insane person or a person under the influence of drugs acts, and thereby aims at achieving certain ends.” – Thorsten Polleit, “Human Action Is Purposeful Action,” Mises Institute, August 19, 2011 (available free online), quoting Ludwig von Mises, Human Action (1949), Ch. 1.
      - “I go to parties sometimes until four, it’s hard to leave when you can’t find the door!” – Joe Walsh, “Life’s Been Good to Me So Far” (1978).
- Creative Sharing: Shared Meanings can be used creatively for many purposes, most of which I cannot imagine yet. Shared Meanings can be used as a form of peace treaty – the inconsistent Events would be violations of boundaries or initiating combat – and I do not think this is inappropriate because it is not the same as the Treaty activation of the Diplomatic Power (i.e. there is no game mechanical process requiring Concierge actions) and because acceptance of the valid right to existence and claims of another is the most basic shared meaning.
  - ✓ “Oh, it was a rebirth ceremony alright. It also doubles as a marriage ceremony, depending on how seriously anyone took it. Somebody got married the other day.” – Catherine Sakai (Jeffery Sinclair’s former lover) to Capt. Jeffery Sinclair (Station Commander) about the Minbari rebirth ceremony, from Babylon 5, “The Parliament of Dreams” (1994).<sup>15</sup>

For the calculating types, a Shared Meaning can still be beneficial if destroyed in that there can still be a net gain in Monads on the Diplomatic Spaces (as in a history of relationship, deeper understanding of the others), if that is the objective of establishing the Shared Meaning. But there is still the Power Activation cost and the assessed Intervention Potentials.

- ✓ “As Jim Mattis and I have many, many times said when we were in uniform: If we don’t fund the State Department properly, buy us more bullets.” – White House Chief of Staff, Gen. John Kelly (Ret.), October 12, 2017.

*“It is noteworthy that human concern about human extinction takes a different form from human concern (where there is any) about the extinction of non-human species. Most humans who are concerned about the extinction of non-human species are not concerned about the individual animals whose lives are cut short in the passage to extinction, even though that is one of the best reasons to be concerned about extinction (at least in its killing form).*

*The popular concern about animal extinction is usually concern for humans – that we shall live in a world impoverished by the loss of one aspect of faunal diversity, that we shall no longer be able to behold or use that species of animal. In other words, none of the typical concerns about human extinction are applied to non-human species extinction.”*

– David Benatar, Better Never To Have Been: The Harm of Coming into Existence (2006), p. 197 <sup>16</sup>

**The Meaning of Extinction (and the extinction of meaning):** All Diplomatic Spaces and Meanings are immediately lost when the position with which they are shared, directed toward, or associated with suffers Total Extinction (see Countdown to Extinction, 1 Resolution, p. 1462, *in-fra*). All Diplomatic Spaces but the one connecting the First Spaces are immediately lost when a position suffers Political Extinction and there is an immediate 50% chance for each Meaning directed to the Politically Extinct position to be lost. See the Resolution section for the conditions of extinction.

- Acts of Mercy: Is it an act of mercy when we take our beloved pets to the veterinarian for medical care or is it an act of selfishness? A shield against glimpsing the Void? Do we really care more about our pets than the extinction of non-human species that are not pets? I believe I have (literally) spent a year’s salary at the animal hospital, what or who was it all for?

- ✓ “Even the most beloved, pampered pet pooch cannot live forever.” – Rachel Feltman, “Are we reaching the limits of human life span?” Washington Post, October 6, 2016.

This is the same question that has been asked for millennia, when an evangelist (“Jesus Freaks out in the street, handing tickets out for God.” – Elton John, “Tiny Dancer” (1971)) says he is trying to save your soul. Whose soul is he really trying to save? Do you accept the argument that by saving his soul he is saving yours, or that you are saving each other?

- ✓ “He imagined that in forcing a youth to become a monk he would be offering a sacrifice acceptable to God. He used to boast of the many victims which he devoted annually to Dominic and Francis and Benedict.” – Desiderius Erasmus, as quoted in Life

and Letters of Erasmus: Lectures Delivered at Oxford 1893-4 (1899) by James Anthony Froude.

- See full feature quote, 4 Order, p. 569, *supra*.

*“Using the Categorical Imperative and a few very basic assumptions, Dr. Fasan derives eleven fundamental metalaws of presumably universal validity. They are, in descending order of importance, as follow:*

- No partner of Metalaw may demand an impossibility.
- No rule of Metalaw must be complied with when compliance would result in the practical suicide of the obligated race.
- All intelligent races of the universe have in principle equal rights and values.
- Every partner of Metalaw has the right of self-determination.
- Any act which causes harm to another race must be avoided.
- Every race is entitled to its own living space.
- Every race has the right to defend itself against any harmful act performed by another race.
- The principle of preserving one race has priority over the development of another race.
- In case of damage, the damager must restore the integrity of the damaged party.
- Metalegal agreements and treaties must be kept.
- To help the other race by one’s own activities is not a legal but a basic ethical principle.

*Fasan’s metalaws are the beginning of a new era of metalegal development. Such principles of conduct may soon become a matter of survival; our thinking must be guided by metalegal precepts in astropolitical contexts.*

*When intelligent extraterrestrial life is discovered, mankind must be prepared, for in all of human history there will be but one first contact.”*

– Robert Freitas, “Metalaw and Interstellar Relations,” 1977  
(from the version on his website)

**Mephisto’s Marriage Counseling:** Metalaw is based on or accords with the general ideal of humanitarian based international relations post-WWII, post-Colonial era; as such, it seems to make agreeable sense at first reading. Application however has always turned out to be another matter entirely, due to politics, economics, and prejudices.

- ✓ “The philosophical underpinning is the Categorical Imperative, first elaborated by the 18<sup>th</sup> century German philosopher Immanuel Kant. The thrust of the Imperative, which holds for any rational being, is that no activity be undertaken unless it would be valid ‘as a principle of general legislation.’ If a particular course of action will lead to contradiction or a generally destructive result, it is proscribed by the Imperative. For example, if one contemplates murder, he asks: ‘Would it be desirable for everyone to murder?’ It clearly is not, since acceptance of murder as a general rule would result in the murderer’s own death, an inherent contradiction.” – Robert Freitas, “Metalaw and Interstellar Relations,” 1977 (from the version on his website).

Metalaw, as with any agreement or treaty, implies contractual ability, as commonly understood in Western jurisprudence; aliens who do not recognize philosophy, law (other than their own), or

do not have contractual ability (or cannot communicate with us: again, *alterity* – think bees, ants, Phase IV, the Arachnids in Starship Troopers, as opposed to the hominid Skinnies) will not recognize any treaty *or* obligation to others. Even in our own society, among adults who would be said to have contractual ability, there is frequent intentional or negligent disregard for the rights of others: We usually call them *criminals* and/or they get sued in civil court for their acts; thus we should not expect every intelligent species, individual or unit of the species, to respect even the spirit of Metalaw principles.

It may thus occur that certain spacefaring species would be deemed the equivalent of criminals among species that are able to *grok* metalaw. All of this circles around back to the question asked in *The Come As You Are Party*, 1 Combat, p. 932, *supra*: Why would we bring a gun when exploring interstellar space?

The rules of Metalaw stated above, though they sound warm and cozy in principle, do not insure interstellar peace; in fact, one can imagine many situations where two principles of Metalaw come into conflict or create a conflict – most of those situations have already been covered by science-fiction literature generally. The affirmative actions required by Metalaw insure that conflict will arise and species will involve themselves in the affairs of other species – even when taking into account that the principles of Metalaw are a logical hierarchy intended to be read and applied in descending order. Metalaw is thus more expansive than the Prime Directive in Star Trek, it goes beyond mere self-determination and non-interference.

➤ Ant Altruism: Metalaw seems to work on the unspoken assumption that any advanced species, or species who can understand Metalaw, will display altruism. It seems generally that we associate altruism with personhood, sapience, and abstract intelligence, for example, see the quote from Eric Michael Johnson:

- ✓ “The researchers’ conclusion was that altruistic punishment emerged in our species through a process of gene-culture coevolution. In other words, human psychology is biologically predisposed to enforce a system of fairness, but how much we do so depends on the culture we see reflected around us. This result was later supported by another study in 2010 that developed a model explaining how even ‘selfish genes’ could promote altruistic traits.” – Eric Michael Johnson, “Human Nature and the Moral Economy,” *Scientific American* (blogs), September 23, 2013.

- The longer feature quote is at 1 *The Sidereal Stage*, p. 111, *supra*.

Thus there is a fundamental quality difference between:

- 1) Altruism *as described in anthropology*, and
- 2) Altruism as a trait attributed to eusocial insects, e.g., bees, ants, termites.

The difference is the sapient concept of fairness. While bees may work and serve the hive without individual reproductive activity, *they are not the least interested in fairness*, as far as we can tell. Their altruism is for species survival and applies only to their hive. So it seems that altruism is a term misapplied to social caste insects, but maybe we haven’t invented a better, more specific term?

It is clear from the anthropology studies that Mr. Johnson cites that altruism is a geno-cultural trait of advanced *human* intelligence (and as Daniel Dennett points out, human and person are locally co-extensive, or nearly so, see feature quote, 2 *Diplomacy*, p. 1110, *supra*);

can we or should we assume that would be the case among sapient and/or technologically advanced aliens? We have hundreds of examples from nature of apparently altruistic behavior, the most famous of which are the hundreds of reported instances where humpback whales have interfered with orcas' (aka "killer whales") hunting and prevented them from killing members of other marine and mammal species (e.g., see Jason Bittle, "Why Humpback Whales Protect Other Animals From Killer Whales," National Geographic, August 8, 2016, the picture at the top shows a humpback whale apparently protecting a crabeater seal from an orca). There are many videos on YouTube of unlikely interspecies tolerance, friendships or even alloparenting – *mainly by animals under human care* – though there are examples of wild animals interspecies co-parenting, such as the lioness who helped the tigress with cubs.

- ✓ The altruism of Metalaw traces out the backdoor to Immanuel Kant's Categorical Imperatives: If you were to ask which sorts of acts would be desirable as principle of general legislation or universal law, altruistic acts and general fairness would be near the top of the list. Put another way, if in contemplating an altruistic act, one were to, as Kant urges, ask "Would it be desirable for everyone to commit altruistic acts?" It clearly is since acceptance of altruism as a general rule would result in additional acts of altruism to the probable benefit of civilization (or least likely to be detrimental to civilization). See Immanuel Kant feature quote and Universal Legislator, 2 Dreamtime, p. 150, *supra*.

*"Not to be outdone, U.S. Twitter users responded with a similar mix of mindless put-downs. Proof that missing the point is truly universal."*

– Emile Rauhala, The Washington Post, September 28, 2015 <sup>17</sup>

#### Endnotes.

<sup>1</sup> **Commentary:** The preceding quote followed from a discussion of metalaw in Clifford Simak's 1963 short story, "New Folks Home." Metalaw is a term coined in 1956 by attorney Andrew Haley "to refer to his hypothesis regarding the proposed existence of fundamental legal precepts of theoretically universal application to all intelligences, both human and hypothesized intelligent extraterrestrial life" (from Wikipedia article, "Metalaw" retrieved July 14, 2018). The Prime Directive, of course, is a direct reaction against 500 years of European colonialism.

<sup>2</sup> **Citation & Commentary:** "BEFORE YOU THINK ABOUT LEAVING A NASTY COMMENT PLEASE READ THE FOLLOWING. This happened in Yellowstone National Park where it is illegal to get within 25 yards of a fox or a badger, or interfere with them in any way. If I had interfered I would have been arrested, but before that could happen about 50 other photographers would have stopped me because both they and I know as much as we were really sad about the situation, badgers have rights too. They also have to eat, and feed their babies. That's how nature works whether we like it or not." – disclaimer for YouTube video, "A fox and a badger fight in Yellowstone – the whole story," posted by Judy Lehmborg YouTube Channel, February 24, 2015 (all caps in original).

- ✓ This is what the Prime Directive would look like in actual practice, if it were stringently followed, instead of a plot device. Before getting sappy about the Prime Directive, I recommend watching this video.

<sup>3</sup> **Citation:** Babylon 5: **Sheridan speaking to Kosh:** The Narn and the Centauri are fighting! **Kosh:** They are a dying people, you should let them pass. **Sheridan:** Who, the Narn or the Centauri? **Kosh:** Yes.

<sup>4</sup> **Citation:** **Gen. Heydrich:** Yes, he told me a story about a man he'd known all his life. A boyhood friend. This man hated his father, loved his mother fiercely. The mother was devoted to him, but the father used to beat him, demeaned him, disinherited him. Anyway, this friend grew to manhood and he was still in his 30s when the mother died. This mother who had nurtured and protected him. She died. The man stood as they lowered her casket and tried to cry, but no tears came. The man's father lived to a very extended old age. Withered away and died when the son was in his 50s, I think, and at the father's funeral, much to his son's surprise, he could not control his tears. He was wailing, sobbing. He was apparently inconsolable. Lost even. That was the story [Freidrich] Kritzinger

told me. ... The man had been driven his whole life by his father. When the mother died, that was a loss. When the father died, when the hate had lost its object, then the man's life was empty. Over. ... That was Kritzingner's warning.

**Col. Eichmann:** What? That we should not hate the Israelites?

**Gen. Heydrich:** No, that it should not so fill our lives that when they are gone, we have nothing left to live for. So says the story. I will not miss them. – from the movie *Conspiracy* (2001).

- ✓ Conspiracy – where the participants calmly discuss the Final Solution as a bureaucratic, legal, administrative problem – is one of the few movies worth a second watching. It is heavy in formalities and dialogue and is an interesting study of a combination of threats, manipulations, and appeals used by Heydrich to bring about 'agreement' on the Final Solution and interagency cooperation. It also shows Eichmann as more than just a train dispatcher. It must have been the most amazing task for the actors to portray this without a hint of horror, but that is the acting trade. Prior to the movie, I did not realize that the Chelmno camp was operating and Operation Reinhard death camps (Treblinka, Belżec, and Sobibór) were under construction *before* the Wannsee Conference in January 1942 (and the conference participants in the movie were also surprised).
- ✓ There is some objection that gassing was not discussed at the Wannsee Conference because it is not in the transcript of the conference, but it is portrayed in the movie *Conspiracy*. But at the same time, it is widely admitted that Eichmann sanitized and heavily edited the transcript of the conference, so how can we know? How can we be sure that it wasn't edited out or discussed outside the meeting during breaks? Anyway, all portrayals of the Wannsee Conference must be fictional drama and must pick and choose their points.

<sup>5</sup> **Citation:** **Clara:** Since when do you care about the Doctor? **Missy:** Since always. Since the Cloister Wars. Since the night he stole the moon and the President's wife. Since he was a little girl. One of those was a lie. Can you guess which one? **Clara:** He's not your friend. You keep trying to kill him. **Missy:** He keeps trying to kill me. It's sort of our texting. We've been at it for ages. **Clara:** Mmm. Must be love. **Missy:** Oh, don't be disgusting. We're Time Lords, not animals. Try, nano-brain, to rise above the reproductive frenzy of your noisy little food chain, and contemplate friendship. A friendship older than your civilisation, and infinitely more complex. **Clara:** So the Doctor is your bezzy mate and I'm supposed to believe that you've turned good? – Dr. Who, "The Magician's Apprentice" (2015).

- ✓ **Later: Davros:** You have slaughtered billions of my children, as I have slaughtered billions of your race. We have exhausted the conventional means of communication. – Dr. Who, "The Witch's Familiar" (2015).

<sup>6</sup> **Commentary:** Lennier's description of the Minbari population decline problem is strikingly parallel to Loren Eiseley's description in *The Modern Dilemma* of the 14<sup>th</sup> and 15<sup>th</sup> Century worldview of scholasticism in England: That the greatest of humanity lived in the ancient times (e.g., the Biblical prophets, Hellenistic philosophers, Church Fathers and Roman writers) and wrote down all the wisdom that was available to mankind, and each generation since has been less and less, such that the world is in twilight in the 14<sup>th</sup> and 15<sup>th</sup> Centuries (the Fifth Monarchist thought that the English Civil War portended the end of the world in 1666). It is also apparent from Lennier's description that the Minbari do not believe in or practice artificial reproduction that is often described in other science-fiction stories (see *Brave New World*, 5 Taxation & Census, p. 343, *supra*). Would they choose extinction or change?

<sup>7</sup> **Commentary:** One could think of all sorts of outlandish pulp-fiction reasons; for example, the British tanker was carrying a terrorist-made biological agent to be released at a European port. Maybe there was an alien plague; would you go back in time and sink all ships leaving Caffa in 1346 A.D.? And why hasn't the Doctor done that already? Maybe the British government knows the reason for the American action, but cannot disclose it, and thus there is a puzzled, indignant public outcry in England over the hostile American action against their ally. Maybe the British government first said that the tanker exploded for unknown reasons, but the truth got out somehow?

<sup>8</sup> **Commentary:** People who deride the perceived 'moral superiority' of the United States have a shallow view of history and perception. People understood that we had defeated the Nazis, opposed the Soviet Union, had fought the German Imperialists in WWI (though we arrived late), and had fought a Civil War over abolition of slavery. The United States was a huge power comprised of the descendants of immigrants who shook off the European systems. The model of the United States had triumphed, and was equated with moral superiority. Perception is power.

<sup>9</sup> **Commentary:** Charitable promises have limited enforceability at law (i.e. specific performance, *estoppel*) if others relied upon them and were harmed by the reliance.

- ✓ "The promissory estoppel theory upholds the gift if the facts of the case clearly show that the charity changed its position in detrimental reliance upon the promise being honored. If this occurs, the donor is legally estopped to deny enforceability. This is stated in Section 90(1) of the Restatement of Contracts. No matter what state law applied, charities were usually reluctant to sue to enforce defaulted gift promises.

3 Diplomacy – Between Mars & Venus

They didn't want to create a negative litigious image. And most of the time donors honored their gift pledges. But this all changed with the 2008 economic downturn, financial scandals, and investment rip-offs." – from Miami Herald article (original no longer available online), reported by Todd W. Sicity on Appraiser Workshops blog, January 3, 2012.

The murkiness of the subject (and various factual possibilities) makes it a favorite of law school review articles:

- ✓ "In another much smaller group of cases, the courts endeavor to leap the consideration hurdle by finding that the various subscribers to a charitable project make a multi-lateral contract among themselves and that their mutual promises, each running to the charity, are consideration for each other. In *Higert v. Trustees of Indiana Asbury University*, a typical fact situation is presented. The promisors were citizens living in or near the city of Greencastle, Ind. The promisee was the already organized Indiana Asbury University. The amount to be raised was \$15,000 to be used as a building fund, and each subscriber, including the defendant, promised to give 'one per cent on the amount of property held by us, severally, in said city and township, as shown by the tax duplicate of said county. ...' The court, in finding for the plaintiff promisee, cited with approval the reasoning found in the *California case of Christian College v. Hendley*: 'If a number of persons subscribe to a paper in which they promise to contribute money for the accomplishment of an object of interest to all, as the erection of a building for a college, and which object cannot be accomplished, save by their common performance, their mutual promises constitute mutual obligations, and are a sufficient consideration to support the promise of each.'" – T.C. Billig, "Problem of Consideration In Charitable Subscriptions," Cornell Law Review, Volume 12, Issue 4, June 1927.

The truth is that most charitable giving now is not truly charitable (as in receiving nothing material in return); the pattern has been set in televised and other charitable drives of promoting the idea of receiving something in return (e.g., gift packs, autographed items, chance to win, etc.) for the 'donation' and thus are really sales at a greatly inflated price. Those who provide the materials and services to be given away are somewhat more charitable, but often, this cost can be used to reduce tax liability to the government and as advertising or promotion, so they are receiving a benefit as well. Most common charity is thus, sadly, not really charity in the modern age.

<sup>10</sup> Commentary: In July 2019, Pittsburgh Pirates pitcher Trevor Williams and his wife adopted a newborn baby girl, adding one to a family that already included a toddler son. During the Pirates broadcast on July 14, 2019, Trevor Williams told the reporter that while his toddler son was excited to have a new baby sister, he was mad because she can't talk to him yet. Trevor commented humorously, "Let's wait a couple of years and check back on that!"

<sup>11</sup> Commentary & Citation: According to Ambassador G'Kar in the Babylon 5 television series, every race in the universe has something equivalent to Swedish Meatballs. "I suspect it is one of those great universal mysteries which will never be explained, or that would drive you mad if you knew the truth." – G'Kar, Babylon 5, "Walkabout" (1996). I have no idea what that would be for the Pakmarah, and I don't think anyone would want to ask.

<sup>12</sup> Commentary: I personally admire and hold as the highest ideal, collaborative intuitive couples, such as Lewis Padgett which was the pseudonym used by the married writing team of C.L. Moore and Henry Kuttner or Nobel Prize Winners Pierre and Marie Curie. I have never found one with an intuitive grasp.

<sup>13</sup> Commentary: I have never had any indication that a cat can force itself to purr, thus, when a cat purrs, it is for authentic reasons, for whatever reasons cats purr. It would never occur to them, unlike human friends, strangers, and significant others, to be inauthentic in their relations. We love cats and dogs for this reason, their simplicity.

<sup>14</sup> Commentary & Citation: The beginning of the official video for the song, made in the 70s, is a real artifact. Not only does the video quality remind you of how television was in the 70s, but it features a conversation between two parents and their adult daughter from some daytime soap that is a true artifact of the time. My first reaction in watching it was, Wow, how does this guy get to tell his daughter that it's time for her to find a boyfriend now and then go on to suggest who she can date? It's not his choice. It's a display of the traditional patriarchal dominance.

- ✓ The first of the original 10cc videos I saw years ago was for "I'm Not in Love," featuring scenes from 1970s soaps as introductions and video along with the music. That video seems to have been removed from YouTube now (probably some stupid dispute) and replaced with Vevo videos, but a number of other late 1970s 10cc videos remain that begin with and include 1970s daytime soaps.

<sup>15</sup> Commentary: Oh this is beautiful – to Babylon 5 fans who know the whole structure of the story: Delenn was symbolically married to Sinclair in the first season, and literally married Sheridan in the fourth season. If I kept going, I'd have to tell the whole story arc... ☺

<sup>16</sup> Citation: cf. Sixth Mass Extinction Event excerpt, Taxation & Census, *supra*.

<sup>17</sup> Citation: "A gentleman will not insult me, and no man not a gentleman can insult me." – Frederick Douglass.

*“In the treaty councils the commissioners have claimed that our country had been sold to the Government. Suppose a white man should come to me and say, ‘Joseph, I like your horses, and I want to buy them.’ I say to him, ‘No, my horses suit me, I will not sell them.’ Then he goes to my neighbor, and says to him: ‘Joseph has some good horses. I want to buy them, but he refuses to sell.’ My neighbor answers, ‘Pay me the money, and I will sell you Joseph’s horses.’ The white man returns to me and says, ‘Joseph, I have bought your horses, and you must let me have them.’ If we sold our lands to the Government, this is the way they were bought.” – Chief Joseph, 1876*

**Mathó Thípila:** Minor Races are those races in the Galactic Space, which positions may encounter from time to time, who have not attained Stardrive, that is, have not passed fully into the 1<sup>st</sup> Era of interstellar technology. Most will actually be non-technological or very primitive even by our current standards (otherwise, they may have been ‘noticed’ sooner due to the electromagnetic energy indiscriminately emitted into space by early technological cultures). This is not to suggest that given sufficient time, a Minor Race would not have discovered Stardrive technology on their own; rather, it is just bad cosmic luck that other alien species did so first and found them before they learned to stand and run on their own (in the same way that Europeans invaded everyone else’s timeline, see *Invading Timelines*, 4 Order, p. 576, *supra*).

When encountering a Minor Race,<sup>1</sup> a position might decide to do any of the following:

- ✓ They might conquer/enslave the Minor Race.
  - ✓ They might exterminate the Minor Race.
  - ✓ They might contact the Minor Race.
  - ✓ They might ignore the Minor Race.
  - ✓ They might protect the Minor Race.
  - ✓ They might attempt to surreptitiously ‘help’ the Minor Race.
  - ✓ They might openly ‘help’ the Minor Race.<sup>2</sup>
  - ✓ They might Land a colony on the Homeworld of the Minor Race.
    - The breakthrough intellectual moment of the Calvin & Hobbes comic occurred when Calvin, playing is favorite character, Spaceman Spiff, who crash landed on an alien planet, suddenly realized that indigenous natives were not the aliens on their planet, he and Hobbes were!
- **Roanoke Island Colony:** The colony Landing on the Homeworld of a Minor Race may or may not be friendly. There are a range of options here, well known from the history of our own world, but in all cases, participants should consider the issue of xeno-microbes and disturbance of the biosphere (see *Bad Exchanges 4 Expansion*, p. 924, *supra*). Also, it is possible to Land a colony at the Homeworld of a Minor Race without making First Contact with them; for example, suppose chlorine-breathing aliens had landed a colony on the Moon in 3,500 BCE? Such a colony might be a Specialized Colony (see *4 Expansion*, p. 925, *supra*) to observe the primitives as our planet would be of little interest to chlorine breathers otherwise. Again, because GGDM does not look at planetary details, there is room for the partici-

pants to have any scenario, for example, suppose the colony is Landed on an Optimal Habitability Class moon (like Pandora in Avatar) and the Minor Race is discovered in the upper atmosphere of the gas giant the moon orbits or on another moon, e.g., Europa Report (2013).

- ✓ The uncontacted Sentinelese people of the Andaman Islands of India have been called the “last Stone Age tribe in the world” (Dan McDougall, *The Observer*, February 2006). Observers have seen no evidence of agriculture or fire making activities, though they do apparently use fire. They use bows, arrows, spears for hunting, fishing and to ward off outside contact, they have bamboo and wooden containers, woven baskets for carrying, and fishing nets and outrigger type canoes suitable for coastal fishing only. Their language is not mutually intelligible with any of the surrounding tribal languages. Though they have no metallurgy, they have taken and used, and sometimes adapted, metal objects obtained from the outside world. In 1996, the Indian government discontinued all attempts to contact the Sentinelese, after several hostile situations, including the 1974 attempt by a National Geographic film crew (arrow wound), and discourages any approach to their island. They are occasionally monitored from the air, for example, in census attempts. Gleaned from Wikipedia article, “Sentinelese,” May 31, 2018.
- *Parens patriae*: All Minor Races are controlled by the Concierge. Minor Races are mostly in the game for story purposes; it is irrelevant to the Concierge what positions do when they discover Minor Races. It is not irrelevant to the Minor Races, however, and the Concierge will react accordingly, from the viewpoint of the Minor Races, to whatever the positions decide to do. The story arc or story of the game and positions is not a consideration from the point of view of the Minor Race.

It is not impossible within the GGDM rules for a position to have First Contact and share a Diplomatic Space and form Treaties with a Minor Race. It is, however a lopsided relationship, and the Concierge will need to represent the interests of the Minor Race, without engaging in excessive private diplomatic communications with the position players, in addition to still being the Concierge. There is a careful balance in this, because other positions may feel that someone in the game is getting free Diplomatic Spaces and goodies, so there must be some level of responsibility and cost to the relationship. The Minor Race may also act, through the Concierge, to break Treaties and damage the Diplomatic Space shared with the Major Race. However, there is also great promise in such relationships in regards to the story of the game (e.g., uplift), and mature interstellar culture.

- ✓ “Hey! How Halloweeny can you get!” – Bugs Bunny after Marvin the Martian disintegrates the ground around his rabbit hole in “The Hasty Hare” (1952).
- ✓ At work one day in 2006 or 2007, I was tasked with calling a doctor who had been sued for malpractice to set up a time for his interview with the attorney assigned by the insurer to defend him. It was a First Contact situation since we had not represented him previously. He was livid that he had been sued (it was his first time) by his patient and was waiting for someone to pounce on; he bent my ear for 45 minutes or more venting and fuming before I could politely extract myself from the call. It didn’t matter what he told me, I was not his attorney, he’d have to repeat it again.

*“Why does any advanced civilization seek to destroy a less-advanced one? Because the land is strategically valuable, because there are resources that can be cultivated and exploited, but most of all ... simply because they can. You have experienced much the same on your own world. There are humans for whom the words ‘never again’ carry special meaning. As they do for us.”*

– G’Kar, Babylon 5, “And Now for a Word” (1995) <sup>3</sup>

**Why Not Again:** Contact issues with Minor Races might be best regarded as Why Not questions (see initial discussion, 2 Disruption, p. 269, *supra*). The history is well known, *religion did not provide any deterrence* to Why Not destroy, enslave, and plunder indigenous natives.

- ✓ “In their madness, they obliterated a civilization. In the name of piety, in a mockery of their religion, the Spaniards utterly destroyed a society with an art, astronomy, and architecture the equal of anything in Europe. We revile the Conquistadors for their cruelty and shortsightedness, for choosing death. We admire La Pérouse and the Tlingit for their courage and wisdom, for choosing life.” – Carl Sagan, *Cosmos*, Episode 13.

In fact, in the name of evangelism, Western religions encouraged it. The regrets of later generations mean nothing until the next Why Not. If there are technologically advanced, starfaring alien species out there and they are aware of us, and the least bit curious, it is likely that their answer to the Why Not question is all that prevents First Contact: Their answer to the Why Not question is humanity’s current adolescent understanding of the Existential Void and our historical answers to the Why Not question on Earth. That we have not destroyed ourselves yet is but mediocracy (i.e. simply avoiding a foreseeable terminal result), not an achievement.

- ✓ If I were to surreptitiously help a promising primitive species to eventual technology, I would give them the mathematical concept of zero. Put simply, without zero, we don’t have computers. And a whole lot of our advanced math. And even our cyclic counting system (e.g., 1 with a zero added is 10, which comes after 9, and the next number is 11, *et seq.*) that you learned in kindergarten. The question of when and how zero developed has fascinated scholars for ages and the issue is not settled; recently it has emerged that a predecessor to zero<sup>4</sup> was in use between 224 and 383 A.D. (George Dvorsky, “Origin of Zero Symbol is Centuries Older than Previously Thought,” Gizmodo, September 14, 2017, discussing the Bakhshali manuscript).
- **Gua Effect:** “We were like you once. There’s a time for peace and inner-growth, but we became complacent; and when the invasion force landed, they took us down. One rebel led us to freedom. That’s when we took the name Gua; it means ‘power to overcome.’ Over the centuries, science and industry achieved perfect focus. We created a military machine to ensure our freedom, permanently... We’re here because we’ll never be victims again.” – Joshua Bridges, *First Wave*, “Joshua” (1998).
- ✓ This backstory for the Gua in the *First Wave* series (1998-2001) suggests a domino effect of invasions (nice for *epic story* purposes) similar to the chain reactions caused by the Huns when they invaded Europe or the southward spread of Chinese power

along the coast in ancient times that inspired successive migrations (the name Vietnam referred to the lands of non-Chinese people to the south since the 3<sup>rd</sup> Century B.C., it is thus a Chinese name).

- Never Again: There is a reason why France and Israel (e.g., the Samson Option) have nuclear weapons. It is to insure the *never again*. The history of Jewish treatment in Europe is well known; France was the victim of German aggression three times in about 70 years (1870, 1914, and 1940), losing twice, and being bled dry the other time when it successfully defended. The results of each attack on France were worse than the previous, and arguments were made that French losses in WWI contributed to manpower shortages in WWII. Israel has no expectation that they would be treated differently by Muslim states than they were in Europe, and Israel has the peculiar problem of only being 30 miles wide at its narrowest point, meaning it could be cut in half by an armored column in a day of fighting.
  - ✓ Thus the dichotomy: Israel is both one of the least likely countries in the world to use nuclear weapons (which they won't admit they have) but is also the one place in the world where it was most likely in the late 20<sup>th</sup> Century that the circumstance prompting the use of nuclear weapons would arise. France, of course, was protected by NATO and by a divided Germany.

It is taken as a general precept that 'responsible adult' nuclear club members would only use strategic nuclear weapons against an *existential threat* (the issue is slightly less clear with 'tactical nuclear weapons,' but there is a clearly-mapped, slippery-slope risk there) as a last option or in retaliation for a nuclear attack.

- ✓ For example, nuclear-armed Britain did not threaten Argentina with nuclear destruction over the Falkland Islands War in the 1980s, it would not have been appropriate.

Nuclear weapons are better as a background threat than in actual use. Further, it follows that it is unlikely that nuclear weapons would be used against a state that does not also have nuclear weapons; no state without nuclear deterrent of their own would likely push a nuclear-armed state to the position where they would need to use nuclear weapons. And that is the thread by which the world hangs.

- ✓ The geopolitical problem of certain countries who are trying to (and probably have) developed nuclear weapons is twofold. The first is that we don't think of those countries as being 'responsible adults' in the current world and thus not responsible enough to have nuclear weapons (in addition to the possibility that terrorist might obtain a functional nuclear weapon) and second, that once they have nuclear weapons, those countries are no longer protected by a moral obligation to not use nuclear weapons on conventionally-armed countries. That is the problem.
  - Sometime a few months after the 9/11 attacks, I saw a person wearing a t-shirt that said something like "Mecca 2002" over the picture of a city being nuked as a U.S. bomber flies away. The message of the shirt is obvious, not intended to be satirical. Quite aside from the fact that Saudi Arabia does not have nuclear weapons and is not an existential threat to anyone, there are countries out there ruled and radical groups led by people who would wear that t-shirt proudly. This includes a couple of countries that actually have nuclear weapons, unfortunately. That is the problem.

*“In the sky over our planet, other people blindly fought out a brutal war – a war between people we didn’t even know.”*

– Müil Princess, from *Valarian and The City of a Thousand Worlds* (2017)

**War of the Worlds:** This short battle sequence brings together many elements discussed in GGDM thus far; in a confusing cinematic minute, the expected tragedy occurs, the human fleet cripples the main alien warship, using a doomsday missile, which then crashes into Planet Müil below, explodes, destroying the planet and the primitive Müil sapient species.

Generally, a Minor Race has little or no chance against an interstellar civilization in a conflict, regardless of what Hollywood shows in the movies. It comes down to a contest not only of technology, but also of resources and time. Even a Minor Race that has colonized system space, is at a major disadvantage against starships and an interstellar civilization. If the Minor Race wins the initial defensive battles (i.e. Earth in the typical Hollywood alien invasion movie), and maintains their independence for awhile, the attacking fleet can simply retreat and leave the system.<sup>5</sup> The Minor Race, lacking Stardrive technology, cannot follow and take the war to their enemies, so they can only sit and wait while the interstellar power builds an even bigger fleet and comes back again. A Minor Race, confined to a system, cannot match the industry, technology and resources of an interstellar power who has time and the resources of the galaxy.<sup>6</sup>

- ✓ For example, the metallic asteroid called 16 Psyche – which may be the remnant core of a destroyed planet – has metals – mainly iron, nickel – estimated to be worth \$10,000 quadrillion. It is predicted that the influx of metals from this asteroid alone would destroy the world metal commodities market and trigger a collapse of the world economy (possibly similar to the influx of gold from the New World into Spain).<sup>7</sup> Consider those nations whose significant income is from mining metal ores and whose population are already living in poverty. This is but one asteroid in our own solar system; multiply by millions or billions of times those resources available to an interstellar culture. This suggests that interstellar (or even system) colonization would cause an epochal change in Earth economy. Such changes have already occurred in the past, for example, the change from barter to metal coins (first level abstraction) and later from metal coins to paper currency (second level abstraction) to whatever we have now. The current world economy probably could not operate on a metallic-coin-based currency.
  - A somewhat similar situation to a Minor Race occurs when a Major Race position loses all or most of its warships, and can then only sit and wait on the defense while enemy fleets concentrate against and capture isolated colonies one by one. This is a signpost on the road to extinction.<sup>8</sup>

The only means for a Minor Race to survive this conflict scenario would be if another Major Race intervenes on their behalf, or if the attacking power simply loses will or interest and/or is disorganized, or has an attack of moral conscience, e.g.:<sup>9</sup>

- ✓ This is more or less true of most contests where there is a great disparity in resources: “I think that the North fought that war with one hand behind its back. At the same time the war was going on, the Homestead Act was being passed, all these marvelous

inventions were going on, in the spring of '64 the Harvard-Yale boat races were going on and not a man in either crew ever volunteered for the army or the navy; they really didn't need them. I think that if it had been more Southern successes, and a lot more, the North simply would have brought that other army out from behind its back. I don't think the South ever had a chance to win that war." – Shelby Foote, *The Civil War: A Film by Ken Burns* (1990), Episode 7.

- The North feared European intervention, but it never happened, any chance was dashed by the Emancipation Proclamation, which would have placed European intervention as *in favor of* chattel slavery.
- ✓ For example: In *Avatar* (2009) the natives won one. Good for them. But there is nothing, other than a lack of political will that would prevent the Earthers from coming back again, and again, with more military power, regular military forces, and colonist with machines, until the native populations are decimated. The situation in *Avatar* is directly analogous (as was intended) to the situation faced by the Native Americans, Zulus, Afghans, etc.:
  - The Native Americans could not prevent the Europeans from landing anywhere and coming back again and again, even if they defeated the initial landings (e.g., the Calusa drove off Ponce de Leon in 1513).
    - This goes to the core of the Major and Minor Races discussion, 5 Beginnings, pp. 51-52, *supra*.
  - The Native Americans had no ability to attack the Europeans in Europe and later, to even attack the eastern coastal cities after approximately 1650 C.E.
    - See population density, next page, *ut infra*.
  - King Cetshewayo of the Zulus seems to have understood that the great Zulu victory over the British at Isandlwana in 1879 had so humiliated the British that a negotiated resolution was impossible; the British would return with a larger army. Some victories are counterproductive.
  - The British burned Kabul in 1842 in revenge for the Massacre of Elphinstone's Army by Afghan tribesmen.
  - L. Ron Hubbard showed in *Battlefield Earth* (1982) just how easily modern Earth was conquered by a single drone from an advanced civilization.

---

*"It's a hell of a thing, killing a man. You take away everything he's got and everything he's ever gonna have." – Clint Eastwood, Unforgiven (1992)*

---

**This Side of Dead**: The emotional punch of the preceding line is the loss of potentials. Although this line could be arguably true of the death of any living thing ... including aliens, the sentimental and moral lamentation of the loss of potentials only applies generally to persons, that is, humans.

Unless an animal is the featured character in a story, generally an adult animal is viewed as having reached its potential, especially if it has reproduced successfully, and thus the death of a "non-person" animal is not viewed as a loss of potentials (not even in our favorite pets do we

view death the same way as for humans). On this level then, persons and sapience are defined mainly in terms of potential of the living matter in question.

*“I know that my race must change. We cannot hold our own with the white men as we are. We only ask an even chance to live as other men live. We ask to be recognized as men. We ask that the same law shall work alike on all men.”*

– Chief Joseph, Lincoln Hall Speech, January 14, 1879

**Cossacks:** The people who went to Lincoln Hall that day to hear Chief Joseph speak already knew the story. They were probably not surprised to receive a post-mortem tongue lashing from the Native American Chief. I have thought that is exactly why many of them went; it was understood by that time that many very wrong things had been done. What surprised them was that it was delivered with calm measure and eloquence, and with dignity and gravitas befitting any orator known from classic antiquity. And that is why his words still cut today.

- ✓ The Lincoln Hall speech is available online from places such as [http://psi.mheducation.com/current/media/prints/pr\\_105.html](http://psi.mheducation.com/current/media/prints/pr_105.html) (Primary Source Investigator, McGraw Hill, found November 2018).

Unknown to most of the West, the situation of the Cossacks and Tartars has marked similarities to that of the Native Americans.<sup>10</sup> Back in the United States, in the dawn of the 20<sup>th</sup> Century, a wave of guilt and remorse passed over the country as, following the close of the Western Frontier in 1890, the population began to evaluate the enormity of what had transpired in the drive West, began to comprehend the massive crimes that had been committed against humanity. This remorse reached its peak in the late 1960s and carried into my youth in the 70s; it probably merged with or was extended by the collective world guilt over the Holocaust and mounting Cold War fears. Yet, at the same moment, we are the result of what was done, and the bell cannot be unring; it would be nearly hypocritical for us to completely repudiate the results. In the same way that it would be hypocritical for Amazon to repudiate the invention of the internet.<sup>11</sup>

**Dances with Wolves:** *You always ask about the white people. You always want to know how many more are coming. There will be a lot, my friend. More than can be counted.*

**Kicking Bird:** *How many?*

**Dances with Wolves:** *Like the stars [Speaking Lakota] It makes me afraid for all the Sioux.*

– from *Dances With Wolves* (1990)

**Population Density:** Of the dozens of factors – from small pox<sup>12</sup> to technology (in fact, the Native bow was initially superior to the European musket) – that have been offered as reasons why the European colonists, immigrants and descendants overcame the Native Americans over four centuries in the New World, one that is most overlooked is population density.

Simply put, even if technologies were equal and disease didn't play a large part, the European-style population density – cities and towns – with the attendant requirements in resource production, reproduction, and social/governmental organization, would have been a great challenge for the Native Americans to hold back.<sup>13</sup>

When the Europeans arrived in the New World, they saw vast uncleared forests and unimproved agricultural land (see Loren Eiseley's "Adamic Eden," 4 Writs, p. 453, *supra*). Coming from Europe which was densely populated (relative to North America) and mostly cleared, improved farmland and cities, the scattered Native American tribes and the land they occupied appeared 'uncivilized' (especially following the collapse of Mississippian civilization, about which they did not know or care). The feel of *population density* was thus a deciding factor in the initial European impressions, cognition, and relationship to the native people of North America.<sup>14</sup>

- ✓ "For the natives, they are neere all dead of Small poxe, so as the Lord hath cleared our title to what we possess." – John Winthrop, Quoted in Alfred W. Crosby, Ecological Imperialism: The Biological Expansion of Europe, 900-1900 (1986), p. 208.
  - If you think you read this before, you did, in 4 Expansion, p. 924, *supra*. It is worth repeating, it speaks what Europeans thought at the time.
- ✓ A young Native American male of a Pueblo, Wichita or Pawnee tribe – recognizing the existential threat of the Spanish – attempted in 1541 to lead the Spaniard Coronado and his army away from his people into the Great Plains in search of the Seven Cities of Gold. He probably hoped that the Spaniards would perish on the Great Plains, being caught in the open by winter. The Spaniards killed him after finding Quivira with no golden city. The expedition returned to Mexico in 1542, but Coronado was bankrupted, lost the governorship in 1544, and died 1554.
- Funnel Effect: During the Great Migrations, Western Europe acted like a *funnel* forcing the westward migrating humanity into a smaller and smaller area, with more coming behind them, like cattle into a chute. This funnel effect also caused the rapid accretion of cultures in Western Europe and increased population density, much as the southward migrations of the Danube peoples created the classical Mediterranean cultures of antiquity. Like silt accumulation in the delta of a big river. Europeans became accustomed to greater population density, even though they were regularly decimated by wars, famine, and plague.

The global position at the End of the World that was a strength for the Roman Empire turned into a liability when impersonal waves of migrating humanity reached the End of the World and crashed into a weakened Rome. But as much as all that, the Roman Empire, of course, did themselves in because they refused and/or were unable to change. A better government and social structure may have survived, technology would have helped. But the surviving Roman Empire would not have been "Roman" any longer.

- ✓ The importance of the discovery of the North American continent is apparent: While the Europeans knew of Africa and had sailed well south along its coasts, the discovery of America for the first time meant that Europe was no longer the End of the World. See *Circumambulation*, 1 Expansion, p. 875, *supra*.

*“The great achievement of polytheism is the articulation of a common semantic universe. ... The meaning of a deity is his or her specific character as it unfolded in myths, hymns, rites, and so on. This character makes a deity comparable to other deities with similar traits. The similarity of gods makes their names mutually translatable. ... The practice of translating the names of the gods created a concept of similarity and produced the idea or conviction that the gods are international.”*

– Jan Assman, Moses the Egyptian: The Memory of Egypt in Western Monotheism (1997), p. 45

**You know he doesn’t like that name:** *Interpretatio graeca* is a comparative discourse in which the ancient Greeks sought to understand mythos of other religions within the concepts of Greek mythologies, *Interpretatio romana* is the Roman continuation that led to the merger (wholesale looting) of Greek polytheistic religion into the existing Roman pantheon, along with reinterpretation of Gallic and other religions in Roman terms. There was a process through the Middle East, around the Mediterranean Sea and through Western Europe, of comparing gods of different religions and identifying similar or compatible spheres of influence, myths, heroes, so that gods of one religion were identified with similar gods of another pantheon, translating all religions to an international, intercultural commonality. If alien races have religions, this is possibly one of the first processes by which views are shared and commonality formed (or not) in interstellar civilization *beyond* math and science.

- ✓ “Apart from the small and ethnically circumscribed exception of the Jews, the ancient world had never known an exclusivist faith...” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” *Aeon*, January 30, 2017.
- ✓ “The Jews had kept themselves separate for as long as anyone could remember, but Greeks and Romans were used to that. Jewish communities were concentrated, nowhere large, and they were exempt from mandatory participation in a public cult. Around the Mediterranean, people could look at Jews with a sort of tolerant, if uncomprehending, disdain.” *Id.*

The Jews, those fanatic monotheistic iconoclasts of the ancient world, sitting on strategic land routes between Syria and Egypt at the eastern end of the Mediterranean, refused to identify with any other religion and refused to have Jehovah identified with any other religion’s supreme ruler (e.g., Jupiter).

- ✓ This is possibly the reason why the Romans removed religious artifacts from the Second Temple and destroyed it after the First Jewish-Roman War (66-70 A.D.). It is not clear that the Romans initially intended to destroy the Jewish ethnicity and religion (as opposed to the later Nazis), but over time, that is what developed (e.g., Jerusalem was renamed as a Roman City, Jewish practice was restricted after 70 A.D. and they paid a tax for being Jewish, Jews were barred from Jerusalem after 135 A.D.). The remaining Jewish population was sold into slavery and/or became Hellenized.

Further, in the 2<sup>nd</sup> Century BCE, there was a strife between traditional Jewish factions (Maccabees) attempting to expel Hellenistic Judaism from Israel. Hellenistic Judaism was the result of syncretic attempts by apologists to identify *Hellenistic philosophy* (but not Greek pantheons)

with Judaism, so that reason and wisdom came to man from Jehovah. The Romans, of course, brought additional waves of Hellenization, preferred Hellenized Jews, and destroyed the Hasmonean ruling dynasty (descendants of the Maccabees revolt) through their proxy, Herod.

- ✓ Herod the Great (Herod I) may have been of Maccabee descent, as were some later Herodian rulers, however, there is significant record of his perceived disrespect toward the Jewish religion and his fondness for Roman baths and elements of Romanized Hellenistic culture. He certainly had full Roman support, the *Roman Senate* elected him king of Judea in 40 B.C. His brother, Phasaël was Governor of Jerusalem, his son married Herod's daughter (his first cousin).

Christianity, a Jewish cult that became Hellenized – it's politics, they were rejected by the Jewish traditionalists – has properties traceable to non-Jewish religions: A mortal woman giving birth to the son of a god (Virgin Mary, Io from Greek mythology), the man claimed a right to rule by divine lineage (as did Julius Caesar and others, though the same existed in other places), his Earthly acts were godlike and he was unconquered (image of Caesar that led to his assassination), he was a top priest or above the priests of the day (Caesar had been *flamen Dialis* and later *pontifex maximus*, note that the Pope is called the pontiff), he was considered divine (Roman *divus*), died prematurely by the hands of his enemies (the assassination of Julius Caesar), and was deified and obtained a cult after his death (as Julius Caesar's cult to *divus Julius*), and someone later was appointed high priest of the new cult (Marcus Antonius became *flamen of the divus Julius*, Paul became the leader of the new Christian cult), and that person died shortly as well (Marcus Antonius committed suicide, Paul and Peter were executed in Rome).

- ✓ The record is not encouraging: **Paul** was beheaded in Rome, **Peter** was crucified inverted in Rome, **Andrew** was crucified in Greece, **Thomas** was killed by soldiers in Syria, **Philip** was executed in Asia Minor by a jealous Proconsul, **Bartholomew** was martyred on a missionary expedition, **James** was stoned and clubbed to death, and **Simon the Zealot** (the Zealots were the fourth sect of Judaism, active during the Second Temple period, and instrumental in the First Jewish-Roman War, they persecuted Christians) was executed in Persia, **Matthais** was burned in Syria, and only **John** lived to old age, in exile on the Island of Patmos. Information on the fates of the Twelve Apostles taken from Ken Curtis, Ph.D., "Whatever Happened to the Twelve Apostles?" Christianity.com, originally published April 28, 2010.
  - According to Wikipedia articles, **Jude the Apostle** (aka Thaddius) was killed with Simon the Zealot in Beirut in 65 A.D. (which I do not believe was part of Persia in 65 A.D., *ut supra*, thus there are contradictions in the various stories) and **Judas Iscariot** committed suicide. And that makes twelve bad endings, eleven of them violent – noting that the various lists can't even agree on identities of the Twelve (I certainly do not claim to be an expert) and Matthais may have joined after Judas' suicide.

---

*"The Hero with a Thousand Faces is, after all, the story of ourselves, or anyway, the story of our lives that we would write if we had our fingers on the Keyboard in the Sky, which is why our professional storytellers keep telling it to us again and again throughout the millennia, and why we are always willing to live it vicariously one more time."*

– Norman Spinrad, Science Fiction in the Real World (1990) (emphasis in original)

---

**Keyboard in the Sky:** The modern version (revival) of this process began with Joseph Campbell's Hero with a Thousand Faces (1949), which had an influence on the Star Wars films of the 1970s. My college orientation featured mainly a Joseph Campbell analysis of Star Wars.

- ✓ “Campbell explores the theory that mythological narratives frequently share a fundamental structure. The similarities of these myths brought Campbell to write his book in which he details the structure of the monomyth. He calls the motif of the archetypal narrative, ‘the hero’s journey.’ In a well-known quote from the introduction to The Hero with a Thousand Faces, Campbell summarizes the monomyth: ‘A hero ventures forth from the world of common day into a region of supernatural wonder: fabulous forces are there encountered and a decisive victory is won: the hero comes back from this mysterious adventure with the power to bestow boons on his fellow man.’” – from Wikipedia article, “Hero with a Thousand Faces,” January 30, 2019.

In GGDM, participants do have their fingers on the Keyboard in the Sky ... but it’s not about you. Really. What will you type into reality? Are you a monkey working on Shakespeare?

- ✓ “And if you never saw an angel cry, words cannot describe to you the show that Boshel put on then. They are still at it tonight, typing away at random, for that last sad near-victory was less than a million-billion cycles ago. And only a moment ago – half way back into the present cycle – one of the monkeys put together no less than nine Shakespearean words in a row. There is still hope. And the bird has now worn the rock down to about half its bulk.” – R. A. Lafferty, “Been a Long, Long Time,” (1969).<sup>15</sup>

---

*“One remarkable fact is evident from study of these works, as well as from specific statements in other parts of the Old Testament: that Israelite Wisdom was similar to that of neighboring peoples like the Edomites, and had antecedents and counterparts in the much older cultures of Phoenicia, Egypt, and Mesopotamia. It was in fact part of an international, intercultural, and interreligious school of thought whose beginnings can be traced to early times in Sumer and Egypt, and which was to make its impress eventually on the New Testament and the Talmud.*

*... In the neighboring cultures, and also in Israel, the Wisdom literature was of two main types that apparently represented divergent tendencies among the sages. The first is represented in the Bible by the Book of Proverbs (except for 8:22-31 and 30:1-4), the second by Job and Ecclesiastes (Kohelet). The spirit of the former is conservative, practical, didactic, optimistic, and worldly wise. The latter type is critical, even radical, in its attitude to conventional beliefs; it is speculative, individualistic, and (broadly speaking) pessimistic. The former expresses itself characteristically in brief rhythmic adages and maxims suited to instruction, as well as in longer admonitions; the latter, chiefly in soliloquy and dialogue.”*

– Rev. R.B.Y. Scott, excerpts from Proverbs and Ecclesiastes (1965), published on myjewishlearning.com, captured July 30, 2018

---

#### Endnotes.

<sup>1</sup> Commentary: If we find in exploring the universe that humanoid (or vaguely Earth-like) life forms exist across the galaxy in discernable repeating patterns, it is likely that the universe was procedurally generated. Cosmic MMOG?

<sup>2</sup> Citation: “It wasn’t so bad really, being conquered by the aliens. I mean, they were pretty decent about the whole thing when you stop to think about it. Like when they were going to blow up Venus to demonstrate their power. People protested and said how much Venus means to us and everything and they listened... they really listened, they were willing to compromise. So they blew up Mars instead, which was just a dead hunk of rock anyway. And some people bitched about that, too. Some people are never satisfied.... I don’t know if they even fired a shot, the aliens I mean. Seems like we did all the blowing stuff up. They made us get rid of all our nuclear weapons first thing when we signed the peace treaty.... but everything else stayed pretty much the same. The governments were still the same, the economic system... there was still crap on television. The aliens had the last word on everything but they didn’t really mess in our personal business much, not enough to do any good. We still had crime and poverty and all that, just like the old days.” – Jan Strnad (story) and Neal McPheeters (art), “Duet,” *Epic Illustrated*, Vol. 1, No. 27, December 1984.

<sup>3</sup> Citation & Commentary: “‘Possession’ is a unifying theme in Tolkien’s imagined world. The fallen Melkor wanted to have God’s power of creation. The pathetic Gollum was twisted by his possessive love of his ‘Precious.’ No one epitomized this quality more than Smaug. The hobbit’s dwarf companion Thorin could not hide his contempt: ‘Dragons ... guard their plunder ... and never enjoy a brass ring of it. Indeed, they hardly know a good bit of work from a bad, though they usually have a good notion of the current market value; and they can’t make a thing for themselves....’” – Chris Armstrong and Steven Gertz, “J.R.R. Tolkien: Did You Know?” *Christian History Magazine*, Issue #78, 2003 (quote from J.R.R. Tolkien, *The Hobbit* (1937)).

- ✓ Though Smaug’s attack was characterized as ‘punishment’ for the Dwarves greed (possibly caused by the corruption introduced by the Dwarven rings) ... in the end, it appears that he took it (i.e. possessed it) *because he could*, morality tales aside. He did not, for example, attack Lothlorien, Rivendell, the Shire, the Gray Havens, Minas Tirith, or challenge Balrog for Moria. And the dwarves were lessened – impoverished and homeless – to the exact same extent that Smaug was enriched – having taken their mountain kingdom and made a bed on all of their wealth – see Zero Sum discussion, 6 Diplomacy, p. 1171, *infra*.

<sup>4</sup> Commentary: Zero as a place holder in counting systems seems to have proceeded math operations, possibly as an accounting function.

<sup>5</sup> Commentary: History is full of short-lived states following military victory; for example, the Jews in Judea did eventually accept a Messiah, a leader named Simon bar Kokhba (né Bar Kosiba) and a revolt erupted in 132 A.D. (the Bar Kokhba revolt or Third Jewish-Roman War). Simon took the title of Nasi Israel (Prince of Israel), coinage was minted, and Jerusalem and parts of Judea were independent for over two years. But the Roman armies closed in slowly pushing the rebels back; engaging in total war, the Romans devastated Judea, killing, enslaving or displacing most of the Jewish population, destroying hundreds of towns and villages. And then there was the Islamic State....

<sup>6</sup> Commentary & Citation: Science fiction occasionally attempts to demonstrate this effect, e.g., in the space-opera *Race for the Galaxy* card game (2008), the Alien Data Repository is worth 3x the entire Old Earth (which is a goods-consumption black hole), and the galactic Rebel Underground is twice as valuable as the old Earth.

<sup>7</sup> Citation: Shivali Best, “Nasa plans to explore a \$10,000 quadrillion asteroid that could cause the world’s economy to Collapse,” *Daily Mail*, January 17, 2017; Sean Rossman, “NASA planning mission to an asteroid worth \$10,000 Quadrillion,” *USA Today*, January 18, 2017.

<sup>8</sup> Commentary & Citation: e.g., the alien revolutionaries at the end of Mike Resnick’s *Birthright: The Book of Man* (1982), having learned total war from the former human Galactic Empire, could not tolerate the existence of even a small isolated human colony. The remaining human population of a few families explosively destroyed their planet to avoid alien invasion (similar to the ending of *Beneath the Planet of the Apes* (1970)).

<sup>9</sup> Citation: This was the subject of a couple of *Stargate SG-1* episodes about mining on primitive worlds, including “Spirits” (1998) featuring a Native American-inspired culture, and “Enemy Mine” (2003) featuring a primitive humanoid alien culture, the Unas. It was perhaps inevitable that the series would touch this subject given the weekly proliferation of cookie-cutter, primitive, frozen-in-time, Earth-derived human cultures (and similar humanoid alien cultures) discovered on each planet-of-the-week accessible by *Stargate*.

<sup>10</sup> Commentary & Citation: While I have placed the plight of the Cossacks as comparable to Native Americans (as victims), others have culturally compared them as rugged individuals to the “gun-toting freebooters of the American West.” Narrator Indiana Nidell opens the “History Of The Russian Cossacks Until World War 1” video on the Great War YouTube Channel with this claim, backed by an unattributed book quote at about the 3-minute mark.

<sup>11</sup> Commentary & Citation: If you knew that the Japanese were going to launch a surprise attack on Pearl Harbor in December 1942 and went back to the summer of 1942, would you tell the authorities (quite aside from the fact that

they would probably confine you to an institution)? Would you act in any way to prevent it, to prevent the loss of millions of lives and create a paradox fatal to your existence, your parents and children’s existence, and the entire world you know? Or would the choice to do nothing be easy because without it, your timeline, your history, the world you know, would not exist, the world would be much different, and there would be no U.S.S. Nimitz.

- ✓ *What if certain people in 1942, not from any future time, knew with certainty what would happen, and the outcome of WWII inasmuch as the United States becomes a dominant superpower armed with a weapon of unimaginable power? Would they allow it to happen, knowing that millions of people would die?*
- ✓ *Though they cannot have imagined the world of today ... there seemed to be a conspiracy theory in my youth that the U.S. Government deliberately allowed the Japanese surprise attack on Pearl Harbor (see 3 Government Titles, EN 18, p. 625, supra). Perhaps their reasons were more mundane, e.g., that Germany would declare war on the U.S. if the U.S. declared war on Japan, perhaps political and pecuniary profit from war was a motive. The military-industrial complex has always been suspected of promoting war for profit, and there is always politics of employment, prosperity, union labor involved in it.*

<sup>12</sup> Commentary & Citation: Although smallpox is officially ‘extinct in the wild’ and represents one of the few diseases that have been eradicated, samples are kept in Russia and Atlanta under heavy security:

- ✓ *“Most Americans born since 1972 have not been vaccinated for smallpox. Under a 1979 WHO agreement, the only remaining official live smallpox stocks are kept at CDC in Atlanta and the VECTOR laboratory in Novosibirsk, Russia. Every few years, WHO considers whether these last stocks should be destroyed. At a meeting in May, WHO members again postponed a decision because some experts argued that the stocks are still needed for research.” – Jocelyn Kaiser, “Six vials of smallpox discovered in U.S. lab,” Science Magazine, July 8, 2014 (available free online).*

This is known as the ‘small pox retention debate.’ Given the role of small pox in history and the history of the world, the gravity of this debate is ominously obvious and largely unreported, overshadowed in the late 20<sup>th</sup> Century by nuclear weapons and now by climate change. As the article title indicates, to the horror of those in the world who understood, six forgotten vials of smallpox were discovered in a government laboratory in Bethesda, Maryland in July 2014; the article also indicates that smaller samples had been found in forgotten stocks in various laboratories (with much less news coverage), for example, cloned samples in South Africa in 2013.

- ✓ *According to NPR (Fran Kritz, September 9, 2019) there was a gas explosion at the VECTOR lab. The small pox samples kept there were not compromised, but again, the retention question is raised.*
- ✓ *See also Bad Exchanges discussion, 4 Expansion, p. 924, supra.*

<sup>13</sup> Commentary: In the town where I grew up, in center city and the old areas, there were huge mountain stone churches, which I noticed when I was young, had rifle slits and high windows. These citadels were built in the early days, I was told, after the Big Runaway (1778-1779), as defenses in case the Native Americans penetrated into the settlement. I seem to recall from some history that the last Native American incursion in the area was a raid on the less protected settlement or trading post on the south side of the river stemming from a trade dispute around 1800. Sullivan’s Expedition (1779), disease, scorched-earth policy and increasing population density, buildings, and organization doomed the Natives.

<sup>14</sup> Citation: “Long-term solutions included agricultural intensification and the establishment of a hierarchically managed economy. These were not permanent solutions, however, for the archaeologically-evident pattern of population growth indicates that, with each establishment of a higher-capacity production system, population simply rose further. The military option must have been perpetually tempting.” – Joseph Tainter, The Collapse of Complex Societies (1988), pp. 171-172.

- ✓ *“The insecurity that this created among the rural population selected for nucleation around secure, regional centers (Sanders 1981a: 361; Webster 1977: 348). This in turn further intensified subsistence stress, as populations aggregated into smaller areas, leaving large hinterlands with comparatively fewer people and less agricultural production (Webster 1977: 348)...” *Id.*, pp. 171-172.*
- ✓ *“That’s because food production was critical for generating large surpluses that could support non-farming specialists, and the buildup of large populations enjoying a military advantage over others.” – Jared Diamond, Summary of Guns, Germs, and Steel (2017), p. 45, Kindle Edition.*

<sup>15</sup> Commentary: This is the first story in Brian Aldiss’ Galactic Empires Vol. 1 (1976) that I read when I was probably about 14 or 15 years old. Amazingly, considering all that has happened in 35 years, I still have the original hard-cover books (with dust jackets!) of my youth on my shelf.

*“To make damn sure that even the historically naïve and entirely unselfaware reader got the point, I appended a phony critical analysis of Lord of the Swastika, in which the psychopathology of Hitler’s saga was spelled out by a tendentious pedant in words of one syllable. Almost everyone got the point....*

*And yet one review appeared in a fanzine that really gave me pause. ‘This is a rousing adventure story and I really enjoyed it,’ the gist of it went. ‘Why did Spinrad have to spoil the fun with all this muck about Hitler?’*

*And the American Nazi Party put the book on its recommended reading list. They really liked the upbeat ending.*

*Apparently the appeal of The Emperor of Everything to the longings of power within all of us, save the true Bodhisattva, is so powerful that some readers can get off on it, even when it means reveling in genocide and identifying with Adolph Hitler. This is admittedly as extreme as an example of the phenomenon can get, and the overwhelming majority of the readers of The Iron Dream did get the point.”*

– Norman Spinrad, Science Fiction in the Real World (1990), p. 158 <sup>1</sup>

**Elder Race:** Racism and racial supremacy are entirely dependent upon which race you identify with; for example, white supremacists (species: *Hostis humani generis*) identify only with those whose ancestors originated in Europe, mainly central and western Europe, which they regard as congruent in the sense of being identical in form; coinciding exactly when superimposed with the human race to the exclusion of others whose ancestors originated from other parts of the world.

If you listen to white supremacists arguments, eventually you will be asked the rhetorical question of why technology, science, and ‘advanced civilization’ did not develop in Africa. The implied pseudo-intellectual answer lends support to the assertion that people of European descent are somehow superior to other people in the world.

- ✓ When race supremacist – of any kind – offer what they think are arguments or empirical evidence in support of their arguments (rather than the usual assertions), they do so only because others criticize and lampoon them for their beliefs. They are not actually interested in evidence as most people consider it, nor are they interested in arguments. They have already formed their conclusion and nothing rational will deter them or change their minds; they do not need evidence or arguments except for the outsiders. This they share with practitioners of religion and astrology, and all three work on unshakable ‘faith’ because they serve the most basic human needs.

The race question is intellectual poison (thanks in part to Runyard Kipling’s “The White Man’s Burden” (1899)) in that any attempt to rigorously investigate and answer such a question would automatically be considered racism as any answer, no matter how enlightening or well meaning, would be construed as an attempt to prove the ‘superiority’ of European descended peoples.

This argument is as absurd as claiming that an analysis of the lopsided Chinese loss in the First and Second Opium Wars is somehow racist. Wikipedia has three very well-written pages on the Opium Wars including significant analysis and it does not appear that any person has attempted to distort the discussion by calling it racist. If analysis and expert discussion of historical events

were commonly derided as racist attempts to justify history, then there could be no discussion of, for example, why the Spanish defeated the Aztecs, why the Greeks defeated the Persians, why Caesar defeated the Britons, any discussion of the Crusades, why the Taiping Rebellion first succeeded but eventually fell before the Qing Dynasty, why the forces of the Prophet won the Battle of the Trench, why the Goths defeated the Romans at Adrianople or the Bulgars defeated the Crusaders at Adrianople, or a million other wars, battles, conflicts that make up human history.

- ✓ In the same vein, neuroscience that studies the differences between male and female brains runs the instant risk of being labeled misandry or, quite more likely, misogyny. Articles, such as Lise Elliot, “Neurosexism: the myth that men and women have different brains,” (Nature, February 27, 2019) decry it as a ‘scientific myth.’ The difference from the race question is that neuroscience has the aegis of medical science. And all of the screaming about neurosexual myths are limited to publications aimed at the intellectual and educated; neuroscience researchers don’t get trolled on the net.

There are then, certain types of legitimate inquiries that intellectuals are discouraged from pursuing out of political correctness.

- ✓ “Again, specifics definitely matter, and I presume we’ll get them soon, but I strongly suspect that this is a case where Anderson, who is black, used a word that is historically acceptable when used by and among black people and always unacceptable when used by non-black people. If that is the case, MLB has thrown itself into the insanely controversial and likely indefensible position of presuming that it can and should police a black person’s use of that term. I hope I’m wrong about this, but I feel like I’m not.” – Craig Calcaterra, “MLB suspended Tim Anderson for using a ‘racially-charged word’” MSN Sports, April 19, 2019.<sup>2</sup>
- Bare-Knuckle Max Weber: And thus we arrive at Max Weber, who is considered to be one of the founders of modern sociology. There is a colorable argument that Weber’s works, especially the analysis of the relationship between religion and economic performance (i.e. the ‘Protestant historical coincidence’; he coined the term ‘Protestant work ethic’), and especially when the analysis is extended to regions outside of Europe, and regardless of their intellectual value, were – unintentionally perhaps – a backdoor justification of 19<sup>th</sup> Century European ‘superiority’ and colonial imperialism. As noted in 2 Constructural Elements, EN 6, p. 201, *supra*, in regards to Ibn Khaldun’s ‘asabiyyah,’ apparent justification attempts can be also a warning to the future when those conditions are absent from civilization.

The question that Max Weber addressed regarding the ‘historical coincidence’ of the prosperity of nations that adopted Protestantism is similar enough to the question asked by white supremacists to draw such a comparison. GGDM started with an entirely different, non-historical question, but arrived in a similar place.

- ✓ The same or similar argument might be made regarding GGDM in that it is, undoubtedly, modeled on the Western ideals of civilization which may not be considered applicable to civilization views in other parts of the world. For example, GGDM could be used to make a convincing argument about why the Native Americans were overrun (e.g., see Population Density, 4 Diplomacy, p. 1146, *supra* and other places in GGDM); some would consider this a racist argument and GGDM an attempt to prove the superiority of Western civilizations. Others might see it more neutrally as a historical argument or deductive argument of civilizations. For the record, and for what

it's worth, the author of this work does not have a racist agenda, and does not consider himself a racist.<sup>3</sup> Rather, GGDM sometimes serves intellectually sober, bare-knuckled profundity to the adult table (many, however, will likely dismiss me as post-modern absurdity, and my attempted profundity as deepity<sup>4</sup> or pseudoprofundity, see further discussion, FALLACIES, 2 Fallen to Earth, p. 1513 *et seq.*, *supra*). Pangloss does not visit here often.

While it should not happen, there is no way to guarantee that real world racism, extremism, and nationalism will not invade the game. Only complete anonymity – because if you know nothing at all about the other players, it would be hard for racism or nationalism to play a part in reactions to others – would free the game from real irrational prejudices. But anonymity is neither practical nor desirable in GGDM game play, rather, the opposite should occur; players should get to know each other and share their experiences, expertise, and culture; gaming with humans is a social activity. Fortunately, it is unlikely that overtly racist and nationalist persons, or persons who are religious or ideological extremist, would have any interest in GGDM or our conversation about civilization.

- Real Racism: Racism always requires a level of willful ignorance (see Willful Ignorance discussion, 2 Information, p. 1353, *infra*). I have seen YouTube videos where posters try to make racist comments (sometimes disguised as bad humor or bad attempts at humor) only to be shown in replies to be factually wrong as to place, historical facts, and other minor details that everyone but the poster seems to know. Willful ignorance allows for distortion into which racism fits.
  - ✓ [Interview] “Of course, the horrors, of which I heard in connection of the Nuremberg trials; the fate of the 6 million Jews, their killing and those of many others who represented different races and creeds, shocked me greatly, but, at that time, I could not see any connection between these things and my own past. I was only happy that I had not personally been guilty of these things and that I had not been aware of the scale of these things. However, one day, I walked past a plaque on the Franz-Joseph Straße (in Munich), on the wall in memory of Sophie Scholl. I could see that she had been born the same year as I, and that she had been executed the same year I entered into Hitler’s service. And, at that moment, I really realised that it was no excuse that I had been so young. I could perhaps have tried to find out about things.” – Gertraud “Traudl” Junge (d. 2002), Hitler’s last personal secretary, interview at the end of the 2004 movie Downfall.
- Pan-Galactic People: Many, if not most, people on Earth agree that the world would benefit greatly if we all regarded ourselves as part of an inclusive “human race” regardless of geographic origin of our ancestors.<sup>5</sup> You already know who would not agree. However, when humanity is moved to an interstellar or space-opera setting, a type of speciesism supremacy often again creeps into the literature because aliens, even if humanoid in form, are reproductively incompatible with humans because they evolved in a different ecology.<sup>6</sup>
  - ✓ Merriam-Webster online dictionary at *speciesism*: **1**: prejudice or discrimination based on species; especially: discrimination against animals, **2**: the assumption of human superiority on which speciesism is based. The word was first used in 1973.
  - ✓ Reproductive compatibility between two living organisms is one of the core elements making those two organisms the same species, for example, Merriam-Webster online

dictionary at *species*: **d(1)** ... comprising related organisms or populations potentially capable of interbreeding. That is, the production of viable offspring – including possible xenogenesis, the Census Power in GGDM.

- See also crossbreeding discussion, Pan-Galactic Pornography, 5 Beginnings, p. 53, *supra*.

As they are distinctly different species from us, at what point would humanity identify itself as part of a ‘pan-galactic race’?

- ✓ “The Pythagoreans and their successors held the peculiar notion that the Earth was tainted, somehow nasty while the heavens were pristine and divine. So the fundamental idea that the Earth is a planet, that we’re citizens of the universe, was rejected and forgotten.” – Carl Sagan, *Cosmos*, Episode 7.

Suppose that in order to join the pan-galactic race, humanity must be altered to join a hive mind (e.g., the Overmind in *Childhood’s End* (1953),<sup>7</sup> Galaxia-Gaia in the *Foundation’s Edge* (1982) and *Foundation and Earth* (1986)) or to become eusocial with other intelligent alien species; it would be fair to assume that any pan-galactic race would be a condition of *alterity* to humanity. Such a situation might oddly suggest that for the pan-galactic race, the universe is a valuable food source/nest or hive that must be defended against those outside the universe:

- ✓ “The new examples of eusociality hint that the nature of an animal’s home may hold the answer. As more eusocial species come to light, researchers note that a common thread is that of living inside a ‘valuable resource,’ like a hive or nest, that has taken much labor to build and maintain, and is valuable enough to die for.... Similarly, eusocial aphids, like those discovered by Dr. Nancy Moran, an evolutionary biologist at the University of Arizona at Tucson, patrol and defend the tiny galls they have formed on the cottonwood trees of Arizona; *the galls are both a home and a source of food*.... Many questions remain for researchers about the origins of eusociality. In particular, the naked mole-rat has kept biologists asking why no other mammal, including humans, has evolved sterile, worker castes.” – Carol Kaesuk Yoon, “Social Castes Found to be Not So Rare in Nature,” *New York Times Archives*, 1993 (emphasis added).<sup>8</sup>
  - See also excerpt of Chaki Kobayashi, “What is a Tree,” *Persistence of Existence*, *supra*.

- ✓ Although only vaguely eusocial, Robert Sheckley’s cute 1953 First Contact short story “Specialist” is based on the idea of a starship formed from creatures of different planets that all serve as natural components of what we’d expect on a starship: Walls, Engines, Communications, Navigator. When the ship’s Pusher dies, they discover Earth, where humanity is a race of primitive Pushers (which is offered offhand as an explanation for warfare, science, sovereignty, human supremacy over nature, greed and hatred, interpersonal conflicts – all because we are Pushers with nothing to Push). With some difficulty, the alien starship kidnaps an army private on furlough in the wilderness and convinces him to join their cooperative starship as their Pusher. The role of the Pusher is to accelerate the ship to FTL speeds, which only the Pusher can do mentally. Robert Sheckley’s story, published in *Galaxy Magazine*, May 1953<sup>9</sup> is

the only example I know of a non-cybernetic, alien-human eusocial relationship. The story provides just enough details to work while leaving huge looming unanswered questions.

*“Those who aren’t quite as familiar with the internet slang definition of ‘troll’ or ‘trolling’ might automatically think of the mythical creature from Scandinavian folklore. The mythological troll is known to be an ugly, dirty, angry creature that lives in dark places, like caves or underneath bridges, waiting to snatch up anything that passed by for a quick meal. The internet troll is a modern version of the mythological version. They hide behind their computer screens, and actively go out of their way to cause trouble on the internet. Like the mythological troll, the internet troll is angry and disruptive in every possible way – often for no real reason at all.”*

– Elise Moreau, “Internet Trolling: How Do You Spot a Real Troll?” Lifewire, July 20, 2019 <sup>10</sup>

**The Diamond Problem:** A quick Google search for “Jared Diamond racist” (on June 22, 2017) instantly provides two pages of hits from articles and forums arguing about whether Jared Diamond’s works, particularly the Pulitzer Prize-winning Guns, Germs and Steel (1997), are racist.

- ✓ “A naive outsider might imagine that Diamond’s ideas would go down equally well with the left-leaning anthropology establishment. After all, they are explicitly a retort to racism; he denies Eurasian societies any grounds for pride at ending up on top, exposing the geographic privilege on which their success relied. But he found himself accused of ‘geographic determinism’: in his critics’ opinion, his arguments squeeze out any role for human agency and decision-making, thereby sparing history’s colonisers – and today’s elites – any responsibility for having created our grotesquely unjust world. As one writer put it, after the book was adapted for the US TV network PBS, his stance means that ‘a PBS donor can sit in his Connecticut estate feeling no guilt since it was, after all, only an accident of geography that made him rich and the Bolivians poor.’ Jason Antrosio, an anthropologist, wrote: ‘Jared Diamond has done a huge disservice to the telling of human history.’” – Oliver Burkeman, “Interview: Jared Diamond: ‘Humans, 150,000 years ago, wouldn’t figure on a list of the five most interesting species on Earth’” The Guardian, October 24, 2014.

For his part, Mr. Diamond, the champion of “environmental and geographical determinism,” (a term he contests) maintains that his work is anti-racist, that it shows that the Europeans were just lucky in where their civilization grew and are not inherently or genetically superior in any way:

- ✓ “Diamond himself has been accused of racism, particularly by anthropologists, who have questioned his work with indigenous people in New Guinea, where he has conducted extensive field research. It is ironic because in Guns, Germs, and Steel Diamond explicitly sets out to refute racial readings of history, arguing that the reason Europe became globally dominant was to do with geographical advantages.

One anthropologist published an academic paper entitled F\*\*k Jared Diamond, in which he accused the genteel American of disguised ‘racism’ and ‘environmental de-

terminism’ which served to normalise colonialism. Why, I ask him, is he so resentful? Diamond puts it down to his success and the popular style in which he writes. What about his politics? Although he refuses to be drawn on the subject, it is clear that he resides somewhere on the conservative wing of liberalism.

‘I don’t think that’s the reason because the reality is that I’m a mixed bag. My views about immigration do not coincide at all with extreme liberal American views about immigration, but I would be praised by anthropologists for my views on the intelligence of New Guineans compared to the intelligence of Europeans.’” – Andrew Anthony, “Interview: Jared Diamond: So how do states recover from crisis? The same way people do.” *The Guardian*, April 21, 2019.

But many people see his work as a racist justification for European conquest and colonization. Just as they might see Weber’s attempts to extend and apply his analysis of the Protestant historical coincidence (and the Protestant work ethic) to non-European, non-Christian peoples as racist and/or a justification for European colonialism. In fact, a Google search on the same date, for “Max Weber racist” yields similar results, except that, due to his position as one of the preeminent founders of modern sociology, he is also accused of – variously – being a social Darwinist, imperialist, nationalist, racist, and most importantly, that the sociology he created is tainted with, a tool of, or a justification for ‘genteel white racism.’

- ✓ Norman Spinrad has also charged (in relation to *The Iron Dream* (1972)) that much of science-fiction literature borders on Nazism, is very close to Nazi ideals, and that future science-fiction stories rarely show people or times much better than our own.<sup>11</sup> Notably, for whatever reasons you may believe are true, most science-fiction literature is written by ‘white men’ (and sometimes women, e.g., Pauline Gedge, Julian May) and feature white characters or characters of undetermined ‘race’ or ‘ethnicity’ who are most likely ‘whites’ from modern Western civilizations. Thus, Spinrad was making the same charge of mainstream science-fiction literature as has been made against sociology, both products of 19<sup>th</sup> and early 20<sup>th</sup> century western civilization, science-fiction literature often contains elements of sociology.

The trolls (and some academics) who carelessly or maliciously called Jared Diamond a racist are missing the point as usual: There is a well-established history (i.e. facts) that must be accounted for (proximate and ultimate causes); the history of 500 years of European domination are imprinted on our current world, every one of us, every culture, every institution.<sup>12</sup> It is the same imperative, not less, but probably more, that lead the Founding Fathers to explain and declare to the world their reasons for rebelling against England. It cannot be wished away, there is no reset. The only difference is that the two are on opposite sides of the divide of identity politics. I have never heard of a troll complaining about the U.S. Declaration of Independence.

- ✓ Which is also more or less the same reason we have creation myths: We feel that we could not have always existed and must account for our beginnings, and the beginning of everything that *matters* to us. It fills the nothingness before our birth with a suggestion that for all practical purposes, everything has always been here (and will continue even after death) and creates meaning in the Void. See *The Happy Hurdle*, *Meta Aspect and Be Fruitful*, 4 Culture, pp. 409-410, *supra* and Douglas Adams quote in *1 Technology*, pp. 694-695, *supra*.

Fundamental realities are things we feel compelled to explain, see Jared Diamond quote, 3 Con-structural Elements, p. 210, *supra*. Having rationally dismissed in the last century all pseudoscientific arguments claiming European mystical, moral, mental or physical superiority – these claims are now considered by definition *racist* – another type of explanation must be offered, something outside of any attempt to claim a ‘rightful’ superiority (which again, is *racism*).

Mr. Diamond offered such an explanation, a compelling one based solely on the happy accident of geography. For this, he is called a racist by those who refuse to understand the problem he is solving; it is unlikely that these people are trying to deny or pretend the history doesn’t exist (and many of them actually are rather proud of it) – because if it didn’t exist, they would have no reason to call anyone a racist!

- ✓ “This general charge – that Diamond offers a hugely oversimplified, morally exculpatory account of history – is the only thing that punctures his politesse. ‘Whenever I hear the phrase ‘geographic determinism,’ he says, ‘I know I’m about to waste time discussing with someone who has no right to be discussing [how human societies developed]. Because the fact is that geography has a strong influence on humans. It doesn’t determine everything, but it has a strong influence.’ Certain anthropologists – the kind he calls ‘not scientists’ – may insist that, say, Aboriginal Australians made a cultural choice not to develop agriculture, but the fact is they simply lacked the domesticable crops or animals to do so.” – Oliver Burkeman, “Interview: Jared Diamond: ‘Humans, 150,000 years ago, wouldn’t figure on a list of the five most interesting species on Earth’” *The Guardian*, October 24, 2014.<sup>13</sup>

These same sorts will likely refuse also to understand the ‘problem’ addressed by GGDM and instead choose to distort the discussion by careless accusation and name calling. It is so easy to call anyone a racists nowadays, closely followed by sexist, misogynous, and even use pejorative terms for liberals (e.g., ‘snowflakes’) and conservatives (e.g., ‘conspiritard’).

- ✓ What, if anything I have added to Jared Diamond’s work was to point out the funneling effect of Western Europe on the Great Migration and the circumambulation. I don’t think that is particularly genius on my part; I am sure it has been mentioned before (but I have not seen it anywhere before), but it is important to the population density issue, which also suggests that in addition to natural resources, Europe had social and mental resources as well. In the movie, *The Man from Earth* (2007), John said that in the early days, he just followed the sun...

The Diamond Problem is not Professor Diamond, but mass human willful ignorance, those who miss the point, jump the gun, refuse to understand and learn, whose thinking is limited to name calling and trolling, and “the level of thought that goes into 140 characters” (Sen. Jeff Flake). This is different from scholarly and academic criticisms of his work, his offered evidence. But that’s not what trolls are about. Even the academic kind.

- ✓ Jared Diamond’s theory seems to apply and adapt Edward Soja’s spatial injustice theory on a macro-historical scale to describe the reason for 500 years of European global colonialism and superiority (similar perhaps to the way absurdism has been generalized in GGDM into a macrosocial metaphysics of human civilizations). Edward Soja, who is barely known outside the elite circles of postmodern social theory (i.e. no Today Show or GMA appearances), has probably never been called a racist, and is of no interest to the internet chattering class or trolls.

*“During the Nazi era, German authorities reintroduced the Jewish badge as a key element in their plan to persecute and eventually to destroy the Jewish population of Europe. They used the badge not only to stigmatize and humiliate Jews but also to segregate them and to watch and control their movements. The badge also facilitated deportation.*

*Nazi propaganda minister Josef Goebbels was the first to suggest a ‘general distinguishing mark’ for German Jews in a memorandum in May 1938. Security Police chief Reinhard Heydrich reiterated the idea at a November 12, 1938, meeting convened by Herman Göring following Kristallnacht. In both cases no immediate action was taken.”*

– from “Jewish Badge: During the Nazi Era,” Holocaust Encyclopedia  
(United States Holocaust Museum) <sup>14</sup>

**Toyland:** The thinness of racist arguments continues to be exposed over and over. The 2009 Oscar-winning live short film “Toyland” (YouTube, 14 minutes) does this at two critical points in the story. A lady with a young boy is neighbors with a Jewish couple who has a young boy of the same age, in Nazi-controlled Germany. The boys are friends, called themselves “blood brothers” in the film. Aware that the Jewish neighbors might soon be taken away, the mother tells her son that the neighbors are going on a trip to ‘Toyland’; he wants to go with them, but she (obviously) says no because she knows she is lying. She struggles to keep up the fiction. The Nazis round up the Jewish family and ransack their apartment, the boy tries to run away, to get in the van with them to go to ‘Toyland.’ The Jewish boy yells to him that there is no ‘Toyland’ as the guards knock the runaway boy to the ground and close the prison van doors.

When the frantic mother arrives at the deportation train station, believing her runaway son (whom she has not yet found) is on the train with the Jewish family, she is called a “Jewish bitch” by the guards, who ask why she isn’t wearing the required Star of David, until she produces papers showing she is not ‘Jewish,’ then their demeanor instantly changes to gentlemanly.

When they open the train box car where the Jewish families are imprisoned, she sees the Jewish boy and pretends that it is her son so that he is removed from the train and given to her care. The Nazi officer comments on how he “looks just like his mother,” despite the fact that he is wearing a Jewish star on his jacket lapel. The Jewish parents keep quiet and the Jewish boy does not object, but goes home with his new ‘mother’ while his parents are sent to a camp.

She then raises two ‘sons.’

- ✓ So, yes, the film is a work of fiction. And some would say then that makes it a less powerful example for the argument. But the events in the film are plausible and based on well-documented historical precedent; one could easily say it could have happened that way once or a thousand times. And if the Jewish people were in any way distinguishable from the ‘German people’ there would have been no need for them to wear, by legal decree, the Star of David on their lapel (or one might ask, ‘why were they required to wear a Star of David?’). They did not do so before being required to and few seemed to notice their Jewish neighbors before the Nazis made it a top political issue. Without the star on their lapel, they were indistinguishable.
- ✓ “The persecution of the Jews began systematically almost as soon as Hitler came to power. The Nazis established many new anti-Jewish laws. These were introduced slowly at first, so that the civilian population would not realise the extent of the Nazi

party's anti-Semitism. ... It is uncertain whether Hitler planned to murder the Jews when he came to power. Originally it seems he intended to force them out of Germany but this eventually led to a plan to exterminate the Jews.” – “Anti-Jewish Decrees,” British Library (<https://www.bl.uk/learning/histcitizen/voices/info/decrees/decrees.html>).

*“Humans did this. Hundreds of thousands of babies cradled by mothers grew up through millions of unique experiences only to find themselves all at Jerusalem, each of their stories worthy of its own novel unraveled one way or another over these three months, and have, through the great filter of history, been reduced to a reference in this very sentence. I don't think you or I or our species has the capacity to truly understand this. In the end, perhaps, all we can do is take the time to pause and reflect.*

*As we do this, we can in a way, commune with our ancestors who did the same; at Carthage, for instance, it is said that Scipio Aemilianus weepingly looked over the flames which engulfed the city, imagining that one day, such flames would be seen over Rome itself. At Jerusalem, we can imagine that Titus was also seized by similar thoughts. Today, I am sure, we can also bow our heads humbly and reflect up on the destruction we reap across the world which may one day, return to our own homes.”*

– closing narration from “The Siege of Jerusalem (70 AD) – The Great Jewish Revolt [FULL DOCUMENTARY]” by YouTube channel Invicta, August 11, 2019

**The Inge Process:** William Ralph Inge, born in 1860, was an Anglican priest and the Dean of St. Paul's Cathedral in London from 1911 to 1934. He was, as expected, a very educated man, a Fellow of the British Academy, a Knight of the Royal Victorian Order, Professor of Divinity at Cambridge, a church politician. He was a prolific author of books and articles, thoughtful and well-spoken, his lines are frequently eloquent in a way that we only look back upon with longing. He is quotable, Wikiquote has a page of fine quotes from his works, usually of one sentence, currently there are sixteen quotes there attributed to William Ralph Inge, with links for some to various works on Google Books and the Gutenberg Project (most of his writings are in the public domain).

However, an examination of the works linked to the Wikiquote page demonstrates that they were cherry picked, very carefully cherry picked. While he said some fine insightful things that are at once worthy, profound thoughts on various subjects, many of his works have racist undertones, he (like many of his time) conflated nationalism and race (*gee*, not much has changed there), and other comments in his works are distasteful because he was a late 19<sup>th</sup> and early 20<sup>th</sup> Century cleric (e.g., his comments on evolution and science), an English aristocrat (e.g., vaguely derogatory comments about the United States, or consumerism or unionization of labor), or because he was a politician playing to his base (a common charge even nowadays).

- ✓ I have understood from other readings that the ‘special relationship’ between the United States and England – sort of a GGDM Shared Meaning (see *The Commonality*, 3 Diplomacy, p. 1131, *supra*) – dates mainly from World War II and that prior to England being flooded with U.S. servicemen (and equipment) who then flooded across the Channel and through France and Germany, England aristocratically looked down upon the United States as a lesser cousin and had a slightly adversarial attitude toward the U.S., even after World War I. England thought the United States did little in WWI because the United States joined late.

Sometimes, his insightful, quotable lines seem to contradict other works that have distasteful comments or undertones, e.g., his 1948 (he was 88 years old) comment, “A nation is a society united by a delusion about its ancestry and by a common hatred of its neighbours”<sup>15</sup> seems to contradict the very title (not to mention substance) of his 1919 Galton Lecture (he was 59 years old) called “The Future of the English Race”,<sup>16</sup> this is probably a human process representing a difference in views after World War I and World War II and the beginning of the Cold War fear. He also was realistic in many senses, and sometimes his comments are near prescient, as for example, about South Africa or hinting at the future dissolution of the English colonial empire.

He was a man of his times. We expect outstanding intellects *to be humans beyond their times, to be heroic in an intellectual sense*, and we celebrate that, but often they are not, often they must play to the tune and politics of their time (e.g., Socrates and the Thirty Tyrants or Cicero’s joy at Caesar’s assassination in the Senate), or are trapped in their existential realities (which makes their works useful as historical record of the attitudes and thoughts of a time). The same argument is made of American writer Robert E. Howard, whose short life is encompassed by the period of time (approximately) that Robert Inge was Dean of St. Paul’s Cathedral and most prolific as a writer; Robert E. Howard has been called a racist, but arguably not especially racist by the standards of his time.<sup>17</sup>

So, we cherry-pick; Wikiquote cherry-picks, whether consciously or unconsciously. Aristotle made statements that seem to support Ionian slavery (e.g., “for he that can foresee with his mind is naturally ruler and naturally master, and he that can do these things with his body is subject and naturally a slave.” (Politics, 1:2, 2)) that were ignored perhaps until Carl Sagan pointed it out in Cosmos, Episode 7, in his discussion of the Ionian revolution and descent into mysticism. Aristotle’s statements in support of slavery are not commonly found on the internet quotes sites, rather, the Aristotle and Plato quotes found are the ones used in books and taught in colleges or repeated in business psychology seminars. They are the quotes we find palatable and insightful.

Wikiquote is part of a long-term *socio-intellectual Bowdlerization process*.<sup>18</sup> The cherry-picked quotes on Wikiquote will be repeated in school papers and other works, the ones that are distasteful, dated, or in discord with our current worldview will be ignored and read only by those who read original works, do historical research, and understand the times (i.e. scholars, deep blue thinkers). Perhaps this is part of a topical truth function in our civilization; each generation cherry-picks quotes and ignores others, the sum result is that after many, many generations have cherry-picked thoughts and insights from authors and chewed over their works, what remains is the rough pit of thoughts that might be regarded as human truths.<sup>19</sup>

However, we do ourselves a disservice by politically correcting or ignoring quotes of famous people that don’t sit well now; we forget – and we probably want to forget except for moments of self-puffery, self-congratulation and romantic narcissism – that the world wasn’t always with the current sensibilities. Without that, we are small people, a tiny point in time, having lost the sense of all other times in our history, being deprived of their collective wisdom.

- ✓ This is an argument made from facts: 1) William Inge was... 2) William Inge is quoted favorably on the internet... 3) His writings are often in discord with or distasteful to moderns... 4) Therefore the internet quotes are cherry-picked. 5) Aristotle, Robert E. Howard, and many others were also racist by our standards, or endorsed slavery, or said disagreeable or outdated things and are also widely quoted on the internet and elsewhere... 6) therefore their quotes are cherry-picked like those of Wil-

- liam Inge. 7) cherry-picked quotes are repeated and disseminated in our society, carried from generation to generation... 8) the original texts and sources remain for those who want to read and understand... 9) this process serves as a truth function, extracting and emphasizing the insightful and thought-provoking prose of famous authors into universal human truths or observations, and suppressing the trivial, distasteful or dated, leaving those to the scholars and historians in the preserved original works.
- ✓ There is a similar intellectual process that runs in other parts of our civilization, certain books, short stories, and literary ideas are made into movies and TV shows, giving them an outsized influence, shows and movies are ‘reimagined’ or remade or rebooted several times, each interpretation learning from the previous mistakes and criticisms, giving them extended legacy. In 2020, we will see our third generation of Dune movies (1984, 2000, 2020). Like our history, our entertainment is pragmatic.
- Cherry-Picking Inge: “We may surmise that the European man, the fiercest of all beasts of prey, is not likely to abandon the weapons which have made him the lord and the bully of the planet. He has no other superiority to the races which he arrogantly despises. Under a régime of peace the Asiatic would probably be his master.” – Dean William Ralph Inge, Outspoken Essays, “The Future of the English Race” (The Galton Lecture, 1919), available for free on the Gutenberg Project.
- ✓ I wonder if the use of “bully” by Dean Inge above was a coy double entendre? A modern reader pictures immediately one with a big stick and that certainly is colorable following the use of the word “lord,” but bully also meant *excellent, wonderful* as an adjective: My mother used to say, “Well bully for you!” when she wasn’t buying my excuses for whatever careless, thoughtless thing I did in my youth that I was in trouble for just then. All of the dictionary meanings of ‘bully’ were in the language, according to Merriam-Webster online dictionary at the time Inge used the term.
  - ✓ It may be surmised from this quote above that Dean Inge was an anti-colonialist, pacifist in some sense, and possibly anti-racist (of some sort); the date is also interesting: 1919, the post-WWI milieu. I think Jared Diamond would agree with his quote. Unlike many of the late 19<sup>th</sup> and early 20<sup>th</sup> Century intellectuals cited, Dean Inge lived to see WWII and the Bomb. He was 85 years old in 1945, he lived to age 93.
  - ✓ However, later in the *same essay*, he supports “racial survival” by colonization, which the way the Europeans did it, required them to be the “bully of the planet”: “Emigration, as we have seen, does not diminish the home population by a single unit; and so, while there are empty lands available for colonisation, it is by far the best method of adding to the numbers of our race.” *Terra nullis*. After genocide.
    - In this, he echoes Thomas Malthus, see quote, 1 Taxation & Census, p. 297, *supra*. This point is also not dissimilar to the point made by Joseph Tainter in The Collapse of Complex Societies (1988), pp. 171-172.
  - ✓ But it is clear that in 1919 (based on the above quotes), Dean Inge *did not believe* in any *mystical, moral, or intellectual* superiority of Europeans over the rest of humanity; he was not guilty of Western sanctimony in that sense at least. He would not have said, based on the quoted public lecture above, that any European was smarter than a person from Africa, or morally superior to a person from China, for example. He recognized the European unwarranted sense of entitlement and lack of sense of obligation to the rest of the world (see Arrears in Aristos, 2 Entropy, p. 234, *supra*).

- In this, he says much the same as modern anthropology has said, see Oliver Burkeman quote, p. 1158, *ut supra*.
- ✓ Note also that this was apparently the discussion and language of the time, e.g., consider this following:
  - “When asked what was the greatest political fact of modern times, [Otto von] Bismarck is reported to have responded, that it was ‘the inherited and permanent fact that North America speaks English.’ Whether the saying be authentic or not, the remark is certainly worthy of its reputed author’s keen insight into political fundamentals.” – George Louis Beer, The English-Speaking Peoples, Their Future Relations and Joint International Obligations (1917), p. 186. Note the title, style of the work and the date.

➤ The Voltaire Case: Voltaire’s opinions offended nearly everyone, we tend to do that. The record is clear that in his early years, he was anti-Islam (e.g., his 1736 tragedy, “Fanaticism, or Mahomet the Prophet”), but that his opinions, like Dean Inge, evolved over time. The implications would be frightening if they didn’t; the 20<sup>th</sup> century has no shortage of examples, especially linked to dominance and power.

Voltaire’s opinion of Islam is still an issue of discussion on the internet, e.g., a thread on the Historium forums (<https://historium.com/threads/voltaire-on-islam.127989/>), started by JoanOfArc007 on June 12, 2017 titled, “Voltaire on Islam” discussing a Muslim World League site that (backhandedly) rationalized Voltaire’s early criticism of Islam and praised him as a later defender of The Prophet.

- ✓ “In his Essay on the Manners and Spirit of Nations (published 1756) ... Voltaire highlighted the Arabian, Turkish courts, and conducts. Here he called Mohammed a ‘poet’, and stated that he was not an illiterate. As a ‘legislator’, he ‘changed the face of part of Europe [and] one half of Asia.’ In chapter VI, Voltaire finds similarities between Arabs and ancient Hebrews, that they both kept running to battle in the name of God, and sharing a passion for the spoils of war. Voltaire continues that, ‘It is to be believed that Mohammed, like all enthusiasts, violently struck by his ideas, first presented them in good faith, strengthened them with fantasy, fooled himself in fooling others, and supported through necessary deceptions a doctrine which he considered good.’ He thus compares ‘the genius of the Arab people’ with ‘the genius of the ancient Romans’” – from Wikipedia article, “Voltaire,” captured February 17, 2019.
  - Note that Essay on the Manners and Spirit of Nations was written 20 years after the anti-Islam tragedy play that he recommended to the Pope in 1745.

Voltaire continues to be quoted today, like Dean Inge, because in between, there are some revealing insights. For example Voltaire wrote:

- ✓ “It is to be believed that Mohammed, like all enthusiasts, violently struck by his ideas, first presented them in good faith, strengthened them with fantasy, fooled himself in fooling others, and supported through necessary deceptions a doctrine which he considered good.” *Id.* citing to David Allen Harvey, The French Enlightenment and Its Others: The Mandarin, the Savage, and the Invention of the Human Sciences (2012).

This humanistic treatment of Muhammed implies that what was true of Muhammed, would also be true of others of the same kind, thus was applicable to both the Church Fathers and to radical reformist in pre-Revolutionary France (a point proven perhaps by later events, e.g., The Reign of Terror). It was a way of criticizing current institutions and movements indirectly which is also what the Muslim World League article by Dr. Khalid Shaya argues.

To wit: If you accept Voltaire’s criticisms of or comments about Mohammed as valid, worthy observations (if not arguments), then when the same is pointed out to exist in Christianity, you cannot deny the same is true of Christianity, which is exactly the point. Voltaire’s description of Mohammed (*ut supra*) must just as easily apply to the famously prone-to-hallucinogenic-fantasy and violently-struck-by-his-own-ideas St. Ignatius of Loyola, founder of the Jesuit Order (and many other ‘Saints’), which had a huge impact on both the Counter-Reformation and on European missions to China, Japan, India, etc. *Ripples*.

Interestingly, Voltaire referred to both Jesus Christ and Muhammed (and Zoroaster) as ‘legislators’ in his A Philosophical Dictionary, Vol. 1 (1764) (available in searchable format on Google books, there were five hits for the word “legislator” in the volume) 30 years before Kantian ethics’ Categorical Imperatives. If these people were Legislators of Mankind, *they were elected after the fact by the religions that were erected on their names* (unlike secular legislators) and Kant is simply asking people to put themselves in that place before acting.

However, it is noted that Voltaire commented inconsistently on the Jewish people, to wit:

- ✓ “According to Orthodox rabbi Joseph Telushkin, the most significant Enlightenment hostility against Judaism was found in Voltaire; thirty of the 118 articles in his *Dictionnaire philosophique* dealt with Jews and described them in consistently negative ways. For example, in Voltaire’s A Philosophical Dictionary, he wrote of Jews: ‘In short, we find in them only an ignorant and barbarous people, who have long united the most sordid avarice with the most detestable superstition and the most invincible hatred for every people by whom they are tolerated and enriched.’ On the other hand, Peter Gay, a contemporary authority on the Enlightenment, also points to Voltaire’s remarks (for instance, that the Jews were more tolerant than the Christians) in the *Traité sur la tolérance* and surmises that ‘Voltaire struck at the Jews to strike at Christianity’. Whatever anti-Semitism Voltaire may have felt, Gay suggests, derived from negative personal experience. Bertram Schwarzbach’s far more detailed studies of Voltaire’s dealings with Jewish people throughout his life concluded that he was anti-biblical, not anti-Semitic. *His remarks on the Jews and their ‘superstitions’ were essentially no different from his remarks on Christians.*” – from Wikipedia article, “Voltaire,” captured February 17, 2019 (emphasis added).

---

*“Being friends with anyone for 30 years is no easy task – people change, they drift apart, they move on.” – Alana Stewart*

\*\*\*

*“In my life, there have been people that I was convinced would be around forever, and yet, somehow they managed to drift away after a couple of years. Likewise there have been people who have begun as casual acquaintances but become more important with each passing year.” – Alana Stewart*

---

**Drifting Off the Table:** “Advanced Stellar Conquest” drifted off the game table, but GGDM has not yet hit the floor. Like the old computer advertisement with the water glass falling off the table in slow motion while the big voice tells you that their computer can perform millions of calculations before the glass hits the floor – GGDM is still calculating millions of thoughts and mastering the knack, like Arthur Dent, of flying into cyberspace. It’s all a matter of time, input, processing power and SQ and we are just a slight bit slow.

- ✓ “There is an art to flying, or rather a knack. The knack lies in learning how to throw yourself at the ground and miss. ... Clearly, it is this second part, the missing, that presents the difficulties.” – Douglas Adams, Life, The Universe and Everything (1982).
  - “You have to have your attention suddenly distracted by something else then you’re halfway there, so that you are no longer thinking about falling, or about the ground, or about how much it’s going to hurt if you fail to miss it.” *Id.*
- **Continental Drift:** A position having a Shared Meaning with another may create and activate a one-time Special Writ based on that Shared Meaning. The Special Writ, when approved and activated by actualization of a Fuzzy Group, may operate to affect *either* 1) the Events in the Shared Meaning, *or* 2) the party position’s own civilization in reasonable relation to the Shared Meaning and the relationship overall of the two positions. Regular Meanings cannot be the basis of a Special Writ and cannot be affected by the Special Writ. The Writ must be based on the Diplomacy Power and follow a general form of the Writ (see Form of the Writ, 2 Writs, p. 438, *supra*), describing background and a reasonably-related effect.
  - ✓ The Concierge should give liberal interpretation (but not give into speciousness), bearing in mind the cost associated with forming the Fuzzy Group and activating the Special Writ. As discussed in The Commonality, 3 Diplomacy, p. 1131, *supra*, the Concierge will not provide pre-rulings or hypothetically discuss a Special Writ.
  - ✓ Each Special Writ must be unique, but there is no limit to the number of Special Writs that can be activated in relation to a Shared Meaning over the course of the game. The requirement of a Special Writ imposes a *cost* to modification.
    - “My husband recently made me try on a bikini. A bikini is not so much a garment as a cloth-based reminder that your parts have been migrating all these years. My waist, I realized that day in the dressing room, has completely disappeared beneath my rib cage, which now rests directly on my hips. I’m exhibiting continental drift in reverse.” – Mary Roach.
- **Earthquake Events:** A Special Writ that affects the Shared Meaning (#1 above) may *unilaterally* add, subtract or alter the wording of Events in the Shared Meaning. A Shared Meaning must always have at least one Event, there cannot be any empty Shared Meanings. Because the changes are unilateral, this can result in a bit of a tug-o-war back and forth – a bit of a *lover’s tussle* told in monologue narration like Katherine Ann Porter’s short story, “Rope” (1928) – but that would cost considerable Special Writ activations by the sides, distracting them from other priorities. Also because it is *unilateral*, there is no concurrent requirement to activate the Diplomacy Power by the other party, unlike forming the original Shared Meaning.
  - ✓ Without the use of Special Writs, Shared Meanings would be static, unchanging as they are formed, beneficial only in the formation, a burden afterward, and can only be destroyed by Event violations. This may not be a problem for some players. The use

of Special Writs however adds dynamics to the Shared Meanings and rewards positions with opportunities for keeping it.

- ✓ It is possible to form a Shared Meaning where one of the Events bars changes or any use of Special Writs, or even bars unilateral changes. It is up to the judgment of the Concierge whether or not to accept such a Shared Meaning – there may be some unimaginable situation where it is appropriate (just as one should be very careful about declaring anything absolutely impossible) – but generally, it probably should not be accepted by the Concierge.
- **Fault Lines:** The contents of the Special Writ are not shared with anyone when used to add, subtract, or change Events of a Shared Meaning; the other position should notice the changes without needing to read the Writ. *However*, when a Special Writ based on a Shared Meaning is used to alter a position’s civilization (i.e. #2 above), the partner to the Shared Meaning will – in the vein of the Expose’ News Event (see 4 Writs generally, *supra*) – receive a copy of the Special Writ. It will not be published as a News Event, but it’s not exactly secret either. The Special Writ is unilateral, so does not require the other’s approval, but the issuing position cannot control the information once it gets out. The effect of the Special Writ used in this way can be powerful, something just short of an actual Expose’ News Event, but must still be based on the Shared Meaning and the relationship between the two positions and must, of course, be in proper form and the reasoning and intent must be intelligible.
  - ✓ For example, one might use a Special Writ in relation to the Shared Meaning to either shield a Government Title for a Regular Turn from being Disrupted if the Conflict Checks would require a position to violate the Events of the Shared Meaning or in extreme cases, it might be used to rid a position of a Government Title whose Conflict Checks are in conflict with the Shared Meaning.
    - Publication of the Special Writ to the other position in the Shared Meaning may not seem very realistic in the game sense, but is a concession, like the Expose’ News Event, to storytelling in both exposure (learning about the other) and powerful game effects. It is perhaps a form of cohering between positions, even when their Shared Meanings are not ‘positive’ (like the cat and the bird). As discussed *ut supra*, Shared Meaning Events probably should not be allowed to bar sharing of the Special Writ when used in this way.
- **Subduction Zone:** Whenever a Special Writ is used in relation to the Shared Meaning for either purpose, one Monad is added to the Diplomatic Space between the two positions. It can be added randomly, or can be manually placed by the Concierge if the two positions can agree on placement; this is a good way to fill ‘holes’ in the Diplomatic Space. In either case, it is possible due to the wrap around nature of Diplomatic Spaces (like Public Spaces, see discussions *Over the Edge*, 1 The Sidereal Stage, p. 108, and *Shared Spaces*, 2 Diplomacy, p. 1118, *supra*, and *Built Spaces and Mental Spaces*, 3 Reformation, pp. 1401-1402, *infra*) for the insertion of a Monad to push adjacent things apart, or to push things from one edge to another. However, the First Spaces must be inviolate, they must remain on the original edges, directly opposite each other with space for at least one Monad between them, but otherwise can be moved farther and farther apart as Monads are inserted (see *First Space*, 2 Diplomacy, p. 1116, *supra*) or the Monads can be added around the sides to expand the space laterally.

- ✓ “My father was an entomologist who believed in continental drift. In the early ‘50s, that was regarded as nonsense. It was in the mid-’50s that it came back. Someone had thought of it 30 or 40 years earlier named Alfred Wegener, and he never got to see it come back.” – Geoffrey Hinton.

*“The Humans say, ‘The road to Hell is paved with good intentions.’ Why?  
Do they think there is a shortage of bad ones?”*

– Opening quote from Andromeda, “Forced Perspective” (2001)

Endnotes.

<sup>1</sup> Citation: See Norman Spinrad ‘Emperor of Everything’ feature quote, 3 Constructural Elements, p. 205, *supra*.

<sup>2</sup> Citation & Commentary: This is by far the best statement of a sensitive issue – an apparent double standard – that has perplexed me and all reasonable adults in the United States for most of a century; I first noticed it when I was in about 2<sup>nd</sup> Grade in the early 1970s and I personally witnessed it daily when I began working in the early 1980s. I believe this is a language issue mainly in the U.S. as a result of the Civil War, Reconstruction, and the Civil Rights movement and not such a big deal elsewhere in the Anglosphere. The issue is usually raised when someone is defending themselves against a public outcry over racism; for example, I recall the loud offended howling when a famous New York City chef or restaurant owner, accused of racism, pointed out this nonsensical paradox. What would be said if Tim Anderson mentioned it to the press in argument against his suspension considering that other ‘non-black’ players may have been suspended for the same?

- ✓ This is not an argument in favor of anyone using the word: As President Obama said of the Confederate Battle Flag, the word in question here belongs in a museum and at this point, **no one** should be using it, both out of respect and self-respect. It is not a word that can be rehabilitated by neutral, non-pejorative use, nor does it have any meaning beyond the pejorative, no matter the speaker (it is considered non-subjective ‘hate speech’ not protected by the First Amendment). No one, I am certain (except perhaps the anti-PC camp), would argue that our language would be lessened by retiring that particular word (but you know it won’t happen), except where appropriate in accurate historical drama depiction.
- ✓ As to the anti-PC arguments I have heard over the years, I would suggest that a substance abuser might have the same reaction if told their life would be better without the substance abuse. The problem with anti-PC arguments generally is that it is hard to make such arguments without sounding like a closet racist, just as it is hard to make pro-Fundamentalist Christian arguments without sounding like a deluded fool.

<sup>3</sup> Commentary: In fact, the irony is that if GGDM contained an outrageous, misogynistic, racist, homophobic, or atheist ranting screed or a detailed religious alien conspiracy theory or celebrity gossip or claimed extraterrestrial or extradimensional channeled wisdom, it would be more likely to be widely read (if only to laugh and troll me) than in its current state as a *levelheaded and profound philosophical and macrosocial simulation and argument*.

<sup>4</sup> Citation & Commentary: “A deepity is a proposition that seems to be profound because it is actually logically ill-formed. It has (at least) two readings and balances precariously between them. On one reading it is true but trivial. And on another reading it is false, but would be earth-shattering if true.” – Daniel Dennett, “Evolution of Confusion” speech at the American Atheist International Conference, 2009; the video is available on YouTube via the Richard Dawkins Foundation for Reason & Science channel.

- ✓ *Cf.* Merriam-Webster online dictionary at *paradox*: **2:a** a statement that is seemingly contradictory or opposed to common sense and yet is perhaps true.
- ✓ “Deepity” is a Dennett neologism used primarily and sparingly in Philosophy of the Mind, intellectual fraud, and theological discussion.

<sup>5</sup> Commentary: It may seem a minor point, but it is huge, that in order to have Jackie Robinson Day, Major League Baseball has to first admit that there was a “color barrier” and second, that it was wrong. The second part is the most important because, historically, there can be no question that there was a color barrier, but as long as it is not thought to be wrong, arguments can be offered to justify and support the exclusion of African-Americans. Once something becomes a social or personal wrong, no further arguments can be offered in support or justification.

<sup>6</sup> Commentary & Citation: Aliens are not necessary, mutants will do, as in Norman Spinrad’s The Iron Dream (1972), written by an alternate history Adolph Hitler who became a 1950s science-fiction writer instead of the historical monstrosity that we know well. The Iron Dream was written to demonstrate that science-fiction and fantasy literature are often very close to Nazi ideology.

<sup>7</sup> Commentary: Is it perhaps possible that Arthur C. Clarke’s ‘Overmind’ is the modern science-fiction expression of Ibn Rushd’s (Latinized as Averros in the West) 12<sup>th</sup> century post-Aristotelian “unity of the intellect” theory?

<sup>8</sup> Commentary: With special thanks to Ms. Yoon for supplying the link to this article.

<sup>9</sup> Citation: Available at [https://archive.org/stream/galaxymagazine-1953-05/Galaxy\\_1953\\_05#page/n69/mode/2up](https://archive.org/stream/galaxymagazine-1953-05/Galaxy_1953_05#page/n69/mode/2up).

- ✓ The ‘pusher’ idea echoes wishfully every few years, e.g., the 2014 mini-series *Ascension* ends thus, as does the 2019 Canadian very low-budget indie movie *Project Ithaca*, by mental trans-dimensional portals.

<sup>10</sup> Commentary & Citation: Demise of the Daily Stormer:

- ✓ “Neo-Nazi Andrew Anglin had encouraged trolls to target [Taylor] Dumpson after her historic win in May 2017 as the first African-American female student body president at American University in Washington. She was black, she was a woman and she was excelling at university – all things that white supremacists hate. Anglin did not respond to the lawsuit against him and his highly trafficked neo-Nazi Daily Stormer website, even when a \$725,000 judgment was entered against him, the site and another troll – money that Dumpson may never see. And no one was ever identified as the hanger of the lynched bananas around the AU campus, a clear hark back to America’s murderous racist past and an intimidation tactic. ... She hopes her tormentor and others like him stop their harassment for good. ‘Even though you’re a white supremacist, even though you’re a neo-Nazi, even though you think like this, I don’t think you’re always going to think like that,’ she said. ‘I don’t think that it has to be that way.’” – Sara Sidner and Mallory Simon, “He tweeted hate at her. She sued. Then she met him,” CNN, September 21, 2019.
- ✓ “A federal judge ruled Thursday that Andrew Anglin must pay \$14 million in damages to a Jewish woman who was subjected to a troll storm he organized. Tanya Gersh sued Andrew Anglin in 2017 after she and her family experienced years of harassment and intimidation because Anglin published her name and contact information on his website, the Daily Stormer, and urged readers to contact her. Gersh was named in a post that criticized her for becoming involved in a dispute with the mother of Richard Spencer, a white nationalist, and condemned her for being Jewish. ... The judge also approved a permanent injunction ordering Anglin to ‘permanently remove from his website the blog posts encouraging his readers to contact Plaintiff Tanya Gersh and Gersh’s family, including all photographs and images of the family and comment boards associated therewith...’ The Southern Poverty Law Center brought the case to court on Gersh’s behalf.” – Sara Sidner and Mallory Simon, “Neo-Nazi website founder ordered to pay \$14M for troll storm,” CNN, August 8, 2019.

These cases show the limits of civil restitution. According to his attorney, Anglin has fled the country. In any event, no one will ever collect their judgments and he can only be ordered to cease & desist on an individual case basis, unless the attorneys can get a class action suit against him. But he will just go somewhere else and keep doing the same as before. Preventing that is the role of criminal law. I have been aware of the Daily Stormer site in years past, I recall that they have been booted off of many different servers, I think it happened after the Charlottesville, VA situation. What he does on his site and blog is a violation of most service provider TOS, but there are service providers out there who welcome sites like the Daily Stormer.

- ✓ “The website for the Daily Stormer, the white supremacist, neo-Nazi and antisemitic racist group, has lost access to a critical piece of web infrastructure that allows the general public to access its hate propaganda easily. This infrastructure ensures the Stormer, the most read hate site in the world, attracts and maintains website readers and protects it from malicious attacks. But in a hectic 24 hours, Andrew Anglin, the website’s founder, took to Gab.com on Tuesday and told his readers the Stormer was down, and then somehow found an alternate way to keep the site going on the dark web.

The Stormer has lost its main access because it hasn’t paid for the service that allows audiences to view the content, Rob Monster, founder and CEO of Epik.com, told Hatewatch in an email. Epik.com runs BitMiti-gate, a content delivery network, or CDN, that ensures a site’s content becomes visible online.

‘As for Stormer, they actually never paid us a penny,’ Monster wrote. ‘In August we discontinued the free plans. Stormer, like any other client, had the opportunity to secure a paid plan. They chose to overlook those opportunities which were proactively presented with ample opportunity.’

Anglin could not be reached for comment. But on Gab.com, he made a desperate plea for support and noted that the Stormer website might not survive. He wrote he’s seeking \$11,000 in donations to fund continued access to BitMitigate.

‘We’re searching for a new CDN – Bitmitigate is no longer willing to put up with the level of attacks we bring on a budget we can afford. Daily Stormer is now under an unprecedented level of pressure and we’ll have trouble staying online for the future.’

Anglin apparently was referring to web-based attacks that can make the site inaccessible. He noted that the Stormer is still accessible through the Tor browser, a free program that routes users’ internet traffic through a system of servers as a means of offering increased anonymity. Tor is one of the easiest ways to access the dark web, where many extremist sites have set up shop after they’ve found increasing difficulty in staying on the open web.” – “Daily Stormer Website Goes Dark Amid Chaos,” Southern Poverty Law Center.

<sup>11</sup> Commentary: In a previous age, Norman Spinrad would have written this as a Thesis and nailed his Thesis to the door of the Library of Congress.

<sup>12</sup> Commentary: See the macro-historical process identified as the Columbian Exchange.

<sup>13</sup> Commentary: This is not a difficult concept: The end result of most card games played by reasonable, experienced, average-skill players can be divided simply into players who got the cards they needed when they needed them, and those who did not. Inherent in any card game (or any game for that matter) are scarcity and randomness. Human choices and mistakes only move the division bar up or down slightly.

<sup>14</sup> Citation & Commentary: “The biggest change I have seen is in the racial problem, the blacks. And some of it I regret very much. Quite the opposite of the Jews in the case of the Holocaust, the blacks seem not to want to be re-minded of history, seemed not to want – in this Disney project that was announced, we will show you what it was like to be a slave – but a great outcry went up, ‘we don’t want to see that kind of thing.’ Almost the opposite of the Jews having holocaust museums and all kinds of things. I regret that; I think they ought to celebrate their past the same way the Jews did about bondage in Egypt; they are not ashamed of it, they say, we came out of it, we conquered it. I wish there were more of that.” – Shelby Foote interview, Book TV C-Span 2, July 26, 1994 (YouTube).

✓ This is a profoundly interesting thought; I can see both sides of it: The ‘blacks’ may feel that being re-minded of slavery is *holding them back*, enforcing the view of their ‘minority’ status and racism. This is particularly interesting *when contrasted with* reception of the 1970s mini-series *Roots*.

<sup>15</sup> Citation: Dean William Ralph Inge, The End of an Age: and other essays (1948), p. 127.

<sup>16</sup> Citation: Dean William Ralph Inge, Outspoken Essays, “The Future of the English Race” (The Galton Lecture, 1919), available for free on the Gutenberg Project.

<sup>17</sup> Commentary: Robert E. Howard was also called a feminist, and apparently admired by later female fantasy writers, yet, while his works contain strong women, the majority of women are slaves, concubines, and sex objects. For example, see <https://skullsinthestars.com/2011/03/28/what-did-robert-e-howard-think-of-women/>.

<sup>18</sup> Citation: “Other languages will occasionally borrow words from each other. English lures other languages into dark alleyways, mugs them for vocabulary, and goes through their pockets for loose grammar.” – James Nicoll (quote posted on YouTube).

✓ *Cf.* “The problem with defending the purity of the English language is that English is about as pure as a cribhouse whore. We don’t just borrow words; on occasion, English has pursued other languages down alleyways to beat them unconscious and rifle their pockets for new vocabulary.” – James Nicoll (usenet post, 1990, cited in Wikipedia article and on Wikiquotes).

<sup>19</sup> Commentary: Mmmm... so how did I come to this ‘Inge problem’? I was searching on Google on January 30, 2019 for quotes to use in 3 Kairotic Moments, *infra*, which I was rewriting; the search lead me to read the Wikipedia page about William Ralph Inge and then to the Wikiquotes page. I liked the quotes on the page, but then started reading the original works on Google Books and Gutenberg Project and was struck by the discord between the fine-sounding words on Wikiquote and some of what I read from his works online. His works contained many thoughtful, insightful and well written ideas, but frequently, there were comments or asides, or undertones that wrinkled my mental nose. I started to think about the subject, it kind of bothered me a little, and I adopted caution in using his quotes. I must have thought about it while sleeping and I read more of his writings the next morning, found wonderful quotes that were not on Wikiquotes, but also found my appreciation of his works dimming. It had snowed about an inch overnight and just after lunch (February 1, 2019), I went out and shoveled my walk and several neighbors’ walks (I have some elderly, retired neighbors) as the snowfall was tapering off, and while shoveling, I began thinking of the problem in a larger context. Sometime during my shoveling, I began composing this section in my head, and typed it after I came in from shoveling snow.

*“‘You know you never defeated us on the battlefield,’ said the American colonel. The North Vietnamese colonel pondered this remark for a moment. ‘That may be so,’ he replied, ‘but it is also irrelevant.’”*

– Conversation between Col. Harry G. Summers, Jr., Chief, Negotiations Division, U.S. Delegation, and Col. Tu, Chief, North Vietnamese Delegation, on April 25, 1975, as reported by Col. Harry G. Summers, Jr. in [On Strategy: A Critical Analysis of the Vietnam War](#) (1982) <sup>1</sup>

**Dirty Work:** What we had to learn again is that a nation is not well served by treating badly those who do its dirty work – those who are sent to kick the enemy out of this place or that – upon their return should not be scoffed at, humiliated, or shunted aside and forgotten. Nor should a society or its leaders have any illusions about what war means to both sides, the costs both measurable and immeasurable, and to those who happen to be in the way, the generational consequences should not be the cost of political expedient or the need to be right.

**Zero Sum Game:** A zero-sum game is one in which the gains of one side are equaled exactly by the corresponding loss of the other side such that the two come to a sum of zero. Suppose two sides were playing a game where the total number of points in the game is ten and cannot ever be less or more. Both sides start with five points each. If either side gains a point in the game, the other must necessarily lose a point; that is, the point is ‘transferred’ from one side to another.

Zero-sum game theory or thinking is valid in certain contexts.<sup>2</sup> For example, in international affairs, if you started with the premise that there is a finite amount of land on Earth and that *almost* every parcel of land has been claimed by someone or some country (e.g., Rockall); if one gains land, another loses land in equal measure. Bir Tawil is a rare barely ‘habitable’ and uninhabited *terra nullis* between Egypt and Sudan from a political and administrative boundary difference.

- ✓ This is also how discovery of documents is treated in litigation; there is a finite ‘universe of documents’ applicable to any lawsuit and to the extent that one side can deny documents (or any evidence) to the other, that side gains in the struggle and the other side’s chances of prevailing are equally diminished for lack of document evidence. This is not the ideal of justice, but is instead, the practical side of legal practice.

Zero sum is valid in some other contexts, for example, retail sales are zero sum: The customer wants a certain item in a certain amount at a certain time and place, if the customer buys what they need from a competitor, they are not buying it from you.<sup>3</sup> There is a finite demand for product and a finite pool of potential customers at any time; your competitor’s gain is your loss in equal measure. You lose sales if you do not have the right item, at the right price, in the right quantities, at the right time and/or if the potential customer never heard of you or doesn’t want to buy from you for whatever other reasons.

However, zero sum is not always as clear cut as presented here, for example:

- ✓ “Trump’s core supporters tend to regard economic policy as a zero-sum game. Many believe that others must lose for them to win. Most Americans, however, believe that it’s possible to have economic policies that benefit everyone in the country. Six in 10 Market Skeptic Republicans say that pretty much any economic policy will end up benefiting some at the expense of others, much higher than Core Conservatives.” –

James Hohmann, The Washington Post, October 25, 2017, referencing categories in the Pew Research Center report, “Political Typology Reveals Deep Fissures on the Right and Left,” October 24, 2017.

Zero sum thinking is not appropriate in other situations where sides can gain without taking from the other (e.g., information or interstellar colonization) or in situations such as nuclear war (see Michael T. Klare nuclear firebreak feature quote, 1 Combat, bottom p. 945, *supra*), where *both sides lose* equally due to contamination of the land (that is, a lose-lose, everyone loses).

- ✓ In fact, most of the things that civilization has considered important are not zero sum; ethics and social responsibility are never zero sum, nor is knowledge, information, or education in any direct sense, zero sum. These latter three can sometimes seem to be zero sum in the moment when they are filtered through business and power interests, criminal activities, and the interests of the privileged and elite (which tend to merge).

Conflict, and especially war or armed conflict, can be viewed as a seemingly zero-sum generative activity; both the Axis and the Allies could claim paradoxically that WWII was generative activity! Example, compare the real result of WWII to The Man in the High Castle alternate result. The paradox of war – *we are fighting for our children’s future* – collapses when everyone loses. Collapses in the face of war orphans whose parents’ death didn’t make their future better.

- ✓ See also Entropy & Evolution, 1 Order, p. 515, *supra*.

Conversely, after the invention of Stardrive, when the vastness of space is open to colonization, available land and resources are no longer limited to a single planet, everyone can gain by going out to the stars, colonizing, gathering resources in the universe at large without need to forcefully take from others.<sup>4</sup> Unless they want to... (see Why Not Again, 4 Diplomacy, p. 1142, *supra*).

- ✓ **Lancelot to King Arthur:** Your rage has unbalanced you. You sir, would fight to the death against a knight who is not your enemy for a stretch of road you could easily ride around. – Excalibur (1981).

And once a place has been colonized and/or occupied, do not assume that the inhabitants will easily and voluntarily move on; as the colonization of a place represents a claim, an investment of resources, energy, risks taken, and solid ground to call home. Colonized places are therefore, zero sum to the sovereigns and inhabitants, even if they possess stardrive access to endless places and resources. See also discussion of fuel in Unobtainium, 3 Movement, p. 857, *supra*.

- **Interstellar Paleolithic Culture:** The arguments offered above mirror the situation believed to exist in the Paleolithic and Neolithic periods of human civilization, more specifically, arrangements for conflict resolution and resource competition. It’s amazing how the futures we imagine are always identifiable as parodies of past conditions of humanity, even when we don’t specifically discover or become cognizant of those past events or conditions until later.
  - ✓ “According to cultural anthropologist and ethnographer Raymond C. Kelly, the earliest hunter-gatherer societies of *Homo erectus* population density was probably low enough to avoid armed conflict. The development of the throwing-spear, together with ambush hunting techniques, made potential violence between hunting parties very costly, dictating cooperation and maintenance of low population densities to prevent competition for resources. This behavior may have accelerated the migration out of Africa of *H. erectus* some 1.8 million years ago as a natural consequence of conflict avoidance.

Some scholars believe that this period of ‘Paleolithic warlessness’ persisted until well after the appearance of *Homo sapiens* some 315,000 years ago, ending only at the occurrence of economic and social shifts associated with sedentism, when new conditions incentivized organized raiding of settlements.

Of the many cave paintings of the Upper Paleolithic, none depicts people attacking other people explicitly, but there are depictions of human beings pierced with arrows both of the Aurignacian-Périgordian (roughly 30,000 years old) and the early Magdalenian (c. 17,000 years old), possibly representing ‘spontaneous confrontations over game resources’ in which hostile trespassers were killed; however, other interpretations, including capital punishment, human sacrifice, assassination or systemic warfare cannot be ruled out.

Skeletal and artifactual evidence of intergroup violence between Paleolithic nomadic foragers is absent as well.” – from Wikipedia article, “Prehistoric Warfare.”

And there you have interstellar- and far-future post-apocalyptic fiction in a nutshell. Conditions of interstellar space (especially with so many exoplanets already known to exist) offer an infinite Paleolithic population density and social condition, while on the other hand, colonies are established by civilizations that of necessity, must have become settled – as a precondition of technology and cultural development – on their original homeworlds, with attendant expectations of complex organization and infrastructure.

- ✓ “At some point toward the end of the last Ice Age, it appears that human populations were increasing and the option to move around the landscape was being lost. In other words, the landscape was becoming populated with more and more people and so people shifted to reliance more and more on agriculture. And reliance on agriculture seems to be one of the triggers that generates further increase in complexity. Because to be agriculturists, people had to be sedentary. They had to live in more or less the same place every year, and year-round in order to tend their crops. And being sedentary means that they had to live in larger communities.

You know, when you live in large communities, you have disputes between individuals, you have to have rules, you have to have ways of solving disputes. You tend to get people who specialize in certain kinds of things, maybe people who specialize, say, in making pottery or making stone tools or making metal tools. Other people specialize in producing food as farmers. So you get markets emerging and complex economic exchange systems. And so once you have agriculture in sedentary communities that grow in size, then complexities in human societies seem to grow, and that’s been the story for much of – or about the last twelve thousand years.” – Joseph Tainter, podcast interview (transcript) on PeakProsperity.com, by Adam Taggart, June 25, 2017.<sup>5</sup>

Any condition that shifts far future interstellar civilizations from the neo-Paleolithic condition to a widespread settled condition is *purely local*; for example, the interstellar empire of 11,000 worlds is just a teardrop in the ocean of stars, but within its boundaries will exist zones of core worlds, industrialized worlds, farming worlds, and frontier worlds. Sort of like early hegemonic empires centered around a few cities and settled agricultural areas of a large river valley, beyond which lies partially known mountain, forest, Pontic, tribal ranges.

- ✓ Organized warfare, diplomacy and just about everything we know, is thus, an emergent from the triumph of sapience over the environment and the various elements of the Neolithic Revolution.

---

*“The only original bit of color to the generic sci-fi setting is dividing species up into two philosophies: ‘little endian’ and ‘big endian.’ This programmer joke (each term refers to a data format) is a reminder that Starships Unlimited is the personal work of one man, Andrew Ewanchyna.... Ultimately, though, Starships Unlimited benefits from having one designer’s focused and uncompromised efforts.”*

– Sam Parker, “Starships Unlimited: Divided Galaxies Review,” Gamespot, January 17, 2002

---

**Big Endian, Little Endian:** One possible model of GGDM diplomacy (and diplomacy in general) is based on the game theory of *Homo reciprocans* vs. *Homo economicus*, or cooperative man vs. economic man. Which wolf do you feed?<sup>6</sup>

- ✓ To wit: “The *homo reciprocans* concept states that human being players interact with a propensity to cooperate. They will compromise in order to achieve a balance between what is best for them and what is best for the environment they are a part of. *Homo reciprocans* players, however, also are motivated by justification. If a second player is perceived as having done something wrong or insulting, the first player is willing to ‘take a hit,’ even with no foreseeable benefits, in order for the second player to suffer. A common example of this interaction is the haggler and shopkeeper. If the haggler wants a deal and the shopkeeper wants a sale, the haggler must carefully choose a price for the shopkeeper to consider. The shopkeeper will consider a lower price (or a price in between) based on the benefit of selling a product. If the haggler’s offer is a low-ball, which may be offensive to the shopkeeper, the shopkeeper may refuse simply on the grounds that he is offended, and will knowingly and purposely lose the sale.” – Wikipedia article, “Homo reciprocans,” July 21, 2018.
  - Thus, *H. reciprocans* behavior seems to be related to the gene-culture propensity for fairness and altruistic behavior, see Eric Michael Johnson feature quote, 1 The Sidereal Stage, p. 111, *supra*; see also discussions of Metalaw, Mephisto’s Marriage Counseling, 3 Diplomacy, p. 1135, *infra*.<sup>7</sup>
- ✓ cf. “*Homo economicus* is a term used for an approximation or model of *Homo sapiens* that acts to obtain the highest possible wellbeing for him or herself given available information about opportunities and other constraints, both natural and institutional, on his ability to achieve his predetermined goals. ... *Homo economicus* is seen as ‘rational’ in the sense that wellbeing as defined by the utility function is optimized given perceived opportunities. That is, the individual seeks to attain very specific and predetermined goals to the greatest extent with the least possible cost. Note that this kind of ‘rationality’ does not say that the individual’s actual goals are ‘rational’ in some larger ethical, social, or human sense, only that he tries to attain them at minimal cost. Only naïve applications of the *homo economicus* model assume that this hypothetical individual knows what is best for his long-term physical and mental health and can be relied upon to always make the right decision for himself.” – Wikipedia article, “Homo economicus,” July 21, 2018.

- ✓ ‘Utility’ is satisfaction. For example, suppose you could make \$100 per hour mining ore. Your predetermined goal is to make as much money as possible in the shortest amount of time, and mining the ore is your best available option. According to *H. economicus*, in the most extreme interpretation, you will mine the ore even if doing so is dangerous or adversely affects your health in either the long-term or short-term.
  - This does not mean that *H. economicus* cannot be cooperative if doing so is the most cost effective or efficient means of reaching a predetermined goal (e.g. avoiding unnecessary wars), nor does it mean that *H. reciprocans* cannot be uncooperative, if cooperating is not the best course or is not justified (e.g., the other party is trying to leverage, exploit).
- Super-Rationality: Similarly, compare also game-theoretic rationality to *super-rationality*. In a symmetrical game, the super-rational player – without any knowledge of the other player or what they might do – must begin with the assumption that the other player is also super-rational. The super-rational player in such a game will make the choice that maximizes the reward for both players, believing that the other super-rational player will make the same choice (as there is only one logical choice). Thus, the super-rational players inadvertently cooperate. See also, “magical thinking.” Cf.: In normal game-theoretic rationality each player makes the best choice to maximize their own gain with no knowledge or expectation of what the other player might do, out of the available possibilities and with no assumption as to whether the other player is making a rational or irrational choice.
  - ✓ “[Ludwig von] Mises used the term praxeology to name the deductive science that begins with the premise *that human beings act intentionally*. This premise is often called the ‘axiom’ of praxeology. It is an axiom because, in order to disprove it, you have to engage in what the proposition affirms, i.e., you have to act intentionally to argue against the proposition. An intentional action identifies an *end*, or purpose, to the action, as well as certain means selected to achieve that end.” – Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” alertando-oriented.com (blog), April 13, 2016 (emphasis in original).
  - ✓ “Note that Austrian theory does not care and makes no claim about the psychological state of mind of the actor, and whether the action is rational or not. This is also in contrast to mainstream neoclassical economics which rely on a ‘rational agent under constraint’ assumption for the economic actor, an assumption which is increasingly being recognized as seriously flawed or limited.” *Id.*

---

*“Politics in a constitutional republic is not supposed to be a zero-sum game...”*

– James Hohmann, *Washington Post*, September 27, 2017

---

*“E. Pluribus Unum. From many, one.... Humanity is not a zero-sum game.”*

– Sen. Jeff Flake, “I Will Not Be Complicit” speech on the Senate Floor, October 25, 2017

---

**Parliamentary Progression:** For most of history, politics has frequently been zero sum, especially at the highest echelons of government; resulting in exile, show trials, purges, *coups de'etat*, estates seized and executions.

One possible argument for the rise of parliamentary government (and the associated judiciary development) is as a buffer or hedge against the excesses of zero-sum politics and factionalism. At first, it was the lower feudal orders trying to protect themselves from the excesses and demands of the crown (e.g., The First and Second Barons' Wars, 1215-1217 and 1264-1267).

The modern break occurred in England when Simon de Montforte (in 1265, the “uncrowned king of England,” see Second Barons' War) invited townspeople into parliament, a trend that was never reversed. The relatively modern idea of a written plan of government (i.e. the constitution and the constitutional republic) continues that development by pre-delineating the powers and limits of each part of the government and their relationships.

- ✓ There is a well-accepted argument that the American Revolution (1775-1781) was the continuation of and radicalization of the Glorious Revolution in England (1688-1689).<sup>8</sup> The uneasy parliamentary seizure of power was completed in America.

The defeat of the Axis Powers in 1945 could be seen as the final triumph of a global parliamentary movement, with the defeated powers finally adopting (real) parliamentary forms of government. This macro-historical process culminated in the League of Nations and later, the United Nations, a non-sovereign, vaguely parliamentary body intended to curb the worst excesses of zero-sum international relations between sovereign states. Note the subsequent parallel development of controversial non-sovereign ‘international’ regulatory and judiciary entities, such as WIPO, W3C and the ICC (and the odd creature, ICANN, which is still controlled by the United States and was an election issue in 2016, see ICANN Understand, 3 Information, p. 1370, *infra*).

- ✓ From the previously identified East-West technological inversion, the Columbian Exchange, the transition of the Roman Republic to Roman Empire, the Great Migration, it seems that 500 years is the minimum natural macro-historical period. The Parliamentary Progression cycle seems to (generally) fit that period as well. But I have wondered, has this always been true? In the prehistoric past was the ‘macro-historical’ period longer, has it slowly accelerated? And if so, what were the ‘causes’ of the acceleration of later macro-historical periods? And yet that roundish 500-years seems to adequately fit so many of the great events or trends identified in our history such that it has become the staple of science-fiction and fantasy-fiction literature.
- **Judgment:** Has the United Nations been successful? Many times – and this is probably the general belief – the United Nations has seemed a useless, expensive waste of funds; the Soviets felt the United Nations was simply an extension of the United States. They weren't entirely wrong on that. Judgment of the United Nations might begin with the biggest items: There have not been any World Wars since the UN was founded and we avoided the global nuclear war that everyone feared (you and I are still here, having this conversation). There is a question of whether any of this can be attributed to the United Nations, or simply to a more responsible or changed idea of national leadership (and aren't the two related?) or to the inefficiency of the Soviet Union; or simply to the economic, military and diplomatic power of the United States in the latter half of the 20<sup>th</sup> Century (*Pax Americana*). And there are still lots of very bad things that go on inside states and between states; so that the United Nations – like any grandiose human instrument – has fallen far short of the ideal.

- **Jury:** One of the major issues that remain unsettled in the world is whether international law applies only to the relationships between nation-states or whether it also applies to the relationship of nation-states to humanity (some hold that there is no international law, only a set of treaties and agreements). For example, whether the leader of a nation can be held accountable for genocide against the inhabitants, citizens or indigenous populations of his or her own nation? While the latter interpretation can be established by treaties, it can also just as easily be cast aside when inconvenient, for example, the nations that drop from the International Criminal Court (ICC) when the Court issues charges against their leaders. See also Jenny S. Martinez quote, *Interstellar Law*, 3 Order, p. 553, *supra*.

*“At this point it will suffice to say that conflict between empires more often leads to expansion of the victor than to the collapse of both.”*

– Joseph Tainter, *The Collapse of Complex Societies* (1988), p. 61

**Alice in One Plane, the Mad Hatter in Another:** Mr. Tainter is correct, except when thermonuclear weapons are involved.

For the first time in history, the combined nuclear weapons arsenals of the powers present a situation where everyone loses and the damage would last for a very long time. The end of WWII, especially the last act, and the Cold War, made it imperative that we figure out how this thing got started, where it began. This consequence of the Cold War cannot be overstated in the development of Western civilization and nascent global civilization. Significant advances were made from 1960 onward in anthropology, conflict theory, understanding technology, and historical re-assessment of civilizations.

Like civil wars and explosions of human fanaticism, nuclear weapons discard conventional rules and are in a category of their own (see Michael T. Klare feature quote, 1 Combat, p. 945, *supra*).

- ✓ “Mohammed had touched off one of those explosions of human energy which transcend ordinary considerations of arms and tactics. Outbursts of this sort, mysterious and dreadful in the new forces they are capable of generating, have never failed to shatter existing military values. Their true origins, like those of electricity or atomic energy, must remain largely in the nature of a cosmic enigma. Their causes and effects are more open to analysis, and it is noteworthy that such explosions have inevitably led to aggression. Defenders, however brave and patriotic they may be, are never charged with quite the same mystical fury. Man, it has been said, is the only animal on earth willing to fight and die for an idea. The distinction offers a further clue to those hurricanes of conquest which have occasionally swept through history, leaving the wreckage of empires behind them. For the most potent weapon of a Mohammed, a Jenghiz Khan or a Hitler is an idea generated into human energy.... Conquerors of this type, it seems, are not restricted at first by the usual laws of tactics and strategy.” – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), p. 121.<sup>9</sup>

The error of the Secretary of the Interior turned President of the United States in *By Dawn’s Early Light* (1990) is the idea that one can win a global thermonuclear war or achieve an acceptable outcome; when confronted with the unfolding horror, he fell back upon historical and conventional ideas – the wrong framework – to make the most momentous decision in history.

The largest flaw in the movie is that the hawkish Col. Fargo, the expert on Soviet military capabilities and weapons, does not seem to grasp or understand that thermonuclear weapons are not like conventional weapons, they are in a class of their own as a potential existential threat (i.e. the nuclear firebreak)<sup>10</sup> nor does he understand what Capt. Moreau understood, when he advised the President to “Cut off the head of the Soviet chicken.” It is difficult to imagine that he obtained the rank and the position next to the President lacking such understanding. If this were a standard horror movie, Col. Fargo would be the evil supernatural whisperer, like the ghost of Grady in *The Shining* (1980); there is something almost (or perhaps) unintentionally supernatural about Fargo’s character and influence, sort of an echo of the whisperer in *A Canticle for Leibowitz* (1959),<sup>11</sup> and Alice in the other plane is his ‘saintly’ opposite:

- ✓ **President:** We got Alice in one plane and the mad hatter in another. – By Dawn’s *Early Light* (1990).

---

*“When I came back to the United States [from the Paris Peace Conference of 1919], I decided that if you could use propaganda for war, you could certainly use it for peace. And ‘propaganda’ got to be a bad word because of the Germans using it, so what I did was to try and find some other words so we found the words ‘public relations.’”*

– Edward Bernays as quoted by Adam Curtis, *The Century of the Self* (2002)

---

**Propaganda by Another Name:** The feature quotes above and below, taken together, expose an unexpected naivety in such an insightful intellect; first that renaming “propaganda” as “public relations” while retaining the same methods and functions, somehow makes it no longer propaganda, and second, that any tool he might invent, for however good a purpose envisioned, could not be and would not be opportunistically appropriated for the detriment of the people, or for no good purpose. We are all susceptible, however, to this fallacy, it is probably the same horror felt by the innovators and practitioners of modern psychiatry when they found out it would be used for suppression of political dissent (e.g., *Aktion T-4* in Nazi Germany) or to advance agendas.

- ✓ “Sound bytes. Catch phrases. Sales pitches. Words. All lexical legitimizing. ‘A rose by any other name...’ he said. In the end it’s all propaganda.” – J.A. Willoughby, “Promised Land” (2014).

---

*“Goebbels [...] was using my book *Crystallizing Public Opinion* as a basis for his destructive campaign against the Jews of Germany. This shocked me.”*

– Edward Bernays, *Biography of an Idea: Memoirs of Public Relations Counsel* (1965)<sup>12, 13</sup>

---

Endnotes.

<sup>1</sup> **Commentary:** Col. Summers book was my first introduction to Clausewitz’ Ten Principles of War when I was in high school. It is worth reading just for that, and *a lot easier than reading Clausewitz!*

- ✓ In the summer of 2019, I discovered that a full pdf version of Col. Summer’s *On Strategy* is available and free to download from Ike Skelton Combined Arms Research Library, Digital Library.
- ✓ Col. Summer’s comment is sort of like Angmar saying, “No man can kill me.” True, but also irrelevant.

<sup>2</sup> **Commentary:** Ultimately, with a great Freudian reach, one might conclude that zero sum thinking is a natural result of human reproductive psychology and an infantile need to possess mother for safety and survival. If that conclusion is accepted, then what could be said of a technologically advanced, civilized species where the young are

not cared for by the parents (such as sea turtles) and reproductive instinct does not involve transference of infantile possession to the sex partner? Would they develop a zero-sum view?

<sup>3</sup> **Commentary:** Which is something that always puzzles me about Amazon. I go to Amazon and I buy a new pillow. Thereafter, for the next six months, I get spam from Amazon that begins by showing me pillows, has pillow in the subject line. I only needed one pillow. I got what I wanted. I likely will not buy another for ten years, and certainly will not buy another immediately. But Amazon’s spam bots simply go off of what you most recently bought, sending spam emails for more of the same.

<sup>4</sup> **Citation:** “Emigration, as we have seen, does not diminish the home population by a single unit; and so, while there are empty lands available for colonisation, it is by far the best method of adding to the numbers of our race.” – Dean William Ralph Inge, *Outspoken Essays*, “The Future of the English Race” (The Galton Lecture, 1919), available for free on the Gutenberg Project.

- ✓ Dean Inge is eloquent, intellectual and quotable, but a creature of his time who, between clear, quotable lines, often makes statements – possibly for political purposes – that reflect the beliefs of his time and are offensive to the current worldview (he was a church politician). As the title of the essay suggests, the entire discussion (if historically prescient in some respects, e.g., South Africa, and very realistic, practical) has heavy racial undertones which GGDM does not support, but the general idea of this quote is appropriate to GGDM’s Galactic Space. See discussion of the Inge Process, 5 Diplomacy, p. 1161, *supra*.

<sup>5</sup> **Commentary:** The course of a game of GGDM may be considered akin to the evolution of agriculture described by Dr. Tainter. The initial Galactic Space playing area will fill quickly, First Contacts will happen, disputes must be resolved, complexities will arise from the fact that the population in the center is both sedentary and increasing, though some population will move outward as the Galactic Space expands, most of the population will remain in the center and grow into interstellar states. Successive waves of population will settle in bands outward.

<sup>6</sup> **Commentary:** I spent way too much time back then playing Starships Unlimited (commercial release) against the AI on my PC. The three main features that stuck in my mind from the game, over 15 years ago, was 1) the Little Endian/Big Endian diplomacy (I didn’t get the in-joke though), 2) reaching the Age of Singularity (which I thought at the time was black-hole powered technology, but now I am not sure if it referred instead to the Technological Singularity), and 3) being annoyed by the ambient background noise that I either turned down or off.

- ✓ I hope that GGDM has benefitted “from having one designer’s focused and uncompromised efforts.” *Id*. But I cannot really tell... I have no objective view of this issue.

<sup>7</sup> **Commentary:** I was selling games at a convention and a customer asked me the price of a Star Wars X-Wing unit that I had forgotten to tag. Offhandedly, I said, “Probably the same as the others, but let me check.” I probably shouldn’t have said it that way. I checked the distributor’s invoice and saw that the cost of the unit was more than the others, so I calculated the retail markup and applied a price sticker to the unit. The customer came back around and was miffed because it was more than the other X-Wing minis it had been with and because I said it was probably the same price as the others. The guy acted like a real jerk, trying to browbeat me into selling the mini at the same price as the others, and I wouldn’t budge because he was being a total jerk. I was selling plenty and since he was being an ass, I didn’t care if he bought it or not. I would rather lose the sale, and ultimately, he didn’t buy it.

<sup>8</sup> **Citation:** “As far as the government is concerned, we’re seeing something pretty interesting. Parliamentary democracy has been around for 350 years, starting in England in 1689 with the so-called Glorious Revolution, when sovereignty was transferred from the royalty to the parliament. The beginnings of parliamentary democracy in the United States [came] about a century later. Parliamentary democracy is not just based on laws and constitutions. In fact, the British constitution is maybe a dozen words. It’s based on trust and good faith, the assumption that people will act like human beings.” – Noam Chomsky interview by Michael Brooks, “Noam Chomsky: Trump’s Inaction on Climate Change Makes Him ‘the Worst Criminal in History, Undeniably,’” *Jacobian Magazine*, June 23, 2020.

<sup>9</sup> **Commentary:** This description of the phenomenon by Lynn Montross, which has captivated me since I was in high school, may describe both emergence and a punctuated equilibrium (the two are not inconsistent) in human history and civilizations. See continued discussion, 2 Kairotic Moments, EN 3, p. 1437, *infra*.

- ✓ *Dune* was published about five years after Montross published this work. This is not to suggest that Herbert was aware of Montross or would have even looked at his book, but rather that both are expressing an idea that was circulating in the early 1960s. I read *Dune* at the same time I read Montross, in high school.

<sup>10</sup> **Citation:** “Nuclear weapons made annihilation vastly more efficient. A single bomb could now destroy a target whose elimination had once required thousands of bombs. During an aerial attack, you could shoot down ninety-nine per cent of the enemy’s bombers – and the plane that you missed could obliterate an entire city.” – Eric Schlosser, “World War Three, by Mistake,” *The New Yorker*, December 23, 2016 (free online).

- ✓ Oddly, the Kamikaze attacks in the late war months might be considered a prelude: You could shoot down 99% of them, but the one that gets through could disable or destroy a ship and inflict massive casualties.

<sup>11</sup> **Citation & Commentary:** “‘And so it was in those days,’ said Brother Reader: ‘that the princes of Earth had hardened their hearts against the Law of the Lord, and of their pride there was no end.

And each of them thought within himself that it was better for all to be destroyed than for the will of other princes to prevail over his. For the mighty of the Earth did contend among themselves for supreme power over all; by stealth, treachery, and deceit they did seek to rule, and of war they feared greatly and did tremble; for the Lord God had suffered the wise men of those times to learn the means by which the world itself might be destroyed, and into their hands was given the sword of the Archangel wherewith Lucifer had been cast down, that men and princes might fear God and humble themselves before the Most High. But they were not humbled.

And Satan spoke unto a certain prince, saying: ‘Fear not to use the sword, for the wise men have deceived you in saying that the world would be destroyed thereby. Listen not to the counsel of weaklings, for they fear you exceedingly, and they serve your enemies by staying your hand against them. Strike, and know that you shall be king over all.’

And the prince did heed the word of Satan, and he summoned all of the wise men of that realm and called upon them to give him counsel as to the ways in which the enemy might be destroyed without bringing down the wrath upon his own kingdom. But most of the wise men said, ‘Lord, it is not possible, for your enemies also have the sword which we have given you, and the fieriness of it is as the flame of Hell and as the fury of the sun-star from whence it was kindled.’

‘Then thou shalt make me yet another which is yet seven times hotter than Hell itself,’ commanded the prince, whose arrogance had come to surpass that of Pharaoh.

And many of them said: ‘Nay, Lord, ask not this thing of us; for even the smoke of such a fire, if we were to kindle it for thee, would cause many to perish.’

Now the prince was angry because of their answer, and he suspected them of betraying him, and he sent his spies among them to tempt them and to challenge them; whereupon the wise men became afraid. Some among them changed their answers, that his wrath be not invoked against them. Three times he asked them, and three times they answered: ‘Nay, Lord, even your own people will perish if you do this thing.’ But one of the magi was like unto Judas Iscariot, and his testimony was crafty, and having betrayed his brothers, he lied to all the people, advising them not to fear the demon Fallout. The prince heeded this false wise man, whose name was Backeneth, and he caused spies to accuse many of the magi before the people. Being afraid, the less wise among the magi counseled the prince according to his pleasure, saying: ‘The weapons may be used, only do not exceed such-and-such a limit, or all will surely perish.’” – Walter M. Miller, Jr., *A Canticle for Leibowitz* (1959).

- ✓ This is a fantastic potential movie waiting to be made, but it requires the right hand. There are a pair of trailers on YouTube, one was someone’s school project, both of them somewhat missed the point.

<sup>12</sup> **Citation:** “No one really believed the charge, including the people making it, as archives have subsequently shown. But that didn’t matter. The point of the posters was not to convince people of a falsehood. The point was to demonstrate the party’s power to proclaim and promulgate a falsehood. Sometimes the point isn’t to make people believe a lie – it’s to make people fear the liar.” – Anne Applebaum, “History will Judge the Complicit,” *The Atlantic*, published on the internet as a free article about June 5, 2020, appears in July/August 2020 Issue.

<sup>13</sup> **Citation:** “‘Why, of course, the people don’t want war,’ [Hermann] Goering shrugged. ‘Why would some poor slob on a farm want to risk his life in a war when the best that he can get out of it is to come back to his farm in one piece? Naturally, the common people don’t want war; neither in Russia nor in England nor in America, nor for that matter in Germany. That is understood. But, after all, it is the leaders of the country who determine the policy and it is always a simple matter to drag the people along, whether it is a democracy or a fascist dictatorship or a Parliament or a Communist dictatorship.’

‘There is one difference,’ I pointed out. ‘In a democracy the people have some say in the matter through their elected representatives, and in the United States only Congress can declare wars.’

‘Oh, that is all well and good, but, voice or no voice, the people can always be brought to the bidding of the leaders. That is easy. All you have to do is tell them they are being attacked and denounce the pacifists for lack of patriotism and exposing the country to danger. It works the same way in any country.’” – Hermann Goering, Luftwaffe Commander at the Nuremberg Trials, as reported by psychologist and U.S. Intelligence Officer, Gustave Gilbert from a private conversation in his cell on April 18, 1946.

- ✓ Information from Snopes.com, January 3, 2020. According to Snopes, a similar quote attributed to Julius Caesar is “a latter day fabrication” but the Goering quote is authentic.

*Hostis humani generis***Text from Wikipedia Article, captured August 19, 2017**

International waters (also called “the high seas”) have their own customs and usage, rules and articles, and laws. Unlike the case with land, above the high-tide mark, where title, ownership, and sovereignty are created by law based around use and possession, no nation may claim as its territory the high seas, for continuous use and possession of them is impossible; as such, no nation may thus forbid trespass through the high seas. The high seas, since they cannot be owned by anyone, are held to belong to all humanity, and every nation is held to have a separate and equal right to have its ships navigate over them; this is the concept of *mare liberum*, or the freedom of the seas. As the sea is the common property of all, the perils of the sea and of navigation are shared by all mariners, and all nations. A law of amity and reciprocity holds among the seafaring powers, especially in regard to matters related to the protection of life and to a lesser extent, property; for instance, the law stipulates the obligation of every mariner to assist those who are shipwrecked, and the obligation of every harbormaster to provide safe harbor to any vessel in need during a storm, regardless of the flag it flies.

Perhaps the oldest of the laws of the sea is the prohibition of piracy, as the peril of being set upon by pirates, who are not motivated by national allegiance, is shared by the vessels and mariners of all nations, and thus represents a crime upon all nations. Since the time of the Ancient Romans, pirates have been held to be individuals waging private warfare, a private campaign of sack and pillage, against not only their victims, but against all nations, and thus, pirates hold the peculiar status of being regarded as “hostis humani generis,” the enemies of humanity. Since piracy anywhere is a peril to every mariner and ship everywhere, it is held to be the universal right and the universal duty of all nations, regardless of whether their ships have been beset by the particular band of pirates in question, to capture, try by a regularly constituted court-martial or admiralty court (in extreme circumstances, by means of a drumhead court-martial convened by the officers of the capturing ship), and, if found guilty, to execute the pirate via means of hanging from the yard-arm of the capturing ship, an authoritative Custom of the Sea.

Although summary battlefield punishment was conducted by certain nations at certain times with regard to pirates, it was regarded as irregular (but lawful if the attenuation of due process was dictated by urgent military necessity), as individuals captured with pirates could potentially have a defense to charges of piracy, such as coercion. For instance, in early 1831, the 250-strong crew captured off Ascension was brought to Ascension and summarily hanged, as they were acting in a rebellious manner and threatening to overthrow the 30-man crew of HMS *Falcon*, a British sloop-of-war, which took them captive. As the summary punishment in this case was due to military necessity, there was clear evidence of the offense, and it was done proximate in time and location to the battlefield, it can be classified as merely irregular, and not a violation of the custom of the sea.

In more recent times, much of the customary law of the sea has been codified. Piracy is the broadest exception to the principle that a ship on the high seas is subject to the protection of, and jurisdiction of, its flag state. Piracy is considered an offense of universal jurisdiction, such that any state may board and seize a ship engaged in piracy, and any state may try a pirate and impose punitive sanctions in accordance with that state’s own laws. Piracy is defined in Article 101 of the 1982 Convention on the Law of the Sea, and the 1958 Convention on the High Seas also regulates this exercise of jurisdiction.

The tradition of classing the pirate as “hostis humani generis” has been expanded to one other particular class of seafaring criminal, that of the slaver, who, by trafficking in human flesh upon the high seas, is similarly held to be in a state of war against all humanity. These treaties, as well as the customary international law, allow states to act similarly against slavers.

Although the tradition of privateering has been in decline over the past several centuries and international treaties are held to have abolished it, privateering, or the use of private ships as raiders of commerce of the enemies of the sovereign whose flag the privateer flies, is not considered piracy but warfare against a particular national enemy, and thus does not represent a crime against the customary international law, provided those involved adhere to the law of naval warfare.

*“The history of sea power is largely, though by no means solely, a narrative of contests between nations, of mutual rivalries, of violence frequently culminating in war. The profound influence of sea commerce upon the wealth and strength of countries was clearly seen long before the true principles which governed its growth and prosperity were detected. To secure to one’s own people a disproportionate share of such benefits, every effort was made to exclude others, either by the peaceful legislative methods of monopoly or prohibitory regulations, or, when these failed, by direct violence.*

*The clash of interests, the angry feelings roused by conflicting attempts thus to appropriate the larger share, if not the whole, of the advantages of commerce, and of distant unsettled commercial regions, led to wars. On the other hand, wars arising from other causes have been greatly modified in their conduct and issue by the control of the sea. Therefore the history of sea power, while embracing in its broad sweep all that tends to make a people great upon the sea or by the sea, is largely a military history...”*

– Alfred Thayer Mahan, The Influence Of Sea Power Upon History, 1660 – 1783 (1890) <sup>1</sup>

**Port of Origin:** Mahan used the word “influence” in the title of his work, it is clear that Mahan did not believe that sea power *was* world history. Rather, humans live on the land, the population base, cities and nations are on the land, and that is where history is made, where culture, industrial, and political power exists. Sea power is but a foray. This point is epitomized by the decline of the Byzantine fleets after the *land defeat* at Manzikert that deprived them of resources and recruits, see discussion, 2 Construction, p. 671.

In terms of science-fiction, space-opera settings, the truth remains the same, the base of interstellar civilizations are still the population base of the colonies, the difference from Mahan’s time is that starships can destroy entire colony worlds (the ships of Mahan’s time obviously could not decisively and directly affect the population of a continental nation, only interfere with commerce and colonization), which is analogous to the later development of nuclear armed ships that *can* destroy a nation from the sea, both in population, urban centers, and infrastructure.

✓ See also *Nobless Oblige* discussion in 4 Movement, starting on p. 869, *supra*.

It is worth noting, historically, that the Chinese Treasure Fleet and Vasco de Gama’s Portuguese fleet missed each other by about 60 years (i.e. *only* three generations). The vast Ming Treasure Fleet had visited ports all the way to the east coast of Africa from 1405-1433. They were not there for exploration, as the Chinese already knew the coasts and ports; they were not there for trade, as the Chinese were self-sufficient, wealthy, and had plenty of trade. The Chinese fleet was there to show the flag, overawe; which is vastly different than the intent of the Portuguese and later Europeans. The Mings did not found colonies or conquer distant lands, abandoned oceangoing junks, tower or castle ships, and future world history was changed.

**Naval Power:** Military power for the sake of military power is never a sufficient reason. Military power must be integrally related on all levels with national survival, national prestige, and the national will. Naval units, which represent the most advanced and concentrated units of fire-power in the history of the world, are the least exempt from this principle. Naval power must have three reasons for its existence:

1. To protect the homelands from invasion,
2. To protect **Commerce** and the prestige of the nation in the world, and

3. To project forces onto our enemies' shores and areas to enforce our will.

Additionally, as noted in the Manzikert discussion in 2 Construction, p. 671, *supra*, naval power and sea trade is a layer of complexity developed by usually urbanized civilizations to solve a problem. When humans go out into space in a large way, it will be a layer of complexity added to solve a problem – probably we want resources. GGDM participants must assume that the advent of stardrive and interstellar colonization at the beginning of the game is in response to a pregame problem as perceived by their civilization (probably overcrowding, lack of resources, migration urges, and to a lesser extent, actual science and exploration).

- Naval Superiority: In all of their centuries of conflict, the French never sustained naval superiority over England; after 1066 A.D., the French were never able to cross the channel and invade England (but the Stadholder of Holland, William, Prince of Orange did in 1688 what Napoleon never did). During the various conflicts of the 16<sup>th</sup> through 18<sup>th</sup> Centuries, the English were able to harass and raid the French towns along the Channel coasts at will, tying up significant French troops and resources. This situation culminated in the inability of Napoleon to invade England in the summer of 1805 from his massive army camp at Boulogne sur mer and the crushing naval defeat at Trafalgar in October 1805. The historical proximity of Napoleon's greatest land triumph at the Battle of Austerlitz against the combined Austro-Russian armies in December 1805 epitomizes the strategic problem of the First Empire. Napoleon could have had long-term, if uneasy, peace in 1801, but not after 1805.
  - ✓ Organized national navies extend the sovereign boundary control out to sea. In most science-fiction stories, the sea is replaced by space, armed sailing ships replaced by armed spaceships or starships, most space-opera fiction is a parody of Earth history.
- First War: In a general or total war situation between sovereign entities, each side will try to deprive the other of resources, which means attacks on resource production and transportation of resources, e.g., Cargo Ships and Log Ships in GGDM, and population. This may mean attacks on targets of opportunity while they are at **alien colonies**, or even, to be brash and reckless, on **alien colonies** supplying or trading resources to the enemy. This path is well known, famously, it was one cause of the U.S. entry into WWI (i.e. 'unrestricted submarine warfare', 'tonnage war'). Thus, commerce is the propagation agent that can cause the war to spread, drawing in positions and causing or reinforcing alliances across Galactic Space.
  - ✓ You think there will be no war for the heavens? As soon as one or more nations of the Earth (or the entire Earth) begins to import, profit from and depend on imports of anything from space, from other places in our solar system, there will be a need to protect the shipping from whomever disagrees currently and has the power to attack it, whether that is another nation on Earth or extraterrestrial settlements. And the need to regulate and police follows the inevitable corruption, exploitation, inflation from imports. The first defense and attack will likely be space-capable fighters; the side that wins that battle will build armed system boats. The arms race begins.

Remember, everyone says they want peace. Peace is good for business, war is good for business. It might be wise to study the Ferengi Rules of Acquisition (ST:DS9) before playing GGDM.☺

*“The centrality of cities to an understanding of historic societies is an assumption shared by most urbanists but it is scarcely evident in the work of other social analysts. It is still possible to write or compile contemporary histories that allot, at best, a chapter to urban phenomena. This may not be because the other social analysts are being obtuse but rather because urbanists have, in the main, not made an adequate case for that centrality.”*

– Edward Soja, Abstract from “Writing the City Spatially,” *City: analysis of urban trends, culture, theory, policy, action*, Volume 7, Number 3, November 2003, pp. 269-281

**Commerce Power:** All of interstellar civilization hangs on tiny *island motes of dust floating in the endless empty space*. Ninety-nine percent of what we know about anything has to do with these *motes*, and Stardrives only give us the ability to make the leap from one *mote* to the next through unimaginable distances. What kind of interstellar civilization would we have if the only contact between colonies was by the captains and crews of military starships? It is generally assumed that each colony is self-sufficient, they must be or else they will not survive the long periods of isolation. But, even though each colony is self-sufficient, each will eventually produce more of something or find some things easier to have than others, and those excesses have value elsewhere on colonies that cannot produce them as easily as they can buy them or wherever a taste for that product can be cultivated. That is the scene where Cargo Ships and the Commerce Power enter the sidereal stage.

- ✓ “Poor country people often try their luck in town, whether or not the town can absorb them.” – Raymond Birn, *Crisis, Absolutism, Revolution: Europe 1648 to 1789* (2<sup>nd</sup> Ed., 1992), p. 205.
- **Stellar Synekism:** It has generally been accepted that, in the broadest historical sense, food, raw resources and population tend to flow from the countryside to the cities,<sup>2</sup> and that manufactured goods and ‘culture’ flow outward from the cities due to “the stimulus of urban agglomeration” (*ut infra*).<sup>3</sup> This would remain true even with in-system and interstellar colonization; much of science-fiction and space-opera trope is a naturally-occurring argument from synekism that was understood generally before Edward Soja put a name and definition on it.
  - ✓ “Synekism is a concept in urban studies coined by Edward Soja. It refers to the dynamic formation of the polis state – the union of several small urban settlements under the rule of a ‘capital’ city (or so-called city-state or urban system). Soja’s definition of synekism, mentioned in *Writing the City Spatially*, is ‘the stimulus of urban agglomeration.’ ... In densely settled urban places, a critical-mass provides potential for innovation that is not typically available in rural environments, therefore synekism can be thought of as the geographical relationships that create and give importance to cities.” – from Wikipedia article, “Synekism,” January 15, 2019.

Some form of the idea is still present in current historical observation, to wit:

- ✓ “In a cosmopolitan Roman empire, where cities sucked in expendable labour from the countryside, and where artisans and craftsmen had to travel a very long way from home, that kind of community could not be taken for granted or created casually.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were

Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” Aeon, January 30, 2017 (emphasis added).

The immigration to urban centers and industrialized nations, from agrarian cultures, was the driving force behind the standardization of English through the 18<sup>th</sup> and 19<sup>th</sup> Centuries; grammar, punctuation and spelling were standardized and sentence structure and composition replaced the teaching of rhetoric and classics to schoolchildren, to homogenize the culture and assist in mainstreaming immigrants.

- ✓ “This city desert makes you feel so cold, It’s got so many people, but it’s got no soul.” – Gary Rafferty, “Baker Street” (1978).

Many science fiction stories take the polis state to extremes, either as a merger of cities into mega-cities, or in post-apocalyptic or post-fall settings where the rural areas are barren, contaminated and uncontrolled, and the population takes refuge in the remainder of cities.

There are few things or perhaps nothing more synonymous with commerce in humanity than cities, urbanization. Thus, the Urbanization Cultural Proficiency is very much related to the Commerce Power, see 3 Culture, p. 400, *supra*. Not surprisingly, Edward Soja appears there as well, his argument is consistent.

- ✓ “When are you gonna come down?, When are you going to land?, I should have stayed on the farm, I should have listened to my old man.” – Elton John, “Goodbye Yellow Brick Road” (1973).

---

*“There are some oddities in the perspective with which we see the world. The fact that we live at the bottom of a deep gravity well, on the surface of a gas covered planet going around a nuclear fireball 90 million miles away and think this to be normal is obviously some indication of how skewed our perspective tends to be, but we have done various things over intellectual history to slowly correct some of our misapprehensions.”*

– Douglas Adams, “Is there an Artificial God?” speech at Digital Biota 2, Cambridge U.K., September 1998 (transcript and audio recording of the more than one hour speech are available free at <http://www.biota.org/people/douglasadams/>)

---

**Completely Absurd:** I was struck by the way that Douglas Adams died: He died of a heart attack after his regular workout at a private gym at age 49. Seems completely absurd, and I suspect that if he thought about it beforehand (and he probably did), that would have been how he expected to die: absurdly, ironically.

It is like dying while having great sex – an idea not alien to existentialist fiction – I watched a French police detective movie (with English subtitles) long ago in the late 1990s where an old man died in a brothel while having sex on a fancy moving bed with a young prostitute (and that’s mostly what I remember about the entire movie, the idea that stuck in my mind).

- ✓ Private gyms, funerals, movies, prostitution are all commerce, are they not, eh?

**The Power of Commerce:** The Commerce Power may be activated for any of the following six purposes:

1. Trade Mission (interstellar movement of Cargo Ships to known **alien colony**),
2. Load resources to a Cargo Ship,
3. Unload resources from a Cargo Ship,
4. Marketing,
5. Issue Articles of Incorporation (Corporations only, see 1 Corporations, *infra*),
6. Trucking Transactions (local in-system or Balkanized planet trade with aliens),
7. Carting (local RP transfer between sovereign colonies).

Commerce Power activations in GGDM, with the exception of Marketing, are always location-specific activities – thus subject to Power Activation failures – with the eventual goal of inflating a target colony’s GDP for a turn (see Gross Domestic Product, 1 Construction, p. 662). A colony which does not need to build does not need to Unload RPs or receive RPs by Trucking or Carting, a position may eventually become insular.

- ✓ Commerce never *directly adds* to the Treasury, only taxation can do that.
  - ✓ Loading RPs on a Cargo Ship immediately reduces their broader utility but does prevent ‘aging-out,’ see Aging Resources, 2 Taxation & Census, p. 304, *supra*.
- Load & Unload Activations: Activations of the Commerce Power for the purpose of Loading or Unloading resources (hereafter, “Load” and “Unload”) require one Act and one Scene. If the Commerce Power is activated at a colony for the purposes of both Loading and Unloading in the same Regular Turn, *only one Scene is required*.
- ✓ Load and Unload of Cargo Ships should not be confused with Loading and Unloading Population to Colony Ships (see 3 Expansion, generally, *supra*).

Regardless of the ownership of the colony, one Scene must be placed on the colony’s planet, not star, prior to the activation and are removed with the Commerce Power activation. Since the owner of the Cargo Ships cannot place a Scene on an alien colonized planet, unless the colony planet is Balkanized with a loyal sovereign colony, see Lebensraum, 3 Taxation and Census, p. 321, *supra*, the alien trading partner will have to supply the Scene to have other position’s Cargo Ships Load or Unload at their colony.

Thus, there is potential for Balkanized planets as trading posts between regular trading partners. If a Scene is on the planet at the time the Commerce Power is activated for this purpose, it will be taken for the Power Activation. The Concierge will not stop Regular Turn processing to inquire of the Balkanized colony owner whether permission has been granted. This could create issues on the colony owner’s next Regular Turn if they expect the Scene to be there (courtesy between trading partners goes a long way). See Scene Snitching, 3 The Sidereal Stage, p. 124, *supra*.

- Change for a Trillion: Direct transfer of cargo between Cargo Ships of *two different positions*, when located at the same planet, is done by activations of the Commerce Power appropriately by each position on their Regular Turns for the purpose of Load and Unload; Unload has to go first, of course. If either activation fails, the process is aborted, must start over.

Probably one Scene should be able to be used for both, as if they were occurring in the same turn, as long as the Load occurs on the recipient **alien colony** owner’s next Regular Turn, within one Turn Cycle. However, this is a matter of judgment for the Concierge.

- ✓ The cargo transfer may transfer more than RPs ... there is a chance of *apostasy* in the ships engaged in the Loading and/or Unloading depending on whose colony(s) are on the planet, see Alieneys Apostasy, 3 Disruption, p. 283, *supra*.
  - ✓ It is deemed game-mechanically unnecessary to transfer RPs directly between two Cargo Ships *owned by a position*, even if at an *alien colony*, and no rules are provided. If such a rare situation arises, the Concierge will need to handle it.
- **The Store of Worlds:** Activation costs for the Trade Mission and Marketing purposes of the Commerce Power are discussed below (Trade Mission, p. 1189) and in 2 Commerce, p. 1193, *infra* (Marketing). Trucking Transaction, 4 Commerce, p. 1225, *infra*, activations cost one Act, additionally, the first position in the transaction must also supply one Scene on their colony. Carting, *Id.* p. 1229, requires only one Scene on the star *or* on one of the participating sovereign colony planets.
- ✓ “The Store of Worlds” is a 1959 post-apocalyptic psychological healing short story by Robert Sheckley originally appearing in the September 1959 issue of Playboy magazine and later in the January 1963 Italian language issue of Galaxy.
- **Corporate Sponsors:** Activations of the Commerce Power for the purposes of participating in Corporations will be explained fully in 1 Corporations generally, *infra*.

---

*“My grandfather looked at me, and after a bit of silence, he gently and calmly said, ‘Jeff, one day you’ll understand that it’s harder to be kind than clever.’*

*What I want to talk to you about today is the difference between gifts and choices. Cleverness is a gift, kindness is a choice. Gifts are easy – they’re given after all. Choices can be hard. You can seduce yourself with your gifts if you’re not careful, and if you do, it’ll probably be to the detriment of your choices.”*

– Jeff Bezos, Princeton Commencement Speech, 2010

---

**Cargo Ships:** Cargo Ships are starships designed specifically for transporting resources, in any form (except populations), between interstellar colonies. This means they are a little short on life support and are generally not suitable for moving populations.

- ✓ One of the most enduring lessons of being in Marine Corps artillery in the 1980s is that the M923 and M925 are five ton *cargo trucks* and if you happen to be riding in the back of one, as Marines do regularly, *you are cargo* and you feel like cargo. The fold-down side seats don’t do much to help the ride, especially if you are not feeling well – remember that the next time you see a war movie or documentary where the wounded and sick are being evacuated in cargo wagons and trucks!

Rather, Cargo Ships tend to be mostly large empty spaces with only stardrives and a small module to control the ship and house a small crew. Prior to building Cargo Ships, a position must hold the Cargo Ship Existential Patent which is available during the setup process. Cargo Ships are built like other ships, at Friendly, Naturalized, or Converted Colonies that have an Orbital Shipyard, by activations of the Construction Power at a cost of 8 RPs each. Cargo Ships may not carry anything but RPs, they may not carry anything that is to be specifically transported by Log Ships or Colony Ships. Cargo ships are the *only ships that can carry RPs*, though others have capacity expressed in RPs; Cargo Ships can carry 15 RPs of cargo.

Cargo Ships have been pictured in many ways in video sci-fi. Some have been pictured as small ships attached to large fabric and lattice work ‘balloon’ structures providing enormous interior storage spaces. Some have been envisioned as long spine ships, with the bridge at one end, propulsion at the other, and cargo pods attached externally along the spine. Some have been envisioned to operate more like river tugboats pushing barges (a common sight in Pittsburgh). The opening of *Battlestar Galactica* 1978 famously showed a regular ship with Conex Boxes (aka ISO-standard shipping containers) externally attached, humorously labeled ‘Colonial Movers.’

- ✓ I recommend the 2009 Swiss-made, German-language film (with English subtitles) *Cargo: Space is Cold*, which I watched in spring 2019. This highly-intelligent, low-budget, non-Hollywood sci-fi movie touches all elements of Cargo Ships discussed in GGDM. The movie is derivative, especially of the *Matrix* (1999), but also *Alien* (1979), *Solaris* (1971, 2002), and *2001: A Space Odyssey* (1968), but was sparingly praised for being well done (I liked it);<sup>4</sup> there is criticism of the spaceship drives in the movie, but most sci-fi space drives are scientifically implausible (James Blish).
- Cargo Ships in Combat: Not a profitable activity (e.g., *Ferengi Rules of Acquisition*). Cargo Ships are completely unsuited for combat, and have no combat capabilities; they may not initiate combat or attack enemy units, but do have Close-in Defense Weaponry against Fighters (see *Close-in Defense Weaponry, 2 Carriers & Fighters*, p. 1058, *supra*). They are easy targets for even the most primitive warships, being non-warship targets.<sup>5</sup>
  - ✓ [Interview] “Travelling in wartime is something you don’t attempt unless you are strong, and I wasn’t strong but I was ignorant...” – Marge Schreiber (wife of Raemer Schreiber), 1993 interview by the Los Alamos Historical Society.

Any RPs or ‘cargo’ on a Cargo Ship when it is destroyed are lost. Additionally, as Cargo Ships may only travel to destinations *where there are known colonies*, Cargo Ships may not be used for exploration. ‘Known’ is defined as your position has seen it, physically.

- ✓ Civilian ships frequently find themselves in situations where they are flashpoints for international and interstellar incidents.<sup>6</sup> For example, it was a ship called *Arrow* that was the spark leading to the Second Opium War. *Arrow* was originally a pirate ship; was captured by the Chinese government, then resold to a new owner, who registered it under the British flag in Hong Kong. *Arrow* was seized a second time by the Chinese authorities, while flying British colors with an expired registration, who thought (possibly incorrectly) that it was engaged in piracy. The controversies surrounding the seizure of a British-flagged ship with a mostly Chinese crew roused resentments and issues between the sides who were both unhappy with the results of the first war.
- ✓ Oil tankers in the Persian Gulf and transiting the Strait of Hormuz are modern flashpoints of piracy, asymmetric conflict and international protection enforcement.
- Space Bridge: All of the rules that apply to Cargo Ships for Unloading, Loading, Marketing, also apply equally to Cargo System Boats whether with a Tender Starship or operating in a system between colony planets. Since Cargo System Boats cannot travel outside their system without assistance, only Unloading, Loading, and possibly Marketing purposes would apply to them, and since in-system travel is instantaneous, they can Load or Unload from any colony in their system (as appropriate) on any Regular Turn, with proper Commerce Power activations on both colonies. Where Cargo System Boats are on a Tender Starship, the Tender

Starship should be able to act as a Cargo Ship for movement purposes (i.e. Trade Mission Commerce Activation, next page, *ut infra*).

- ✓ The practical limit on capacity of 2<sup>nd</sup> and 3<sup>rd</sup> Era Cargo Ships is 1) the GDP limit of colonies, 2) the amount of RPs in the Treasury, 3) how many Regular Turns are needed to Load (expenditure of Acts, Scenes and Power Activations) and 4) actual need for RPs at target colonies. A similar set of criteria limits 2<sup>nd</sup> and 3<sup>rd</sup> Era Log Ship and Carrier capacity.
- **Move Without Moving:** A Cargo Ship or Cargo System Boat can both Load from and Unload to different colonies in the same system in the same Regular Turn with appropriate Power Activations, without moving (effectively, a ‘space bridge’ between colonies). A loaded Cargo Ship is not required to move to another starsystem to Unload, a loaded Cargo Ship could simultaneously Unload to two eligible colonies in the same system on the same Regular Turn with two activations of the Commerce Power for the purpose of Unloading.

*“He thought, only a madman would give a loaded revolver to an idiot.”*

– Frederic Brown, “The Weapon” (1951) <sup>7</sup>

**Green Goods:** Activation of the Commerce Power for the purposes of Trade Mission requires one Act and one Scene placed on the *star* where the Cargo Ships are currently located. One Activation of the Commerce Power for the purpose of Trade Mission:

- 1) Allows any number of Cargo Ships (whether loaded or empty),
- 2) To depart one starsystem for any number of other starsystems where there is a known colony owned by another position (Native Population Type is irrelevant) or a planet known to be occupied by a free Minor Race.

In other words, a Cargo Ship may move from one **alien colony** system to another, as long as it can remain supplied (e.g., ‘tramp freighter’).<sup>8</sup> Cargo Ships may never depart for any destination starsystem where there is not currently a *known colony* (not the same as a Supporting Colony), or that is beyond their Operational Flight Limitation (see 3 Movement, 855, *supra*). *Only Cargo Ships* may use the Commerce Power activation to initiate interstellar movement.

If Cargo Ships are departing for the purpose of Loading or Unloading RPs at their own colony in the destination system, they should use the Movement Power instead to initiate interstellar movement. However, activation of the Commerce Power for the purpose of Trade Mission costs the same as activation of the Movement Power to initiate interstellar movement and, thus, if there are both friendly and **alien colonies** in the destination system the conditions precedent of either activation is satisfied (i.e. Movement Power activation does not require there be no **alien colonies** in the destination system), and so either could be used. This might be important for some reason, such as Conflict Checks for Government Titles requiring regular Commerce Power Activations.

- ✓ Because of the *normal* processing sequence of Power Activations, it is not possible to Load RPs and have the same Cargo Ship move via Trade Mission in the same Regular Turn.
- ✓ Activation of the Commerce Power for the purpose of Trade Mission does not allow the Cargo Ships to automatically Unload or Load at the destination system. That is, it

is not like Combat Movement or Scouting (see Move Out!, 1 Combat, p. 942 and Then Never Comes, 3 Expansion, p. 907, *supra*), they are separate activations.<sup>9</sup>

- ✓ Activation of the Commerce Power for the purpose of Trade Mission is not required to be able to Load or Unload Cargo Ships at **alien colonies** at the destination (*ut supra*). It is irrelevant how the Cargo Ships arrived before Loading or Unloading – they might even be fleeing a combat in their origin system.
  - How about some alternate history? Vasco de Gama’s Portuguese fleet encounters the Chinese Treasure fleet as it rounds the Cape...
- Before You Go: Like other activations initiating interstellar movement, each ship designated to leave on the Trade Mission must check to see if it obeys the Power Activation. If the ship fails to obey the Power Activation due to inactive Constructural Elements (see Power Off, 2 Constructural Elements, p. 193, *supra*), a second check is made if there are Supporting Colonies in the system, as described previously in Engines Offline, 1 Movement, p. 839, *supra*.  
Ships that fail both checks ignore the Commerce Power activation for the purpose of Trade Mission and remain in-system. If the ship or colony’s Epistemological Constructural Element is active, Enlightenment may be applied to Trade Mission activations.
  - ✓ “The lake, it is said, never gives up her dead, When the skies of November turn gloomy, With a load of iron ore twenty-six thousand tons more, Than the Edmund Fitzgerald weighed empty, That good ship and crew was a bone to be chewed, When the gales of November came early ... Coming back from some mill in Wisconsin ... Concluding some terms with a couple of steel firms, When they left fully loaded for Cleveland, And later that night when the ship’s bell rang, Could it be the north wind they’d been feel’n?” – Gordon Lightfoot, “Wreck of the Edmund Fitzgerald” (1976).
- Icebergs in Space: When moving to a destination system containing only an **alien colony**, the owner of the Cargo Ships must have successfully explored the system previously prior to moving Cargo Ships to the system. Trade Missions to systems containing **alien colonies** do not require the pre-approval of the **alien colony’s** owner prior to starting movement – if the aliens do not approve of the arrival of Cargo Ships in their system, there will probably be some warships present to let their displeasure be known!
- Return from the Abyss: Upon arrival of the Cargo Ships in the alien starsystem, a star and planets must necessarily be placed on the Cargo Ship owner’s Public Space. If there is no room, some pieces will need to be moved by the Concierge to make room. Upon departure of the Cargo Ships from the alien starsystem, the Scene required for the necessary Commerce Power activation must be on the *star* prior to the Commerce Power activation for the purpose of Trade Mission. This may result in Scene Snitching, 3 The Sidereal Stage, p. 124, *supra*.
- Cold Lunch: Cargo Ships arriving at an **alien colony** system where the owner of the Cargo Ships does not have a colony, are not automatically resupplied as they would be if they arrived at any friendly colony. If the alien (i.e. non-sovereign) colony either Loads resources to the Cargo Ships or allows resources to be Unloaded from the Cargo Ships, *then* the Cargo Ships are considered to be *automatically resupplied*, and their Operational Flight Limitations (OFL) and Operational Supply Limitations (OSL) are reset.

Absent loading or unloading at the **alien colony**, the **alien colony’s** owner may also simply grant permission to resupply the Cargo Ships (reset OFL/OSL), which costs nothing to the

**alien colony's** owner (and generates goodwill). Without permission or Loading and Unloading, the Cargo Ships have a 50% chance of obtaining resupply elsewhere in the system each Regular Turn that they remain *before* Supply Rolls.

- ✓ It is *optional* whether the Concierge allows application of Enlightenment to these rolls, representing Robinson Crusoe-like survival ingenuity. Duct tape please?

As long as Cargo Ships can remain supplied, they can move from one **alien colony** to another; if they cannot be resupplied, they need to return home quickly before their Operational Supply Limitation (OSL) expires or they must make Supply Rolls.

- ✓ Resupply in this case is not that which is mentioned in Aliency Apostasy, 3 Disruption, p. 283, *supra*. But it is a bit of a grey area, noting that the Cargo Ships *will be* exposed to possible **apostasy** each time they Load or Unload at the **alien colony**.
- ✓ While there are legitimate questions about whether an **alien colony** would have the proper foodstuffs (e.g., ‘tastes like chicken’),<sup>10</sup> parts, and fuel to resupply Cargo Ships, the game assumes that suitable supplies may be found/manufactured with help.
- ✓ A Cargo Ship that moves from **alien colony** to **alien colony** may eventually develop a bad case of **apostasy**, see Aliency Apostasy, 3 Disruption, p. 283, *supra*.

---

*“It is not the struggle of opinions that has made history so violent, but rather the struggle of belief in opinions, that is, the struggle of convictions.”*

– Friedrich Nietzsche

## Endnotes.

<sup>1</sup> Citation: “The stakes were high, the pressure on Jellicoe immense, and his caution certainly understandable. His judgment might have been that even 90% odds in favour were not good enough to bet the British Empire. The former First Lord of the Admiralty Winston Churchill said of the battle [of Jutland] that Jellicoe ‘was the only man on either side who could have lost the war in an afternoon.’” – from Wikipedia article, “Battle of Jutland” (1916), citing to Massie, Robert K., Castles of Steel: Britain, Germany, and the Winning of the Great War at Sea (2003).

- ✓ “Well might Winston Churchill remark that the commander of the Grand Fleet was the only man ‘who could lose the war in an afternoon.’ In view of this appalling responsibility, the post was given to an admiral of cautious doctrines, Sir John Jellicoe. Under him, as commander of the battle cruisers, Sir David Beatty displayed a lust for combat which carried on the Nelsonian tradition. ... During the next few minutes the German capital ships suffered heavy damage without one of them sinking, but Jellicoe allowed 11 destroyers to cheat his 27 battleships of their prey as he made a 45-degree turn. ... But while the battle of Jutland might be called a German victory in tactical respects, the strategic situation was not changed. Britannia continued to rule every sea except the Baltic, and Scheer himself reported to the kaiser that the enemy could never be brought to terms by means of naval battles. He urged a resumption of the undersea raids on commerce, promising ‘a victorious end to the war at not too distant a date.’ ... The most far-reaching strategic result of Jutland, therefore, was a renewal of German faith in unrestricted submarine warfare. For if the campaign of 1915 had failed, only 19 U-boats had been lost while 54 new ones were being built. At this rate of increase, tremendous results might be expected from a resumption.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 713-715.
- ✓ See discussion of ship building rates, Shipbuilding and Strategic Shipyarding, 3 Construction, pp. 675-676, *supra*.

<sup>2</sup> Citation: “The initial reaction to the depopulation of the plague was for people to flee locations with high mortality rates like London. But an interesting study published last year looking at data from medieval cities found a surprising result. Despite the devastation of the plague and periodic return of the illness, urban populations recovered

to pre-plague populations by the 16<sup>th</sup> century. Further research on abandoned rural villages and deforestation suggest that rural populations decreased over the same period and took more than a century more to return to the pre-plague population. This result is counterintuitive; the general thought would be that places harder hit by the pandemic would recover more slowly, both because their population was harder hit and because people would be reticent to return to high mortality areas. Instead, the data suggests the people moved from low mortality areas in the country to high mortality areas in the city. The conclusion is that factors such as quality of land and human infrastructures ... affected migration more than mortality rates. ... The findings support the idea ... that London saw a significant increase in immigration from the Northern England following the pandemic. This conclusion is supported by records that have been accumulated by the Universities of York and Sheffield in England’s immigrants database ... In the period following the plague, the resulting labor shortage meant a demand for labor, thus conditions and wages were relatively good compared to many places in Europe....” – The History Guy, “The Great Vowel Shift,” YouTube, January 27, 2020.

<sup>3</sup> Commentary & Citation: I believe that I obtained the idea stated in this sentence from an old sociology book that predates Soja by decades. I believe it might have been an essay in Clarence Marsh Case’s Outlines of Introductory Sociology (1924), though the printed index was not helpful in finding it.

<sup>4</sup> Citation: e.g., Cheryl Eddy, “The 10 Best Foreign-Language Sci-Fi Movies Of The Last 10 Years,” Gizmodo, December 11, 2016, where it is listed at Number 4.

<sup>5</sup> Commentary & Citation: However, the overloaded cargo ship *Margaret and John* carrying colonist to Jamestown in 1621, defeated *two* Spanish men-o-war in a boarding action. See “Lawrence Bohun (d. 1621),” Encyclopedia Virginia, and “Jamestown Settlers versus Spanish Pirates,” The History Guy YouTube Channel, January 21, 2019.

<sup>6</sup> Citation: “The Trump administration has used diplomatic pressure, legal action, economic sanctions – and even cold, hard cash – to try to get its hands on a hulking Iranian oil tanker that has been spinning its way around Africa and the Middle East for months.

The extraordinary effort to seize the vessel has come to naught – so far. Even a curious State Department offer to make the ship’s captain a multi-millionaire fell flat. But the cat-and-mouse game between Iran and the Trump administration over the vessel – called the *Adrian Darya 1* and laden with 2.1 million barrels of oil – is emblematic of an increasingly confrontational relationship. And like the fate of the supertanker and its crew, the outcome of the U.S.-Iran tensions remains unclear.

The Trump administration’s efforts to capture the *Adrian Darya* is a small part of its ‘maximum pressure’ campaign – aimed at reducing Iran’s oil exports to zero, strangling its economy, and forcing its leaders into negotiations with President Donald Trump. Trump withdrew the U.S. from the 2015 nuclear deal between Iran and other world powers, saying it did not do enough to curb the Islamic Republic’s ballistic missile program and support for terrorism.

Experts say Iran’s ability to keep the *Darya* out of the U.S. government’s long reach illustrates the shortfalls of the U.S. strategy.” – Deirdre Shesgreen and Kim Hjelmgaard, “Trump official offered millions of dollars to captain of Iranian ship,” USA Today, September 8, 2019.

<sup>7</sup> Commentary: Though often noted as not being a science-fiction short story, this lovely piece of anti-nuclear weapons protest prose is frequently found in anthologies of best science-fiction short stories from the Golden Era.

<sup>8</sup> Citation: “... You see, gentlemen, behind every great man there is a woman urging him on. And so it was with my Stella. She urged me on into outer space. Not that she meant to, but with her continual, eternal, confounded nagging. Well, I think of her constantly, and every time I do, I go further out into space. ... I had the androids construct a perfect replica of Stella so that I could gaze upon her and rejoice in her absence.” – Harry Mudd, “I, Mudd” (ST:OS) (1967).

<sup>9</sup> Commentary: In many games, the Cargo Ship would automatically unload at the destination. This was a design choice I made long ago, the probable reason is that there is an operational difference between Scouting exploration, Combat Movement and Commerce. In the case of Scouting, arriving in an unexplored system triggers the automatic exploration; there is nothing else for the Scout to do, by virtue of being there, they are ‘looking.’ In Combat Movement, within 24 hours of arrival, the ship owner has to send Combat Orders to initiate the combat, so there is a decision point right after the turn results are received. In the case of Cargo Ships arriving, there was the possibility of multiple colonies in a system, both friendly and alien, and thus, Unloading or Loading RPs could not be automatic. The same is true for Colony Ships: Loading, Unloading or Landing after arrival cannot be automatic.

<sup>10</sup> Commentary: e.g., even dog and cat food are not recommended for human consumption, not only because of the inferior products and processing, but because the food is tailored to their nutritional needs – cat food has higher magnesium and ash content than human food because they need it.

*See Appendix COM – Trading with Scene-snitching Aliens Example*  
*See Appendix ENVAL – Enhanced Value & Looting Summary*

*“The captain might navigate a starship and the explorer might detect useful civilizations by the most tenuous of signs, but in the final clutch it was the trader ... who faced the aliens and who plucked out of their minds and culture that which was useful and give in return something they found useful.”*

– Isaac Asimov, “Nothing for Nothing” (1979)

**Interstellar Barter:** As discussed previously in What You Got, When You Get, 2 Taxation & Census, p. 302, *supra*, the basic economic unit of this game is the Resource Point (RP); the game addresses only resources. There is no ‘monetary system’ or ‘money’ in the game.

Given the awesome complexities of the money markets and values on our one little planet, there is some doubt as to whether such a system could be made to work in interstellar civilization between widely-separated worlds, with minimal interaction, where each world is a civilization onto itself. Imagine, for example, a ‘water planet’ with only a few scattered inhabited islands,<sup>1</sup> and vast distances of ocean in between; among the premodern Polynesian island cultures of the south Pacific, the most commonly traded items, beads and sea shells – easy to transport on small boats – were the only items that approached any kind of ‘currency’ as they circulated through the islands. In short, the basic interstellar commerce system depicted in this game is at best crude.

➤ **Intrinsic Value:** The “intrinsic value” of a resource or thing is the inherent value of the object in a particular economic location. In our own world, the most common example used for ‘intrinsic value’ is sports memorabilia, for example, a famous player’s autograph on a baseball vastly inflates the value of the baseball which, by itself, has low intrinsic value.

✓ Babe Ruth signed far more baseballs after he died than he did in his lifetime.

A baseball in an industrialized Western nation has low ‘intrinsic value’ because they are mass-produced at low cost from readily available materials, they are commonly available items, and they are not necessary for everyday survival; a baseball is a luxury. The MLB uses over 160,000 baseballs in a season, about 90-120 baseballs per game. If the baseballs were transported to another country, where the people are poor, the value of the baseball might increase because they are imported (arbitrage), and are a rarer and highly desired commodity in that country, or they might be worthless in the sense of unsellable because poor people don’t have spare money (or desire) to buy them. Consumerism requires both.

In interstellar economics, it can be assumed that every colony planet will eventually have or develop an excess of a resource, or have or develop a resource that is of little or no value to that colony planet except that it has value for trade elsewhere. Cargo Ships pick up resources from places where there is an excess, and where the resource has a relatively low ‘intrinsic value’ and by virtue of transporting them to places where they are needed and in demand, increase the value of those resources upon safe arrival at the destination.

✓ Resource has been used very broadly in this game system, to mean anything that is useful and necessary to the functioning of civilization and/or everything, whether tangible or intangible, that is available for a civilization to draw upon in carrying out its basic functions or to perform a necessary task. In this game, resource and Resource Points (RPs) have been used for raw materials, manpower, intellect, trained special-

ists, food and basic living items, as well as high-end manufactured items, such as machinery, metals and alloys, and even stardrives. One can have all the resources imaginable – for example, being the sole occupant of a treasure-filled pile of rocks on the Giza Plateau – and not have a RP in Varanasi. Hint: You need Cargo Ships!

- **Enhanced Value:** Enhanced value – a key concept in GGDM commerce – is obtained by comparing the ownership of the Cargo Ship and the colony where it is being Loaded or Unloaded, *if they are different*, the cargo has *enhanced* RP value to the recipient. Enhanced value simply represents *boundary control function* and boundary crossing, even if the origin of the RPs Unloaded is the same population type as the colony receiving them.
- ✓ Enhanced Value accrues only to the **alien** recipient of the RPs at the time of receipt in any qualifying situation. ‘Double enhancement’ is possible if RPs Loaded from an **alien colony** are subsequently received by (Unloaded to) another **alien colony**.
  - ✓ The true value of receiving alien RPs is not having to subtract RPs from the Treasury, plus inflated local GDP when downloaded, and building diplomatic contacts.

This system is deliberately vague and simplistic; the game does not track origin of RPs or the origin, movement and activity history of ships, and players should resist the urge to exploit ‘loopholes’ in the system.<sup>2</sup> It is up to the participants to look or not look, to use in the game if necessary and suitable to the story, and to be honest and play the game rules in good faith.<sup>3</sup>

---

*“[Trader] ‘I pointed out that a smaller stone-tipped stick could be hurled forward with greater force and effect and with longer range if a cord under tension were used as the mechanism of propulsion.’*

*The explorer said, ‘Such devices have been encountered among primitive intelligences which were, however, far advanced beyond these. Paleontologists call it a bow and arrow.’*

*The captain said, ‘How could the knowledge be absorbed? It couldn’t be, at this level of development.’*

*[Trader] ‘But it was. Unmistakably. ... Surely you do not think I would have taken these art objects were they twenty times as valuable, if I had not been convinced that I had made a return? Nothing for nothing, Captain.’”*

– Isaac Asimov, “Nothing for Nothing” (1979)

---

**Marketing:** Prior to departing for a distant colony with a load of RPs, or to pick up a load of RPs, it is helpful to know where the cargo might be in demand.

Activation of the Commerce Power for the purposes of Marketing requires one Act, and allows a position to obtain *with certainty* advance knowledge of the *enhanced value* by percentage in the value of the cargo if Loaded from or Unloaded at non-sovereign colonies within the Operational Flight Limitation (i.e. ‘the range’) of the Cargo Ship (excluding those located in the same system as the Cargo Ship is currently). Thus, the activation must specify a target Cargo Ship or ships that are currently located at a colony (ownership is irrelevant). There is no Power Activation check for Marketing, this is the only purpose of Commerce Power that is not possible to fail.

- ✓ Activation of the Commerce Power for the purpose of Marketing is a commitment to activation of the Commerce Power on the following Regular Turn for purpose of Trade Mission (*ut infra*).

- ✓ In the Actions submitted to the Concierge by the position, the position may list one known non-sovereign colony within range of the Cargo Ship(s) for each currently undisrupted Government Title held by the position.
- ✓ In return, the Concierge will provide the *enhanced value* expressed in a percentage both if cargo is loaded from or delivered to any of those locations (i.e. one activation).
- ✓ The values provided by the Concierge are only valid *if* the target Cargo Ship departs for any of those locations in the next Regular Turn. If not, the Marketing is wasted.

Marketing is never required, Cargo Ships may always depart for any legal destination within their range, with or without cargo, and may travel blindly to whatever market is at the destination. Note that, in some instances, the Concierge may manually adjust the market values (by Intervention) if a location has received too many unloads or loaded too many ships recently, or for other circumstances; but in most cases, market value will be determined by a die roll.

- ✓ Marketing cannot be used or applied to Trucking Transactions as they are of a different structure than standard interstellar trade. See Flea Market 4 Commerce, p. 1225, *infra*.
  - ✓ Marketing cannot be used or applied to Looting, see Black Market, 3 Commerce, p. 1211, *infra*, but they do still receive enhanced value when Unloaded.
- Price-Lock Ness: The Marketing Activation must function as a ‘price lock’ (even if not realistic) otherwise, it is pointless in the game. As with some other GGDM rules, this is a concession to game necessity. The economic fallacy of the Marketing Activation in GGDM is that it implies perfect knowledge and perfect competition – the very same features alleged as advantages to centralized managed economies, like the Soviet Union which failed miserably.
- ✓ “Since human beings are finite and temporal, praxeology pays attention to the time dimension of human action. From that attention to time, praxeology quickly hones in on the idea of *future uncertainty*. Uncertainty means that the future is ‘somewhat predictable,’ i.e., it is neither completely determined nor completely random. Future uncertainty is conclusively deduced from the axiom of intentional human action. If future outcomes were completely known with certainty, *no ends would be chosen*, as we would simply wait for those outcomes to occur. Conversely, if we thought the future were completely random, *no means would be selected*, since we would not think that means could help achieve ends. The emphasis on time considerations and on future uncertainty is one of the main reasons Austrian economists typically reject basic neoclassical economic market models that invoke idealizations like ‘perfect knowledge’ or ‘perfect competition.’ Such models imply instantaneous adjustments to prices, which cannot conceivably occur in real human action. Austrian economists believe these models are flawed and must be rejected.” – Michael Accad, M.D., “An introduction to praxeology and Austrian school economics,” [alertandoriented.com](http://alertandoriented.com) (blog), April 13, 2016 (emphasis in original).

Participants are invited to give the GGDM Marketing Activation some thought. One might try to imagine how it would actually work with Cargo Ships (‘tramp freighters’) going wherever they think there is a market for their cargo or to find a cheap load, or it might be that in future interstellar civilizations, through means unknown to us currently, the neoclassical models of perfect knowledge and perfect competition might be realized? GGDM inherently assumes much of what is not now thought possible.

- ✓ Marketing is simply a ‘marketing’ tool – obtaining advanced knowledge of the enhanced value of the RPs if loaded or unloaded at target non-sovereign colony(s) – whereby a position can use Marketing to negotiate trade at an **alien colony** for enhanced value. Marketing takes no account of the origin of the RPs (which could theoretically be the same as the colony to which they were unloaded); the game information does not track the origin of RPs or the activities of ships.
- ✓ Loading RPs at an **alien colony** then Unloading them to the same colony for enhanced value both ways is called ‘**porting**’ in GGDM and *violates the spirit of the system*. The cost of this, constant use of Scenes and Power Activations, and **apostasy** risk, might be deemed by some to be worth the *double enhanced value* at the colony, but the RPs can only be used at that colony limiting their ‘unjust’ enrichment potential slightly. The Concierge may also notice and probably should forbid it unless some convincing rational and extra-rational reason (as in very imaginative) can be supplied.

*“Mercantilist theory and practice should be placed within the context of the age – a time of excessive international warfare, internal political strife, crop failures, severe climactic variations, defective consumption, insufficient distribution, and depressed prices alternating with scarcity-provoked inflation. Governments felt obliged to intervene in the economic life of states in order to find ways of combating the gloomy prospects.*

*Jean-Baptiste Colbert, Louis XIV’s controller-general of finance, was the most energetic of the experimenters. He persuaded his king to raise tariffs, regulate manufacturers, establish and underwrite commercial companies, and encourage the immigration of foreign craftsmen. He also convinced his king to go to war in order to crush commercial rivals and take over their markets. Louis needed little encouragement to merge his dream of dynastic glory with Colbert’s mercantilist vision. ... War was the crudest weapon of the mercantilists. It promised the quickest solution but entailed the gravest of risks. Tariff barriers against manufactured goods offered a more subtle approach. ... Indiscriminately applied tariffs have a boomerang effect though.”*

– Raymond Birn, [Crisis, Absolutism, Revolution: Europe 1648-1789](#) (2<sup>nd</sup> Ed., 1992), p. 53

**Tariff Walls:** Any of the preceding sound familiar? The ghost of Colbertine mercantilism remains. There is caterwauling about tariffs and import trade imbalances around every national election. The entire current economic system was created in large part by the obligatory government intervention to fight the Great Depression and subsequent recessions. The difference is that actual war, with bullets, in the current world order, is too risky; e.g., the 1990 Iraqi invasion of Kuwait, whatever the reasons offered, was widely seen as an attempt to crush and annex a commercial rival and gain a greater share of the oil market. The war is now in cyberspace.

**Before the Big Bopper (“Chantilly Lace”):** Mercantilism vs. Consumerism formed one of the great, intricate, protracted socioeconomic struggles of Europe during the 16<sup>th</sup> to 18<sup>th</sup> Centuries. Mercantilism, practiced famously by France, emphasized the production of goods for export and on the accumulation of cash reserves through positive trade balance.

The underlying assumption of the time was that the only people who had money to spend were the wealthy and thus, industries that produced exports that appealed to the wealthy, and the greatest cash surplus, were encouraged and supported by the state. France became famous for wines, Chantilly lace (before the Big Bopper), clothing fashions, perfumes, cosmetics, hats, shoes, pastries and confections, art which they exported for high profits around the world.

- ✓ “The glass of Saint Gobain, silks of Lyon, tapestries of Beauvais, Chaillot, and the Gobelins factory of Paris, the embroidered cloths of Arras and Carcassonne – all became by-words for quality and beauty among leisured customers. France became the workshop of Europe’s aristocracy. Colbert could conceive of no other kind of market. He set the tone of *luxe* for French products that haunts its industry to this day.” – Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648-1789 (2<sup>nd</sup> Ed.), p. 55.

Consumerism, conversely, encourages the accumulation and consumption of goods and services. Mercantilism plays into consumerism, however, consumerism makes the assumption that most people have some spare change, and that if they have spare change and see something they desire, they will buy it if they can afford it. Consumerism is instantly familiar to the reader because, when combined with the industrial revolution of the 17<sup>th</sup> to 20<sup>th</sup> Centuries, it was wildly successful. Manufacturers can make a huge profit selling cheaply mass-produced goods to common people in their own country and in other countries in exchange for their spare change; especially if the goods are consumable and the sale is repeatable. Simply put, consumerism has a larger market base at a smaller *per-unit* profit than mercantilism, and also works domestically in a political and social view by meeting the needs of the population and driving new products.

Both have always existed and still exist as local and national business or market strategies. What made the rivalry so prominent was the opposing models of France (agrarian, religious) and Britain (urban, middle class) and their conflicts for colonial, naval and world market hegemony (see 2 Disruption, EN 9, p. 280, *supra*). France, resisting technological and socioeconomic change and industrialization, lost to the Anglosphere for that and other geopolitical reasons.

- ✓ “In the almost complete absence of other sustained macro-political and social narratives – concern about global climate change notwithstanding – the pursuit of the ‘good life’ through practices of what is known as ‘consumerism’ has become one of the dominant global social forces, cutting across differences of religion, class, gender, ethnicity and nationality. It is the other side of the dominant ideology of market globalism and is central to what Manfred Steger calls the ‘global imaginary.’” – Paul James and Imre Szeman, Globalization and Culture, Vol. 3: Global-Local Consumption (Introduction) (2010) [Introduction section is available on academia.edu for free].

The base assumption of the discussion of domestic subsistence ‘comfort level’ in GGDM (see Resources, 2 Taxation & Census, p. 301, *supra*) is probably shaded toward consumerism because it was written by a late 20<sup>th</sup> Century person of Western culture, for readers of the same milieu, though the core arguments of domestic subsistence are independent of consumerism. Positions in GGDM however, might develop forms of mercantilism or enhanced export values to certain well-known markets by use of Writs, Specialized Colonies, Commerce or Marketing Colleges.

- ✓ “Some contemporary theorist already saw the shortcomings of Colbertine mercantilism. The great French marshal Sébastien Le Prestre de Vauban (1633-1707) pleaded for a system of priorities that would place the welfare of laboring poor ahead of a favorable balance of trade ... Vauban advocated state responsibility for full employment even if it meant giving away exports, and called for a graduated tax based on income, not rank. ...the legal officer Pierre le Pesant de Boisguilbert (1646-1714) pointed out mercantilism’s failure to grapple with maldistribution of wealth. *Money, he believed, had become the master, of commerce not its servant.* ... As might be im-

aged, Colbert's theories found severe critics across the English Channel." – Raymond Birn, *Crisis, Absolutism, Revolution: Europe 1648-1789* (2<sup>nd</sup> Ed., 1992), pp. 55-56 (emphasis added, this is still more true today, e.g., Wall Street, FINRA).

- In the remainder of the quoted paragraph, Mr. Birn goes on to discuss the Fable of the Bees (1714), as one of the main severe criticisms of Cobertine mercantilism which is also one of the original arguments for consumerism.

Consumerism has also not solved maldistribution of wealth and thus is not better in that sense (as Oxfam's annual global wealth reports show), in fact, many feel that it has made it worse or is the culprit (noting however, that maldistribution of wealth has always existed *as long as there is force of law*, e.g., "An imbalance between rich and poor is the oldest and most fatal ailment of all republics." – Plutarch). See *Economic Inequalities*, p. 246, and EN 8, p. 251, 3 *Entropy*, *supra*.

➤ The Paradox of Thrift: Consumerism is paradoxical to savings as a concept of wealth accumulation and moral good. It is called the Paradox of Thrift; generally that more saving and less spending as a widespread sociocultural, socioeconomic value is actually bad for the economy leading to decreased output, decreased demand, and unemployment in spiraling effect. Yet in the centuries before consumerism took hold, frugality and savings were seen as both morally virtuous, and the means to wealth accumulation (excepting the aristocracy and nobility *who were expected to be extravagant* to benefit others by employment and trade). The advent of consumerism thus tracks with general secularization in the West.

- ✓ "The paradox of thrift ... is a paradox of economics. The paradox states that an increase in autonomous saving leads to a decrease in aggregate demand and thus a decrease in gross output which will in turn lower total saving. The paradox is, narrowly speaking, that total saving may fall because of individuals' attempts to increase their saving, and ... that increase in saving may be harmful to an economy. Both the narrow and broad claims are paradoxical within the assumption underlying the fallacy of composition, namely that what is true of the parts must be true of the whole. The narrow claim transparently contradicts this assumption, and the broad one does so by implication, because while individual thrift is generally averred to be good for the economy, the paradox of thrift holds that collective thrift may be bad for the economy. It had been stated as early as 1714 in The Fable of the Bees, and similar sentiments date to antiquity. It was popularized by John Maynard Keynes and is a central component of Keynesian economics. It has formed part of mainstream economics since the late 1940s." – from Wikipedia article, "Paradox of Thrift," January 17, 2019.

Expression of such sentiments in late antiquity would have been clearly anti-Christian (in the sense of virtues and vices), as Christianity then inveighed mightily against Roman vice and excess, as leading to the martyrdom of Jesus Christ and many of the Apostles.

- ✓ See also the Parable of the Broken Window introduced by Frédéric Bastiat in 1850 which makes a somewhat similar economic argument for consumerism.
- Consumerism Modernity: Consumerism became historically intertwined with, or perhaps caused in large part, industrialization of manufacturing and unionization of labor. Though probably not supporting mercantilism, Dean Inge in the early 20<sup>th</sup> Century still expresses the English aristocracy's skepticism of consumerism that relates to unionized labor:

- ✓ “The manufacture of goods to be exchanged for food may fall off owing to foreign competition, a result which is likely to follow from a rise in the standard of living, for the labourer then demands higher wages, and consumes more food per head, which of itself must check fertility, since the same amount of food will now support a smaller number. The delusion shared by the whole working class that they can make work for each other, at wages fixed by themselves, is ludicrous; a community cannot subsist ‘by taking in each other’s washing.’ Or the supply of importable food may fail by the peopling up of the countries which grow it.” – Dean William Ralph Inge, Outspoken Essays, “The Future of the English Race” (The Galton Lecture, 1919), available for free on the Gutenberg Project [notice the awful ‘X-up’ form existed in 1919?].

Dean Inge is referring to the Malthus concepts, which have so far, been checked by expanding technology which has exploded crop yields per acre and created stored surpluses that required government market controls and subsidies to maintain prices.

- ✓ “The second problem ... is that technological optimists argue that we don’t really [need] to worry about resources, that all we need are free markets and the price mechanism. That as long as there are free markets that whenever resources start to become scarce, the market signals that it’s time to innovate, that there will be rewards to innovation. And so the assumption is that as a resource becomes scarce, people develop – put effort into developing a new resource or finding more efficient ways of using the existing resource or developing new technologies and so forth. This is a hard argument to counter because up until this point, the technological – excuse me – the technological optimists have been correct. We have maintained the most complex society humanity has ever known, and we have maintained it up to this point...” – Joseph Tainter, podcast interview on PeakProsperity.com, by Adam Taggart, June 25, 2017.

Inge’s and Tainter’s commentaries also relate back to the domestic subsistence discussion, see 2 Resources and Red Planet, 2 Taxation & Census, pp. 301, 307 respectively, and Natural Assumptions, 4 Taxation & Census, p. 327, *supra*.

- ✓ See also discussion of the Inge Process, 5 Diplomacy, p. 1161, *supra*.

---

*“Germany had been forced to depend largely on synthetics after conquering the productive capacity of a highly industrialized continent. Japan’s problem was exactly the reverse. After conquering endless supplies of raw materials, Japan could depend only on the limited manufacturing potential of the home islands. If the two Axis Powers had managed to pool such resources – if they had been true political and geographical instead of unilateral partners – the difficulties of their enemies might have been multiplied. But in the strategic sphere, the Allies were able to wage a war on interior lines, with the bombing plane serving as the most effective weapon against Germany, and the submarine as well as the bombing plane against Japan.”*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 957 <sup>4</sup>

---

**Use Two Hands Please:** Commerce Power Activations for Loading or Unloading Cargo Ships require that both the colony and the ship(s) that are the target of the activation check to see if they obey the Power Activation.

The colony should be checked first because if the workers are on strike (i.e. fail to obey the Power Activation) then there is no need to check the target ships and the activation will fail. If

the colony obeys the Power Activation, then each ship involved must also check to see if it obeys the Power Activation, and if so, Unloading or Loading will proceed. If a ship fails to obey, it will not perform as ordered, but other ships might if multiple ships were targeted. An active Epistemological Constructural Element at the colony or on a ship, allows Enlightenment to be applied to their rolls if it was designated for that Power Activation.

- ✓ If the Loading or Unloading is occurring at a non-sovereign colony, the colony is *first* checked to see if it ‘obeys’ the Power Activation (i.e. accepts alien goods) as if the colony owner had activated the Load or Unload Resources at that colony. If the colony fails, the alien goods are not Loaded from or Unloaded to the Colony, regardless of the willingness of the Cargo Ships involved. Enlightenment can be used to reroll failed die rolls if the ships have active Epistemological Constructural Elements (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*), *but cannot be applied to the alien colony’s roll* because there is no Power Activation. If the **alien colony** fails first, rolls for the ships are not necessary and Enlightenment will not be used.

**Uploading:** Cargo Ships *that begin the turn* in a system with an eligible colony may Load RPs from that colony by activating the Commerce Power for the purposes of Loading.

- ✓ Eligible colony is defined as either a sovereign colony or a non-sovereign colony where permission has been given by the owning position to Load RPs from the colony. Colony political status is irrelevant to eligibility to Load RPs.

A colony may not load more RPs to the Cargo Ship in a turn than the colony would have produced if it had been taxed at the beginning of the turn (i.e. the GDP limit, see Gross Domestic Product, 1 Construction, p. 662, *supra*), with the exception of Looting (see 3 Commerce, p. 1210, *infra*). As discussed in 1 Construction, *supra*, a colony may not spend more in a turn on activities at that colony than the colony would have produced if taxed at the beginning of that turn (see Gross Domestic Product), and this applies to Loading RPs to Cargo Ships as well as Construction Activities. The RPs loaded to Cargo Ships (similar to RPs spent on Construction activities) are subtracted from the position’s Treasury. RPs loaded to alien Cargo Ships between Regular Turns, count toward the colony’s GDP on its owning position’s next Regular Turn.

- ✓ Ships which execute a short movement arrive at the end of the same Regular Turn thus, a Cargo Ship that completed a short movement would be at the colony at the beginning of the next Regular Turn for the purposes of Loading RPs. See Space Hop, 2 Movement, p. 850, *supra*.
  - ✓ Loading is also used by the receiving Cargo Ship to transfer RPs between Cargo Ships owned by different positions if they both begin the Regular Turn in the same colony system (permission is obtained by the previous Unload action issued by the owning position to the alien Cargo Ships involved), see Change for a Trillion, 1 Commerce, p. 1185, *supra*.
- **Front End Loading:** Cargo Ships each have a limit on RPs that can be Loaded onto the ship, which is governed by the Cargo Ship’s Patent and any improvements or enhancements that may have been made to the Cargo Ship Patent; a Cargo Ship may never Load more RPs than its capacity. Upon activation of the Commerce Power for the purpose of Loading, the position must include in the Actions the exact number of RPs to be Loaded to each Cargo Ship at that location.

- ✓ If information is missing from the Actions, the Concierge will not hold up the game or inquire, rather, the Actions are executed as received.
  - ✓ If a position fails to inform the Concierge of what is to be Loaded, it is a wasted Power activation.
  - ✓ If there are not sufficient RPs in the Treasury to pay for the Loading, the Cargo Ship will Load what is available.
  - ✓ If the activities at the colony on that turn exceed the local GDP, Construction activations will take precedence over all others.
  - ✓ Note that Loading from a *Conquered Colony* is automatically Looting (see 3 Commerce, p. 1210, *infra*) and will trigger the mechanics related to Looting.
- **Back End Loading:** Cargo Ships may Load RPs from eligible **alien colonies** (i.e. colonies owned by any other position, regardless of Native Population Type) at *enhanced value* (*ut supra*, p. 1193). If the **alien colony** is on a Balkanized planet with a friendly colony, the owner of the Cargo Ships may provide the required Scene. Otherwise, the Scene may be ‘snitched’ from the **alien colony** if one is available (see Scene Snitching, 3 The Sidereal Stage, p. 124, *supra*). If there is no Scene on the **alien colony** to be used for the Commerce Power activation, the Load actions will fail, and the Power activation will be wasted.
- ✓ The owner of the **alien colony** is never required to activate the Commerce Power to Load RPs to another position’s Cargo Ships, only the owner of the Cargo Ships needs to activate the Commerce Power. But the sovereign must still grant permission.
- Actual RPs* (not enhanced RPs) loaded from the **alien colony** will be immediately subtracted from the alien position’s Treasury *and count against the alien colony’s GDP limit on its owner’s next Regular Turn*. The Load RPs will fail either partially or completely, if there are not sufficient RPs in the aliens’ Treasury at the time of the loading to support the loading.
- ✓ Yes, this is kind of weird. The Treasury is always simultaneously local and non-local throughout the position. It is a quantum smear.
- **Packing It In:** RPs from non-sovereign colonies are Loaded at the *enhanced value* to the Cargo Ship. The amount subtracted from the owner’s Treasury and that counts against the colony’s GDP for the next turn is the unenhanced value of the RPs loaded.
- ✓ For example, if 15 RPs of *enhanced value* were Loaded to another position’s Cargo Ship by a colony, the actual (unenhanced) value at the colony might be 10 RPs (with 50% enhancement) which is the amount subtracted from the Treasury and that counts against the colony’s next Regular Turn GDP.

Except for Looting, a colony cannot upload more in actual value than would be its GDP if taxed at that moment, see Gross Domestic Product, 1 Construction, p. 662. A Load RPs can fail partially or fully if the colony doesn’t have sufficient GDP at the moment of Loading (or RPs in the Treasury).

If the Commerce Power was activated for the purpose of Marketing for Load RPs at the location of the Cargo Ship prior to movement to the non-sovereign colony, that value will be used. If not, then the parties will need to take their chances on randomly determined enhanced value while Loading RPs from one position’s colony to another’s Cargo Ship. This

may result in partially complete Loading and uncertainty as to the amount in the Treasury and the amount of GDP available at the colony on the next Regular Turn.

- ✓ It may be profitable for a position to set up ‘trading post colonies’ on frontiers, through which alien trade passes, but should consider the Power Activations costs of hauling away RPs via Cargo Ships if not immediately used at the colony.
- ✓ Remember while slurping *alien fungi smoothies* and watching a female cat dancer on Nimbus III that Loading, Unloading or transferring anything at an **alien colony** can lead to *apostasy* (see Alieny Apostasy, 3 Disruption, p. 283, *supra*).

---

*“Never sell weapons to people who don’t have a sense of humor.”*

– Col. Jack O’Neill, Stargate SG-1 television series

---

**Humor:** In current human theory, humor is regarded as a safety valve, an outlet for angst, a condition of *ekstasis* that keeps us sane. Angst, not wonder, is human literature. To wit:

- ✓ “During his 2009 interview for Australian Skeptics’ podcast The Skeptic Zone, Minchin addressed his performance style as one that allows bringing up issues that can be upsetting or judgmental to others, such as the ‘moral hypocrisy about the idea that the Bible is perfect, the only place that you need to go to for your moral guidance...and about, obviously, prejudice in the church, its role in ostracising homosexuals...your defences are down when you’re laughing as well and it’s couched in music. All I’m doing is making things consumable that are otherwise difficult to consume.” – from Wikipedia article, “Tim Minchin” citing to April 2009 interview ([http://skeptizone.libsyn.com/the\\_skeptic\\_zone\\_26\\_17\\_april\\_2009](http://skeptizone.libsyn.com/the_skeptic_zone_26_17_april_2009)).
- ✓ “Everyone experiences pain, of course. But a comedian has the ability to use their anger and intelligence to refocus and reconstruct their pain into entertainment. It’s so obvious that it almost goes without saying, but comedians are generally more intelligent and sensitive than the average person. It’s our undeniably superior (almost god-like) intelligence that made life difficult for us when we were children. We could see through the hypocrisy and illogic of our parents and teachers, but because of our age and size we couldn’t do anything about it. The more we pointed out the foolishness of our ‘superiors,’ the more they kept us down. But just as pressure and heat transform coal into diamonds, it’s that frustration, social pressure and the heat of anger that transforms us into comedians.” – from iComedy TV.<sup>5</sup>
- ✓ Merriam Webster online dictionary at *ecstasy*: *ékstasis* ‘displacement, mental distraction, astonishment, trance.’

Displacement and mental distraction means to stand outside ourselves in this context, humor lets us stand outside ourselves, be distracted from reality.

- ✓ “I fear the comic novel is in retreat. A joke is by definition politically incorrect – it assumes a butt, and a certain superiority in the teller. The culture won’t put up with that for much longer.” – Martin Amis, interview with Carol Burns, Washington Post, November 7, 2003.

Humor is, of course, one of those services *we spend money for...* handing over paper notes with no intrinsic value at the door.<sup>6</sup>

*“Music files and downloading have indeed changed the currency of music to a great degree.” – Henry Rollins*

*“Downloading is definitely on the rise, but not because it’s free – that’s probably third on the list – but because it’s immediate and the selection is virtually unlimited.” – Don Rose (aka Dr. Don)*

*“Illegal downloading, digital cheating, and cutting and pasting other people’s stuff may be easy, but that doesn’t make those activities right.” – G. Hannelius*

**Downloading:** RPs may be transferred from a Cargo Ship to any colony by activation of the Commerce Power for the purpose of Unload RPs targeting the colony and Cargo Ship. The ship is not required to *begin* the turn in the system, it may arrive at the beginning of the Regular Turn. Both the Cargo Ship and colony will be checked, as previously explained, to see if they obey the Power Activation to Unload RPs; Enlightenment (a club) might be applied (*ut supra*, p. 1202).

- ✓ Thus, a Cargo Ship can ‘drop and dump and run’; the Unload RPs activation will be processed with any Construction Power activation at the colony (see Material Handling, 1 Construction, p. 664, *supra*) and Movement Power activations process after Construction Power activations in the normal order of processing Power Activations. This may be extremely useful in Blockade Running, see 4 Commerce, p. 1233, *infra*.

RPs will only be Unloaded from *friendly* (i.e. sovereign) Cargo Ship(s) at a sovereign colony in a Regular Turn that would be sufficient to satisfy the colony’s needs for that turn, up to the limit specified in the Unload action. This may mean that some, all, or few of the RPs onboard a Cargo Ship will be Unloaded as a result of the Commerce Power activation for the purpose of Unloading RPs at that colony. RPs received from Unloading Cargo Ships will be spent first for the colony’s Regular Turn activities and any remainder will be subtracted from the position’s Treasury.

- ✓ These rules prevent wastage of RPs *within* the position’s system, because unused RPs at a colony are lost at the end of the Regular Turn. Thus, friendly Cargo Ships at a sovereign colony will only download what is necessary, up to the limit set in the action; the remaining RPs will remain onboard the Cargo Ship and are not lost.
  - ✓ Unloading RPs is also used by the sending Cargo Ship to transfer RPs between alien Cargo Ships if they both begin the Regular Turn in the same colony system, see Change for a Trillion, 1 Commerce, p. 1185, *supra*. As this is not an Unload RPs action to a colony, no *enhanced value* is received regardless of the ownership of the respective Cargo Ships involved. But you can give someone RPs by meeting them halfway.
  - ✓ Unloading RPs at a Conquered Colony does not trigger a Disruption Event and in fact, is useful in bribing ... uh, attempting to convert (uh, subvert) the Conquered Colony, see Conversion, 3 Order, pp. 554-555, *supra*.
- **Intrinsically Profitable:** The RPs received by a colony from Unloading RPs by an alien (i.e. non-sovereign) Cargo Ship will be based on the *enhanced value* of the cargo at that colony,

not the intrinsic value of the cargo as it was Loaded from the source colony. Generally, the value of cargo (‘resources’) will substantially increase merely by the act of transporting the resources to where they are needed.

- ✓ This would normally be considered ‘price arbitrage’ except that the game is based on resources and not money, selling is not part of this concept. Rather, this would more properly be termed “resource arbitrage.”

The RPs available to the target colony on its owner’s next Regular Turn is the *enhanced value* of whatever was Unloaded by the Cargo Ship owner on their previous Regular Turn. Unlike Unloading RPs from a friendly Cargo Ship at the colony, all RPs ordered to be Unloaded by the Cargo Ship owner will be ‘dumped’ onto the target colony and it is the responsibility of the colony owner to use them or lose them on their next Regular Turn.

- ✓ This is necessary because two positions are each taking their respective Regular Turns separately, as opposed to one position taking a Regular Turn and being able to coordinate the amount of RPs Unloaded to their colony to prevent wastage.
  - ✓ Notably absent from this process is the permission requirement; the Concierge does not require the colony owner’s permission to receive Unloaded RPs from an alien Cargo Ship. In the rare instance that this is an issue, it can be dealt with through other means in the game. If the colony owner really does not want the RPs from aliens, combat is an option (like preventing Colony Ships from Landing).
  - ✓ Communication between the positions involved – grey diplomacy (see 1 Diplomacy, p. 1097, *supra*) – is extremely important, with minimum Concierge involvement.
- Arbitrage: Resource Arbitrage does not apply to RPs Unloaded from friendly Cargo Ships to sovereign colonies for use at that colony. This is a ***boundary control function*** in the GGDM rules; RPs Loaded, transported, and Unloaded between colonies owned by a position *occur within the system* and theoretically pass through the imaginary pool called the Treasury. The cost of building anything in the system is the entire assumption of cost by the system.
- ✓ One way to think of this is as a living body. The oxygen breathed into the lungs and transported to the rest of the body in your blood is all just part of the system, the muscles and brain don’t receive any enhanced value in oxygen delivered by the blood by virtue of being transported through the body. They simply receive the oxygen you breathed in... all of the parts need each other and need to work together, each doing their own special job.

Conversely, the activation of the Commerce Power for Trade Missions and Marketing address specifically exporting of resources *out of the system* formed by the sovereign position, while accepting RPs downloaded to a sovereign colony by alien Cargo Ships constitutes opening the gate for non-sovereign RPs to enter the system.<sup>7</sup>

- Cha-Ching!: The *enhanced value* received from cargo unloaded to the colony by non-sovereign Cargo Ships is the number of RPs unloaded plus the percentage increase in value determined for that colony. For example, 10 RPs unloaded for a 50% increase in value, would equal 15 RPs value to the colony that would go toward the colony’s activities for the next Regular Turn.<sup>8</sup>
- ✓ If *enhanced value* was established through Marketing prior to the departure of the Cargo Ships that value will be used when Unloading RPs to the **alien colony**. This is

important information both to the owner of the **alien colony** (so as to be able to plan their next Regular Turn activities) and to the owner of the Cargo Ship so as to negotiate with the owner of the **alien colony**.

- ✓ If no value was established prior to the departure of the Cargo Ships from their last location, the Concierge will have to determine the value at the time of the Unloading. The Concierge will not inform the **alien colony** or the Cargo Ship owner in advance (no pre-rulings) of the *enhanced value* of the Unloaded RPs at the **alien colony** and this may cause shortfalls and planning difficulties on the next Regular Turn activities.
- ✓ If the amount was established in advance by Marketing, and the Cargo Ship owner certified that the Unload RPs occurred (i.e. no Power Activation failure by the colony or ship), then the colony owner will know how many RPs are waiting to be used; however, if the RPs were Unloaded without previously established *enhanced value*, then the colony owner will have to guess and take chances on how much *enhanced value* is actually available which may lead to wastage.

It is therefore, much better operationally, if the value of the cargo is established through Marketing prior to departure (i.e. information), because Actions will fail if there is not enough RPs in the Treasury to cover the cost of the activities at the colony *or* if the amount taken from the Treasury to cover the colony's activities would exceed the Gross Domestic Product limitations of the colony (see 1 Construction, p. 662, *supra*).

- ✓ Because the game does not look to or specify what exactly is represented by the RPs on a Cargo Ship, the value must be random each time. Participants may find ways to be more specific about cargo if there is a long-established interstellar trade.
- No Tribble at All: Resources downloaded to an **alien colony** are more likely to be raw resources (or 'Shrooms from Proxima Centauri'<sup>9</sup>), or data, with perhaps some low-end manufactured items, with a few art or curiosity objects. Though not a hard universal truth, it is unlikely that stardrive parts, food, ammunition, or weapons repair kits will be delivered to an **alien colony** (especially if they have no sense of humor!).
- ✓ There is, of course, great potential for Special Operations in Unloading RPs to non-sovereign (alien) colonies; not just in terms of Lodging Missions (see Shipping & Freight, 2 Special Operations, p. 1295, *infra*) but also in the introduction of contraband or even innocent-seeming products and alien lifeforms (e.g., Earth ants in Babylon 5 and Tribbles in Star Trek OS) to wreak havoc on the colony.
  - ✓ There is no direct mechanic in GGDM for transferring anything to or from colonies to Log Ships owned by a different position; only that Cargo Ships can resupply from **alien colonies** (see Cold Lunch, 1 Commerce, p. 1189, *supra*). There are always questions of technological and ergonomic compatibility for starters; any such cases will need to be handled manually through the Concierge.

---

*"We have created in the world in which we live all kinds of things; we have changed our world in all kinds of ways. That's very very clear. We have built the room we're in and we've built all sorts of complex stuff, like computers and so on, but we've also constructed all kinds of fictitious entities that are enormously powerful. So do we say, 'That's a bad idea; it's stupid – we should simply get rid of it?' Well, here's another fictitious entity – money.*

---

*Money is a completely fictitious entity, but it's very powerful in our world; we each have wallets, which have got notes in them, but what can those notes do? You can't breed them, you can't stir fry them, you can't live in them, there's absolutely nothing you can do with them that's any use, other than exchange them with each other – and as soon as we exchange them with each other all sorts of powerful things happen, because it's a fiction that we've all subscribed to. We don't think this is wrong or right, good or bad; but the thing is that if money vanished the entire cooperative structure that we have would implode, but if we were all to vanish, money would simply vanish too. Money has no meaning outside ourselves, it is something that we have created that has a powerful shaping effect on the world, because it's something we all subscribe to."*

– Douglas Adams, "Is there an Artificial God?" speech at Digital Biota 2, Cambridge U.K., September 1998 (transcript and audio recording of the more than one hour speech are available free at <http://www.biota.org/people/douglasadams/>)

**Exchange:** I agree with Mr. Adams that generally, exchanging notes for notes, has little value (except in currency futures contracts). Money must be exchangeable for goods and services that are needed, when, and where they are needed. This is exactly what I thought as an initial objection to BitCoin when I first understood it; any form of money is useless unless it can be exchanged. Still, the image of money as a hollow or hallowed fiction, or artificial god, is prevalent in our literature and songs. Ironically, Pink Floyd's "Money" (1973) was their best-selling song.

- ✓ Mr. Adams succinctly describes the *power of an interpretation on a civilization level*, money is an interpretation. Cf. Dream Police, 1 Dreamtime, p. 132, *supra*. Conversely, without the concept of legitimized money, believing paper notes have exchange value might seem insane, like offering Monopoly money, landing you in a special institution.

**Monopoly Money:** Any form of 'money' or 'currency,' whether slips of government-printed paper or cryptocurrencies, needs to be reducible/tradable into goods and services. Money has little or no intrinsic value, nor can it command resources that don't exist. See Hrimata Eleison!, 2 Taxation & Census, p. 305, *supra*.

The basic question of interstellar currency (or currency in any setting, but especially interstellar) is if I trade goods that have value for money that has little intrinsic value, what guarantee do I have that I will be able to trade the money elsewhere, at the next planet, to receive goods and services, that the next person will accept money in exchange for their valuable goods and services? Yet, we all know that this problem has been solved because every nation on Earth prints money, which is readily accepted in 99.999% of transactions and allows the government to monitor and manipulate the economy. What makes money work?<sup>10</sup> Civilization-level interpretation.

Most games include monetary systems in any setting from fantasy to interstellar without explanation or justification, e.g.:

- ✓ Traveller RPG uses 'credits' (up to megacredits) to make adventuring from planet to planet within the Imperium easy, but is intentionally vague as to the actual mechanisms, for example, I don't think it was ever explicitly stated whether credits were paper money or simply electronic, though I think the assumption leaned toward the latter. There was no practical explanation of portability, though vaguely, it may have been envisioned as some sort of government issued cryptocurrency.

- One likely reason that the form of the Traveller RPG credit was vague was the wide range of planetary technology levels that made up the Third Imperium; some would not support crypto-currency technology.

It is simply a massive convenience for the designer and the players who are familiar with currency and no one thinks about it, it provokes no thought (i.e. civilization-level interpretation). For all purposes, GGDM does just as well with RPs while also being thought provoking.

- Printing More Money: The question is often asked innocently by children why the government can't just print more money and use it to pay their debts? The answer is illustrative – printing money does nothing but produce more money; nothing of value is added to the economy (because currency notes have very low intrinsic value). Rather, the currency is devalued, e.g.:
  - ✓ “To get richer, a country has to make and sell more things – whether goods or services. This makes it safe to print more money, so that people can buy those extra things. If a country prints more money without making more things, then prices just go up.” – The Conversation, “Curious Kids: why don't poorer countries just print more money?” December 17, 2018.

Thus, the government has taken value from the economy by barrowing and using the money to obtain goods and services, and if it prints money to repay its debts (not unheard of...) it is repaying or returning nothing of value to the economy. That difference is the extent to which the currency used to repay debts is devalued.

- ✓ “A rise in the money stock must, for logical reasons, reduce the exchange value of a money unit. This is because the additional money unit can be used to satisfy an additional end that is necessarily less urgent than the satisfaction of the preceding end. A rise in the money stock will thus necessarily lead to a decrease in the marginal utility of the money unit (compared to the situation in which the money stock had remained unchanged). As a result, a rise in the money stock can never be ‘neutral’ in economic terms. It necessarily leads to a decline in its exchange value – when compared with a situation in which the money stock had remained unchanged; and it should also be noted here that a rise in the money stock affects different market agents differently (the ‘Cantillon Effect’). A monetary policy of increasing the money supply is therefore never ‘neutral’: It necessarily lowers the exchange value of the money unit, and it necessarily benefits some people (namely the first receivers of the new money) at the expense of others (namely the late receivers of the new money).” – Thorsten Polleit, “What Can the Law of Diminishing Marginal Utility Teach Us?” Mises Institute, February 11, 2011.
- ✓ “Example: Almost 2-3 years back 3 eggs could have cost you 100 billion dollar ‘Zimbabwe’ bank note. So basically we are talking about total devaluation of currency. Off course [sic] this is extreme but it shows the capability of [the] inflation beast.” – Anand Bhushan, “Printing Money – Can a Country print Money and get Rich?” Wisdom Times, undated article, but probably from 2012 based on comments.

While most discussions of money are premised on the assumption of paper money, the same effect, in a slightly different way was felt in the Roman Empire whose coinage was based on precious metals, see Praetorian Guard discussion in Household Troops, *et seq.*, 6 Government Titles, pp. 653-654, *supra*.

- ✓ Very few current board games use paper money unless they are required by the theme of the game. Many games use plastic or metal coins (e.g., koku, ducats), others use resource cubes of different colors to represent money, metals, wood, etc. Thus, modern board game economies have become more resource-oriented for the same reasons as GGDM was constructed on RPs, e.g., paper money would be silly in the board game Stone Age (2008) and GGDM is the ‘stone age’ of interstellar culture!

*“As the mantra of the 2008 financial crisis goes: The risks on Wall Street have been socialized while the profits have been privatized.”*

– William D. Cohan, “How To Fix Wall Street’s Flawed System of Compensation,” New York Times, July 1, 2016

## Endnotes.

<sup>1</sup> Commentary: Such a place might be an Optimal Habitability Class planet with a large Maximum Habitability for water-based Major Races in GGDM, while for humans it might be a Hospitable Class planet with a very low Maximum Habitability. It all depends on how you like your fish: live and fresh, or dead and cooked. *gollum!*

<sup>2</sup> Commentary: Roughly, overall it probably works out even or productively in the end without introducing tracking game mechanics for ship movement and RPs or even supplies and enhancements, because likely one does not unload RPs at an **alien colony** without other compensation.

<sup>3</sup> Commentary: There is an ancient, but in modern times, very subdued debate about intellect and charitable service vs. commercialism in terms of generativity. In fact, I could not even find relevant results on Google on January 24, 2020. There were results for ‘philanthropy vs. charity,’ and ‘charity as generativity,’ unfortunately, the latter results related mostly to senior longevity rather than actual generativity, which is typical of the current age. The results of ‘commercialism as generativity’ search mostly decried commercialism as degenerative to personal generativity (i.e. the attitude that we should be remunerated for whatever we do that we do not have to do), rather than talking about commercialism’s effect on future generations, i.e. all of the things that make up our world as a result of commercial enterprise. In terms of GGDM, the root question is what is the difference – in terms of generativity – between designing it to fit into a shrink-wrapped game box with pretty artwork or a set of RPG-like hardcover books (in an overloaded tabletop gaming market) or doing it the way I have chosen – to release my lifework as free PDF downloads from my own web domain? The junk-filled, commercialized internet has created a slowly-realized promising opportunity for charitable intellectual service to reemerge as generativity in the form of continued exposure of older works in the public domain, free articles and thoughtful blogs, and free educational information and materials.

<sup>4</sup> Citation: “Despite all of the above, Japanese industry was not productive enough to keep up with either the United States or the Soviet Union, and [Gen. Tomoyuki] Yamashita warned against going to war with them for this reason. His recommendations were not taken to heart, and Japanese militarists eventually successfully pushed for war with the United States. In spite of their recent experience and military improvements, the Japanese would generally continue to underestimate their adversaries, emphasizing the courage and determination of the individual soldier as a way to make up for their lack of numbers and smaller industrial base. To varying degrees, the basic problems that faced them at Khalkhin Gol would haunt them again when the Americans and British recovered from their defeats of late 1941 and early 1942 and turned to the conquest of the Japanese Empire.” – from Wikipedia article, “Battle of Khalkhin Gol,” captured May 18, 2020.

<sup>5</sup> Commentary: I recall part of an old movie which I watched long ago (but do not know the title) where a stand-up comedian was being questioned by an IRS agent about his claimed work-expense deduction for cases of beer. The comedian replied (and this was not a comedy movie, but more a drama or biopic) that he drinks many beers every night before he goes on stage, because he is funny when he is drunk, and thus the beer is a work expense!

<sup>6</sup> Commentary & Citation: There is a nature video on YouTube, “How not to wake up a lioness,” (Kruger Sightings, January 29, 2019), where a large male lion nips a sleeping female in the butt and jumps back as she comes up roaring and swinging, like a boyish prank. There is no way it was staged; he seems to be laughing about it afterward.

<sup>7</sup> **Commentary:** In the original Stellar Conquest board game, the 43-year old granddaddy of GGDM, there was a rule called the Emigration Bonus (or *population bonus*, pp. 5-6 of the original rules) in which an extra population would be received for every three loaded to Colony Transports up to the limit of the colony’s normal population growth on Production Turns plus three. At some point, I realized this was simply a mechanic to speed the game along without any realistic justification, and thus, it was omitted from the earlier versions of GGDM and was eventually replaced by the Census Power Activation, which replaced population growth in Stellar Conquest on the “Production Turn” bookkeeping interruption following every fourth turn. The reasons the Emigration Bonus was eliminated are apparent in my commentary on Colony Transports.

- ✓ That being said, some argument could be made against enhanced destination value of RPs loaded at one sovereign colony, transported, and then unloaded at another sovereign colony. I feel it would be similar to the Emigration Bonus in the original Stellar Conquest, which I have rejected as a corny mechanic (though I wonder if Howard Thomas had read Dean Inge...), and have instead taken the holistic view from a height looking at the position’s sovereign interstellar civilization as an entire system (which is consistent with the game) and thus, the cost of, say, building a ship includes the cost of loading, transporting, and unloading resources at sovereign colonies all within the same ‘system,’ excepting the Acts, Scenes and Power Activations required to bring the resources together.
- ✓ Enhanced value for unloading resources onto an **alien colony** does serve to encourage commerce between positions, and in that sense it is a game convenience mechanic consistent with the pan-galactic theme of the game. But the receiving **alien colony** is the gateway allowing input of goods, resources, information, which are outside the reach of the alien interstellar system, did not cost them anything in production, transportation, etc., did not cost them any of their own resources, Acts or Power Activations, into the alien system. There might be justification for the enhanced value in downloading RPs to **alien colonies**.
- ✓ This thinking is consistent with previous statements throughout GGDM, for example, the introduction Hegemony, 4 Order, p. 570, *supra*, or the boundary control function of the Integrity Proficiency and Security Proficiency, 3 Culture, pp. 390, 399 respectively, *supra*.

<sup>8</sup> **Commentary:** Suppose Position A needs emergency RPs at one of its colonies and arranges delivery from Position B of 8 RPs (base, unadjusted) in exchange for a return delivery later at Position B’s colony of 11 RPs. Is this a ‘loan’ or a “futures contract”? It doesn’t matter, because isn’t a futures contract the same as a short term loan? That’s how it started when the samurai would sell the next rice harvest at discounted prices to get early cash; commodities futures were loans of typically less than one year on future expected resource production. And those futures could be sold, assigned or traded before the harvest. It seems only a difference of semantics: A loan must be repaid plus interest later, whereas with futures you are selling ownership rights at a discount for something that doesn’t yet exist. Either way it’s money now for the loss of rights to something in the future.

<sup>9</sup> **Citation:** See Mushrooms from Alpha Centauri, 2 Movement, p. 851, *supra*.

<sup>10</sup> **Commentary:** I am not clueless. The discussion here is rhetorical, to induce participants to think through the nuts and bolts of an interstellar monetary system. Asking questions should never be confused either with ignorance (i.e., you may already know the answer) or *with knowing the answers* already (i.e. you may be ignorant):

- ✓ “People thought because we were asking the questions, we had the answers. We were just as clueless as everyone else.” – interview of The Moody Blues band member from Legend of a Band video (1989).

Though I have thought about money in the past, before even the internet, the advent of Bitcoin (I knew people who mined Bitcoin) and blockchains (I also know a ‘blockchain guy’) made many people begin to think again about what is money and storage of economic value systems. I have heard about all that I ever want to hear in a lifetime about Satoshi Nakamoto theories, Mt. Gox, ‘wallets,’ ‘bubbles,’ ‘splits,’ and Ethereum, drug money laundering through cryptocurrencies, ransomware scams demanding payments in Bitcoin, Chinese market oppression and software espionage, the CIA, blockchains, etc.

- ✓ For the record, I do not believe that GGDM would benefit from any virtual in-game currency (e.g., like Lindens in Second Life or Interstellar Credits in EVE Online) or any sort of block-chains. It follows also that GGDM is not suitable for and should not be converted to a MMOG.

*See Appendix ENVAL – Enhanced Value & Looting Summary*

*“Their home world is a place called Earth, located in a fairly uninteresting part of the galaxy. We have never bothered much of that area before. Had little military or strategic value. But as a culture grew decadent, it becomes intrigued by art, by trinkets like eccentricity. And the humans had art and trinkets and eccentricity to spare.”*

– Londo Mollari, *Babylon 5*, “In the Beginning” (1998) <sup>1</sup>

**Centauries Past:** The Centauri in *Babylon 5* are not from Alpha Centauri, our closest neighbor (their name arose from a misunderstanding during First Contact). There are in fact dozens of stars that bear the name “Centauri” in some part. *Babylon 5*, like *Star Trek*, has been pointed out to be inconsistent as to distances and locations, and the actual homeworld of the Centauri was never specified, but it is clear they are not from Alpha Centauri. However, despite the seemingly vast distances in the series and oversized claims of the Centauri Republic, they are hardly a ‘galactic empire’ of any scale, see previously opening discussion, *Stage Illusions*, 1 *The Sidereal Stage*, p. 107, *supra*. Even *Babylon 5* was staged on a small soapbox in the local stellar park.

*“It is not from the benevolence of the butcher, the brewer, or the baker that we expect our dinner, but from their regard to their own interest.”* – Adam Smith

**Getting Along:** And if you kill the butcher,<sup>2</sup> the brewer and the baker because they don’t agree with you and/or won’t obey laws and pay taxes, who will provide your dinner? If you kill the blacksmith, who will provide your weapons and armor? If you kill them all, who will people your military and government, what will your sons and daughters rule over? Thus, sovereignty is more than just force, or appeal to force, it is a cooperative arrangement and the best cement for that arrangement is economic benefits and security from invasion (in their radical Maoist reform, divorced from reality, the Khmer Rouge never understood this).

✓ Thus, citizens and subjects are not slaves to the ruling elite.

The early Roman Republic experienced the Conflict of the Orders and the *Secessio Plebis* (about 500 B.C. to 287 B.C.) in which the Plebeians struggled to wrest rights and self-governance from the Patricians (before they gave into bread & circuses). In our time, labor unrest (coal miners, dock workers) has brought down the communist governments of Poland, the Soviet Union and Apartheid South Africa, and caused difficulties in mainland China and South Africa in the last decades. And there are thousands of other historical examples, such as the Edict of Fontainbleau or the Alhambra Decree where religious intolerance cost great nations flights of skilled labor, children and wealth.

- ✓ From this perspective then, slavery and other forms of forced labor (and tributes), are an attempt to end-run this sovereignty relationship, to have absolute power, by co-opting the population with the apparent material benefits of slavery.
- ✓ See previous discussions of Conversion, Pacification and Slavery, 2 and 3 Order and 6 Combat and Sovereignty and Legitimacy, 2 and 3 Government Titles, *supra*.
- ✓ This is the *natural limit* to the military and police forces who apply the legitimized physical violence:

- “In 494 BC Rome was at war with three Italic tribes (the Aequi, Sabines and Volsci), but the Plebeian soldiers advised by Lucius Sicinius Vellutus refused to march against the enemy, and instead seceded to the Sacred Mount outside Rome. A settlement was negotiated and the patricians agreed that the plebs be given the right to elect their own officials. The Plebeians named these new officials Plebeian Tribunes (*tribuni plebis*).” – from Wikipedia, “Conflict of the Orders,” captured February 12, 2019.

The instant downfall of a government is when the military and police actively side with the protestors, this is what happened in Romania in 1989 when Minister of Defense Vasile Milea died, the Ceaușescu government claimed it was suicide, but the army believed he had been murdered or executed, and went over to the revolution, marching on the government buildings.

*“Kant argued that any action taken against another person to which he or she could not possibly consent is a violation of perfect duty interpreted through the second formulation. If a thief were to steal a book from an unknowing victim, it may have been that the victim would have agreed, had the thief simply asked. However, no person can consent to theft, because the presence of consent would mean that the transfer was not a theft. Because the victim could not have consented to the action, it could not be instituted as a universal law of nature, and theft contradicts perfect duty.”*

– Wikipedia article, “Categorical imperative,” captured July 21, 2018

**Looting:** Looting is triggered by activation of the Commerce Power for the purpose of Load RPs (not Unload RPs) or allowing alien Cargo Ships to Load RPs at a Conquered Colony. This is a special exception of sorts, in this case, the Conquered Colony is not considered a sovereign colony for the purpose of RPs Loaded to Cargo Ships. It is thus that some positions may make a business of Looting colonies to obtain the ‘*enhanced value*’ when the ‘alien’ RPs are Loaded.

- ✓ Looting is a Disruption Event at a Conquered Colony, regardless of the amount taken. The Disruption Check (see Hagar’s *Faucet*, 2 Disruption, p. 278, *supra*) is triggered by a Commerce Power Load RPs activation at the Conquered Colony. This can occur multiple times if the Conquered Colony is Looted on more than one Regular Turn.

RPs loaded from a Conquered Colony to *any* Cargo Ship (regardless of owner) are not subtracted from the Treasury, instead, they are subtracted from the colony. When resources are Loaded to any Cargo Ship from a Conquered Colony, Industry and other installations on the Conquered Colony are destroyed equal to the *unenanced value* of the RPs loaded to Cargo Ships.

- ✓ Looting is therefore *not* limited to the GDP of the Conquered Colony (see *Uploading*, 2 Commerce, p. 1199, *supra*). Whether or not RPs can be Loaded by Looting a Conquered Colony beyond the value of Industry, installations and enhancements on the target colony is a judgment on the part of the Concierge.
- ✓ It is normally assumed that there is a 1:1 correlation between RPs loaded from Looting and destruction of the colony being Looted, however, the Concierge could use an Intervention to change the correlation *for story purposes*.

- ✓ Looting is antithetical to Reverse Engineering *alien technology* (see 3 Technology, p. 712, *supra*) at that colony or planet. This can be distinguished from a colony which has simply been abandoned (e.g., see Resources from Special Planets, 2 Taxation & Census, p. 307, *supra*). Looting or warfare destruction can be measured in the Quality of Contact assigned by the Concierge for later Reverse Engineering attempts.

Some or all of the population of the colony that are not Loaded onto Colony Ships in the same Regular Turn, will perish as the infrastructures of their civilization are destroyed by Looting (this does imply or require loss of Maximum Habitability or Habitability Class of the colony planet). The Concierge will make a determination as to the fate and loss of populations, taking into consideration the Habitability Class of the planet. Loss of populations can trigger multiple Disruption Checks on the Conquered Colony, see Peaches for Mad Molly and Mars Bombing Run, 2 Disruption, pp. 273-274, *supra*.

- ✓ Looting on this scale will cause the collapse of a complex society (*à la* Joseph Tainter, this was discussed in various places previously). Loss of population is also an issue that bumps up against the previous discussion of slavery (see The Chain About Your Neck, 3 Order, p. 546, *supra*); are populations being lost on the colony because they are loaded as slaves or harvested for food for the conquerors? Or just mindless apocalypse? There is game-story potential here.

The loss of population from looting will likely be announced via Special Bulletin. The Conquered Colony is not checked to see if obeys the Power Activation! As noted in Alieneity Apostasy, 3 Disruption, p. 283, *supra*, ships engaged in Looting may also contract *apostasy*, e.g.:

- ✓ “It had taken Rome centuries to sink into sloth and apathy – the Goths and Vandals became decadent within a few generations. Like so many rude conquerors before and since, the barbarians paid the historic penalty of acquiring the vices as well as the loot of a fallen empire. Only a hundred years after Châlons the last great Ostrogothic king, Baduila, found it necessary to remind his people of the sturdy and warlike virtues of their ancestors. His efforts were in vain and the Ostrogoths perished by the thousand before the invading horse-archers from Constantinople. The northern Italian plain became so depopulated as a result that the Lombards moved in without a struggle.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 93.<sup>3</sup>
- Black Market: Loading RPs from a Conquered Colony is always considered the same as Loading RPs from an *alien colony* (see Back End Loading and Packing It In, 2 Commerce, both p. 1200, *supra*). Marketing cannot be used for Loading Looted RPs; Loading RPs from Looting must have the *enhanced value* established by die roll at the time of the Loading. The Concierge will not prejudge.
  - ✓ There is some grey area here for judgment. Humans are humans everywhere on Earth, but the cultural and resource differences between East and West made the Silk Road and oceangoing trade valuable business, such that the Europeans forcefully overran Africa, India, and the coast of China causing much bad history that echoes today. The rule above also does not strictly account for Naturalized colonies that are Conquered or Lost Colonist Primal States. The Concierge must exercise judgment.

The *enhanced value* range of the Black Market may be much wider than the *enhanced value* of normal *alien* RPs when Unloaded to a sovereign colony; the value may be wildly inflated

or next to worthless, boom or bust, but more likely the former. This represents, in some sense, the value of things Looted that would not have normally been available for Loading in normal Commerce, it may also represent the vastly superior amount of ‘stuff’ represented by Looted RPs as opposed to normally-Loaded RPs. Or maybe the new alien subjects are a delicacy on your planets?

Looted RPs (Loaded at *enhanced value* by the recipient Cargo Ship) may be subsequently Unloaded at *enhanced value* at another **alien colony** per the normal rules (see Cha Ching!, 2 Commerce, p. 1203, *supra*). This is another case of possible *double enhanced value*.

- ✓ There are some potentially tricky issues that will require judgment of the Concierge. For example, if Looted RPs were attempted to be later Unloaded at an **alien colony** owned by the previous owner of the Conquered Colony or had the same Native Population Type as the Looted colony? Like for example, pirates loot New York City then their ships arrive in Charleston, North Carolina trying to trade or sell the loot? Has something like that happened in history? Count on it.
- ✓ Imagine a sci-fi story where First Contact begins with an alien merchant ship coming to Earth looking to sell? Cargo Ships could Unload RPs to a planet occupied by a Minor Race if they can legally move to the system and if the Concierge agrees (on behalf of the Minor Race). There have been movies of alien slave starship revolts (*à la* the Amistad case) that came to Earth creating a First Contact situation (e.g., Alien Nation (1988) and District 9 (2009)). Anyway, how would we know that the cargo they are trying to sell isn’t looted or stolen? You can bet that would be in the story.
- Boudicca’s Revolt: According to the account of Cassius Dio, written generations after the events, the uprising of the Celtic Iceni and Trinovantes tribes led by Queen Boudicca were caused by Roman predatory lending practices that were leveraged into confiscation of property and daughters.
  - ✓ Tactius, who was 5 or 6 years old at the time of the uprising, wrote a starkly different version of the historical events, blaming the events on annexation of the Iceni Kingdom by the Roman Emperor, rape of Boudicca’s daughters, flogging of Boudicca, and abuse and displacement of the Trinovantes Celts by Roman colonizers.
  - ✓ The two versions are not entirely incompatible or mutually exclusive – both could be more or less true, but the major details of each version are notably absent in the other. They emphasize different causes. It is unlikely however, that Cassius Dio attempted to justify or whitewash the history of the uprising in favor of the Romans; his causes don’t place the Romans on any better moral or legal ground than the different reasons given by Tactius.

The competing histories of the Celt uprising of 60 A.D. provide historical examples. What is more interesting is the Celts rampage suggests that theirs was a cultural war against the Romans with the intent of destroying all Roman people, places and artifacts; it was total existential war by the Celts. Boudicca’s Revolt (60 A.D.) then is very much like the diaspora Jewish revolts on Cyprus and Cyrenaica (Libya) 55 years later (Kitos War, 115 A.D.).

- ✓ The problem with Boudicca’s (or Boadicea’s) Revolt is that it was easy while she had a rampaging mob of warriors and their families moving across south England. They simply overwhelmed lightly-defended Roman towns and burned them after looting.

They even ambushed a relieving Roman Legion (as the Jews did during the Bar Kokhba Revolt 72 years later, 132-136 A.D.). But she failed when confronted with a test of generalship. There is nothing in the legend of her as a heroine that suggests that she possessed the slightest sense of generalship, she was not, for example, Queen Zenoba (whom even Emperor Aurelian complemented). She made no preparations, and did not think critically about the terrain<sup>4</sup> or the enemy's or her own army's abilities and limitations. She may have even bought into the mystic reputation that was growing around her. The Celts she led were not substantially different than those led by Vercingetorix over a century earlier and the results were the same. Had the Romans not defeated them in battle, Boudicca's force might have melted away shortly afterward due to logistical difficulties (based on the size reported), tribal rivalries, and the character of Celtic warriors. But the Romans' pride was hurt by the burning of three colonies and the loss of a Legion, and they wanted to make an example.

- On the other side of this disaster was probably a famine and economic hardship for the rebels: While the armies with women and children were rampaging through Roman colonies, who was tending the farms? And in addition to enormous numbers killed (particularly men), they also lost wagons and everything they brought with them. Unlike the Roman legionnaires, the rebels were not soldiers, they were farmers.
- The Sack of Rome (454 A.D.): Pope Leo I, alone, met the Vandal King Genseric (who was an Arian Christian) on the road to Rome in 454 A.D. with a message. He convinced the Vandal King to not harm any Roman citizens or destroy the city in exchange for being allowed to sack Rome. Did Rome, through its citizens and government, agree to be looted? Or was it that the Vandal King was going to loot Rome anyway – as they had so many other places – and the Pope using his authority, through a poor bargaining position, obtained a most Christian concession from the Arian Christian Vandals?

There is a grey area here where it is possible for participants in GGDM to agree to or acquiesce to conquest and Looting of colonies. As discussed in Greys Diplomacy, 1 Diplomacy, p. 1097, *supra*, the Concierge neither sees nor controls the 'informal diplomacy' of the game which is expressed by in-game Power Activations of the positions. There are many such things that happened throughout history – the ceding or exchange of peasant villages, castles, marrying off daughters for political or diplomatic gain, dynastic considerations – that offend modern sensibilities for which the participants of the game will need to decide whether *they* will engage in similar behaviors behind the scenes through informal diplomacy.

- ✓ This reinforces the point – the necessity – of the Concierge not being involved in position diplomacy when it does not require an activation in the game – participants should not be concerned that the Concierge does not approve of their game actions or agreements (and the Concierge should avoid being in that position anyway).
- The Sack of Magdeburg (1631 A.D.): After the Sack of Magdeburg (1631), which the Pope commended as a victory over 'a nest of heretics,' Count Pappenheim wrote, "All of our soldiers became rich," and compared the desecration of Magdeburg to the Destruction of Jerusalem. The Imperial Commander Pappenheim was probably quite relieved that it was over; rich soldiers are happier and easier to control than frustrated, bored, starving soldiers.

- ✓ On the other side, Otto von Gericke, Burgomeister, reported, “In addition to all this, quantities of sumptuous and irreplaceable house furnishings and movable property of all kinds, such as books, manuscripts, painting, memorials of all sorts ... which money could not buy, were either burned or carried away by the soldiers as booty. The most magnificent garments, hangings, silk stuffs, gold and silver lace, linen of all sorts, and other household goods were bought by the army sutlers for a mere song and peddled about by the cart load all through the archbishopric of Magdeburg and in Anhalt and Brunswick. Gold chains and rings, jewels and every kind of gold and silver utensils were to be bought from the common soldiers for a tenth of their real value...” Doubtless, most of this sudden ill-got wealth was shortly squandered away.

It is surprising that this is not treated more realistically in fantasy-war and adventure-fiction stories where epic destruction, sacks and looting occur so often; the best example of mercenaries and looting in fantasy I recall is Elizabeth Moon’s (a former Marine Corps officer) saga The Deed of Paksenarrion, which is a gritty, detailed, low-magic fantasy story about a mercenary company in a fantasy medieval setting. I was in the Marines stationed in Okinawa, Japan when I read this book in 1988 (got it at the PX bookstore) and I was impressed with her description of, for example, drill formations using twelve-foot long pikes; being in the Marines, I was very attuned to marching and drill formations at that time, but we, of course, had 7 lb. rifles, just over 3 feet long (compare to an American Revolution musket, which was about 5.5 ft. long and weighed 20 lbs.).

- ✓ Looting is not the same as genocide, though the two can overlap and merge – looting all of the atmospheric equipment from a domed city on a Hostile Class planet is the same as genocide. See discussion of the Sack of Brandenburg Tor (Andromeda TV series), Brandenburg Tor, 6 Combat, p. 1025, *supra*. Mongol sacks were usually massacres intended to inspire terror and implement slavery of the survivors, see the story of the Republic of Novgorod and of Kiev in *Surviving the Horde*, 5 Combat, p. 1016, *supra*. Practically, there is no difference between the Sack of Magdeburg by a Catholic army in 1631 (“A census conducted in 1632 listed only 449 inhabitants. Much of the city remained rubble until at least 1720.” – Wikipedia, “Sack of Magdeburg”) and the Sack of Kiev by the Mongol army in 1241.
- The Sack of Baghdad (1258 A.D.): The Mongol sack of Baghdad in 1258 bears similarity to what happened in Kiev (see *Surviving the Horde*, 5 Combat, p. 1016, *supra*) but possibly with much greater cultural consequences – the loss of irreplaceable books, inventions, and art equals the loss of the Library of Alexandria, and far exceeds the cultural damage to Kiev, or the damage the Habsburgs did to Rome in 1527 (see *Unintended Consequences*, 2 Entropy, p. 236, *supra*) or to Magdeburg (*ut supra*), the loss is probably comparable only to the Fourth Crusade’s Sack of Constantinople in 1204 (see *Manzikert*, 2 Construction, pp. 671-672 and *Bulwark of the Past*, 2 Eras, p. 773, *supra*). Such events can and frequently do cause complex societal and civilization collapse within Joseph Tainter’s definition, in Islamic histories, it is the end of the Golden Age.
  - ✓ “Hulagu began his campaign in Persia with several offensives against Nizari groups, including the Assassins, who lost their stronghold of Alamut. He then marched on Baghdad, demanding that Al-Musta’sim accede to the terms imposed by Möngke on the Abbasids. Although the Abbasids had failed to prepare for the invasion, the Caliph believed that Baghdad could not fall to invading forces and refused to surrender.

Hulagu subsequently besieged the city, which surrendered after 12 days. During the next week, the Mongols sacked Baghdad, committing numerous atrocities and destroying the Abbasids' vast libraries, including the House of Wisdom. The Mongols executed Al-Musta'sim and massacred many residents of the city, which was left greatly depopulated. The siege is considered to mark the end of the Islamic Golden Age, during which the caliphs had extended their rule from the Iberian Peninsula to Sindh, and which was also marked by many cultural achievements." – from Wikipedia article, "Siege of Baghdad (1258)," captured October 25, 2019.

- ✓ "The Mongols looted and then destroyed mosques, palaces, libraries, and hospitals. Priceless books from Baghdad's thirty-six public libraries were torn apart, the looters using their leather covers as sandals. Grand buildings that had been the work of generations were burned to the ground. The House of Wisdom (the Grand Library of Baghdad), containing countless precious historical documents and books on subjects ranging from medicine to astronomy, was destroyed. Survivors said that the waters of the Tigris ran black with ink from the enormous quantities of books flung into the river and red from the blood of the scientists and philosophers killed." *Id.*
- ✓ "Some historians believe that the Mongol invasion destroyed much of the irrigation infrastructure that had sustained Mesopotamia for many millennia. Canals were cut as a military tactic and never repaired. So many people died or fled that neither the labour nor the organization were sufficient to maintain the canal system. It broke down or silted up. This theory was advanced by historian Svatopluk Souček in his 2000 book, *A History of Inner Asia.*" *Id.*
- Duality of Understanding: From the lamented discussion of the losses of material cultural inheritance, one might conclude that I (and others of my ilk, like historians) care more about the loss of books, art, buildings, and inventions than the murder of thousands of people or of individual atrocities. This is the duality of understanding. Throughout GGDM, I have emphasized that population is the foundation of civilization; GGDM is about the population, it was built from deduction of structures not found in any other source for the purpose of simulating population as more than just numbers and income generation (see *The Problem of Immersion*, 1 Culture, p. 352, *supra*). For this purpose, GGDM has Aspects, Proficiencies, Faculties, Colleges, Institutes, Government Titles, Public Space, Reformations, Kairotic Moments, Writs, Fuzzy Groups, Constructural Elements *und so weiter*.

But we are mortal. Culture is that which is passed from generation to generation and that includes intellectual works of all types and traditions. Their loss is like Sisyphus who was at the top of the mountain, finding himself back at the bottom of the mountain so he pushes the boulder back up the steep mountainside again and again. On the one hand, you have the living population of *now*, which *is* civilization, but equally on the other, is the material (and non-material) cultural heritage which is what sets humanity apart from the billions of generations of other species on Earth.

- ✓ This has, of course, happened thousands of times on equal or lesser scale across the globe and across *all of history*. The historical examples given in GGDM are mainly from Western civilization, because that is naturally (and unapologetically) what I know best; it is the same issue that attaches to 'world' military histories in the West, which are mostly Western military histories (e.g., Lynn Montross, Dupuy & Dupuy)

with some mention of events in other parts of the world. There is really a language-cultural barrier to learning pre-Columbian history of the ‘non-Western’ parts of the world, one stumbles over names in non-Romantic languages and over cultural beliefs and traditions that are unfamiliar and actions that are sometimes hard to understand.

*“Though the Dutch had been transporting porcelain, lacquer ware, silks and plants to Europe for several generations, a seemingly insurmountable problem inhibited the establishment of genuinely great commercial ventures with China. Except for gold and silver, the Manchus wanted few things that Europe could offer. Until the English East India Company was able to dump Indian cottons and opium into China, the great tea trade remained in its infancy, emerging only at the end of the eighteenth century.”*

– Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648 to 1789 (2<sup>nd</sup> Ed., 1992), p. 163

**The Opium Wars:** There are some nuances beyond the basic assumptions of the Loading and Unloading rules that economics will introduce to the game. An example is the British 19<sup>th</sup> Century opium trade in China. Originally, the European traders were bringing boatloads of silver to China, first from Europe, then from colonies in Africa and India, to trade for China’s excess production of silk, lacquer wares, art porcelain, spices, rice and anything else of value, to be transported back to Europe and sold for silver. This caused a silver drain in Europe for a time, and China became wealthier still from the accumulation of the world’s silver; consequently, much of the stolen gold and silver from the New World flowed through Europe and southeast through Asia along the sea and land trade routes.

Then the British – the world’s first drug cartel – began transporting opium and cotton from India to China, selling opium there for silver and then using the silver to buy the items valued in the West. This changed the equation, China went from trading its excess production for silver, to trading silver and valuable products for *addictive and consumable* opium.<sup>5</sup> The silver was flowing out of China and China was getting, in exchange for its tradable goods, something that it did not really want or understand: a massive opium problem.<sup>6</sup> Sound familiar? The Chinese diaspora of the 19<sup>th</sup> and 20<sup>th</sup> Centuries brought opium use to the West Coast of the United States.<sup>7</sup> Thus, Loading and Unloading cargo and populations are areas ripe for Concierge Interventions.

- ✓ The Christian heterodox theocracy The Heavenly Kingdom of Nanjing officially banned opium, controlled Shanghai and other southern ports, and was not cooperative in trade discussions with Westerners. Thus it is likely that the growing opium problem in China was not an insignificant factor in the causes of the Taiping Rebellion (the cynical might note that fanatical heterodox Christianity simply replaced opium...) who called the Qing “demons” and sought to rid China of its “demons,” (and not just the Qing, who let in the foreigners, but also Buddhism and Confucianism) and their ban on opium trade may have led to eventual European intervention on behalf of the Qing Dynasty. Despite the Heavenly Kingdom’s attempt to ban opium, *generally, opium was associated with Christianity throughout China*, and both with foreign traders and missions; the general view being that the West had bullied and disrespected Chinese culture and sovereignty, forcing opium and Christianity on China.

➤ Dirty Business: While the British may have been the world's first global drug cartel, there is one important difference – it was a drug cartel backed by a sovereign navy and expeditionary forces with global hegemony. China realized it had a drug problem, combined with many other factors – including rejection of Christian missionaries – became increasingly hostile toward Westerners and trade. The Opium Wars were caused by Britain's increasing demand to freely trade opium in China (e.g., William Jardine), various incidents of cultural xenophobia by Chinese and attempts to reassert Chinese sovereignty.

- ✓ “Starting in the mid-1700s, the British began trading opium grown in India in exchange for silver from Chinese merchants. Opium – an addictive drug that today is refined into heroin – was illegal in England, but was used in Chinese traditional medicine. However, recreational use was illegal and not widespread. That changed as the British began shipping in tons of the drug using a combination of commercial loopholes and outright smuggling to get around the ban. Chinese officials taking their own cut abetted the practice. American ships carrying Turkish-grown opium joined in the narcotics bonanza in the early 1800s. Consumption of opium in China skyrocketed, as did profits.

The Daoguang Emperor became alarmed by the millions of drug addicts – and the flow of silver leaving China. As is often the case, the actions of a stubborn idealist brought the conflict to a head. In 1839 the newly appointed Imperial Commissioner Lin Zexu instituted laws banning opium throughout China. He arrested 1,700 dealers, and seized the crates of the drug already in Chinese harbors and even on ships at sea. He then had them all destroyed. That amounted to 2.6 million pounds of opium thrown into the ocean.... Angry British traders got the British government to promise compensation for the lost drugs, but the treasury couldn't afford it. War would resolve the debt. But the first shots were fired when the Chinese objected to the British attacking one of their own merchant ships. Chinese authorities had indicated they would allow trade to resume in non-opium goods. Lin Zexu even sent a letter to Queen Victoria pointing out that as England had a ban on the opium trade, they were justified in instituting one too.” – Sebastien Roblin, “The War That Made Asia: How the Opium War Crushed China,” *The National Interest*, February 17, 2017.

England was also starting to see the effects of opium addiction and there were many who were opposed – led by future Prime Minister Gladstone who had seen the effect of opium on his sister – to using Britain's military force to enforce opium trade upon China and felt that it was a dirty business. Ultimately, the Opium Wars culminated in the capture of Beijing in 1860 by a combined French-British expeditionary force of 18,000 men (half a world away from Europe) and burning of the Summer Palaces of the Chinese Emperor who fled.

- ✓ So, if you are following this, the Western powers (the Ever Victorious Army, 1860-1864 was led and trained by American and European officers) helped the Qing defeat the Taiping rebellion in large part because the Heavenly Kingdom banned opium trade – and while this was still going on (Nanjing was not captured until 1864) – the Western powers went to war with the Qing who were also trying to ban the opium trade and stop the spread, eventually capturing Beijing in 1860 and burning the Summer Palaces. Hegemony of opium. Don't trust Westerners, they are twofaced.

Chinese historians call this the “Century of Shame.”<sup>8</sup> This is an example for GGDM in how trade can become war and ripple into vast, unfathomable cultural and political effects.

- ✓ “It’s hard to over-emphasize the impact of the Opium Wars on modern China. Domestically, it’s led to the ultimate collapse of the centuries-old Qing Dynasty, and with it more than two millennia of dynastic rule. It convinced China that it had to modernize and industrialize. Today, the First Opium War is taught in Chinese schools as being the beginning of the ‘Century of Humiliation’ – the end of that ‘century’ coming in 1949 with the reunification of China under Mao. While Americans are routinely assured they are exceptional and the greatest country on Earth by their politicians, Chinese schools teach students that their country was humiliated by greedy and technologically superior Western imperialists. The Opium Wars made it clear China had fallen gravely behind the West – not just militarily, but economically and politically. Every Chinese government since – even the ill-fated Qing Dynasty, which began the ‘Self-Strengthening Movement’ after the Second Opium War – has made modernization an explicit goal, citing the need to catch up with the West.” – Sebastien Roblin, “The War That Made Asia: How the Opium War Crushed China,” *The National Interest*, February 17, 2017.
  - Notice again the “romantic narcissism” *ut supra*: “While Americans are routinely assured they are exceptional and the greatest country on Earth by their politicians, Chinese schools teach students that their country was humiliated by greedy and technologically superior Western imperialists.” Echoes Alan Wolfe (2016), see feature quote in 3 Colleges, p. 487, *supra*.
- ✓ The Japanese were aware of what happened in China in 1860. This, in conjunction with the Perry Expeditions, led to the Meiji Restoration in 1868 and the 20<sup>th</sup> Century history of China, Japan, and the Pacific Rim. One must consider the militarization of Japan, opening of Japan to the West, to be in reaction to what happened to China.
  - The Japanese-language tiaga drama series (with English subtitles) *Yae no Sakura* (2013) in Episode 1 mentions as part of the dialogue the humiliation of China in the First Opium War (1839-1842) and what could happen to Japan. The series begins in 1851 with national heroine Niijima Yae as a 6-year old girl, just a few years before the Second Opium War and two years before Perry’s Expedition, which arrives at the end of Episode 1.<sup>9</sup>
- Onomatopoeia: Fiction imitates history; this historical process has been repeated in science-fiction trope. For example, in *Birthright: The Book of Man*, it was a human tactic to find a substance that was addictive to the local sapient alien population of a planet targeted for conquest, and then dump that substance on the market through trade deals. In the *Andromeda* television series (“Pitiless as the Sun” (2001)), the methane-breathing Pyrians became fatally addicted to ammonium-phosphate fertilizer that they got in trade with the human subspecies Inari. The powerful, technologically advanced Pyrians then became hostile to trade and interdicted trade routes to block the contraband substance from reaching their worlds again.
  - ✓ Merriam-Webster online dictionary at *onomatopoeia*: **1**: the naming of a thing or action by a vocal imitation of the sound associated with it (such as buzz, hiss), **2**: the use of words whose sound suggests the sense. Basically, imitation, parroting.

The Opium Wars are featured in GGDM because they provide a good example of interrelationships of culture, war, trade, sovereignty, hegemony and are an important event in shaping the history of the 20<sup>th</sup> Century. Not only are the Opium Wars a good example in GGDM, but discussion of the subject is also profoundly educational from a current issues perspective. Throughout GGDM, I have used historical examples as supplemental commentary highlighting or complementing the rules and sandbox aspects of GGDM. I could have created examples out of pure fiction (I do use examples from popular science-fiction – fiction takes on a level of ‘reality’ by being popularized in video), but in the realism sense of modernity, the fictional examples would not have been as compelling as the history that shaped our world. Historical examples then (accepted facts, see Five Types of Facts, 1 Dreamtime, p. 135, *supra*), add the ‘realism’ to GGDM, making it relevant to the conversation of our current civilization. Plato would have created idealized mythical dialogue to make the same points.

- ✓ “In ‘The Awakening of Asia’ (1954) ... [Eric] Hoffer discusses the reasons for unrest on the continent. In particular, he argues that the root cause of social discontent in Asia was not government corruption, ‘communist agitation,’ or the legacy of European colonial ‘oppression and exploitation,’ but rather that a ‘craving for pride’ was the central problem in Asia, suggesting a problem that could not be relieved through typical American intervention. For centuries, Hoffer notes, Asia had ‘submitted to one conqueror after another.’ Throughout these centuries, Asia had ‘been misruled, looted, and bled by both foreign and native oppressors without’ so much as ‘a peep’ from the general population. *Though not without negative effect, corrupt governments and the legacy of European imperialism represented nothing new under the sun.* Indeed, the European colonial authorities had been ‘fairly beneficent’ in Asia. ... According to Hoffer, however, Communism in Asia was dwarfed by the desire for pride. To satisfy such desire, Asians would willingly and irrationally sacrifice their economic well-being and their lives as well.

Unintentionally, the West had created this appetite, causing ‘revolutionary unrest’ in Asia. The West had done so by eroding the traditional communal bonds that once had woven the individual to the patriarchal family, clan, tribe, ‘cohesive rural or urban unit,’ and ‘religious or political body.’ Without the security and spiritual meaning produced by such bonds, Asians had been liberated from tradition only to find themselves now atomized, isolated, exposed, and abandoned, ‘left orphaned and empty in a cold world.’ Certainly, Europe had undergone a similar destruction of tradition, but it had occurred centuries earlier at the end of the medieval period and produced better results thanks to different circumstances. Hoffer notes that ‘the resentment of the weak does not spring from any injustice done them but from the sense of their inadequacy and impotence.’ In short, the weak ‘hate not wickedness’ but themselves for being weak. Consequently, self-loathing produces explosive effects that cannot be mitigated through social engineering schemes, such as programs of wealth redistribution. In fact, American ‘generosity’ is counterproductive, perceived in Asia simply as an example of Western ‘oppression.’” – from Wikipedia article, “Eric Hoffer,” captured November 29, 2018 (emphasis added).

- “We were liberated from the fold, that’s all.” – The Who, “Won’t Get Fooled Again” (1970). They probably read Eric Hoffer’s books.

That is to say, they came upon the Existential Void without the protection of their traditional culture. Opium addiction was the short solution for many then and now.

*“In the laboratory, we call this the six-degrees-of-separation-from-cancer rule: you can ask any biological question, no matter how seemingly distant – what makes the heart fail, or why worms age, or even how birds learn songs – and you will end up, in fewer than six genetic steps, connecting with a proto-oncogene or tumor suppressor.”*

– Siddhartha Mukherjee, M.D., Columbia University Medical Center, author of [The Emperor of All Maladies: A Biography of Cancer](#) (2010)

**Spheres in Six Degrees:** Interstellar colonization creates a nearly infinite expanding ‘world.’ Commerce creates links that ‘shrink’ the world. The GGDM setting is a nascent interstellar civilization; the course of the game might be described as a contest between an expanding and shrinking world as forces create the first interstellar civilizations. The “six degrees of separation” are at issue. For example, could any two citizens of an interstellar civilization with far flung colonies be connected by Frigyes Karinthy’s famous “six degrees of separation”?<sup>10</sup>

For the first generation or two, it is possible that any citizen on a newly founded colony would be separated by no more than six degrees from any citizen on the origin world from which the colony ships departed. But over a period of time, it is likely that only the elites and the privileged few travelers in a nascent interstellar civilization would continue to be separated by six degrees or less, like colonist and immigrants to the Americas drifted from the original European families.

But, what if, in a more established interstellar setting, populations move freely via commercial transport, where travelling from colony world to colony world on business, vacation, for a night out on the stars, is like a flight from New York to Paris? What if interstellar communications rose to the level of an interstellar internet? Did you check your Spacebook page today?

- ✓ **Doctor Who:** So, what, do you think that’s how spring begins? With a group message on Tree Facebook? Do you think they send texts to each other? – Dr. Who, “In the Forest of the Night” (2014).

Six Degrees of Separation is a function of removal of distance:

- ✓ “William Wilson’s location theory tries to give an explanation for the widening poverty and inequality gap. With rise of new technologies in recent decades, the new communication methods have allowed us to process and transmit information over great distances. This has, in a sense, destroyed distance. Distance no longer hinders communication as much as it used to. As a result, many businesses have relocated out of the inner city to the suburbs. Sadly, this leaves many ethnic communities stranded in the deindustrialized inner city. They are unable to take part in the sudden shift to information-based and service-based industry jobs.” – captured from Wikipedia article, “Fractal City,” March 8, 2018, citing two William Wilson, [The Truly Disadvantaged: The Inner City, the Underclass, and Public Policy](#) (1987).

Though subject of criticism and controversy, William Wilson’s removal of distance idea plays into the larger ‘spatial justice’ spectrum of Edward Soja (see *Spatial Injustice*, 3 Entropy, p. 246, Soja feature quote, 2 Government Titles, p. 599, Never Achievable, 3 Expansion, p. 908, *supra*).

- Where's Norman?: Interesting identity question: When did the Normans in England stop being the Normans? For example, Kidwelly Castle (Carmarthenshire, Wales) was besieged in 1403 by Welsh revolutionaries supplemented by soldiers from France and Brittany. The castle was relieved and avoided capture by the arrival of a 'Norman' army and was rebuilt on instruction from Henry V.

England was at that time engaged in the Hundred Years War, and led by Lancastrian Henry V who had a claim to the French throne (through his wife Catherine of Valois, daughter of Charles the Mad, and the Treaty of Troyes), and who won a huge victory over the French at the Battle of Agincourt in 1415 using Welsh longbows, temporarily uniting the two kingdoms under his infant son, Henry VI. Histories and depictions of the Battle of Agincourt rarely, if ever, reference Henry V's army of 1415 as a 'Norman army,' rather, in that context, they are referred to as the English army (though unruly, troublesome local Norman knights are mentioned) vs. the French army, echoing subsequent history.

In 1136, the Normans were defeated at the Battle of Crug Mawr along the Welsh coast near Cardigan by an outnumbered Welsh force that employed about 2,000 long bowmen to pelt the Norman force (including Flemish mercenaries) with devastating fire at 200+ yards. Earlier in the year, the Princess Gwenllïan ferch Gruffydd had been executed following the defeat of a Welsh army near Kidwelly Castle, and her husband, father and brothers took out their vengeance against the Normans at Crug Mawr. But the Normans were insatiable, and while they were trying to subdue Wales, they also invaded Ireland in 1179; there were significant contacts between Wales and Ireland, probably the Irish supported the Welsh.

But apparently, contemporary accounts of the Norman Invasion of Ireland in 1179 (just 113 years after the Battle of Hastings) do not refer to 'Normans,' but to 'English' invaders:

- ✓ "In contemporary or near-contemporary sources, the invaders are overwhelmingly described as English. This was because they were vassals of the king of England, and not because they were culturally Anglo-Saxon. *Expugnatio Hibernica* almost always describes them as English; so too does *The Song of Dermot and the Earl*, a source which uses the term 'English' about eighty times, whilst using 'French,' 'Flemings,' and 'Normans' in only one particular line. Despite the modern employment of terms such as 'Normans,' 'Anglo-Normans' (itself an eighteenth-century construct), and 'Cambro-Normans,' contemporary sources virtually never use 'Norman' in an Irish context. Irish sources usually describe the men as 'foreigners' and 'grey foreigners,' or else as Saxain ('Saxons' or 'English'). In consequence, it is apparent that contemporaries regarded the incomers as English, despite the fact that they were not exactly such." – from Wikipedia article, "Norman Invasion of Ireland," October 3, 2019.

Thus, in the Irish context, the Normans were already 'English' just over a century after the Battle of Hastings (1066) in which the Norman William the Conqueror defeated and killed the Saxon king, Harold Godwinson. The Norman lords (the Hiberno-Norman lords) in Ireland carved out their own fiefdoms and quickly lost cultural identity, intermarrying with local Gaelic women, the FitzGeralds of Kildare ruled by proxy, and were mostly ignored and forgotten by the English court in London until they involved themselves in scheming with Yorkist. This eventually prompted the Tudor invasion of Ireland after 1500 (and no one referred to the Tudors as Normans) which were resisted by the previous 'Hiberno-Norman' families.

- ✓ In the context of GGDM and in science-fiction trope generally, at what point after colonization and possible long isolation, are populations on exoplanets (or even in our solar system) descended from Earth no longer referred to as Earthers, Earthlings, or Terrans? Science-fiction writing has been ambivalent on this point, preferring mostly to use the term ‘human,’ unless the sociocultural-sociopolitical context demands it.
  - ✓ This, of course, relates to the Human Drift-course discussion in 3 Entropy, p. 246, *supra*; removal of distance and shrinking of the ‘sphere’ by commerce, maintaining a homogenized culture works against the quick or eventual loss of cultural-ethnic group identity in far-flung interstellar settings.
- Homogenized Milk: I watched a video on YouTube of the Royal Marines Marching Band in a parade through Glasgow, Scotland (unknown date). They were playing the Colonel Boogie. There was no difference at all between Glasgow, Scotland and Pittsburgh, Pennsylvania; they might as well have been marching through center city Pittsburgh in 2018. The buildings looked the same, the store fronts looked the same – they even marched past a Subway restaurant (a ubiquitous sight in Pittsburgh currently). The traffic lights and banners hanging off of streetlight poles. The people dressed and the cars looked the same as Pittsburgh, it was over-cast just like Pittsburgh would be on any given day, people were wearing light jackets and hoodies suitable for a little rain and coolness, most with no hats. The band uniforms were not greatly different than USMC dress blues, except for the pith helmets. And the pavement – when the band turned a corner at an intersection, I happened to notice the – um – pavement condition, and it looked just like any intersection in center city Pittsburgh. Such is the homogenization of cityscapes in the Anglosphere.
- ✓ I remember seeing a news report around the late 1990s that made this similar point, that a mall or commercial-retail area in Kansas looked just like any one you might find in Georgia or Texas. The homogenization of American landscapes and the disappearance of regional niches and variations has been made possible by media, commercialization, prime farmland turned into cookie-cutter malls and residential developments, consumer economy, the internet, and the dominance of large chain stores and restaurants which have made everything look the same-ness. Some find this reassuring, others disturbing; e.g., those who like the natural uneven look of natural wood paneling and furniture vs. those who like the uniformity of manufactured artificial surfaces such as Formica countertops or stainless steel appliances.

It is an interesting vision to imagine that in some sort of a pan-galactic culture the Public Spaces and Diplomatic Spaces of the interstellar races will merge into a new Public Space for the pan-galactic civilization, or more likely, that a Public Space will form for the pan-galactic civilization in which all of the preceding Public Spaces and Diplomatic Spaces form a complex dimensional ‘sub-network’ linked emergently to each other and to the pan-galactic? This has been a running theme in GGDM mentioned specifically in Sides of the Coin, 4 Government Titles, p. 630, Pan-Galactic Civilization, 2 Diplomacy, p. 1121, and Pan-Galactic People, 5 Diplomacy, p. 1155, *supra*.

- Dreamspheres: Other than the elaborate government-corporate conspiratorial deception which placed them there (and the wasteful fact that it required so much time and energy to transport the sleepers to Station 42 when it could have been done without leaving), it is difficult to see why the Rhea colony simulation in the movie Cargo: Space is Cold (2009) was so

bad? It looked pretty darned good to me, and clearly Dr. Portman was very sad at having to leave and at what she was about to do.

This may be the actual solution to the Fermi Paradox, that any sufficiently advanced species simply places themselves inside a perfect simulation, a never-ending dream, instead of going out to the stars and colonizing (especially if their planet is deteriorating). And perhaps the majority of the population even forgets. Sort of like *The Matrix* (1999) movie. If you think there is something wrong with that solution (as the movie writers seemed to, but didn't really explain well), we'd better start forming the arguments now, because some very smart people think that the universe might be a simulation or hologram, and like a Rosicrucian secret for reformation of mankind, they have been letting it leak out slowly for the rest of us to absorb.

- ✓ Some big Hollywood movies have recently explored the idea of a perfect future for humanity being a virtual reality simulation (notice this never occurred in *ST:OS* or even *Star Wars*) and it's hard to answer Why Not. While our technology is not there yet, what if aliens offered it to us (this might be a great story idea)? Would we be more suspicious than if a human corporation or AI we invented offered it? The perfect VR simulation idea overall seems similar to recreational drug use without (as many) consequences. If we have not yet convinced ourselves of Why Not use recreational drugs (despite the long catalog of personal and social consequences) how could we ever say no to living inside a perfect simulation while our physical bodies are suspended in sleep, or withering, dead, or even non-existent and the Earth returns to nature? If this is the answer to the Fermi Paradox, then no one else has found the Why Not either. If they never bother to look outside or have forgotten, they wouldn't notice us or even care. Maybe FTL is actually accomplished by merging the perfect VR dreamscapes of alien civilizations and that is where everybody is at?
  - See Alissa Wilkerson feature quote from her review of the movie *Ready Player One* (2018) in *1 Corporations*, p. 1241, *infra*. Why Not?

---

*“So what is a ‘cosmopolitan’? It’s a cousin to ‘elitist,’ but with a more sinister undertone. It’s a way of branding people or movements that are unmoored to the traditions and beliefs of a nation, and identify more with like-minded people regardless of their nationality. ... In the eyes of their foes, ‘cosmopolitans’ tend to cluster in the universities, the arts and in urban centers, where familiarity with diversity makes for a high comfort level with ‘untraditional’ ideas and lives.”*

– Jeff Greenfield, “The Ugly History of Stephen Miller’s Cosmopolitan Epithet,” *Politico Magazine*, August 3, 2017

## Endnotes.

---

<sup>1</sup> Commentary & Citation: It seems likely that the Great Maker (aka J. Michael Straczynski as his mother named him) must have been aware of (maybe read) current theory on social collapse especially as the Centauri Republic seems vaguely inspired by the late Roman Empire, e.g.:

- ✓ “This argument is strongly reminiscent of that of Shephard Clough, who suggested that weakness and collapse can be caused by diverting resources from investment in capital to expenditures on art and knowledge. As more resources are devoted to artistic achievement, the share available for creating economic

well-being diminishes, as does the society's strength. Thus the elements that define 'civilization' lead to its demise. The collapses of Egypt in the First Intermediate Period, and of Rome, are explained accordingly (Clough, 1951: 3-7, 52-53, 143-59, 261)." – Joseph Tainter, The Collapse of Complex Societies (1988), pp. 55-56.

<sup>2</sup> Commentary: I heard many times in my youth that prostitution is the oldest profession. I guess that depends on whether one considers marriage a form of prostitution – something I also heard much in my youth. But in any case, hunter, shaman/medicine man, chief and **butcher** must all be a very close second.

<sup>3</sup> Commentary: A fun alternate game option to try: There is a 2% chance per Turn Cycle elapsed so far in the game that each Aspect exposed will be a Sloth-Apathy Aspect instead of the one desired by the position. That means that by Turn 40, there will be an 80% chance of getting a Sloth-Apathy Aspect. Each change in Government Title reduces the chance by 20% on the Regular Turn immediately following the change, per Government Title changed. Sloth-Apathy Aspects probably shouldn't be used as a trigger for a Kairotic Moment (see Critical Mass, 3 Kairotic Moments, p. 1438, *infra*) – but that might be interesting too! But it could also overwhelm the game eventually.

<sup>4</sup> Commentary: The Roman use of defensive terrain at the Battle of Watling Street – creating a narrow front with woods on either side, and using missile weapons against vastly numerically superior opponents – is very similar to the English use of defensive terrain at the Battle of Agincourt, fourteen centuries later.

<sup>5</sup> Commentary: Opium use began in China in the 15<sup>th</sup> Century, but at that time, opium was rare and expensive, and thus a novelty good for the extremely wealthy. The British opium trade with China, beginning two centuries later, flooded China's coastal area with opium, which was often mixed with tobacco, making it cheap and available for addiction. Some years just before 1850, the German Lutheran Missionary, Karl Friedrich August Gützlaff (aka Charles Gutzlaff) was the victim of a scam by alleged Chinese Christian converts who were opium addicts, and his local Bible printer. His converts sold new copies of the New Testament he had given them free for use in proselytizing missions inland, back to the printer for opium money, who in turn, resold them back to Gutzlaff's mission.

<sup>6</sup> Commentary: Joe was a time traveler. He bought coffee at the grocery store before time-jumping to an alternate medieval world, where he sold the coffee at great profit. With his profits, he was able to buy a coffee plantation and eventually a coffee-processing factory back in his original world. With this, he was able to regularly supply his medieval customers with coffee, made enormous profits, and became King Joe, the wealthiest king that medieval world had ever seen (and a very wealthy man in his own world as well, draining gold and valuables from the medieval economy for coffee). By edict, every subject over the age of 8 was required to drink coffee every day and the only supplier of coffee was King Joe and the coffee sellers became the aristocracy and King Joe's oligarchy. Thus, a cup of coffee became known as a Cup of Joe. Coffee became associated with wealth, intelligence and vitality. Wars of conquest were launched to open new markets to coffee consumption-by-edict and galleys became sailing ships. King Joe died of heart arrhythmia when his highly agitated subjects revolted over spilled beans.☺

<sup>7</sup> Citation: "There is nothing new in the world except the history you do not know." – Harry S. Truman, 33rd President of the United States of America.

<sup>8</sup> Commentary: When you understand the Century of Shame and the Chinese Communist Revolution, the situation in Hong Kong in 2019 is not surprising. Hong Kong is a symbol of the Century of Shame and the West is unwilling and unable to enforce the guarantees of the 'one country/two systems' agreements that created the SAR because the balance of power has shifted. China's actions in Hong Kong are in part to show that the West is impotent in Chinese internal affairs. Most *would not think* that the Hong Kong problem there is related to the opioid problem here.

<sup>9</sup> Commentary: I thought I was watching a movie, which is how it is listed on Amazon Prime Video. At some point, I realized the story was moving too slowly for a 72-minute movie. At the end, I figured out it was only the pilot episode of a 50-episode annual series; Amazon only had the first episode (but it was very good!).

- ✓ Cf. Game of Thrones had 73 episodes over 8 seasons, and I have only seen the first episode of that series too. The thought of 73 Machiavellian body-count episodes is daunting, though in my youth of 25 years ago, I happily watched all 110 episodes and all 5 television movies of Babylon 5. I guess I am old now.

<sup>10</sup> Commentary: I am 'separated' from Pat Benatar by only a few degrees: I personally know (as in FTF) someone who lives in Los Angeles (in a section populated with music big wigs) who met and befriended Pat Benatar's daughter in 2019. It's 'so what?' totally meaningless braggadocio to know someone who personally met and is 'friends' with the daughter of some famous singer. But I'm a fan, I bought her Live from Earth album in vinyl when I was 14 (still have it) and I saw her in concert once at the Pittsburgh Regatta, so it was kind of interesting for a *moment*.

*“There is more credit and satisfaction in being a first-rate truck driver than a tenth-rate executive.” – B.C. Forbes (founder of Forbes magazine)*

*“My father was a truck driver. That’s where it all started, and academically I was a disaster at school. My cousin got his name on the honor board; I, at Melbourne High School, I carved mine on the desk.”*

– Lindsay Fox (founder of Linfox, Australian logistics company)

**Trucking:** Trucking is in-system trade between **alien colonies** owned by different positions.

- ✓ **Apostasy** only affects the Cargo Ship or Cargo Boats involved in the Trucking Transaction; it is not applied to the colonies (who may benefit in more than RPs, p. 1228, *ut infra*). See Aliency Apostasy, 3 Disruption, p. 283, *supra*.
- **Shanzhai Products:** Any activation of the Commerce Power for the purpose of Trucking *must first be checked to see if the colony obeys the Power Activation*. If the colony does not, the remainder of the Trucking activation is ignored; if this happens to the first Partner in the trade, it would be courteous to inform the second Partner before their next Regular Turn. If it happens to the second Partner – it is important especially for the second Partner to insure it doesn’t happen at their colony – the players will need to deal with the problem in-game.
  - ✓ Although Trucking using Cargo Ships or Boats arguably includes a Loading or Unloading activation, for game convenience *only the colonies are checked* to see if they comply with the Power Activation. Thus a ship that would fail to obey half the time due to inactive Constructural Elements, might be useful for Trucking activations.
  - ✓ Sending RPs via Trucking from a Conquered Colony is Looting (due to Loading)...
- **Flea Market:** The Commerce Power is activated for the purpose of Trucking for local trade between two non-sovereign colonies not requiring interstellar movement.<sup>1</sup>
  - ✓ The Commerce Power may not be activated for the purpose of Trucking if the originating or target colony is involved currently in any Combat (including being Besieged).
  - ✓ The activation costs one Act.
  - ✓ The first position to activate the Commerce Power for the purpose of Trucking must also supply a Scene on their planet. Both positions do not need to supply a Scene.
    - In a Trucking Transaction between partners on the same planet, it is possible for the second partner to place the Scene used by the first partner. See Scene Snitching, 3 The Sidereal Stage, p. 124, *supra*.
  - ✓ It is possible to have one-sided Trucking Transactions where the first partner intentionally sends RPs to the second without expectation of reciprocation and without the second partner ever activating the Commerce Power for the purpose of Trucking Transaction. The conditions precedent (i.e. Scene and cargo unit conduit) *only need to be met on the first partner’s activation* to start the transaction.

- ✓ However, to be able to activate without costing a Scene, the second partner must *successfully activate* the Commerce Power for the purpose of Trucking using the same cargo unit conduit and targeting a colony in the same system on the Regular Turn in which RPs are received via Trucking Transaction from the first partner's colony. If for any reason this is not done (or if the Power Activation fails), then any subsequent Trucking Transaction activations will be as 'first partner' and cost a Scene.

The Trucking transaction is designed for *two positions only*; there is no provision for direct three and four- or more-way trading and passing RPs around a system between multiple positions by chaining Trucking Transaction activations is probably not cost effective. The Trucking Transaction necessarily applies only to local trade between two colonies owned by different positions (even if they have the same Native Population Type); thus Trucking is not intended for two colonies owned by the same position (see Carting activation instead, *ut infra*, p. 1229). Trucking crosses sovereign boundaries and that is the reason requiring a separate activation. Marketing cannot be applied to Trucking Transactions (see Marketing, 2 Commerce, p. 1193, *supra*).

- Planet Caravan: If the Trucking Transaction is between planets in the same system, *one* position must supply a suitable Cargo Ship or Cargo Boat *that is currently present in the system during the first partner's Regular Turn* to serve for the transaction, and that unit must be present during the entire transaction (cannot move way, retreat, or be destroyed) – that is, at least two Regular Turns – or the entire Trucking Transaction is cancelled. The first partner may designate a Cargo Ship or Boat belonging to the second partner (i.e. is owned by the owner of the target colony to whom the RPs are being sent) at the risk that the cargo unit is suitable and won't move away; it will be *assumed* that permission has been granted by the owner if RPs are being sent to them (game processing will not stop to seek permission).
  - ✓ It is not a bad idea to have some redundancy in Cargo Ships in case one or two are destroyed in combat, or for sedentary Carting and Transaction duties.

The designated cargo conduit must be able to hold, in RPs, the total amount of RPs designated for the Trucking transaction. The Cargo Ship or Cargo System Boat used will automatically Load the number of RPs sent and Unload the same number of RPs to the target Colony as part of the Trucking transaction, no separate orders are required for the Load/Unload.

- ✓ The Cargo Ship used for the Trucking Transaction may also Load or Unload RPs from its own colony(s) in the same Regular Turn but cannot leave the system before the Trucking Transaction is complete.
- ✓ A position engaging in Trucking must specify the amount of RPs sent from their colony to the other, which will be fully deducted from the position's Treasury and *half will count against the colony's GDP for the turn*, e.g., loaded on a truck and sent away. It is not possible to trade RPs that are not currently in the Treasury, it is not required that both parties reciprocate the same amount of RPs or that the second party reciprocate at all (*ut supra*). It is possible to send double the GDP if the colony only engages in Trucking (i.e. does not use GDP for anything else that turn) and the Treasury and conduit can handle it. It is also possible for the first partner to designate zero RPs to be traded away, starting the Trucking Transaction where they expect to receive RPs from the second partner (but still must provide the Scene, *ut supra*).

- “... doubtless some societies would be willing to receive inputs of goods without reciprocating through exportation, but this is obviously difficult to achieve in a world of shortages. Probably the contemporary society that comes closest to this is North Korea, as it lacks a market economy, and can afford comparatively few exports, as the goods of the sort it produces are generally needed at home. However, it does welcome inputs in the form of humanitarian food aid, and does receive such aid from a number of countries.” – Kenneth D. Bailey, “Boundary Maintenance in Living Systems Theory and Social Entropy Theory,” *Systems Research and Behavioral Science*, Vol. 25, Is. 5, pp. 587-597, January 7, 2009.
  - See longer quote in Social Entropy Theory excerpt, Entropy, *supra*.

For example, two colonies on the same planet are set to trade. The owner of the Galactic Firsters colony activates the Commerce Power for the purpose of Trucking, costing one Act and one Scene, designates the Last Laughters colony as the trade target and 15 RPs for trade. Those 15 RPs are deducted from the Galactic Firsters’ Treasury and half of the RPs count also against the colony’s GDP for the Regular Turn (rounded down). The owner of the Last Laughters colony on their next Regular Turn should activate the Commerce Power for the purpose of Trucking at the colony, costing just one Act, and designate how many RPs will be sent to the Galactic Firsters colony (if reciprocating).

- ✓ If the two colonies in the preceding example were on different planets, Galactic Firsters will need to also designate a Cargo Ship or Cargo System Boat that belongs to either party that is capable of handling the RPs sent and doesn’t move away.

Trucking obviously requires a considerable amount of pre-coordination and agreement through private player communications. The Concierge will not enforce any agreements between positions, it is up to them to execute as agreed or deal with the consequences in-game.

- Fairies Wear Boots: The actual RPs received by the target colony in the Trucking transaction is the amount sent plus 5% to 8% plus ½ RP per previous successful Trucking Transaction (rounded up) between the *same two colonies regardless of changes in ownership*, not positions (1 RP for a full round of reciprocal trade); the RPs will be available to the trading partners at the beginning of their Regular Turn *immediately after it was sent*, as if Unloaded from a Cargo Ship (that is, ‘enhanced value,’ see Cha-Ching, 2 Commerce, p. 1203, *supra*). Thus, they may be used in addition to the colony’s GDP for colony activities during the Regular Turn, including being loaded to a Cargo Ship. If not used, they are lost.
  - ✓ For example, Johnny Badhair<sup>2</sup> sends RPs to Babymetal in the first part of a Trucking Transaction; the enhanced RPs received will be available on Babymetal’s next Regular Turn and it will be incumbent upon them to reciprocate if that was the deal.
  - ✓ The RPs sent cannot simply be stored on the Cargo Ship used as a conduit, they must first go to the target colony and may be Loaded to a Cargo Ship in the same turn by separate activation of the Commerce Power for that purpose. Generally, Trucking Transactions are not directly useful to the positions outside the local system.
  - ✓ Because only *previous* Trucking Transactions between the same two colonies are counted, the current transaction doesn’t count, but will count the next time (i.e., in the reciprocation or just the next time RPs are sent, whichever is first). This could be a small benefit to going first and providing the Scene in a reciprocal trade deal.

- ✓ The first partner in the Trucking Transaction is taking a chance; they could get stiffed either intentionally or accidentally by the second partner, if reciprocation is expected (this is business, or maybe extortion, not love!), either through intentional failure to activate the Commerce Power for Trucking, or oversight or Power Activation failures or not transmitting the promised RPs (or not having the RPs in their Treasury). In this case, the second partner is unjustly enriched by receiving enhanced RPs without fully reciprocating or at all. This trade surplus or deficit is left to be dealt with in-game by the participants involved; it is a game/trade diplomacy issue.<sup>3</sup>

In addition, each position receiving RPs – if the other colony was of a different Native Population Type – has a 30% chance of receiving a Cultural Traits piece adjacent to the colony involved in the transaction – either a random Proficiency or a random Aspect Piece from the position’s Aspect List (a position will not receive alien Aspects) at the end of the Regular Turn if an open Monad is available. Finally, there is a 15% chance that an Intervention Potential or Intervention Potential Plus against the position *will be eliminated or generated*, 50% chance each, however, the position will not be informed if this occurs.

- ✓ Unused Enlightenment attached to the Trucking activation can be used for the first roll (Cultural Traits piece), but not for the second (Interventions) roll.
- Orientalism: There are two design reasons behind the receipt of Cultural Traits through Trucking transactions. First, the costs in Acts and Scenes weighs against the relatively low gain in RPs received as opposed to other actions the position could take. Second, planetary trade has led to cultural exchange, e.g., orientalism and re-orientalism provided cultural reflections like standing between two mirrors. There is more opportunity (in interstellar terms) for such exchanges between colonies that occupy the same planet (just like on Earth) or system, and actively engage with each other in trade. The secondary effects of Trucking transactions may also occasionally save some Government Titles from failing Conflict Checks and possibly becoming disrupted.
  - ✓ “Paradoxically, while Europe’s religious leadership lost touch with China, Europe’s leisured classes became infatuated with the East. Outward trappings of Chinese civilization became the rage. Porcelains, lacquerware, furniture, and the architecture of the pagoda and pavilion captivated Europe’s aristocratic tastes. Oriental flora and fauna were imported and came to adorn arboretums and zoos in London and Paris. Great atlases of China, India, and the Pacific were printed. Learned societies published papers on East Asian customs, and novelist gave birth to the Oriental tale. Except for the clergy, the West’s reception of China remained warm. ... In the end, Rome’s feud with the Jesuits provided eighteenth-century sinophilism with its genuine cutting edge. *Admitting the value of the East became a way of identifying what was wrong with the West.* By virtue of their image of the Orient, early Enlightenment thinkers, pro-Chinese and hostile toward Rome, created what they wished their Europe would become.” – Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648-1789 (2<sup>nd</sup> Ed., 1992), p. 170 (emphasis added).

This is what came to be called Orientalism; upon the East, the West projected their ideals of paradise (often without realistic basis, similar to infatuation with a romantic interest, the very term that Birn uses) mixed with the exotic charm of Eastern art, ideas, and artifacts. The

concept later flowed into mid-20<sup>th</sup> Century counterculture movements that often embraced Eastern philosophies, beliefs, and rituals against the majority Christian norms.

- ✓ Cf. “The attempt to understand the loss of paradise is at the same time a grasping to comprehend current conditions and a philosophy of how a political society should be. Here then is another dimension to the study of collapse: it is not only a scholarly attempt to understand the past and a practical attempt to ascertain the future, but also, in many minds, a statement of current political philosophy (see, for example, Isaac [1971]).” – Joseph Tainter, The Collapse of Complex Societies (1988), p. 39.

Both Birn (1992) and Tainter (1988) express the same idea, that xenophilism and nostalgia for a past ‘golden age’ are inherently or inherently become a statement of criticism of the present and a wishful vision of the future.

---

*“You’ve got bad eating habits if you use a grocery cart in 7-Eleven.” – Dennis Miller*

---

**Carting:** Carting is the Power Activation of the Commerce Power used to transfer RPs directly between two colonies in the same system or same planet that are owned by the same position (the opposite of Trucking Transactions, *ut supra*). Conquered Colonies sending RPs via Carting are being Looted (see 3 Commerce, p. 1210, *supra*). Carting can only be used to transfer RPs. Carting is useful for two or more colonies to cooperate in constructing a ship at one colony that has a Shipyard (see Orange Cones, 1 Construction, p. 663, *supra*).

- ✓ It is possible, through conquest, for a position to own more than one colony on a single Balkanized planet of different native population types. This is especially good for Carting transactions (tribute?). There may be only one colony on each planet for each Native Population Type (see Lebensraum, 3 Taxation & Census, p. 321, *supra*).
  - ✓ Due to the order in which Power Activations are processed during the Regular Turn (see Clockwork Universe, 3 The Streams of Time, p. 90, *supra*), Carting activations will process before Construction Power activations at the receiving colony.
- **Donkey Cart:** Activation of the Commerce Power for the purpose of Carting requires one Scene located on one of the planets participating in the Carting or on the star. Scene snitching is possible (see 3 The Sidereal Stage, p. 124, *supra*), especially on Balkanized planets. Like the Trucking Transaction activation, it is only intended for two sovereign planets in the same system, and thus there is no provision for three-way movement of RPs and it cannot be used to move RPs to a non-sovereign planet or to a colony outside the starsystem. The Carting Power may be activated any number of times in the same system on the same Regular Turn to accomplish RP movement involving three or more planets, only one Scene is required to satisfy the requirements of any number of Carting activations in the same system in the same Regular Turn for all colonies owned by one position.
- ✓ This is similar to the use of one Scene at a colony to satisfy Loading, Unloading and Construction Activations in the same Regular Turn at that colony. See Construction Zone and Material Handling, 1 Construction, pp. 661, 664 respectively, *supra*.
  - ✓ The Concierge may note frequent one-way Carting in a system and take the position of the people on the ground in the *creative use of Interventions*; e.g., certain colonies may feel like “donor economies” to an empire from which they benefit little (see

quote about the War of the Sicilian Vespers, The Chain About Your Neck, 3 Order, p. 546, *supra*) or there may be a situation similar to Boudicca’s Revolt (see 3 Commerce, p. 1212, *supra*) where the Romans took 1/3 of their harvest and then sold it back to them at high prices. There may also be a cultural displacement involved, similar to the Zulus who were forced from a homesteader economy to having to work in mines and farms on land that had been taken from them (see discussions of the Zulus in Programming Dilemma, 1 Culture, p. 352, and The Chain About Your Neck, 3 Order, p. 546, *supra*) and then had to buy what they had produced in stores owned by whites. It is also possible that the receiving colony may develop opulence (see Cosmic Impracticality, 3 Entropy, p. 248, *supra*) and that an illusion of superabundance (next page, *ut infra*) may prevail at the sending colonies.

- **Hot Dog Cart:** A Carting activation involving colonies on different planets also requires a friendly Cargo Ship (or Boat) to be in the same system at the *beginning* of the Regular Turn (i.e., not arriving at the beginning of the turn, see Long Jump, 2 Movement, p. 851, *supra*) and not depart during the Regular Turn (the rules are the same as Trucking Transactions). The Cargo Ship (the ‘hot dog cart’) designated must also have available cargo space remaining (and don’t forget the condiments!☺), but can be carrying RPs from other places and may also Unload or Load normally during the same Regular Turn that it is also Carting, and it is possible for one Scene to cover all of the activations if the Unloading/Loading and Carting all involve the same colony planet on the same Regular Turn (Donkey Cart, *ut supra*).
  - ✓ Only one Cargo Ship (or Boat) can be assigned to each Carting activation; the same ship may be assigned to multiple Carting activations, and each Carting activation may also use a different Cargo Ship (or Boat) if available. It’s a matter of RP capacities.
- **Golf Cart Handicap:** For the Carting activation, *only the sending colony* is checked to see if it obeys the Power Activation (the receiving colony says, ‘Hey, free stuff!’ and the Cargo Ship says, ‘Look, it’s just my job, don’t blame me!’). If it fails to obey the Power Activation, nothing is transferred, which may cause problems on the other end if the RPs are not available to the receiving colony’s GDP on that turn for Construction actions. Enlightenment may be used to reroll failed results if the sending colony has an active Epistemological Constructural Element (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*).
  - ✓ Sometimes Enlightenment ‘grows’ out of the barrel of a gun, but be careful with that, see Getting Along, 3 Commerce, p. 1209, *supra*. If the sending colony is a Conquered Colony, no Power Activation check is made for Carting, on the flip side, the colony is being destroyed slowly by Looting. Newly Converted colonies can be problematic as they may have inactive Constructural Elements.
  - ✓ “I was out on the golf course, a guy came riding out in a golf cart and said, Did you know that Elvis died? And I just said, Well, there you go. It was like I had kinda been expecting it.” – Mac Davis (who wrote four hits for Elvis Presley).
- **Cheesesteak Vendors in Phili:** Regular Turns in GGDM have the paradoxical quality of being potentially infinite but definitely finite. Did I mention eigenstates previously? Effectively a Cargo Ship could transfer an infinite number of RPs between planets in-system in a Regular Turn, but on the other tenstical, the Regular Turn does end.

The Carting activation must specify the number of RPs the sending colony will attempt to transfer in-system to the receiving planet; the receiving colony must also be specified. Like

Taxation, it is theoretically possible for a sending colony to send RPs equal to what it would produce if taxed at that moment, but not more, unless a Writ or some other game device is used (see Red Planet, 2 Taxation & Census, p. 307, *supra*).

The number of RPs transferred from the sending colony to the receiving colony on a different planet is equal to the available RP capacity of the Cargo Ship (or Boat) used, as of the beginning of the Regular Turn (thus cannot be increased by Unloading Cargo at the same time, or decreased by Loading) times a die roll of 1-10 (i.e. 1d10). In concrete terms, the die roll represents the number of transfer revolutions accomplished during the Regular Turn – load, move to receiving colony, unload, move back to sending planet, rinse & repeat.

- ✓ If the amount of RPs transferred is less than the number of RPs to be sent, the Carting roll would be considered a failure for the purposes of triggering Enlightenment rerolls, even if only by 1 RP. The reroll result could be worse, or better. If Enlightenment has been assigned to this Power Activation and has not been used previously, it may be applied if either the sending colony or the Cargo Ship (or Boat) has an active Epistemological Constructural Element.

The RPs received through Carting are added to the receiving colony's GDP-limit for the current turn activities as if they were Unloaded from a Cargo Ship that same turn (see Gross Domestic Product, 1 Construction, p. 662, *supra*).

- ✓ Positions should plan for variable RPs received, in some cases, insufficient RPs will be available for Construction activities on the receiving colony that is counting on the Carting; in other cases, too many RPs will be received and will be lost if not used that Regular Turn (just like Unloading RPs from a Cargo Ship).
  - “The world is full of people who will help you manufacture tornados in order to blow out a match.” – Shaun Hick (author).

---

*“First, it led to planners to shift lands from grain to economic crops, such as cotton, sugarcane, and beets, and divert huge numbers [of] agricultural laborers into industrial sectors, fueling state demand for procured grain from the countryside. Second, it prompted the Chinese leadership, especially Zhou En-lai, to speed up grain exports to secure more foreign currency to repay debts to the Soviet Union and to purchase capital goods needed for industrialization. Finally, **the illusion of superabundance** made the adoption of the commune mess halls seem rational at the time. All these changes, of course, contributed to the rapid exhaustion of grain supplies.”*

– Dali L. Yang, [Calamity and Reform in China: State, Rural Society, and Institutional Change Since the Great Leap Famine](#) (1996), p. 65 (emphasis added) (about 50 pages of this book are available for free on Google Books)

---

**The Illusion of Superabundance:** Theoretically, it might be possible for a position to trade away more than its GDP in a Regular Turn through Trucking (either singly or collectively through multiple Trucking transactions) due to the fact that only half counts against the GDP.

This is a grey area that the participants will need to decide to allow or disallow (see Red Planet, 2 Taxation & Census, p. 307, *supra*). This could be very useful in the short term, and could be a

subject for Specialized Colonies (i.e. Trading Posts) and Corporations or MegaCorporations (see 1 and 2 Corporations generally, *infra*) with supporting arrangements. There could also be long term adverse consequences on the colony (e.g., the Great Chinese Famine):

- ✓ “In Xinyang, people starved at the doors of the grain warehouses. As they died, they shouted, ‘Communist Party, Chairman Mao, save us.’ If the granaries of Henan and Hebei had been opened, no one need have died. As people were dying in large numbers around them, officials did not think to save them. Their only concern was how to fulfill the delivery of grain.” – Yang Jisheng, “A hunger for the truth: A new book, banned on the mainland, is becoming the definitive account of the Great Famine,” February 10, 2012, chinaelections.org.
  - This article exists in the original Chinese text on the Wayback Machine (aka ‘internet archive’<sup>4</sup>). The article’s English translation cited in the Wikipedia article, “Great Chinese Famine,” is no longer available on the internet as of January 19, 2019. It is certain that the Chinese government would like this article to disappear, but it has been preserved outside their reach in the original language, the important part is cited on Wikipedia.
- ✓ “Yang Jisheng, a long-time communist party member and a reporter for the official Chinese news agency Xinhua, puts the blame squarely on Maoist policies and the political system of totalitarianism, such as diverting agricultural workers to steel production instead of growing crops, and exporting grain at the same time. During the course of his research, Yang uncovered that some 22 million tons of grain was held in public granaries at the height of the famine, reports of the starvation went up the bureaucracy only to be ignored by top officials, and the authorities ordered that statistics be destroyed in regions where population decline became evident. ... Mao refused to open the state granaries as he dismissed reports of food shortages and accused the peasants of hiding grain.” – from Wikipedia article, “Great Leap Forward,” January 19, 2019.
  - During the Great Leap Forward and the subsequent Great Famine, ideology took precedence over practicality and reality. Minister of Defense Peng Dehuai wrote a private letter of opinion to Mao Zedong during The Lushan Conference (1959) urging him not to put ideology before economics. The private letter was circulated, and Mao Zedong took it as a personal attack on his leadership and, despite his previous statement of amnesty for any opinions stated at the conference,<sup>5</sup> purged General Peng and his supporters. General Peng was forced into retirement and relocated to a suburb under constant guard. The disaster of the Famine snowballed into 1960 and 1961 as no one dared to report the truth to the well-fed leadership (who didn’t want to hear it anyway). In 1966, General Peng was arrested, humiliated, tortured as part of the radical Cultural Revolution that unleashed the fanatical Red Guards militia on the countryside. Peng was sentenced to life imprisonment for his ‘crimes’ and died in prison in 1974, Mao having personally ordered withholding of medical treatments.

This is a situation that participants might consider in GGDM in cases of radical Government Titles, Ideological Constructural Elements in allowing excessive Trucking.

*“Mercy sakes alive, looks like we’ve got us a convoy! ...  
By the time we got into Tulsa Town, We had eighty-five trucks in all ...  
Well, we shot the line and we went for broke, With a thousand screamin’  
trucks, An’ eleven long-haired Friends of Jesus, In a chartreuse micro-bus.”*

– C.W. McCall (aka Bill Fries and Chip Davis), “Convoy” (1975)

**Jumping Around in the Livingroom:** I cannot possibly imagine the number of times I heard this song around my 8<sup>th</sup> birthday and into the summer after, I remember it was fun, I remember mimicking the CB conversations, jumping around the living room with my friends, pretending to drive a big truck. The song faded from my consciousness, but after seeing “Smokey and the Bandit” too many times in 1980-1981 (a totally idiotic movie, it was almost continuously played on HBO then), as a teen, I came to kind of hate the song.

My reasons for not liking the song, though not clearly articulated when I was a teen, are probably similar to the reasons I disliked *From Dusk Till Dawn* (1996): After I watched it – I realized that the movie tricked the viewer into liking very unlikeable characters: The main ‘heroic’ characters Seth and Richie Gecko are fugitive bank robbers, murderers, kidnappers and Seth is also a rapist. All in the first ten minutes of the movie. But they become heroic because they join with a pastor when confronted with the forces of hell? By the end of the movie, the viewer is made to forget the beginning of the movie. I didn’t buy into the transition and resented the sleight of hand attempted by the writers and directors.

In any event, I view the song now for what it was, a silly novelty song on the radio in my youth related to economic angst. I still don’t think much of the *Smokey and the Bandit* movies though.

*“Blockade running seems almost as brisk as ever, the new class of blockade runners are very fast and sometimes come in and play around our vessels, they are built entirely for speed.”*

– Rear Admiral David Dixon Porter, USN, letter to War Department (American Civil War) cited in [Stark’s History and Guide to the Bahama Islands](#) (1891)

**Blockade Running:** Blockade Running (aka blade running) in GGDM occurs when Cargo Ships attempt to Load or Unload, Log Ships attempt to transfer or receive anything, or Colony Ships attempt to Load or Unload populations at a colony planet during any Regular Turn in which the target colony is engaged in an ongoing Colony Combat (whether Besieged or not, see 3 The Sidereal Stage, p. 124, *supra*).

The Blockade Running situation lasts only during the Regular Turn, but the ships involved, if they cannot depart during the Regular Turn, will be ‘retreated’ to the colony planet and automatically join the Colony Combat on the next Combat Round (where they may thereafter attempt to stay or retreat, be Combat Screened, etc.).

- ✓ Unlike normal Power Activations for the purpose of Load, Unload, or Ship Supply, or Loading or Unloading Colony Ships, when a Blockade Running situation occurs, *before resolution*, each ship must be checked to see if it obeys the Power Activation (or in the famous words of Han Solo, “Look, I ain’t in this for your revolution, and I’m not in it for you, Princess. I expect to be well paid. I’m in it for the money.”). If the

ships obey the Power Activation, each ship that does will then make the Blockade Running attempt. If and when they arrive, any second checks at the colony are performed to see if the colony does (and is able, considering the circumstances) to obey the Power Activation. If so, the Loading, Unloading or Transfers can proceed. If Enlightenment has been assigned to the Power Activation (one of the benefits of arriving at the end of the previous Regular Turn by Short Movement), it may be applied to the rolls to see if the ships or colony obeys the Power Activation, but may not be applied to the Blockade Running attempt, *ut infra*.

There are many timing issues in GGDM that can lead to these situations, for example, non-warships arriving at the end of a Short Movement (which arrives before the beginning of the next turn) to find their destination colony under attack. As Besieged Colonies cannot act as Supporting Colonies (see 1 Movement, p. 840, *supra*), the ships may have no choice but to try to reach the colony (*ut infra*), or if they have sufficient OSL, they may leave for another destination. The ships may also be carrying things vital to the colony defenses and need to reach the colony to deliver the goods, and thus risk running the gauntlet, ordeal by fire.

- Round The World With Rubber Duck: Any order to Load, Unload, or Transfer, *regardless of ship ownership*, anything to a colony under attack in Colony Combat will invoke the Blockade Running procedures, the actions will not be resolved until and unless the ship successfully runs the blockade. Log Ships may not use Combat Resupply procedures at a colony (see 4 Movement, p. 868, *supra*). A ship that successfully runs the blockade to the target colony may still fail to execute the order to Load, Unload, or Transfer due to inactive Constructural Elements (see Power Off, 2 Constructural Elements, p. 193, *supra*). A ship that successfully runs the blockade is automatically resupplied, that is, the colony is able to act as a *Supporting Colony* (see 1 Movement, p. 840, *supra*) for ships that reach orbit.
  - ✓ Blockades only apply to the colony involved in a Colony Combat; running is not necessary to reach colonies on Balkanized planets that are not under attack.
  - ✓ Blockades cannot be ‘turned off’ voluntarily, the local commanders will enforce a security exclusion zone (like in the Falkland Islands War) to isolate the target.
- Cab-over Petes Don’t Float: These rules do not apply to Colony Ships that are Landing on a planet where a Colony Combat is in progress against a colony already on the planet. As there can be only one colony of each Native Population Type on a planet (see Island Motes, 4 Expansion, p. 921, *supra*) any Colony Ships carrying population of a colony that already exists on a planet can only Load or Unload or move on after being resupplied. Thus any Colony Ships Landing at the site of an ongoing Colony Combat are likely not involved in the combat, unless they are the attacker’s ships. There is some grey area there for judgment, but the process in that case (the attacker would be considered extremely aggressive in doing this) could be treated like landing Ground Units (see Dropping In, 4 Combat, p. 991, *supra*).
- Crashed the Gate Doin’ 98: Blockade Running attempts are resolved separately for each ship. The resolution process is a simplified Fighter attack with two *sorties* lasting one Combat Round. The attacker(s) in the Colony Combat *does not need to activate the Combat Power* and the attacking warships will respond automatically to Blockade Running attempts. Only warships and Fighters involved in the Colony Combat will participate in the Blockade Running attempt. The defenders will know already how many warships and Fighters the attacker has present and will be able to generally know the odds of success in advance; it might

be possible for the defender to improve the odds by certain attacks in the Combat Round just before the Regular Turn is processed. The Blockade Running attempt is resolved as follows:

- ✓ The base value ('total cost' per Laying Keel, 3 Construction, p. 675, *supra*) of all warships of the attackers in the Colony Combat is totaled and 25% of the value is treated as 'Fighters'; remember that Carriers are also warships. To that is added half of the value of the Fighters belonging to the attacking side in the Colony Combat.
- ✓ The total is then reduced by half the total RP value of the Fighter Complements belonging to the defenders in the Colony Combat. Further, half the value of any warships at the colony planet (having retreated there previously, see Ship Zipped, 3 Combat, p. 982, *supra*, or ran the blockade) are subtracted from the attacker's 'Fighter RPs' to arrive at the value of the Fighter Complement that will attempt to block.
  - For example, the base value of three warships attacking the colony is 200 RPs total, which is reduced to 50 RPs for the Fighter Complement. The attackers have no Fighters, their Carrier was destroyed in a preceding Ship Combat in System Space. The colony has 20 RPs of Fighters remaining, and a small 20 RP warship in orbit that retreated to the colony at the end of the Ship Combat that the defenders lost. The defending Fighters subtract 10 RPs from the attacker's total and the warship is an additional 10 RPs subtracted, so that the value of the 'Fighter Complement' attempting to block *each runner* is 30 RPs.
- ✓ After the calculations, the 'Fighter attacks' are resolved in two sorties, each at half the value of the whole, against *each* blockade runner. The attacks are resolved as normal, with Effectiveness Rolls, but the Fighter attacks *do not* receive the bonus for being a Concentrated Attack (as they normally would, see 2 Carriers & Fighters generally, *supra*, for Fighter attack procedures) and the runners do not Close-in Defense Fire.
  - Continuing the previous example, *each* ship attempting to reach the colony will be subjected to two Fighter attacks at 15 RPs each. The ships attempting to run the blockade will not execute any Close-in Defense Fire.

Thus, the attackers in a Colony Combat will never suffer losses from Blockade Running attempts. The entire risk is on the runners:

- ✓ If a ship attempting to reach the colony is Engaged, but not destroyed, the Blockade Running attempt is aborted and the runner retreats to system space. If the second attack on the runner is successful, it becomes a hit and the runner is destroyed (see A Hurt, 2 Carriers & Fighters, p. 1056, *supra*) unless the runner can take more than one hit due to technologies. If no attacks against the Blockade Runner are successful, the ship reaches the target colony safely and executes (or attempts to) its Regular Turn actions as if no combats were in progress. Everything is just peachy. For Molly.
- ✓ As Enlightenment cannot be used to force an opponent to reroll a successful attack, they will be no use in Blockade Running. As the attackers in the Colony Combat are responding automatically to the attempt, the position players will not have an opportunity to decide whether or not to use Enlightenment. Thus Enlightenment will not be a factor in Blockade Running.

- ✓ All combat shifts apply to resolving Blockade Running, including Era differentials. As blockade runners are most likely civilian ships, shifts in favor of the attackers will be applied for civilian targets.

Any ship or unit that is capable of Ambush Mode does not need to run the blockade to reach the target colony. They just slip by the attackers and are resupplied if they reveal.

- ✓ There is a tremendous range of technologies and doctrinal templates that could be developed to assist both sides in a Blockade Running situation or make Blockade Running unnecessary.
- About to Put the Hammer Down: Any ship at a *planet* (not in system space) that is owned by the defenders in an ongoing Colony Combat, that initiates interstellar or interplanetary movement or movement to system space during a Regular Turn, must first successfully run the blockade pursuant to the Blockade Runner procedures above. If the result is Engaged, the unit retreats back to the planet. If no attacks on the unit are successful, it escaped and may initiate the movement.
  - ✓ The rules for initiating interstellar or interplanetary movement to escape out of a Blockade are the same as the normal rules for the Power Activation that is used to initiate the movement (or in the case of interplanetary movement, the normal Movement Power activation is used). Each ship seeking to run out of the blockade must check to see if it obeys the Power Activation and the colony may act as a Supporting Colony for the second roll if the first fails. Enlightenment may be applied to the rolls if the ship or colony (as appropriate) has an active Epistemological Constructural Element, but cannot be applied to the Blockade Running attempt (*ut supra*).
    - **C-3PO**: Sir, the odds of successfully navigating an asteroid field is approximately three-thousand-seven-hundred-twenty to one! **Han Solo**: Never tell me the odds! ... **C-3PO**: Sir, the odds of surviving a direct assault on an Imperial Star Destroyer are precisely-... **Princess Leia Organa**: Shut up! – Star Wars Episode V: The Empire Strikes Back (1980).

---

*“Trade relations between the two blocs increased substantially during the era of détente. Most significant were the vast shipments of grain that were sent from the West to the Soviet Union each year, which helped make up for the failure of kolkhoz, Soviet collectivized agriculture.”*

– from Wikipedia article, “Détente,” November 20, 2019

---

**How the Cold War Ended Cold**: I heard a figure when I was young that the average American farm produces enough food to feed the farmer and 120 other people per year.

Whatever the number, crop yields per acre have skyrocketed and in addition to industrialization of meat production (i.e. factory farming, intensive animal farming, some consider it an ethical shame of modern times), it reached the point where the U.S. government began paying millions of dollars per year to farmers *not to plant crops* to reduce the excess on the market. And we still had enough to annually export millions of tons of food to the Soviet Union during Détente.

- ✓ There is a feedback loop: Excess food on the market drives the prices down, farmers plant more to keep their income up, which adds more excess to the market, driving

the prices even farther down... The government sought to stabilize the market prices by setting price minimums, buying up excess for the military and government economic support programs (e.g., the picture of Ronald Reagan holding up government cheese) and dissuading farmers from planting more and more by propping up their income with subsidies. And by shipping millions of tons to the Soviet Union.

The core of Détente was food sales to the Soviet Union to make up for their poor system. All the rest was containment and deterrence around the edges. I personally remember hearing regular mentions about this on the evening news growing up: Détente, grain shipments, arms control.

- ✓ “Nixon and his national security adviser, Henry Kissinger moved toward détente with the Soviet Union in the beginning of the 1970s. They had hopes that the Soviets would, in return, help the United States extricate or remove itself from Vietnam. People then started to notice the consciousness in which the American politics started to act with.” – Wikipedia, *Id.*, citing to Richard Rhodes, *Arsenals Of Folly: The Making of the Nuclear Arms Race* (2007), p. 61.
- ✓ “At the same time, the Jackson-Vanik amendment, signed into law by Gerald Ford on 3 January 1975, after a unanimous vote by both houses of the United States Congress, was designed to leverage trade relations between the U.S. and the USSR, making the United States’ involvement dependent upon improvements of human rights within the Soviet Union, in particular allowing refuseniks to emigrate; it added to the Most Favoured Nation status a clause that provided that no countries resisting emigration could be awarded this status. This provided Jackson with a method of linking geopolitics to human rights.” – Wikipedia, *Id.*

Food sales to the Soviet Union accomplished four goals:

1. Propped up domestic prices by soaking our excess harvest off the domestic market.
2. Prevented the Soviets from going to war to obtain food, which could easily slip into a nuclear exchange or a wider conventional war.
3. Made the Soviets dependent upon us, if they went to war with us (or tried to take the oil fields of the Middle East) they would lose their food support – and the Soviet leadership was well aware of what hungry angry mobs can do because that is what brought the Bolsheviks to power in 1917.

Tom Clancy used this approach in his famous 1983 novel *Red Storm Rising*. Except that he used oil refining and terrorism as the trigger because it was sexier than food and perhaps because the Soviets would run out of gas before they ran out of food (especially if they went to war with us using up their military fuel supply!). In the book, the Soviets needed to win decisively in three months or less and they needed to attack NATO in Europe to distract NATO from being able to intervene decisively against their drive to the Middle East oil fields.

4. Thus, as a side issue, it also insured the domestic stability of the Soviet Union for 20 more years which was important because they had a huge arsenal of nuclear weapons:
  - “When the Soviet Union collapsed in 1991, the worry in the West was what would happen to that country’s thousands of nuclear weapons. Would ‘loose’ nukes fall into the hands of terrorists, rogue states, criminals – and plunge the world into a nuclear nightmare? Fortunately, scientists and technical experts in both the U.S. and the former Soviet Union

rolled up their sleeves to manage and contain the nuclear problem in the dissolving Communist country.” – Clifton B. Parker, “Why the Soviet nuclear arsenal stayed secure as the nation collapsed,” [engineering.stanford.edu](http://engineering.stanford.edu), August 4, 2016.

- There was a period of time during the collapse of the Soviet Union when we did not know who had the nuclear launch codes. It would only take a couple of radicals with the launch codes to retaliate against NATO or to cause an incident that would ‘reunite’ the Soviet Union against the West.

As I have argued previously, the inefficiency of human economic systems probably prevented the Cold War from ending in thermonuclear apocalypse: The Soviet Union collapsed from its own absurdities. There were people then who railed against détente, and would do so now in historical hindsight; it is said that Ronald Reagan’s rhetoric rejected détente and hastened the collapse of the Soviet Union. But détente gave time for the containment strategy to work.

This argument is not ignoring the controversy of the 1980 Grain Embargo by the United States against the Soviet Union. Though the Soviets arguably *came out the better for it* and the U.S. economy suffered, the Soviet need to import additional grain from South America still points to the central problem: Had the Soviets invaded Western Europe or the Middle East, they would have been cut off from all grain imports, including from South America. They did not have the power projection ability to invade South America to regain their food supply source, they would have needed to compensate by overrunning Iran and Iraq. Roll the dice.

---

*“From 1965 to 1974, I served the best possible apprenticeship for an actor. I learned firsthand how a truck driver lives, what a bartender does, how a salesman thinks. I had to make a life inside those jobs, not just pretend.”*

– Brian Dennehy

---

*“The woods are lovely, dark and deep, But I have promises to keep, And miles to go before I sleep, And miles to go before I sleep.”*

– Robert Frost, “Stopping by Woods on a Snowy Evening” (1923)

---

#### Endnotes.

<sup>1</sup> Citation: Funny truck-driver quotes: 1) “My teacher told me that nobody would ever pay me to look out a window ...he was wrong.” 2) “Your pickup can tow 10,000 pounds. That’s cute.”

<sup>2</sup> Citation: Johnny Badhair is the cover illustration for Epic Magazine Issue No. 33, December 1985.

<sup>3</sup> Commentary: The game design philosophy here is minimum game mechanical entanglements between positions. The deal is not between game mechanics, but between positions, facilitated by minimal mechanics necessary.

<sup>4</sup> Citation: <https://web.archive.org/web/20120210190821/http://en.chinaelections.org/newsinfo.asp?newsid=18328>.

<sup>5</sup> Commentary: This would be called a bait and switch. I am sure it does not have a complimentary term in any language. But when you are the authoritarian ruler of a country backed by fanatical ideologues, and the army leader, with whom you have been friends for 30 years, begins to question you ... you can probably do whatever you need and get away with it. In the name of the revolution.

**“The Duck Test” (from “When Empires Fall II”)****Excerpt from article by Dave Nilsen, February 1993, Challenge Magazine #69**

The age-old duck test declares, ‘If it walks like a duck and quacks like a duck, it’s a duck.’ Unfortunately, there is nothing resembling such a straightforward test for sentience.

The main reason for this is the emotional priority given to preexistence. There is a clear popular prejudice that something artificially created or manufactured cannot be sentient; that it is somehow instead merely a simulation or mimicry of sentience. On the other hand, a pre-existing organism that is discovered to have sophisticated mental processes is much more likely to be perceived as legitimately sentient.

What this demonstrates is a deep-seated psychological or spiritual belief that life or intelligence can only be created by something greater than we are, something which is infinite or eternal. Just as we finite creatures are an order of magnitude less substantial than the infinite (shadows of the eternal forms, as Plato would have it), our creations must again be an order of magnitude lower than we are, and the notion that we can rise this lesser order of energy up to our level is something that we emotionally resist. Whether this belief is true or not is arguable; that it is unconsciously subscribed to by a substantial portion of humans is not. Thus we find ... the persistent rejection of increasingly sophisticated robots and computers as anything other than machines.

A powerful adjunct to this belief is the ‘threshold’ issue. If we accept the premise that we can manufacture sentient life, then we should be able to define the threshold at which a mere thing becomes a *being*, something with a *a priori* value. Then it follows that we can simply add the ingredient that takes something across the line into beinghood, we can take it back and pull it back across into thinghood. Once we know what that thing is, we can identify the people that were born without it, or the point at which a person loses it and becomes merely disposable. We don’t really want to know what that thing is; after all, we have a vested interest in maintaining our anointed status as beings.

- ✓ See previously Plato’s “Allegory of the Cave” (Second Coversheet, *supra*), see also the concept of uplifting lower forms or races common in science fiction.
- ✓ Rhetorical Question: Do you think that the source being a 1993 RPG magazine article somehow lessens the thought-value of the argument? Is there anything in the quote that makes you say, “Oh, that’s just from some silly space game”? Like we are talking about Martian invaders?

**The Dark Secret at the Heart of AI****Excerpts from article by Will Knight, April 11, 2017, MIT Technology Review**

Last year, a strange self-driving car was released onto the quiet roads of Monmouth County, New Jersey. The experimental vehicle, developed by researchers at the chip maker Nvidia, didn’t look different from other autonomous cars, but it was unlike anything demonstrated by Google, Tesla, or General Motors, and it showed the rising power of artificial intelligence. The car didn’t follow a single instruction provided by an engineer or programmer. Instead, it relied entirely on an algorithm that had taught itself to drive by watching a human do it.

Getting a car to drive this way was an impressive feat. But it's also a bit unsettling, since it isn't completely clear how the car makes its decisions. Information from the vehicle's sensors goes straight into a huge network of artificial neurons that process the data and then deliver the commands required to operate the steering wheel, the brakes, and other systems. The result seems to match the responses you'd expect from a human driver. But what if one day it did something unexpected – crashed into a tree, or sat at a green light? As things stand now, it might be difficult to find out why. The system is so complicated that even the engineers who designed it may struggle to isolate the reason for any single action. And you can't ask it: there is no obvious way to design such a system so that it could always explain why it did what it did.

The mysterious mind of this vehicle points to a looming issue with artificial intelligence. The car's underlying AI technology, known as deep learning, has proved very powerful at solving problems in recent years, and it has been widely deployed for tasks like image captioning, voice recognition, and language translation. There is now hope that the same techniques will be able to diagnose deadly diseases, make million-dollar trading decisions, and do countless other things to transform whole industries.

But this won't happen – or shouldn't happen – unless we find ways of making techniques like deep learning more understandable to their creators and accountable to their users. Otherwise it will be hard to predict when failures might occur – and it's inevitable they will. That's one reason Nvidia's car is still experimental.

Already, mathematical models are being used to help determine who makes parole, who's approved for a loan, and who gets hired for a job. If you could get access to these mathematical models, it would be possible to understand their reasoning. But banks, the military, employers, and others are now turning their attention to more complex machine-learning approaches that could make automated decision-making altogether inscrutable. Deep learning, the most common of these approaches, represents a fundamentally different way to program computers. "It is a problem that is already relevant, and it's going to be much more relevant in the future," says Tommi Jaakkola, a professor at MIT who works on applications of machine learning. "Whether it's an investment decision, a medical decision, or maybe a military decision, you don't want to just rely on a 'black box' method."

There's already an argument that being able to interrogate an AI system about how it reached its conclusions is a fundamental legal right. Starting in the summer of 2018, the European Union may require that companies be able to give users an explanation for decisions that automated systems reach. This might be impossible, even for systems that seem relatively simple on the surface, such as the apps and websites that use deep learning to serve ads or recommend songs. The computers that run those services have programmed themselves, and they have done it in ways we cannot understand. Even the engineers who build these apps cannot fully explain their behavior.

This raises mind-boggling questions. As the technology advances, we might soon cross some threshold beyond which using AI requires a leap of faith. Sure, we humans can't always truly explain our thought processes either – but we find ways to intuitively trust and gauge people. Will that also be possible with machines that think and make decisions differently from the way a human would? We've never before built machines that

operate in ways their creators don't understand. How well can we expect to communicate – and get along with – intelligent machines that could be unpredictable and inscrutable?

\*\*\*

The resulting program, which the researchers named Deep Patient, was trained using data from about 700,000 individuals, and when tested on new records, it proved incredibly good at predicting disease. Without any expert instruction, Deep Patient had discovered patterns hidden in the hospital data that seemed to indicate when people were on the way to a wide range of ailments, including cancer of the liver. There are a lot of methods that are “pretty good” at predicting disease from a patient's records, says Joel Dudley, who leads the Mount Sinai team. But, he adds, “this was just way better.”

At the same time, Deep Patient is a bit puzzling. It appears to anticipate the onset of psychiatric disorders like schizophrenia surprisingly well. But since schizophrenia is notoriously difficult for physicians to predict, Dudley wondered how this was possible. He still doesn't know. The new tool offers no clue as to how it does this. If something like Deep Patient is actually going to help doctors, it will ideally give them the rationale for its prediction, to reassure them that it is accurate and to justify, say, a change in the drugs someone is being prescribed. “We can build these models,” Dudley says ruefully, “but we don't know how they work.”

\*\*\*

But it was not until the start of this decade, after several clever tweaks and refinements, that very large – or “deep” – neural networks demonstrated dramatic improvements in automated perception. Deep learning is responsible for today's explosion of AI. It has given computers extraordinary powers, like the ability to recognize spoken words almost as well as a person could, a skill too complex to code into the machine by hand. Deep learning has transformed computer vision and dramatically improved machine translation. It is now being used to guide all sorts of key decisions in medicine, finance, manufacturing – and beyond.

The workings of any machine-learning technology are inherently more opaque, even to computer scientists, than a hand-coded system. This is not to say that all future AI techniques will be equally unknowable. But by its nature, deep learning is a particularly dark black box.

You can't just look inside a deep neural network to see how it works. A network's reasoning is embedded in the behavior of thousands of simulated neurons, arranged into dozens or even hundreds of intricately interconnected layers. The neurons in the first layer each receive an input, like the intensity of a pixel in an image, and then perform a calculation before outputting a new signal. These outputs are fed, in a complex web, to the neurons in the next layer, and so on, until an overall output is produced. Plus, there is a process known as back-propagation that tweaks the calculations of individual neurons in a way that lets the network learn to produce a desired output.

The many layers in a deep network enable it to recognize things at different levels of abstraction. In a system designed to recognize dogs, for instance, the lower layers recognize simple things like outlines or color; higher layers recognize more complex stuff like

fur or eyes; and the topmost layer identifies it all as a dog. The same approach can be applied, roughly speaking, to other inputs that lead a machine to teach itself: the sounds that make up words in speech, the letters and words that create sentences in text, or the steering-wheel movements required for driving.

- Commentary: Imagine that a bank is sued by a group of Plaintiffs for discrimination in hiring or promotion decisions or in loan and mortgage decisions – don't think a moment that all of these have not happened many times already. The bank defends the claims stating that the decisions were made by Deep Learning AI software and that, even though the results may appear to be a pattern of discrimination, in fact the bank had no such intention. See, it was all the computer? And the bank cannot explain how the software made these decisions. You cannot depose the AI software to ask, and the person-most-knowledgeable (PMK) of the subject sent over for deposition by the bank doesn't know and cannot explain it either. What can the Plaintiffs do? The pattern of discrimination, the appearance of discrimination, may be enough to settle the case favorably for the Plaintiffs, but direct testimony, documentary evidence like e-mails and texts, leading to intent would be a much better case. Except that it was all the computer, see? Might the Court conclude then that just as an owner is responsible if their dog bites someone – whether they loosed the dog on the victim or not – that the bank is responsible for the pattern, appearance and actual damage of seeming discrimination due to the AI? You cannot say, legally, well my dog bit him, I didn't bite him so I am not responsible, and we can only ever speculate why the dog bit someone, we cannot ask him, depose him. This would be a fascinating case, I would happily work on such case of first impression.

**AI Is Inventing Languages Humans Can't Understand. Should We Stop It?  
Excerpts from article by Mark Wilson, July 14, 2017, fastcodesign.com**

Bob: "I can can I I everything else."

Alice: "Balls have zero to me to."

To you and I, that passage looks like nonsense. But what if I told you this nonsense was the discussion of what might be the most sophisticated negotiation software on the planet? Negotiation software that had learned, and evolved, to get the best deal possible with more speed and efficiency – and perhaps, hidden nuance – than you or I ever could? Because it is.

This conversation occurred between two AI agents developed inside Facebook. At first, they were speaking to each other in plain old English. But then researchers realized they'd made a mistake in programming.

"There was no reward to sticking to English language," says Dhruv Batra, visiting research scientist from Georgia Tech at Facebook AI Research (FAIR). As these two agents competed to get the best deal – a very effective bit of AI vs. AI dogfighting researchers have dubbed a "generative adversarial network" – neither was offered any sort of incentive for speaking as a normal person would. So they began to diverge, eventually rearranging legible words into seemingly nonsensical sentences.

"Agents will drift off understandable language and invent codewords for themselves," says Batra, speaking to a now-predictable phenomenon that's been observed again, and again, and again. "Like if I say 'the' five times, you interpret that to mean I want five

copies of this item. This isn't so different from the way communities of humans create shorthands."

\*\*\*

### We Teach Bots To Talk, But We'll Never Learn Their Language

Facebook ultimately opted to require its negotiation bots to speak in plain old English. "Our interest was having bots who could talk to people," says Mike Lewis, research scientist at FAIR. Facebook isn't alone in that perspective. When I inquired to Microsoft about computer-to-computer languages, a spokesperson clarified that Microsoft was more interested in human-to-computer speech. Meanwhile, Google, Amazon, and Apple are all also focusing incredible energies on developing conversational personalities for human consumption. They're the next wave of user interface, like the mouse and keyboard for the AI era.

The other issue, as Facebook admits, is that it has no way of truly understanding any divergent computer language. "It's important to remember, there aren't bilingual speakers of AI and human languages," says Batra. We already don't generally understand how complex AIs think because we can't really see inside their thought process. Adding AI-to-AI conversations to this scenario would only make that problem worse.

But at the same time, it feels shortsighted, doesn't it? If we can build software that can speak to other software more efficiently, shouldn't we use that? Couldn't there be some benefit?

Because, again, we absolutely can lead machines to develop their own languages. Facebook has three published papers proving it. "It's definitely possible, it's possible that [language] can be compressed, not just to save characters, but compressed to a form that it could express a sophisticated thought," says Batra. Machines can converse with any baseline building blocks they're offered. That might start with human vocabulary, as with Facebook's negotiation bots. Or it could start with numbers, or binary codes. But as machines develop meanings, these symbols become "tokens"—they're imbued with rich meanings. As Dauphin points out, machines might not think as you or I do, but tokens allow them to exchange incredibly complex thoughts through the simplest of symbols. The way I think about it is with algebra: If  $A + B = C$ , the "A" could encapsulate almost anything. But to a computer, what "A" can mean is so much bigger than what that "A" can mean to a person, because computers have no outright limit on processing power.

"It's perfectly possible for a special token to mean a very complicated thought," says Batra. "The reason why humans have this idea of decomposition, breaking ideas into simpler concepts, it's because we have a limit to cognition." Computers don't need to simplify concepts. They have the raw horsepower to process them.

\*\*\*

### Why We Should Let Bots Gossip

But how could any of this technology actually benefit the world, beyond these theoretical discussions? Would our servers be able to operate more efficiently with bots speaking to one another in shorthand? Could microsecond processes, like algorithmic trading,

see some reasonable increase? Chatting with Facebook, and various experts, I couldn't get a firm answer.

However, as paradoxical as this might sound, we might see big gains in such software better understanding *our* intent. While two computers speaking their own language might be more opaque, an algorithm predisposed to learn new languages might chew through strange new data we feed it more effectively. For example, one researcher recently tried to teach a neural net to create new colors and name them. It was terrible at it, generating names like Sudden Pine and Clear Paste (that clear paste, by the way, was labeled on a light green). But then they made a simple change to the data they were feeding the machine to train it. They made everything lowercase—because lowercase and uppercase letters were confusing it. Suddenly, the color-creating AI was working, well, pretty well! And for whatever reason, it preferred, and performed better, with RGB values as opposed to other numerical color codes.

Why did these simple data changes matter? Basically, the researcher did a better job at speaking the computer's language. As one coder put it to me, "Getting the data into a format that makes sense for machine learning is a huge undertaking right now and is more art than science. English is a very convoluted and complicated language and not at all amicable for machine learning."

\*\*\*

Given that our connected age has been a bit of a disappointment, given that the internet of things is mostly a joke, given that it's no easier to get a document from your Android phone onto your LG TV than it was 10 years ago, maybe there is something to the idea of letting the AIs of our world just talk it out on our behalf. Because our corporations can't seem to decide on anything. But these adversarial networks? They get things done.

*See Appendix ART – Articles of Incorporation Examples*

*“American based multinationals have an impressive record of interference in the affairs of the host countries, with activities ranging from bribery of local officials to outright attempts to overthrow foreign governments, including those of Iran in 1953, Guatemala in 1954, and Chile in 1970... Exxon it was soon discovered had paid nearly \$60 million to government officials in fifteen nations, including \$27 million to several Italian political parties. Lockheed had distributed nearly \$200 million in bribes and payoffs ... and the resulting scandals implicated a prince of the Netherlands, the Prime Minister of Japan, military leaders in Columbia, and cabinet members in Italy... In all more than 500 major American corporations ... admitted to giving bribes or other questionable payments to government officials ... to obtain benefits for themselves. (Sampson, 1973, Hougan, 1976, Hersch, 1982).”*

– Ian Robertson, [Society: A Brief Introduction](#) (1989)

**Real Corruption:** By early 1975, the SEC’s investigation uncovered staggering bribery by American corporations of foreign officials and businesses. The investigation was switched to a voluntary-disclosure-for-amnesty program. In December 1977, the Foreign Corrupt Practices Act was signed into law. And it goes ever on. In 2009, the CEO of Kellogg, Brown and Root, a subsidiary of Halliburton Corporation, pled guilty to charges stemming from a scheme that paid \$180 million over 10 years to three successive governments of Nigeria for mineral rights.

- ✓ The early-mid 1970s revelations about the actions of U.S. multi-national corporations overseas coincided with movies such as Rollerball (1975), which in GGDM terms, might be deemed an Aspect. Rollerball was probably the start of the anti-corporate movie as a sub-genre of video science-fiction, followed later by movies such as Alien (1979) and Resident Evil (1996) to name just a few.<sup>1</sup> That Aspect has not yet ‘aged-out’ in our civilization, or is it the ‘dark side’ of an Aspect called Modernity?

In December 2008, Siemens paid \$1.6 billion in fines to the governments of Germany and the United States relating to an overzealous and systemic program of foreign bribes. Siemens executives intimidated and dismissed the whistleblower who initially reported their fraud relating to a contract with the Norwegian Department of Defense. This is not unusual, I have worked on many such cases in my legal career.

- ✓ “When the Western advisory firms came into Angola almost two decades ago, they were viewed by the global financial community as a force for good: bringing professionalism and higher standards to a former Portuguese colony ravaged by years of civil war. But ultimately they took the money and did what their clients asked, said Ricardo Soares de Oliveira, an international politics professor at Oxford who studies Angola. ‘They are there as all-purpose providers of whatever these elites are trying to do,’ he said. ‘They have no moral status – they are what you make of them.’” – Michael Forsythe, Kyra Gurney, Scilla Alecci and Ben Hallman, “How U.S. Firms Helped Africa’s Richest Woman Exploit Her Country’s Wealth,” New York Times, January 19, 2020.

Imagine the multitude and magnitude of the *cultural* damage caused by such epic corruption, let your mind follow the implications; look at the headlines from Nigeria and other places of endemic corruption and desperate poverty. They feed on each other in a vicious cycle.

- ✓ Corruption is not limited to business and corporations, of course, it exists in any organization that commands significant economic power. The corruption of the Church has been mentioned previously in GGDM (e.g., see *The Black Death*, 1 Disruption, pp. 252-253) and has been an issue in organized labor, both in the old guilds and in the modern unions (e.g., see Noam Scheiber and Neal E. Boudette, “Behind a U.A.W. Crisis: Lavish Meals and Luxury Villas,” *New York Times*, December 27, 2019). So if you think corporate corruption is a problem, the problem gains magnitude here.<sup>2</sup>
- Hold My Wallet: As mentioned in one article I read in 2019, *quid pro quo* is almost never explicitly stated. Not like in the movies; e.g., the ‘defense contract’ scene from *Elysium* (2013), it is usually instead suggested or implied, e.g., the ‘bribery’ scenes such as the ‘hold my wallet scene’ in *Spies Like Us* (1985) or the pimp in *Dirty Harry* *Magnum Force* (1973). Except that those are movies. My experience in *quid pro quo* sexual harassment litigation confirms the probable truth of it and Aaron Blake of the *Washington Post* thought the same:
  - ✓ “It’s difficult to see how Zelensky could interpret that set of circumstances as something other than a strong suggestion and even a veiled threat. It’s equivalent to your boss repeatedly suggesting you do something – while noting what your compensation is – without explicitly making a demand. What are you going to do: believe it to just be a gentle suggestion? No, you’re going to think there could be some relation between your pocketbook/job status and your future actions.” – Aaron Blake, “7 takeaways from the rough transcript of Trump’s call with Ukraine’s president,” *Washington Post*, September 25, 2019.

This thought is applicable throughout GGDM as a simulation of civilizations, but most especially in relation to Entropy, Government Titles, and Diplomacy, lodging Special Operations missions and executing certain ops, and, of course, Corporations.

- Tolkein Revolution: Where J.R.R. Tolkien revolutionized fantasy was that Sauron is unlike any other evil character: There is no evidence that he derived or desired any earthly delights or treasures or lived a luxurious lifestyle at the expense of others (unlike the notorious leaders of certain countries, the military-industrial complex, or the common view of feudal lords or executives of corporations). Sauron was just pure supernatural evil, deception, and corruption and power for its own sake (and not for the joy of it either). There is all the difference in the world.
  - ✓ A continuation of this can be seen in certain long-lived or nearly immortal ‘evil’ characters in *Dr. Who* as they single-mindedly pursue devious and power-hungry schemes not apparently designed for gain in worldly wealth and pleasure, but for power or mischief for its own sake (e.g., Davros, The Master). This is distinguishable from the servants, mercenaries, bounty hunters, and co-conspirators who are doing so for material and worldly gain regardless of the moral consequences; they can be manipulated by the one who is the agent of chaos, evil, darkness, spite, revenge, etc. consistent with most world religions and philosophies that put the non-material (i.e. essence) above material gain, even if for evil purpose. I want you to meet Mr. Vader, our new CEO, he specializes in anger and not management.

*“Ready Player One is set in a dystopian future. But it seems to have no idea how dystopian it really is. ... It’s one of the more frightening things I’ve ever seen in a movie, largely because it’s only a few notches past the world we inhabit now. It’s like a scene from Black Mirror: a world of people so distracted by their shiny technology that they have entirely neglected the stuff of human life. They’d rather just escape into another world, created by a couple of programmers. To me, that seems transparently dystopian – not that the world is bad, but that nobody cares anymore about fixing it. ...*

*I sounds overly pedantic to say this, and it probably is, but I couldn’t stop thinking about what was going on in the world outside the OASIS. Were people starving? Or fearing for their lives? Can everyone afford to have headsets, or does this neglected world include people who have to live in the dystopic ruins without escape? What kind of unrest has driven them into this dystopic state? And why doesn’t anyone think it can be fixed? Isn’t it horrifying that they’ve just left it all behind altogether? ...*

*But Ready Player One presents itself as a story about a gang of brave, scrappy heroes who are motivated to save the world – but only the virtual world, the one that keeps them from engaging with what’s really going on in the physical world. And the movie applauds this. It very obviously wants us to cheer for our heroes as they try to save the OASIS from destruction.*

*I sat watching this all unfold, disturbed by the implication here: that we out in the audience are supposed to be on the side of escape. In fact, we are on its side, engaging in a movie that functions as an escapist fantasy itself. It’s a little hard not to feel like the emperor isn’t wearing any clothes. By the end of the film, the only concession to this weird dissonance comes in a sort-of statement that it’s probably good to take off the headset and actually interact with the real world now and then. Not to think about how the in-world injustices might map onto real-world injustices, or to fix problems.”*

– Alissa Wilkerson, “Ready Player One is a fun romp that’s even more dystopian than it realizes,” Vox.com, March 29, 2018 (emphasis in original) <sup>3</sup>

**Resident Evil:** Corporations have always been one of the favorite villains of science-fiction literature, representing the emotionless, exploitive, inhuman, dehumanizing face of technology, business organizations, and socially-irresponsible wealth.

In our world, Exxon corporation’s fleet of tankers worldwide constitutes more vessels than the navy of Great Britain and a Congressional investigation in the mid-1970s learned that Exxon, Lockheed, and hundreds of other multi-national corporations had paid billions of dollars to leaders, officials, political parties, and as bribes to dozens of European and “third-world” countries. Multinational corporations employ mercenaries, and have their own ‘foreign policies,’ and have attempted the overthrow of the government of Iran in 1953, Guatemala in 1954, and Chile in 1970, to be replaced with more cooperative governments. In some countries, the operating budget of a large, multi-national corporation for that country will exceed the national budget of the country where they are operating. Multi-national corporations, through their influence and wealth, effectively control some smaller nations today. They controlled about half of the world’s economy at the end of the Cold War.<sup>4</sup>

➤ **Interstellar Corporations:** Now, let’s throw the pie into the sky. In an interstellar setting, corporations become even more powerful in a civilization of ‘island-worlds’ held together only by starships. Science-fiction literature has imagined whole worlds being owned by, enslaved by, or dominated by corporations (similar to early 20<sup>th</sup> Century ‘company towns’). In most

interstellar settings, there are really only three possible owners of starships: Starships are owned either by a government (usually the military), by a corporation (or similar large group), or least likely, by private extremely wealthy individuals and/or the crews of the ships. As long as starships are mind-bogglingly expensive, indispensable to interstellar civilizations, and massively powerful, ownership will be limited to corporations, governments, and the wealthy. Think in our own world who owns the large seagoing ships (and aircraft)? If you had to get to Shambala at the end of the world, how would you get there? While it might be a great adventurous journey to walk there on a planet, you can't walk to anywhere in space. You need a ship and guess who owns the ships?

Some have thought that corporations might eventually, on our own world, or in an interstellar setting, replace governments, or alternatively, become so massively powerful, with their own private armies, police (e.g., *Rollerball* (1975), *Robocop* (1987), *Metropolis* (1927), in the United States currently, many universities and hospitals have their own state-licensed police forces – not security guards – uniformed, armed police), warfleets, and significant populations, that they become independent of the nations, spanning entire regions, crossing borders, forming sort of a 'second government,' 'shadow government' or 'world government.' The greatest dystopian fear of corporations is that they will be able to (or currently do) exercise control over governments through their ruinous, overbearing economic power, for the purely selfish motives of the wealth of their shareholders (the biggest of whom are the directors of the corporation and several other corporations), without accountability. In science-fiction settings, these have been called "mega-corporations," with the power to doom entire planets.

Yet at the same time, whatever their selfish motives, corporations provide an economic network to a civilization for development and allocation of resources, that is unparalleled and indispensable. And when humanity finally moves into space, it will be corporations driving the ship toward new resources and new worlds to exploit, with government trying hard to catch up and gain control of the frontiers. Out there, for at least the first couple of centuries, it will be a 'wild-west' of corporations, until they run into something they can't handle.

- CHOAM: CHOAM in the *Dune* (1965) universe is the most comprehensive example of corporate economic tyranny; an interstellar trade conglomerate corporation owned by the Estates, operated for their benefit, granted a monopoly on all trade and a near monopoly on all starships (other than those owned by the Emperor or Great Houses), and supported by and deeply interwoven with the religion and legitimacy of their society.

- ✓ Dynastic progress and the increasing authoritarian power of the Emperor (originally a minor shareholder) is measured by increase in ownership of CHOAM.

It is the ultimate example of a corporation that is effectively part of, and inseparable from the government, and upon which the economic health of its civilization depends entirely. Grant of a management contract by CHOAM amounted to a quasi-fiefdom with contractual authority to appoint planetary governors over millions of people, backed by the power of the Imperium and a Great House's private army. If there were ever a contract dispute, how would it be resolved? There is no court to hear the dispute other than the Imperial Court of the Emperor, where the issue would be resolved by power intrigues, bribes, ritual assassination and force, or feudal war. It is possible to view Corporations in GGDM in this manner, as they are proxies for certain specific Power Activations that represent the entire civilization.

*“Inside JPMorgan, they called it the ‘Sons and Daughters’ program. Authorities now describe it as ‘corruption, plain and simple.’.. The practice of giving the children of China’s ruling class plum jobs and internships was so common at JPMorgan that the bank even had a formal program known as ‘Sons and Daughters.’ The program included spreadsheets that tracked how often the hires turned into business deals.”*

– Matt Egan, “JPMorgan fined for hiring kids of China’s elite to win business,” CNN Money, November 17, 2016

**Corporation Games:** Corporations, in the game and in the real world, are artificial legal entities which operate under a charter from the state, which is called the Articles of Incorporation. The essence of the corporation in GGDM is to save Power Activations, Acts and Scenes by *automatically* performing regular, repetitive, Power Activation-related *location-specific functions* at sovereign colonies that provide output of goods and services for the civilization. Thus Corporations legally relieve some *scarcity of means* in GGDM’s Power Activations, Acts and Scenes.

- ✓ See Shoestring Production, 3 The Sidereal Stage, p. 122, Gone With the Wind, 1 Government Titles, p. 582, and Player Piano, 2 Eras, p. 770, *supra*.

Corporations can still fail to perform each Regular Turn due to *inactive Constructural Elements*, p. 1248, *ut infra*, because Corporations are made of people who may be incompetent, or just not in agreement with the current view of things. Corporations can suffer and be part of the breakdown of social cohesion, they can also be the target of creative Concierge Interventions!

Corporations in GGDM are thus a subset of sovereignty or sub-sovereign entities. In this, they may be vaguely similar to famous real-world ‘corporations’ such as the BBC (which has a Royal Charter that is renewed periodically), the U.S. Postal Service,<sup>5</sup> FINRA (which refuses to be transparent)<sup>6</sup> or Fannie Mae/Freddie Mac. Inherent in a GGDM Corporation *and MegaCorporation* is the ability to activate a Power at a specific location without use of Acts and Scenes or using one of the position’s precious Power Activations. Any Power could be activated by Corporation as long as 1) it is location specific (and generally repetitive), and 2) it can somehow be creatively justified by the participants within the logic of the game.

- ✓ It is no light matter that Corporations as presented in GGDM and in much of space-opera fiction have a *captive market* in their species or areas controlled by their sovereign, and they have a vested business interest *and existential interest*, in protecting and expanding that captive market. See discussion of Stephen R. Donaldson’s United Mining Corporation, 1 Government Titles, EN 3, p. 585, *supra*. This is less true of MegaCorporations, which the Concierge may sometimes determine will act on their own divergent interests.
- ✓ Corporations in GGDM should never be allowed to generate additional Power Activations for their position (a Corporation is not a genie granting wishes); their functions already ‘alleviate’ some pressure on Power Activations by regularizing routine local activities (localization is the eigenstate of GGDM Corporations to Government, like Institutes are to Colleges). There may be some possible instances where Corporations could, to a limited extent, produce Acts and Scenes (but they are already providing substitute activations at the cost of no Acts or Scenes). A Corporation in GGDM can never act as or substitute for a Government Title (even if they control it).

- ✓ There are a fair number of Conflict Checks for Government Titles that relate to Corporations, MegaCorporations and Commerce Power activations; thus, in addition to the core function of Corporations in GGDM, there may be government legitimacy issues in play as well.

GGDM corporations do not represent a ‘nationalization’ of industry such as has happened in certain countries on both sides of the curtain in the 20<sup>th</sup> century; it is not *socialism*.

GGDM Corporations do not have shareholders (or if they do, it is irrelevant to the game unless it’s useful to the story), the sole owner of a Corporation in GGDM is the position that issued the Articles of Incorporation and at whose sovereign colony it operates. This is different from MegaCorporations, which will be addressed later. Corporations cannot be transferred.

- ✓ “Because means are scarce – with respect to the ends that they could possibly serve – they must therefore be *economized*. As a result of scarcity, the actor has to allocate scarce means to serve the most desired ends, and so certain ends will have to remain unsatisfied. From this it follows that the larger the supply of means is, the more ends can be satisfied. As means are scarce, human action implies that individual actors must rank their alternative ends. Human action is therefore indicative of judgment and valuation – or, as [Murry N.] Rothbard said, demonstrated preferences: the highest-ranking ends are those which the actor values most highly.” – Thorsten Polleit, “What Can the Law of Diminishing Marginal Utility Teach Us?” Mises Institute, February 11, 2011 (emphasis in original).
- We Built This City: A position may not activate an Articles of Incorporation (Special Writ) if it currently has active Corporations equal to or greater than the number of currently undisrupted Government Titles. MegaCorporations memberships do not count as Corporations for this purpose. Corporations that are active and operating do not automatically become suspended or lost due to a Government Title being disrupted, but a position may be unable to issue new or reactivate expired Articles of Incorporation (p. 1247, *ut infra*) due to disruption of the government. The rule linking Corporations to undisrupted Government Titles are applied only on the Regular Turn the Articles are issued or renewed, and thus are a timing issue.
  - ✓ For example, a position with four currently undisrupted Government Titles has five active Corporations.
    - The position will be unable to renew one of the Corporations when its Articles expire unless a new Title is added and no Titles become disrupted.
    - The position would be unable to issue new Articles of Incorporation (i.e. add a new Corporation) until two of the others expire and are not renewed, or until a new Title is added and one of the existing Corporations expires and is not renewed.
    - If one Government Title (of the four) became disrupted the five corporations would continue to operate until expiration, but two of them may not be able to be renewed when they expire.

Undisrupted Government Titles plus active Corporations allow a position to approximately double the size of the government or more with the latter half being location-specific activities. There is a price to pay in Power Activations to get there and to maintain the structure.

- ✓ A position can suffer a double whammy – like a chain car accident I witnessed one day – if failure to renew Articles or failure to timely act with regards to a Corporation causes Government Titles to suffer Conflict Checks and/or become disrupted.
  - Merriam-Webster online dictionary at *double whammy*: a combination of two usually adverse forces, circumstances, or effects.

- We Just Wanna Dance Here: The place at which the Corporation performs its location-specific function must be a Friendly, Naturalized, or Converted sovereign colony of the position that owns the Corporation. Conquered colonies cannot be the target location of a Corporation. The colony at which the Corporation performs its functions is called the Host Colony (similar to the Host Colony of a College, see Campus Life, 1 Colleges, p. 459, *supra*) and must have at least five population on each turn for each Corporation that operates there.

The difference between Hosting Colleges and Corporations is that a College cannot be hosted on a Converted Colony and a College requires a minimum of ten population for each College hosted there. Additionally, a colony hosting a College must have an active Epistemological Constructural Element for the College to operate. Thus, hosting a Corporation is easier than Hosting a College. Colleges and Corporations frequently mirror in GGDM.

A colony can host and/or operate any number of Corporations, Colleges, and MegaCorporations as long as it has sufficient population and *all requirements are met for each one*. A Corporation can have only *one* Host Colony; if the activity of a Corporation involves regular circular movement of a ship or ships between colonies, pick one to be the Host.

As the Host colony must preexist the corporation (must exist and qualify at the time the Writ is activated, it is not possible for a Corporation to found its own Host Colony. This is not to say that it is impossible for a Corporation to found new colonies however, but those colonies must be sovereign to the position, not Corporation owned. Otherwise, what happens to them if the Corporation is not renewed? They would become government colonies.<sup>7</sup>

---

*“Economics is inextricably tied to moral behavior, though few economists will say that. It’s time someone did. In every financial transaction – whether you’re selling a car, paying employees, or repackaging commodity futures as financial derivatives – there are ethical calculations that influence economic activity beyond the price.... Sure, you can cheat a potential buyer and not mention that your 1996 Ford Mustang GT has a cracked engine block, in the same way that your boss can stiff you on overtime. If you get away with it you will succeed in making a short-term gain or see a bump in the next quarterly earnings report. But, if you eventually develop the reputation as someone who consistently defrauds the people you do business with, there is a good chance that the value of your net worth will be as negative as the moral values you embraced. But why is it that businesses that are ‘too big to fail’ don’t seem bound by the same moral economy as the rest of us?”*

– Eric Michael Johnson, “Human Nature and the Moral Economy,” Scientific American (blogs), September 23, 2013 <sup>8,9</sup>

---

**Articles of Incorporation:** Corporations are created by a Special Writ called an Articles of Incorporation in conjunction with a Commerce Power activation for that purpose costing an Act and a Scene on the proposed Host Colony of the Corporation. Articles of Incorporation are a Special Writ used to create a Corporation (describing its operation and social milieu); other Special Writs previously introduced include Writs of Naturalization and Land Grant Writs.

- ✓ *Jobs for slobs.* Prior to actualizing the Fuzzy Group to activate the Special Writ, a check must be made at the proposed Host Colony to see whether the Commerce Power activation for the purpose of Articles of Incorporation is obeyed. If the Host Colony objects (i.e. fails), local resistance has caused the Power Activation to fail. If the Power Activation fails, the Fuzzy Group is not actualized, the Special Writ is not Activated. Another try can be made on the next Regular Turn. Enlightenment may be applied to a failed die roll if the target colony has an active Epistemological Constructural Element and Enlightenment was designated for the Power Activation.

Since Articles of Incorporation are a Writ, they are an official Interpretation, and serve as the Interpretation for the activation of the Commerce Power on the Regular Turn that the Articles are *first Issued*. Like all Writs, it must follow the correct form of the Writ, and must be approved by the Concierge; it must be consistent with the sociopolitical cultural milieu of the position on the Regular Turn it is activated. Articles of Incorporation have a few different requirements discussed below.

- **Who Counts the Money:** In the form of the Articles of Incorporation, the Power to which it relates must be the Commerce Power (see Form of the Writ, 2 Writs, p. 438, *supra*). The Directive section of the Articles of Incorporation must describe the Regular Turn operation of the Corporation in its entirety, and include the Power whose functions it automatically performs and the location.
- **Marconi plays the Mamba:** The Corporation will *operate automatically* as described at the location (host) colony each time a Regular Turn is processed for the position until either the Articles of Incorporation expire or operation becomes impossible (e.g., the Host colony is conquered, destroyed, removed, or reverts). A Corporation will continue attempting to operate until its Articles of Incorporation expire, even if operation becomes impossible.
  - ✓ Certain hostile actions may be taken by other positions to destroy or interrupt the operation of a Corporation for whatever reason they deem compelling. It would be extremely difficult to hide the fact that a colony is Hosting a Corporation. This harkens back to the discussion of Louis XIV’s aggressions under Colbertine mercantilism (see Before the Big Bopper, 2 Commerce, p. 1195, *supra*), though it is unlikely that destroying enemy Corporations in most cases will allow the attackers to ‘take over’ markets. For example, if the Saudi oil fields were collectively considered as a Corporation in GGDM (which seems appropriate), then the Iranian attack on the oil fields in 2019 – perhaps a Raid or a Black-op or both in GGDM terms – would be a Colbertine maneuver.<sup>10</sup> The Colbertine market maneuver was also the essence of the Iraqi invasion of Kuwait, along with a threat to the Saudi oilfields that prompted world action.
- **Underneath the Bar:** The operation of a Corporation during the Regular Turn is not a Power Activation, thus does not take up one Power Activation and *does not require an accompanying Interpretation*. No News Event should announce the regular operation of a Corporation. Corporations thus provide a way to do things ‘under the radar’ in GGDM.

- Someone Stole the Stage: Articles of Incorporation *must* have an expiration time in Turn Cycles *after* the turn of activation or renewal, which is equal to or less than the current number of *undisrupted* Government Titles of the position. The expiration time is reset each time the Articles of Incorporation are renewed based on the *current condition* of the issuer.
    - ✓ Renewing Articles of Incorporation *does not require* an activation of the Commerce Power for the purpose of Issuing Articles of Incorporation, but does require an activation of either the Commerce Power or the Power to whose function it relates, on the same Regular Turn as a Fuzzy Group is actualized to activate the Special Writ.
    - ✓ Renewal of the Articles of Incorporation are considered to occur at the Host Colony (even if the Power activated is not at that colony or capable of being specifically activated at one colony), thus renewal can fail due to inactive Constructural Elements at the Host Colony. Such failures only apply to the attempt to activate the Special Writ (i.e. the Articles of Incorporation), and not to the accompanying Power Activation (whether or not it fails for the same reason), and if failed, the Fuzzy Group to be used is not Actualized (i.e. not removed from the Public Space).
    - ✓ Renewal of Articles of Incorporation (a Special Writ) *does not* serve as the Interpretation for any Power Activation on the Regular Turn the renewal occurs.
      - The distinction is that the initial creation of the Corporation by issuance of Articles of Incorporation (and activation of the Commerce Power for that purpose) is a general event of the civilization (activation of the Commerce Power for that purpose is not considered location specific), whereas, renewal of the Articles is considered location specific. Though probably not properly analogous, think of the media fanfare accompanying the BBC Royal Charter issued in 1927 (for which John Reith was knighted) as opposed to the lack of interest in the semi-generational Charter renewal.
    - ✓ These rules *only apply to* activation of Articles of Incorporation Special Writ to renew Corporations and do not apply to any other part of the game, e.g., they do not apply to Host Worlds of Colleges, or to activation of any other Writ.
      - Compare Articles of Incorporation to a Land Grant Writ. A Land Grant Writ creates Institutes which require a supply of Faculties each Regular Turn to operate, but can operate indefinitely as long as conditions are met.
- Note that because the expiration time is based on Turn Cycles, *it will continue to run even if the position fails to submit turn actions/process a Regular Turn during the cycle*. The entire game of GGDM is based on the assumption that positions will be active each Turn Cycle and/or Combat Rounds during the appropriate time periods (see The Law of Periods, 2 The Streams of Time, p. 84; Turn, Turn, Turn, 3 The Streams of Time, p. 90; Run Away!, 1 Combat, p. 944, and Capoeira, 3 Combat, p. 970, *supra*).
- ✓ A Corporation can be renewed before it expires, however, this may not be advantageous if 1) some Government Titles have become disrupted and/or 2) because the new expiration time begins the run the Regular Turn after renewal.
- Then We Just Lost the Beat: Renewal of Articles of Incorporation is not automatic or automatic. A position can chose to let a Corporation expire, sometimes renewal will *be physically or practically impossible*, and each renewal requires judgment by the Concierge that the

state of the civilization and circumstances still accords with the Writ. The Concierge can ‘re-tire’ a Corporation as no longer being consistent with the sociopolitical cultural milieu of the position or physically impossible. All renewals require actualization of a Fuzzy Group to re-activate the Articles of Incorporation (p. 1244, *ut supra*) or commitment of resources, which may not be possible at that moment, managing corporations requires foresight and planning.

- ✓ There is no mechanism except expiration for ‘getting rid’ of existing Corporations when they are no longer wanted or needed. These things take on a life of their own...
- ✓ There is no game mechanism for amending Writs because they are very specific to their time and place (i.e. milieu), unlike the broader College Charter (see Amended Charter, 1 Colleges, p. 462, *supra*), thus there is no means to amend Articles of Incorporation. To change Corporate operations, new Articles must be issued.

---

*“This is the Bank of Karabraxos, the most secure bank in the galaxy. A fortress for the super-rich. If you can afford your own star system, this is where you keep it. No one sets foot on the planet without protocols. All movement is monitored, all air consumption regulated. DNA is authenticated at every stage. Intruders will be incinerated. Each vault, buried deep in the earth, is accessed by a drop-slot at the planet’s surface. It’s atomically sealed, an unbreakable lock. The atoms have all been scrambled. Your presence on this planet is unauthorised. A team will have been dispatched to terminate you. The Bank of Karabraxos is impregnable. The Bank of Karabraxos has never been breached. You will rob the Bank of Karabraxos.”*

– Dr. Who, “Time Heist” (2014)

---

**In the Bank:** I was waiting for the Dr. Who writers to reveal that our solar system is suspended in ‘liquid’ inside an underground vault of the Bank (like Horton Hears a Who (1954) or Rarg (1988)) and that our entire apparent universe is the hi-tech ‘container’ in which our solar system is preserved, like a bacterial culture or precious gem, and thus, there is no escape.

**Putting the Drama Back into Shipping:** A Corporation is a ship launched, it will operate for the number of *Turn Cycles* – whenever Regular Turns are processed – specified as long as it can and is not prevented. It will operate as provided, it will consume or use the resources and ships and other physical items provided and they will not be returned until the time the Writ expires. Thus, in an emergency, the resources cannot be pulled back or diverted. It may become impossible for the Corporation to operate, e.g., the specific colony location where it operates is captured or destroyed or ships are lost, at which time, it may be suspended by the Concierge.

- **Good Gravy, Man!:** Active Corporations will operate automatically, in the order from oldest to newest, based on the Writ creation date (not the latest activation of the Writ), so that the order always remains the same. Planning and management are necessary, it is possible for Corporations to interfere with each other’s operation or to work at counter purposes.
- **Help This Woman or...:** The Corporation must essentially perform functions that could be performed by Power Activations. Corporations could theoretically be formed to perform any *location-specific task* in the game. The operation of the Corporation is treated as a Power Activation *and can fail normally due to inactive Constructural Elements* at the target colony, ship or both, and be rerolled if Enlightenment has been provided to the Corporation.

For example, loading population on Colony Transports at a location over several Regular Turns (only useful if CTs are present and ready), taxation of a specific planet every Regular Turn (the planet would however, need to be exempt from normal Taxation Power activations), or to automatically supply Log Ships at a specific location whenever they are present.

- ✓ Corporations cannot be created for anything that does not require a Power Activation, for example, colony defenses operate automatically and thus, cannot benefit from a Corporation. Corporations could, however, build Defense Bases every turn at a specific colony if resources are provided.
  - ✓ Some corporations could be created to do odd things that will require some imaginative mental acrobatics to visualize; e.g., a Corporation could be created to activate the Combat Power in a system each turn for the purpose of Combat Alert.
  - ✓ Corporations could be created to do certain functions better than the government, this is all part of balancing the Special Writ (i.e. the Articles of Incorporation) and there must be some costs.
  - ✓ Corporations can benefit from the Enlightenment in any situation requiring a die roll (e.g., loading populations); if the Corporation is to use Enlightenment each turn, it must be specified in the Writ. Corporations can either be granted or denied access to Enlightenment, it is not automatic, they do not automatically draw on the pool.
    - This is simply a game concession for management purposes, so that positions can manage their uses of Enlightenment.
  - ✓ Corporations should not be allowed that primarily consume Enlightenment to produce a good or service. This is a GGDM systemic boundary separating Corporations from Institutes. There is much twilight area for imaginative participants and, like all else, it should not be declared absolutely impossible. There is, or can be, an odd, sometimes peculiar relationship between Colleges and Corporations in GGDM.
- She's in Shock: Corporations may and probably will, require in many cases the assignment of ships or pre-commitment of resources.
- ✓ For example, Loading Populations to Colony Ships or Supplies to Log Ships are not 'free' just because they are being performed by a Corporation.

Resource Points (RPs) or units assigned to a Corporation belong to that Corporation until expiration; RPs assigned to a Corporation will be transferred from the Treasury to the Corporation and will not age while with the Corporation (but likely will be consumed, never to be seen again). Renewal of the Corporation may require resources or additional ships.

Corporations in most cases should avoid providing 'free RPs' but there is room here for balancing and judgment by the Concierge and participants. The primary purpose of the Corporation is to alleviate the pressure on Acts, Scenes and Power Activations. This is not to say that Corporations cannot be created whose main function is to generate RPs without taxation (e.g., casinos) but there will be other balancing costs and factors (i.e. renewals).

- ✓ Again, 'balancing' in GGDM does not mean no net gain or transformation of one thing to another without benefit. Balancing is not an equal sign in an equation. It means instead gain commensurate with the effort and resources expended. Imagination is key. See *Balancing the Pin*, p. 735, 2 Patents, *supra*.

- ✓ A Corporation may not automatically use Enlightenment in tasks where it could be used unless granted a number of Faculties per turn, which are ‘reserved’ during the duration and not available for use elsewhere. Corporations, even ‘educational corporations,’ should not be allowed to generate Faculties, even for their own use.
- What if I get a Nasty Papercut?: It’s a cost-benefit analysis. The cost of forming the Fuzzy Group to activate the Writ, plus the activation of the Commerce Power to enable the Corporation vs. the number of Acts, Scenes and Power Activations saved by operation of the Corporation. There are possible synergies between Corporations and the other parts of the position, for example, Institutes (see 3 Colleges, p. 487, *supra*) might function to produce Cultural Proficiencies at their specific planet location which could be used to support the corporation’s regular Writ activations (effectively, the Institute is training corporate employees, perhaps) to renew the Articles of Incorporation. Corporations could support other Corporations, theoretically, though the ‘devil is in the details.’ Plot and scheme carefully.
  - ✓ Powerful GGDM positions are built on synergies. There are myriad possible relationships between Colleges/Institutes, Writs, Corporations, MegaCorporations, Shared Meanings, Special Planets, Specialized Colonies, Special Operations, Reverse Engineering, etc. in addition to the basics of the game. Lots of moving parts.
    - Merriam-Webster online dictionary at *synergy*: **1**: synergism: broadly: combined action or operation, **2**: a mutually advantageous conjunction or compatibility of distinct business participants or elements (such as resources or efforts).
    - Rhetorical Question: What is the difference between a synergy and an emergence?

---

*“Buying bread from a man in Brussels  
He was six-foot-four and full of muscles  
I said, ‘do you speak-a my language?’  
He just smiled and gave me a vegemite sandwich”*

– Men at Work, “Down Under” (1980)

---

**Land Down Under:** Participants can use their imagination – game rule technicalities aside – to find some creative story-enhancing uses for Corporations.

- ✓ For example, a people-mover corporation could be formed based on limited activation of the Taxation Power each Regular Turn to collect fares from passengers between colonies. The Corporation might be required to be hosted at a colony that has an Orbital Shipyard, and a small initial investment of a few RPs would be required to build the passenger ships – sort of a cross between a passenger jet and a cruise ship – to move business travelers between colonies. No Patent would be required for the passenger ships – they would be based on existing ship technology – and they would not appear physically in the game, abstractly they would be just part of the Corporation for as long as it exists. Revenues from fares might amount regularly to 1 or 2 RPs per turn (think of the long term), and of course, that may depend on the number of colonies, their political status, etc. The position would need to have at least three colonies to operate the StelLux Liner Corporation.

From this basis, there may be some interesting collateral story issues. For example, one might argue that the Corporation prevents or mitigates the effects of localized inbreeding, that is, affects the genetic pools of each colony. This is an issue if participants choose to make it one in the game (see Inbred Populations, 4 Taxation & Census, p. 330, *supra*). It might also mitigate the effects of local drift of each colony from the interstellar proto-culture, which the Concierge might take into account (see Human Drift-course, 3 Entropy, p. 246, and Spheres in Six Degrees, 3 Commerce, p. 1220, *supra*). Although it is not a ‘game unit’ exactly, Special Operations Missions (SOMs, whether friendly or not) and Counter Operations Missions (COMs) Lodged at the Host Colony may have to allow instant movement to any colony (see Shipping & Freight, 2 Special Operations, p. 1295, *infra*). And of course, criminal organizations, insurgencies, and rebel forces would use the passenger transport, providing opportunities for Interventions by the Concierge. The Corporation is not transporting colony-sized population, so it is not an issue of Loading, Unloading, or Landing population, and the total population factors at each colony would be unaffected by the Corporation. Nor is it transporting cargo, so there is no effect on the local colony’s GDP.

- ✓ Another example, a Corporation called The Church based on the Cohering activation of the Culture Power. Each Regular Turn, there is a chance that the Corporation will activate the Cohering Power at each eligible colony or ship (see 5 Culture, p. 421, *supra*). Upon reissuing the Articles of Incorporation (Articles cannot be amended as they are Writs, p. 1247, *ut supra*), the position adds a special ship that moves about to the most threatened colonies (that is, colonies with the most inactive Constructural Elements) and has a great effect in one place for that Regular Turn in regards to Cohering. Vaguely, this is how I might picture the Church of the Papal Mainframe in Dr. Who (who had their own military, ships and police forces) in GGDM terms.

Of course, there are collateral issues. It’s the game of *whac-a-mole*, just like the Stel-Lux Liner Corporation example solved or helped with certain kinds of problems but created entropic and Intervention Potentials in other areas, the Church certainly suggests extreme manipulation and conformity pressures from the top down. Think of any historical situation where the government controls the Church, or the Church is the government, or they are heavily intertwined, and the potential for adverse Interventions by the Concierge will become apparent: If the function of The Church Corporation in the position is Cohering, someone will be squashed, silenced, shunted aside in each instance of Cohering. Creativity may be stifled, orthodoxy and dogma in extremes, monetary corruption and wealth accumulation are classic problems of organized religion. A Reformation may be necessary (*infra*).

---

*“The largest American corporations are linked together through interlocking directorates, social networks consisting of individuals who are members of several different boards. The directors of the board of General Motors, for example, sit on 29 other corporate boards. The members of those boards, in turn, sit on the boards of an additional 650 corporations. The total directorate of the leading corporations resembles a tightly spun web, making the influence of these organizations all the more concentrated....”*

– Ian Robertson, [Society: A Brief Introduction](#) (1989)

---

## Endnotes.

<sup>1</sup> Commentary: The root of the modern form of anti-corporate messaging probably begins in the de-Nazification of Germany and the (failed) attempt to break apart the Krupp family industrial conglomerate which was seen as instrumental in the rise of the Nazis and WWII. From there, it expanded into the criticisms of the larger ‘Military Industrial Complex’ in the 1950s and 1960s (a term which has now morphed to other areas, such as ‘Prison Industrial Complex’ describing the industries that make billions off of incarceration).

<sup>2</sup> Citation: “Social scientists who have studied the erosion of values and the growth of corruption inside companies have found, for example, that ‘people are more likely to accept the unethical behavior of others if the behavior develops gradually (along a slippery slope) rather than occurring abruptly,’ according to a 2009 article in the Journal of Experimental Social Psychology. This happens, in part, because most people have a built-in vision of themselves as moral and honest, and that self-image is resistant to change. Once certain behaviors become ‘normal,’ then people stop seeing them as wrong.” – Anne Applebaum, “History will Judge the Complicit,” The Atlantic, August 2020.

<sup>3</sup> Commentary & Citation: Compare to Soylent Green (1973).

<sup>4</sup> Citation: Ian Robertson, Society: A Brief Introduction (1989), p. 327.

<sup>5</sup> Citation: “The United States Postal Service (USPS; also known as the Post Office, U.S. Mail, or Postal Service) is an independent agency of the United States federal government responsible for providing postal service in the United States, including its insular areas and associated states. It is one of the few government agencies explicitly authorized by the United States Constitution. ... The USPS is legally obligated to serve all Americans, regardless of geography, at uniform price and quality. ... Since the early 1980s, many of the direct tax subsidies to the Post Office, with the exception of subsidies for costs associated with the disabled and overseas voters, have been reduced or eliminated in favor of indirect subsidies, in addition to the advantages associated with a government-enforced monopoly on the delivery of first-class mail. Since the 2006 all-time peak mail volume, after which Congress passed the Postal Accountability and Enhancement Act which mandated that \$5.5 billion per year be paid to fully prefund employee retirement health benefits, revenue dropped sharply due to recession-influenced declining mail volume, prompting the postal service to look to other sources of revenue while cutting costs to reduce its budget deficit.” – from Wikipedia article, “United States Postal Service,” January 18, 2019.

<sup>6</sup> Commentary: A 1950s case I read in the Southern District of New Jersey provided an enlightening history for the creation of FINRA’s predecessor, the NASD. The Court was examining whether the NASD was a quasi-governmental agency; an issue important to the case resolution. The Court noted that Congress had pressured the financial industry to provide a means to self-regulate (that is, you either regulate yourselves or we will regulate you) and to alleviate the burden of financial industry cases that were overwhelming the court systems nationwide. The NASD with its own financial services arbitration program (i.e. stock broker/advisors cases) was created to fill the purpose. The NASD/FINRA is overseen by the SEC at arms-length and their arbitration decisions are reviewable by the judiciary and can be reversed under very limited circumstances. But make no mistake, FINRA is a private corporation.

<sup>7</sup> Citation & Commentary: “Following the English Restoration in 1660, matters of colonial administration drew the king’s attention. Massachusetts in particular was reluctant to agree that the king had any sort of authority to control its governance. This led to crises in the 1660s and late 1670s in which steps were first planned, and then executed in England to vacate the colonial charter. The Lords of Trade had decided for a variety of reasons to consolidate the New England colonies; they issued *quo warranto* writs in 1681 for the charters of several North American colonies, including Massachusetts. The Massachusetts writ was never served for technical reasons, and the charter was not formally vacated until the chancery court issued a *scire facias* writ formally annulling the charter on June 18, 1684. The proceedings were arranged so that the time had expired for the colonial authorities to defend the charter, before they even learned of the event. [Hmmm... how convenient]

From 1686, the colony’s territory was administratively unified by James II of England with the other New England colonies in the Dominion of New England. The dominion was governed by Sir Edmund Andros without any local representation beyond hand-picked councillors, and was extremely unpopular in New England. Massachusetts authorities conspired to have Andros arrested in April 1689 after the 1688 Glorious Revolution in England, and they reestablished government under the forms of the vacated charter. However, dissenters from the Puritan rule argued that the government lacked a proper constitutional foundation, and some of its actions were resisted on that basis. The years from 1689 to 1692 were also difficult ones, since the colony was at the forefront of King William’s War,

and its frontier communities were ravaged by attacks organized in New France and conducted by French and Indian raiding parties.

King William III issued a charter in 1691, despite efforts by Massachusetts agents to revive the old colonial charter. It was chiefly negotiated by Increase Mather in his role as the colony’s ambassador-extraordinary, unifying Massachusetts Bay with Plymouth Colony, Martha’s Vineyard, Nantucket, and territories that roughly encompass present-day Maine, New Brunswick, and Nova Scotia to form the Province of Massachusetts Bay. This new charter additionally extended voting rights to non-Puritans, an outcome that Mather had tried to avoid.” – from Wikipedia article, “Massachusetts Bay Colony.”

✓ “The structure of the colonial government changed over the lifetime of the charter. The Puritans established a theocratic government limited to church members. Winthrop, Dudley, the Rev. John Cotton, and other leaders sought to prevent dissenting religious views, and many were banished because of differing religious beliefs, including Roger Williams of Salem and Anne Hutchinson of Boston, as well as unrepentant Quakers and Anabaptists. By the mid-1640s, Massachusetts Bay Colony had grown to more than 20,000 inhabitants.” *Id.*

- Roger Williams founded the Rhode Island colony. Nathaniel Hawthorne was born in Salem in 1804; his ancestors were involved in the Salem Witch Trials, and young Hawthorne added a ‘w’ to his name to disassociate himself from his ancestors. Increase Mather was involved tangentially in the Salem Witch Trials, his son Cotton Mather was very much involved but neither were judges at the trials.

<sup>8</sup> Citation: See also *homo reciprocans*, Big Endian, Little Endian 6 Diplomacy, p. 1174, *supra*. The entire article is available online at: <https://blogs.scientificamerican.com/primate-diaries/human-nature-and-the-moral-economy/>.

<sup>9</sup> Citation & Commentary: “Go ahead and hate your neighbor, Go ahead and cheat a friend. Do it in the name of heaven, You can justify it in the end. There won’t be any trumpets blowing, Come the judgment day, On the bloody morning after, One tin soldier rides away.” – The Original Caste, “One Tin Soldier” (aka, the Legend of Billy Jack).

<sup>10</sup> Citation: “Secretary of State Mike Pompeo on Wednesday acknowledged that the current crisis with Iran is a ‘direct result’ of actions taken by President Donald Trump.

Since Trump withdrew the US from the 2015 nuclear deal with Iran, his administration has engaged in a ‘maximum pressure’ campaign against Tehran in an effort to cripple the Iranian economy with harsh sanctions. The end goal of this is to squeeze Iran into coming back to the negotiation table to agree to a more stringent version of the nuclear deal that prevents Iran from building nuclear weapons.

But so far, Trump’s hardline strategy has not been successful and there’s little evidence this is changing. Pompeo defended this approach to reporters traveling with him to Saudi Arabia, stating, ‘There is this theme that some suggest that the president’s strategy that we allowed isn’t working. I would argue just the converse of that. I would argue that what you are seeing here is a direct result of us reversing the enormous failure of the JCPOA.’ He was referring to the formal name of the 2015 nuclear deal, the Joint Comprehensive Plan of Action. ...

There is a direct line you can draw from Trump’s violation of the Iran deal and the risk of conflict today. Since Trump withdrew from the 2015 nuclear deal, relations with Iran have rapidly spiraled downward. The situation has become so contentious in recent months that it’s raised fears of a new conflict in the Middle East.

As the Trump administration has ramped up the economic pressure on Iran, the Iranians have responded with aggressive behavior in an effort to cause problems for the US and its partners.

If Iran is indeed responsible for the Saudi oil field attacks, experts and former US officials say Trump’s decision to withdraw from the JCPOA opened the door for the attack as well as the broader tensions surrounding it.

As Barbara Slavin, director of the Future of Iran Initiative at the Atlantic Council, put it in an op-ed on Wednesday: ‘This is what happens when you unilaterally pull out of a nuclear deal and then try to smother another country.’

‘The results of this ‘maximum pressure’ campaign are now clear: growing instability in the Persian Gulf, including an unprecedented attack on Saudi oil installations that caused a bigger disruption of world oil markets than the Iranian Revolution, and an incremental but steady resumption by Iran of nuclear activities proscribed by the JCPOA,’ Slavin added.

Trump’s choice to pull the US from the JCPOA was condemned by nuclear experts and US allies who were also signatories to the deal.” – John Haltiwanger, “Pompeo inadvertently admitted the Iran crisis is a ‘direct result’ of Trump’s actions,” Business Insider, September 19, 2019.

*“According to a 2004 study by the World Bank Institute, \$1 trillion is paid every year in bribes worldwide. Many agree that the victims of bribery are often those living in poverty in the developing world, in countries rich in resources but dominated by corrupt governments. While the vast majority of these citizens remain very poor, often living on \$1 a day, their elected officials accumulate enormous personal wealth, taking millions in bribes from corporations looking to secure lucrative contracts. Research by Transparency International shows that bribery not only stymies development, it also impacts health services, literacy rates and the environment.”*

– Frontline World, “The Business of Bribes, Spotlight: The Victims of Corruption,” February 24, 2009

**A Billion Employees:** Imagine a corporation with a billion employees? No government on Earth, even those with the most formidable armies, has ever employed even a significant fraction of that number, and certainly no organization of any type has come close to a significant fraction of those employed by governments. We don’t need to look back too far in history to determine this has never happened, the world’s population reached one billion around 1800 A.D. but reached seven billion around 2011 (see previous discussion, The Human Diaspora, 1 Expansion, p. 885, *infra*), just two centuries. Employing a billion people, the population just under that of China currently, would make the corporation effectively a nation, but in the interstellar civilization scale of GGDM, probably not. How far into the future do we need to look to find one billion employees?

- ✓ According to Wikipedia article, “List of Largest Employers” (April 1, 2019),<sup>1</sup> the U.S. Department of Defense employed 2.86 million people, and the People’s Liberation Army of China employed 2.52 million between 2010 and 2015, the entire U.S. government employed 2 million civilian workers excluding the Postal Service and military (Wikipedia article, “United States federal civil service”). Walmart employed 2.3 million between 2010 and 2015, and McDonald’s had 1.7 million employees in 2010 and 1.9 million employees in 2015. Walmart worldwide is thus the size of the civil U.S. federal government, minus the Postal Service; Walmart employees do occasionally ‘go postal’ though (*non sequitur* humor).☺
- ✓ “Satan hasn’t a single salaried helper; the Opposition employ a million.” – Mark Twain.

Theoretically, I guess, the entire population of the Soviet Union might have been considered ‘state employees,’<sup>2</sup> however impractical:

- ✓ “THEY pretend to pay us, we pretend to work. This half-serious summary of communist economics contained a kernel of truth: for Soviet workers, the freedom to pilfer and dawdle made up, to some extent, for empty shelves and wretched wages. Like other illusions, it served a purpose for a while, though that could not last.” – The Economist, April 26, 1999 (emphasis in original).<sup>3</sup>

*“Thorngate (1976) developed a postulate of commensurate complexity in which there are trade-offs among a theory being **general**, a theory being **accurate**, and a theory being **simple**. A theory cannot be all three simultaneously; general accurate theories are not simple, accurate simple theories are not general, and simple general theories are not accurate. Weick (1979) provides examples of each.”*

– John P. Bean (Indiana University), “Light and Shadow in Research Design,” Clifton F. Conrad & Ronald C. Serlin, Eds., The SAGE Handbook for Research in Education (2006), p. 354 (found on Google Books, emphasis in original)

**Commensurate Complexities:** A MegaCorporation is an artificial entity created by two or more positions. Unlike Corporations, the Articles of Incorporation for a MegaCorporation are issued by each member by activation of the Diplomacy Power for that purpose on the same Regular Turn as the actualization of a Fuzzy Group to activate the Special Writ. All of the rules that apply to Corporations apply to MegaCorporations unless otherwise noted below.

- **Gelt’s Casino World:** The Host World of the MegaCorporation must be designated in the Articles of Incorporation. When all Members of the proposed MegaCorporation have performed the required Diplomatic Power activations and activated their Special Writs to form the MegaCorporation, the proposed Host World must be checked on the last proposed joining member’s Regular Turn (even if they don’t join) to determine if it accepts the MegaCorporation. This check is made as if a Power Activation occurred at that colony even if it is not owned by any member of the MegaCorporation (next page, *ut infra*), if the check fails due to inactive Constructural Elements at the colony, the MegaCorporation has failed and all of the Power Activations and Writ activations are wasted.<sup>4</sup> Positions may try again...
  - ✓ This is one of only three instances where an **alien colony** can cause the failure of a friendly Power Activation either directly or indirectly; the others are Load and Unload Resources at an **alien colony**. Failure of an **alien colony** can also mess up a Trucking transaction, but will not cause a friendly Power Activation failure.
- **Too Many C(r)ooks in the Kitchen:** MegaCorporations are formed by issuance of Articles of Incorporation for that purpose by multiple positions. Each position desiring to join the MegaCorporation must independently create a set of Articles of Incorporation Special Writ. The Concierge should be made aware of the intent to form a MegaCorporation and the identities of the proposed member positions so that the Concierge can view the proposed Articles and determine whether they are appropriate for each position and are compatible and in agreement on the operation of the MegaCorporation. The proposed Articles must list the Diplomacy Power and not the Commerce Power as the associated Power for the Special Writ.
  - ✓ As noted in the Diplomacy sections, it is expected that private communications will occur in advance between players, which is of no concern to the Concierge. The Concierge will only judge what is necessary and presented. It is possible, of course, because of player communication, for the proposed Articles to have identical language, but that does not mean that they are identically compatible with each position’s current milieu. Expect that the process of forming a MegaCorporation may take more than one Turn Cycle.
  - ✓ It is unlikely that a regular Corporation could become a MegaCorporation by adding members. But like all else, it is not *impossible* with great creativity and imagination.

- **Sovereign Chefs:** MegaCorporations are trans-sovereign entities, they might even be quasi-states (in the Justice Jackson sense, see 3 Government Titles, EN 8, p. 623, *supra*). All proposed members must share Diplomatic Space with all other proposed members; i.e. two positions that have not had First Contact cannot possibly form or join the same MegaCorporation. The proposed members must decide in advance which colony world will Host the MegaCorporation. The owner does not lose sovereignty over the colony as a result of Hosting a MegaCorporation, and the MegaCorporation does not need to be hosted on a world owned by any member theoretically (but the owner must share Diplomatic Space with all members), if some other position will agree to host the MegaCorporation. Like Corporations, however, MegaCorporations must have some *location-specific activity* related to the host colony, even if there are activities at other colonies related to the MegaCorporation.

- ✓ A non-member might agree to Host a MegaCorporation at a ‘neutral site’ to receive the free benefits of the *location-specific* activity of the MegaCorporation at their colony without needing to expend their own Acts, Scenes, Activations or RPs. Call it ‘rent money.’ Of course, there is a mountain of potential complications in depending on another group of positions for your regular grub, not to mention the unwanted attention it may attract to your colony.

Whether a MegaCorporation can own a colony world is an unsettled issue with many ramifications. Potential members may desire a Host Colony not owned by any position. Any sovereignty over a colony world by a MegaCorporation necessarily involves ceding population which might be a supra-legitimacy issue; it is of course, easier to cede population that is not of your own Native Population Type and that may cause less supra-legitimacy issues for a member position. If a MegaCorporation does come into ownership of a colony, in whatever way, that colony is no longer sovereign to any position (until conquered), everything on the colony (including defenses, which might be the purpose of it) passes to the MegaCorporation, and the colony will no longer respond to Power Activations of any position.

- ✓ This is the kind of situation that offends modern sensibilities. It is a similar situation to other games that allow players to diplomatically ‘cede’ cities and territories to their allies or make agreements as to who can take which territories (e.g., to be in position to jointly attack certain other players later). It is important to remember that not all eras share our modern sensibilities, for example, it is very unlikely that the French asked the Native Americans for permission to sell the Louisiana Purchase to the United States. Nor did the Europeans ask the permission of Indians and Polynesian islanders when they granted exclusive control of ports and islands to European Corporations to exploit. India had little say over the British East India Company.
  - ✓ In each instance, the Concierge will make a determination based on the milieu of the game as to what might be allowable; the East India Company had an army and fleet.
- **Dinner is Served:** When the Concierge has approved all of the proposed Special Writs to form the MegaCorporation, the proposed members must each on their next Regular Turn, activate the Diplomacy Power for the purpose of Articles of Incorporation which costs one Act and one Scene on the Capital Colony. Concurrent activation of the Commerce Power is not required to create a MegaCorporation.
  - ✓ Any position that fails to do so will lose the opportunity to initially join the MegaCorporation and may in some instances compromise the whole venture if, for example,

- there were only two proposed members or if that position's material contribution to the MegaCorporation was vital.
- ✓ Positions should be certain that they have the proper Acts and Scenes and can spare the Power Activation on the Regular Turn after everything is ready, go.
  - ✓ Only those positions who activate the Diplomacy Power as required are initial members of the MegaCorporation, if the MegaCorporation is tenable with the current membership. The Concierge and/or members may deem the MegaCorporation untenable or inoperable if certain members fail to join by following the above procedures. It may also be possible that the absence of a proposed initial member is irrelevant.
  - ✓ The Concierge may, with discretion, allow the process to go forward a second time or third time if desired if the MegaCorporation is untenable without a certain member position, but cannot force the other proposed members who were stood up on at the altar to recommit to the process or expend additional Acts, Scenes or Power Activation for second and third tries.
    - The worst situation is when two, three or four other positions have activated their Diplomacy Power during their Regular Turns but the last, but crucial position doesn't and the whole project collapses. It is sort of like trying to complete a real estate closing or get project funding in place.
- Late Dinner Guests: Late guests will be tarred and feathered after dessert is served. It is possible for other positions to join an existing MegaCorporation. The process involves three parts; the proposed member must submit the proposed Articles of Incorporation Special Writ (the Concierge must give the proposed Writ the same consideration), the existing members must consent, and when all is ready, the proposed member must activate the Diplomatic Power for the purpose of Articles of Incorporation on the next Regular Turn and make whatever other contributions are necessary. The existing members *are not required* to activate Diplomacy Powers to accept the new member. The addition of a new member cannot substantially change the operation of the MegaCorporation consistent with the previous discussion regarding non-amendment of Writs (see *We Just Lost the Beat*, 1 Corporations, p. 1248, *supra*).
- ✓ Dessert is served! MegaCorporations are the first step toward pan-galactic culture, the first level of synergy above positions. As such, some positions with particular Government Titles or different agendas will be opposed to MegaCorporations. MegaCorporations can also cement long-term alliances and adds Diplomatic Spaces (see *Shared Spaces*, 2 Diplomacy, p. 1118, *supra*).
- Leaving So Soon?: Members may leave a MegaCorporation by activation of the Diplomacy Power for the purpose of Break Treaty, or by becoming extinct in the Galactic Space. Members who fail to timely renew their Articles of Incorporation are also considered to have left the MegaCorporation, though they may be readmitted at the discretion of the Concierge and permission of the remaining members. The Concierge may also determine that the Articles of Incorporation are no longer consistent with the current milieu of any member position and refuse renewal.
- ✓ For example, a position whose change of Government Titles and other actions have made it militant, xenophobic, or opposed to the other members, and this is a radical

departure from the conditions in which it initially joined the MegaCorporation, might not be allowed to renew the Articles.<sup>5</sup> This is within the discretion of the Concierge to ‘suspend’ Writs as described in *Suspended Writ, 2 Writs*, p. 440, *supra*.

Members who leave may or may not receive back anything they contributed, and whether the departure of a member causes the MegaCorporation to collapse is a situational judgment by the Concierge and members (unless there were only two members!).

- **Cold Leftovers:** Generally, it would be problematic for positions to apply Enlightenment to MegaCorporate activities. In the same vein, MegaCorporations should not likely benefit from Writ activations or Institute activities of member positions; all are specific to the internal sociocultural state of the member position. But, it could in some circumstances be part of the bargain, to bring expertise to the MegaCorporation. Like Corporations, if a MegaCorporation is to use Enlightenment (the best of the member species) it must be stated in the Articles of Incorporation; one species’ level of enlightenment might be another species’ dumb!<sup>6</sup>
  - ✓ There are two aspects to technology questions regarding MegaCorporations. First, the MegaCorporation benefits from whatever technology is provided to it; thus if a member provides a 3<sup>rd</sup> Era Cargo Ship, that ship operates for the MegaCorporation as a 3<sup>rd</sup> Era Cargo Ship (per the abilities granted by its Patent) regardless of the relative technology levels of the other members. Second, if there is any question, the MegaCorporation operates with and has available whatever technologies are available to the position that owns the Host Colony.
  - ✓ MegaCorporations have the opportunity to become a mish-mash of technologies and Native Population Types (someone is doing the work, GGDM doesn’t really track well the Native Population Types of ship crews and laborers), and is a prime opportunity for Reverse Engineering and a conduit for Special Operations Lodging.

---

*“Staggering in size, these organizations are so large that no one person can know everything they are concerned with at any given moment. Total shares of stock, annual profits, number of employees are all astronomical. Many organizations are so large that different divisions of the same megacorporation may actually be working at cross purposes. In most regions, megacorporations merely own the land their installations are on, but in some areas they control entire planets, either directly or indirectly.” – From Traveller Wiki, “MegaCorporations,” January 17, 2019*

---

- ✓ *Most Megacorporations use a hegemonic form (power structure) of governance.*
  - ✓ *They are sometimes called ‘corporate technocracies’ and use an oligarchic power source, generally composed of a board of directors. Exceptions to the generality do exist.*
  - ✓ *Most megacorporations are organized very much like smaller companies, with a board of directors, a president, and vice presidents.*
  - ✓ *However, the board and the higher-level executive officers of the company are largely out of contact with the day-to-day (or even year-to-year) functioning of the company.*
-

- ✓ *These upper level executives serve to plan general policy and long-distance actions.*
- ✓ *The most important executives, in terms of personal power, are the various regional managers, by whatever title they have assumed.*
- ✓ *A regional manager may control only a small portion of a megacorporation's total assets, but many hold more power in some regions than the representatives of the Imperial government.*
- From Traveller Wiki, "MegaCorporations," January 17, 2019

**CHOAM-ed Again:** CHOAM in the Dune Universe could be viewed in GGDM terms as either a Corporation or MegaCorporation. To the extent that the Great Houses – the shareholders – are regarded as sovereign – they do appear to have a monopoly on the legitimate use of force in their territories – and the Imperium as a trade confederation ruled by the Emperor, CHOAM is a MegaCorporation between sovereign civilizations. However, if the Imperium is defined as the sovereignty of all humanity (a 'position' in GGDM) and considered a Unitary Structural Title, then CHOAM must be a Corporation, whose shareholders are the Estate Titles. However, there are no sapient aliens in the Dune (1965) universe against which the collective sovereignty of humanity can be contrasted as a 'position.' As mentioned several times throughout GGDM, it often comes down to how you slice the pie.

The balance is tilted toward CHOAM being a MegaCorporation in GGDM terms because it is not specific to a single location. In 2011, a Forbes article listed CHOAM as the largest fictional company. It's hard to argue with when they ship to an entire galaxy!<sup>7</sup>

Unlike the Dune (1965) universe, the Traveller RPG setting has about a dozen Imperial Charter MegaCorporations; in Dune CHOAM is the only one. Traveller actually calls them MegaCorporations whereas Dune does not.

- ✓ Traveller's MegaCorporations are not like MegaCorporations in GGDM, as they are all owned and operated within the Third Imperium (not cross civilization ownership by governments), so they are really just very big and powerful interstellar trade, mining and manufacturing Corporations; in Dune, the Great Houses are the manufacturers, especially House Harkonnen. Some alien civilizations bordering the Traveller Imperium have their own MegaCorps.
- ✓ Traveller MegaCorporations have large private armies and interstellar navies, and hire mercenaries, adventurers and spies, like the Great Houses in Dune and the major territory nobles in Traveller, creating great mischief; there is no mention in Dune of CHOAM having or needing a naval force or private army; the shareholders have the armies and fleets to enforce CHOAM's monopoly.
- ✓ Though Traveller MegaCorporations are Imperial Chartered, it is vague as to what extent they govern or are an extension of the government; they do sometimes own worlds, their navies and armies cause troubles and they sometimes operate against the government's interests in frontier areas. The Imperial family may have some owner-

ship, as do major sector nobles, but the MegaCorporations seem to operate autonomously, at cross-purposes and are staggeringly huge (always providing convenient and easy adventure hooks).

Thus, the embrace in Traveller is much like the current world, the government and society need the abilities and resources of scale and multi-national corporations, but cannot fully trust them and must reign them in regularly.

There is little doubt that the Traveller MegaCorporations and the idea of tyrannical interstellar corporations is based on the East India Company (1600 to 1874), who owned islands, slaves, and recruited an army and navy (after 1750) and became the force of British conquest and policy in India and Southeast Asia (the East India Co. attempted to annex Afghanistan in 1839). They are also the culprits in the China opium trade and Opium Wars, discussed in 3 Commerce, p. 1216 *et seq.*, *supra*, and mentioned in Elder Race, 5 Diplomacy, pp. 1153-1154, *supra*. This leaves much room for mischief relating to Corporations and MegaCorporations in GGDM.

---

*“Hey doc, do you happen to know anybody who is interested in buying a slightly used flying saucer – it’s only got 3 billion miles on it.”*

– Bugs Bunny, “The Hasty Hare” (1952) <sup>8</sup>

---

**Starship Sales:** In the preceding Commerce section, rules were established for the Unloading of resources at **alien colonies** by Cargo Ships. However, Cargo ships cannot deliver (directly) ship or colony enhancements and certainly cannot deliver other starships; there is no mechanism in the prior rules for transfer of enhancements, technological devices or starships between positions.

Corporations and MegaCorporations, if their Articles of Incorporation allow, may manufacture and/or deliver anything that can be produced in the game and/or that is possible to deliver. For example, a Corporation might manufacture and sell Cargo Ships by treaty to another position, or a MegaCorporation might build industry on a colony as part of its function. It is assumed that whomever is going to be the recipient of the starship would provide the Corporation or Mega-Corporation with the technical information necessary to manufacture the ships to specifications.

Selling or stealing starships may not be as easy as it seems. For example, in the anime Crest of the Stars/Banner of the Stars, only Abh could fly Abh ships because the controls included an interface that plugged into the back of their heads. They could ‘feel’ the ship like their fingers, and thus, in addition to imperial law banning regular humans from owning ships, humans could not fly Abh ships in any event.

- ✓ This is an issue that the Concierge will need to take into account in situations such as revolts or insurgencies on Conquered or Converted Colonies. In Timothy Zahn’s The Blackcollar (1983), the objective was to locate and reclaim for the revolution a fleet of *human* warships that had been hidden before Earth surrendered. They weren’t trying to capture and operate alien warships. See boarding combat discussion, For the Babylon Bobs, 6 Combat, p. 1028, *supra*.

**Better Business Model:** While sitting in a traffic jam one day trying to get to the airport, a friend told me the story of another day when he and his father were sitting in a traffic jam waiting to go to the airport.

That day, he and his father were listening to call-in talk radio. A caller, who claimed to be the owner of a traditional gas station, called the show and complained on the air about all of the new chains of convenience store or mini-mart-gas stations that were springing up across the country. In short, he was complaining that he was losing business, that they were destroying his business, and added, that they should be outlawed!

The talk show host eventually broke in and asked him why, other than the fact that his particular business was not doing well, he thought the chain convenience store/mini-mart-gas stations should be made illegal. The caller had no answer, only reiterated that they were destroying his business. At which point, my friend's father, a high level Fortune 500 corporate executive, said, to his son, "so they should be outlawed because they have a better business model?"

As traditional manufacturers and retailers know well, online retailers have the better business model. For example, "It's been a downward spiral for traditional retailers. The model of online retailers is winning out. They are more competitive on pricing, they have better selection and their convenience level is quite high." – Christian Magoon from CNN Money interview, cited in Washington Post article, "America is over-stored, and Payless ShoeSource is the latest victim," April 5, 2017.

Further, the United States is oversaturated with retail space from the boom of the 1990s, having six times the amount of retail space per capita as Europe. And the results are showing in the continuous line of distressed retailers, store closings, and bankruptcy filings. *Id.*

The position of traditional retailers in the market is likely untenable in the long term, and the solution will be immensely complex at best. But what are *not solutions*: 1) blaming the consumers, 2) blaming internet retailers, 3) instituting policies that restrict sales from distributors to only brick & mortar retailers (other than for other compelling reasons, such as licensing and professional installation) and 4) forcing buyers – especially of non-vital, luxury or recreational hobby items – to purchase at local brick & mortar stores.

➤ The True State of Gaming: The tabletop gaming hobby in North America is shrinking, or at least it has not been growing. Tabletop gaming has been seen as niche, geeky, old-fashioned and the subject of lampooning for the last 50 years; it will never be mainstream in our society, unlike the more acceptable, and much less socially useful, video gaming. I have understood that tabletop hobby gaming is a different market and treated differently in Europe.

All four of the above solutions, as I have personally experienced as an internet game retailer, is what the hobby gaming manufacturers – led by Asmodee North America (ANA) who controls 60% of the North American market – have chosen to do to solve their FLGS 'brick and mortar' problem.<sup>9</sup> And they bullied the distributors into going along with it – to be clear, the manufacturers need the distributors as much as the distributors need the manufacturers. Theoretically, their bargaining positions are equal; the power of the manufacturers is not so oppressive as it seems at first glance – if the distributors as a bloc refused, what could the manufacturers do? But the distributors (GTS, ACD, etc.) are spineless, instead of standing up for their own business independence, they will allow some other *non-governmental group* to tell them who they can sell what to, at what price,<sup>10</sup> and allow it to affect their bottom line and the viability of their employee's income and economic lives.<sup>11</sup> The problem they are trying to solve in this way is the problem they will exacerbate by forcing customers to pay brick & mortar prices; they will inherit the wind as the hobby continues to shrink.

- ✓ Notably, the same rules do not seem to apply to brick & mortar retailers who sell on the internet, e.g., Amazon, eBay; once they have the certification number from ANA, they can buy anything in the catalog and there is no control on where, for how much and to whom they sell it. For example, I know of a local game store that sells on the internet from the back room of their store, at much lower prices than in the store, they sell under a different name, so that they can be competitive in internet pricing, maintain their FLGS in-store pricing, and none of their store customers will complain.

There is nothing inherently unethical about having a better business model, but there is something inherently unethical about controlling the market without a legally-supervised monopoly – our civilization decided that in the 20<sup>th</sup> Century and instituted programs (e.g., public utility commissions, SEC, Justice Department, etc.). Imagine the consequences to civilization if doing something better, having a better organization, system, management, process or procedure was considered unethical? Further, more competitive should not be confused with anti-competitive practices. They are definitionally different and the reactionary response of those who control the hobby gaming market to more competitive opposition is to enact anti-competitive market barriers to artificially prop up the traditional game retailers.

- ✓ See also article by Austan Goolsbee, “Never Mind the Internet. Here’s What’s Killing Malls.” New York Times, February 13, 2020, which argues big box stores, growing income inequality and spending on services instead of things is killing mall retail.

*“The hack only exposed the truth about how most of us interact with big corporations these days: All the power is in their hands. Customers sometimes aren’t even aware they’re customers until something has gone wrong. Every financial contract involving consumers is standardized to prevent negotiation. Every financial contract involving wealthy individuals or companies, on the other hand, is highly tailored to personal concerns. The terms of the contracts for regular people are consistently asymmetrical: they favor the company, and never the consumer....”*

*Instead of capitalism based on democratic principles of trade, it’s more of a feudal system: The land is owned by the banking class and anyone using it has to pay the owners. The ‘land,’ in this case, is the entire U.S. financial system of banking and credit, as banks and financial firms like Equifax have made themselves successful intermediaries in nearly all transactions, from simple salary payments (hello, direct deposit) to renting an apartment (try doing that without having a credit score on file.) While consumers remain accountable to financial firms – that late rent payment is on your credit report – financial firms are not at all accountable the other way around. They do business as they like, as Equifax shows. Because their more profitable customers are other financial firms, and those firms don’t care if you have to spend an hour or two on the phone cleaning up Equifax’s mess.”*

– Heidi N. Moore, “Why didn’t Equifax protect your data? Because corporations have all the power,” Washington Post, September 21, 2017

**Encore, Encore!:** Oh, hey, don’t go away yet, we are not done! Need an encore? In September 2017, it was also revealed that the SEC’s EDGAR filing system was hacked and the hack may have been used to facilitate insider trading (just picture the ending of 1983’s Trading Places).

And back in the land of Equifax – whose hack exposed the records of three quarters of the American adult population (143 million records were possibly breached), it turns out that for two or

more weeks afterward, Equifax operators were carelessly providing an incorrect web address that sent consumers worried about their data breach, to a phishing website, where they would then have to have entered their personal data.

- ✓ “What makes the situation especially awful is that you never had much choice about entering into a relationship with Equifax. ‘It’s not like when you get to choose your bank, or choose your credit card,’ says Mike Litt.... No one specifically asked Equifax or its competitors, Experian Plc and TransUnion, to collect data about them. But unless you want to live off the financial grid, you have to accept that these companies you may know little about are keeping an eye on you and your reputation with creditors.... This setup isn’t just infuriating – it partly explains why the hacking of just one company can make so many people so vulnerable. Credit reporting businesses have been built primarily to serve banks and credit card companies, not the consumers they monitor. But just as a lender benefits from having quick access to credit reports and scores, which lets them grant credit to perfect strangers, so does the impostor who comes to them looking to open an account.” – Pat Regnier and Suzanne Woolley, “Thank you for calling Equifax. Your business is not important to us,” Bloomberg, September 14, 2017.

The problem with the Equifax situation and many other data breaches is the same as the argument of the anti-natalists: The failure to obtain your consent, violation of autonomy, and violation of Kantian imperatives, to wit:

- ✓ “Did I request thee, Maker, from my Clay, To mould me Man, did I sollicite thee, From darkness to promote me, or here place?” – John Milton, *Paradise Lost* (1667), Book 10, 743-745.

With one important *caveat*: While it is impossible to obtain the consent of a human to be born who does not yet exist (or for the universe to be created), Equifax could have obtained your consent to keep your records (and/or the government could have exercised better parental authority over the industry). Instead, like being born (or the creation of the universe), it turns out that your welfare was never a consideration at Equifax, and they took it as implied that they were able to amass records and respond to credit inquiries about your file. The anger at Equifax I think is rooted in being reminded of the powerlessness of being forced into existence, except that the target is a corporation and not our parents or our God, and they could have obtained consent.

---

*“In the wrong hands, private filings from EDGAR could give a trader (or traders) a significant advantage. Trading on ill-gotten early knowledge of quarterly results could yield a massive payday. For the EDGAR fraudsters, that payday amounted to a cool \$4.1 million.*

*The SEC filed charges in the U.S. District Court of New Jersey against 11 individuals and two companies. Court documents reveal this was a truly global conspiracy. The defendants allegedly conspired from four different nations: four from Ukraine, four from the Russian Federation, two from the United States, and one from the Republic of Korea.*

*One of the two named companies, Copyield Systems Limited, was incorporated in Belize. The other, Spirit Trade Limited, was based in Hong Kong.*

---

*The actual hacking was allegedly carried out by 27-year-old Oleksandr Ieremenko of Kiev. Ieremenko was previously charged by the SEC and Department of Justice with securities fraud in two other similar cases. Today's filing indicates that Ieremenko stole 157 non-public earnings statements from EDGAR. The other named defendants allegedly executed trades based on the information contained in that trove of documents. They pocketed the lion's share and handed a cut back to Ieremenko for his assistance."*

– Lee Mathews, "SEC Charges Hackers Who Broke Into EDGAR Database And Traded On Stolen Secrets," *Forbes*, January 5, 2019

## Endnotes.

<sup>1</sup> Citation: The Wikipedia article cites to several articles, including Niall McCarthy, "The World's Biggest Employers [Infographic]," *Forbes Magazine*, June 23, 2015. The article is available online for free.

<sup>2</sup> Commentary & Citation: A documentary or news report I watched long ago showed that Moscow construction workers did nothing all day. I cannot find it now, but I think it was from the late 1980s, perhaps around 1990 even, they installed a camera to watch the workers all day. The workers sat or stood around, and about once an hour, one of them would go move a piece of lumber or a few tools, then resume whatever they were doing.

- ✓ France, with its current pro-labor and employment laws and the power of unions, has been alleged to have similar issues, in particular, in 2013, CEO of Titan Tires, the controversial and outspoken Maurice Tylor, wrote to the French government, "The French workforce gets paid high wages but works only three hours. They get one hour for breaks and lunch, talk for three and work for three." See Wikipedia article, "Morry Tylor," and Lori Hinnant, "Workers seize 2 bosses at French Goodyear site," *Associated Press*, January 6, 2014.
  - "The Amiens plant has an especially contentious past. Goodyear's hopes to close the plant have been thwarted by violent protests with huge bonfires, government concerns and France's prolonged layoff procedures. Now, the union is willing to accept the inevitable loss of jobs — but at a cost." Hinnant, *Id.*
  - In the end sections of L. Ron Hubbard's novel Battlefield Earth (1982), Johnny came to be owner of several Chatovarian (alien race) firms that caused him considerable trouble. The Chatovarian Empire consisted of 700 overpopulated worlds, with 49 trillion population and food shortages (they ate trees), and their impenetrable planetary defenses had survived all attacks of the 'evil' Psychlos (that seems regrettable). The Chatovarian firms were technologically-advanced, huge, bureaucratic, and unprofitable on the whole, they tended to overstaff, overdo everything, they never fired or laid off workers, and just kept expanding never-ending projects. They built gleaming cities on Earth with no population, then sealed them up and turned them over to a caretaker. Without Johnny's knowledge, they turned North Africa into an inland sea and rapidly planted billions of trees across the Middle East so that it turned green, which increased cloud cover.

<sup>3</sup> Citation: This article that I found at <https://www.economist.com/news/leaders/234594> had no title and no attribution of authorship.

<sup>4</sup> Commentary & Citation: Kudos if you know Gelt. Surfing channels one day in the early 1990s, I almost died of shock when I encountered a sci-fi space adventure movie (Battle Beyond the Stars (1980)) with Richard Thomas whom I immediately recognized as John Boy Walton from The Waltons television series (1972-1981). I ended up watching the rest of the movie, of course, I think I saw most of it.

<sup>5</sup> Commentary & Citation: One might think of this as a situation where you might say, "Wow, what happened to you? You weren't shy last night." (this might be from the movie Splash, 1984). It's as if an evil twin or long lost sibling took the member's place, think for example of the three roles played by Peter Sellers in Dr. Strangelove, you

go into business with Group Captain Lionel Mandrake (the British exchange officer) and Dr. Strangelove shows up the next day and says he's the same person!

- ✓ “Half of every pair of twins doesn't actually have to be evil, but it does make things a whole lot easier and more fun if they are. These are the incidents where the same actor played the good and bad identical siblings (or sometimes the 'bad and even worse' versions). Plain old doppelgangers don't count. Nor do alternate timelines. No clones. No robo-versions. And no magical manifestations from the other side (sorry Ash and Evil Ash).” – Rosie Fletcher, “9 times actors played their own evil twins in TV and the movies,” Digital Spy, March 29, 2017.

<sup>6</sup> Citation: **THOR**: Your projectile weapons proved effective in fatally damaging the replicators. ... Your technology and strategy for destroying the *Beliskner* was successful. ... The Asgard have tried to stop them. You have demonstrated their weakness may be found from a less sophisticated approach. We are no longer capable of such thinking. **DANIEL**: Wait a minute, you're actually saying that you need someone dumber than you are?

- ✓ *At the end of the episode*: **THOR**: However, now there is hope where once there was none. **CARTER**: Well if you ever need any more dumb ideas you know where to find me.
- ✓ From Stargate SG-1, “Small Victories” (2000).

<sup>7</sup> Commentary & Citation: Michael Noer, “The 25 Largest Fictional Companies,” Forbes, March 11, 2011 (<https://www.forbes.com/sites/michaelnoer/2011/03/11/the-25-largest-fictional-companies/#5abba7485d81>).

<sup>8</sup> Citation: Bugs Bunny the Booster!

<sup>9</sup> Commentary: ANA sent a letter out dated December 17, 2015 which had them talking out both sides of their mouths as usual. Most of it was the same lip service we'd heard for years about how they value all of their retailers while at the same time announcing they were going to discriminate against non-brick & mortar retailers.

<sup>10</sup> Commentary: A notion that I rejected, as Grant Dalglish of Columbia Games found out when he tried to enforce his idiotic Minimum Allowable Price (MAP) policy on my business and tried to get me delisted from Amazon. He told me that I would not be allowed to order more from Columbia if I didn't comply, and I told him that at the rate his games were selling, we'd both be dead by the time I needed to restock. And that his efforts to enforce a minimum retail price on his retailers wasn't helping his games sell any faster, in fact, it was counterproductive.

<sup>11</sup> Commentary: I asked my GTS and ACD reps: If ANA said that they were not allowed to sell games to any retailer who sold games to certain people based on race, religion, or ethnicity, and it was not illegal to do so, would they do it? I have little doubt that ANA would demand that if it were not illegal, because it makes as much sense as their other policies. My question was not appreciated. But I bet the distributors would ... “for a few dollars more.”

The only difference is that it is not yet illegal to exclude internet retailers from the distribution network to prop up brick & mortar stores, and the distributors were more than willing, enthusiastic even, about doing that even though it will hurt their own sales? As I pointed out then, their policy effectively made my money, as an internet retailer, somehow less valuable than a brick & mortar retailer's money for the same products. But even when racial discrimination was legal, generally there were businesses that sold to and targeted the discriminated, segregated groups because ... their money was the same color as that which came from the more affluent sections of town. This is not an argument that confuses apples (game distribution discrimination) with oranges (racial discrimination) because neither discrimination existed for legitimate reasons (the thing that gives them factual commonality); the difference, of course, is in scope and social significance, which greatly favors the latter.

The distributors cared more about their relationship with the manufacturers than they did with their loyal long-time internet retailer customers, sort of like Equifax who has a relationship with financial institutions but considers your wellbeing a collateral issue as they collect your data.

- ✓ The U.S. government has chosen to do nothing about ANA's monopolistic behavior in the market. It probably has to do with the perception of tabletop gaming, in the same way that science-fiction was perceived in decades past. If, for example, the issue was dog food – what if dog food manufacturers said that only brick & mortar stores could buy from their licensed distributors? I am sure the government would be on it. This may, however, not be an apt analogy because I don't know the details of that industry, but it is certain that our society cares more about the price of dog food than freako tabletop hobby gamers or science-fiction fans (the groups overlap significantly) paying more. But if it was a foreign video game maker invading...

## Excerpts from article “Syria Has Effectively Ceased to Exist,” Jonathan Spyer, Foreign Policy Blog, March 19, 2017

On my last night in Damascus, some younger members of the Information Ministry-sponsored delegation in which I was taking part decided to have a drink. It was late April, and the bars and restaurants were doing good business in the cool and breezy evenings. An inebriated Russian journalist, accompanied by a uniformed Russian soldier, entered the bar opposite our hotel in the Old City where my colleagues were sitting. Words were exchanged. An altercation began.

At a certain point, the Russian journalist produced a pistol and aimed it at the forehead of one of the delegation’s participants. He then entered our hotel and threatened one of the employees there, all with his uniformed colleague silently accompanying him.

How the incident ended says much about who truly holds power in regime-controlled areas of Syria today. After the two Russians had departed, the delegation’s participants sought to contact the authorities and report the incident. The representative of the Syrian security forces asked if the armed men were Russian. When told that they were, he replied that there was nothing the Syrian authorities could do.

Six years into the Syrian war, the survival of President Bashar al-Assad’s regime is ensured – but it has become something of a facade and lacks a strategy for reuniting the country. The sometimes sharply differing interests of Russia and Iran from above, and the local concerns of a myriad array of pro-regime irregular militias from below, are the decisive factors – not the decisions of the country’s nominal rulers. This impacts the calculus of the ‘regime’ side in the war, in determining its strategy in the conflict.

\*\*\*

The term “reconciliation” is a misnomer, of course. The regime is interested in the surrender of the rebels, not rapprochement with them. But given the balance of forces and the slow progress, there seems to be a gap between objective and method.

\*\*\*

In other words, there is no strategy at all, but the kind of conspiracy theories that no self-respecting Baathist should be without. In fact, no evidence exists of any overarching plan to divide Syria – nor do any of the major forces in the country support its breakup. Syria’s de facto division is a result of the inability of any force to prevail over all the others, not of design.

\*\*\*

This measured reply delineates the actual situation well. The regime cannot now be militarily defeated, a significant success for its diplomacy and arms. But neither has it any clear road to victory...

The reason for the regime’s lack of knowledge is that decisions made by Assad and those around him will not be the decisive factor in determining Syria’s future. As the fighting in eastern Aleppo showed, the government side only makes real progress when the Russians commit to ensuring its victory. So the crucial question is of Russian, not Syrian, intentions – and Moscow may well have already achieved most of what it came to Syria to achieve. It has ensured the safety of its bases in Latakia province and the survival of its regime allies, demonstrated the

efficacy of Russian arms, and guaranteed there can be no diplomatic process to settle the war without Moscow's involvement.

These are significant accomplishments. But it is also the case that a further Russian commitment to finishing off the rebellion could result in the unpleasant situation in which a cash-strapped Russia finds itself saddled with the responsibility for the reconstruction of a ruined Syria on the basis of "you broke it, you own it."

\*\*\*

With the regime and rebels now effectively reduced to client status and no great desire on the part of the patrons to commit to absolute victory for their proxies, the diplomacy on the Syrian war should presumably shift toward arrangements acknowledging the fragmentation of the country....

As this process plays out, the Russians will continue to do as they wish by day and night in Damascus, the gap between regime rhetoric and reality will remain as gaping as ever, the rebels and the Kurds will continue to march in tune with their own patrons' wishes. Meanwhile, the stark fact will continue to remain unsaid: namely, that the state known as Syria has effectively ceased to exist.

*“There are these four ways of answering questions. Which four? There are questions that should be answered categorically [straightforwardly yes, no, this, that]. There are questions that should be answered with an analytical (qualified) answer [defining or redefining the terms]. There are questions that should be answered with a counter-question. There are questions that should be put aside. These are the four ways of answering questions.”*

– Buddha, Sutta Pitaka <sup>1,2</sup>

*“The problem is not that officers don’t ask questions. Oh, you have a staff meeting, and the young officers will ask lots of questions. The problem is that they don’t know how to ask the right questions.”*

– A Senior Enlisted Instructor, 2RFIS, Ft. Bragg, 1995 <sup>3,4</sup>

**The Human Adventure:** In most adventure stories, and especially in militant space-opera, science-fiction literature, the issues of the day are not decided by the big battles, but by the actions of individuals and small groups (characters) in what would be called “special operations” or “black-ops” – sneaking into the enemy base, spying, sabotage, breaking into computer systems, the lucky recon mission that finds the enemy’s one weakness, assassination of leaders, the special mission to retrieve the alien or religious artifact, rescuing prisoners – all of the things that individuals and small groups can do within the larger setting of the conflict, and that *creates drama*. Partially, this is because our literature is necessarily character oriented (and movies and television are based on individual, recognized actors in lead roles), partially it is the result of the human audience’s need to connect with a likable sympathetic character, but equally, it is because the human audience has always identified with the sense of individual empowerment on the heroic scale (e.g., Joseph Campbell, Hero with a Thousand Faces (1942)), even when the heroic character isn’t really human. That, in addition to the fact that we are individually narcissistic.

In times past, those who were so heroically empowered in the stories were either gods, demi-gods, sons of gods, sons of kings or were kings, or later, saints and those blessed by God. Individual empowerment (and legitimacy and education) always rested with the upper social classes, and with those who took to arms or to the seas, while peasants bound to the land or to lords, could only listen to stories. The startling difference in modern adventure literature is that ‘average’ people, in admittedly extraordinary circumstances, are empowered and act in heroic ways. This is also part of the appeal of modern televised professional sports, that feeling, that childhood dream that still lives inside each of us, that, hey, we could do that, or we could have done that, we could have been that good, if only we had the physical talent.

The fundamental attitude which accompanies ‘technosolution’ (see discussion, 1 Patents, p. 726, *supra*) and is the result of the Enlightenment and the Reformation,<sup>5</sup> is the idea of individual empowerment through technology (as opposed to fantasy or religion). The universe is accessible to us, it is predictable, we can shed light into previously dark places, we can understand, we can do. Technology puts the power of the gods in our hands, each of us individually, and as a group.

- ✓ “There’s always the question how much technology is empowering a small group of people to cause damage. ... [S]maller groups might have access to ... nuclear weapons

or, even worse, bioterror or cyber’ weapons.” – Bill Gates, as quoted by Mike Allen, “Bill Gates: tech companies inviting government intervention,” Axios, February 13, 2018.

Could James Bond have done all that he did without his famous array of technological gadgets? And for the first time, in the decades following the end of the Second World War, we – the human race, or at least nations representing a sizeable portion of it – had the capability to destroy the world, to destroy our entire civilization, and possibly to extinguish all life on Earth. It was then that the stories of gods and natural disasters that had so entertained our ancestors began to lose some of their eternal appeal.

- ✓ There is a parallel between nuclear weapons and war, and modern weapons and the Second Amendment. Modern weapons are of a different class (along with population density) in relation to the Second Amendment’s assumptions to nearly the same extent that nuclear weapons are different than all preceding conventional weapons.

This is the basis of modern terrorism, one person with a bomb or modern firearms can now do in a minute what would have taken a dozen or hundreds of people centuries ago. And as is well documented, increasingly, individuals decide to become the god of death, theirs and however many other people they can kill in a short time before they either commit suicide or are killed by the police. Aside from the regular public outcry and political, social and legal issues of mass-murder, workplace or school building shootings, the base issue with Second Amendment (“right to bear arms”) arguments is that in the time it was written, a person with a musket would have killed at most one person in a crowded room or building before being overwhelmed or fleeing: automatic breach-loading, ‘repeating’ or whatever terms you want to use, modern weapons – even of the civilian sort – have changed this computation completely. This should not come as any surprise considering the staggering extent to which warfare was changed from the early 19<sup>th</sup> Century to the mid-20<sup>th</sup> Century.

- ✓ And also to the extent that we have touched both the Absurdity and the Existential Void, like never before in the early technological age. The ‘god of death’ mass-murderer phenomenon is the overlap of the two that we have yet to resolve. I use a specific gender here because it has not escaped notice of the media and social sciences, that the vast majority of mass murderers are men/male. What is the reason?

Technology is a force multiplier that gives individuals and small groups an effect and effectiveness far disproportionate to their actual numbers. Would I have been able to design this game without the computer technology I employ? Possibly, but it would not have been the same, it would not have been a PBEM or internet-based gaming, of course. In my very first serious attempt at game design, when I was about 15 years old, I recall hand writing, and editing and re-writing, pages and pages of complex rules. I might perhaps have continued to do that without computers, but the reach of my game would be very limited without the internet.

- ✓ It is no great historical coincidence that the 18<sup>th</sup>, 19<sup>th</sup> and early 20<sup>th</sup> Century revolutions that swept away the old monarchies and regimes and focused on individual rights followed the modern technological movement. There is a larger continuity.
- ✓ Most of the ‘modern problems’ can be characterized as age-old problems enhanced by or combined with our struggle with the sudden individual and personal empower-

ment granted by the rapid development of technology. Sort of like a teenager struggling between childish impulses and increasing freedom, decision making, economic power, and coming adult expectations. And being given a car. Some never quite pass.

- See related discussion in More Than a Feeling, *et seq.*, 1 Temporal Technology, p. 808, *supra*.

➤ Time Safari, Inc.: The ultimate human adventure and force multiplier in science-fiction is time travel tales (how many movies, TV series?<sup>6</sup>) and a time excursion would be the ultimate Special Operation. Time travel fiction succinctly epitomizes *technological empowerment* of individuals and small groups (*ut supra*), entangling with personal regrets, angst, etc.

- ✓ [Interview with *fictitious* science-fiction writer Kevin Ulrich] “The Soviets found the time machine to be an invaluable tool for espionage.” – The History of Time Travel (mockumentary, 2014).<sup>7</sup>
- ✓ I watched an interview with one of the main creative team members for the Terminator movies who amusingly pointed out that if you were sending an agent back in time, you’d want someone who blends in with the crowd on the street; Schwarzenegger stands out in a crowd, but people loved it anyway!

Time Safari, Inc.<sup>8</sup> As discussed in 1 Temporal Technology, GGDM is not suitable for that sort of play, it has the wrong structure. To the extent that temporal technologies are allowed in GGDM, participants should be extremely careful if allowing temporal Special Operations.

- ✓ One problem with temporal excursions of any kind is that they require a level of awareness and perfection beyond human capability to avoid causing ripples and paradoxes. In the short film “Destroyer of Worlds” (Samuel Dawes, The CGBros, 2019, YouTube 44 minutes) the ‘bad guys’ took the car keys but missed the journal that had writings about the events leading to their future time. When the journal fell out of the author’s bag on the train in 1954 and was picked up and read by his past self in 1954, that future vanished because he didn’t follow the same course. And the woman passenger whose lipstick he used to write equations on the train window also vanished.

I would suggest at the most that such operations be limited – very limited – to Recruiting and Lodging Missions (and possibly remote viewing); actual Special Operations ‘black ops’ are too problematic in their causal ripple effects. Even Recruiting and Lodging can cause ripples if anyone is doing anything they would not have otherwise done (e.g., became a spy instead of a brilliant professor), but those may be handled within the game by a judicious Concierge:

- ✓ Suppose a virus – actual biological or the computer type – was created in the future and emplaced in our time through temporal means. How would we know that it was from the future? The event would just ‘happen’ in the normal course of things in our time, it would just be there so to speak, the only possible mystery being where it came from (like trying to figure out where an epidemic started). If the virus in question were of the *biological kind*, there would be some – nay, major risk – that the mad creator either wouldn’t exist or that their world would be different as a result (because their ancestors died of the virus) – and hence the virus was never created or never sent back in time – a paradox. Something like a computer virus or inserting a flaw or backdoor into operating systems (for example, allowing an enemy state to shut down the national power grid or steal secrets), is less likely to create paradoxes, but if that is

the case – or in either case – both are history that already happened before the future mad scientist type, and thus, what have they accomplished but to confirm history?

- ✓ If someone from the future were putting ideas and images in your head – maybe in a sort of *Interstellar* (2014) movie way – how would you know? We do sometimes get ideas suddenly that seem to have no source or are disconnected from what we are thinking at the moment, or wake up in the morning with a sudden new understanding. Cognitive theorists have suggested our brain multi-processes and that dreams play a role in working out issues and problems, but regardless, to us they are our thoughts and ideas because they suddenly occurred in *our minds*.
  - See Temporal Constructural Element, p. 173 and Avi Sion feature quote, p. 175, 1 Constructural Elements, *supra*.
- ✓ One possible solution to sloppy time-travel causality is to argue, like the creators of the Terminator franchise, that there is a fixed future point or condition (that is, a future world without Skynet) and whatever causal changes are made, or paradoxes are created between the 1980s and that point, will always lead to that fixed point, despite creating divergent timelines (which can be viewed as line excursions). If this is the way that GGDM participants treat temporal technologies, then they should be prepared for very heavy-handed Concierge Intervention to make sure it comes out right!
- Character Assassin: Unfortunately, Special Operations – the vision of such – bumps hard up against the ‘no literary characters’ in GGDM discussed in *A Story Without Characters*, 4 The Streams of Time, p. 102, *supra*. As much as possible, participants should envision Special Operations in a general conceptual sense, but there is no avoiding the issue of individuals – characters, actions, motives, like any criminal investigation or spy novel or documentary – in Special Operations, as is demonstrated by the discussions below.
  - ✓ The trial of Adolf Eichmann perhaps ‘served a purpose’ of refocusing attention on the banality aspect, the generation of mundane people who either participated in or passively accepted what happened in the Third Reich. In the immediate aftermath of WWII, the focus naturally was on the ‘masterminds’ (intentionalism holocaust argument) and vast insanity of it, but from the 1961 Eichmann trial the world learned the expression and concept of “The Banality of Evil” which was coined by Hannah Arendt, who reported on the trial for *The New Yorker*.<sup>9</sup> GGDM throughout has focused on the duality of the leadership and those on the ground (and unity of the opposites).

Any individual involved in a Special Operation will live for probably a Regular Turn or less in GGDM game time (depending on how much ‘objective time’ the participants think a turn represents), and thus Lodged Missions must age out, like RPs in the Treasury and Faculties in the Enlightenment pool.

- ✓ Thus, in GGDM there should be no captured spy exchange or *Bridge of Spies* (Glienicke Bridge, Berlin, featured in the 2015 movie), because of the potential time scale of a Regular Turn.

It is also possible to assume that the actions of individuals *echo well beyond the very short time duration of their act* and shortsightedness of their lives, e.g., the assassination of Philip II of Macedon (father of Alexander the Great, who was then about 20 years old):

- ✓ “Whatever the actual background to the assassination, it may have had an enormous effect on later world history, far beyond what any conspirators could have predicted. As asserted by some modern historians, had the older and more settled Philip been the one in charge of the war against Persia, he might have rested content with relatively moderate conquests, e.g., making Anatolia into a Macedonian province, and not pushed further into an overall conquest of Persia and further campaigns in India.” – from Wikipedia article, “Philip II of Macedon,” captured June 1, 2019.<sup>10</sup>
- ✓ Without Alexander the Great’s conquests, there is no Cleopatra VII Philopator, the last ruler of the Ptolemaic Kingdom of Egypt. Generally, Alexander the Great may have had some minimal relationship to the rise of Rome, the Romans admired him, e.g., Plutarch’s famous comparative biography, and may have been influenced by visions of replicating his achievements.<sup>11</sup> Thus, the echoes of the moment of assassination of Philip II of Macedon ripple and refract through time to Julius Caesar (who was, if you recall, also assassinated 292 years later) and Mark Anthony, to both of whom Cleopatra bore children.

---

*“Thanks to oil, Khartoum today is a boomtown, the whole city a construction site. Osama Bin Laden had a construction business here in the 1990s, when he lived in Al-Riyadh City, a rich suburb of Khartoum. He was an acquaintance of Gubara’s eldest son. Mohammed Gubara knew everyone because he was the director of the Blue Nile Sailing Club. Mohammed also knew Carlos the Jackal, a leftist terrorist who lived in Khartoum in the 1980s, when he was one of the world’s most-wanted criminals. The Jackal was eventually betrayed by his own bodyguards as he lay recovering from minor surgery – for a varicose vein on a testicle – and extradited to France.”*

– Nadja Kornith, “The Omega Man – Gadalla Gubara and the half-life of Sudanese cinema,” Bidoun (bidoun.org), Issue 20, Spring 2010

---

**The Gubaras:** To close the circle, the Gubaras were distant descendants of the Mahdi as was the Prime Minister, and thus they were also distantly related to the Prime Minister. It doesn’t take a college degree to see why Osama Bin Laden made their acquaintance.

**Player Generated Entropy:** Special Operations (other than information gathering) are treated in GGDM as a dichotomy:

- ✓ On the one hand, they represent literal ‘black-ops’ (attempts) by one position against another through all of the usual espionage means familiar to us – bribery, blackmail, infiltrating *resistance groups*, media manipulation – to the extent that those work on alien species – and in another, they represent in many cases, unintended consequences and espionage-like entropic events that may occur within the target society regardless of external forces.

In the realm of unintended consequences, a Special Operation sometimes has effects far beyond what is anticipated by the masterminds and perpetrators (e.g., the Affair of the Poisons and the Dreyfus Affair, 3 Special Operations, p. 1309, *infra*, the assassination of Philip of Macedon, previous page, the assassination of General Heydrich next page). Thus, the mechanics of Special Operations in GGDM are literal in the sense of ‘recruiting’ missions, amassing opportunities and

assets against a target, while the results can often times be more general, beyond the scope of merely destroying an installation, corrupting local officials, or stealing a few research secrets or some computer code.

- ✓ It is similar to the way the stock market is treated in our current civilization: “The risks on Wall Street have been socialized while the profits have been privatized.” – William D. Cohan.
- ✓ Operation Anthropoid was the only successful attempt by the Allies to assassinate a Nazi leader. The success was of negligible military value and the Nazi retaliation against the Czech population (against which the Czech government in exile warned) curtailed any such future operations. General Heydrich died of his wounds (on June 4, 1942) a week later after they became infected, and in that, some see justice as he was the architect of the famous ‘Final Solution’ and chaired the Wannsee conference just six months earlier. Many of the attendees of the Wannsee conference were not convicted, but at least Heydrich was killed. Other effects of his assassination are debatable; execution of the Final Solution plan fell to his deputy, Col. Eichmann (i.e., the “Banality of Evil” who was his sidekick at the Wannsee conference) and perhaps internal resistance to the Final Solution within the Reich ministries and Wehrmacht stiffened after his death? It must have also been concerning to the Germans that a lone Allied bomber (a RAF Halifax) was able to penetrate so far into their airspace in December 1941 and parachute in 9 soldiers just east of Prague.
  - Heydrich appears as an old man in *The Man in the High Castle*, brags about his immoral ‘achievements,’ and tries to have the elderly Hitler assassinated so that he can take over the Greater Reich.
- Resistance: Not all resistance is or should be considered foreign-induced; e.g., the Solf Circle,<sup>12</sup> the Kreisau Circle, and the White Rose group in Nazi Germany were not connected to any of the Red Orchestra groups, nor were they any danger to the Nazi State, but were stamped out simply because they disagreed and were speaking out about it (similar to the Confessing Church). However, the Allies reprinted and dropped over Germany in July 1943 millions of copies of the sixth White Rose leaflet – that had been smuggled out of Germany to the UK (see propaganda and psyops discussions). Organic internal ideological resistance is addressed more properly with Thesis Statements (see *Disputation*, 2 Reformation, p. 1391, *infra*) but can become a consideration in Special Operations.
  - ✓ In terms of local ‘criminal’ activity, in the 1966 movie *Khartoum*, the enemy could not have done more damage than the shyster who forged General Gordon’s signature on grain appropriation orders, then sold the grain for pure profit in the marketplace. When it was discovered that most of the grain stores were missing and the besieged garrison had little food, the perpetrator was arrested and revealed to be one of Gordon’s own men; he was executed summarily but what was the difference at that point? Security needed to prevent the acts. Why did no one notice? A greedy thief was more valuable to the besiegers than a saboteur.
- Vortex Manipulator: Each time that a Black-op (i.e. activation of the Special Operations Power for the purpose of Black-ops, *ut infra*, including activations for the purpose of Treason, see 3 Special Operations, p. 1310, *infra*) or Counter-Operation (i.e. activation of the

Special Operations Power for the purpose of Counter-Operations, *ut infra*) is executed (targeted, attempted) against a position, regardless of the results and regardless of who is ultimately ‘blamed’ for it, an Intervention Potential is *attached to the position* from the pool of general Intervention Potentials (note that this is not the same as an Intervention Potential Plus) *at the location of the Special Operation* and should be used by the Concierge in that Regular Turn or within the Turn Cycle, to create some effect linked to the Special Operation.

- ✓ For example, whatever the motives and intents of the July 20 Plot conspirators, they inadvertently succeeded in eliminating one of the finest field commanders of WWII (regardless of the alleged myth): The Nazi party, suspecting that Rommel was involved in the July 20 Plot, forced him to commit suicide on October 14, 1944, and then lied to the German public about his cause of death. Probably, this didn’t change the course of the war ... but what if Rommel had been commander at the Battle of the Bulge just a few months later? Had Rommel succeeded in the mutiny of the Western commanders (and his demand letter finally reached Hitler), there might not have been a battle in the Ardennes in December 1944. But he was not a July 20 plotter.

This effect could be linked to a known Thesis lodged against the position (see Disputation, 2 Reformation, p. 1391, *infra*), if any, or to an ongoing Kairotic Moment effect (see Kairotic Moments generally, *infra*) to create story continuity.

- ✓ Merely recruiting and Lodging Special Operations or Counter-Operations Missions *do not* cause an Intervention Potential to be *attached*, nor does Reconnaissance activations (see One-Way Mirror, *et seq.*, 2 Information, p. 1340, *infra*).
- ✓ If the Special Power Activation failed due to Constructural Elements, *it never happened*, and thus was not attempted, and no Intervention is *attached*.
- ✓ This rule applies only to Black-Ops and Counter-Operations, not to Information Operations.

The attacker in a Black-op will consider this a bonus, whether or not the operation is successful. And it’s a plus too if paranoid defenders conduct Counter-Operations in places where no Special Operations Missions have been Lodged, and thus generate another Intervention. But more so, the reason for this is the vortex of paranoia in civilizations: If they go looking, they will find an enemy, foreign or domestic, to persecute. Rocks will be kicked over, rocks will be thrown in glass houses.

- Presidential Assassinations: Four sitting U.S. Presidents have been killed by assassins:
  - ✓ President Lincoln was killed by a Confederate sympathizer,
  - ✓ President Garfield was killed by a disgruntled office seeker at a train station,
  - ✓ President McKinley was killed by a mentally-ill man who claimed to be an anarchist (but had been shunned away by Emma Goldman), and
  - ✓ President Kennedy was killed by Lee Harvey Oswald, whatever you think he was... crank, Soviet agent, Mafia agent, CIA agent, communist sympathizer, whatever your pet conspiracy theory.

The system was slow to react, there was *no security* around President Lincoln, *little security* around President Garfield, President McKinley was in a meet & greet with the aisle lined by

U.S. Army artillerymen in full dress uniforms (one of them tackled the shooter) and with local police detectives and a couple of Secret Service agents (who were standing too far away to be effective), even though the Secret Service had not yet been officially tasked by Congress with protecting the President.<sup>13</sup> It was not until after the assassination of President McKinley that Congress officially legislated the Secret Service as the arm to protect the President.

- ✓ Only the assassination of President Kennedy has attached suspicions of foreign nation or criminal organization involvement.
- ✓ Emma Goldman, the lover of Alexander Berkman who was then in jail for attempting to assassinate Henry Frick, was detained after the assassination of President McKinley, but was released as she had no involvement and had shunned the shooter. But she was never considered at any point, a possible foreign agent despite her Lithuanian birth, but rather as an intellectual anarchist agitator in possibly a loose, vague international conspiracy.

Thankfully, despite the quickly-forgotten movie *The Pelican Brief* (1993), no U.S. Supreme Court Justices have been assassinated, though many lower court Judges have been killed (e.g., the 2005 Atlanta Courthouse shootings) and many of them carry concealed weapons (e.g., Judge Joseph J. Bruzzese Jr. who was ambushed in the Jefferson County, OH courthouse parking lot in 2017 and returned fire after being shot). People give considerably less thought to the profound implications of violent attacks on the judiciary than on the President of the United States (or leaders of other nations), some even applaud them (e.g., Judge Chuck Weller, a family court judge, who was shot through a third floor courthouse window in Reno, NV in 2006. See “Wounded judge was despised by some parents,” Associated Press, June 14, 2006).

---

*“As William F. Buckley, the founding editor of National Review, once put it: ‘To say that the CIA and the KGB engage in similar practices is the equivalent of saying that the man who pushes an old lady into the path of a hurtling bus is not to be distinguished from the man who pushes an old lady out of the path of a hurtling bus: on the grounds that, after all, in both cases someone is pushing old ladies around.’” – Quoted in the Washington Post, August 16, 2017*

---

**The Little Black Book:** Special Operations are all of those things that governments do that they wouldn’t want to see on the front page of a newspaper. They are, at best, a necessary evil, no matter how adventurous the stories or how charismatic the characters. The Special Operations Power may be activated for the following purposes:

1. Reconnaissance (Surveillance and Probing, see 2 Information, *infra*),
2. Recruit Missions (SOMs),
3. Lodge Missions (SOMs),
4. Information Operations (see 2 Information, *infra*),
5. Black-ops (non-Information operations),
6. Treason (it takes two to tango...),

7. Train Counter Operations Missions (i.e. Lodge & Recruit COMs),
8. Counter-Operations (sweeping up the garbage!).

**Reconnaissance** – which address observation and military reconnaissance as opposed to espionage and black-ops – and Information Operations – spying, espionage – will be discussed fully in, 2 Information generally, *infra*. This part relates solely to Black-ops and Counter-Operations.

- **Acting Lessons:** Special Operations Power activations cost one Act, however, when the Power Activation occurs at a sovereign colony (as in Counter-Operations for example) the Power activation *costs a Scene instead*, which must be on the colony. That is, any activation of the Special Operations Power will cost either an Act or a Scene as applicable, but not both, unless a position is Lodging Missions at both alien and friendly units in the same Regular Turn. If the target location is a sovereign ship (or MegaCorporation membership property) which is at a sovereign colony (as in putting SOMs or COMs on a ship), either one Act or a Scene (position’s choice) at the colony may be used for the Power Activation. A position may not choose to use an Act when a Scene is required; the Scene must be used.
- **Making a Scene:** Special Operations Power Activations generally do not fail due to inactive Constructural Elements unless they occur on Friendly, Naturalized or Converted sovereign colonies or ships (i.e. using a Scene). Thus, Power Activation failure for inactive Constructural Elements (see Power Off, 2 Constructural Elements, p. 193, *supra*) can only occur when Special Operations Power is activated to place Special Operations Missions (SOMs) on Friendly, Naturalized or Converted sovereign colonies or ships or to carry out Black-ops at those places, and in any Counter Operations activation on sovereign colonies.
  - ✓ A position may use an Act to Train Counter Operations Missions (COMs) that are being placed on ships at sovereign colonies to avoid the possibility of Power Activation failure. However, this may not always be an option depending on circumstances.
    - Although this is mostly a game gimmick, it may also be reasoned that ships are easier to protect – especially spaceships – due to the limited room, restricted access, compartmentalization, outside environment, etc. Which is what makes the smuggling of Shadow ‘teeps’ onboard the Earth-force fleet at Mars such a stretch in the Babylon 5 episode, “Endgame” (1997), but the show pulled it off smoothly.<sup>14</sup>

Special Operations Power Activation failure checks are only made when a Scene is used, whether voluntarily or by requirement (*ut supra*). Special Operations Power activation failures can be subject to Enlightenment rolls if such is committed to insure the Power Activation *and* if the *target location* (i.e. where the Scene is used) has an active Epistemological Constructural Element (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*).

In short, Special Operations at alien locations *does not depend on* the operator’s Constructural Elements, but may be greatly affected by the target’s inactive Constructural Elements, as discussed in more detail in A Heartless Woman’s .38, 2 Special Operations, p. 1301, *infra*.

- ✓ Note that like the Taxation Power, the Special Operations Power Activation can fail at each specific friendly location while also executing normally at alien locations (whether successful or not). See Jobs for Jackals, 2 Special Operations, pp. 1290-1291, *infra*, for further discussion.

---

*“[Adm. Wilhelm] Canaris was a highly intelligent and sensitive man with many likeable qualities. He loved his dogs and his horse almost more than any other living creatures. He often said to me, ‘Schellenberg, always remember the goodness of animals. You see, my dachshund is discreet and will never betray me – I cannot say that of any human being.’” – Walter Schellenberg*

---

*“[Adm. Caranis’] skill in acting a part, his cunning, his imagination, the ease with which he affected naive stupidity and then emerged into the most subtle reasoning disarmed the security agents who interrogated him.”*

– Fabian von Schlabrendorff

---

*“Canaris hated not only Hitler and Himmler, but the entire Nazi system as a political phenomenon .. He was everywhere and nowhere at once. Everywhere he traveled, at home and abroad and to the front, he always left a whirl of confusion behind him .. In reality this small, frail, and somewhat timid man was a vibrating bundle of nerves. Extremely well read, oversensitive, Canaris was an outsider in every respect. In bearing and manner of work, he was the most unmilitary of persons.” – Hans Bernd Gisevius*

---

**Destruction of the Abwehr:** Participants should never dismiss the idea of ideological infighting and ineffectiveness as basis for game entropic effects or die roll failure; this especially seems to be true of intelligence services due to the secretive work they do and their prideful position.

The Abwehr was the German military intelligence service during WWII. It was not especially effective and some members were part of the Black Orchestra; the Abwehr provided British explosives and fuses for two attempts to assassinate Hitler in 1943 and 1944. Some members were connected to the Solf Circle as well and had allegedly compiled a huge dossier (the lost Zossen documents that the Gestapo allegedly burned at castle Schloss Mittersill, but some were allegedly buried) of German war crimes on the Eastern Front.

- ✓ “Hitler had long suspected that the Abwehr had been infiltrated by anti-Nazi defectors and Allied agents, and the defection of [Erich] Vemehren after the Solf Circle arrests all but confirmed it. It was also mistakenly believed in Berlin that the Vermehrens absconded with the secret codes of the Abwehr and turned them over to the British. That proved to be the last straw for Hitler. Despite the efforts of the Abwehr to shift the blame to the SS or even to the Foreign Ministry, Hitler had had enough of [Vice Adm. Wilhelm] Canaris and he told Himmler so twice. He summoned the chief of the Abwehr for a final interview and accused him of allowing the Abwehr to ‘fall to bits.’ Canaris quietly agreed that it was ‘not surprising,’ as Germany was losing the war.

Hitler fired Canaris on the spot, and on 18 February 1944, Hitler signed a decree that abolished the Abwehr. Its functions were taken over by the Reichssicherheit-

shauptamt or RSHA (Reich Main Security Office) and SS-Brigadeführer and Generalmajor [Brigadier General] of Police Walter Schellenberg replaced Canaris functionally within the RSHA. This action deprived the German Armed Forces (Wehrmacht) and the anti-Nazi conspirators of an intelligence service of its own and strengthened Himmler's control over the military. Canaris was cashiered and given the empty title of Chief of the Office of Commercial and Economic Warfare. He was arrested on 23 July 1944, in the aftermath of the July 20 Plot against Hitler and executed shortly before the end of the war, along with [Generalmajor Hans] Oster, his deputy. The functions of the Abwehr were then fully absorbed by Amt VI, SD-Ausland, a sub-office of the RSHA, which was part of the SS.” – from Wikipedia article, “Abwehr,” June 23, 2019.

The feud between the Gestapo and Abwehr has been referenced in movies such as *Bonhoeffer: Agent of Grace* (2000) where it was commented that “the Gestapo is taking Abwehr apart.”

*[Narrator] “[Col. Claus von] Stauffenberg increasingly became the core of the Valkyrie plan ... but one major problem remained: Neither [Maj. Gen. Henning] von Tresckow or other conspirators, such as [Col. Albrecht] Mertz von Quirnheim, had actual access to the Fuhrer. But then, in June of 1944, Stauffenberg was appointed as chief of staff to none other than General [Friedrich] Fromm, head of the home army. Hitler frequently wanted to be appraised of its combat readiness. So Stauffenberg suddenly found himself in a position where he himself would see Hitler on a regular basis. Of all of the conspirators, he was now best placed to become the assassin.”*

– *Operation Valkyrie: The Plot to Kill Hitler* (2008)

**Opportunity:** Opportunity is key and fleeting,<sup>15</sup> without opportunity, all plans are just air. General Fromm was a passive observer of the plot (and he was aware that Col. Stauffenberg was involved in the Black Orchestra group), who quickly turned on the plotters before knowing whether Hitler had survived or not, but he was the catalyst of the opportunity nonetheless, sending his Chief of Staff to report to Hitler instead of going himself, or sending someone else he knew was not involved in plotting against Hitler. Very strange, isn't it? Was Fromm passive-aggressive against Hitler?

The key to Special Operations – especially given the operational conditions of the GGDM setting – is opportunity. First Contact, MegaCorporations, Balkanized Planets, alien trade, Diplomatic Space, any form of extended contact between positions in GGDM creates opportunity just as ‘familiarity breeds contempt’ (Chaucer, 1386 A.D.). When designing or judging Special Operations, participants should consider first the opportunity for the operation, how many steps are between the concept and the concrete target of the operations, how many opportunities for screw-ups and chance to intervene, what connects the originator to the target that provides the opportunity for the operation? Thus positions must choose: Isolation as protection or engagement with the story and the developing pan-galactic culture in the game?

- ✓ ‘Opportunity’ is a word frequently used for or substituting for ‘offer or solicitation’ (especially in anything relating to sales). This is not a bad question for GGDM special operations. What is being sold, solicited or offered? And to whom?

- Internal Disputes & Isolationism: The preceding opportunity discussion does not apply strictly to Thesis Statements, see Disputation, 2 Reformation, p. 1391, *infra*. However, there are possible game connections between Special Operations and Reformations.

Internal disputes are often the opening for foreign intervention. A succession dispute in Scotland was the opening for Edward I of England (aka “Edward Longshanks”) when the disputants appealed to him to mediate (as feudal custom, only a king could mediate a dispute for royal succession) in an attempt to avert another civil war. Edward insisted on being proclaimed Lord Paramount of Scotland on the argument that in order to mediate the dispute he had to have authority over the disputing parties, but it was a trap, and soon he was demanding allegiance and implementing laws in Scotland as its ruler and stormed towns, won battles defeating anyone who didn’t agree. You know the history already.

Similarly, Offa of Mercia in the 8<sup>th</sup> Century used disputes in the Kingdom of Kent to make himself overlord there, over Canterbury and the Channel port of Dover and over East Anglia (whose king he had beheaded for rebelling, ‘offa your head!’); then used a dispute with the Archbishop of Canterbury to convince the Pope to divide the Holy See into two Archbishops, halving the power of Canterbury and providing a new Archbishop at Lichfield loyal to him in 787 A.D.

‘Foreign’ in this case is *relative*, since the unification of England in the 10<sup>th</sup> Century and the gradual political, linguistic, economic and cultural unification and homogenization of the Isles is a celebrated thread of English history.<sup>16</sup> But at the time, since the disputants were each considered sovereign – whether as Lords Temporal or Lords Spiritual – any meddling or affairs outside their sovereignty was foreign.

Space-opera settings with long-term ideas or detailed back histories tends to follow this pattern from sovereign or semi-independent colonies or regions in the early eras to some similar process of unification leading to galactic empires, etc. or just endless petty galactic warfare, e.g., Christopher Moeller’s Iron Empires stories:

- ✓ “Eight weary nations, spanning three million light years of the Milky Way Galaxy. They are the withering remains of a human civilization once immeasurably vast. Their dying has not been quiet.” *Id.*

Some Government Titles are based on and require isolation to pass their Conflict Checks. By choosing those titles from the pool, positions have chosen isolation. Government Titles serve as guides to the position’s conduct.

- ✓ [Interview] “It turns out that in 1944, there were seven and a half million foreign workers in Germany. And the Germans had this worry that there could be a civil disturbance.” – Professor James V. Koch (Old Dominion University, Norfolk, VA), *Operation Valkyrie: The Plot to Kill Hitler* (2008).
  - [Interview in German with English Subtitles] “The plan, under the motto ‘Valkyrie’ was a contingency plan in the event of an uprising of foreign workers forced to work in Germany. There were many such workers in almost all sectors. If a labor revolt did occur, it would be suppressed by Plan Valkyrie. Every corps had prepared for this eventuality.” – Baron Philipp von Boeselager, credited as the last survivor of the July 20 Plot. *Id.*

- The conspirators in the July 20 Plot to kill Hitler were high-level army officers who were desperate to rid Germany of its insanity and who cleverly planned to *subvert an existing continuity of government structure and plan already in place* to complete their *coup d'état* if Hitler was killed by the bomb in the Wolfsschanze.

- Earth Bygones: The period before and between, and even just after World War II is ripe with examples of special operations of all kinds – some wildly successful (e.g., the Norwegian heavy water sabotage operations 1940-1943, commando raids and air flak operations to blind radar, and the *entirely fictional* Guns of Navarone story of 1961 movie fame which would be equivalent to sabotaging an Orbital or System Defense Base) and some less so (e.g., Operation Canned Goods, 1939) or completely fanciful, questionable, or outlandish (e.g., Operation Long Jump and the plot to kidnap the Pope, both in 1943).

The entire 20<sup>th</sup> century, extending through the Cold War is fertile ground for imagination of GGDM Special Operations, in addition to a considerable body of spy-thriller fiction (even to the silliness of James Bond movies), science-fiction and fantasy-fiction stories they inspired.

I highly recommend reading the Wikipedia article (and any news articles or other reliable historical journalism) on the Red Orchestra to obtain ideas of what can be done under the most oppressive circumstances with the placement (seeding) of just a few agents working more or less independently of each other and often without knowledge of other groups. It is true that all involved on both sides were humans, within social and business relationships, which is not presumed to be the case in GGDM most of the time. So the Concierge and participants must judge the quality of contacts between the Special Operations aggressor and the target alien population – how common or rare is contact with aliens for the particular target group? How long and improbable is the string of contacts, circumstances, contrivances to get from operational concept to concrete objective?

- ✓ See discussion of Improbables, 4 Colleges, p. 506, *supra*.
- ✓ On the subject of Cold War espionage operations, I recommend reading the Wikipedia article on Mitrokhin Archive (and other reliable historical journalism) regarding actual operations that the KGB deemed and undertook as practicable.
- Harebrained Schemes: Some schemes are so harebrained as to constitute a dark comedy of sorts. Examples include the attack on Nancy Kerrigan by contract thugs plotted by Tonya Harding's ex-husband and ex-bodyguard, or by way of further example, the scene where Russian spy Anna Chapman (Anna Vasil'yevna Kushchyenko) was caught. In particular, the attack on Nancy Kerrigan was a dime-store-novel plot, schoolboy stunt that made most adults legitimately do a double-take when they heard the news, an authentic "Huh? What?" response.<sup>17</sup>

A game mechanic that resolves the result of a Special Operation by die rolls is not a judgment on the merits of the operation. It is thus that some truly harebrained operations (e.g., ST:OS "Journey to Babel") could succeed simply on die rolls and not on merits. Many years ago, I worked on a case about a modern Ponzi scheme that was so transparent and outlandish that it demonstrated that some people are both unbelievably greedy and gullible.<sup>18</sup> So, it can never be said that a hare-brained Special Operation could never succeed. The Concierge is

free to exercise judgment on any Special Operation and may (especially considering the interstellar setting) block or alter the results of the patently harebrained species of Special Operation through Interventions (and an entertaining Special Bulletin New Event!).

- **Mission Impossible:** The Concierge and participants should distinguish between hairbrained operations and those which are just *very difficult* and are carried out by competent people, but have a low probability of success:

- ✓ [Interview] “Where the plot began to fall down was that Stauffenberg couldn’t be in two places at once. He was instrumental in organizing the operation of Valkyrie in Berlin, so he needed to be there. He’s a tremendously powerful, dynamic man, so he could pick up the phone and talk to all corners of Germany at once and convince everybody to act in the way that they should do. But at the same time, he realized that summer that he actually had to be the assassin as well. So he also had to be 300 miles to the east planting the bomb in the map room in Rastenburg.” – Roger Moorehouse (author of *Killing Hitler* (2007)), *Operation Valkyrie: The Plot to Kill Hitler* (2008).
  - [Narrator] “Since Stauffenberg had to remain alive and return to Berlin to orchestrate the coup, he had to use a timer in the form of a fuse.” *Id.*
  - But the one thing that absolutely had to happen was that Hitler must die – it was mission critical. Two men carried two bombs into the room (one was not armed, they didn’t have time) and two men left the room after placing one bomb under the table (and tossed the second unarmed one into the woods). One of them needed to insure the task by guarding the bomb, nothing else mattered. If Hitler doesn’t die – and he didn’t – the rest of the planned coup fails – and it did. Stark opportunity is a cruel thing, un-forgiving of self-preservation or ‘human failings.’

‘Mission critical’ is the function of and guiding principle to the use of Enlightenment when used for rerolls in GGDM. See *Mission Critical*, 2 Special Operations, p. 1300, *infra*.

- ✓ Contrast this with von Gersdorff’s failed attempt to assassinate Hitler in March 1943 by suicide bombing (he planned to embrace Hitler while the bomb went off, killing both of them); the preparations for which are shown in the movie *Bonhoeffer: Agent of Grace* (2000). Therefore, Bonhoeffer was an adjutant of the Black Orchestra because he knew of von Gersdorff’s plan. Von Gersdorff failed because Hitler rushed through the tour in less than ten minutes and took away the opportunity, as the bomb had a ten-minute fuse. Von Gersdorff was also part of General Tresckow’s group of conspirators and it was likely that von Stauffenberg was aware of his failed attempt and the altruistic idea behind it (which in the movie *Bonhoeffer* reluctantly blessed by quoting John 15:13). Von Gersdorff was also apparently involved in procuring the explosives and fuses used by von Stauffenberg in the July 20 Plot.
- ✓ Twice during WWII, the German Navy lodged agents inside the United States via U-Boats (Operation Pastorius, June 1942 and Operation Magpie, November 1944), both with no expectation of support within the U.S. and only a general sort of plan. Both failed entirely. Was this a hairbrained scheme or mission impossible? See further discussion of Lodging missions, 2 Special Operations, generally, *infra*.

*“To subdue the enemy without fighting is the supreme excellence.” – Sun Tzu*

\*\*\*

*“One need not destroy one’s enemy. One need only destroy his willingness to engage.” – Sun Tzu*

\*\*\*

*“There are but two powers in the world, the sword and the mind. In the long run the sword is always beaten by the mind.” – Napoleon Bonaparte*

\*\*\*

*“The first casualty of war is truth.” – Runyard Kipling*

**PsyOps:** The following observations serve as guidelines for psychological warfare operations in the interstellar setting. First, it would seem rather difficult (but not impossible) to conduct tactical psychological warfare in a space combat, but they probably would be more effective in Pacification or Ground Combats. In order to conduct psychological warfare against another species, there would need to be a high level of familiarity between the species, translating to a fairly large Diplomatic Space.

Fear is the crudest tool of psychological warfare although other emotions can be used, such as false security, reckless triumph, religious awe, guilt, loss, and so forth, depending on the circumstances, and thus the target alien species must have the capability of experiencing the emotion that is to be evoked by the psyop in such a way as to be adversely affected. And finally, above all else, while alien psychologies multiply the difficulties of psychological warfare, it should never be considered impossible.

- ✓ Fear is the primary element of judgment; judgment comes from experiencing failure or loss, it is the shield against fear of future or continued failure or loss.
  - “The demon’s target is not the possessed; it is us the observers..everyone in this house. I think the point is to make us despair..to reject our humanity: to see ourselves as ultimately bestial, vile and putrescent; without dignity; ugly; unworthy.” – William Peter Blatty, *The Exorcist* (Mr. Blatty wrote both the novel (1971) and wrote the script for and produced the movie (1973)).
- ✓ **Head games:** **The Mahdi:** The message, I sent the message. There is no British army. **Gen. Gordon:** Why would you send me a false message? **The Mahdi:** Oh, it is sometimes wise, Gordon Pasha, to provide a man with a few sunny hours of fraudulent hope, so that when night comes, he will have a more perfect inward vision of the truth of his hopelessness. I sent the message, there is no British army. You are alone. Quite alone. – dialogue from *Khartoum* (1966).
  - At many points in the movie *Khartoum*, Gen. Gordon was urged to leave Khartoum. The British government ordered him to leave, and he refused. In other scenes (including the one above), the Mahdi is shown offering him safe passage and asking him to leave. As with most historical dramas, the dialogue is fictional – there was no stenographer present – and is intended to represent the sides and advance the drama and story. Fair

enough, but I don't doubt that the Mahdi wanted Gordon to leave (and would have granted safe passage) because it would have served his purposes: 1) It would then appear that the British abandoned Sudan to him, 2) He would have been able to present himself as a liberator and the Anglo-Egyptians as cowards, 3) Gordon's magnificent image in the Sudan would have been shamed, diminished, dismissed, and 4) It would have avoided the massacre. And of course, the death of Gen. Gordon provoked a backlash that was fatal to his future state.

- ✓ See previous discussion in 5 Combat, pp. 1006-1009, *supra*, regarding morale in GGDM.
- ✓ See also Pedagogy of Propaganda, 1 Kairotic Moments, p. 1425, *infra*.

**President Muffley:** *But, how is it possible for this thing to be triggered automatically, and at the same time impossible to untrigger?*

**Dr. Strangelove:** *Mr. President, it is not only possible, it is essential. That is the whole idea of this machine, you know. Deterrence is the art of producing in the mind of the enemy... the fear to attack. And so, because of the automated and irrevocable decision making process which rules out human meddling, the doomsday machine is terrifying. It's simple to understand. And completely credible, and convincing.*

\*\*\*

**President Muffley:** *Yes, but the whole point of the doomsday machine is lost if you keep it a secret! Why didn't you tell the world?*

**Russian Ambassador:** *It was to be announced at the Party Congress on Monday. As you know, the Premier loves surprises.*

– Dr. Strangelove (1964) <sup>19</sup>

---

## Endnotes.

<sup>1</sup> Commentary: The universe tends to choose the last option when humanity asks questions.

<sup>2</sup> Citation: Wally on Buddha (Dilbert Comic): “A deep understanding of reality is exactly the same thing as laziness ... Have you ever seen a statue of Buddha jogging?”<sup>©</sup>

<sup>3</sup> Citation: “There are naïve questions, tedious questions, ill-phrased questions, questions put after inadequate self-criticism. But every question is a cry to understand the world. There is no such thing as a dumb question.” – Carl Sagan, The Demon-Haunted World: Science as a Candle in the Dark (1995).

<sup>4</sup> Commentary: I'll never forget the Master Sergeant's introductory comments: “Around here, I am called older than dirt. There are people who think I was with George Washington when he crossed the Delaware River. That's not true. I was however, Moses' Sgt. Major when he crossed the Red Sea!”<sup>©</sup>

<sup>5</sup> Commentary: As will be discussed later, one of the points of the Reformation (in relation to humanism) was to reestablish individual worth in the West, bypassing the Church in the human relationship with God or the universe.

- ✓ This process is what I believe Eric Hoffer was addressing in the ‘craving for pride’ process in the West as contrasted with Asia in the 20<sup>th</sup> Century. See Wikipedia discussion of Eric Hoffer quoted in Onomatopoeia, 3 Commerce, pp. 1218-1219, *supra*.

It was thus that love became romanticized and an expected part of marital relationships, the marriage vision focused on individual satisfaction rather than family relationships, alliances, primogeniture, procreation. With the increasing expectation of romantic love and marital satisfaction, the prevalence of marriages with large age differentials slowly receded (e.g., *Oldest Living Confederate Widow Tells All* (miniseries, 1994), or Sir Francis Bacon's unproductive marriage to Alice Barnham in 1606) because compatibility is related also to stages in life, and not just social station.

- ✓ Perhaps an interesting case of the transition of expectations is the marriage of Philip of Hesse to Christine of Saxony in 1523. She was the daughter of the Duke of Saxony and undoubtedly, it was a *political marriage* to link two houses. She was, according to Martin Luther (repeating a letter from Philip of Hesse), unattractive, unlikeable, and a chronic drunk (Wikipedia article, "Philip of Hesse" linking to [The Life of Luther](#) – a translation of his autobiographical writings – available on Google Books). Nonetheless, they produced ten children in twenty years from 1527 to 1547. Philip of Hesse was lecherous and an adulterer (within weeks of his marriage), who could not be accepted in communion, and beginning in 1526, consulted with Luther and Melanchthon regarding bigamous marriage as an alternative to divorce; he considered divorcing Christine as sin and looked to the case of Henry VIII of England.

Eventually in 1540 he secretly married 17-year old Margarethe von der Saale (he was 14 years her senior) with whom he had nine more children from 1541-1557, this seemed to have been a morganatic *romantic marriage*. Bucer and Melanchthon performed the wedding services, Melanchthon had agreed to it, Luther reluctantly gave his permission as well, but later claimed to have had nothing to do with it when Philip's sister Elisabeth (to whom Margarethe von der Saale was daughter of one of her ladies-in-waiting) revealed the bigamous wedding and Protestant Germany was scandalized (despite Philip having obtained pre-permission from Christine and jealous rivals, her father the Duke, and John, the Elector of Saxony). This was a very costly decision by the Protestant leadership and crippled Philip's political and diplomatic power at a critical time. Christine of Saxony died in 1549, so the bigamy was nine years and her last child, George I, Landgrave of Hesse-Darmstadt was two years old. Philip died in 1567, Margarethe in 1566.

Epilogue: When Protestant forces commanded by John I, Elector of Saxony suffered ignominious defeat at the Battle of Mühlberg in 1547, the Schmalkaldic League collapsed due to the defeat, undoing Philip's life's work. Bucer and other Protestant reformers fled to England. Philip's father in law, the Duke of Saxony, fought on the Imperial side during the Battle of Mühlberg and was rewarded Elector of Saxony title after John I was captured and imprisoned. The Duke was killed in battle in 1553, John I died in 1554.

<sup>6</sup> Commentary: Quantum Leap was passible sci-fi historical fantasy, it was formula-episodic 80s television, but it wasn't among the great science-fiction television shows. I didn't watch every episode, but I watched about half, and I specifically remember a few moments. I remember the time that Sam was inhabiting the body of a disabled vet, and he got up from the wheelchair and slugged an abusive young nursing home attendant. I also remember the time that Sam was with white supremacist during the Civil Rights movement and had to listen to their low-brow racist jokes all day – which would be like people from an enlightened utopian future listening to our self-centered, shallow, narcissistic prattle (sort of like the final scene in the Twilight Zone episode, "The Rip van Winkle Caper"). And near the end, when the producers were trying to resurrect the stale show – a problem with formula-episodic television, *Forever Knight* had the same issue – there was the episode with the youthful Stephen King and the devil. Because if you meet anyone during time travel, wouldn't it likely be the devil himself? Dr. Who did.

<sup>7</sup> Citation: From *The History of Time Travel* (mockumentary, 2014):

- ✓ [Faux Interviews] [General] The Pentagon would be developing a new secret weapons system and somehow the Soviets would have one first. We would be developing a new aircraft and before we could even approve a prototype, the Soviets would be flying the damned thing.
- ✓ [Writer] It became quite clear what the Soviets were doing. They would wait for us to develop something, a new tank, missile system, whatever, and Soviet spies would smuggle the design back to Moscow. Then the Soviets would use the [time] machine to go back in time and 'invent' it before we did.
- ✓ [Professor] Sputnik was based entirely on an American design. The day that the blueprints were finalized was the day the Soviets launched it into orbit.

<sup>8</sup> Citation: From Ray Bradbury's "A Sound of Thunder" (1952).

<sup>9</sup> Citation: "Arendt's term, the expression 'banality of evil,' does not refer to a theory or a doctrine, but fits 'a phenomenon which stared one in the face at the trial' (Arendt, 1992: 287), the experience of an abyss: a lack of common measure between the gigantic scale on which the crimes (the evil) were committed and the insignificance (the

banality) of the persons who were among those most responsible. Confronted with Eichmann in the flesh, Arendt felt it impossible to ascribe the phenomenon she observed to ‘any particularity of wickedness, pathology, or ideological conviction of the doer.’ (Arendt, 1971: 417). As a concept created through contact with a specific situation the ‘banality of evil’ neither referred to Shoah nor Nazism’s evil as a whole. The banality did not concern all of the agents carrying out orders, but specifically the evil that was committed by Eichmann. His case was all the more exemplary because he had not been simply a subordinate. Rather, his part was decisive in implementing the crimes. Arendt neither doubted Eichmann’s guilt, nor did she doubt that he deserved the death sentence.” – from Sciences Po (aka Paris Institute of Political Studies), “Violence de masse et Résistance” (<https://www.sciencespo.fr/mass-violence-war-massacre-resistance>), no authorship attributed, April 29, 2019 (available free online).

- ✓ “If Hannah Arendt (1906-75) leaves no other intellectual legacy, her notion of ‘the banality of evil’ seems certain to ensure her a place in the history of Western thought. The idea, emblazoned in the subtitle of her controversial 1963 book, Eichmann in Jerusalem, impressed many people as a fundamental insight into a new and distinctly modern kind of evil. Adolf Eichmann had been a leading official in Nazi Germany’s SS, one of the key figures in the implementation of the Final Solution, and he had managed to remain in hiding in Argentina until Israeli agents captured him in 1960. In her critical account of his 1961 trial for crimes against the Jewish people and humanity, Arendt argued that Eichmann, far from being a ‘monster,’ as the Israeli prosecutor insisted, was nothing more than a thoughtless bureaucrat, passionate only in his desire to please his superiors. Eichmann, the unthinking functionary capable of enormous evil, revealed the dark potential of modern bureaucratic man. ... While the controversy over Arendt’s idea has continued, the phrase *banality of evil* has slipped easily into the language, becoming a commonplace, almost a banality itself. Journalists and others freely apply it as an all-purpose explanation – for the racist treatment of African Americans, the terror of Saddam Hussein’s rule in Iraq, and even, in the case of one theater critic, the betrayal of Sir Thomas More in *A Man for All Seasons*. In the intellectual world, it remains an idea of consequence. Bernard Williams, Britain’s pre-eminent moral philosopher, cites Arendt in declaring that ‘the modern world . . . has made evil, like other things, a collective enterprise.’” – Stephen Miller, “A Note on the Banality of Evil,” *Wilson Quarterly*, Autumn 1998 (available free online).
- ✓ “Can one do evil without being evil? This was the puzzling question that the philosopher Hannah Arendt grappled with when she reported for *The New Yorker* in 1961 on the war crimes trial of Adolph Eichmann, the Nazi operative responsible for organising the transportation of millions of Jews and others to various concentration camps in support of the Nazi’s Final Solution. Arendt found Eichmann an ordinary, rather bland, bureaucrat, who in her words, was ‘neither perverted nor sadistic,’ but ‘terrifyingly normal.’ He acted without any motive other than to diligently advance his career in the Nazi bureaucracy. Eichmann was not an amoral monster, she concluded in her study of the case, Eichmann in Jerusalem: A Report on the Banality of Evil (1963). Instead, he performed evil deeds without evil intentions, a fact connected to his ‘thoughtlessness,’ a disengagement from the reality of his evil acts. Eichmann ‘never realised what he was doing’ due to an ‘inability . . . to think from the standpoint of somebody else.’ Lacking this particular cognitive ability, he ‘commit[ted] crimes under circumstances that made it well-nigh impossible for him to know or to feel that he [was] doing wrong.’ Arendt dubbed these collective characteristics of Eichmann ‘the banality of evil’: he was not inherently evil, but merely shallow and clueless, a ‘joiner,’ in the words of one contemporary interpreter of Arendt’s thesis: he was a man who drifted into the Nazi Party, in search of purpose and direction, not out of deep ideological belief.” – Thomas White (ed. by Sam Dresser), “What did Hannah Arendt really mean by the banality of evil?” *Aeon* (pub. in association with the American Philosophical Association), April 23, 2018 (available free online).
- ✓ “We shall begin with factual errors. Arendt never considered the Nazi evil or the Holocaust as an expression of ‘an undiagnosed but latent disease of regular, ordinary human beings,’ as [Eva] Illouz wrote [in “Rethinking the Banality of Evil,” *Haaretz*, August 5, 2016]. She definitely did not see Adolf Eichmann only as a cog in the monstrous Nazi machine, and she was at pains to emphasize unequivocally, in a 1964 radio interview with the German journalist and historian Joachim Fest that she never meant that within each of us is hidden a small Nazi (nor is that notion found in her writings). From her mistaken presumption, Illouz then immediately concludes that ‘if within each of us there is a dormant Nazi, then evil, according to Arendt, is necessarily banal.’ That is arrant nonsense, which even many of Arendt’s regular denigrators no longer dare repeat once they have been confronted with her writings. Nor did Arendt ever claim that Eichmann was not an anti-Semite or was not a Nazi idealist in every fiber of his being. It is precisely his absolute and thoughtless symbiosis with the Nazi world, its ideologies and racist norms – despicable and flagrantly immoral but nevertheless legitimate and lawful within the Nazi world, and enjoying the assent of its

‘moral majority’ – that is the embodiment of the banality of evil.” – Ada Ushpiz, “The Grossly Misunderstood ‘Banality of Evil’ Theory,” Haaretz, October 12, 2016 (available free online).

<sup>10</sup> Commentary: The story that Philip II of Macedon’s assassin tried to flee but tripped over a vine and was killed by the King’s bodyguards may be metaphorical: The assassin may have been slightly inebriated (the assassination occurred at a wedding) – bottle courage – and unable to run effectively, instead stumbling away in his escape attempt.

- ✓ It’s also a post-mortem attempt to retrieve honor: We didn’t stop the assassin but we caught and killed him instantly afterwards. The assassin was allegedly one of his bodyguards or the captain of the bodyguards.

<sup>11</sup> Commentary: A favorite discussion of military historians is a what-if scenario asking whether Alexander’s Macedonian phalanx would have fared well against late Republic of Rome legions of two centuries later. The conquest of Macedon by the Romans (148 B.C.) offers no clue, as the phalanx (and non-Roman leadership) was considered degraded by that time and the legion (and Roman leadership) was ascendant. The technology had not really changed.

<sup>12</sup> Commentary: The Solf Circle destruction was also the trigger event for the Gestapo to destroy Abwehr.

<sup>13</sup> Commentary: The original job of the Secret Service was catching currency counterfeiters.

<sup>14</sup> Commentary & Citation: On this issue, JMS commented in response to the question, *Wouldn’t the ship’s quartermaster notice a frozen telepath arriving?*:

- ✓ “In something like this, you don’t move unless you have the main quartermaster at the Mars base ON YOUR SIDE. You stuff it all into cargo loaders and crates, and ship it up. Have you ever seen military shipments? I looked into this, and security for big crates like this is done \*at the point of shipping\*.” – from The Lurker’s Guide to Babylon 5 for the “Endgame” episode (<http://www.midwin-ter.com/lurk/guide/086.html>), captured July 22, 2019 (emphasis in original).
  - Still this seems like a stretch to me, you need security at both ends. Especially when no one is to be trusted, when the organization has been infiltrated, when there is an active resistance, when paranoia reigns, as in the last days of President Clark. Further, the crates in which the Shadow ‘teeps’ were wheeled in looked very conspicuous, there is a scene of them being moved past security!

<sup>15</sup> Commentary: On May 7, 1861 Virginia Militia occupied Arlington House, the home of Robert E. Lee and Mary Lee (great granddaughter of Martha Washington), overlooking Washington, D.C. As such, they were a direct threat to the Capital and could have, if they had been organized, fortified the hill and brought up heavy artillery to bombard the Capital. They departed the position after Mary Lee evacuated on May 14<sup>th</sup> to her sister’s estate in Virginia. The hill was retaken unopposed by Federal troops on May 24<sup>th</sup> and later became Arlington National Cemetery.

<sup>16</sup> Citation: “Offa’s reign has sometimes been regarded as a key stage in the transition to a unified England, but this is no longer the general view among historians in the field. In the words of Simon Keynes, ‘Offa was driven by a lust for power, not a vision of English unity; and what he left was a reputation, not a legacy.’” – from Wikipedia article, “Offa of Mercia,” captured May 3, 2020.

- ✓ See legacy discussion, The Insistence of Memory, 3 Temporal Technologies, p. 830, *supra*.

<sup>17</sup> Commentary: I, like millions of others, witnessed the unwatchable-but-can’t-look-away travesty that was Tonya Harding’s performance at the 1994 Olympics. Surely, she should never have been allowed back onto the U.S. Olympic Team after pleading guilty to *conspiracy to hinder prosecution* (a low-grade felony, meaning she could have spent more than a year in jail) in relation to the attack on Nancy Kerrigan.

<sup>18</sup> Commentary: The perp in the Ponzi scheme was sentenced to a very long jail term; I had no issue with him serving significant jail time, but the sentence seemed disproportionate when I realized that he would spend more time in jail than many people convicted of killing a human. Indeed, about 15 years later, the drunk driving perp who killed an on-duty police officer and injured his K-9 companion (discussed in 2 Diplomacy, EN 6, pp. 1122-1123, *supra*) was sentenced (on a charge of Third Degree Murder) to less jail time than the perp in the Ponzi scheme. Consistency and proportionality have always bedeviled criminal sentencing.

<sup>19</sup> Commentary: In perhaps an echo of Dr. Strangelove (and completely unintended, I am sure), Putin announced the Russian ‘nuclear powered cruise missile’ known as Burevestnik and designated by NATO as SSC-X-9 Skyfall, in his annual ‘state of the union’ speech on March 1, 2018. The press has dubbed it Putin’s ‘doomsday weapon’ and Putin is known to be unrepentant about the Soviet Union and the Cold War. He is 66 years old in 2019.

*See Appendix AGE – Aging Out  
See Appendix SO & IO – Special Operation & Information Operation Example*

*“No one had given Muhammad Ali a chance against George Foreman in the World Heavyweight Championship fight of October 30, 1974. Foreman, none of whose opponents had lasted more than three rounds in the ring, was the strongest, hardest hitting boxer of his generation. Ali, although not as powerful as Foreman, had a slightly faster punch and was lighter on his feet. ...*

*But when the bell rang just after 4:00 a.m. in Kinshasa, something completely unexpected happened. In round two, instead of moving into the ring to meet Foreman, Ali appeared to cower against the ropes. Foreman, now confident of victory, pounded him again and again, while Ali whispered hoarse taunts... Foreman lost his temper, and his punches became a furious blur. To spectators, unaware that the elastic ring ropes were absorbing much of the force of Foreman’s blows, it looked as if Ali would surely fall. By the fifth round, however, Foreman was worn out. And in round eight, as stunned commentators and a delirious crowd looked on, Muhammad Ali knocked George Foreman to the canvas, and the fight was over.*

*The outcome of that now-famous ‘rumble in the jungle’ was completely unexpected. .... Yet in the end, a fight that should have been over in three rounds went eight, and Foreman’s prodigious punches proved useless against Ali’s rope-a-dope strategy.*

*This fight illustrates an important yet relatively unexplored feature of inter-state conflict: how a weak actor’s strategy can make a strong actor’s power irrelevant...”*

– Ivan Arreguin-Toft (U. of Oxford), “How the Weak Win Wars: A Theory of Asymmetric Conflict,” *International Security*, Vol. 26, No. 1 (Summer 2001), p. 93 <sup>1</sup>

**Offset Strategies:** Black-ops in both GGDM and in fiction often operate as an offset strategy, heroic character operations in science-fiction adventure, whether in books or on film, amount to offset strategies for the weaker side – because it is necessary for the characters to be part of, allied with the weaker side of the conflict in order to be heroic; i.e., the ‘heroes’ on the stronger side are necessarily evil bullies, traitors, and so forth, greedy servants of the evil enterprise.

- ✓ “An offset is some means of asymmetrically compensating for a disadvantage, particularly in a military competition. Rather than match an opponent in an unfavorable competition, changing the competition to more favorable footing enables the application of strengths to a problem that is otherwise either unwinnable or winnable only at unacceptable cost. An offset strategy consequently seeks to deliberately change an unattractive competition to one more advantageous for the implementer. In this way, an offset strategy is a type of competitive strategy that seeks to maintain advantage over potential adversaries over long periods of time while preserving peace where possible.” – from Wikipedia article, “Offset Strategy,” June 26, 2019.

Once you understand an offset strategy, a lot becomes clear. The alleged Russian interference in the 2016 Presidential Election – which would be a Black-op in GGDM as it was in the real world – is an offset strategy. Implicit in an offset strategy is the admission that the acting side is considered to be in a weaker position and feels threatened enough to act, to take the risk or the cost.

- ✓ “Despite the technological advantage of the U.S. military, insurgents in Iraq and Afghanistan have proven their resilience in the face of large-scale campaigns. Groups like these are constantly innovating on the tactical and strategic levels because they

are constantly at war, and defeat, for them, has existential consequences. Their military innovation curve is much faster by necessity. Insurgents tend to use new combinations of available commercial technologies to great military effect. Insurgents in Iraq combined cheap, commercially available cell phones and service with rudimentary explosives to create improvised explosive devices, and with the aid of Iranian designs, also produced explosively formed penetrators, which proved costly for U.S. forces. In the future, insurgents armed with commercially available drones or state-provided technology, could deny the U.S. military the staples of low-intensity conflict such as MQ-9 Reapers or Blackhawks in a strategically meaningful manner. Hezbollah has already demonstrated its ability to use anti-ship missiles against Israeli ships, and Hamas is trying to develop ‘suicide’ drones.” – Benjamin Locks, “Bad Guys Know What Works: Asymmetric Warfare and the Third Offset,” War on the Rocks (Texas National Security Review), June 23, 2015 (available free online).

In GGDM terms, the best use of Black-ops activations is as an offset strategy (especially in combination with insurgencies), though, when combined with conventional strength, they can make a side seem nearly unstoppable as well (e.g., Prussia under Otto von Bismarck), so they cut both ways equally. But it is more likely that the ‘weaker side’ will resort to Black-ops because it is very expensive (especially in Power Activations) to maintain both conventional superiority and operate asymmetrically at the same time. The response of the other ‘superior’ side to offset Black-ops must either be use of conventional power or to resort to Counter-operations on defense and their own Black-ops activations thus shifting the contest into a Special Operations arms race-kirmish and detracting from the disparity in conventional power.

- ✓ Otto von Bismarck was the master of the offset. Prussia had a legendary, potent military but was always vastly outnumbered and surrounded by potential foes. Bismarck prudently used diplomacy, spies, and intimidation (with a few orchestrated demonstrations such as the Second Schleswig War (1864)) and a web of protocols, secret agreements and treaties in what is referred to as the Balance of Power. His heirs, however, mystically convinced of Prussian conventional military superiority and their own manifest destiny, abandoned his subtle offset strategy in August 1914.
- Historical Offsets: The classic offset strategy is diplomacy, forming alliances with others against a stronger opponent (e.g., the Battle of Qarqar aka “The Battle of the Twelve Kings,” in 853 B.C.). Offset is at the core of surprise and ambush (see In Open Space, 7 Combat, p. 1036, *supra*); the Japanese attacked at Pearl Harbor to offset the conventional power of the U.S. Navy’s Pacific Fleet whose forward deployment to Hawaii very much concerned them.
  - ✓ The decline of the surface capital warship in the mid-20<sup>th</sup> Century was due to the offset ability of aircraft, submarines, and torpedoes; *the offset became the new norm*.

Trade and economics have also served as offset strategies, making others dependent upon the weaker position for something that is very important to them, which works as a precarious balancing act as long as no one can conquer the weaker position; this explains the existence of countries such as Kuwait and Qatar.

- ✓ “Nor are non-state actors the only ones who will be likely to use commercially available technology and asymmetric tactics to achieve their military ends. China has used swarming fishing boats to bolster its territorial claims in the East and South China

Seas and could use them for intelligence, surveillance and reconnaissance, or offensive operations in a time of war. Russia has shown its willingness to use unconventional tactics to occupy Crimea and eastern Ukraine. With new unmanned, communication, and remote sensing commercial and military technology, asymmetric warfare will cut across all military domains by actors small and large. If the third offset does not account for the diversity of enemies, asymmetric tactics and strategies, and their potential for military innovations, the military will run needless risks in the most common types of future conflicts.” – Benjamin Locks, “Bad Guys Know What Works: Asymmetric Warfare and the Third Offset,” *War on the Rocks* (Texas National Security Review), June 23, 2015 (available free online).

Technology in GGDM, in science-fiction literature, and in the real world of the 20<sup>th</sup> century during the Cold War served as an offset strategy, to wit:

- ✓ “In the 1950s, President Eisenhower emphasized nuclear deterrence to avoid the larger expenditures necessary to conventionally deter the Warsaw Pact. In a second period from about 1975 to 1989 the term ‘Offset Strategy’ returned, again referring to technological superiority to offset quantitative inferiority in conventional forces.” – from Wikipedia article, “Offset Strategy,” June 26, 2019.<sup>2</sup>

It remains a continuing part of the new ‘Third Offset Strategy,’ to wit:

- ✓ “The Defense Department’s Third Offset Strategy, which seeks to outmaneuver advantages made by top adversaries primarily through technology, is at heart based on the time-honored military concepts of being able to win a war if necessary but also having enough capability to deter one. ... A core component of the initiative is the formation of a Long-Range Research and Development Planning Program that will purportedly target several promising technology areas, including robotics and system autonomy, miniaturization, big data, and advanced manufacturing, while also seeking to improve the U.S. military’s collaboration with innovative private sector enterprises. The Center for Strategic and Budgetary Assessments released a report ... emphasizes the development of next-generation power projection platforms like unmanned autonomous strike aircraft, the acceleration of the LRS-B, additional investments in under-sea warfare systems like Unmanned Underwater Vehicles, and steps to reduce U.S. and partner vulnerability to the loss of space-based communications.” *Id.*<sup>3</sup>
  - ✓ “During my month-long preparation for my Senate confirmation hearings, I read many excellent intelligence briefings. I was struck by the degree to which our competitive military edge was eroding, including our technological advantage. We would have to focus on regaining the edge.” – Gen. Jim Mattis (USMC Ret.) op-ed, “Jim Mattis: Duty, Democracy and the Threat of Tribalism,” *Wall Street Journal*, August 28, 2019.
- Nizarism: Assassination of opposing leaders is an offset strategy made famous by the Nizari Ismailis in the late 11<sup>th</sup> century.
- ✓ “The Nizaris posed a strategic threat to Sunni Seljuq authority by capturing and inhabiting several mountain fortresses throughout Persia and later Syria, under the leadership of Hassan-i Sabbah. Asymmetric warfare, psychological warfare, and surgical strikes were often a tactic of the assassins, drawing their opponents into submission

rather than risk killing them.” – from Wikipedia article, “Order of Assassins,” captured October 25, 2019.

The Order of Assassins tried to stop the Mongol Invasion of 1258 by assassinating the Mongol leaders; all of the multiple assassination attempts failed, and as a result, the Mongols captured their castle at Alamut, and executed the Grand Master of the Order. Deprived of sovereign territory, the Order of Assassins (Nizaris) passed into distorted legend and folklore.

- ✓ Though it is often clouded by other issues and factors, such as vengeance, punishment or retaliation (e.g., the OAS assassination of Gen. Ginestet) or attacks to prevent the other side from gaining an advantage, assassination remains mainly the tool of the side which is perceived to be weaker in any conventional conflict. In the alternative, it is used when two sides are about equal and neither side can find a way to gain the upper hand. However, increasingly in modern contexts, it has been used as a police action, e.g., drone and helicopter strikes, in an asymmetrical conflict;<sup>4</sup> this is the issue that has arisen with modern capabilities that has made Westerners uncomfortable.
- Sign of Weakness?: There is a psychological barrier to using asymmetric tactics or even strategies: Doing so has classically been regarded as an admission that a side is weaker (or perceives themselves to be weaker) than their opponent in the conflict.
  - ✓ Failure of Nizari Ismailis’ assassination attempts confirmed that they were the weaker party; the Mongol invaders probably already thought so: Justified True Belief (JTB).

In the West, this in part, derives from chivalric notions of warfare inherited from the Middle Ages; chivalric warfare was almost devoid of battlefield tactics, flank charges and ambushes, even missile weapons (e.g., Cumans, Mongols, Byzantines), were considered cowardly. In 1278 at the Battle of Marchfield, the leader of 200 German knights hidden in the woods apologized in advance for what they were about to do: They were stationed in the woods to surprise charge the flank of the Bohemian knights once they were fully engaged in a frontal charge. The Bohemians, for their part, never imagining that the Habsburg Holy Roman Emperor would do such a thing, did not have anyone guarding the woods. They lost.

- ✓ Asymmetric warfare is relative – at the Battle of Marchfield, it was simply a tactic that had been discarded by chivalric warfare codes which regarded ‘proper combat’ as between two armed, trained men, face to face, on an open field. Within centuries, it was just a normal battlefield maneuver. Asymmetric tactics are often similar to an ambush hidden behind an idea (see *In Open Space, 7 Combat*, p. 1036, *supra*).

A very slow trend over the last five or six centuries has been the slow widening of tactics and very slow integration of asymmetric options into regular warfare (not just rebellions and insurgencies). Missile weapons slowly came to dominate warfare (as did technology generally), ambushes and raids returned, shock and attrition warfare gave way to maneuver warfare. Navies used fireships, commandos and special forces, snipers developed, the Italian Navy attacked with explosive motorboats, civilian populations and industry became targets, counterfeiting currency and assassination of enemy leaders, WWII ended with suicide attacks by regular national air forces. Also rising in the last two centuries was the notion of formalized psychological warfare operations and disinformation campaigns (and now cyber-warfare), which still make some people in the West uncomfortable (see *Pedagogy of Propaganda*, 1 Kairotic Moments, p. 1425, *infra*). The line between conventional and asymmetric

conflict and tactics blurred significantly in the late 20<sup>th</sup> century, leading to helicopter gunships being used against non-combatants, and the controversial use of armed drones.

- ✓ Asymmetric tactics, strategy, warfare, rests in opposition to what is considered ‘conventional’ conflict or combat in a time and place. Conventional warfare is what the regular forces are trained, equipped and willing to do operationally, and what is socio-politically tolerable. As the notions and tactics of ‘conventional conflict’ widen – leaders like to have ready options, forces trained and equipped to do different tasks in different environments – will there come a time when nothing is really asymmetrical?

*“I think they were doing very basic intelligence work: Who’s out there? Who’s willing to play ball? And how can we use them?”*

– Stephen L. Hall (CIA Ret.), as quoted in the Washington Post, August 15, 2017

**Playing Ball:** Who’s willing to play ball can be answered in GGDM by a combination of Insurgency levels (see Fabrication of Order, 6 Combat, p. 1022, *supra*), colony political status (e.g., Conquered, Converted, etc., see 2 Order, p. 538 *et seq.*, *supra*), Thesis Statements (see Disputation, 2 Reformation, p. 1391, *infra*), and inactive Constructural Elements (see Presence, 2 Constructural Elements, p. 189, *supra*), with possible emphasis in these cases on the Ideological Constructural Element (see 1 Constructural Elements, p. 179, *supra*).

**SOM-COMS:** The basic unit of Special Operations (both Black-ops and Counter-operations) is the Mission (but is not a game unit, see The Fine Print, 1 Construction, p. 660, *supra*).<sup>5</sup> The Mission is whatever is needed, that package of people, opportunities, placement, and resources needed to carry out the operation for which the Mission is eventually used. Missions must be first “recruited” and then “lodged” in a specific location or corporation. Missions are only designated as Special Operations Missions (SOMs) or Counter Operations Missions (COMs, see CIT, 3 Special Operations, p. 1320, *infra*). Other than that designation, it is irrelevant what Special Operation or Counter Operation the Mission is eventually used for; it is assumed that at the time of Recruitment and Lodging of the Mission the powers that be have an idea of what the Mission (or cell, CIT, or whatever you want to call it) will be used for, but those are details that do not need to be specified for game purposes until the Mission is actually used.

- ✓ Black-ops can be an adjunct to normal conflict, or war by another name, or the mainstay of asymmetrical conflict that includes News Events and Thesis Statements.
- **Special Operations Missions (SOMs):** Special Operations Missions (SOMs) are the ‘offense’ of Special Operations, they are the ones who go out and do the dirty deeds (but not dirt cheap). *It should not in most cases, be assumed that those who are carrying out the Special Operations are of the controlling Native Population Type of the position which recruited and lodged them; foreigners (especially **aliens**) stick out, Special Operations are usually carried out by locals, people you know.*<sup>6</sup>

Before a Mission can be used for Black-ops, it must be first Recruited and then Lodged (the Who, Who and How?). A SOM *may not be* both on the same Regular Turn, therefore, it is at least a two-turn process to put Missions in place. Missions should be expended with care.

- ✓ Studies have shown that most murder victims are killed by someone they know, someone close. Fear of being killed by total strangers is largely overblown.

- Sneakers on the Ground: “Hackers working for Dutch intelligence officials obtained the document and provided it to the F.B.I., and both its existence and the collection of it were highly classified secrets, the people said.” – Adam Goldman, “Justice Dept. Investigating Years-Old Leaks and Appears Focused on Comey,” The New York Times, January 16, 2020.

- ✓ In January 2020, it was reported that Jeff Bezos phone had been hacked by Saudis, see Stephanie Kirchgaessner, “Amazon boss’s phone ‘hacked by Saudi crown prince’” The Guardian, January 22, 2020.

Missions, Recruiting and Lodging do not always have to be thought of as sneakers on the ground, there are many other less literal possibilities, for example, designing a computer virus could be recruiting a mission, and Lodging it would involve some person or means to introduce it to the target. You know, like the movie Independence Day (1996).☺ A sophisticated or AI virus can be devastating as a ‘mission’ in Black-ops – the United States used one to damage or destroy 1,500 of Iran’s centrifuges (Stuxnet, 2010) being used to purify uranium – and increasingly, cyber-attack is the real Special Operation of the 21<sup>st</sup> Century, e.g., the Chinese have been accused of attacking or trying to infiltrate the computers that control the U.S. power grid, and the U.S. has done the same to Russia.

- ✓ Consider this 1993 – yes, 1993 – article: “Lucan’s scientists had deliberately programmed the virus to instinctively navigate through the intricacies of the standard Imperial Data Packages; the virus knew these computers better than their own operators, and were able to defeat them at every turn. Crews who were trained to run their ships through computer interfaces were no match for an enemy that turned those computer interfaces against them. There was no contest.” – Dave Nilsen, “When Empires Fall II,” Challenge Magazine, Issue 69, February 1993.

- Combat Recruiting: As implied in the foregoing, Missions are only *recruited* during Regular Turns and not during Combat Rounds. Whether or not Missions can be recruited (during the Regular Turn) in units in an ongoing combat is an interesting question for careful consideration, depending on what type of unit (ship, Ground Unit, Defense Base) and what type of combat and who is involved. For example, during WWI on the Eastern Front, entire Czech units of the Austro-Hungarian army left their trenches and walked across no-man’s land to join the Russians; this would be much more difficult in ship combat. But, GGDM is science-fiction. The Czech Legion played a legendary role in the following Russian Civil War.

- ✓ The Germans in WWI also transported Lenin and Trotsky across the frontier in April 1917 in sealed railway carriages to reinsert them into Russia (a sort of Lodging...).

- Jobs for Jackals: When the Special Operations Power is activated for the purpose of Recruit Missions, the position may attempt to recruit as many Missions as desired. For each activation for Recruiting Missions, an amount of RPs *must be* committed (call it a ‘recruiting bonus’: bribery, payoffs, smuggling, fake identification, operations to change appearance or genetic structure, supply drops, infiltration, support for dissident elements, etc.) per Recruiting attempt and the number of Missions desired to be recruited must be specified.

- ✓ The base chance of recruiting a Mission is 35% plus 2% per RP committed.

Only one roll will be made per Mission attempted to be Recruited, and there is only a 50% chance that Enlightenment can be used in case of failure, if committed to the Recruiting actions. Positions cannot use Enlightenment to reroll a failure to be able to use Enlightenment

(like wishing for more wishes)! Unused Enlightenment, unlike Combat, is not lost in relation to *any* Special Operation Power activation.

Again, note that because Special Operations Power activations cost either one Act *or* one Scene and never more, their actions will process early in the Regular Turn order (see Clockwork Universe, 3 The Streams of Time, p. 90, *supra*), in particular, before Taxation, etc.

- ✓ Missions just represent potentials, so Missions are very ‘vanilla’ and are not tied to a specific place or event, are not affected by other considerations, such as corporations, colony status, diplomatic relations, and such. Missions are not Recruited ‘against’ any particular opposing position, rather, that is the function of Lodging (p. 1293, *ut infra*). Missions just hang out by the hyperspace pool until either Lodged or not.

Only Special Operations Power activations (for any purpose) using or requiring a Scene (see Making a Scene, 1 Special Operations, p. 1274, *supra*) are subject to Power activation failure checks at the location where they occur. Thus, Special Operations will fail less often overall than most other Power Activations, and *Recruit Mission will never fail*, and *Lodge Mission and Special Operations activations can only fail if the target is a friendly unit*. Special Operations offense in this regard has a slight advantage over Counter-Operations, the defense. When the Lodging attempt involves both friendly and non-friendly target units, only the friendly units are checked (Back ye foul beast! No unhandled exceptions in GGDM!).

- ✓ The Day of the Jackal is a *fictional* 1973 film about an attempt to assassinate Charles de Gaulle in 1963, which is based on an *actual* assassination attempt on August 22, 1963 (so how fictional is it?). The title might also refer to Carlos the Jackal, the Venezuelan leftist terrorist whom Hugo Chavez publically declared a friend and compatriot, who killed two French police officers, was arrested in Khartoum in 1994 and handed over to the French; he is now serving a life prison sentence.

---

*“The bizarre saga of Anna Chapman, the smoking hot Russian spy arrested in New York in 2010, just got a lot weirder. In a new interview with the BBC, the FBI’s counterintelligence chief Frank Figliuzzi revealed that the real reason the feds arrested Chapman was because top officials believed she was getting ‘closer and closer’ to seducing a sitting U.S. Cabinet member. Figliuzzi told the BBC that Chapman got ‘closer and closer to higher and higher ranking leadership ... she got close enough to disturb us.’ ‘We were becoming very concerned,’ he said, according to The Independent. ‘They were getting close enough to a sitting US cabinet member that we thought we could no longer allow this to continue.’”*

– Grace Wyler, “FBI: Russian Honey Trap Anna Chapman Was ‘Close’ To Seducing An Obama Cabinet Official,” Business Insider, April 3, 2012

---

**Assets:** If this is true, Anna Chapman was much more successful than Jack Barsky (*ahem*, I know what you are thinking: She had more *assets*).

And as such, she was more exposed; Jack Barsky’s lack of success meant that he was never noticed and was not arrested until 1997, nine years after he quit spying, having been outed after the end of the Cold War by a defector, KGB archivist Vasili Mitrokhin, who provided the United

Kingdom with 25,000 pages (compiled over 30 years) of *hand-copied* and annotated KGB materials which he hid in the floor of his dacha.

**Bees, Bears & Sci-Fi:** Think about the classic ‘honey trap’ espionage. Obviously this is not going to work between alien species – but then again, GGDM is a space-opera setting. Likely, it would require recruiting members of the target native population type and the assumption that sexuality exists in the target species.

- ✓ Imagine the drama potential ... a woman recruited for a honey-trap operation to infiltrate the top echelons of a pesticide manufacturer by insectoid extraterrestrials... ☺

Honey-trap operations go hand in hand with sleeper agents; Anna Chapman is an example of the classic ‘honey trap’ sleeper (or maybe ‘sleep with her’☺) agent.

GGDM makes no explicit assumption of either sexual or asexual reproduction in species unless specified by Fundamental Realities or developed as an in-game detail. See What Is, Is, 5 Taxation & Census, p. 338, *supra*.

- ✓ I personally did not find Anna Chapman “smoking hot” (*ut supra*). She, of course, can be ‘glammed-up’ (horrible phrase) like anyone else – such that it is hard to believe the girl in the media pics is the same one in the police mugshot (compare her pictures) – but there is more to appeal than looks. Bluestocking George Eliot knew that. And honey-trap agents, like Virginia Oldoini, must know that.

---

*[Interview] “He [Claus von Stauffenberg] said in response to one attempt to motivate him to overthrow Hitler in November 1939, ‘I’m not ready yet.’ What does that mean? He was a captain at the time, a captain in the general staff. How many opportunities to oppose a dictator and a commander in chief are open to a captain?”*

– Professor Peter Hoffmann, biographer of Claus von Stauffenberg, Operation Valkyrie: The Plot to Kill Hitler (documentary, 2008)

---

**French Vanilla:** Activating the Special Operations Power for the purpose of Lodging Missions allows the position to attempt to Lodge as many Missions as desired in any number of locations.

Whenever a Mission is successfully recruited, it should be Lodged on the following Regular Turn. Missions which fail to Lodge *are lost*; additionally if the position fails to issue Actions to Lodge the Recruited Missions (and that’s a strategic risk choice of the position players), they *may be lost* at the end of subsequent Regular Turns due to ‘aging out’ (p. 1296, *ut infra*). Lodging is the process of putting a Mission in a specific place; that is, translating the potential to the real (i.e. collapsed wave function).

- ✓ Recruiting Missions is a commitment to Lodging them on the subsequent turn.

Players should note that a Special Operations Power activation for the purpose of Recruiting Missions should be followed on the next Regular Turn by a Special Operations Power Activation to Lodge the Missions and plan accordingly or the opportunity is wasted. Both of these notes suggest that GGDM Black-ops should be selectively targeted with a well-considered plan.

It thus takes two Regular Turns to develop a Special Operations Mission – one to Recruit and one the Lodge, Missions cannot be Lodged until the position that Recruited them knows the potential exists to Lodge them. On the third Regular Turn, the position may attempt a Black-op (p. 1297, *ut infra*) against a target at the location where the recruited missions were Lodged.

- ✓ Missions may only be Lodged in a game unit (see View from a Height, 1 Construction, p. 660, *supra*), that is they are either Lodged on ships, colonies or in Ground Units.<sup>7</sup> The target game unit for the Lodging may either be a friendly or non-friendly unit. Lodging on *friendly units* should be considered nearly automatic, unless the Concierge chooses to use an Intervention Potential (representing incompetence, etc.).
- ✓ Missions may not be Lodged on empty planets – in anticipation of aliens arriving later – but then again, GGDM is science-fiction! Isaac Asimov’s robot detective R. Daneel Olivaw lived for about 20,000 years, manipulating the galaxy for humanity, and is discovered lodging on Earth’s moon in Foundation and Earth (1986). But that is something that goes beyond the basic mechanics of GGDM; within GGDM, the only way a Mission could be on an empty planet is if it were Lodged in a Ground Unit that was placed there (see Beans, Bullets & Bandages, 4 Combat, p. 988, *supra*).
- ✓ The Actions to Lodge Missions do not need to specify which Mission is being Lodged (they are vanilla) but do need to specify where each Mission is being Lodged.
- ✓ The chance of Lodging each Mission in a unit or location owned by another position (i.e. non-friendly unit) is 3% for each Monad in the Diplomatic Space between the positions, plus a percentage equal to the Insurgency Level of the target colony (see Fabrication of Order, 6 Combat, p. 1022, *supra*), and 6% may be added also if the target colony has the same Native Population type as the position attempting to Lodge the Mission. A maximum of 1 RP may be added to each Lodging attempt increasing the chances by 15% (money talks, BS walks); participants may decide to adjust this bonus up or down in their game or based on Concierge judgment. Enlightenment – in this case, recognizing opportunity and manipulating others – may be applied to each Lodging attempt using the same rules for Recruiting Missions (p. 1291, *ut supra*).
  - There is no way within the GGDM game mechanics – similar to opposing combat rolls – for a defender to apply their own Enlightenment against enemy attempts to Recruit or Lodge Missions or conduct Black-ops as the defender or target has no Power Activation. However, clever players may find ways to activate Writs whose effect relates to defending against enemy attempts. And of course, technology is the asymmetric response to the asymmetric offset. And ever onward...
  - MegaCorporations create Diplomatic Spaces and thus contribute that way. A colony Hosting a MegaCorporation of which both positions are members adds 10% to the chance of Lodging.
- ✓ When a Special Operations Mission is successfully Lodged, it is in place, ready to use in an activation of the Special Operations Power for the purpose of Black-ops, and will be recorded as such on the position’s game information.
  - One of the most interesting chapters in Cold War espionage was the Trinity College Five, who were recruited as Soviet spies and infiltrated the British counterintelligence agency; a senior member – Kim Philby, who had previously been cleared of suspicion – of British counterintelligence

was a Soviet spy! It was revealed a couple of years ago that he even made training videos for the KGB that were shown in East Germany. The consensus seems to have developed that while the West ‘won’ the Cold War, the Soviets won the espionage war. Food for thought in GGDM.

- “While *The Sword and the Shield* contains new information ... none of it has much significance for broader interpretations of the Cold War. The main message the reader comes away with after plowing through almost a thousand pages is the same one gleaned from the earlier books: the Soviets were incredibly successful, albeit evil, spymasters, and none of the Western services could come close to matching their expertise. Bravo the KGB.” – Amy Knight, “The Selling of the KGB,” *Wilson Quarterly*, Winter, 2000, available free on [webarchive.org](http://webarchive.org) (aka The Wayback Machine).

- Diplomatic Impunity: In the real world, intelligence agents are often ‘lodged’ under cover in diplomatic embassies and consulates due to the protection afforded by their status as diplomatic staff. Rarely is anyone actually fooled, and it becomes a cat and mouse game between counterintelligence and the undercover operatives from the embassy or consulate. Frequently, they are expelled *en masse* in tit-for-tat diplomatic spats. GGDM does not inherently contain embassies and consulates on Capital Colonies (though players could certainly create such through, e.g., Institutes), the Diplomatic Space serves as a representation of such generally. This is also the place where MegaCorporations may play out.

The minimum Diplomatic Space between two positions that have had First Contact are the two First Spaces, they do not need to be connected for Lodging. This provides an automatic base 6% chance. When two positions are very entangled (i.e. have a large Diplomatic Space), Lodging may be nearly automatic, but I recommend capping the chances at 90%.

The decision of whether or not to add 1 RP is a cost-benefit analysis in the larger picture of the Power Activations used, cost in Acts, critical necessity, or how much is in the Treasury against other demands.

- Walking to the Moon: Recruited SOMs exist as a pool of potentials with no location until Lodged (*ut supra*, p. 1291), but they aren’t just going to walk there. A means, a plot device or mover, is necessary (for which the Lodging activation and/or Scene serves a purpose) to have them appear there; there must be some connect between the position, potential, and actuality of a Lodged mission. First Contact is important in this regard, as is proximity of colonies, ships, business transactions, etc. Participants should give some thought to the means and opportunity to Lodge SOMs and the Concierge should adjust the percentages as necessary to reflect the circumstances and conditions, and stage of the game. No pre-rulings will be issued, but players may pitch a means or meaning of the Lodged SOMs to the Concierge.
- Furnishing Alcohol to Minors: It is also minimally possible to Lodge Missions, by expending 1 RP, against a position with which the attacker has not yet had First Contact. The Concierge may forbid this, but the idea does accord generally with surreptitious alien invasion scenarios in science-fiction stories (e.g., *Invaders from Mars* (1953), *First Wave* (1998-2001), where the humans are a Minor Race in GGDM terms and the invaders took human form) – they know we are here, but we don’t know they are here. Does it fit the game story?

- ✓ Secret, pre-First Contact alien invasion scenarios in fiction where humans have advanced stardrive capabilities is usually in the form of intelligent viruses, parasites or paranormal creatures. Participants will need to decide if this is something they want in their GGDM game story.
- Shipping & Freight: Missions may not be Lodged on ships that are *en-route* between stars. Missions attempted to be Lodged on moving starships are not lost, rather, the Lodging Actions simply are not executed (but the Power Activation is still used). This is game mechanical concession to the fact that, due to Turn Cycling, ships may move away (or be destroyed) before such is known by the players whose position is attempting to Lodge on the ship.
  - ✓ A Lodged Mission may be moved by re-Lodging it in another location by activation of the Special Operations Power for the purpose of Lodging Missions, as long as it is physically possible (the Concierge may block attempts that are not physically possible), an unlimited number of times until it is lost either by failure or by aging out (i.e. ‘migration of missions’). Missions Lodged on colonized planets may be moved to ships by “re-Lodging” them on a ship while it is in the system, and vice versa, for movements from ships to planets. This means there is a chance of failing to Lodge the Mission and losing it each time the Mission is Lodged in a new place, not to mention the use of numerous Special Power activations, but it does provide a means of deep infiltration through starships when there is no other way (with considerable risk of loss or aging). Each re-Lodging attempt is treated individually between the Lodger and the target unit and position, as described above.
  - ✓ Missions Lodged on Colony Ships that Land are automatically transferred (Lodged) to the new colony, Missions in Ground Units move with the Ground Unit if loaded, unloaded or landed from Transports. These are not considered ‘re-Lodging’ of the Mission and there is no risk of loss other than by aging out.
  - ✓ Special Operations Missions may not – for game sanity – be Lodged inside other Special Operations or Counter Operations Missions (despite the Cambridge Five and Kim Philby) – that would be just too weird in game terms. As noted previously, Special Operations Missions and Counter-operations Missions are not considered ‘game units’ per The Fine Print, 1 Construction, p. 660, *supra*.
  - ✓ Finally, starships that are *en-route* between stars cannot be targeted for Lodging of Special Operations Missions or Counter-operations Missions, and Missions may not move from ship to ship while *en-route*.
- Unclaimed Freight: Black-ops are the main weapon of and against terrorism. In the vein of the preceding discussion, many of the Islamic extremist attackers in Europe in the last decade have posed as refugees or lived in refugee camps. This then has been used as argument by extreme right and ultra nationalist groups against accepting refugees; such arguments may be playing into militant radical Islam’s hands, creating the conflict they (and both sides, in a radical feedback loop) want to foster. Such are the many interactive factors at work.

In GGDM terms, this means that Missions may be moved involuntarily by the action of Loading and Unloading Colony Ships, trade ships, and Troop Transports, without the knowledge of the position that Lodged them. There is much room for play and surprises in this by the Concierge and opportunity for diligent, clever operatives.

- ✓ [Narrator] “At that moment, Woss tried to open the door to tell Stauffenberg of a phone call. Von Haefen had just finished activating the first bomb but the second fuse hadn’t been crushed. [Woss went away, not admitted to the room] ... [Gen. Wilhelm] Keitel [waiting outside] was impatient and told Stauffenberg to hurry. [Woss was sent back in to get Stauffenberg to hurry up allegedly changing his shirt in the bedroom] They’d run out of time. One bomb would have to do.” – Operation Valyrie: The Plot to Kill Hitler (documentary, 2008).
- Ralph Wolf & Sam Sheepdog: At the end of each Regular Turn (or Turn Cycle if Regular Turn Actions are not submitted or processed) *after* a Mission (of either type) is either *first Recruited or initially Lodged* (i.e., not on the initial turn it is Recruited or Lodged), at the end of the Regular Turn there is a 30% chance that each Mission (whether Lodged or not) will be lost as circumstances change, opportunities pass, loyalties change, places change, security upgrades, and agents quit, defect, die or are compromised. This *aging process* is independent of any losses caused by successful Counter-Operations (see Spy vs. Spy, 3 Special Operations, p. 1323, *infra*), failure to Lodge, or use of Missions in Black-ops at the location where the Mission is Lodged.
  - ✓ “With my sunglasses on, I’m Jack Nicholson. Without them, I’m fat and 60.” (unsourced quote though it doesn’t seem out of character for Jack Nicholson).
  - ✓ “I’ve often thought that the process of aging could be slowed down if it had to go through Congress.” – President George W. Bush.
- Punching Time Cards: This is a matter of game-mechanical timing. A Mission that is Recruited cannot be Lodged on the same Regular Turn; the position must wait until the next Regular Turn to attempt to Lodge the Mission. Thus, Recruited Missions should not ‘age-out’ before an attempt can be made to Lodge them. And a Lodged Mission should not ‘age-out’ before the position has at least one opportunity to use it (however, see Treason, 3 Special Operations, p. 1310, *infra*).
  - ✓ Missions that fail to Lodge are lost (p. 1293, *ut supra*), so Recruited Missions will generally disappear rather quickly by one cause or the other.
  - ✓ Positions that have successfully Lodged Missions (of either type) should be cognizant that the clock is running (just like the biological clock of your life).
  - ✓ *If* participants believe or interpret in the game that time does not pass for passengers and crew of starships during FTL movement (which may take several Regular Turns) and the concept of ‘aging’ is taken very literally, the Concierge could suspend ‘aging’ of SOMs and COMs during interstellar flight. This would greatly extend the range of Black-ops and Counter-operation Target Protection of ships.

Consider that KGB sleeper agent, Jack Barsky, was contacted and trained by the KGB in East Berlin then in Moscow for approximately nine years before being inserted (i.e. Lodged) into the United States. He was able to operate in the United States for ten years, but found that what the KGB taught him about Western interpersonal manners and beliefs wasn’t quite accurate, and he had to adapt. Overall, he does not appear to have been very effective and *never got close to his main goal* of President Jimmy Carter’s foreign policy advisor (his mission was apparently similar to Anna Chapman’s, see Grace Wylder feature quote, p. 1292, *ut supra*). He has stated that when he arrived in the U.S. he had no real idea of how to reach his

intended target, he was inserted with a goal or target but without a plan or any help, but performed other missions instead, such as stealing computer code from an insurance company (hmmm... this would never happen in GGDM, right?).

- ✓ “Each year you get older is a smaller and smaller percentage of your age.” – Joe Block (Pittsburgh Pirates Broadcaster), September 12, 2019.

**Col. Rodin:** *We are not terrorists, you understand. We are patriots. Our duty is to the soldiers who've died fighting in Algeria, and to the three million French citizens who have always lived there.*

**The Jackal:** *And so you want to get rid of him.*

**Col. Rodin:** *[after a pause] Speaking as a professional, do you think it's possible?*

**The Jackal:** *It's possible. The point is getting away with it. And speaking as a professional, that's a very important consideration.*

\*\*\*

**The Jackal:** *Half a million. In cash. Half in advance, and half on completion.*

**Montclair:** *Half a million francs?*

**The Jackal:** *Dollars.*

**Montclair:** *Are you mad?*

**The Jackal:** *Considering you expect to get France in return, I'd have thought it a reasonable price.*

– From *The Day of the Jackal* (1973)

**Life on Edge:** The execution of Black-ops and Counter-operations works on details and variables. The players provide the details, attention to the smallest details is very important when living on the edge. The Concierge provides the variables. The Special Operations Power is possibly the part of the game where the Concierge has the most difficult tasks and the greatest influence on the game.

- ✓ The Special Operations rules, like the other rules of GGDM, are designed to provide a framework for the story part of the game, and a set of procedures to resolve Black-ops and Counter-operations in a way that keeps the game flowing smoothly along.
- **Black Ops:** Google Dictionary at *black operations*: covert military or political operations that may employ measures not generally authorized – “the plan involved wiretapping, burglary, mail-opening, and other black operations.”
  - ✓ Merriam-Webster online dictionary at *black*: **14:** of or relating to covert intelligence operations
  - ✓ Dictionary.com at *black-ops*: a secret mission or campaign carried out by a military, governmental, or other organization, typically one in which the organization conceals or denies its involvement: [examples] Some national intelligence agencies use black ops to undermine enemy governments. The company even resorted to an industrial black op to steal secrets from its competitor.
  - ✓ Cambridge Dictionary online at *black ops*: secret military activities, especially illegal ones, that are ordered by a government or organization but that they will not admit to having ordered: a black ops agent/team.

- ✓ “A black operation (or black op) is a covert or clandestine operation by a government agency, a military unit or a paramilitary organization; it can include activities by private companies or groups. Key features of a black operation are that it is secret and it is not attributable to the organization carrying it out. A single such activity may be called a black bag operation; that term is primarily used for covert or clandestine surreptitious entries into structures to obtain information for human intelligence operations. ... The main difference between a black operation and one that is merely secret is that a black operation involves a significant degree of deception, to conceal who is behind it or to make it appear that some other entity is responsible (‘false flag’ operations).” – from Wikipedia article, “Black Operations,” captured June 29, 2019.

The degree of deception is what separates Special Operations Power Activations for the purpose of Black-ops from Special Operations activations for the purpose of Reconnaissance (see One-Way Mirror, 2 Information, p. 1340, *infra*).

---

*“Based on the anti-tank missile tube found in Ramadi and other examples of weapons purchased by U.S. suppliers from European manufacturers, CAR (Conflict Armament Research) says there is evidence that many weapons obtained by various Syrian rebel groups supported by the U.S. were diverted to ISIS.... Pieter Wezeman, a senior researcher at the Stockholm International Peace Research Institute, said CAR’s work ‘shows the enormous risks’ that come with handing weapons ‘to unprepared, not very well-trained armed groups, or even so-called organized militaries..’. James Bevan, CAR’s director, found a Mauser rifle manufactured in Nazi Germany in 1941 in an ISIS cache in Baghdad alongside 150 other weapons and improvised explosive devices. [Damien] Spleeters said the fact that ISIS used older weapons ‘shows the extent of how long such a weapon can live and go through different owners and keep shooting and keep killing.’”*

– Gabe Joselow, “ISIS weapons arsenal included some purchased by U.S. government,” NBC News, December 14, 2017

---

**On the Border:** This is not a new game. In the 1949 *fictional* movie *Outpost in Morocco*, the local Emir who dreamed of revolting against the French obtained modern long-range rifles presumably from a weapons smuggler since they were delivered in a night caravan. He also had heavier ordinance *en route* but was killed along with his daughter and his revolt crushed before it arrived. There is no suggestion directly in the movie that foreign governments were involved in stoking the revolt, but the weapons were obviously foreign made... Just because the movie is fictional doesn’t mean it is entirely absent of truth (e.g., a *hospital janitor* Chan Han Choi, arrested by Australian police in 2017 for brokering smuggled coal and arms deals for North Korea).

- ✓ It is well known now that governments routinely provide weapons to other countries and groups whom they support; M-16s made in South Korea were found in Cambodia, Chinese-made Silkworm missiles were launched at U.S. ships by Iran during various naval clashes in the 1980s. And of course, the U.S. and Russia have sold billions worth of weapons to prop up regional allies in proxy conflicts; e.g., Congress recently ineffectually (as in weak, impotent, incompetent) passed a bill disallowing the proposed sale of weapons to Saudi Arabia which was vetoed by the President.

- ✓ On July 16, 2013, a North Korean ship was seized in the Panama Canal by Panamanian authorities on suspicion of carrying illegal drugs, but was found to be carrying undeclared military weapons from Cuba hidden under bags of sugar; the crew of 35 resisted and were interned, the ship captain suffered a heart attack and attempted to commit suicide shortly afterward.
  - “Hugh Griffiths, an arms trafficking expert at the Stockholm International Peace Research Institute, said the seized ship is called Chong Chon Gang and has been on the institute’s suspect list for some time, having previously been caught trafficking drugs and small arms ammunition. He said that earlier this year the institute reported to the UN a discovery it made of a flight from Cuba to North Korea that travelled via central Africa.” – Haroon Siddique, “Panama seizes North Korean ship carrying weapons,” *The Guardian*, July 16, 2013.

Arms smugglers exist and operate with semi-impunity (even though they also supply weapons to drug cartels, terrorists) *because governments need them* for backchannel supply.

- ✓ Notably, the Babylon 5 television series featured quite a bit of unofficial ‘official’ smuggling; in one episode Commander Susan Ivanova recruits smugglers for back-door supply of the station by saying she will turn a blind eye to their other activities if they don’t step out of bounds.
  - “The fishing boats go out across the evening water, Smuggling guns and arms across the Spanish border. The wind whips up the waves so loud, The ghost moon sails among the clouds, And turns the rifles into silver, On the border.” – Al Stewart, “On the Border” (1976).

**True Little Lies:** Black-ops activities include media manipulation, stealing plans and artifacts, blowing things up, smuggling arms to insurgencies, treasonous acts of the moment, extractions (e.g., Adolf Eichmann), economic warfare, political stagecraft, false flag operations, etc. Black-ops in GGDM can be used for anything that is not covered within the Reconnaissance, Information Operations (see 2 Information, p. 1349, *infra*) or Counter-Operations (see Spy vs. Spy, 3 Special Operations, p. 1323, *infra*) activations of the Special Operations Power.

- ✓ Boldness of Black-ops (or similar small military actions, and probably in life as well) is often related to ideological drive, e.g., the capture of Adolf Eichmann in Argentina in 1960 or the Entebbe Raid in 1976. Such boldness of action occurs when ideological considerations outweigh practical and political risk considerations should the operation go badly; Israel was not going to allow a Nazi fugitive like Eichmann to escape in 1960 nor were they going to allow terrorist hostage-takers to cow Israel (especially after the Munich Olympics Massacre in 1972). *Alternatively*, the potentially disastrous political consequences of not making an attempt when the opportunity and knowledge were within the grasp of the leadership was at least equal to or greater than the consequences of failure of the actions taken by Israel in 1960 and 1976. If players are playing their positions immersively, this links – in GGDM terms – strong active Ideological Constructural Elements to Black-ops.
  - “When a man asks himself what is meant by action he proves that he isn’t a man of action. Action is a lack of balance. In order to act you must be

somewhat insane. A reasonably sensible man is satisfied with thinking.” – James A. Baldwin.

Black Ops may only occur in places where Special Operations Missions (not Counter-operations Missions) have been successfully Lodged previously (and have not ‘aged out’ – ghosts don’t do you any good, you need the collapsed wave function), the Black-op Special Operation Power activation cannot be used in any place where no Missions are Lodged.

- ✓ Thus the Black-op activation of the Special Operations Power should not be used to simply harass other positions and attach Intervention Potentials (see Vortex Manipulator, 1 Special Operations, p. 1271, *supra*) and expect the Concierge to do the dirty work for you, without going to the expense of Recruiting and Lodging Missions (e.g., Steely Dan, “Dirty Work” (1972)). You have to ‘pay to play’ in that game.

A Lodged Mission is considered to have the ability to affect its entire game unit location, thus a SOM Lodged on a colony may act against anything at the colony, including enhancements such as industry, Orbital Cities, Defense Bases, and against anything Hosted on the colony, such as Institutes, but may not act against ships at that location or Ground Units. A Mission Lodged on a ship or in a Ground Unit may only affect those units and anything attached to or on them. As Missions must be Lodged in a game unit, they can only indirectly affect Government Titles and Corporations (the Host Colony) by their actions against the game unit in which they are Lodged.

- Profile in Perfidy: The Special Operations Power may be activated multiple times per Regular Turn in the same or as many locations as necessary; however, Lodged Missions at one location cannot participate in more than one Black-op or Information Operation (see 2 Information, p. 1349, *infra*) per Regular Turn. When the Special Operations Power is activated for the purpose of Black-ops, the position executing the Black-op must send a Profile to the Concierge with the Actions. The Profile must contain at the minimum a concise detailed description of the proposed Black-op, with a concrete result if the operation is successful, and the list of Lodged Missions to be expended during the operation. *Lodged Missions are expended – lost, eliminated, removed from the game – regardless of the success of the operation.* The Profile may also, but is not required to add up to 5 RPs to enhance the success of the Black-op, and may also indicate other outside support for the operations, such as ships that are in place or arriving, and so forth. Possible Profiles are limited only by the imagination and circumstances – but should be short, concise, not a treatise.
- Mission Critical: When conceptualizing Special Operations ‘campaigns’ against a target or target position, positions and the Concierge should be cognizant of the ‘mission critical’ (especially in conjunction with Combat Orders) elements of the plan whose failure can cause chain failures of other parts of the operation or render other successes ineffective.
  - ✓ “A mission critical factor of a system is any factor (component, equipment, personnel, process, procedure, software, etc.) that is essential to business operation or to an organization. Failure or disruption of mission critical factors will result in serious impact on business operations or upon an organization, and even can cause social turmoil and catastrophes.” – from Wikipedia article, “Mission Critical,” June 10, 2019.

For example, it is mission critical to the internet to be ‘always on,’ which is why it cannot be shut down in response to DDoS attacks. Killing Hitler (of which several attempts were made) was mission critical to the Black Orchestra group, as discussed in Mission Impossible,

1 Special Operations, p. 1279, *supra*, failure to do so doomed Operation Valkyrie. Mission critical to the GGDM conspiracy of undermining ignorance and stupidity is preservation, dissemination, and hopefully being read widely (and a computer assistant to ease game management) in the same way that Plutarch’s comparative biographies were loved, read, and copied thousands of times by hand by Roman scribes and (mostly) preserved for posterity.<sup>8</sup>

- ✓ The cost of a successful or unsuccessful Black-op could equal the cost of a warship, or small combat. Can a thief in the night be worth so much asked Conan?<sup>9</sup>
- ✓ “It was so obvious the whole German uranium set up was on a ludicrously small scale. Here was the central group of laboratories, and all it amounted to was a little cave, a wing of a small textile factory, a few rooms in an old brewery. To be sure, the laboratories were well equipped, but compared to what we were doing in the United States it was still small-time stuff. Sometimes we wondered if our government had not spent more money on our intelligence mission than the Germans had spent on their whole project.” – Samuel A. Goudsmit, Alsos (1947), cited in Wikipedia article, “Alsos Mission,” captured March 5, 2020.
  - Goudsmit was a member of Alsos Mission sent to scoop the German nuclear weapon program in 1944-1945 and deny the Soviets and the French access.
- In the Morning Papers: Players will note that there are some actions that may be done by Black-ops that could easily be done or duplicated by News Events. In other words, why would a position go to the expense of blowing up a ship by a Black-op when a News Event could be used to do the same? There are three reasons to offer:
  - ✓ First, despite the statement that News Events are neutral (representing entropy, the natural force of the universe), and not the responsibility of the position issuing them, it is in the human nature to blame News Events on the news maker and retaliate. A successful Black-op may not identify the (evil) doer and hence there is an opportunity to truly avoid being blamed for dirty deeds (but you could also be blamed for someone else’s dirty deeds, see Plausible Deniability, 3 Special Operations, p. 1314, *infra*).
  - ✓ Second, News Events can be modified, by later, follow up News Events, whereas the results of a Black-op, good or bad, are absolutely true and not capable of modification by other positions (but are capable of ‘retaliation’ unlike a News Event). The reported results of Black-ops may be somewhat less than absolutely true, however, see Plausible Deniability, 3 Special Operations, p. 1314, *infra*.
  - ✓ Finally, certain acts when done in-game by a Black-op (much effort) are less offensive than when done by a (cheesy) News Event, especially those that might violate the Keep the Sand in the Sandbox prohibitions in 2 Dreamtime, p. 147, *supra*.
- A Heartless Woman’s .38: The base chance of successfully executing a Black-op is 30% plus 5% for each additional Mission used (that are not soaked off by Counter-Operations Missions on Target Protection, see Quartering Act and Secret Services, 3 Special Operations, pp. 1321, 1323 respectively, *infra*) and 2% per RP committed. The Concierge may increase or decrease the percentage based on the superior knowledge and judgment of the Concierge. The adjustments are not complicated, and are based on common sense.

- ✓ For example, the sympathy level of the colony where the operation is taking place, the nature of the operation, the results of the operation, security considerations and other factors known only to the Concierge (and/or the target position).

One key factor that the Concierge should consider is the active or inactive state of Constructural Elements at the target location or unit. Pursuant to the previous discussion of the ‘meaning’ of inactive Constructural Elements in GGDM (see Artifice, 2 Constructural Elements, p. 191, *supra*), the inactive Constructural Elements should weigh in favor of success of the Black-op resolution at that location or unit, whether a colony planet or a ship. Thus target ships that have retreated from combat or traded at **alien colonies** (see 3 Disruption, generally, *supra*), or target colonies that have suffered Disruption Events (see 2 Disruption generally, *supra*), or newly Converted Colonies, or positions that have not Cohered or are affected by an ongoing Kairotic Moment or **apostasy** (see Aliency Apostasy, 3 Disruption, p. 283, *supra* and Wave Motion, 2 Kairotic Moment, p. 1432 and Ship of Fools, 3 Kairotic Moment, p. 1444, *infra*) are most vulnerable to Black-ops.

It should not automatically be considered easy just because the planet where the operation is being executed is unfriendly to or resentful of its current owners; few people, no matter how much they dislike the current owners/conqueror of the planet would (except for a few radicals) agree that having an atomic bomb go off in the center of their city (i.e. the ‘nature of the operation,’ previous page, *ut supra*) is a desirable event. They also would not like Orbital Bombardment by the conquerors and it is doubtful that they would cooperate in something equivalent (i.e. exploding an atomic bomb in the center of their own city) – in the name of revolution against the conquerors – unless pushed to that point where sacrificial extremism seems the only alternative to extermination.

- ✓ For example, the most galling fallacy of the original Battlestar Galactica: Why would Count Baltar cooperate with and assist the Cylons who were intent on exterminating humanity (including presumably, Count Baltar)? In fact, at the end of the pilot episode, it is implied that the Cylons murdered Count Baltar after destroying the human colonies; but he somehow appears later in the series.
  - The reimagined Battlestar Galactica series danced lightly around the problem by introducing the sultry No. 6 and remaking Baltar as a vain, genius, playboy scientist who worked for the ministry of defense – the classic honey-trap operation 6½ years (airdate December 2003) before Anna Chapman’s arrest in June 2010. He granted her illegal access to the defense mainframe, inadvertently betraying his people. Although GGDM is a game without heroic individual characters (as discussed in Character Assassin, 1 Special Operations, p. 1269, *supra*), the reason for the change in the story is the same reason that the Concierge might outright block Count Baltar-type scenarios.
- ✓ Another example, conflicts of interest and operational rules may exist within resistance elements. In the Babylon 5 television series, Earthers who came to Mars to help the Mars resistance exploded a bomb in the lobby of a hotel that was being used by EarthForce personnel, causing damage and civilian casualties. The leader of the Mars resistance was furious and threatened the Earthers because she and her group would be blamed for the attack, and the Earthers would simply go home unscathed.

➤ **Murder By Numbers:** Resolution of a Black-op requires two rolls.

- ✓ The first roll, described above, determines whether the Black-op was successful.

The first roll is a yes or no answer, and thus may be the subject of Enlightenment rerolls if such have been dedicated to the Power Activations. Application of Enlightenment is the *same* in resolving Black-ops as in Recruiting and Lodging Missions (p. 1291, *ut supra*).

- ✓ Regardless of the result of the first roll, a second roll is made to determine the ‘degree of success.’ This should be on a scale of 1-10 (1d10).

The Concierge will then merge the results of the two, on a sliding scale, based on his best judgment and the Profile submitted, to determine the actual outcome of the operation.

- ✓ For example, if the operation was deemed unsuccessful on the first roll, but had a high degree of success on the second roll, then the operation was ‘almost successful,’ whereas, if the operation was deemed successful on the first roll, but had a low degree of success on the second roll, the actual result would be marginally successful.
- ✓ The *actual results* will be tailored to the scale of success of the operation and may include unintended consequences or degrees of lesser or greater success.
  - One review of an epic old space-opera board game that I read praised the game, but noted that the insurgency (equivalent to Black-ops in GGDM terms) part of the rules were difficult and rarely worked. This may be true also of GGDM Black-ops. However, I think it is true of real world black-ops as well.
- ✓ The *reported results* may not be entirely accurate however, as the situation dictates; if you are shooting in the dark, it is not always possible to know if you hit anything. Using large numbers of Missions may not enhance either die roll.

---

*“Let’s suppose you are an American baseball legend being divorced by your beautiful Hollywood actress wife. Let’s further suppose that you see her car parked outside a small apartment house near Melrose and Crescent Heights late one night in 1954. Naturally, you decide to break down the door and catch her in the act with another man, even though you have a less than 50-50 chance of breaking into the right apartment. Of course, you call some private detectives. And being an American baseball legend, an Italian American baseball legend, your chums include a well-known Italian American singer. Out comes the ax and down goes the door at 8122 Waring Ave. Uh-oh. Instead of catching Marilyn Monroe, Joe DiMaggio and various companions (including Frank Sinatra) terrified Florence Kotz Ross. Who was asleep. By herself.”*

– L. M. Harnisch, “Chasing Marilyn Monroe,” Los Angeles Times (the Daily Mirror), June 2, 2007

---

**Wrong Door Raids:** An operation can change suddenly in mid-stream. In the 1949 *entirely fictional* movie *Outpost in Morocco* (p. 1298, *ut supra*), the French garrison decides to stage a raid on the arsenal of the rebellious Emir.

They sneak a detachment into town, then fight their way into the palace area, only to discover that the arsenal has been moved (a lot of anonymous extras died in the movie for no reason).

The Cossack officer in command of the raid then decides to capture the Emir while they are there, only to find he has left several days ago.

They end up kidnapping the Emir's daughter and taking her back to the fort as a hostage, which holds off the attackers for several weeks until she is freed voluntarily. Of course, this was a plot device to place her with the French captain who was her budding love interest, creating the dramatic conflict that led to her death ... but you get the idea. 😊

- ✓ Sometimes, things just go horribly wrong. In the famous “Wrong Door Raid,” Frank Sinatra and Joe DiMaggio broke down the door of what they thought was Marilyn Monroe’s girlfriend’s apartment, *after* Monroe divorced DiMaggio, in an attempt to catch her sleeping with another man. They entered the wrong apartment – they didn’t just surreptitiously break into the apartment, they battered down and destroyed the door with an axe – and the lady whose apartment they broke into while she was sleeping (and woke her up in terror) sued both of them, which then made headlines, leaving the culprits with egg on their public faces, having to testify before a Grand Jury (criminal liable suit against Confidential magazine). The whole affair involved lots of lying, contradictory stories and political grandstanding, and political use of police authority against private investigators at the behest of Hollywood studios trying to destroy Confidential magazine in 1957. “We didn’t start the fire...” (Billy Joel, (1989)).
  - See, L. M. Harnisch, “Chasing Marilyn Monroe,” Los Angeles Times (the Daily Mirror), June 2, 2007 (50<sup>th</sup> Anniversary of the Wrong Door Raid), and Jon Ponder, “Wrong Door Raid: The Celebrity Scandal That Irued Sinatra, Made a Fool of DiMaggio – All at Marilyn Monroe’s Expense,” Playground to the Stars, December 7, 2010.

---

*“The paper’s front-page story revealed the identity of a Soviet atom spy who had not been prosecuted by the authorities, Mrs. Melita Norwood, code-named HOLA. She had actively spied for the Soviets in the post war period and continued even after the organisation that employed her stopped doing classified work for the UK Government and her security clearances were not renewed. She had remained in contact with the KGB until her retirement. The article also identified John Symonds, code-named SCOT, as another KGB agent who had never been prosecuted by the UK for espionage.”*

– The Mitrokhin Inquiry Report, Introduction, Paragraph 3, (Report into the Security and Intelligence Agencies’ handling of the information provided by Mr. Mitrokhin, June 2000, British SIS to the House of Commons) <sup>10</sup>

---

## Endnotes.

<sup>1</sup> Commentary: Available free at <https://web.stanford.edu/class/polisci211z/2.2/Arreguin-Toft%20IS%202001.pdf>.

<sup>2</sup> Commentary: This concept is very much reflected in Tom Clancy’s Red Storm Rising (1983).

<sup>3</sup> Citation: “The reason our technological advantage in Iraq and Afghanistan did not translate into a strategic advantage is because the technology we were using was not designed for that type of war. For example, precision-guided munitions, a staple of counter-insurgent/terrorist operations, were initially designed in the second offset to destroy massed Soviet armor in a war on the plains of central Europe. These munitions showed their effectiveness in accomplishing that objective by destroying Iraq’s Soviet-modeled army in the First Persian Gulf War. However,

precision-guided munitions have not produced the same strategic advantage in Iraq and Afghanistan because that enemy did not rely on massed armor. The insurgents’ strategy was to use small-scale attacks, predominantly with improvised explosive devices and suicide bombers, against allied forces in order to slowly bleed us until we packed up and left. Our most advanced technology could not change this basic strategic fact. As commercial and military technology develops and proliferates, insurgents and hybrid forces will have yet more resources to execute an asymmetric strategy unless we develop counter-measures.” – Benjamin Locks, “Bad Guys Know What Works: Asymmetric Warfare and the Third Offset,” War on the Rocks (Texas National Security Review), June 23, 2015.

- ✓ This is what struck me as so absurd when the United States used a MOAB (GBU-43/B Massive Ordnance Air Blast aka “Mother of All Bombs”) against ISIL insurgents in Afghanistan in April 2017. The MOAB was not made for that use, it is not particularly effective against widely dispersed individual targets such as insurgents (though we were targeting a tunnel complex, but we have other better bunker-buster bombs for that). I was reminded of the incident where U.S. C-130 aircraft dropped 15,000 lb. BLU-82 ‘daisy cutter’ bombs on the tiny island of Koh Tang during an infantry battle with forces of the Khmer Rouge in May 1975 during the *Mayaguez* incident – the fact that they were even dispatched is idiotic overkill – the bombs were of no use in the battle, and their detonation at the far south end of the island simply stunned everyone on both sides with the shockwave and contributed nothing to the various ongoing engagements.

<sup>4</sup> Commentary: It seems that the Israelis originated this modern practice; my first recollections of it were news reports that Israeli helicopter gunships had attacked vehicles in the Gaza Strip to kill Palestinian leaders. I think that was in the early 1990s, I remember thinking at that time that the Israelis had become arrogant. The advent of missile-firing drones and the conflicts with Islamic extremist groups have forced the further development of this form of asymmetric ‘police action.’ There are certainly those in the United States who think we have become arrogant.

<sup>5</sup> Commentary & Citation: It is possible due to the recent history of our world, as discussed in Institutionalized, 3 Colleges, pp. 487-488, *supra*, for proselytizing positions to have Institutes named Missions, similarly, Colleges have Missions (1 Colleges, p. 458, *supra*); hopefully, no confusion will arise and participants will be careful in usage.

<sup>6</sup> Commentary: Star Trek OS featured some of the most cringe-worthy examples of alien infiltration attempts, for example, when Captain Kirk’s ears were surgically altered to look like a Romulan (ST:OS “The Enterprise Incident”) or the fake Andorian, a surgically-altered Orion Pirate, at the conference in “Journey to Babel” (ST:OS). Unless the alien population is dumb as cows – primitive hunters allegedly wore bison hides and mimicked their movements while sneaking up on the herd – putting on a costume or surgical alteration won’t fool anyone but a child.

- ✓ Andromeda TV series also had some of this, but not as depressingly obvious, for example, the Nietzschean who had his lower arm bone blades removed to pass as a normal human. The most clever alien infiltration attempt was the movie Avatar, but even then, it was a human mind in an alien body who went native.

<sup>7</sup> Commentary & Citation: Thus, the concept of a ‘game unit’ or units in the game which I wrote long ago (View from a Height, 1 Construction, p. 660, *supra*) has come back around to define location of Missions in Special Operations, both of which I may have written before I specifically defined game units. The process of development tends (at least in GGDM) to have followed that circular pattern as changes and new ideas propagate through dozens of rewrites and thousands of edits, weaving the system together holistically and providing internal consistency.

<sup>8</sup> Commentary & Citation: Or perhaps in the same way that the monks in *A Canticle for Leibowitz* (1959) preserved his hand-written grocery list which they could not understand (they thought it was sacred somehow) lacking context.

<sup>9</sup> Citation: This is a reference to a story I read in *Savage Sword of Conan* long ago about a peasant revolt that takes over a castle, a pampered, spoiled, arrogant, weakling prince sent in command of an army to recapture the castle, and Conan’s involvement on both sides. The desperate prince offers Conan his gold crown to open the gates to the castle at night, and Conan asks, can a thief in the night be worth that much? Can a thief in the night be worth an army? I believe from online searches that it may have been *Savage Sword of Conan* #213 (September 1974).

*“However, you are just as dead if you buy the farm in an ‘incident’ as you are if you buy it in a ‘declared war.’” – Robert Heinlein, Starship Troopers (1959)*

**Political Cant:** The likely underpinning of this statement by Robert Heinlein was the recent Korean War which was not a war declared by Congress, but instead was a United Nations Security Council action. Enough people died on both sides in the Korean War to make it a war *de facto* by any standard, even if not a war *de jure* in the United States. As the U.S. Supreme Court opined in the Obamacare case, Justices (and historians) are not bound by what other people call something out of political convenience or ideological cant. *And neither is the Concierge in GGDM.*

- ✓ If the Justices determined that Obamacare was a Congressional Taxation Power Activation, the Justices could treat it in that way, with all of the legal precedents and reasoning applied, and calling it an ‘individual mandate’ was just political cant.

Korea was the first of a proliferation of modern ‘military actions’ and ‘incidents’ (sometimes contrived) in which the U.S. Congress never exercised its Constitutional authority to declare war.

*[Interview] “Parties at the lab during the war were very segregated... You didn’t talk to the people who came to the parties about what they did because you just didn’t do that so you had to have some other way of having a conversation with them which was certainly more about family and hobbies and what did you read lately rather than what do you do for a living. You didn’t ask that question.”*

– Sara Schreiber (daughter of Raemer Schreiber), *The Half-Life of Genius: Physicist Raemer Schreiber* (2018)

**Fuzzy Ops:** Colleges present an ‘in-between’ Black-ops problem in GGDM, and to some extent so do Corporations and MegaCorporations (see Corporations generally, *infra*): On one hand they are hosted at a specific location, a physical unit within the GGDM universe, and can be affected by Black-ops potentially, but in another sense, they also exist across the position and hence are not considered to be in one location only, but simultaneously exist through the Public Space in every Friendly or Naturalized population factor and ship controlled by the position.

- ✓ It is because Ground Units contain population factors that they can be affected by Colleges and Black-ops and Counter-Operations. It is also assumed that ships are crewed from population at the colony at which they were built and replacements from colonies where they have stopped. This then, comes back around to the issue of drones and artificial intelligence (see Web of Night, 2 Colleges, p. 477, *supra*); the Concierge will need to make a ruling when or if armies and ships consist entirely of drones, AI war droids, the stuff of science-fiction trope (noting the example of the Battle of Naboo in Star Wars, which was a Ground Combat in conjunction with an Orbital Combat and palace penetration Black-op).<sup>1</sup>

The Host location provides a place where Colleges and Corporations can be ‘targeted,’ but the effects must depend heavily on the Profile of the Mission (e.g., the Russians have long sought to infiltrate ‘think tanks’ and political campaigns), circumstances of the target, and the judgment of the Concierge. Conversely, Institutes (see Institutionalized 3 Colleges, p. 487, *supra*) are single location specific extensions of Colleges and should be treated slightly differently.

- ✓ Constructural Elements at the target game unit where the Black-op is executed could certainly be affected by the ‘right’ kind of operation; the devil is in the details. The Concierge can also take into account political status of the population, size of the colony, frequency of contacts with the central interstellar government, strength of Insurgencies (see Fabrication of Order, 6 Combat, p. 1022, *supra*), prior Orbital Bombardment, alterity of the population, Native Population Type, etc. ‘Invisibility’ in the Galactic Space of the game does not make a target immune to attack or effect, intentional or as a side consequence (e.g., ‘psyops’). Note that some Black-ops can trigger disruption checks at a colony.
- ✓ Perhaps the most effective use of Black-ops is against anything that might disrupt the target position’s Government Titles, especially any Conflict Checks whose failure is permanent (and many of the Conflict Checks are difficult and precarious), though purely local effects might sometimes be useful, just one planet disobeying a Power activation could be quite consequential as a result, in addition to all of the other problems the target position might be experiencing. Government Titles may also be affected purely as a side consequence of a successful Black-op when operating blindly (see Player Generated Entropy, 1 Special Operations, p. 1270, *supra*) especially if it is perceived that sovereignty has been violated (see Sovereignty & Legitimacy, 3 Government Titles, p. 609, *supra*).
- ✓ Technology is an even more elusive issue because it is considered to exist through the Matrix and Patents, through and over the entire position. Common technologies (e.g., toasters, lamps) that are ubiquitous could be ‘stolen’ easily, just go to the store and buy one, put it in a box and ship it out. And the basic science behind those items is also readily available in primary school books, etc., but that’s not what anyone is trying to ‘steal.’ Rather, the issue is the cutting-edge industrial and military research and technology that is the target (and the romance of) black-ops in science fiction adventure. The Concierge and participants will need to judge the locations at which such technologies can be pilfered – ships, the Capital Colony, Specialized Colonies devoted to research, recently Captured or Converted Colonies that hosted sufficiently-related Colleges, are possible examples. It’s also a matter of scale, stealing a Patent would be huge (but since everything has specs and blueprints, it is possible), stealing an Application less, and the most accessible (and most location specific) and common ‘technology’ to be stolen are Research Pieces located adjacent to a colony on the Public Space. Technology operations also raise the issue of relative cost-benefit of multiple Special Operations Power vs. Technology Power activations.

Though everyone is probably well familiar with the nature of information by now, it must be stated explicitly here that ‘stealing’ a Patent, Application, or Research Piece does not mean that the target has physically ‘lost’ it (i.e. it is not removed from the Public Space or Matrix), but that the attacker has gained it illicitly (like plagiarizing, or surreptitiously copying the whiz kid’s test answers at school). See Thomas Jefferson feature quote, top of 3 Patents, p. 746, *supra*.

---

*“Remember gentlemen, it’s not just France we are fighting for,  
it’s Champagne!” – Winston Churchill in WWI*

---

*“Dinner would have been splendid...if the wine had been as cold as the soup, the beef as rare as the service, the brandy as old as the fish, and the maid as willing as the Duchess.” – Winston Churchill*

**Une Affaire Francaise:** Special Operations could be thought of as sort of connected to Interventions, they share some of the same traits, much of what can be said about and offered as justification for Special Operations results also applies to story-creating Interventions by the Concierge. Many very strange things happened in the 16<sup>th</sup> to 19<sup>th</sup> Century Europe that might serve as examples for Special Operations (possibly of the unintended consequences kind) or Interventions by the Concierge in GGDM, depending on what participants think is going on in the game.

- **The Affair of the Poisons:** One of the strangest chains of causality run from an astrologer, fortune-teller, black magic practitioner in 17<sup>th</sup> Century Paris, Catherine Monvoisin (known as “La Voisin,” burned at the stake in 1680 for witchcraft) to Prince Eugene of Savoy, a French noble exile who became one of the greatest generals in European history and together with the Duke of Marlborough, checked Louis XIV’s ambitions for hegemony over Europe. La Voisin was connected to Prince Eugene’s mother, the Countess of Soissons, a lover of Louis XIV who aspired (and failed) to be Queen of France, through the Affair of the Poisons (*L’affaire des poisons*); the Countess abandoned Eugene and her other children and fled France, was then expelled from the Spanish court, and died in exile in Brussels in 1708 at age 70.

When Eugene came of age at 19 years old, he personally requested of King Louis XIV and was denied command of a company in the French army; he left Paris in July 1683 to join a branch of his family in the service of the Holy Roman Empire and received a commendation for his service at the Battle of Vienna in 1683. His abilities gave rise through the army ranks and he repeatedly distinguished himself defeating the Ottoman Turks and campaigned against his former countrymen, ending the Turkish threat to Europe and becoming the major Imperial commander checking French ambitions at the end of the 17<sup>th</sup> Century.

- ✓ There are so many elements of this story that are hard to comprehend in modern terms. That an unproven, palace-spoiled 19-year-old boy with little or no military training (and slated to join the clergy and probably denied due to homosexuality) should think that he is entitled – by birth – to petition the King of France personally and receive command of a company of French soldiers – is astonishing in the modern sense of military command.<sup>2</sup> Yet his subsequent career and his display of military ability from an early age (he was a Major General at age 22, whereas Napoleon made Brigadier General at age 24, but of course, there is a great disparity in their family ranks), makes the King’s personal denial (and Eugene’s personal hatred of Louis XIV) based on his mother’s (and former King’s lover) status as an exile at least regrettable in hindsight to 17<sup>th</sup> Century French ambitions. Prince Eugene arguably extended the existence of the Austro-Hungarian Empire – being crushed then between Prussia, France, and the Ottomans – for several generations to WWI and his partnership with the Duke of Marlborough aided England’s efforts to contain the Continental Powers to Europe and check their ambitions.
- ✓ And the incomprehensible Affair of the Poisons (you have to read about it), like the Affair of the Placards (1534)<sup>3</sup> and the Dreyfus Affair (1894), speaks volumes about

the paranoia, politics, sensitivities, social channels, and sociopolitical and cultural milieu of the time and provides background for much of what was to come.

- The Dreyfus Affair: Sometimes special operations can have unintended effects, even though the operation may have failed or been only partially successful. A historical example is the Dreyfus Affair during the Third Republic Period of France. This affair has been mentioned previously in *The Taxil Hoax*, 2 *Dreamtime*, p. 145, and *Deutsche Physik*, 2 *Patents*, pp. 737-738, *supra*. French intelligence learned that artillery parts were being passed to the Germans (what passed for TechInt back then) and an investigation was launched. Quickly, they zeroed in on Lt. Dreyfus, an artillery officer in the French Army. He was convicted in a secret courts-martial of treason and publically humiliated by having his sword broken and uniform torn off at the Paris Military School. He was sentenced to incarceration at the infamous Devil's Island and spent about five years total imprisonment, most of it on Devil's Island.

Many people were convinced that he was falsely convicted and had been singled out because he was Jewish and that anti-Semitism had colored the whole affair from the beginning. Eventually, he was returned to France and given a new trial in 1899. *They had discovered the real culprit, but Dreyfus was again convicted of treason regardless.* About that time, the whole matter became a huge divisive public debate, coinciding with radicalization of French politics, division of French society, rampant anti-Semitism in the press, spinning out of control. Army morale was low, and the public was furious for or against. What began as an operation for filching artillery parts turned into a sociopolitical fracas, the Germans had to be most pleased! The affair went on and on until 1906 when Dreyfus was reinstated and promoted to Major, and awarded the Legion of Honor. In 1908, a reporter attempted to publicly assassinate Maj. Dreyfus. Maj. Dreyfus served as a reserve officer in WWI, along with his son and two nephews, all in artillery, and ended his career as a Colonel.

- ✓ Thus, a somewhat successful Special Intelligence operation by the Germans against the French Army emerged into a spiraling affair that lasted more than ten years prior to the First World War that lowered Army morale, destroyed the credibility of the military tribunals and investigative services (see also the 1957 movie, *Paths of Glory*), divided, embittered, and radicalized the French Republic, affected the life of Marie Curie (see 2 *Patents*, *Id.*), and set the stage for official French anti-Semitic activities during the German Occupation May 1940 to December 1944 (e.g., *Opération Vent printanier*, rounding up Jews in Paris, July 1942).
- Petites Affaires: One of the most successful diplomatic 'special operations' was completely 'above board' so to speak. In 1855, Count Cavour, the Prime Minister of Piedmont-Sardinia, brought to Paris his beautiful and sophisticated 18-year-old cousin, Virginia Oldoini, Countess of Castiglione, and introduced her to 47-year-old Emperor Napoleon III, a philanderer of international fame. She became his mistress (like Greta Garbo as Napoleon I's Polish mistress in *Conquest* (1937)) for at least two years operating as a diplomatic spy and to plead the Italian cause, leading to France's involvement in the War in Italy in 1859 and the later Italian unification in 1861.

Napoleon III knew why she was there, there wasn't a person in Europe who didn't know why she was in Paris. He was personally sympathetic to the Italian cause and allowed her to stay. The proto-tabloid newspapers were fascinated by his *petites affaires* while at the same time

castigating him as a philanderer and adulterer (as France is largely Catholic) and for their distraction from his ability to govern.

- ✓ The Countess was later personally involved in persuading Bismarck to avoid occupation of Paris by Prussian troops in 1871 and in-between, became a famous early photographic artist and later, a vain, crazy old woman who lived in a funeral-decorated apartment with black walls, no uncovered windows, no mirrors.
- ✓ Tabloid journalism began in the late 19<sup>th</sup> Century, shortly after the fall of Napoleon III.
- ✓ French attitudes on the subject of affaires has famously shifted slightly with the final victory of secularization in the 20<sup>th</sup> Century, e.g., *Un cinq à sept*.

---

*“What do you think would be my fate if my misguided countrymen were to take me prisoner?”*

– Benedict Arnold, as quoted in Clifton Johnson, The Picturesque Hudson (1915)

---

**Treason:** To which the captured Colonial Army captain reportedly replied, “They would cut off the leg that was wounded at Saratoga and bury it with the honors of war, and the rest of you they would hang on a gibbet.” *Id.*

- ✓ Merriam-Webster online dictionary at *treason*: **1:** the offense of attempting by overt acts to overthrow the government of the state to which the offender owes allegiance or to kill or personally injure the sovereign or the sovereign’s family, **2:** the betrayal of a trust: treachery.

Treason, as most people assume, usually implies foreign assistance (e.g., bribery, offers) and/or assurances (though the dictionary definition is silent on this point), especially in wartime or in combat. This perception is reinforced by the narrower definition of treason in the U.S. Constitution at Art. III, § 3, which was written less than a decade after the War of Independence:

- ✓ “Treason against the United States, shall consist only in levying War against them, or in adhering to their Enemies, giving them Aid and Comfort.”

Activation of the Special Operations Power for the purpose of Treason allows a position to attempt one Black-op between the activating position’s Regular Turns similar to Combat Alert, Treason is a Black-ops Alert. The Treason activation of the Special Operations Power expires at the beginning of the position’s next Regular Turn if not used; additionally the Lodged Missions reserved for the Black-op may age out (see Ralph Wolf & Sam Sheepdog, 2 Special Operations, p. 1296, *supra*) at the end of the same Regular Turn as the Treason activation (and that sucks!).

- ✓ Treason implies that the agent is in a position to act, usually a position of authority or trust. This becomes problematic in a setting with aliens, one must assume that the Lodged agent is a *secretly* dissident part of the alien population, which implies deception and personal dishonesty. This circles back to the issue of the two-step difficulty of recruiting and lodging SOMs on Native **alien colonies**.

Each time that a position does not use Lodged Missions during a Regular Turn (*whether SOMs or COMs*), those Missions may ‘age-out,’ *except* on the Turn in which they are initially Lodged (see Punching Time Cards, 2 Special Operations, p. 1296, *supra*).

- ✓ The activation must include all that is necessary for a normal Black-op activation, that is, a Profile, Missions at the target location, how many Missions to be used, etc. See True Little Lies, *et seq.*, 2 Special Operations, p. 1299, *supra*.
- ✓ Missions designated/reserved for the Treason activation cannot be used for any other Special Power Activation (including re-Lodging) during the same Regular Turn as the Treason activation.
  - In the original *movie* adaptation of The Handmaid’s Tale (1990), the assassination of Commander Fred by his “handmaid” (concubine) Offred was key to the rebel attack plan.<sup>4</sup> Having lost everything – her husband, her daughter, her job, her life as a librarian – and enslaved for her ovaries, made a non-person object, and appalled by the hypocrisy of the privileged ruling elite of the Republic of Gilead, she is surreptitiously recruited and provided a knife to stab the Commander on the night of the rebel attack.

Thus, the position activating the Special Operation Power for the purpose of Treason must have a very specific anticipation of need which requires timing and circumstances or events precedent to taking the decision to act. The Treason activation of the Special Operations Power thus acts similar to the Combat Alert activation of the Combat Power (see DefCon 1, 1 Combat, p. 946 *supra*) – both require forces to be in position waiting – but due to the nature of Black-ops, have more specific requirements, and additionally, can be negated by loss of opportunity due to aging of Lodged Missions!

- ✓ The Treason activation of the Special Operations Power only applies to Black-ops and not to Counter-Operations. There is no reason – game mechanically – why Counter-Operations would be carried out between Regular Turns; Counter-Operations should be used to purge opposing Special Operations Missions from a target location *before* the Black-ops. The timing of Recruiting, Lodging, and using SOMs for Black-ops requires at least three Regular Turns and thus, there are plenty of opportunities for Counter-Operations to attempt a purge of SOMs at a location or game unit.
- The Gibbet: The Black-op profiled and/or used in a Treason activation of the Special Operations Power does not require that actual treasonous acts occur. Rather it is a ‘sexy’ term for a Special Operations *interrupt* that likely may (but not necessarily) involve an ongoing Combat (i.e. not passing artillery parts during peacetime, Dreyfus Affair, p. 1309, *ut supra*) – which is the main reason for the existence of this action in the game, e.g.:
  - ✓ “On the second day of the chaotic [Ship Combat] battle ... the virus was released. One of Dulinor’s strike teams was able to seize control of the research station’s data center. In their hurry to get the goods and get out, they infected their data retrieval systems with the virus, believing they were only collecting raw research data. However, the team had run out of time. To ensure that the data would get to Dulinor’s fleet even though they were not unable to escape, they began spewing high-speed data transmissions which were picked up by several of Dulinor’s ships as well as Lucan’s.” – Dave Nilsen, “When Empires Fall II,” Challenge Magazine, Issue 69, February 1993.

In GGDM terms roughly, the purpose of initiating the Ship Combat was to capture intact or *raid* via a Black-op (not the same as Raid Combat with Fighters) Research Station Omicron. Special Operations Missions had been Lodged in the attack fleet (in the form of a commando

strike team) to raid the station during the Ship Combat, while Counter-Operations Missions had been lodged on the colony, target protecting the Research Station. Plausible Deniability would be rather pointless in this case...

- ✓ *Treasonous Example:* I remember reading a story in a comic book, I think it must have been a Conan (probably Savage Sword of Conan, which usually featured betrayals), where a defending army consisting of infantry and cavalry met an invading army that had only infantry. The two infantry masses engaged, while the defender's cavalry remained hidden behind a hill to charge the flank at the opportune moment, a sure victory for the defenders. The cavalry didn't charge, the leader of the cavalry had been compromised and betrayed his ruler at the crucial point in the battle. The defenders became nervous when they saw the cavalry's hesitation and the defender's infantry started to lose will, eventually, it turned into a rout and the land was overrun by the invaders. The cavalry quietly rode away.
- ✓ In a tabletop board game of Battlestar Galactica, I was Lee Adama, the CAG and a human. When the Vipers were pulled in for a jump, I was assassinated on the flight deck by Cali who was a Cylon. Starbuck then became the CAG. When it came time to launch the Vipers again, the Vipers were not launched. Starbuck was a Cylon and fled to the Cylon Base Ship. I came back into the game as Kat, a human Viper Pilot (you remember Kat, right?) and resumed as the CAG. We managed to have Cali executed, but it didn't matter because we lost the game on the next turn. The third *unrevealed* Cylon was Commander Adama!

Treason is one of three crimes specifically mentioned in the U.S. Constitution (the others being piracy and counterfeiting) and the only one defined. Understandably, all three of these issues were sensitive matters for the Framers and treason in particular touched a sore spot because of the acts of Benedict Arnold. The Framers did not want treason to be used as a political weapon leading to totalitarianism, so they required sworn written statements from two witnesses, but they also wanted to define it as one of the highest crimes against the United States. They could not convict Aaron Burr of treason, however.

- ✓ See discussion of the Ft. Griswold Massacre, Massacres, 5 Combat, p. 1012, *supra*.
- ✓ Many countries have their traitor, in Norway, his name was Vidkun Quisling, while Col. Konrad Sundlo was considered either a traitor or traitorously negligent.

---

*“The evening of 10 July saw a lively atmosphere aboard the Rainbow Warrior as the crew and guests celebrated Steve Sawyer’s birthday. Margaret Mills, another crew member, had baked a birthday cake decorated with a jelly bean rainbow. People mingled and enjoyed drinks and slices of cake.*

*Little did they know that one of the guests was a French spy, observing all that was taking place to feed back to his colleagues. The spy departed just after 8pm, and at about 8.15pm, the skippers of all the protest yachts going to Moruroa descended into the hold of the Rainbow Warrior for a planning meeting.*

---

*Outside, French combat divers were attaching two bombs to the ship's hull below the water line. The divers had motored across the harbour in an inflatable zodiac dinghy from a secluded launching ramp at Stanley Point, Devonport."*

– from Greenpeace New Zealand website, November 22, 2019 (no author)

**Rainbow Warrior:** Overt acts of foreign intelligence operatives may be considered *terrorism* by the government. For example, the Greenpeace vessel *Rainbow Warrior* was sunk while docked (i.e. opportunity) in the port of Auckland, New Zealand on July 10, 1985 by two bombs that exploded outside the ship. One person was killed. The government of New Zealand declared it a terrorist act, the first terrorist act in New Zealand. Two French intelligence agents were arrested in New Zealand and pled guilty to planting the bombs; the French Minister of Defense resigned.

- ✓ “The French government saw its nuclear testing programme as essential for France’s security (even though a nuclear armed world is hardly a secure one). But negative publicity about the testing would put pressure on the French government to stop its programme. It was for this reason that the French government wanted to stop the Rainbow Warrior’s upcoming anti-nuclear protest.

The Rainbow Warrior was a large vessel which could act as a flagship for the smaller protest yachts. French naval vessels would not be able to intimidate it as easily as the other, more fragile yachts. The Rainbow Warrior could carry large amounts of supplies, which meant that it could protest for a long period of time. The communications equipment on board would allow the crew to maintain radio contact with the outside world and send up-to-the-minute reports and photos to international news organisations.

The French navy would find it extremely difficult to deal with the non-violent tactics of the protest vessels. To avoid this, the French secret service DGSE was ordered to launch ‘Operation Satanique,’ where French secret service agents were sent to New Zealand to sink the Rainbow Warrior before it could lead the protest flotilla.” *Id.*

The *Rainbow Warrior* was sunk in retaliation for Green Peace’s protests against French nuclear bomb testing in the South Pacific. In 2005, nine years after President Mitterrand died, his intelligence chief Admiral Pierre Lacoste admitted that the President had personally authorized the operation. Despite being left leaning, he disliked Greenpeace’s global initiative.<sup>5</sup> Information from Wikipedia articles, “François Mitterrand,” (citing to archived Times article) and “Sinking of the Rainbow Warrior,” July 5, 2019.<sup>6</sup>

- ✓ The Partial Test Ban Treaty was signed in 1963 and the United States discontinued testing at that time in the Pacific Proving Grounds. The French obviously continued testing into the early 1980s. The Treaty of Rarotonga in 1986 formalized the Nuclear Weapons Free Zone, and in 1996, coinciding in the year with the death of Mitterrand (a year after he left office), France ratified the three protocols of the Treaty.

*“On multiple occasions, QAnon has dismissed his false claims and incorrect predictions as willful misinformation, claiming that ‘disinformation is necessary.’ This has led Australian psychologist Stephan Lewandowsky to emphasize the ‘self-sealing’ quality of the conspiracy theory, highlighting its anonymous purveyor’s use of plausible deniability and noting that evidence against the theory ‘can become evidence of [its] validity in the minds of believers.’”*

– from Wikipedia article, “QAnon,” captured November 1, 2018

*“Non-attribution to the United States for covert operations was the original and principal purpose of the so-called doctrine of ‘plausible denial.’ Evidence before the Committee clearly demonstrates that this concept, designed to protect the United States and its operatives from the consequences of disclosures, has been expanded to mask decisions of the president and his senior staff members.” – Church Committee II Reports, U.S. Senate, November 20, 1975 <sup>7</sup>*

**Plausible Deniability:** Regardless of the outcome of any Black-op or Information Operation, a die is rolled to determine if anyone ‘noticed.’ The Concierge may determine that the operation was noticed automatically, for example, when a ship blows up when it shouldn’t (e.g., the Rainbow Warrior, *ut supra*) or there is an **alien** plague on the colony, it’s hard not to notice.

- ✓ “It was naïve for policymakers to assume that sponsorship of actions as big as the [Bay of Pigs] invasion could be concealed. The Committee’s investigation of assassination and the public disclosures which preceded the inquiry demonstrate that when the United States resorted to cloak-and-dagger tactics, its hand was ultimately exposed.” – Church Committee IV Reports, U.S. Senate.

It is somewhat more difficult to determine when the Black-op was unsuccessful or less than successful (Information Operations are automatically successful if not blocked, see 2 Information, p. 1349, *infra*). The base chance of anyone noticing the Black-op, if it is not determined to be automatic, is ... 50%! The Concierge may again, adjust the base percentage depending on the result of the previous rolls, the nature of exactly what happened, and where it happened, and other knowledge within the ken of the Concierge, mainly, whether anyone is ‘looking.’ The position executing the Black-op may not be informed of whether their operation was noticed by anyone, if the Concierge determines that they have no realistic way of knowing whether anyone noticed.

- ✓ “Operational phenomenology” if you will – the appearance of the operation: “By an ‘appearance’ is meant any existent which impinges on consciousness, anything cognized, irrespective of any judgment as to whether it be ‘real’ or ‘illusory.’ The evaluation of a particular appearance as a reality or an illusion is a complex process, involving inductive and deductive logical principles and activities.” – Avi Sion, from abstract for his book Phenomenology (2005).
- **Alibi, Adlib, and Abscond:** The difference between an alibi and plausible deniability? An alibi has to be factual, credibly provable (I was with him at the bar at the time of his wife’s

home-invasion murder) whereas plausible deniability is just that, *plausible* as in: “superficially fair, reasonable, or valuable but often specious,” “superficially pleasing or persuasive” and “appearing worthy of belief.” (Merriam-Webster online dictionary at *plausible*).

- ✓ [Narrator] “But there is a bigger barrier. Spies may have good causes, but few things they do could be called good. They want to know our secrets, but don’t want us to know theirs, ever.” – *The Spy Who Went into the Cold: Kim Philby, Soviet Super Spy* (documentary, 2013).

The problem with espionage agents is the same as for nuclear-armed submarines or fighter pilots – once they leave port, you can only hope they follow orders and do as they should do, as they were trained to do, and that their loyalty remains committed to the homeland. Once out there, they may harbor unpatriotic intentions, may encounter situations that change their minds, might have to alter plans due to unforeseen difficulties, or may just decide to not follow orders any longer unless it suits them. This is the issue of The Hunt for Red October (novel, 1984), Viktor Belenko and hundreds of other combat jet defections, and of course, an unknown number of secret agents who quit or go rogue while in foreign lands on missions (or in the case of ships, while at sea or in foreign ports). There is, of course, always the threat of retaliation against family back home, but this doesn’t always work; I recall from reading Viktor Belenko’s book back in the 1980s that he was married to a woman chosen by the Communist Party for whom he did not have romantic affections or children, while Soviet spy Jack Barsky avoided repercussions against his family in East Germany by cleverly telling the KGB he had contracted AIDS while in the United States and had to stay here.

- ✓ Everyone in *The Man in the High Castle* series lies about something every episode; it’s rather appalling, everyone is a walking living lie or omission, but it’s also adventurous and exciting. The art of their lying is plausibility; and plausibility lasts until new facts are presented, which is what churns the plot: Lies, plausibility, revelations.
- The Blame Game: If the Special Operation has been ‘noticed’ by the target, then it’s a question of whodunit? As law enforcement knows, even if the crime is discovered soon after it was committed, it is oftentimes difficult to discover whodunit. The basic chance of being able to officially blame anyone is 50% and half of those times the actual perpetrator of the operation will be discovered (e.g., French intelligence agents in New Zealand, p. 1313, *ut supra*), and the other half, that it will be blamed on someone else. Somebody will be blamed, if possible, it’s our nature. But that still leaves a 50% chance that no blame can be attached.
  - ✓ “Fake news doesn’t get retracted or corrected because it’s specifically designed to deceive; detachment from fact is a feature, not a bug, as the saying goes.” – Robert Schlesinger, “The Maestros of Fake News,” *U.S. News & World Report*, July 7, 2017.
  - ✓ Blame sits at the corner of Morality Boulevard and Causality Way. It costs just a nickel to play.

The victim of the Special Operation will be informed who appears to have committed the ‘crime’ against them.

- ✓ “The use of Wagner for operations such as the one in early February shows how integral private mercenary groups are to the Russian military effort in Syria and else-

where, while giving the Kremlin ‘a thin patina of deniability,’ said Michael Carpenter, a former Pentagon and White House official who worked on Russia policy in the Obama administration. ‘More importantly,’ he said, ‘it allows Russian forces to take on the U.S.-backed SDF in a way that regular Russian forces wouldn’t dare do for fear of escalation.’” – Ellen Nakashima, Karen DeYoung, and Liz Sly, “Putin ally said to be in touch with Kremlin, Assad before his mercenaries attacked U.S. troops,” Washington Post, February 22, 2018.

It is up to the victim to determine the accuracy of the report. As before, the Concierge may adjust percentages based on the entire situation and upon their superior knowledge and divine wisdom. The chances of not being blamed may improve somewhat if the position executing the operation provides the Concierge with some kind of plausible deniability (see Merriam-Webster definition, previous page, *ut supra*) as to why the victim cannot blame them.

- ✓ “And a man who tells lies, like me, merely hides the truth. But a man who tells half-lies has forgotten where he put it.” – Mr. Dryden, in *Lawrence of Arabia* (1962).
  - [Narrator] “It’s not surprising we can’t be sure. Spies of all stripes shield the truth with lies.” – *The Spy Who Went into the Cold: Kim Philby, Soviet Super Spy* (documentary, 2013).
- ✓ “Already mourning her lost family and her lost position in the UMCP [United Mining Corporation Police], she also loses her faith in the institution when she learns that Nick [an infamous pirate] is actually a secret UMCP agent, whose thefts and murders are overlooked in exchange for deniable operations in alien space.” – from Wikipedia article, “The Gap Cycle,” (series of books by Stephen R. Donaldson).
- Liar’s Dice: The second roll is only necessary if the Special Operation – whether successful or not – was noticed. It is thus that players may later discover some little thing changed in their position data with no explanation. It is not an error.
  - ✓ Although the Black-ops rules are presented as position vs. position, requiring a significant number of steps for one position to act surreptitiously against another and possibly escape blame and detection; there is an alternate view (see *Player Generated Entropy and Resistance*, 1 Special Operations, pp. 1270-1271, *supra*) that much of what happens in Black-ops is as much a result of social entropy, stupid crap happens, and local political actors as it is the efforts of one position against another in strict game terms. The game is kind of fuzzy that way. Thus the ability to go undetected or to shift the blame for the acts to someone else, or some of the seeming impossibility of the missions could be viewed as a consequence of these forces, or general confusion.
  - ✓ The underlying message of the sandbox simulation, throughout GGDM and especially in *Plausible Deniability* is don’t be silly, don’t let the rules dictate and force upon the game absurdities, and don’t stick your head in the sand either in the game or in the real world. Focus on the ‘plausibility’ of the deniability.
    - Eve was not the first to sample the forbidden fruit, Adam was, then blamed it on Eve, who successfully transferred blame to the serpent who happened by just then. But suspicions lingered and Eve has been eternally tarnished while Adam has lorded over the Earth and the beasts.

- Truer Lies: If the position has any remaining unused Enlightenment from the Black-op, there is a 50% chance that it can be applied to failed Plausible Deniability rolls at the discretion of the Concierge on what constitutes failure (see *Harsh Mistress*, 2 Colleges, p. 478, *supra*). Positions may in the Profile of the Black-op specifically elect that no Enlightenment will be used for the Black-op but that Enlightenment will be applied if possible to Plausible Deniability regardless of the results. This they might do if it is important to not be discovered.
  - ✓ Whether the defender can use Enlightenment to force a reroll is an open question for the Concierge to determine and apply consistently. It depends on whether the Plausible Deniability roll is considered an ‘opposing die roll’ (see *Army of Light*, 2 Colleges, p. 479, *supra*) or whether they are considered neutral game processes.
  - ✓ “You know, the very powerful and the very stupid have one thing in common. They don’t alter their views to fit the facts. They alter the facts to fit their views.” – Dr. Who, “The Face of Evil Part 4” (1977).
  - ✓ “As the late senator Daniel Patrick Moynihan famously said, everybody’s entitled to their own opinions, but they’re not entitled to their own facts. Even if they are called ‘alternative facts.’” – Editorial Board, “Credibility Gap: Our View,” *USA Today*, January 23, 2017.
  
- Soft White Bulbs: Though it may seem silly to be able to use Enlightenment in Black-ops on **alien colonies** and especially, in Plausible Deniability, it’s a fuzzy mechanism to cover a number of situations, including an equal lack of enlightenment in the leadership of the other side. For example, the Dreyfus Affair: Do you think the Germans did anything at all to dissuade the French from blaming Maj. Dreyfus? Do you think they would have actually – if they had the foresight – provided false evidence or assisted the French in persecuting Maj. Dreyfus? Or maybe they did. I have never seen a discussion of this aspect of the Dreyfus Affair, whether or not German intelligence did anything to push it along (but maybe they did), but there are always internal elements that have reasons to push back against or try to suppress certain facts or try to misdirect conclusions (for political, ideological or commercial reasons), and this provides a way to ‘account’ for it in GGDM, e.g.:
  - ✓ “US Central Intelligence Agency (CIA) documents declassified in 2006 show that the [May 1960] capture of [Aldolf] Eichmann caused alarm at the CIA and West German *Bundesnachrichtendienst* (BND). Both organisations had known for at least two years that Eichmann was hiding in Argentina, but they did not act because it did not serve their interests in the Cold War to do so. Both were concerned about what Eichmann might say in his testimony about West German national security advisor Hans Globke, who had coauthored several antisemitic Nazi laws, including the Nuremberg Laws. The documents also revealed that both agencies had used some of Eichmann’s former Nazi colleagues to spy on European Communist countries.” – from Wikipedia article, “Adolf Eichmann,” citing to Julian Borger, “Why Israel’s capture of Eichmann caused panic at the CIA,” *The Guardian*, June 7, 2006 (available free online).<sup>8</sup>

The Israelis were, of course, not bound by such delicate considerations. They were thus the rogue actors who upset the system of hush-hush.
  
- Muddy Waters: The game mechanics of the blame game and plausible deniability exist only within the game; the Concierge will interpret that the result is what is believed by the *people on the ground* to be true or most likely and players must accept that within the game and act

accordingly – in good faith – within the game. It is of course possible for positions to contact each other outside the game, where the position that was blamed in the game will deny, player to player, that they did it (will they be believed?), or for a group to figure out who actually did it. The game cannot account for these communications, of course. Perhaps players could decide not to discuss Black-ops outside the game, accepting the game’s results of Black-ops without outside communication? A communication blackout of Black-ops?

- ✓ Alternatively: “Don’t ask questions when you fear the answers. Don’t make the water muddy by stirring it up. Be patient.” – Paulo Coelho (Paulo Coelho de Souza), Facebook posting, November 16, 2014.
- ✓ ““They believe that the U.S. and its allies in the region are fueling and exploiting internal discontent in Iran,’ [Ali Vaez] said. ‘The game will return to Iran’s comfort zone: indirect attacks against the United States and its allies in ways that would allow plausible deniability and minimal risks of reprisal.’” – Farnaz Fassihi and David D. Kirkpatrick, “Iran Cracks Down as Protests Over Downing of Airliner Grow,” New York Times, January 13, 2020.
- ✓ At the end of the movie *Anti Matter* (2017), Liv says that they need to find someone with a motive on which to blame the computer worm attack they used to steal server processing power from across the globe. The British government is investigating and someone could go to jail if convicted of the cyber-terrorism attack. She can hack the blame onto someone else if she has an email address. Ana (“Ana-matter,” as the blog *This is Berry* dubbed her<sup>9</sup>) coolly reaches into her pocket and produces an animal rights group handout on which the leader of the protestors had written his name and email address for contact. She hands the paper to Liv, who authored the worm attack without the slightest remorse, knowing full well that the man’s life will be ruined and he will go to jail for a crime he did not commit. The investigators are looking for a culprit and will look no further once they find someone to charge. The two women, and their boyfriend who has blood all over his shirt and coat from being grazed in the neck by a bullet (from “Ana-light,” *Id.*), then leave the lab to get dinner.

---

*“Until then, everyone was convinced it must have been one of the laborers working on the barracks, but the sudden disappearance of Stauffenberg put things in an entirely different light. By that evening, Hitler knew that a clique of army officers had been responsible.”*

– Operation Valkyrie: The Plot to Kill Hitler (documentary, 2008), young female voice reading from Gertraud Junge’s memoirs, Until the Final Hour (2002)<sup>10</sup>

---

**Grasping at Straws:** The conspirators in the July 20 Plot used ‘captured’ British plastic explosives and fuses, which they found to be the best after experimenting with various explosive devices. *Id.*, Philipp von Boeselager interview, see also his obituary in the Guardian, May 6, 2008.<sup>11</sup> Does that mean that he was an intelligence agent for the British or that the British were involved in the July 20 Plot?

According to Wikipedia article “July 20 Plot” – citing to a 1976 book by Princess Tatiana von Metternich-Winneburg, British radio broadcast names of possible conspirators *who were then arrested* by the Gestapo in addition to everyone else the Gestapo didn’t like (the Gestapo cast a

wide net, 99% of those arrested and executed had no involvement in or knowledge of the Plot). Clearly the Gestapo thought that the British might be involved or at least took the radio broadcasts as enough pretext to arrest more people in Germany; because the British cruelly broadcast their names over the radio, those people might have been considered British spies.

I am sure that there are and have been attempts to link British spies to the July 20 Plot, I am sure that if there were enough interest, the conspiracy theories would resurface on the internet. In the frantic, fanatical hysteria following the failed July 20 Plot, the Kaltenbrunner Report, November 29, 1944, also implicated the Pope in the 20 July Plot – remember that the next time you see an internet conspiracy theory. There are layers and people grasp at straws in the wind.<sup>12</sup>

- ✓ Not saying that the Germans wouldn't try the same thing: Allegedly, the German intelligence planned to kill Churchill, Stalin, and Roosevelt at the Tehran Conference in November 1943 (“Operation Long Jump”) and also they allegedly planned to kidnap the Pope in September 1943. Both stories are met with significant skepticism and are not entirely substantiated by evidence, whatever the case, neither seems to have progressed beyond being a fanciful, desperate idea for a single intelligence operation to turn the tide; the kidnapping plot doesn't even have an operational name.

However, these all have likely been inspiration for some fiction – because suspension of disbelief allows fiction to take some small liberties with logic and fact – and might be useful in GGDM: I have never understood why the matter transporters in Star Trek were not used much more creatively; what can be done with Tribbles can be done with people, bombs or bacteria, and it would “be no tribble at all!” (Scotty, ST:OS “Trouble with Tribbles” (1967)).

- ✓ An attempt to kidnap Prime Minister Winston Churchill in Norfolk village and deception about his departure for the Tehran Conference is the subject of the fictional movie *The Eagle Has Landed* (1976). Sort of a combination of the two ideas, above, and just as harebrained because it's not clear what expected effect it would have on the war. It was possibly also inspired by the actual Operation Pastorius (an Abwehr operation) in which the Germans landed two four-man teams of saboteurs from submarines off the coast of New York and Florida in 1942.<sup>13</sup> They were betrayed, tried and six of them were executed in the nervous aftermath of the Duquesne Spy Ring (another Abwehr operation) arrests and convictions of 1941.<sup>14</sup>

---

*“Counterterrorism intelligence is different. It requires identifying and thwarting threats before they happen. Analysis and operations go together in preventing an attack or neutralizing a threat. The United States cannot do this by itself – this effort relies heavily on intelligence cooperation from other countries....”*

*The information the United States collects via technical means can be frustratingly inconclusive and is often much more useful if paired with human intelligence. Partner nations are often better positioned to collect intelligence on their own soil and to act on that intelligence when necessary.... Partner intelligence services also often know the local language, including various dialects; share the ethnic and historical ties to intelligence targets, and understand the cultural terrain in ways most U.S. intelligence officers never could.... Local intelligence services are often the first line of defense when it comes to disrupting attacks...”*

– Stephen Tankel, *The Washington Post*, May 16, 2017

---

**CIT:** Counter-Operations Missions (COMs) are different from Special Operations Missions (SOMs) in that they are recruited and operate only in friendly territory; they contain a mixture of police, intelligence, and other elements that constitute the security and law enforcement forces of the civilization they are protecting (e.g., SMERSH). Counter-Operations Missions, like Special Operations Missions, must be placed at or in a specific game unit, i.e. ship, colony, Ground Unit.

- ✓ On December 22, 2019, the New York Times reported that the popular ToTok chat app was a spying tool of the United Arab Emirates (Mark Mazzetti, Nicole Perlroth and Ronen Bergman, “It Seemed Like a Popular Chat App. It’s Secretly a Spy Tool”).
- **Black ICE:** Although framed in terms of operatives, Counter-Operations Missions can be more than just sneakers on the ground (e.g., agents protecting vital computer hubs from physical compromise or staff infiltration, e.g., p. 1321, *ut supra*), they can include virus protection and active security programs (e.g., the ‘black ICE’ popular in cyberpunk stories):
  - ✓ “As with all security programs of any type, they can only be designed to counter known or anticipated threats. In the realm of measure, counter-measure, counter-countermeasure, counter-counter-countermeasure, there is always a small window of opportunity for the latest system. ... Like any living creature, the virus only wanted to be fruitful and multiply.” – Dave Nilsen, “When Empires Fall II,” Challenge Magazine, Issue 69, February 1993 [referencing the Genesis Mandate].
  - ✓ “As the [AI] viruses preyed on each other, they developed ever more sophisticated self-defense security systems and sub-viruses, many times more effective than the man-made security systems they had defeated during the Collapse.” *Id.*
    - Though I do not know the inside details, it is fair to speculate that the Eurisko experience at the 1981 and 1982 Traveller Trillion Credit Squadron Tournaments (see Imperial Admiral Eurisko, 4 Colleges, p. 512, *supra*) hovers in the background leading to the creation of the Virus and of Traveller RPG: The New Era setting.
- **Training Day:** An activation of the Special Operations Power for the purpose of Train Counter Operations Missions allows the Recruiting and Lodging of Counter-Operations Missions on a sovereign colony and friendly ships currently at a sovereign colony by the owner, *in one step*: ‘Train’ in this sense is used as a one-word substitute for two actions, like a cutter pitch in baseball.
  - ✓ Train Counter Operations Missions activation on a sovereign colony requires a Scene at the colony and is thus subject to possible Power Activation failure (see Making a Scene, 1 Special Operations, p. 1274, *supra*); whereas, as mentioned in Acting Lessons, 1 Special Operations, p. 1274, *supra*, training Counter-Operations Missions (COMs) on a friendly ship at a sovereign colony may use either an Act or a Scene at that colony.
  - ✓ Training Counter-Operations Missions is automatically successful (in the sense of Recruiting and Lodging), it is just a matter of cost and time. Each Counter-Operations Mission trained will cost 1 to 3 RPs, and the position submitting Actions to train Counter-Operations Missions must specify either a number of Counter-Operations Missions (at variable cost) or a max budget for new Counter-Operations Missions (however many you can get) *at each location*.

- ✓ Newly trained Counter-Operations Missions do *count against* the GDP of the target colony on that Regular Turn.

Thus, the structure of GGDM Special Operations gives the speed advantage to the defense: Black-ops require three Power Activations to Recruit, Lodge, and use Missions, whereas, Counter-Operations require just one step to Recruit and Lodge Counter-Operations Missions (through the police power of the State). The difference between one step Recruiting and Lodging of COMs and two-step Recruiting and Lodging of SOMs represents the difficulty of projecting Special Operations Power into *alien cultures* and across interstellar distances.

- Quartermaster Act: Unlike Special Operations Missions, Counter-Operations Missions may only be Lodged in a sovereign unit that is or is at the location where they were Recruited on the Regular Turn in which they were Recruited. This includes sovereign ships and Ground Units that *begin* the Regular Turn at the colony where the Counter-Operations Missions were Recruited, e.g., in the movie *Cargo: Space is Cold* (2009) an intelligence operative was added to the crew just before departure to protect them from Neo-Luddite ‘terrorists.’ New ships that are finished in the same Regular Turn do not ‘begin’ the turn at the colony. On the same turn that Counter Operations are ‘trained’ *they must also be assigned to* either Target Protection (the defense) or Counter-Operations (the offense of the defense) at that location.
  - ✓ Though not entirely realistic, GGDM makes no distinction between being on a surface colony or on Orbital Cities over the colony, unless it is necessary for play (for example, different Native Population Types). Thus a Mission Lodged on a Colony is also possibly on any Orbital Cities, Defense Bases or Shipyard, as necessary, because those are not ‘game units’ but rather, ‘colony enhancements’ in GGDM.

Counter-Operations Missions assigned to Target Protection must stay with their target, wherever it goes, and cannot be ‘re-Lodged.’ If the target is moved to a ship, the missions assigned to Target Protection move with it (this does not count as re-Lodging); if their target protection assignment is a ship or a colony, they stay there ‘til retirement. Only COMs assigned to Counter-Operations may need to be re-Lodged occasionally.

- ✓ It is of questionable value in most cases to recruit COMs assigned to Counter Operations on ships using an Act to avoid the possibility of a Power Activation failure, then on subsequent turns, re-Lodging those COMs to a colony, which requires a Scene.
- ✓ “[Ned] Price and others say [Gordon] Sondland’s July 26 [cell phone] call [from a restaurant in Kiev] with Trump raises red flags for another reason: It was likely a highly compromising security breach, and illustrates how lax Sondland was about following State Department protocols to protect sensitive information. ‘The president is the most lucrative intelligence target throughout the world,’ Price said. ‘When the Russians presumably heard that he [Sondland] was connected to the president of the United States, they knew they had hit the jackpot.’ ... Conducting a cellphone call with the president in a public place in Ukraine’s capital, ‘it just doesn’t get any worse than that,’ said Clint Watts, a research fellow at the Foreign Policy Research Institute... Watts said Ukraine is ‘ground zero’ for Russian espionage campaigns, and Moscow almost certainly intercepted Sondland’s conversation with Trump on a major foreign policy issue of keen interest to Russian President Vladimir Putin.” – Bart Jansen and Deirdre Shesgreen, “Gordon Sondland, who flaunted Trump access, may offer first-hand account of Trump’s Ukraine aims,” USA Today, November 17, 2019.

- Police Pensions: Like Special Operations Missions, Counter Operations Missions ‘age-out’ at the end of each Regular Turn (or Turn Cycle if Regular Turn Actions are not submitted or processed); there is a 50% chance that each Counter Operations Mission will be lost at the end of each Regular Turn. Unlike Special Operations Missions, Counter Operations Missions are not ‘expended’ or lost during the defense against *any* operation.
  - ✓ Old policemen never die, they just cop out!<sup>15</sup> (boos, hisses, eye rolls)☺
- The COM-ing of The Virus: It was said in Mubarak’s Egypt that if five men sat down to a café table to plan something, the fifth person wrote a report to Mubarak afterwards, so thoroughly had the police and counterintelligence infiltrated the opposition groups. Still, it didn’t save him from a spontaneous uprising facilitated by the ultras sports fan social networking.
  - ✓ In science fiction: “After a number of furtive and urgent meetings, they decided that they would try to carry warning of this project to the heads of the other factions, one to Margaret’s faction, one to Ielish, one to Deneb, one to Gushemege, one to Vland, and one to Daibei. They planned their departures to coincide with a conference they could all arrange to attend without attracting undue attention to themselves. Unfortunately, one of their number was a plant loyal to Lucan, one of many assigned undercover to Imperial Research Stations to ensure their reliability. This plant arranged for them all to be followed and murdered, but the emissary to Iklisk, Jean Milakhad, was able to turn the tables on his assassin and escape.

However, he did not know that he had been betrayed from within, and continued his mission as planned, although now aboard a patrol cruiser, commandeered with the help of his Imperial Navy reserve status. But as the plant knew of the scientist’s ultimate destination, he was able to position naval units to intercept the craft, and even insert an assassin at the destination, should the patrol cruiser get through. ... As a result of ‘tomb-tapping’ (the psionic probing of the residual brainwaves of a dying brain) tests conducted on Mibkhad, Dulinor learned that the man was bringing warning of one of Lucan’s superweapons, a virus that was being perfected at a research station in Core sector.” – Dave Nilsen, “When Empires Fall II,” Challenge Magazine, Issue 69, February 1993 (this story would be a great fan-made short video subject).

In the case of Emperor Lucan’s Imperial Research Station Omicron, it was seven people who sat down to plan the escape, and the seventh one was a spy for the Emperor....

---

*“Having been involved in many counterintelligence cases in the past, I know what the(y) try to do. They try to suborn individuals, and they try to get individuals, including [citizens], to try to act on their behalf, either wittingly or unwittingly.”*

– John Brennan, former CIA Director, testimony before Congress

---

**Counter Operations**: Counter-Operations Missions must be assigned to either Target Protection or to a Counter Operation on the Regular Turn they are either Trained or Lodged (previous page, *ut supra*). This occurs automatically as a step of Recruiting Counter-Operations Missions.

- Secret Services: Counter-Operations Missions assigned to Target Protection will attempt to block or ‘soak off’ Special Operations Missions which are committed to a Black-op against their target. The base chance of each Counter-Operations Mission intercepting a Special Operations Mission is (surprise!) 50%. The Concierge will adjust the base chance based on several factors, including comparing the *loci* of the Special Operation and the Target Protection.
  - ✓ For example, if Counter Operations Missions were assigned to Target Protect the colony, and a Black-op targeted the Ground Bases at the colony, the *loci* overlap, but are not exactly the same; that is, the Black-op is aimed at a specific target installation, whereas, the Counter-Operations Missions assigned to Target Protection must defend the entire colony. As a result, the Counter-Operations Missions assigned to Target Protection must have a slightly lesser chance of blocking the Special Operations Missions targeting the Ground Bases. Conversely, if the Target Protection assignment was Ground Bases, then it would be a head-on collision between Special Operations Missions and Counter Operations Missions doing Target Protection during the Black-op, with Counter Operations having the legitimate authority/police power advantage in blocking in their home territory.
    - Note that there is no provision within the GGDM system for learning whether there are **alien** Special Operations Missions Lodged at any specific location. The system provides for only passive Target Protection and active Counter Operations to purge a location.<sup>16</sup> It is possible that players may learn (or be fooled) about the existence of Special Operations Missions through informal player diplomacy which is, as noted previously, beyond the GGDM system. A little paranoia goes a long way...
- Spy vs. Spy: Activation of the Special Operations Power for the purpose of Counter-Operations is the counter-offensive, the attempt to purge (discover and eliminate, sweeping up the garbage) enemy Special Operations Missions Lodged at their location (presumably to disrupt a future Black-op). For inspiration, see the MAD comic series.☺

Consistent with the previous rules, each Counter-Operations Mission will have a 50% chance of eliminating a Special Operations Mission, if any exist at that location. And the Concierge may adjust the base percentage based on factors known only to the Concierge (on the advice of a 6’ 3½” tall invisible rabbit named Harvey). The owner of the Special Operations Missions, whether or not any are eliminated, *may or may not be informed* of the Counter Operation (that is, may think they simply ‘aged out’); likewise, the position conducting the Counter Operation *may or may not be informed* of any Special Operations Missions eliminated, in fact, may receive false positive results (by use of a Concierge Intervention). Only your hair stylist knows the true color of your hair, and he won’t tell anyone ... really.

- ✓ Despite the brilliant stroke of propaganda attributed to his famous last words, the adult table version of the story of Nathan Hale’s misadventure in 1776 showed that he was a very poor spy, an inept operative. Like John Brown and Sara Jane Moore, he was idealistically deluded, he expected to find immediately in British-occupied New York City an organized, receptive and active network of Revolutionary underground resistance and was open and careless in his attempts to locate contacts. He had no realistic plan or understanding. He was easily outed by the British counterintelligence and hanged. Though many statues of Nathan Hale may exist (I do not know), the

only one I have personally seen (I was a bit surprised even) was located for a short time in the entryway to the Duquesne Club in Pittsburgh. Any statue of Nathan Hale is thus a statue to ideological bravery and uncommon stupidity.

- The Great Pretender: The possibility of ‘flipping’ opposition SOMs and COMs to work as ‘double agents’ is, as always, intriguing but also difficult in the interstellar environment of GGDM. If we assume that SOMs are most likely from the native population of wherever they are Lodged or at the least, of a ubiquitous alien species resident at that location, then flipping them to COMs is possible. In other words, a human on Earth who is a SOM for aliens who are spying on us, might be taken to Area 51 and made into a double agent.

- ✓ [Interview] “No agent can be trusted completely. He had to be checked all the time...” – Col. Mikhail Lyubimov, former KGB officer, *The Spy Who Went into the Cold*: Kim Philby, Soviet Super Spy (documentary, 2013).

In flipping COMs to SOMs as double agents, one has to ask why the COM would prefer an **alien master**. There are, of course, many possible answers mostly relating to be dissident or having dissident sympathies, based on hopes and promises of what will happen when the **aliens** conquer the colony. And never underestimate greed and promises of power...

- ✓ [Interview] “He was just like two different people in one body.” – Richard Beeston *The Spy Who Went into the Cold*: Kim Philby, Soviet Super Spy (documentary, 2013).
- ✓ Within sci-fi tropes, there are many other possible answers. You know, the usual: mind control, intelligent alien parasites, alien religion and revelation, the desire to get off the colony planet, two people occupying one body at the same time, time travel ... *is Louise Banks in Arrival (2016) a Lodged SOM for the heptapods?* You know...

Flipped COMs and SOMs would still ‘age out’ naturally, and that likely puts a wet towel on the effectiveness of flipping Missions. If COMs can be flipped to SOMs at a location, then a sort of chaining effect may happen, without the necessity for Recruiting and Lodging. Game mechanically, since Black-ops and Information Operations (see 2 Special Operations, p. 1297, *supra*, and 2 Information p. 1349, *infra*, respectively) require Mission Profiles, flipping could be attempted via the Profile. On the Counter-Operations side, there is no profile, but it is possible that other means may be developed in game, such as technologies or Writ activations, that would target flipping SOMs instead of eliminating them during Counter-Operations or even when blocking during Target Protection.

- ✓ It is not necessary that a position know that there are enemy COMs or SOMs at a location to attempt to flip them. This is a game of double blind; Lodged COMs and SOMs were generally only ‘discovered’ or ‘appear’ at the moment of execution of a Special Operations Power activation. Sort of like ‘wave function collapse’....
- ✓ It is also possible that flipping may sometimes occur randomly ... err, by Concierge Intervention. Just for the fun of it. Or maybe the COMs and SOMs just revolt against their current masters and cause an incident.

*“So what? The time for covert operations and secret maneuvers is gone. If we strike, the government will know what’s going on anyway. We may as well strike right now.” – Col. Gallagher, Nydenion (2010)*

Endnotes.

<sup>1</sup> Commentary & Citation: The special mission or desperate black-op in the middle of a conventional battle is the staple of adventure fiction. The battle scene over Antarctica in Stargate SG-1 “Lost City, Pt. 2” (2004) is essentially the same as the Battle of Naboo (assault on Theed) in Star Wars: The entire balance of the battle depends on a small team action (the good guys), under pressure, to master the situation before disastrous defeat by the bad guys.

<sup>2</sup> Commentary: Consider that company commanders are now usually Captains (or a 1<sup>st</sup> Lt. in line for promotion), which requires a four-year college degree, completion of OCS, commissioning as a 2<sup>nd</sup> Lt. and two promotions within about 6 or so years afterward. Thus, most Captains in the Army and Marines (not to be confused with the naval Captain) are in their late 20s with about four years of college and six or more successful years’ experience as an officer. Thus, most company commanders now are about 10 years older than Eugene was when he asked Louis XIV to grant him command of a company in the French army, and all have actual military training and experience.

<sup>3</sup> Commentary: The Affair of the Placards (1534) – nailing Zwinglian Protestant, anti-Catholic placards to the door of King Francis’ bedchamber while he was sleeping – was a schoolboy prank (if ever there was one) that changed the course of French and European history in a single night. People were arrested, tortured, tried and executed (some burned at the stake as witches for being Protestant) as a result of the investigation and France abandoned conciliation and tolerance of Protestants, culminating in the Edict of Fontainebleau in 1540 (Protestants were again granted rights by the Edict of Nantes in 1598, but they were rescinded again by a second Edict of Fontainebleau (1685)) and France became a continental Catholic bastion in natural geopolitical opposition to England and Germany. From this boundary arises much of the next 500 years of European conflict.

- ✓ The same cannot be said, for example, of *Kristallnacht* (November, 1938) four hundred years later, as the German government was both complicit and involved, and because the course of history was not arguably changed, rather, it sped forward to the conclusion we all know. *Kristallnacht* publically confirmed what many people already suspected and outraged and alienated public opinion of Nazi Germany in other countries, especially the United States and England.

<sup>4</sup> Commentary: For the record, the screenplay writers changed the story a bit, especially the ending. The novel was difficult material to translate into a screenplay. As usual, there were angry comments and recriminations on this among the actors, writers, directors and producers as to who did or said what during the process.

<sup>5</sup> Commentary: The bombing of the Greenpeace vessel *Rainbow Warrior* was a particularly petty jerkass act by the French government, more so because it was authorized at the very top. This is sort of like setting the neighbor’s backyard doghouse on fire because their dog barks too much. But governments do those things, they are exactly like the people who populate them.

- ✓ “A Jerkass is a character who is so completely obnoxious that it is unbelievable anyone would willingly interact with them. ... What makes them entertaining is the fact that you don’t have to deal with them yourself in real life. ... The single factor that pushes a merely annoying character over the line into full-time Jerkass status is their absolute obliviousness to other people’s perceptions of them. Nothing they do ever strikes them as out of proportion; they never realize that anything they are doing might ever be considered inappropriate, excessive, or cruel; in fact, they believe they are actually right and everyone around them is in the wrong. If anyone ever does call them out on their Jerkassery, expect them to just rationalize it or shrug the accusation off.” – from TVTropes.org, “Jerkass,” captured July 6, 2019.
- ✓ The trope above almost perfectly describes Adolf Eichmann, see 1 Special Operations, EN 9, pp. 1282-1283, *supra*. Hence, Jerkass behavior might relate, in a literary sense, to Banality of Evil.

<sup>6</sup> Commentary: I was on the island of Okinawa, Japan on July 10, 1985, preparing for a FSMAO (pronounced “phase-mo”) Inspection which amounts to an official Marine Corps terrorist act (as Reddit user WellDweller said in response to a 2018 FSMAO question, “Prepare your anus for early days and long nights.”) in conjunction with an admin paperwork inspection and a series of command inspections in three consecutive months. So I had nothing to do with the sinking of the *Rainbow Warrior*! **Plausible. Deniability.** I have never been south of the equator.

- ✓ In preparation for the FSMAO inspection, it was discovered that our Motor T shop had too many parts, more than was allowed by the supply spec sheets. There is a sort of horse trading that goes on between various units and sections for parts and small tools so that the stuff eventually goes where needed; but this would not have been any consequence to the hard-nosed inspectors. So a Staff NCO loaded the extra stuff in his car trunk and took it back to his room at the Staff NCO barracks, some of it, he had to bring up to the room to empty his trunk for more stuff that had to be hidden. Then he had to hurry to bring it all back the night after the inspection because they were having a Staff NCO barracks room inspection the next day.

<sup>7</sup> Citation: “This is what is known as plausible deniability. As in, senior leadership in any campaign never get too close to the truly explosive (or potentially explosive) material that is peddled in the dark channels of opposition research so that – if ever it actually blows up – they can honestly say they never knew about it.” – Chris Cillizza, “Steve Bannon is 100% right about Russia and the Trump campaign,” CNN Politics, January 3, 2018.

<sup>8</sup> Commentary & Citation: Waffen SS soldiers were used as guards at the Nuremberg Trials. They were from the Estonian and Latvian Legion Waffen SS divisions (15<sup>th</sup> and 20<sup>th</sup> Waffen SS Grenadier Divisions) and considered ideologically neutral (though Dr. Felton disputes this somewhat) and displaced persons after the war. See “Waffen-SS Soldiers Guarded the Nuremberg Trials,” Mark Felton Productions YouTube Channel, April 29, 2020.

<sup>9</sup> Citation: “Worm /Anti Matter (2017): Movie Plot Ending Explained,” This is Berry (thisisberry.com), September 22, 2017.

<sup>10</sup> Commentary: Frau Junge was Hitler’s last personal secretary and had died in 2002 at 81 years old.

<sup>11</sup> Citation: Obituary: <https://www.theguardian.com/world/2008/may/06/secondworldwar.germany>.

<sup>12</sup> Citation: “Every president for whom I have worked has wished that intelligence can say things that it can’t. Right, you wish that some piece of truth existed that would allow you to justify.” – Susan Gordon, CNN interview, December 3, 2019 (video available on YouTube).

<sup>13</sup> Citation: See, Harvey Ardman, “World War II: German Saboteurs Invade America in 1942,” World War II Magazine, February 1997, available free on historynet.com.

<sup>14</sup> Commentary: The Duquesne Spy Ring was a technical intelligence operation that delivered huge amounts of blueprints and technical documentation to Germany *before* WWII, which appears to have been adapted by the Germans and appeared in later German military equipment designs. Some members also distributed propaganda, reported ship movements, defenses of the Panama Canal, stole government contracts, coastal sea charts, and acted as couriers of money, platinum, instructions, photographs – they even had a honey-trap agent in New York’s social circles named Lilly Stein – remarkably, she was a Jewish woman, but I guess that was the perfect cover for a Nazi spy.

- ✓ The fact that the entire ring was rounded up (‘busted’) by the FBI in 1941 does not make it a failed operation. The date of the ‘bust’ – April 1941, before the Pearl Harbor attack and formal declaration of war on Germany – by the FBI and the fact that the FBI had double agents in the ring who controlled one of the Ring’s short-wave radios also does not make it a failure of counterintelligence in the United States. This is a situation example where both sides might be considered successful to a degree in a GGDM Black Op.

<sup>15</sup> Commentary: The origin of the word ‘cop’ in reference to police is filled with many imaginative, but incorrect, folk etymologies; when I was young, I used to see “Community Oriented Policing” on patrol cars and thought that was what ‘cop’ meant (a backronym, false etymology?). Centuries ago, to cop (v.) meant to seize or grab, and is still present in the current misogynic phrase, ‘cop a feel’ (as in former President George H.W. Bush’s joke about his favorite magician) or by a more twisted meaning, ‘copping out’ as in taking yourself out of some commitment, while to ‘cop to’ something is to confess or admit. By the mid-19<sup>th</sup> century, cop had become slang for a policeman in the sense of one of who seizes and arrests, takes into police custody (i.e. a person who was arrested has been copped by the police, otherwise, it is *kidnapping or abduction* if not legitimate). This is typical of English where verbs become nouns denoting the doer of the action, e.g., a person who regularly cops out is labeled a cop-out.

<sup>16</sup> Commentary: Game design process: I asked myself, well how would you know if there were an enemy Special Operations Mission lodged in one of your locations. Answer: There is no way to know within the current game rules. Question: Is that bad for the game? Answer: No, an attempt to execute a Black-op requires at least three Regular Turns, and a little paranoia isn’t a bad thing.

- ✓ Oddly, the Special Operations rules in GGDM inadvertently reflect the nature of crime and policing in the real world.

## First Question and Last Answer

*“The Pythagoreans concluded that the one universal quality of all things in the universe, the one thing that everything had in common, was that it was numerable and could be counted. We could perhaps imagine a universe without smell or taste. However, the idea of creating a hypothetical universe without numbers is very much impossible. And here we see the basis of the Pythagorean philosophy. They believed that numbers were the underlying substance of reality much in the way that Thales believed water to be origin of being in the universe. However, not all numbers were treated equally. Some were considered more holy than others. For instance, the Pythagoreans attributed great importance to the number one. This is probably due to their ideas on the formation of the universe. It was proposed that there once existed chaos and disorder within an unstructured, infinite universe. Then, limitations were set upon the universe and the world as we know it fell into order; objects became numerable, the cosmos became perceivable. In this way the universe came from a sort of chaos and took on a oneness that was previously unknown. This idea of a harmonious, single universe would be echoed by the likes of Parmenides and Zeno of Elea.”*

– by user **Socretes**, <http://classicalwisdom.com/cult-of-pythagoras/>, April 10, 2017

*The Voice said, “You have promise. You answer my paradox with a paradox – except that mine is not a paradox. Consider. I have existed eternally, but what does that mean? It means I cannot remember having come into existence. If I could, I would not have existed eternally. If I cannot remember having come into existence, then there is at least one thing – the nature of my coming into existence – that I do not know.”*

*“Then, too, although what I know is infinite, it is also true that what there is to know is infinite, and how can I be sure that both infinities are equal? The infinity of potential knowledge may be infinitely greater than the infinity of my actual knowledge. Here is a simple example: If I knew every one of the even integers, I would know an infinite number of items, and yet I would still not know a single odd integer.”*

\*\*\*

*Murray said thoughtfully, “You cannot know your beginning. You have said so. Therefore you cannot know your end. Very well, then. That will be my purpose and that will be the last answer. I will not destroy myself. I will destroy you – if you do not destroy me first.”*

*The Voice said, “Ah! You come to that in rather less than average time. I would have thought it would have taken you longer. There is not one of those I have with me in this existence of perfect and eternal thought that does not have the ambition of destroying me. It cannot be done.”*

*Murray said, “I have all eternity to think of a way of destroying you.”*

*The Voice said, equably, “Then try to think of it.” And it was gone.*

*But Murray had his purpose now and was content.*

*For what could any Entity, conscious of eternal existence, want – but an end?*

*For what else had the Voice been searching for countless billions of years? And for what other reason had intelligence been created and certain specimens salvaged and put to work, but to aid in that great search? And Murray intended that it would be he, and he alone, who would succeed.*

– From **“The Last Answer” (1980) by Isaac Asimov**<sup>1</sup>

<sup>1</sup> The “Last Question” may describe a Boltzmann Brain, or suggest that God is a Boltzmann Brain.

*“It from bit. Otherwise put, every it – every particle, every field of force, even the space-time continuum itself – derives its function, its meaning, its very existence entirely – even if in some contexts indirectly – from the apparatus-elicited answers to yes-or-no questions, binary choices, bits. It from bit symbolizes the idea that every item of the physical world has at bottom – a very deep bottom, in most instances – an immaterial source and explanation; that which we call reality arises in the last analysis from the posing of yes-no questions and the registering of equipment-evoked responses; in short, that all things physical are information-theoretic in origin and that this is a participatory universe.”*

– John Archibald Wheeler, *A Journey Into Gravity and Spacetime* (1990)  
(emphasis in original)

**Hologram Universe:** Although John Archibald Wheeler was a theoretical physicist, and thus was probing the *first order of natural phenomena*, his “it from bit” idea might also be applicable to psychogenesis and noogenesis thought, see Order of Genesis, 1 Order, p. 522 and Scaling Eras, 1 Eras, pp. 755-756, *supra*.

The *it from bit* argument seems to have morphed into the idea that we are living in a hologram or computer simulation; that is, the universe is acting in holographic ways or that our current knowledge of the universe allows it to be reasonably interpreted as a hologram or computer game. It all started with *Tron*... The media pronouncements of Elon Musk aside, there seems to be some serious intellectual engagement with the developing idea that the universe is a hologram, to wit:

- ✓ “This paper argues that *at least one* of the following propositions is true: (1) the human species is very likely to go extinct before reaching a ‘posthuman’ stage; (2) any posthuman civilization is extremely unlikely to run a significant number of simulations of their evolutionary history (or variations thereof); (3) we are almost certainly living in a computer simulation. It follows that the belief that there is a significant chance that we will one day become posthumans who run ancestor-simulations is false, unless we are currently living in a simulation. A number of other consequences of this result are also discussed.” – Nick Bostrom, “Are You Living in a Computer Simulation,” *Philosophical Quarterly* (2003), Vol. 53, No. 211, pp. 243-255.
- ✓ “Do we live in a 2D hologram? There’s no short answer, but physicists believe it may be possible. The holographic principle – a property of particle physics’ string theory – proposes that information about a region of space can be ascertained by the information on the surface that surrounds it – much like you can determine, say, currents in water by the eddies on the surface. But does this actually mean that our universe is an optical illusion created by light diffraction?

Fermilab has just switched on a machine that may help a team of researchers figure it out: the Holometer, the most sensitive instrument ever built to measure the quantum jitter of space. They liken the idea to a television, where pixels become less cohesive the closer you get to the screen. Those tiny pieces of data, however, holistically form a recognisable image when you move away from the screen; the researchers believe the universe may be contained in the same way, with the ‘pixel’ size of space roughly

10 trillion times smaller than an atom – the smallest distance possible in the universe, called the Planck length.

The Holometer uses a pair of interferometers – devices used to superimpose waves to compare them – placed close together to each send a one-kilowatt laser (equivalent to 200,000 laser pointers) at a beam splitter and down two 40-metre arms arranged in a perpendicular L-shape. The light is reflected back to the beam splitter, and, if there is motion, this will cause fluctuations in brightness. It is these fluctuations that the researchers will analyse, looking for holographic noise.” – Michelle Starr, “Is the universe a 2D hologram? Fermilab intends to find out,” August 26, 2014, CNET.

**Participatory Universe:** GGDM is a participatory universe defined by many yes-no questions; sandbox games and ‘discard to play a card’ tabletop games, such as Race for the Galaxy, where making something a fact (eigenstate) in the game eliminates other possible futures – seem to reflect an evolving modern understanding of reality. At least in GGDM, the *Bits* in your brain become the *Its* in the game. The modern duality is that we live in a world where facts are facts, things that are unknown currently can be derived or guessed at based on facts, math, and experience, some things are unknowable in any case; but at the same moment, there are scientifically-based understandings that reality is not what it has always seemed; that it is based on probabilities, the universe, solid matter, is mostly filled with – nothingness – and that consciousness may have some part to play in determining what is real: Making us responsible for our reality.

- ✓ See previous looking and wave collapse discussion, Peek-a-Boo, 2 Expansion, p. 893, *supra*.

**Crop Circles:** Information is that which tends to inform the receiver of the surrounding environment, events, memories, impressions, facts that cannot be directly sensed, the thoughts of others, or of what came before or is expected in the future. Information is then, dependent on the receiver (and sender, if any) for context, and is transmitted by energy or matter and received by sensors, senses. When information is transmitted from a sender to a receiver, the sender and receiver must be intelligent and must share a set of common meanings (and sensory range) for the information to be communicated successfully.

I am quite certain, however, that the use of the word ‘information’ is much different now than it was fifty years ago, and most certainly, in the last five hundred years; the Merriam-Webster definition (feature quote, p. 1330, *ut infra*) is very broad, overlapping and confused – a sign of undirected, unrestricted, rapid development and changing of word meaning as it filters through many similarly rapidly developing, unbounded avenues of thought. It seems that our sense of information has changed almost imperceptibly by small degrees even as its volume has increased exponentially by generations. Some of the change is most assuredly tied to the modern time sense. In so many instances of common, daily speech, I now hear ‘information’ being used in a context where it appears to be a thing onto itself, objective – independent of the sender and receiver, and co-existent with the matter and energy used to transform, store, and transmit the information.

- ✓ “Thought has a sound, and a sound has a form...” – Dune (1965).
- ✓ “The Traveller used his thoughts to alter warp fields. Thoughts became reality. Now I’m in a warp field. Could my thoughts have changed this reality?” – Dr. Beverly Crusher, Star Trek TNG episode, “Remember Me” (1990).

Information is not ‘intelligence’ in any sense. Intelligence, at the very least, implies and requires the ability to process information, and in so doing, make it mean or reveal more than the sum of the individual pieces and bits. Intelligence looks for information when it matters. ‘Raw’ information, as any member of the intelligence community would state, is not ‘intelligence’ in any military sense. Raw information needs context. Even the dictionary entries for intelligence and information, seems to confuse news, information, and intelligence as if they were interchangeable.

- ✓ It is important to understand that dictionaries are a sort of journalism, they do not ‘create’ word meanings, but rather, they try to form a definition of a word from current and past usage, both technical and common. There is, of course, a feedback loop; reference to dictionary definitions tend to ‘stiffen’ or set meanings of words that are in flux or loose otherwise in a way similar to how the printing press in part ‘locked down’ the ‘correct’ spelling of words.

Military, political, and law enforcement ‘intelligence’ requires the application of human cognition – processing, organizing, deep learning (like AI Deep Learning, see The AI Problem excerpts in Corporations, *supra*) – to information collected by various means. Informants provide just that, information. Someone has to put the pieces of the puzzle together into a useful picture, extract patterns, meanings, facts, interpretations, and implications. One of the main errors of intelligence agencies is that they have often forgotten that intelligence requires application of intelligence, and does not solely consist of satellite images. Intelligence requires the collection, arrangement, collaboration and interpretation of information, it is not the information itself, but the creative, analytical thought applied to information.

Information is what the Concierge provides, intelligence is what the players make of it, what they bring to the game.

- ✓ “Intelligence is massively inconvenient. It actually typically steals some of the decision space of the president. So you are walking in there making things difficult because of what you are presenting. And you are limiting the choices because once it’s heard it is heard and it exists.” – Susan Gordon, CNN interview, December 3, 2019.

---

*“Information is the resolution of uncertainty; it is that which answers the question of ‘what an entity is’ and thus defines both its essence and nature of its characteristics. Information relates to both data and knowledge, as data represents values attributed to parameters, and knowledge signifies understanding of a concept. Information is uncoupled from an observer, which is an entity that can access information and thus discern what it specifies; information may exist beyond an event horizon, for example. In the case of knowledge, the information itself requires a cognitive observer to be obtained.*

*In terms of communication, information is expressed either as the content of a message or through direct or indirect observation. That which is perceived can be construed as a message in its own right, and in that sense, information is always conveyed as the content of a message. ... The uncertainty of an event is measured by its probability of occurrence and is inversely proportional to that. The more uncertain an event, the more information is required to resolve uncertainty of that event. The bit is a typical unit of information, but other units such as the nat may be used. ... The concept of information has different meanings in different contexts. Thus the concept becomes related to notions of constraint, communication, control, data, form, education, knowledge, meaning, understanding, mental stimuli, pattern, perception, representation, and entropy.”*

– from Wikipedia article, “Information,” July 26, 2019 (emphasis added)

---

**Processing... Please Wait:** Solving algebra problems in high school (you remember doing that right?) is an act of information creation – the algebraic process is a resolution of uncertainty (i.e. what is the value of X?). Framing information as the answer to “what an entity is” (*ut supra*) or what an ‘appearance’ is links information to both phenomenology and ontology. That is, something must appear first (i.e. the area of concern of phenomenology) before we can ask the question and the ‘is-ness’ is a term of being, existence (i.e. the area of concern of ontology). Thus:

- ✓ “In computer science and information science, an ontology encompasses a representation, formal naming and definition of the categories, properties and relations between the concepts, data and entities that substantiate one, many or all domains of discourse. Every field creates ontologies to limit complexity and organize information into data and knowledge. As new ontologies are made, their use hopefully improves problem solving within that domain. Translating research papers within every field is a problem made easier when experts from different countries maintain a controlled vocabulary of jargon between each of their languages.” – from Wikipedia article, “Ontology (information science),” July 26, 2019.

With this description of ontology in information science, the discussion has now reached back around to the outer edges of epistemology. Duplicate information resolves only veracity.

The primary barrier to humanity is the individual organic and the super-organic processing of information. Electronic computing has aided us somewhat, but we must know the correct questions to ask to shortcut the process, and it is knowing those questions that lead to cognitive understanding and not the speed of computers. However, computers are a far step from organic information processing evolution, they are the training wheels on your first bike.

---

**Definition of information**

*1: the communication or reception of knowledge or intelligence*

**2a**

*(1): knowledge obtained from investigation, study, or instruction*

*(2): intelligence, news*

*(3): facts, data*

**2b:** *the attribute inherent in and communicated by one of two or more alternative sequences or arrangements of something (such as nucleotides in DNA or binary digits in a computer program) that produce specific effects*

**2c**

*(1): a signal or character (as in a communication system or computer) representing data*

*(2): something (such as a message, experimental data, or a picture) which justifies change in a construct (such as a plan or theory) that represents physical or mental experience or another construct*

**2d:** *a quantitative measure of the content of information, specifically: a numerical quantity that measures the uncertainty in the outcome of an experiment to be performed*

**3:** *the act of informing against a person*

**4:** *a formal accusation of a crime made by a prosecuting officer as distinguished from an indictment presented by a grand jury*

– Merriam-Webster online dictionary, July 26, 2019

---

**Media Overkill:** The ‘information game’ overlaps, but is not entirely congruent with the ‘special operations game.’ The Special Operations part of the game occurs mainly later in the game rather than early in the game. The ‘information game’ however, plays constantly throughout the game as positions continually attempt to gather information on other positions and the local Galactic Space. It is not limited to activation of the Special Operations Power for the purpose of Reconnaissance, rather, the information game also involves Scouting by activation of the Expansion and possibly Combat Powers, as well as email diplomacy and communications between positions, and postings on the forums.

- **Poking and Pinging:** Reconnaissance in GGDM refers specifically to activities that would be called passive ‘listening’ or ‘observation’ (Surveillance, maintaining a presence) and active military reconnaissance (Probing, without the overt deception of Black-ops) against known or discovered alien locations. Reconnaissance and the ‘information game’ in GGDM does not refer to cyber warfare, hacking, or backdoor electronic surveillance, all of which would be more appropriate as Black-ops, see 1 and 2 Special Operations generally, *supra*. Counter-Operations Missions (COMs) (see CIT, 3 Special Operations, p. 1320, *supra*) are ineffective against Reconnaissance activations of the Special Operations Power and Special Operations Missions (SOMs) (see SOM-COMS, 2 Special Operations, p. 1289, *supra*) are not used or required (or even considered) in Reconnaissance activations.

Reconnaissance in Special Operations overlaps somewhat with Scouting in the Expansion Power, except that Scouting only works until the system is successfully explored and might not be specifically directed against or find alien locations. However, it may also be possible to cleverly pair activations of the Special Operations Power for Reconnaissance and Black-ops in the same Regular Turn and location so that they complement each other, but in any case, those are always two separate functions.<sup>1</sup>

---

**Sorceress:** *If I could look, what else would I see in there?*

**Ancient One:** *Confusion.*

**Sorceress:** *You tease me!*

**Ancient One:** *But it’s true. There’s the past, the future, the present, parallel worlds, the Big Bang, the second Big Bang, and the one to come. There’s even worm holes. It’s all terribly confusing.*

– *The BeastMaster* (TV series, 1999-2002)

---

**Many Names of Merlin:** The Ancient One in the uchronic BeastMaster television series has always reminded us of Merlin, which is likely quite intentional.

- ✓ “There are other worlds. This one is done with me.” – Excalibur (1981).

There is even a possible continuity between the reason given for the Ancient One’s disappearance at the end of Season 2 and Merlin’s actions in the Arthurian legends.

- ✓ The idea of multiple Big Bangs arises from debates about the possible cyclic universe and how the current universe might end. However, in the Dr. Who episode, “The Big Bang” (2010) ... he resets the universe (he can read the ‘source code’ of the universe on a cell phone) with the ‘second Big Bang.’ Dr. Who has, of course, been the modern Merlin of sci-fi television.

- ✓ See also The Cosmic Cycle excerpts, Wheel in the Sky, *infra*.

**Seeing is Bell-ieving:** There is a lot of information in this game, the game is admittedly information intensive and an exercise in understanding and analyzing information. The Concierge will freely report to players, as appropriate, information that is open and obvious to them, that can be seen by their units or that would be otherwise knowable to the position. For example, if **alien** Colony Ships arrive in the Capital Colony’s system, and were not somehow protected from detection, then it would be reported to the players of the respective positions by the Concierge as appropriate. Such reporting may not take the form of an Information Bulletin; rather, certain events such as the arrival and departure of ships will simply be reflected on the Public Spaces or elsewhere on the position’s information and will be up to the players to ‘look’ for and discover on their own. Therefore, players will have to look and study their turn results as they would in any other PBEM game.

- **Information Bulletin:** Rarely the Concierge may need to report important information to players of a position by email when the information would not be obvious by studying the Public Spaces. The subject line of these emails will be “Information Bulletin” which should not be confused with the special News Event posting by the Concierge on the News Event forum, called a “Special Bulletin.”

- ✓ Game information is a design problem inherent in what GGDM is (or isn’t depending on your view). People like games because the information is boxed and packaged and not overwhelming, the possible choices are both fairly clear-cut and important within the game context. GGDM, as a holistic simulation of civilizations has tended to become – naturally – like what it simulates; our civilization is experiencing currently information overload and publication proliferation and our previous cognitive systems are struggling to keep up as they slowly adapt over the next two centuries.

For example, in my experience in the legal profession, I learned from doctors that it is literally impossible to read even all of the critically important articles published in their sub-specialty, and ‘publish or perish’ (and routine CV inflation) has begun to damage our system in ways similar to credentialism and other related ills discussed in Wossamotta U, 3 Disruption, p. 287, *supra*. GGDM is the creature of its time and place, such a game would not have been possible half a century ago when I was born, due to the ability or inability of our worldview and technology to process voluminous information and keep it fairly clear cut, packaged and consequential within the game.

---

*“At present, human scientists are attempting to communicate outside our species to primates and cetaceans, and in a limited way to a few other vertebrates. This is inordinately difficult, and yet it represents a gap of at most a few SQ points. The farthest we can reach in our ‘communication’ with vegetation is when we plant, water, or fertilize it, but it is evident that messages transmitted across an SQ gap of 10 points or more cannot be very meaningful. What, then, could an SQ +50 Superbeing possibly have to say to us?”<sup>2</sup>*

– Robert A. Freitas, Jr.

---

**Xenology:** Though Mr. Freitas is best known in the nanotechnology field, publishing many articles on nanomedicine, and is a senior research fellow at the Institute for Molecular Manufacturing, he also holds a Juris Doctorate, and has published works on the legal implications of SETI, Xenology, and Metalaw. The paper, “Metalaw and Interstellar Relations” (supporting Dr. Fasan) is available on his website (xenology.info) as is his paper on Sentience Quotient as part of his book *Xenology* (1<sup>st</sup> Edition) that is free on the site as well. He also worked as a SETI researcher.

- ✓ “Xenology may be defined as the scientific study of all aspects of extraterrestrial life, intelligence, and civilization. Similarly, xenobiology refers to the study of the biology of extraterrestrial lifeforms not native to Earth, xenopsychology refers to the higher mental processes of such lifeforms if they are intelligent, and so forth.

The xeno-based terminology was first coined for this usage by the renowned science-fiction author Robert A. Heinlein (starting in *The Star Beast ...* 1954), though the first use of the related word ‘xenologist’ is apparently attributable to L. Sprague de Camp (‘The Animal-Cracker Plot,’ *Astounding Science Fiction* 69 (July 1949); ‘The Hand of Zei,’ 1950). This usage was subsequently defended by Heinlein and Harold A. Wooster in a 1961 article published in the journal *Science* (R.A. Heinlein, H. Wooster, ‘Xenobiology,’ *Science* 134 (21 July 1961):223-225) and by Robert Freitas in a 1983 article published in the journal *Nature* (R.A. Freitas Jr., ‘Naming extraterrestrial life,’ *Nature* 301 (13 January 1983):106).

The latter article drew a complaint (‘Xenology disputed,’ *Nature* 302 (10 March 1983): 102) from four specialist researchers claiming to represent ‘20 research groups in at least eight countries’ who preferred to retain use of ‘xenology’ for the study of xenon concentrations in meteorites (an argument that would not apply to other uses of the xeno- prefix) but their plea has largely failed. By December 2008, Google listed 20,600 entries for ‘xenology’ of which only 1140 referred to xenon and most of the rest referred to the extraterrestrial usage. Online dictionaries (e.g., Webster’s New Millennium Dictionary of English, 2003-2008) now typically define ‘xenology’ as ‘the scientific study of extraterrestrials, esp. their biology.’” – from *Xenology.info*, a website owned by Robert Freitas.

- A fascinating if petite study in how words tussle, develop and spread in our language.

**Xenobiology Section:** The ability of a position to accurately, more or less, estimate the Habitability Class and Maximum Habitability of a planet relative to another species, either as a result of exploration or observation, is at the judgment of the Concierge. The Concierge will take into account the technical expertise and capabilities of the position, as well as, the quality, quantity, and length of contact with the other species, including relevant Reverse Engineering attempts (see 3 Technology, p. 712, *supra*). For example, if two species have had First Contact but have not encountered each other’s colonies, the chances of accurately determining the suitability of a planet for colonization by the other species is lower than if the two species have shared colony planets and colony systems for an extended period of time and/or have a large Diplomatic Space.

- ✓ This issue comes into play during situations where a position might observe a planet as described in the next section, 2 Information, *infra*, or use Information Operation activations of the Special Operations Power to obtain xenobiological information.

- The Life of a Flea: Insofar as we can determine, the life of a flea consists of biting, breeding and migrating; no one seriously thinks of fleas as persons or of having any ‘purpose’ other than as a ubiquitous pest. And according to our intellectual scheme in which persons are valued most highly, we regard fleas as being very low on the scale and their individual deaths as being meaningless (or even good, from our point of view). But imagine that in contact between alien sapient species, whether First Contact, or Balkanization of a colony planet, that a few unnoticed fleas might mean the extinction of the other population (depending on biology). It may also mean that we cannot take our pets with us into space; even if no sapient species are encountered, the spread of fleas – alien to the biosphere of a new planet – could destroy the native life.
  - ✓ Pets rarely appear in space-opera fiction; there may be a few practical reasons – for example, life support systems, but mostly I suspect it is simply the focus on *humanity* going to the stars, *human* interstellar adventure. I was never a fan of Muffit in the original *Battlestar Galactica*; I know they were trying new things ... and it was 1970s television, they were doing the family in space, and if there was a (preadolescent) boy in the program he had to have a dog, and the dog had to heroically save them<sup>3</sup> ... but the robotic dog-like creature, especially as a recurring character, always felt corny, contrived and elicited eye-rolls. Mercifully, they omitted the daggits, both real and robotic (and chimp actors), and any mention of, from the reimagined *Battlestar Galactica*, but there was at least one real dog on *New Caprica* whose dish was flipped, though you never saw dogs elsewhere in the series. Which brings us right back to where we were in the beginning...

We have plenty of experience in this with the spread of species through colonization (the Columbian Exchange) or deliberate transplant from continent to continent on our world, which have often proved catastrophic for the local flora and fauna.

---

*“But what makes extremists extreme – whether they’re leftists, right-wingers, fundamentalist Christians, or anti-vaxxers – is a ferocious resistance to anything that contradicts their worldview. When you spend some time with young white nationalists on YouTube, Reddit, or 4chan, you understand that counter-information is nothing but fodder for validating their beliefs. And an attempt to force it on them only reinforces the whole weltanschauung of the new white supremacists: that there’s a massive global conspiracy to disempower white people and destroy Western civilization, accomplished by clamping down on free expression and hiding the dirty ‘truth’ about race, gender, global finance – everything.”*

– Bob Moser, “How YouTube Became the World Wide Leader in White Supremacy,” *New Republic*, August 21, 2017 (emphasis in original) <sup>4</sup>

---

**Selecting Bits:** Worldview is in large part a process of selecting which information we accept and rejecting other information if it doesn’t fit. Worldview is thus a discrimination.

We all do it, including myself. It is related to confirmation bias. It is possibly a defense mechanism of our cognition, and the current form may be a response to increasing complexities (see Tom Nichols excerpt, *The Campaign Against Expertise*, *Colleges*, *supra*) and/or a failure of culture to constructively fill the Existential Void. Worldview is thus, very much an information

game, often with consequences. The modern consequences are seen in the recently exhumed various forms of extremism and populism.

Our civilization has many levels at which it selects bits of the worldview. Peer review and editors select the bits which appeal to certain specialized or educated parts of the worldview. The news media (notably with editors) has long formed the layer below peer-review and learned journals. For a long time, there wasn't another layer until social media and filter bubbles formed that select only what we want to hear.<sup>5</sup>

- ✓ “In our founding documents, Billy Graham explains that Christianity Today will help evangelical Christians interpret the news in a manner that reflects their faith.” – Mark Galli, Editor, “Trump Should Be Removed from Office,” December 19, 2019.
- ✓ See Willful Ignorance, 2 Information, p. 1353, *infra*.

➤ Gag Reflex: I watched the two-minute trailer for the animated series *Ronja, the Robber's Daughter* and instantly decided I wasn't interested in an anime that flippantly tries to tell us how great life is and how wonderful is the world (I made it about half way through *Brave* (2012)). Now, if you accuse me of filtering, I plead guilty; I am not one to watch Hallmark special 'heart-warming' group huggy-type movies (whether for the holidays or otherwise). And like most guys, I don't go for roms or rom-coms very much, or teenage 'coming of age' movies, of which the *Ronja* anime seemed to be all three (to the level of gag reflex).

As a cynical adult male (e.g., GGDM), I have understood the world as petty, stupid, rude, nonsensical, dishonest, negligent and careless, sometimes dangerous, ruled by threat of force, and not fair (and not a lot of other things humans want to think) and my preferences in reading, music, and movies probably serve as *confirmation bias*; in this capacity, history (and the 24-hour news cycle which is the first draft of the next history book) is unequalled. I am simply not interested in being told that the world is wonderful, that life is a happy miracle, that everything is just fine, and that humanity is better than we think we are (which would mean that I am dead wrong on all counts) and that somehow I have missed out.

Such arguments are for children and adults with young minds, and they can hold onto them until the universe hits them over the head a few times.

- ✓ My 'teachable moment' long ago fell into one of the millions of black holes scientist tell us permeate the universe.
- ✓ Now, does that make me an extremist (in the non-militant sense, I am not planning on blowing up Toys 'R Us stores)? Or just a curmudgeon? The “ferocious resistance” described by Bob Moser above is not limited to the groups he names. *Confiteor*.

The point of this is that we all filter information to form our worldview. Being told or shown things that contradict our experience and view of the world, of reality, is like having to listen to the same lies over and over (they are lies because you already know they are).

- ✓ “Sometimes it happens that a man's circle of horizon becomes smaller and smaller, and as the radius approaches zero it concentrates on one point. And then that becomes his point of view.” – David Hilbert quoted by Constance Reid, Hilbert-Courant (1984), p. 174.

*“Peer review is the process that decides whether your work gets published in an academic journal. It doesn’t work very well any more, mainly as a result of the enormous number of papers that are being published (an estimated 1.3 million papers in 23,750 journals in 2006). There simply aren’t enough competent people to do the job. The overwhelming effect of the huge (and unpaid) effort that is put into reviewing papers is to maintain a status hierarchy of journals. Any paper, however bad, can now get published in a journal that claims to be peer-reviewed. ...*

*The only people who benefit from the intense pressure to publish are those in the publishing industry. Hardly a day passes without a new journal starting. My email inbox is full of invitations to publish in a weird variety of journals. They’ll take just about anything. The US National Library of Medicine indexes 39 journals that deal with alternative medicine. They are all ‘peer-reviewed,’ but rarely publish anything worth reading. The peer review for a journal on homeopathy is, presumably, done largely by other believers in magic. If that were not the case, these journals would soon vanish.”*

– David Colquhoun, “Publish-or-perish: Peer review and the corruption of science,” *The Guardian*, September 5, 2011 <sup>6</sup>

## Endnotes.

<sup>1</sup> Commentary: The Information Section was originally titled Intelligence (around 2000), but was changed to broaden the scope and to avoid confusion with Special Operations. While final editing the Expansion section in June 2018, I discovered a remaining reference to the “Intelligence Section” of the rules.

<sup>2</sup> Commentary: We may, in fact, be part of some superbeing’s ant farm. I might also be sitting in a padded cell fantasizing that I am an expendablewannabeintellectualparalegalgamerretailerhomeowneragingfailure. It’s an intriguing idea, but like the recent ideas that the universe may be a hologram or a computer program, it is not immediately clear how that knowledge is useful or how it would change our worldview. Our musings about such things – like religion – likely *matter more than any actual confirmation of our musings*.

✓ See discussion of *a priori*, Crack in the Temple 1 Beginnings, p. 27, *supra*.

<sup>3</sup> Commentary: Similar to the rule that every serious movie and or adventure/police television show – except Westerns – had to have a car-chase scene. Which is what made the beginning and ending of *The Gambler Returns: The Luck of the Draw* (1991) so amusing – the movie, set in 1906, begins with a Western horse chase scene, and ends with a car chase scene.

✓ The Gambler Series through the 1980s, was the last hurrah of the television Western movie or TV series, and fittingly, the Gambler IV in 1991 featured cameo appearances of nine aging 1960s Western TV series stars at the ‘final’ poker game in San Francisco. There certainly was a feeling through the 1970s into the 1980s that the United States was no longer a ‘frontier country’ and that attitudes, music, dress, had become urbanized. We no longer culturally identify with the Old West or the frontier ‘values’ and this is what irks conservatives most. The fictional, idealized Old West had run its course, there are only so many times you can tell the same basic story set in the 20-30 year period (about 1865-1895) of the classic Old West.

✓ I remember thinking that the Pet Shop Boys “West End Girls” (1985) was a parody of the fading of the Old West from our culture, the end of frontier society. I apparently completely misunderstood the lyrics on the radio and it doesn’t appear that anyone else heard it that way (I never saw the music video).

<sup>4</sup> Commentary: I found this in a comment section of an alien invasion movie video on YouTube:

- ✓ “I get the fact this is science fiction...BUT!!... the truth is... The Luciferians are manipulating and brain-washing Us to prepare to accept the coming ‘alien invasion’ or...Revealing, announcement of ‘contact’! and it’s going to Rock everyone’s mind! especially when they affirm that they’re our REAL creators! and viola’ the great biblical ‘falling away’ will increase across the earth, and your average Catholic is going to crumble!! Because the Pope will be behind this deception!”

Uh, yeah, ok. Sure. Because it’s posted on YouTube, it’s hard to tell if the poster is being serious or just violating Poe’s Law (notice no emojis) while trying his comedic hand a provoking nutcase responses in a comments section. Either option is somewhat concerning; the poster should probably just work this into a novel instead. Maybe the poster was doing ‘Biblical research’ on alien invasions on YouTube?

<sup>5</sup> Commentary: War movie clips involving East-West battles have become a favorite target; if you scroll down the comments of just about any of the clips, you will shortly find a racist snipe, e.g., a foreign movie clip about the Siege of Plevna in 1877 has a comment below, “Those days when Europeans knew it [sic] how to talk with barbarians unfortunately gone...” It seems that the *militant wannabe brand of racist* seeks their jollies in B-rated war film clips on YouTube featuring Europeans vs. anyone else when the Europeans are winning and inflicting carnage.

<sup>6</sup> Citation: “Frequent publication is one of the few powerful methods at scholar’s disposal to demonstrate academic talent to peers. Successful publication of research brings attention to scholars and their institutions. This in turn may bring in more funding for the institute and also ensure an individual’s progress through their field. Academic institutions and university frequently use the number of publication to an individual’s credit as the measure of competency. ...

The emphasis on publishing has decreased the value of the resulting scholarship as scholar must spend time scrambling to publish whatever they can manage, rather than spend time developing significant research agenda. The pressure to publish-or-perish also detracts from the time and effort professors can devote to teaching undergraduate and post-graduates. The rewards for exceptional teaching rarely match the rewards for exceptional research, which encourages faculty to favor the latter whenever they conflict. ...

This pressure to increase the number of publications has led to unethical practices and waste full [sic] research. The increase in the number of publications has led to the growth of many new journals. In 2006 alone, approximately 1.3 million peer reviewed scientific articles were published, aided by a large rise in the number of available scientific journals from 16,000 in 2001 to 23,750 by 2006. The increasing scientific articles have fuelled the demand for new journal. There is a ridiculous proliferation of scientific journals of all kind. Every other day we see a new journal cropping up. So the question arises, are we heading in the right direction? The acceptance and appreciation of a publication is frequently gauged by citation index. Only 45% of the articles published in 4500 top scientific journals are cited within the first 5 years of publication, a figure which appears to be dropping steadily. Only 42% of the papers receive more than one citation, 5-25% of these are self-citation by the authors or journals. Majority of the publications still goes uncited. This means that neither they are appreciated by the peers nor they are of any importance to the industry or patient. Research is essential to carry science forward. It importance in improving patient care cannot be denied. However, equally important is the fact that the research done actually benefits patient, physician and community at large. Most of the published research works are done just to improve the curriculum vitae (CV) of the researcher and they do not find any merit in practical terms. A thought must be spared by the researchers for the quality of research being carried out. ‘Publish or perish’ is now becoming the way of life. It is race to get more and more publications to one’s credit. The current trend is forcing scientists to create publishable research. This is giving rise to fraudulent researches. Fraud research may corrupt scientific medical literature and ultimately harm our patients.

The increasing number of publication have led to rise in unethical practices, dubious research practices such as salami slicing, plagiarism, duplicate publication, fraud, ghost authors etc. Fraud is defined as fabrication or falsification in performing or reporting research results. No one could forget the famous fraud of Piltdown man. In this forgery, the lower jawbone of an orangutan combined with the skull of a fully modern man and touted as the discovery of the missing link postulated as the intermediary in the evolution of hominids from apes. The skull was found in a gravel pit at Piltdown in England by Charles Dawson in 1912. It was only in 1953, almost 40 years later, that it was exposed as a forgery.

It is frequent to find that the head of departments and senior professors are producing a dozen publications in a year. This means that the person have conceived idea, submitted protocol, got Institutional review board clearance, done the research, wrote the paper and published it every month. It is virtually impossible for a human being to do this.

Being a professor/consultant sometimes automatically implies that whatever papers goes for publication from their department will bear their name. But this is unethical practice and should be discouraged at all levels.” – Seema Rawat and Sanjay Meena, “Publish or perish: Where are we heading?” *Journal of Research in Medical Sciences*, February 2014.

- ✓ “Research fraud, more politely termed questionable research practices, has been receiving increasing attention in the academic literature and in journal editorial circles. The Journal of Marketing Channels (JMC) Editorial Review Board and originality checking software (i.e., CrossCheck) have found several instances of questionable research practices ranging from submitting a paper for publication already published elsewhere (i.e., self-plagiarism) to a paper whose front end had many problems followed by a discussion and conclusions section that was state of the art. CrossCheck flagged the discussions and conclusions section as being verbatim from an unusual source: an article already published by completely different authors (i.e., plagiarism).

[Note 1] As I live and work in a multicultural, multilingual environment in Hong Kong, I should also mention that self-plagiarism would include publishing the same paper in a different language.

Plagiarism and self-plagiarism are particularly troubling questionable research practices for journal editors as we have a responsibility to strictly adhere to applicable copyright laws of the United States, especially as articles published elsewhere and then republished in whole or in part a second time in a different journal are likely to violate copyright restrictions associated with the prior publication. Editors, reviewers, and authors simply must not knowingly violate the publisher’s guidelines regarding the exclusivity and proprietary nature of other authors’ intellectual contributions. Consequently, every submission and revision at JMC is checked for originality with the CrossCheck software. ...

I have already mentioned plagiarism and self-plagiarism as ethical violations of considerable concern. Related to self-plagiarism is dual submission, which involves publishing the same or almost the same results in two or more journals. This practice often involves using the same results or the same data sets with slightly different twists in multiple articles that probably do not justify additional publication: results that are closely related should be published in the same article.” – Neil C. Herndon (Editor), “Research Fraud and the Publish or Perish World of Academia,” *Journal of Marketing Channels*, July 14, 2016.

- And perhaps this title from Shanghai Daily, October 10, 2011, says it most concisely: “‘Publish or perish’ leads to fraud and paper bubbles in research.” China has the same problem as Arizona State University, e.g., “Plagiarism professor stripped of prize,” *China Daily*, February 11, 2011. See Paper Bubble, 2 *Technology*, p. 709, *supra*.
- I spent a week in Hong Kong in July 1988 docked at the British Naval Base HMS [Her Majesty’s Shore] Tarmac, I remember the hydrofoil ferries, the enormous harbor, the China Fleet Building and learning that ‘arcade’ meant something different in Brit dialect. I brought back a copy of Stephen R. Donaldson’s *Mordant’s Need*, Vol. 2 (1987) which I still have in the original yellow plastic bag from The Times Book Centre.
  - As mentioned previously in No Conspiracy Here, 3 *The Big Bang*, p. 19, *supra*, GGDM has not been peer reviewed (I am not even sure who would or could in any event – commercial copy editing is not peer review – I have done my own copy editing so any goofs are on me) *and when I eventually perish, it won’t be for lack of publication of GGDM!* The abundant quotes and citations show both that my originality is sparse and ignoble, and that I – very conscientiously – do not engage in plagiarism. GGDM is a work done the ‘old way’ – a lifetime ‘research’ project just because ... with the vain hope it means something.

*“In politics and in life, ignorance is not a virtue,’ [President Obama] told the more than 12,000 graduates in New Brunswick, New Jersey. ‘It’s not cool to not know what you’re talking about. That’s not keeping it real or telling it like it is. That’s not challenging political correctness. That’s just not knowing what you’re talking about. And yet we’ve become confused about this.’”*

– Rachel Smolkin, USA Today, May 16, 2016 <sup>1</sup>

**An Observation:** GGDM is non-political or tries, as much as possible, to be about the future and not the politics of the here and now. GGDM is a generativity.

- ✓ “And what I like about this is that [Noam] Chomsky has shown a commitment not to allow the forest to be missed for the trees. ... What is so important about this is that Chomsky distills the importance of not messing around with these sidebar arguments.” – David Pakman, The David Pakman Show, June 24, 2020.<sup>2</sup>

Quotes are included not for political purposes, but because they add something useful to the conversation. Obama was the President of the United States, regardless of party affiliation and so now is Trump, and is an important historical figure, but anyone could have made the same point and it would still be just as useful but less quotable. Phyllis Schlafly is also quoted in GGDM – and it would be hard to imagine two figures more politically opposite than Obama and Schlafly – but both have been quoted because they have something useful to add to the conversation. Hitler is quoted too, as is Frederick the Great and Robespierre and Spock and G’Kar for the same reasons. The following disclaimer found at the bottom of [military-quotes.com/Hitler.htm](http://military-quotes.com/Hitler.htm) is the standard in apologetics:

- ✓ “This collection of Hitler quotes was not made to glorify Hitler in any way. But whether we like it or not he was an important part of our history and we must never forget the great atrocities committed by Hitler and Nazi Germany.”

Or just because he’s a bad guy, doesn’t mean he doesn’t have something interesting to say.

- ✓ Unfortunately for the future of humanity, the recruiters of Tomorrowland (2015) recruited Hitler into the future on April 30, 1945 because he was a dreamer who wouldn’t quit, and dreamers must stick together! Right?

*“But one of the most important legacies of the Hubble Deep Field was how it changed the culture of astronomy. [Robert Williams, audio interview] ‘Until this time, astronomy had a history of people taking the data and keeping it to themselves until they had fully analyzed it. After all, this was intellectual property.’ Instead of hoarding the discoveries embedded in the dataset, Williams and his team formatted and released it immediately to the wider scientific community. It’s been cited in hundreds of papers. [Robert Williams, audio interview] ‘Nowadays, it is so much more common for people to take interesting observations and make the data available to the public even though they might have a right to keep it for a certain period of time to themselves.’”*

– Vox Video Article, “The 1995 Hubble photo that changed astronomy,” Vox YouTube Channel, September 21, 2016 <sup>3</sup>

**Datastream:** The now is here, today, and thus already really in the past like the liquid you sip from a cup, by the time you taste it it is already past. Taste is sensory data, information, input; this is why animals depend so much on smell, if it doesn't smell right, they won't eat it.

Not so humans. By the time we perceive information, it is already past the moment when it occurred; information is always old news. This is the core effect of one-directional time sense; we cannot perceive information before it happens, is created, exists (that is the fascinating business of psychics, see Farsight, 3 Information, p. 1362, *infra*). Information is always in the past, the now is information which we perceive after it has already gone.

- **The Intelligence Puzzle:** During the wonderful summer I spent in battlefield intelligence school, I decided that intelligence is like three-dimensional party puzzles that drunk people play: The pieces keep moving; nobody is sure how many pieces there are supposed to be, and worse yet, nobody knows what the whole picture is supposed to look like when finished.

---

*“The intelligence community will fight hard against a threat to its culture of avoiding open partisanship, former senior CIA operations officer John Sipher told NBC News. ‘It’s all about professionalism and taking the world as it is. There is no such thing as Democratic or Republican intelligence. It is what it is, no matter how inconvenient.’”*

– Ken Dilanian and Pete Williams, “Intel officials worry Trump’s pick for top spy will politicize the job,” NBC News, July 29, 2019

---

*“When it comes to the defense of our experiment in democracy and our way of life, ideology should have nothing to do with it. Whether asked to serve by a Democratic or a Republican, you serve. ‘Politics ends at the water’s edge.’”*

– Gen. Jim Mattis (USMC Ret.) op-ed, “Jim Mattis: Duty, Democracy and the Threat of Tribalism,” Wall Street Journal, August 28, 2019

---

**One-Way Mirror:** Observation begins with the arrival of any friendly unit in the system. Observation occurs automatically whenever any ship or sovereign colony is in a system with a ship or colony not owned by the owner of the ship or sovereign colony (i.e. any friendly unit in the same system with alien units). ‘Observation’ reporting involves answers to the basic question of ‘what an entity is’ (see feature quote, 1 Information, bottom p. 1329, *supra*) or what an ‘appearance’ is. The answer depends on how close you want to get, and/or how long you are willing to wait around. Information in Galactic Space is obtained three ways: by automatic, passive Observation requiring no specific Power Activation (like your eyes and ears), and by Surveillance and/or Probing which requires an activation of the Special Operations Power for the purpose of Reconnaissance.

- ✓ “Sensors do not read radiation in the same way that communication receivers do. They do not read signals for meaning, but look for intensity and patterns over time among many signals.” – Dave Nilsen, “When Empires Fall II,” Challenge Magazine, Issue 69, February 1993.

- See Processing... Please Wait, 1 Information, p. 1330, *supra*.

- **ABBA Arrival:** Upon arrival in a starsystem, the owner of the arriving ships will automatically see all colonized planets (orbits, owners, but *not* numbers of population factors, Native

Population Types *or* enhancements *or* political status except Capital Colony) and will see ships at colony planets and ships in the system (owners, types, numbers, but *not* cargo or enhancements), and whether or not the colony planets have orbital installations (numbers, but not types). There is also a 50% chance to detect each combat (including Besieged Colonies) in progress in the system, providing the name of the combatants and the type of combat.

- ✓ The Concierge may carve out some limited exceptions to this rule, for example, a *Low Population Colony* (see 4 Taxation & Census, p. 326, *supra*) with little or no industry and no orbital installations, nothing in particular to give away its presence on a big wilderness planet, might be allowed to escape instant detection.
- ✓ Additionally, no report or a partially inaccurate report may be received if the arriving ship(s) initiate combat, join an ongoing combat, and especially if they are destroyed (e.g., by exploration Hazard Roll, see Then Never Comes, 3 Expansion, p. 907, *supra*).

Conversely, arriving ships will be seen and noted by any other position whose units are in the system, so arrival observation works both ways when someone is arriving and someone is already there. However, if a ship is destroyed during exploration, *it might not be noticed*.

- ✓ See discussion of GGDM’s generous sensor rules, Riding the T, 3 Temporal Technology, p. 828, *supra*. Note that ships which successfully enter the system surreptitiously will not be automatically detected by units already present.
- **Freeze Frame:** While Observation does not require a Power Activation, it does require submission of Regular Turn Actions from positions that indicate that they are ‘looking’ (i.e. still playing in the game): The information received from Observation is reported as part of the results of the Regular Turn Actions and represents a ‘snapshot,’ or photograph, of the situation in that place on the moment the results were generated. All news in space is old news.
- ✓ Ships executing Short Movement arrive at the end of the turn in which they began movement ... thus they will be present between their owner’s Regular Turns for all other positions to see on their Regular Turns. That’s a possible downside observation-wise, whereas, ships executing long movement are still *en-route* and arrive at the beginning of their Regular Turn, but are not there for critical ‘beginning of the turn’ supply activities . See Space Hop and Long Jump, 2 Movement, pp. 850-851, *supra*.

Observation reporting on Regular Turn results should not be confused with initiation of Combat by other positions on their Regular Turns that occur between your Regular Turns. A position *will always be notified when they are attacked* between their Regular Turns so that they can submit Combat Orders for the first Combat Round. See Capoiera, 3 Combat, p. 970, *supra*. This is necessary because GGDM runs on a continuous Regular Turn Cycle (see The Law of Periods, 2 The Streams of Time, p. 84, *supra*) and because Combat Rounds run independent of Regular Turns in GGDM (see Relativity, 2 The Streams of Time, p. 85, *supra*); i.e. ships arriving by Combat Movement that weren’t there before could initiate combat.

- ✓ When we see a picture of Alpha Centauri, we are viewing it as it was approximately 4 years ago. Information from Observation in GGDM gets old quickly due to the Turn Cycle. Things may happen, come and go, from the system that are never reported because they *occurred between Regular Turns* of the position that owns the observation ship or colony.

- Pistols & Posies, Patience: When the Special Operations Power is activated for the purpose of Reconnaissance, the position may use either an Act or a Scene, regardless of whether a sovereign colony is in the target system. See Acting Lessons, 1 Special Operations, p. 1274, *supra*. The position may choose to use a Scene on a sovereign colony in the target system if such exists, risking a possible Power Activation failure based on the Constructural Elements at that colony. However, using a *Scene*, instead of an Act, also *enhances* the possible results of Surveillance and Probing.
  - ✓ It is also possible that a position may choose to use a Scene because it is there and because no Acts are available on the Powerstrip or the available Act(s) is being used for additional Special Operations Power activations in the same Regular Turn.
- Went to a Garden Party: Enlightenment may be used in Special Operations Power Activations for the purpose of Reconnaissance, but cannot be used in regular Observation (for example, the 50% chance of detecting an ongoing Combat in the system) as no Power Activation is associated. Failure to obtain the information in a Reconnaissance activation is a clear ‘no’ result that will trigger use of Enlightenment if such has been assigned (see Harsh Mistress, 2 Colleges, p. 478, *supra*), if the unit involved has an active Epistemological Constructural Element (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*).
  - ✓ It’s a cost-benefit risk calculation. Each Faculty used only affects one die roll result under certain situations. But you never know when that one reroll might provide the key information. You need to *look...*
- Private Eyes: ... are watching you! Activation of the Special Operations Power for the purpose of Reconnaissance must target all friendly units in a system where at least one friendly unit is present. For *each* friendly unit present, the Power Activation must designate either Surveillance or Probing. Both are possible in the same system in the same Regular Turn and can augment each other. All game units are capable of Surveillance to a greater or lesser degree, only ships, system boats and colonies with a Fighter Complement are capable of Probing. See discussion of game units, View from A Height and Fine Print, 1 Construction, both p. 660, *supra*. Units are *unable to participate* in the Reconnaissance activation if they are:
  - ✓ Currently engaged in combat, or ordered to initiate combat during the same Regular Turn as the Reconnaissance;
  - ✓ Ordered to Load or Unload anything at a Besieged Colony (i.e. Blockade Running, see 4 Commerce, p. 1233, *supra*);
  - ✓ A Besieged Colony (see 3 The Sidereal Stage, p. 124, *supra*);
  - ✓ Ordered to Land to create a new colony in the target system (see The Landing, 4 Expansion, p. 920, *supra*);
  - ✓ Ordered to initiate interstellar movement from the target system during the same turn as the Reconnaissance activation (see generally 1 Movement, 1 and 3 Expansion, 1 Combat, 1 Commerce, *supra*);
  - ✓ Loaded on a ship; that is, Ground Units, Fighters, Population Factors on ships have no observation/surveillance ability independent of the ship.

In short, if you are fighting, running, cowering, cargo, loading, landing or leaving, you are not able to engage in Reconnaissance.

- ✓ Ideally, with a computer assistant all eligible units in the target system will display so that boxes can be checked for either Surveillance or Probing. Failure to designate a unit for either might either be handled as default Surveillance or that the unit does not participate in the activation (if eligible, *ut supra*). Whichever way it is handled should be done consistently across all cases.

➤ Taking it all Down: In the clever sci-fi short, “Telescope” (2016) by Collin Davis & Matt Litwiller (DUST Channel on YouTube), images showing the past conditions of the Earth were captured by a ship jumping outward at FTL speeds. Surveillance in GGDM however, is not about the past – it’s a snapshot of now – but it might be useful sometimes to consider this a possible form of surveillance, past conditions might be captured in light reaching other stars by very fine-tuned equipment. All news in space is old news.

Units at a location that are assigned to Surveillance by activation of the Special Operations Power for the purpose of Reconnaissance may or will attempt to report observed events at their location that occur *between Regular Turns* that can be seen within their sphere. In short, Surveillance continues Observation between Regular Turns, turning the ‘snapshot’ into a short film, but the results are still only received and available on the *next* Regular Turn results. Sphere in this sense refers to their sphere of operations, that is, the Combat Type(s) in which they could engage/initiate as discussed in Keep Your Friends Close, Your Enemies Closer 3 Combat, p. 972, *supra*, if they were hypothetically able to do so (e.g., hypothetically in the case of Cargo Ships, Colony Transports, etc.).

- ✓ For example, a colony will naturally see anything that comes within its orbit or lands on the surface as it can be engaged as a defender in a Colony Combat or Ground Combat. A colony that has a Fighter Complement may engage in Ship Combat in system space and thus may report events in System Space during Surveillance. Ground Units, which may only engage in Ground Combat, will only see events on the surface of the planet where they are located; Ground Units on ships don’t see anything, *ut supra*.
  - At the discretion of the Concierge, Low Population Colonies (see 4 Taxation & Census, p. 326, *supra*) may not be able to notice ships that come into orbit at their planet, and even less likely ships entering their system (having only a high-school telescope). This is the flip side of not being noticed upon arrival, *ut supra*, by virtue of having little industry and no orbital installations. This is a subject well covered in science-fiction literature, e.g., Robert Sheckley’s “Skulking Permit” (1954) and the Twilight Zone episode, “On Thursday, We Leave for Home” (1963).
- ✓ Another example, a Cargo Ship can be attacked in Ship Combat, so its sphere for Surveillance is System Space and whatever might be observed at colonies since it can load and unload at colonies.

Events refer primarily in this case to overt Power Activations at that location by another position, as long as such could be noticed, e.g., ships arriving or leaving are likely to be noticed, Census Power activations might prompt a report of the approximate population of a colony to appropriate units on Surveillance, but recruiting Counter-Operations Missions wouldn’t be noticed. Events also include Combat Orders and results of Combat Rounds that can be seen.

- Field Reports: Surveillance automatically detects changes in all of the conditions apparent to basic observation (see ABBA Arrival, p. 1340, *ut supra*) – which may be the result of other positions’ Power Activations or Combat Orders – plus there is a 5% chance that each unit involved in the Surveillance may obtain a nugget of information not available to regular Observation. For each unit that could possibly observe the potential target (due to their sphere of observation, *ut supra*) there is a small chance that each of the following may be determined (each is treated as a group):
  - ✓ Number of population factors on each colony and Colony Ship.
  - ✓ Native Population Types present on each colonized planet (even if in Orbital Cities) and Colony Ships.
  - ✓ Colony political status (Capital Colonies are automatically known in Observation).
  - ✓ Enhancements currently on each colony (not colonized planet as they can be Balkanized), including Fighter Complements, Ground Units, and Industry.
  - ✓ Types and numbers of each colony’s current Orbital Platforms (Ship Yards, Orbital Cities, Orbital and System Defense Bases, unfinished Keels).
  - ✓ Cargo currently on each Cargo Ship or the contents of each Log Ship.
  - ✓ Enhancements on each ship present (this includes Fighter RPs).
    - I believe from the various questions that I have read online at Quora, Stackexchange, etc. that if ten units have a 5% chance each of success, they have about a 40% chance of success collectively. As I am un-schooled and a dunce, if this is incorrect or unsatisfactory in play, the percentages can be adjusted.<sup>4</sup>

Being located on or *at the same planet* as a colony engaged in Surveillance during the inter-turn period should *double the chances* of that unit obtaining information, i.e. colonies sharing the surface of a Balkanized world or ships loading, unloading, or transferring, or being built at that world.

- ✓ The Pirates broadcasters have noted many times that all of the teams have the same information, yet in pitching and defensive shifting, they come to different conclusions about the same hitters. So, even in terms of *objective statistical information*, there is interpretation. Even medical tests and imaging are ‘interpreted’ and subject to competing interpretations.<sup>5</sup> For example, patients ask for a second opinion on critical medical decisions; consistency of opinion or interpretation from the same information is a bit of an issue that bedevils our civilization, and has since politics, war and ethics were invented. In baseball, it is commented that you can take stats and make them mean anything you want.
- One Is the Loneliest Number: There is no defense to Observation or Surveillance other than being alone. To share a system or a planet with aliens is to be exposed to automatic Observation and possible Surveillance (just as you have no expectation of privacy in a public place or walking down the street or posting to YouTube forums). The only way to avoid or correct the problem is to take action: someone has to leave.
  - ✓ “I’m getting tired of your meddling. This town ain’t big enough for the both of us and I’m going to give you 24 hours to get out. If I see you in Carabinas by this time tomorrow, it’s you or me!” – Nick Grindell, *The Western Code* (1932, IMDB quotes).

Note that being subjected to Observation or Surveillance cannot possibly act as a Conflict Check in Government Titles because they are passive and the position may not be aware they are occurring. However, there are several Conflict Checks relating to not sharing planets or even systems with aliens.

- Ground Support: If a Scene was used in the Reconnaissance activation instead of an Act, and a Power Failure did not prevent the activation, the base chance described above for Surveillance results is 8%, which can double to 16% if located on the same planet (*ut supra*).
  - ✓ Any realistic basis for the Scene enhancement is thin at best, perhaps local ‘ground support’ makes the resource difference in effective Surveillance. It is mostly a reward for the game mechanical risk of Power Activation failure.

- Compiling Dossiers: Observation and Reconnaissance reports (whether Surveillance or Probing) are secret information belonging only to the position that owns the units performing the task. Thus, other positions don’t know what has been seen, what other positions present may know or not know; this creates situations where cooperation and bluffing are possible in the game via player emails and informal diplomacy discussed in Greys Diplomacy, 1 Diplomacy, p. 1097, *supra*. The Concierge will not provide clarification or additional information.

Intelligence work is what the position players extract, interpret from the Observation and Surveillance information included in their Regular Turn results. For example, in a system with colonies and ships from several positions, a specific Scout Ship has been present for several Regular Turns (Scout Ships have *extended* OSL/OFL limitations, see Imperial Interstellar Scout Service, 3 Movement, p. 855, *supra*). On the next Regular Turn report it is not there. What happened? Did it leave, or was it destroyed, or was it scrapped? Informal diplomacy may answer these questions, depending on who you trust to tell the truth. However, if the position had Surveillance in the system, they may receive a report stating that the Scout departed, or perhaps that it was destroyed by another hostile position’s ships, perhaps indicating the start of a war. But in any case, unless it involves a direct attack on the position via initiation of Combat, none of this will be known with certainty until the next turn results.

- ✓ The Cold War was legendary for the surveillance games on both sides. I remember watching a news program or documentary where retired engineers at White Sands Proving Grounds spoke about testing jet engines. They knew when the Soviet satellites would pass over. In between, they’d roll the engines out to the concrete platform, run the tests, then take them back in the hanger before the Soviet satellite passed overhead. The Soviets would only know that they tested because of the heated air and concrete, but could not otherwise see what they were doing at White Sands.
  - It had become an important issue by the end of WWII, before satellite surveillance. Before the D-Day landings, the Allies carried out an elaborate deception plan called Operation Fortitude, including constructing a fake army commanded by General Patton, complete with command staff and rubber inflatable Sherman tanks. The bull wasn’t fooled though, because bulls are experts at ... bull, as in BS. According to Brian John Murphy, “Patton’s Ghost Army,” America in WWII (article undated), a bull charged and rammed one of the fake Sherman tanks used in the deception and the English farmer watched it deflate into a pile of rubber in his field.

- The Germans also used fog, forest and camouflage to disguise the buildup of armored spearhead forces from aerial reconnaissance flights prior to the initial attack at the Battle of the Bulge in December 1944.

*“We all know interspecies romance is weird.” – Tim Burton*

---

**Alien Probes:** Surveillance works best when many units are present from the side performing the Surveillance (lots of eyes and ears, many angles, like a search for a fugitive or a missing child); it is thus less effective in situations where a side has only one ship, probably a Scout Ship, in the system and desires to obtain information on a target colony or fleet of ships very quickly.

This situation is filled by activation of the Special Operations Power for the purpose of Reconnaissance and assigning a ship or ships to Probing (i.e. ‘the quick and dirty’ solution). Both Surveillance and Probing can occur in the same Reconnaissance activation, but each unit involved can only do one or the other. All Probing is resolved before Surveillance at the same location; this is important when Enlightenment has been assigned to the Reconnaissance activation.

- ✓ Probing does not cause a Disruption Event at the target colony regardless of the outcome, see *Burning Sky*, 2 Disruption, p. 275, *supra*.
  - ✓ It is possible, though they are not mentioned above, for Ground Units to also engage in Probing, limited to opposing colonies or targets on the surface of the world where they are located. The Probing procedure below is written on the premise of Probing attempts from space, but could be adapted for Ground Unit Probing attempts, with the caveat that Fighter Complements would be much better for the same task.
- **Flyby:** Each ship (or System Boat) or Fighter Complement assigned to Probing must be given an objective. The objective must either be all ships of a target position in the system or a planet (not specific colony) by Orbit Number. Multiple units can be assigned to Probing the same objective forming a ‘reconnaissance in force’ at that location. Units assigned to Probing do not need to be able to initiate combat, thus Cargo Ships can Probe at great risk.
- ✓ Merriam-Webster online dictionary at *flyby*: **2a:** a flight of a spacecraft past a celestial body (such as Mars) close enough to obtain scientific data.
  - ✓ “The Abwehr had prying eyes, too: reconnaissance planes that flew at 33,000 feet over the English countryside trying to spot FUSAG units and record their activities and movements. The British and American air forces had to be careful to let the Luftwaffe snoop through to see the mock preparations on the ground, yet not let the flights seem so easy as to raise suspicions.” – Brian John Murphy, “Patton’s Ghost Army,” *America in WWII* (undated article).
- **Bloody Noses:** Each Probing attempt is resolved separately, even when multiple units are Probing the same objective. There is a 50% chance that each ‘combat unit’ or enhancements (i.e. Defense Bases, Fighter Complements) at the objective will *fire once* at the Probing unit. This fire will be *normal fire*, not expending Ship Missiles or other expendable enhancements

and all normal Combat Shifts apply (i.e. Scouts Defensive Shift). If multiple units Probe the same objective, the same defending units may attempt to fire at each Probing unit, a defender may have multiple fire opportunities during various Probing attempts.

- ✓ A Probing is a reconnaissance-in-force skirmish, it is a combat to those involved, thus Combat Shifts apply. It is not a Combat Power activation, however.
- ✓ If the Probing unit is a Fighter Complement, Close-in Defense Fire will occur; if the defending unit is a Fighter Complement, it will make an Interception Attempt with both Sorties on the Probing Unit; if both are Fighter Complements, a Dogfight will occur (see Dogfighting, 3 Carriers and Fighters, p. 1072, *supra*). Interception attempts in Probing only occur when the defending unit is a Fighter Complement, as regular units cannot Intercept Fighters but Fighters can Intercept regular units. *Id.*

Defensive fire occurs automatically, no Combat Power Activation is necessary or used on behalf of the defender in attempting to repel **Alien Probing**. Enlightenment cannot be used in defense against Probing. Targeting and resolution are handled automatically and firing units are determined randomly. The defender will be informed that Probing has occurred, *but not what was learned*, with a 50% chance that the assailant will be identified.

- ✓ It would be incredibly problematic to require the defender to have a Combat Power activation at that location to defend against Probing. Such would allow aggressors to burn off Combat Alerts by Probing.
  - ✓ It is possible that there will sometimes be no defense against Probing attempts. The target planet or ships may have no combat ability, or all defenders might fail their 50% chance to fire (flip a coin, get tails ten times in a row) or may simply miss with all of their fire attempts (like an 80s Miami Vice shootout scene) at the Probing unit.
- Never Tell Me The Odds: The Probing unit does not fire at the defenders, except that it may fire Close-in Defense against Intercepting Fighter Complements. The Probing action is finished when all of the shooting is done, no retreat is necessary or is considered to have occurred on either side. Enlightenment assigned to the Reconnaissance activation cannot help Probing units survive as Enlightenment can never be applied to opposing die rolls (see Army of Light, 2 Colleges, p. 479, *supra*), however, Close-in Defense against defending Fighter Complements may expend some Enlightenment assigned to the Reconnaissance.
- Results Rolling In: There are three possible results of Probing. If the Probing unit is not hit, it is successful, if the Probing unit is hit once, it is turned away, but not destroyed (a ‘hit’ in Probing is not destruction), and may report some information at a much lower chance of success. If the Probing unit is hit twice, it is destroyed. Engaged results from Fighter Complements have no effect, so both sorties will need to be successful to score a hit in Probing.
- ✓ The Probing unit is not trying to engage in combat, it is trying to avoid combat. The turned away result is a peel off because we are gonna get clobbered (like when the Death Star was operational), it’s a game of chicken in space. The Probing unit is likewise not trying to intimidate or scare off the target; the objective is to get a good scan.
- The S-2: The information received from Probing is determined individually per unit involved. If the result of the Probing was a success, the Probing unit has a 15% chance of learning information in each category outlined in Field Reports (*ut supra*, pp. 1343-1344) that applies to the sphere of the objective or target of the Probe. If the Probing attempt was

turned away, the chance is 5%. If the Probing unit was destroyed, no report will be received for that unit. If the Special Operations Reconnaissance activation for the Probing used a Scene instead of an Act, the chances above are doubled if the Power Activation did not fail. Finally, Enlightenment assigned to the Special Operations Power Activation may be used for the Probing unit's report if that unit has an active Epistemological Constructural Element (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*).

- ✓ Perhaps the approximate equivalent to Probing in GGDM are the reconnaissance flyovers that countries have conducted since the 1950s. SLAR (side-looking airborne radar) was developed specifically so that reconnaissance aircraft could hug the national border or international water boundary without violating sovereign air space. I used to stand in the gun park and watch SR-71s take off in the late 1980s. The flyovers have always been controversial, but have so far not resulted in a war. The Soviets hated it and shot down a U-2 in 1960 as it flew over the Soviet Union. India continues to fly reconnaissance over Pakistan and I recall an incident, perhaps it was in 2017, where the Pakistanis were upset that an Indian reconnaissance aircraft went sonic leaving Pakistan and created a sonic boom. The Pakistani government felt it was a direct insult by India, intended to remind them (i.e. rub salt in the wound) that the Indian air forces were flying over their air space at will.

The Probing rules in GGDM are crude at best. There is much room for development of specialized abilities by players in this area (i.e. Colleges, Technologies). On the other hand, the situation in space might be different than flying over another country on Earth.

---

*“It’s been estimated by some intelligence experts that Mr. Walker provided enough code-data information to alter significantly the balance of power between Russia and the United States.”*

– John J. O’Connor, “American Spies in Pursuit of the American Dream,” *New York Times* archive, February 4, 1990

---

**Family of Spies:** John Anthony Walker, a Chief Warrant Officer of communications, spied for the Soviet Union from 1967 to 1976 when he resigned from the Navy, but by that time, was able to continue providing information through a spy ring consisting of friends and family members. He was arrested on May 20, 1985, and his son who was serving on the USS *Nimitz* was also arrested. Mr. Walker cooperated with authorities to reduce his son’s prison sentence to 25 years. His son was released on parole in 2000, Mr. Walker died in prison in 2014 and his older brother died in prison shortly before. His ex-wife was not prosecuted because she turned him in, and the last remaining member of the ring Sr. Chief Petty Officer Whitworth is still in prison in 2019.

**ISpy:** The Special Operations Power may be activated for the purpose of Information Operations to assist in garnering intelligence. Sometimes the information supplements or corroborates information received via diplomacy or observation, while at other times, the Information Operation is the only way to obtain the needed information.

- ✓ Information Operations are probably espionage, and that is undoubtedly how participants will envision them, but the term can also encompass an ‘eyes open, ears open’ approach – is it espionage if you happen to be in a public restaurant and overhear a conversation? Happens to reporters a lot. There is no expectation of privacy in a

public place; if someone takes a picture of you walking down the street, or you just happen to be in someone's photo or video, regardless of what you are doing (e.g., a drug deal, handing out flyers, walking your kid to the bus stop, going into a hotel with your mistress), that is not an invasion of privacy. Or spying. Being a tendentious pedant, I chose to call it Information Operations instead of the sexier term, espionage.

GGDM makes no distinction in Recruiting and Lodging Special Operations Missions (SOMs) for either Black-ops or Information Operations, any SOM can be used for either as long as it survives and it is not required to predesignate the intended use of the SOM. *This is purely a game mechanical convenience*, as there is a wide difference between the two.

- Information Operations: Information Operations are *automatically successful* in the sense some kind of information will be reported and no die rolls are involved for resolution, unless the target is protected (see Quartering Act and Secret Services, 3 Special Operations, pp. 1321, 1323 respectively, *supra*).
  - ✓ Enlightenment *may not be assigned* to Special Operations Power activations for the purpose of Information Operations. The operation is automatically successful and Enlightenment cannot be used to affect another position's die rolls (e.g., if the target is protected by COMs). See Army of Light, 2 Colleges, p. 479, *supra*.
  - ✓ Plausible Deniability (see 3 Special Operations, p. 1314, *supra*) procedures will also be followed for Information Operations to see if the operation was 'noticed' by the target and who they think did it.

Information Operations are only resolved as part of a Regular Turn Action and thus, if units in combat are targeted (that is, have Lodged SOMs) the information received will be as of the Regular Turn – a snapshot – there is no provision in GGDM for Information Operations to be resolved during a Combat Round, even by using a separate activation of the Special Operations Power for Treason (see 3 Special Operations, p. 1310, *supra*) which is only for Black-ops, even though it may be treasonous...

There are certain areas where Information Operations and Surveillance would seem to overlap. For example, why couldn't Surveillance collect information about **alien** language, culture, government, through listening and watching, picking up the media from a target colony or from ships? For game purposes, however, those are separate functions; someone with a lot of education and expertise has to sort through the data collected to extract information more complex than which species lives there or how many Fighters are on that Carrier.

- ✓ A position could conduct a Surveillance-like Information Operation by Lodging SOMs on a friendly ship, moving it to another system, and then conducting an Information Operation, possibly in conjunction with an actual Surveillance or Probing action (assuming the ship isn't destroyed).

Information Operations represent the slow accumulation of intelligence information (a book, in sports terms) not related to Surveillance or Probing (*ut supra*) – what we might call HumInt, ComInt, and maybe some TechInt.

- A Field Guide to Traitors & Spies: Although espionage is virtually synonymous with treason, it is not an activation of the Special Operations Power for the purpose of Treason as described in 3 Special Operations, p. 1310, *supra*. Treason in GGDM is more overt action.

- ✓ [Interview] “[Kim Philby] said to betray, you have to first belong, and I didn’t belong, I never belonged. I was a straight penetration agent, he said, and if the other side, in other words, the British, were foolish enough to believe my spiel, then that’s on them. It was their failure, not mine.” – Phillip Knightley (author), *The Spy Who Went into the Cold: Kim Philby, Soviet Super Spy* (documentary, 2013).

What did Benedict Arnold actually do to betray the cause? He had been court-martialed for profiteering from his command and publicly reprimanded by Gen. Washington, and was billed £1,000 by Congress in relation to the Quebec expedition. During this time, he secretly communicated with the British, tendering an offer to become a spy. He sold his home and transferred the money to London.<sup>6</sup> Arnold sent letters to the British detailing troop movements, strengths, and other information.

He stopped by West Point on the way to Philadelphia and provided a report to the British. Upon learning that he might possibly be selected to command West Point, he offered to provide drawings and to surrender West Point to the British. The British agreed for £20,000. While in command of West Point, he degraded its defenses, rearranged troops in non-optimal deployment and wasted away supplies. Arnold met the British spy chief, Major Andre, in person and gave him drawings of West Point and wrote passes for him to transit the rebel lines, but the spy chief was captured by militia on the way back to New York (and was later executed). The scheme then unraveled, and Arnold fled; later he commanded the British force in the Fort Griswold massacre, though he was not personally present.<sup>7</sup>

- Reliability Rating: Information Operations have two distinct differences from Special Operations. First, Special Operations Missions (SOMs) used during Information Operations are not expended as in Black-ops (see Profile in Perfidy, 2 Special Operations, p. 1300, *supra*); a Lodged SOM may be used to gather intelligence over several Regular Turns, but like all Lodged SOMs, they will eventually ‘age-out’ and disappear (Melita Norwood was 88 years old when she was revealed as a spy, more than three decades after she quit spying) and may be eliminated by Counter-Operations (see Spy vs. Spy, 3 Special Operations, p. 1323, *supra*). Second, in Information Operations, the information received has a Reliability Rating.

- ✓ “Remember that intelligence is fundamentally a craft of uncertainty and of possibilities.” – Susan Gordon, CNN interview, December 3, 2019 (available on YouTube).

The Profile for an Information Operation must ask a specific question or set of questions, *and* set forth a specific area and/or location on which information is being sought. The more general or numerous the nature of the question or areas of inquiry, the less specific or reliable the information will be when received.

The resultant information report will be given a Reliability Rating of 1-10 by the Concierge where 10 is best. The Reliability Rating is, as the term suggests, a rating of how ‘reliable’ (true, accurate, current, timely, trustworthy) the information is deemed to be *from the viewpoint of the position receiving the information*. The Reliability Rating should never be taken as absolutely true, as the information may be more or less accurate, true, complete, current, or trustworthy than the rating suggests. Information is best when corroborated and when it paints a complete intelligence picture rather than when it is taken as single reports and facts.

- ✓ “Everything [all intelligence] is uncorroborated until the terrorist attack happens.” – Nicolle Wallace, MSNBC Dead-line: White House, July 2, 2020.

- ✓ The Reliability Rating is not random, it is a judgment call by the Concierge. Thus, there is no opportunity to use Enlightenment to affect Reliability Rating. The Concierge is not bound by his own Reliability Rating, true information may be given with a low Reliability Rating, it's only a perception point of the position's intelligence professionals. But, to mean anything in the game, it should approximately correlate.
- ✓ Game mechanically, Information Operation covers broadly all the ground that is not otherwise addressed in other activations of the Special Operations Power. Information Operations are, for example, the only way to obtain information on the Public Space – by asking the right questions – such as Cultural Pieces, Conflict Checks, and non-physical sorts of information *as it relates to the operational location*.

There is some small chance that the target of an Information Operation will be informed of the operation (see Plausible Deniability, 3 Special Operations, p. 1314, *supra*); this is more likely if the target of the operation was protected or if the place where the operation is conducted has a large number of Lodged Counter-Operation Missions.

- ✓ A major revision of the history of the Waterloo Campaign in 1815 (e.g., Waterloo Betrayed, Stephen M. Beckett, 2015) attributes Napoleon's defeat to spies and traitors who passed his plans to the Anglo-Prussian allies, giving them a 12-hour head start. See also, "Waterloo: The Truth Behind Napoleon's Final Defeat," HistoryMarche YouTube Channel, August 17, 2019, made in collaboration with Stephen Beckett.<sup>8</sup>
  - ✓ In GGDM terms then, Benedict Arnold was successful as an Information Operation but failed subsequently when activated for Treason (i.e. Black-ops). Using the Arnold SOM for Treason expended him as a SOM – this would have been true regardless of whether he was successful or not, his game would have been up either way and it was time for him to un-Lodge (fleeing downriver on the HMS Vulture). His SOM expenditure did not mean his death, but instead his removal from the situation or system where he had trust and authority (though most distrusted him already because they thought he was involved in a black market; and that he had a Tory wife) to another where he was never trusted or respected again.<sup>9</sup>
- Time After Time: Special Operations is one of the primary areas where limited Temporal Technology might be applied; time-traveling police, spies, special agents have always been a fascination of science fiction stories and games (e.g., Time Agent (1992)). Information Operations may be the safest place to apply temporal technology in Special Operations.
- ✓ If we had the ability to remote view (peeping) into the past (even if we were looking into the memory of someone who lived at that place and time), without physically going there, how could that create any paradoxes? Any resulting effects would be now and into the future, not altering the past. Of course there are social ramifications of this technology, in criminal justice at the least, but also in our beliefs about the nature of the universe and about our history. Imagine the opportunity to see inside the mind of a Mongol warrior during the sack of Baghdad, or memory of Elizabeth the Cuman, or learn what Friedrich Kritzinger actually said, remembered or thought at the Wannsee Conference? In an odd sense, the present would merge with the future and past. Except that we tend to change what we observe. The Heisenberg Uncertainty principle in its general suggestion, is one of the most intriguing ideas in a millennium about the nature of knowledge. It has found its way from physics to the social sciences:

- “Abstract. In several fields of social sciences, anecdotal evidence is collected that measuring a property of a population sample couples back to the behavior of the sample and changes its property.” – Peter W. Michor, “Uncertainty Principles in Social Sciences,” October 19, 2017.
- “The preliminary paper [Kashyap (2014)] titled The Uncertainty Principle of the Social Sciences postulates the Uncertainty Principle as follows: *Any generalization in the social sciences cannot be both popular and continue to yield accurate predictions, or in other words, the more popular a particular generalization in the social sciences, the less accurate will be the predictions it yields.* This paper then continues in a verbose way to define social interaction without becoming ever specific.” *Id.*<sup>10</sup>
- “Thorngate (1976) developed a postulate of commensurate complexity in which there are trade-offs among a theory being *general*, a theory being *accurate*, and a theory being *simple*. A theory cannot be all three simultaneously; general accurate theories are not simple, accurate simple theories are not general, and simple general theories are not accurate. Weick (1979) provides examples of each.” – John P. Bean (Indiana University), “Light and Shadow in Research Design,” Clifton F. Conrad & Ronald C. Serlin, Eds., The SAGE Handbook for Research in Education (2006), p. 354 (found on Google Books, emphasis in original).

Thorngate is the most direct social expression of Heisenberg. It is an interesting phenomenon of itself that once the idea was expressed concretely in physics it found application (if imperfect) in other intellectual areas. Almost as if it suddenly existed in a greater sense when it could be concretely expressed. But back to the subject at hand ... do you think the past is an eigenstate? Most do, like object permanence, it seems to be intuitive (however, consider the Rashomon Effect). But to be able to peep back in time, we’d need a different framework, and within that framework, maybe what we call history weaves through Many Worlds and is certain seeming only to us.

- ✓ T-Ships, discussed in Ghost Probabilities, 2 Temporal Technology, p. 818, *supra*, depend upon an encounter with the target in the present to go back in time a few minutes to ambush the target, creating a paradox. The phenomenology of the T-Ship is the same as for the rest of the one-direction-in-time universe, ultimately, the T-Ship gets pushed forward in time as it cannot continuously go backwards in time. Even H.G. Wells time machine surrendered to the forward push of time when not moving backwards in time. One might argue then that with the ability to look back in time, and have things appear to you which you were not there to see when they happened, might be useful to the T-Ship instead of jumping back in time creating paradoxes? Still, I don’t think this works well operationally, since any object that is seen back in time must also be experienced in the present of the T-Ship or it would be pointless. The results would be no different than back-projecting the flightpath of a ship or missile (we do this now, e.g., counter-battery radar).

---

*“In and of itself, ignorance is not a problem. It is often rational and is an unavoidable part of the human condition. But ignorance becomes dangerous when individually rational ignorance leads to harmful collective outcomes. Sadly, that is often the case with political ignorance, and ignorance about scientific issues relevant to government policy.*

---

*From the standpoint of the individual voter, it makes sense to devote little effort to acquiring information about government and public policy, because the chance that her vote will make a difference is infinitesimally small. But such behavior can lead to terrible outcomes when an entire electorate is ignorant in this way. We shouldn't worry much about the fact that a small minority of Americans don't know where chocolate milk comes from. But we should take the problem of widespread political ignorance far more seriously."*

– Ilya Somin, “Public ignorance, brown cows, and the origins of chocolate milk,” *The Washington Post*, June 16, 2017

**Willful Ignorance:** What the internet age has finally brought to the fore (even more so than the print revolution) is the human willful refusal to learn, to understand, and to know facts, especially those contrary to religious or political beliefs. As more and more of the world becomes connected, large swaths of humanity have access to billions of internet sites, millions in their own language, and others through translation.

Those people who have got by in the world in the past through willful ignorance – cynically complaining about everything they didn't understand, which was just about everything in their lives – have now had their pants yanked down around their knees and everyone can see them for the asses that they are, as the 2016 Presidential Election highlighted. The nature of the internet, not controlled by any sovereign (short of complete blackout and unhealthy isolation), has made knowledge on nearly any subject available to those who *look*. Hundreds of thousands of original works are available free in the public domain and are on the internet. Hundreds of millions of people spend time writing, explaining and arguing on the internet for free and freely about every possible subject.

- ✓ When I was young in the early 1980s, a man in his 50s told me that Florida was a desert – he had read an article about draining the swamps in Florida. He also thought that Canada was part of the United States. He informed me that Marines wore their Dress Blues under their camos in combat. He wasn't joking, he really believed it.

Taken together with all of the books in homes, schools, and public libraries, the only barrier to learning anything is a lack of will or desire. Nothing is stopping you from picking up a book and reading it, nothing is stopping you from getting on the internet (if you have access) and learning; there is no reason why, lacking a fancy illuminated degree from an institution, you cannot have a graduate level of knowledge in subjects of your interest and the ability to understand properly the subjects about which you care to argue (or even how to argue properly). Thus, for example, religious fundamentalist who don't understand the scientific process or students who attended religious high schools who do not understand the Ice Ages or the history of the rest of the world (because they are not in the Holy Books) have no reason other than willful ignorance. What you failed to learn in high school because you were more interested in goofing off, or too fucked up on drugs, you can learn by reading books or the internet if you have the will and then you can prove your knowledge by doing something useful. This applies to myself as well.

- ✓ See discussion of *Board of Education v. Pico*, 457 U.S. 853 (1982) about the removal of Desmond Morris' *The Naked Ape* (1967) and other books from the school library.
- Ice Ages: In my final semester of undergrad at college, I knew a young lady – also in her final semester – who was in the program to become a certified public school teacher (BA in Education, I think). She was required to do an elementary school presentation on the Ice

Ages, and wanted me to help her. Some way through the process, I figured out that she knew nothing at all about the Ice Ages. I was shocked to learn that she had never had classes on it in school! I couldn't imagine it, as I had my first classes on the Ice Ages in about 3<sup>rd</sup> or 4<sup>th</sup> grade and assumed it was a requirement of public schools, how could she have graduated high school without ever having a class on the Ice Ages? Well, she went to a religious high school, in fact, had spent her entire youth in religious primary schools, and apparently, they are not required to teach much science, or the Ice Age, or anything that conflicts with their religious beliefs; in fact, she didn't know much history of the world either if it didn't have to do with her religion. She wanted to be a public school teacher, so it's time you learned about the Ice Age, because you will have to teach it someday. She didn't want to learn about the Ice Ages or anything, she just wanted to get the project done. She could have gone to the college library and read about it in an encyclopedia article. How can you be a public school teacher if you have that attitude and never learned the subjects you will be required to teach?

- ✓ I discovered, disconcertingly, that she had not known what I had been talking about more than half the time that I had known her (as you can imagine from reading GGDM); it was apparently practice for the future of the GGDM project (GGDM started about five years before these events).
  - ✓ GGDM is in fact, the result of a process of reading, looking and figuring things out, making connections over a lifetime through a natural progression of subjects, and rejecting willful ignorance (i.e. *looking*). I was pretty ignorant in my youth, though precocious, but not for a lack of will, but for a lack of adult role models and direction, and for the confused place and time where I grew up, before the internet age.
- Raising the Dead: The 'dietary supplement' industry is an epitome of willful ignorance: Foodstuffs sold and classified as nutritional or dietary supplements (e.g., kombucha) are unregulated and generally unproven by credible trials. This is a form of intentionally not looking, of willful ignorance for profit. Absent testing, the manufacturers, retailers and promoters of 'cures' and dietary supplements can claim any health benefit short of raising the dead. And leave it to others to disprove it, and they can always dispute and criticize the tests as biased. They don't want to have to 'hide' contrary empirical data that can be discovered later in litigation (e.g., as happened in tobacco, phospho-soda, and asbestos). The longest running human willful ignorance is the intentional failure to obtain confirming empirical data.
- ✓ Glaceau Smartwater, one of the top-selling distilled bottled water brands in the United States has been criticized for having no scientific or empirical backing for whatever vague health claims they are making to consumers. And you can bet they are not going to go looking...

---

*“Mr. Williams worked for a Kentucky law firm that represented Brown & Williamson Tobacco, now part of R.J. Reynolds. He leaked thousands of pages of internal memos and studies concerning smoking and health that provided ammunition to tobacco opponents. He had copied the documents surreptitiously starting in 1988, and they were made public in 1994. The information made national headlines. According to news reports, the information showed that Brown & Williamson executives knew decades earlier that nicotine was addictive and that they had funneled potentially damaging documents to lawyers to keep them secret. ...*

---

*Mike Moore, Mississippi's attorney general during that era, was at the forefront of the legal fight against the tobacco industry. 'The now famous Brown & Williamson documents that Merrell was able to provide us, under extraordinary circumstances and threat, changed the course of our litigation,' Moore said in an e-mail. 'We got on a plane and took those documents to Congress and the FDA,' he said, referring to the U.S. Food and Drug Administration. 'The three big lies – cigarettes don't cause cancer, nicotine is not addictive and 'we don't market to kids' – were all refuted by the B&W documents Merrell obtained,' Moore said."*

– Bruce Schreiner, "Merrell Williams Jr., Kentucky paralegal who became tobacco whistleblower, dies at 72," *Washington Post*, November 27, 2013

**The Big Three Lies:** The Merrell Williams case is an ethical issue that was discussed in paralegal school. Law firms will maintain that there is an absolute duty of confidentiality to the client, forever, even if that client is breaking the law or hiding evidence. Merrell Williams had also signed a confidentiality agreement. On the other side are the various concepts and ethical considerations – reinforced by the experience of WWII – attached to those who are in a position, have the opportunity, to expose massive lies, cover-ups, dangers, and to improve public health, e.g., Henrik Ibsen's "An Enemy of the People" (1882).<sup>11</sup> Mr. Williams, a smoker, believed that he had heart disease from smoking (SourceWatch wiki) and hoped to use the documents to sue the tobacco industry (but he would have a conflict of interest problem, probably, at the least) and according to the *Washington Post* article (*Id.*) he did die of a heart attack at age 72.

- ✓ Later... "Onetime Brown & Williamson executive Jeffrey Wigand revealed industry secrets to the CBS news show '60 Minutes.' His role inspired the 1999 movie 'The Insider,' which focused on a battle within CBS over whether to air the '60 Minutes' report about Wigand's allegations that tobacco companies manipulated nicotine levels in cigarettes and lied about their addictive power." – *Id.*, *Washington Post*.

For the record, the ABA-approved Paralegal Institute is going to teach what the legal profession wants them to say, but my recollection of the discussion is that the instructor wasn't too forceful about it. It is difficult to say with force and conviction – and a straight face, like emphatically insisting that the Easter Bunny is real – to a class of professional adults that Mr. Williams was wrong when the Defendants were lying to the court and to government agencies (through their lawyers who conspired to help them hide the damning documents), to the media, to Congress, and to the entire world and they would have continued to do so *but for* the actions of Mr. Williams (however wrong those may have been).

- ✓ There will be whistleblowers as long as business and government cannot be trusted.

There were many unclean hands all around in this one, but somehow the end result 'came out right.' The tobacco documents in a box arrived 'mysteriously' on the doorstep of Dr. Stanton Arnold Glantz at UC San Francisco; Dr. Glantz was a leading anti-smoking campaigner:

- ✓ "Merrell Williams, Jr. was the Louisville, Kentucky document review analyst who is often erroneously credited with having mailed the famous Brown & Williamson (BW) 'Mr. Butts' documents to Stanton Arnold Glantz, Professor of Medicine at the Institute for Health Policy Studies at the University of California San Francisco. The papers arrived at Dr. Glantz's office on May 12, 1994 from an anonymous sender identified on the box only as 'Mr. Butts.' They described B&W's internal scientific research, marketing, and corporate policies from the 1960s to the 1980s, and included

studies reporting on the tobacco industry’s internal knowledge of the health effects and addictive properties of nicotine.” (SourceWatch wiki, *Id.*)

- ✓ “[Merrell Williams] was aware that the information, if revealed, could potentially be explosive. Williams secretly copied hundreds of pages of the documents to which he had access, and mailed backup copies to a college friend, Nina Selz, for safe keeping in case something happened to him.” *Id.*

*“The Instrumentality passes dark knowledge to its staff, things not usually understood in the inhabited world, things prohibited to ordinary men and women, because the officers of the Instrumentality, the captains and the sub-chiefs and the chiefs, must know their jobs. If they do not, all of mankind might perish.”*

– Cordwainer Smith, “The Crime and Glory of Captain Suzdal” (1964)

## Endnotes.

<sup>1</sup> Citation: “Reckless, outrageous, and undignified behavior has become excused and countenanced as ‘telling it like it is,’ when it is actually just reckless, outrageous and undignified.” – Sen. Jeff Flake, “I Will Not Be Complicit” speech on the Senate Floor, October 25, 2017.

- ✓ Former President Obama and Sen. Jeff Flake, on opposite sides of the political aisle used the same phrases and made nearly the same point publically, less than two years apart.

<sup>2</sup> Commentary: I am certainly not an expert in any of the forms of anarchism or anarcho-thought, and I am sure that Noam Chomsky wrote many impressive things that I have not read. But what I find objectionable are the simple-minded caricatures of anarchism that seek to dial back the clock to an idealized uchronic time or that are anarchism for the sake of anarchism. The same objection is expressed in GGDM in relation to reactionary religious beliefs.

<sup>3</sup> Commentary: In military intelligence school, it was emphasized repeatedly that information does no good if not passed along, if someone sits on it. It’s not a little kingdom that can be hoarded. The same is true in science.

<sup>4</sup> Commentary: You might naturally think that if I were more mathematical, GGDM would have been different or even not at all. That may or may not be a good thing depending on your view... A math genius would have gone about it differently. This speaks not to alien manipulation, pre-destiny, divine mission, being a special person, but rather to the value of diversity: There are plenty of math and computational prodigies in the world as fits our times.

<sup>5</sup> Citation: “How does my doctor know if I have the flu? Believe it or not, most of the time your doctor knows the moment he sets eyes on you whether or not you have the flu. ... Essentially, your doctor sets his eyes on you and thinks, ‘This person appears to have been hit by a truck.’ Once he has verified that you have not been hit by a truck, he will conclude that you have the flu. Sometimes, for show, your doctor may order a confirmatory rapid influenza swab. However, these tests have a surprising high rate of false positives and false negatives. Thus, if it returns positive in a person who appears to have been hit by a truck he will pat you on the back and say, ‘See what I said, you’ve got the flu!’ If it returns negative, he will explain, ‘Well, you can’t really rely on these things anyway! I knew you had the flu the moment I set eyes on you.’” – Dr. Peter Lazzopina, “How does my doctor know if I have the flu?” Frontier Direct Primary Care website (Harlingen, TX), September 18, 2018.

<sup>6</sup> Commentary: We had a case like that, the Defendant sold his home to his friend to avoid having it taken in judgment and then continued to live there, paying rent. He claimed that he wanted to be rid of the mortgage in anticipation of the judgment against him, but in reality, his rent payment was much more than his prior mortgage payment. He had also sold the house at much less than market value, it was probably a sham sale, with the agreement that he could ‘buy’ his house back later. I think the defendant fled the country shortly afterward. Like Benedict Arnold.

<sup>7</sup> Commentary: Every schoolchild for 200 years has known ‘what Benedict Arnold did.’ Rarely is his service and generalship given much detail in such lessons. His treason has completely overshadowed his battlefield victories.

<sup>8</sup> Commentary: [Narrator] “The Philby mold was now a sorry sight. Isolated, unemployed and unhappy, he might just as well have been in jail.” – The Spy Who Went into the Cold: Kim Philby, Soviet Super Spy (documentary, 2013).

- ✓ Many people were angry that Kim Philby had not been arrested and sent to prison ... he defected to Moscow where he was kept under strict house arrest by the KGB in a fully controlled flat they provided.

<sup>9</sup> Citation: “Only a few weeks after learning of Arnold’s treason, General George Washington enlisted a Continental Army sergeant major named John Champe in a daring mission to capture him from behind enemy lines. The plan required Champe to stage a defection from the colonials and join up with the British. Once in enemy-occupied New York, he was to pose as a turncoat, cozy up to Arnold and then work with local spies to spirit him away to New Jersey, where Washington planned ‘to make a public example of him.’ The scheme very nearly worked. Champe fooled the British and even won an introduction to Arnold, who asked him to join his unit. Yet on the very same night that Champe and his accomplices were scheduled to make their move, Arnold was ordered to leave town on a campaign against the southern colonies. His plan foiled, Champe had no choice but to join in on the mission. He would continue to masquerade as a redcoat for several months before finally sneaking back to the Continental lines.” – Evan Andrews, “9 Things You May Not Know About Benedict Arnold,” January 13, 2016 (updated December 21, 2018), History Channel (history.com). [\[This might make a great movie!\]](#)

- ✓ “After donning a British uniform, Arnold spent 1781 leading raids against Richmond, Virginia and New London, Connecticut, both of which were sacked and burned. He settled in London after the American Revolution ended, but received a chilly welcome from his new countrymen, many of whom considered him an unprincipled mercenary whose actions had led to the death of the heroic Major Andre. Arnold and his wife were greeted with hisses when they attended the theater, and he was lambasted in the English press and blocked from taking up positions in the army and the East India Company. Having only received 6,000 of the 20,000 pounds he’d demanded for switching sides, Arnold eventually resumed his old career as a merchant ship-owner in Canada and the Caribbean. When he died in 1801 at the age of 60, he was buried without military honors.” *Id.*

<sup>10</sup> Citation: “The Uncertainty Principle of the Social Sciences - Quantum Inspiration, Theoretical Investigation and Empirical Insights. The more precisely the position (of some particle) is determined, the less precisely the momentum (of that particle) is known in this instant, and vice versa. -- Heisenberg, uncertainty paper, 1927. Inspired by the Heisenberg Uncertainty Principle for sub-atomic particles in Quantum Mechanics, we postulate the Uncertainty Principle of the Social Sciences as follows: ‘Any generalization in the social sciences cannot be both popular and continue to yield accurate predictions, or in other words, the more popular a particular generalization in the social sciences, the less accurate will be the predictions it yields.’

When we compare the central tenets of the two principles, a striking commonality emerges. This has to do with how each system is affected by efforts at increasing the accuracy of measurements for one variable, resulting in decreased accuracy in knowing the other variable. The Uncertainty Principle of the Social Sciences, thus stated, in terms of popularity and accuracy of predictions, primarily deals with the scope and limitations of any relationships we uncover in social systems. We lay the groundwork for a theoretical framework towards measuring and understanding the Uncertainty Principle of the Social Sciences.

Two elements seem to immediately contribute towards this uncertainty; one is the number of participants in the social system and the other is the number of possible states the predicted outcome can take. The simplifying assumption here is that we can identify [sic] all the possible predicted outcomes and participants unambiguously. We will attempt to create an Uncertainty Index, using the variables mentioned above, for any social system that captures the difficulty inherent in making predictions regarding this system. In certain instances, we will see that it is important to distinguish between the number of participants in the social system and the number of participants in the social system that are aware of the particular relationship that is expected to yield a prediction. We then look at different social systems with a view of predicting various outcomes in these systems and how the accuracy of the predictions change as more participants become aware of the generalizations that yield these predictions.

We begin this exploration by starting with simple social systems and increasing the complexity in terms of the range of possible outcomes and the number of participants. Whether the Heisenberg Uncertainty Principle is the ultimate cause of the Uncertainty Principle of the Social Sciences, or, if there is some relationship between the two is a topic better saved for another time.” – Ravi Kashyap (City University of Hong Kong), abstract of “The Uncertainty Principle of the Social Sciences,” on researchgate.com, published in SSRN Electronic Journal, January 2014.

<sup>11</sup> Commentary & Citation: A FINRA arbitrator (who was also a FAA flight instructor and investigator) at a hearing mentioned that prior to take off of Aloha Airlines Flight 243 on April 28, 1988, a stewardess had noticed a crack in the fuselage but didn’t say anything because she was afraid of embarrassing the crew and her employer. The top of the fuselage over the first class section came off in mid-flight at 24,000 feet, explosively decompressing the passenger cabin. One flight attendant was lost, 65 people were injured, eight of them seriously. The incident had been recounted in a made-for-TV movie that I watched when it first aired in 1990. The point she was making, relating to the instant matter of the hearing, was what happens when people see things that are wrong and don’t speak up.

*“The smarter and more sophisticated we get, the brighter animals appear to be. That is natural enough. The smarter a person or society gets, the less individual people need to have dumb things around them to lord it over and feel superior to. That works with the relationships between different kinds of humans just as it works between humans and animals. We have come to a time when we can emotionally tolerate animals being cognitive so, by decree, as well as by degree, they are.”*

– Roger Caras, *A Cat is Watching* (1989), pp. 194-195 <sup>1</sup>

**Times Intertwined:** Roger Caras was VP of Stanley Kubrick’s production company from 1965 to 1969 and was involved in the 2001: A Space Odyssey film project with Kubrick and Arthur C. Clarke. During this time, he was also a special naturalist correspondent for The Today Show, starting in 1964; he replaced Cleveland Amory who was fired from The Today Show in 1963 for airing extreme (and unapproved) views on animal rights and sport hunting. I read books by both in my youth, but did not know their histories were intertwined.

- ✓ The interesting question is whether that would happen today? Give it a thought. The pro-sport-hunting lobby doesn’t have the same weight and media (the Public Space) has shifted such that extreme views are now the norm (it sells advertising) rather than the exception on the airwaves, social media, and all the internet places where people post. People with important names still do get fired, but not for the same reason.

*“Do we, when we gratify a cat’s obvious desire to be the ultimate hedonistic materialist, deprive it of the need for cognition and therefore of cognition itself? We cannot answer that question, for our own cognitive powers fall short of the task.”* – Roger Caras, *A Cat is Watching* (1989), p. 13

**Animal Intelligence:** A similar question has been asked of dogs: Are domesticated dogs more or less intelligent than wolves?<sup>2</sup> Although foxes were domesticated early, modern dogs are not descended from them, it is probable that foxes were found too skittish to hunt and guard.

- ✓ When interacting with an animal, you have to go at their pace. You can lead a pet or semi-feral cat to food and shelter, but you can’t make them eat or go into the shelter, regardless of your intentions or the wisdom of doing so. With some effort, you can learn their ‘language’ and earn their trust, but even then, you cannot make them do – short of being mean, and that doesn’t work either with cats – what they don’t want to do. We had a similar discussion in a philosophy course once on whether “love thy neighbor” is a command and what sort of a thing it is; if not a command. I cannot command you to “love thy neighbor,” none of us has that power. If there is a God, it experiences the same in dealing with humans as when we interact with animals.

**Perception:** It seems that for millennia, humans assumed that animal sensory perception was as good as or superior to human perception in all ways.<sup>3</sup>

This is very likely the origin of Plato’s Allegory of the Cave; the question: what in Ancient Greece would have been known to Plato that would make him think that humans are not capable of perceiving the full range of reality? It is very likely that Plato thought that animal senses were

better than human senses, and if true, reasoned that humans are experiencing a shadow of reality. Like being chained in a cave, facing the back, watching shadows dance across the wall from a flickering campfire (see Plato, “Allegory of the Cave”).

- ✓ “Why cats were given such terrific peripheral vision when they spend so much time looking down their noses is difficult to understand.” – Roger Caras.

Modern knowledge holds that humans have ten times more cones (receptors) in our eyes than cats do, meaning that humans see more hues and see the world more sharply than cats do; though cats have better peripheral vision (a wider range of vision) and detect movement better, consistent with their role as predators (and depend more on their other senses which actually are superior to human senses). There are many fine articles and image examples to be found on the internet comparing what a human sees to what a cat probably sees. These examples are possible because of advanced image manipulation technology and because *humans can see better than cats*. What does a cat see when it looks at a computer, or anything natural or human-made in the world? It sees what a cat sees and not what a human sees. *See?*

- ✓ What does our music sound like to them who hear things we cannot? We can also imagine, with less certainty, the intelligence and cognitive processing of cats. Cats remind us somewhat of eternal infants.

Were we to encounter an alien intelligence greater than ours – and it seems quite likely – we would not be able to fully understand their level of intelligence and cognition – imagine a plant trying to make First Contact with cats? A cat cannot be made to see what a human sees, nor can a cat be made to understand human cognition.

- ✓ “You cannot expect everything even from the friendliest cat. It is still a cat.” – Cleveland Amory.

The greater alien intelligence would eventually be able to model our sense and cognition, in general terms at least, like we do for cats and dogs.<sup>4</sup> It would be impossible for us to reciprocate (see *a priori* discussion, Crack in the Temple, 1 Beginnings, p. 27, *supra*), just as a cat cannot see the world in human sharpness and hues. And this frightens us because we sit at the top of our little heap of dirt, looking mostly down instead of up.

- ✓ Standing on a pile of dirt looking down is precisely the point of the venerable childhood game, “king of the hill,” and all of the adult metaphors based on it. Or in the case of my youth memory, we used piles of snow left by the school district snow plows after they cleared the concrete playground, the snow turned soon to slick ice.
- **Pulling the Blinds:** One of my favorite perception questions – and I do not know where I first encountered this, but I am certain that I am not the originator – is how could someone who is a (real) psychic (as in extra sensory perception) explain to a non-psychic what it is like to be a psychic? The analogy I recall was, how can you explain to a person who has been blind since birth what is a color?
  - ✓ I watched a scene in some fictional romance movie (I don’t remember the title if I ever knew it) where the boy explained color to the blind teenaged girl (his love interest) by use of textures – it’s a great love scene, I guess, but I didn’t think that worked particularly well, but it was an interesting approach.

- ✓ In the Amazon rotoscope animated series *Undone* (2019), they seem to hint at this; the protagonist is a deaf girl who has an implant and a hearing aid. When her hearing aid is out, all you hear are muffled, indistinct voices; the story is about those who can see beyond reality (maybe it's about progressive schizophrenia, what is the difference?), which would be analogous, as they suggest in the story, to a deaf person hearing for the first time; she says she “never realized silence was so loud.” (Episode 2).<sup>5</sup>

Babylon 5 in several instances touches on these issues in a setting where part of the recent backstory is the sudden appearance of verifiable psychics in the 22<sup>nd</sup> Century (who call mundane people “blips”). How would we model a greater alien intelligence then?

- ✓ “For someone who is color-blind, the chapter on the cat’s eyesight, I am sure, is one thing, quite different from what it would be for someone with what we like to think of as a full range of color vision. My chapter about hearing can be read by a hearing person or a deaf person or a person in between where most of us dwell.” – Roger Caras, *A Cat is Watching*, p. 219.

In the old days, there were articles in *Dragon* magazine discussing this problem in *Dungeons & Dragons*: How to play deity NPCs and other NPCs of greater intelligence, wisdom and age than the normal mortal player characters. Among the advice I recall, the DM should assume the superior intelligence NPCs would know things that they should not possibly or reasonably (by our standards) know, and they should be able to react swiftly, intelligently and proactively to any tricks or actions by the PCs, based on their superior foresight and intellect.

- ✓ “A cat knows how to anticipate. If they didn’t, they could never hunt birds or mice or other sportingly fleet prey. They can anticipate and perhaps plot a prey’s trajectory just as a ... retriever can plot the arc and descent of a tennis ball or Frisbee, but a cat can’t understand the concept of anticipation and therefore is unable to allow for it in other species. So this is where we have them almost surely. Cats virtually always underestimate human intelligence just as we, perhaps, underestimate theirs.” – Roger Caras, *A Cat is Watching*, p. 17.

---

*“It is well known that Sir James Frazer, the distinguished British student of primitive magic and religion, makes a great point of the fact that all over the world magical practice seems to resolve itself into two principles of thought: that things once in contact with each other continue to act at a distance, or, second, that like things produce like results, that is, that the imitation, with proper ceremonial, of a natural phenomenon by the magician will initiate, for example, a real rainstorm.*

*Concealed behind these two widespread branches of magic, Frazer believed, was a single spurious ‘scientific’ principle which was common to the primitive and untutored mind. That principle he proclaimed as a mistaken Law of Sympathy, the conception ‘that things act on each other at a distance through a secret sympathy.’ Magic, as viewed by Frazer, is thus a kind of falsely conceived science based upon a naive projection of human desire upon the exterior universe.”*

– Loren Eiseley, *The Modern Dilemma* (1962), Kindle Loc. 328-330

---

**The Slide-ways View:** Frazier’s view seems to be the current common view of physics and psychiatry. Consider the Frazer analysis of primitive magic (*ut supra*) in relation to Henri Frankfort’s mythopoeic thinking quote, discussed briefly in 1 Temporal Technology, p. 808, *supra*.

The game rules do not assume the existence of any sensory abilities beyond those which existed in the species’ primal state, and which have been subsequently enhanced by technology (i.e. the game does not assume the existence of psychic abilities unless specified by a Fundamental Reality). And in the fine tradition of most science-fiction trope, the aliens – the races in the game – are assumed to have the same sensory ranges and organs as humans, or at least animals on Earth, which is part of the process of placing them on the same galactic shelf as humans (see discussion, 1 Technology and 1 Diplomacy, *supra*), and saving a lot of production costs in movies.

The point of systems such as radar, night-vision systems, and infrared cameras, microphones and listening devices, is to gather information from electromagnetic spectrums above and below our normal sensory range or at a spatial distance beyond our sensory range, and reduce, display the results within our sensory range in a way that is useful. Therefore, even with ‘advanced technology’ to expand our ability to collect data, the basic sensory package of the human species has not changed, the basic human does not have any means of naturally sensing and collecting data about the environment that we did not have a million years ago. The same goes with the ability to process the information received, we have superfast computers, we still have the same cave-brain.

- ✓ “...We are too content with our sensory extensions, with the fulfillment of that ice age mind that began its journey amidst the cold of vast tundras and that pauses only briefly before its leap into space.” – Loren Eiseley, “The Hidden Teacher” (1969).
- **Majik:** Magic always refers to the improbable or impossible non-causal occurrences based on our current knowledge and understanding (see Intonation of the Three, 1 Technology, p. 688, *supra*). The idea of ‘magic’ suggests divine intervention and/or the operation of forces which we cannot understand, but which presumably are accessible to us.<sup>6</sup> Like quantum entanglement and quantum tunneling.
  - ✓ See discussion of intuition in You Already Knew It and Improbables, 4 Colleges, pp. 505-506, *supra*.

My cats see things that appear on my computer screen, but no matter how they bat at it, they can’t touch it, stop it, or catch it and eat it. Can’t smell it, the kitten meowing on my screen has no smell. We understand what it is on the screen and why we cannot not touch it; we have interface tools (e.g., the mouse) that allows us to ‘touch’ what is on the screen. But to my cats, it might as well be (and probably is) magic; this is not dissimilar to *a priori* being a function of sapience as discussed in Crack in the Temple, 1 Beginnings, p. 27, *supra*.

Understanding is a relative matter, a matter of perceptions, and there is already a suggestion of ‘magic’ in the game in line with Clarke’s Law, in the form of *Uber Alles*. From our perspective, the technology of the 2<sup>nd</sup> and 3<sup>rd</sup> Eras might as well be magic, and thus the *Uber Alles* are able to ‘grant’ abilities upon reaching a new Era, without need for detailed explanation (which would be impossible given our current state of understanding). It might be possible to introduce into the game a concept of ‘actual’ magic which is not technological (as in *Uber Alles*) or biological based (which would probably be called telepathy or psionics instead of magic), but again, it would require extensive and careful consideration beforehand by the players and the Concierge.

- ✓ Star Wars is a fantasy story in a science-fiction setting. Nearly everything in Star Wars would transfer one for one to a classic high fantasy movie with dragons, flying castles, planar portals, good and evil. The Force is just magic in a science-fiction setting; it operates essentially the same way magic does when imagined by modern technological-influenced fantasy writers, it happens without explanation or cause to certain special people at important places in the story. It substitutes for technology and allows characters to know in advance things they could not know otherwise. It is however, significantly different than primitive concepts of magic.

Magic is a pre-technological concept. Very few now have an understanding of magic in the pre-technological sense.<sup>7</sup> In most fantasy, especially fantasy role playing games, magic is a crude substitute for technology effects, without any internal logic or justification. I have long suspected that our pre-technological ancestors would not have understood magic as a personal servant or tool at the bidding of the sage, diviner or caster. Nor would normal humans have been able to imbue magic – divine power – into normal artifacts or natural objects. The way our pre-technological ancestors viewed magic and the way we treat magic in fantasy are both very revealing of different worldviews at both ends of 2,000 years of humanity. There is a deference, fear, and mystery to magic that has been lost and replaced by egocentric, materialism, and vainglorious individual empowerment.

- ✓ Curiously, our current understanding of quantum entanglement suggests that our primitive ancestors were – somewhat correct – though in ways they could have hardly imagined. The implications of quantum send a shiver through our consciousness and modern worldview.

Some sort of “techno-mage cult” – which has had some popularity in science-fiction literature – might be possible in GGDM. Personally, I have never been entranced with the techno-mage idea or compelled by the visions of such presented on television (e.g., Babylon 5).

Techno-mage cult ideas share the same root as Western Esotericism, attempting to return enchantment to the future technological worlds of science-fiction, and projecting into humanity’s future, a return of ‘knowledge’ rejected by science, rationality, and modern intellectuals.

- Farsight: It is possible, within the scope and course of a game, for species to develop profound, new, heretofore unknown biological-based sensory abilities (i.e. telepathy,<sup>8</sup> empathy, ESP), biological-based abilities to manipulate matter and energy (e.g., telekinetics, psychokinetics, pyrokinetic) or biological based abilities to affect the behavior of other creatures (i.e. mind-control, coercion, hypnotic suggestion), either individually (i.e. special talents, the term Robert Heinlein used in *Starship Troopers* (1959)) or as a group effort (i.e. a meta-concert, the name that Julian May gave to group focused mental powers in the *Pliocene Saga* (1981)).<sup>9</sup> Such a development must or will likely become part of the greater game story arc.

It is possible that such developments might be included as part of the *Uber Alles* for the 2<sup>nd</sup> and 3<sup>rd</sup> Era, or it could accompany the transition from the pre-Interstellar Era to the 1<sup>st</sup> Era, for example, the sudden appearance of verifiable telepaths coincided with interstellar travel in Babylon 5 and were critical underpinning to the entire story arc. It is a development, however, that the players and the Concierge would need to work out in some detail before being implemented since the game mechanics don’t really support it. A psychic is a walking causality violation, things ‘appear’ to them before they ‘appear’ in the universe. Such new abilities can never be allowed to become all powerful or to unbalance the game but could be fun.

- ✓ “Some of the intelligence people I’ve talked to know that remote viewing works, although they still block further research on it, since they claim it is not yet as good as satellite photography. But it seems to me that it would be a hell of a cheap radar system. And if the Russians have it and we don’t, we are in serious trouble.” – Congressman Charles Rose, Chairman, House Sub-Committee on Intelligence Evaluation and Oversight, Omni magazine, July 1979.<sup>10</sup>

Calling it “a hell of a cheap radar system” demonstrates a stunning ignorance of the phenomena and typical Congressional political thinking. But the Congressman may have been repeating what he and his colleagues were told when they questioned the funding (i.e. they were manipulated); in 1979 we cannot let the Ruskies get something we don’t have, no matter how crazy it sounds! The world hung by a thread, dependent entirely on NATO’s deterrence power, the U.S. Navy and Air Force SAC; and the needle could not be allowed to move even a tick in favor of the Warsaw Pact. What is far more interesting is that a Congressman was commenting on remote viewing in a 1979 magazine article; the Star Gate program was closed and declassified in 1995. Program documents are online at the CIA archives.<sup>11</sup>

People misunderstand the CIA’s brief interest in psychic abilities during the Cold War; it’s not that the CIA or the government thinks there are reliable and controllable psychic abilities in the population or individuals (the G-men probably thought it was a bunch of malarkey), but rather, that if there are, just in case they were wrong, the CIA wanted to be there to take control and keep it secret, keep it from the Ruskies. Hence, the CIA reportedly funded experiments at Stanford Research Institute and interviewed researchers and subjects.

---

*“In this story humanity has been selecting for super intelligence. However there are always some throwbacks born – ‘norms’ as they are called. The norms are always at a disadvantage, not just because of their lower intelligence quotient but also because of the restrictions and discrimination that they face. One norm, a poet, rises up as a voice for the oppressed and becomes a Moses for his kind – asking ‘Pharaoh’ (the government of the su-norms) to build spaceships so he and his people can leave Earth and have [a] place where they can be free. Will the World Council agree? Or will the norms be second-class citizens forever?”*

– Summary by Bev Hankins (March 1, 2013) of Joseph Green’s short story “Let My People Go” (1973) on My Reader’s Block (blog)

---

**Let My People Go:** “Let My People Go” might be the source of or inspiration for arrogant telepaths in the Babylon 5 television series who call normal people ‘blips’ and treat them as second-class citizens. Babylon 5 simply flipped the numbers making the ‘su-norms’ (in the form of telepaths) the minority but they still nearly ended up ruling the planet.

Generations of intellectuals have considered and writers have toyed with the concepts and consequences of reliable and operational telepathic abilities among humans and aliens. Most of these musings have not ended with a favorable conclusion, much having to do with the wall between the sexes. Are men ready to let women into what they really think, want, and feel, and vice versa? To experience (mentally only) what it is like to be the other sex? Are we ready for a new telepathic priests and ruling class or are we willing to live in the fish tank of a communal mind? It is clear that widespread telepathic abilities would require an entire different and new framework, a new culture that is centuries or millennia away from today.

- A Bowl of Biskies: If any human population demonstrated an evolutionarily significant developmental advantage over the general population, one of two courses would occur:
  - ✓ The group would either become the rulers or controllers of a significant part of civilization or be marginalized, controlled or eliminated by the current government, or ...
  - ✓ The group would assume control of humanity and thereafter, either find a way to evolve the rest of humanity to their level, or eliminate mainstream humanity, or eventually be overthrown, marginalized, controlled or eliminated.

Marginalization can take many forms, including, in an interstellar setting, departing into the unknown to found new colonies far away from the current governments. This is a theme which was explored in Babylon 5 via the telepaths, especially the last season, and various short stories – such as the one where a Moses-like leader of normal kids (*ut supra*) wants to lead his people to a new planet, or self-imposed or forced exile, such as Khan Noonein Singh (can you still hear Captain Kirk screaming his name?) and the Auguments in Star Trek.

- ✓ “Let My People Go” (1973) by Joseph Green and “A Bowl of Biskies Makes a Growing Boy” (1973) by Raymond F. Jones were part of a ‘young persons’ anthology compiled by editor Roger Elwood called The Other Side of Tomorrow (1973). Many people seem to remember reading it long ago – as I did sometime around 1980 – but don’t remember the title or titles of the stories; there are at least three asked and answered questions relating to this on SciFi StackExchange (the last from 2016) and I found another on Google Answers (from 2005). Mark L. Irons on his site (article “Sick Tomorrows,” rdrop.com), and some others on StackExchange and Goodreads have commented that the stories are very dark and disturbing for anyone, let alone young readers; rather, the collection is *about* young people in dystopian futures but not very suitable *for* young people to read. So now you know why I am nutso...

---

*“Asymmetric Advantage: an asymmetric advantage goes beyond a normal advantage of knowledge into the realm of having asymmetric information and knowing things others do not. For example, others may be aware of certain operations of our business, but only we can actually do those things. If we have an operational advantage we have an asymmetric advantage. A Patent can [be] used to establish this kind of advantage, but not necessary if the advantage takes skill and discipline others find it difficult to achieve or retain long term. Asymmetric advantage is based on knowing something that creates value or has an edge that others don’t. An asymmetric advantage is protected and maintained through the distinctions between knowledge of a concept vs. actually being able to do it.*

*The Illusion of Asymmetric Insight is useful to maintain an asymmetric advantage because people perceive their knowledge of others to be greater than what it really is. The overconfidence of others is also helpful, since a person’s subjective confidence in his or her judgments and knowledge is greater than the objective accuracy of those judgments, and overconfidence is even asymmetric: this is more true when confidence is high. Disruptive competitive edges are based on having an asymmetric advantage.”*

– Mike Shell, “Asymmetric Advantage,” Asymmetry Observations (asymmetryobservations.com), captured June 26, 2019

---

**De-Mystification:** Mysticism and mystical arts is humanity’s natural drive for the asymmetrical advantage. So is magic and telepathy. Humans have never been satisfied with the empirical world; there has to be more, there has to be a way around it. When we could make up stories to explain creation and the phenomenal world around us (i.e. mythopoeic thought), mysticism and such were natural fits and adjuncts to that world. Empiricism has proven corrosive to mysticism, tearing away veils, pretense of learning, making squares fit into squares and nothing more and nothing less, all measured and explained and testable, repeatable. The sociocultural reaction was Western Esotericism and Theosophy, various Hermetic Orders and neo-Pagan movements.

The classic socially-sanctioned asymmetric advantage is the licensed practitioner – sorry but your New York City psychic friend probably isn’t licensed or insured, for which entry is exclusive and for which the group of licensed practitioners are granted practice monopoly over an important practice in our civilization; e.g., medical doctors, lawyers, engineers. You know, or think you know, what a doctor, lawyer or engineer does, but you cannot do those things (legally, anyways) and probably lack the skill or discipline to even try (e.g., Oneal Ron Morris, 2011, Natalia Jiminez, 2020). What they know and their exclusive right to practice, combined with the needs and procedures of our civilization, creates value. *De-mystification* (as well as burgeoning need and technology) has cut into this slightly, creating a class of unlicensed staff para-professionals, more than clerical workers, who work under the licensed professional, e.g., paralegals, noting that such is the critical practice of medicine that physician’s assistants, nurses, therapist, and such are usually required to be certified and licensed but still must be supervised by a physician.

- ✓ Can you imagine someone suing their psychic advisor or astrologer for malpractice in the same way they might sue their financial advisor, stock broker, mutual fund manager, lawyer, CPA, doctor, architect, or doctor?
  - In Babylon 5, certified human telepaths were forced into a sort of ‘licensed guild’ called PsyCorps for the purposes of control and self-policing, but in fact, it became a highly cohesive organization that took over the government. Those who refused to join were forced to take medications to suppress their abilities (e.g., Ivanova’s mother). PsyCorps telepaths were allowed to charge fees for their commercial services during interrogations, investigations, explorations, and business negotiations; I assume they were barred from casinos, the stock market, baseball, and certain professions, so by dint of their psychic abilities (which they did not seek or want, like being born) they were excluded from normal socioeconomic existence, forced into PsyCorps. I assume they could be sued for malpractice ... but what is the point of it? They were above the law; *their only profession is psychic – imagine your only profession is male or female?*

Asymmetric advantage is eroded by *imperfect execution* and *cognitive limitations*: Even if a batter in baseball could read the pitcher’s mind perfectly, he still might not get a hit because pitchers frequently don’t execute their pitches; in fact, in that case, the worse the pitcher is, the less useful the psychic ability of the batter! The batter might be hit in the head by a bad pitch because he is not looking for where the pitch is, but where it is supposed to be due to his psychic abilities.

- ✓ “The first test came on March 21, 1918. The British had long known that the blow would fall on their front, and even the exact date had been learned. But a surprise can be achieved in method as well as time or place, and no one in General Gough’s Fifth Army

had any conception of the havoc which would soon be wrought.” – Lynn Montross, War Through the Ages (1960, 3<sup>rd</sup> Ed. p 741), discussing the first use by the Germans of infiltration tactics that were invented by a French army captain (WWI *Sturmtruppen*).

Similarly, the Tetris-like falling tile game Hashira provides a preview on the right side of the next three tiles that will fall on the board. I have been undecided as to which results in better play: To take the cognitive moment to glance over and see the next three tiles, so that I can play the current falling tiles more effectively, or to use all of my cognitive speed to react to the current set of falling tiles?

- ✓ That is, even if a psychic can see the future, there is significant cognition that is used in the process and in processing the information (which may not have complete underpinning at that moment, drama fiction loves to use that) as opposed to simply, naturally best reacting to what is happening without precognition of the moment?<sup>12</sup>

In the game Hashira (or any Tetris-like falling tile game) the increasing speed of the game forces the player from the former to the latter; at some point with the board space significantly filled, space shrinking fast, and tiles falling faster, there is no time at the end for precognition of the next set of falling tiles. The question then is whether early game precognition extends the time to that point when it is not possible to glance over at the preview of the next set of tiles; theoretically the final scores should provide the answer, but that result has been inconsistent.

- Magical Thinking: “Men often become what they believe themselves to be. If I believe I cannot do something, it makes me incapable of doing it. But when I believe I can, then I acquire the ability to do it even if I didn’t have it in the beginning.” – Mahatma Gandhi.<sup>13</sup>
  - ✓ Cf. “For a strong adversary (corps) the opposition of twenty-four squadrons and twelve guns ought not to have appeared very serious, but in war the psychological factors are often decisive. An adversary who feels inferior is in reality so.” – Field Marshal Carl Gustav Baron Von Mannerheim, “Father of Modern Finland.”

Which of the above represents mystical thinking as opposed to practical observation (or even a Kantian synthetic *a priori* proposition)? The problem with most motivational quotes is that that they contain an element of magical thinking, some more openly, some more disguised. Motivational quotes usually appeal to our childish sense of the world, where God watches over each and every moment of our lives, the world cares about just us, and things we need or want badly just appear for no particular cause (Santa, Easter Bunny, Tooth Fairy, our birthdays) or because we *really wanted it*. Motivational quotes appeal to that time when we (most of us) experienced unconditional love from our parents (however short that may have been); most are of the same ilk as cargo cults:

- ✓ “...the belief which began among Melanesians in the late 19<sup>th</sup> and early 20<sup>th</sup> centuries that various ritualistic acts such as the building of an airplane runway will result in the appearance of material wealth, particularly highly desirable Western goods (i.e., ‘cargo’), via Western airplanes. ... In attempts to get cargo to fall by parachute or land in planes or ships again, islanders imitated the same practices they had seen the soldiers, sailors, and airmen use. Cult behaviors usually involved mimicking the day-to-day activities and dress styles of US soldiers, such as performing parade ground drills with wooden or salvaged rifles. The islanders carved headphones from wood and wore them while sitting in fabricated control towers. They waved the landing signals

while standing on the runways. They lit signal fires and torches to light up runways and lighthouses. In a form of sympathetic magic, many built life-size replicas of airplanes out of straw and cut new military-style landing strips out of the jungle, hoping to attract more airplanes. The cult members thought that the foreigners had some special connection to the deities and ancestors of the natives, who were the only beings powerful enough to produce such riches.” – from Wikipedia article, “Cargo Cult,” July 31, 2019.

Wouldn't this be a fun basis for a RPG adventure? In countries with extreme poverty and low literacy and/or substantial superstition, could the landing of planes with cash, goods, and military equipment in exchange for narcotics be viewed somewhat in this way?

- ✓ **Rhetorical Question:** What is the difference between magical thinking and faith? Are either or both a failure of causal logic or empirical thought, or are they reliant upon belief in some as yet unseen dynamic. Is there ever a case for Justified True Belief? A primitive human vigorously rubs a stick on a rock while calling on ancestors, wood spirits and the mythopoeic fire god to grant him fire; is this faith or is it magical thinking (when the physical dynamics of friction are unseen, unknown to them)?

**Open Face GGDM:** If a human player were psychic, Mahjongg (or any card game) would be a perfect information game. A perfect information game is one in which nothing is hidden, like a game of chess or the tile game Hive (promoted as “nature’s chess”). The speed of solving the Mahjongg board would still be limited by the physical movement speed at which the tiles could be played off in pairs and solving the game would depend on the correct sequence of decisions; it would still be possible for a puzzle to be unsolvable.

An open public information game of GGDM – where the Public Space, Matrix, Power Strip of each position and all information about Galactic Space are always available to everyone, would be somewhat like a psychic playing Mahjongg – the information utility however would still depend on players looking at, studying and processing of the information, and the mental states and communication between other players, outside the game information, would still be unknown.

---

*“Hegel remarks somewhere that all great world-historical facts and person-ages appear, so to speak, twice. He forgot to add: the first time as tragedy, the second time as farce.”*

– Karl Marx (speaking about Emperor Napoleon III of France)

---

**History and Perception:** I knew and read little about Emperor Napoleon III when I was young. The main event with which he was associated in my youth was the surrender at Sedan; that was his historical legacy (like Benedict Arnold). There are a number of possible reasons why he was not widely discussed in the Anglo-sphere when I was young. One is a heavy Anglo bias to the histories I read (and certainly in our schools, as I commented elsewhere, most ‘world history’ courses in American schools of my youth were really U.S.-justification courses).

Another is that he is overshadowed by the rise of Germany, and the following World Wars, in which play, he is but collateral damage, thus the focus on his surrender at Sedan. Another is that his role in the Italian unification – another subject little taught or understood in America of my youth, again possibly because they were the minor losers of WWII – was not appreciated and I

barely heard of Garibaldi before I was 30 years old. The perception of the 19<sup>th</sup> Century history of France and Italy in the United States through our public school teaching was thus: That they were unimportant – they were not part of the ‘U.S. justification’ except when we had to liberate one and defeat the other in our great 20<sup>th</sup> Century crusades. *Pax Americana*.

Finally, most American students who learned about the American Civil War in grade school are unaware of, never heard of the concurrent French invasion of Mexico in December 1861 (or even the Taiping Rebellion in China), other than if they happened to see Clint Eastwood and Shirley MacLaine in *Two Mules for Sister Sara* (1970), which doesn’t exactly give the subject serious treatment. In fact, Mexican history in American public schools consists of the Aztecs, the Mexican-American War, the Pershing Expedition of 1916-1917, and the Zimmerman Telegram. If it doesn’t have to do with the United States, we aren’t interested in learning. If it wasn’t for the lessons on the Louisiana Purchase, half the country would never have heard of Napoleon because he didn’t invade the United States.

- ✓ “Every year a new army comes along and says ‘feed us, we are fighting for your liberty.’ The only thing they ever liberate are my chickens.” – Mexican farmer, from *The Young Indiana Jones Chronicles* (aka *The Adventures of Young Indiana Jones*).

As an intellectual adult, in the context of GGDM, I have found in the period of the French First Republic and Second Empire, fascinating and missing information about the forces in play on the Continent in the 19<sup>th</sup> Century. And as I came to understand the Opium Wars (see 3 Commerce, p. 1216, *supra*), the Taiping Rebellion (I only knew of the Boxers Rebellion because they teach it in Marine boot camp) was both crucial and also fascinating as a phenomenon in itself.

- Play Dates: In Iran – according to a respondent to Herman Wong’s question, cited in “How the Hiroshima bombing is taught around the world,” (see full cite in *Atomic Bombings 70<sup>th</sup> Anniversary excerpts, The Secret of Fire, supra*) – they are taught that Japan surrendered after the first bomb was dropped on Hiroshima, and then the U.S. dropped the second bomb on Nagasaki “just to test it.” *Id.* Accepting this hypothetically as fact, this is consistent with the Iranian Revolution’s cultural and political villainization of the United States – and it would certainly make sense to surrender after someone dropped a nuke on you if you knew that is what happened (which the Japanese didn’t immediately) – but is not consistent with historical facts accepted in most of the world outside of Iran:

- 1) The first bomb was dropped on Hiroshima on August 6, 1945,
- 2) The second bomb was dropped on Nagasaki on August 9, 1945,
- 3) The surrender by the Emperor of Japan was recorded on a phonograph on August 13 or 14, 1945 (and was hidden when the Imperial Palace was stormed by mutinous officers led by Major Kenji Hatanaka, who attempted to prevent Japan from surrendering) to be played over the radio,
- 4) The surrender of Japan by the Emperor (i.e. the Jewel Voice Broadcast) was broadcast over Japanese radio to the population on August 15, 1945.

Thus a simple chronological examination exposes *the way in which widespread perception can be altered for political purposes by simply changing the date of a historical event*:

- ✓ For example, if the United States wanted to vilify Great Britain, the date of the Treaty of Ghent (December 24, 1814) ending the War of 1812 could be moved back in the history books (to say, August 1814) so that allegations could be made that the British

commander knew the war had ended when his troops attacked the U.S. forces at the Battle of New Orleans on January 8, 1815. To this could be added, without alteration, that two ships were captured, a fort surrendered, and another battle took place, all in early 1815, after the Battle of New Orleans (the last action of the War of 1812 was the Battle of the Sinkhole, May, 24, 1815).

- ✓ On the other side will be those who will – if they have not already – argue that the U.S. government (apparently with the cooperation of the rest of the world outside of Iran) changed the dates in the history books to make it appear that Japan had not yet surrendered on August 9, 1945. And that I have been brainwashed by public education. I don't think that is likely for the reasons cited below – and that the government would also need to destroy all old copies of newspapers, *à la* Orwell's 1984, but in any case, this is an argument necessitating *widespread scholarship* in our civilization – reading from a wide variety of sources, reading from original works, reading reliable secondary sources and translations. And above all, thinking critically, detecting errors, and making colorable arguments.

For those who understand, altering history is the true danger of Wikipedia and not all of the usual near-nonsensical criticisms that have been addressed previously in GGDM. Except that Wikipedia is not controlled by the government (unless you love big conspiracies, e.g. Jimmy Whales is an android, alias, alien, or made-up person), is a creature of the internet, and that a body of scholarship and information exists outside of Wikipedia such that, unless everyone is a moron, there is little danger of history being altered by a Wiki. Wikipedia articles are usually patrolled by people who understand the subject matter independent of Wikipedia, and Wikipedia also insists (as it is an encyclopedia) that articles cite to reliable sources and not be original research.

- ✓ When faced with an argument, it is not a bad approach to ask yourself what would be required to be true for the other side to be correct? In the preceding discussion, ask what would be required for Iran to be right (about anything) and the entire rest of the world to be wrong. The absurdity of their position (on just about all issues) becomes apparent. The U.S. is not also immune to this problem, and our main faith is that the adversarial arguments will eventually lead to truth (in the media, in history, in the courts, in science, in technical disciplines, in the humanities and philosophies). GGDM News Events sort of work that way.

---

*“There is no international law or treaty that calls the Internet into existence or forces everyone to use the same standards and technology. Rather, it is a voluntary effort of people around the world.... The global consensus at the heart of the Internet exists by virtue of trust built up over decades with people from all over the world collaborating on the technical design and operation of the network and the web. ICANN is a critical part of this global consensus. But if the United States were to reverse plans to allow the global Internet community to operate ICANN independently, as Sen. Cruz is now proposing, we risk undermining the global consensus that has enabled the Internet to function and flourish over the last 25 years.”*

– Op Ed by Tim Berners-Lee and Daniel Weitzner, “Ted Cruz is wrong about how free speech is censored on the internet,” The Washington Post, September 20, 2016

---

**Media Fact Checking:** A sizable portion of our professional media is dedicated to ‘fact checking’ claims by politicians. Yet it has seemed to become less and less effective in recent years, as politicians receive a ‘free pass’ from the public as to claims they make, because it’s just political theatre. Fact checking anything does little good in situations where people don’t care much for facts and prefer conspiracies and wild assertions; where hyperbole rules the public discourse.

**ICANN Understand:** By way of introduction, Sir Tim Berners-Lee is considered the inventor of the internet and is the director of W3C. Few individuals have had such impact on Western civilization in such a short time. Co-author Daniel Weitzner is the Director of MIT’s CSAIL Decentralized Information Group and teaches internet public policy at MIT. He has also held the post of Deputy Chief Technology Officer of the United States.

The arguments over releasing ICANN from U.S. control to make it a true international body have precedent in the French decision in 1875 to release control of the metric system:

- ✓ “In the 1870s the French made a crucial decision to turn control of the system over to an international body. In 1875, most of the leading industrialized countries (including the United States, but not Britain) signed the Treaty of the Meter. The treaty established the International Bureau of Weights and Measures, which has presided ever since over what we now call the International System of Units. It also provided for distribution of copies of the metric standards throughout the world and for continuing consultation and periodic revision and improvement of the system through regular meetings of a General Conference of Weights and Measures. The 26<sup>th</sup> General Conference is scheduled for November 2018.” – Russ Rowlett, “The Metric System,” <http://www.ibiblio.org/units/metric.html>, last revised April 27, 2018.

There has been popular resistance to the adoption of the metric system in the United States and Britain, even though the U.S. signed the Treaty of the Metre in 1875 with 16 other nations.

- ✓ In a similar move, President Ronald Reagan allowed worldwide access to the U.S. GPS system following the downing of Korean Airlines Flight 007 in 1983.

However, the story of the proto-internet thinking goes back possibly to the end of WWII. For example, Ted Nelson coined the terms hypertext and hypermedia in 1963. Vannevar Bush described a proto-internet in an essay published in *The Atlantic* in 1945 which was eventually called Memex. Project Xanadu established in 1960 began to attempt implementation of these ideas, and there is a running vision dispute between members of Project Xanadu and WC3 or Berners-Lee about true implementation of the hypertext concept.

---

*“This tendency found its most effective advocate in a follower of Pythagoras named Plato. He preferred the perfection of these mathematical abstractions to the imperfections of everyday life. He believed that ideas were far more real than the natural world. He advised the astronomers not to waste their time observing stars and planets. It was better, he believed, just to think about them.*”

---

*Plato expressed hostility to observation and experiment. He taught contempt for the real world and disdain for the practical application of scientific knowledge. Plato's followers succeeded in extinguishing the light of science and experiment that had been kindled by Democritus and the other Ionians. Plato's unease with the world as revealed by our senses was to dominate and stifle Western philosophy.” – Carl Sagan, Cosmos, Episode 7*

## Endnotes.

<sup>1</sup> Commentary: I have a copy of this book and have read it several times over the years, I may have had this book in my library for 20 or more years now (along with Cleveland Amory's The Cat Who Came for Christmas). As of August 2018, a full, searchable copy of A Cat is Watching – surely one of the most astute studies of cat and human psychology and behaviors – is available on Google Books. The word-search function helped me find something that I knew was in the book, but where the index was unhelpful, and I was looking in the wrong part of the book.

<sup>2</sup> Commentary: I do not dislike dogs, I had a collie named Ladd (because I couldn't name *him* Lassie) through my youth that I loved very much and I am sure we made quite a ruckus because, as everyone knows, dogs and children are natural companions. Many dogs passed through my youth, often unfortunately, but Ladd lived to old age. As an adult in my current cognitive state, I find dogs – my neighbor's four dogs or the houses with dogs that I walk past on the way to the store – annoying. They go bonkers over everything and anything, they have no restraint or sense of proportion, and cannot be made to understand, they can only be disciplined with great effort and patience. Thus, I do not desire to have a dog, quite aside from the natural objections of the dozen or so cats that I care for daily.

<sup>3</sup> Commentary: A user on YouTube posted a one-minute video of two wild foxes jumping around on a large backyard trampoline. Lots of viewers liked it. *Twelve years later*, a sharp viewer posted a comment explaining the foxes' jumping around on the trampoline as hunting activity, pointing out that the jumps were clearly 'hunting jumps' and theorizing that the foxes heard higher pitch squeaking from the coil springs and thought it was small prey; the vertical jumps were the same as they would make when hunting mice or small rabbits. Doubtless, everyone who viewed the video over twelve years thought they were just playing cute. Hence, replies to the post called the poster a 'killjoy' for rationally explaining the behavior, and this turned into a spat (not involving the OP) over people who resent people who are smarter than they are, etc.

<sup>4</sup> Commentary: Although cats are social creatures, the cat tribe that lives on my front porch is a bit of an unnatural creation by virtue of the fact that I feed them, provide water and milk, provide heated, comfortable places to sleep, have a fenced in yard fronted by hedges, and provide them with toys and attention. That is, by virtue of being what I am – the SQ and cognitive difference between cats and humans – and the economic and material power of human civilization, I have created in the cats something more than they would do naturally. This may be what happens if humans encounter a more intelligent and advanced alien species (it was hinted at in *Babylon 5*), that their being may unite lower SQ or less intelligent or less advanced species into some unnatural level of coexistence and interaction.

<sup>5</sup> Commentary: My ears have been ringing since I was an early teen, I am sure they were when I was about 13 or 14; my mother told me then that it was because someone was thinking about me. I hardly believe that now since my ears ring frequently (I cannot imagine any reason why people would waste their brainpower constantly thinking about me), but I guess her comment might have been linked to the idea that 'psychic phenomenon' is a form of hearing above the common level, to the idea that thoughts have sound (*à la Dune* (1965)). According to Mayo Clinic:

- ✓ “Tinnitus is the perception of noise or ringing in the ears. A common problem, tinnitus affects about 15 to 20 percent of people. Tinnitus isn't a condition itself – it's a symptom of an underlying condition, such as age-related hearing loss, ear injury or a circulatory system disorder. Although bothersome, tinnitus usually isn't a sign of something serious.” – from <https://www.mayoclinic.org/diseases-conditions/tinnitus/symptoms-causes/syc-20350156>.

The Mayo Clinic represents likely the 'official party line' of modern medicine on every subject. Another place I read years ago linked Tinnitus to stress or even to intense thinking. So it goes round, thoughts have sound...

Whatever the case, I certainly passed the hearing test to enlist in the Marine Corps when I just turned 16 and went to boot camp when I was 17. I believe they said that I had a slightly 'higher end' hearing range than normal. After being in Marine artillery for a couple of years, I was tested again and had lost 'low end hearing' and was diagnosed with 'noise induced hearing loss' meaning that I have a hard time hearing in a crowded room or if there is ambient

background noise. This is what the military calls ‘artillery ears’ – we joked about it when I was in the artillery. The doctor said it would get worse with age, and I can say definitely that my ringing ears may have got a little more frequent and louder with age ... but I also probably think more intensely in my advanced years.... ☺

<sup>8</sup> **Citation:** “Telepathy, for instance, is in trouble with the scientific community for one main reason: it is in complete conflict with that paradigm we call the electromagnetic theory. We do know, of course, that across the skulls of every one of us race minute electrical currents; and the movement of electrical currents produce radio waves. However, these have been measured by Rolf Ashby, Adrian Walter and Grey Walter, and one can now say that if the nearest person to me has a radio receiver in his skull, his chances of picking up the radio broadcasts from my skull are about as good as his chance of making an audio recording of a smoke-signal. So that kind of transmission is out. Telepathy is therefore impossible.

When we look, however, at the evidence which has been gathered, and we make the temporary assumption – as we must – that some of this evidence has been honestly gathered, and honestly reported, and may represent real instances, we find also that it is characteristic of telepathy that its strength of reception does not vary over distance – even over long distances. Now we are in trouble with something much greater than the electromagnetic theory: we’re in trouble with the inverse square law itself. To me this means one of two things. It means either that telepathy is impossible, by two different paradigms, or else it tells us that the electromagnetic theory is the wrong paradigm to apply here. Now I have no idea what the right one might be; and one of the problems of telepathy is that nobody who has ever worked seriously in the field, and is respected as honest and responsible, has himself ever managed to come up with a decent model for how it works. There is no altering this paradigm to the ones we know don’t work in order to account for this evidence.” – James Blish, The Tale that Wags the God (1987) (Kindle Locations 572-587).

<sup>9</sup> **Citation:** “Special Talents” were psychic individuals who assisted military units in Robert Heinlein’s Starship Troopers (1959); “meta-concert” is a term used in Julian May’s Saga of the Pliocene Exiles (1981) to describe a cooperative effort of a group of meta-psychic individuals.

<sup>10</sup> **Commentary & Citation:** There is an extremely rich joke contained in the 100<sup>th</sup> episode of the television series, Stargate SG-1, which was titled “Wormhole X-Treme” and aired on September 8, 2001. The SG-1 team is sent to act as technical advisors for a campy, idiotic sci-fi television series called Wormhole X-Treme (a TV show within a TV show) because it will supply plausible deniability if anyone discovered the actual Stargate program and made it public. The mission is also cover for the real objective of the operation, the team is looking for an amnesic alien; at the end of the episode a real alien space ship arrives and the filming crew thinks it is just a cool special effect!

- ✓ But the real joke is that the *actual Star Gate project* to develop telepathic location abilities (i.e. remote viewing), for spying on the Soviets is deemed a failure and was declassified in 1995 (FOIA documents can be found online at <https://www.cia.gov/library/readingroom/collection/stargate>). This now provides plausible deniability to any claims made that the CIA and U.S. law enforcement are currently using telepathic abilities for investigations (for example, if someone saw the 2000 film, The Gift). Ingo Swann, whose science-fiction novel Star Fire (1979) I read in about 1983 was part of or associated with the Star Gate Project. Whatever history may think of Ingo Swann and his associates, I liked Star Fire when I read it.
- ✓ The underlying idea is quite clever and interesting: That the popularity of video science-fiction and the fertile imaginations of a century of science-fiction authors and screenwriters provides plausible deniability to *any* secret, outlandish government project or investigation.
- ✓ And of course, if anyone claimed that there actually is a secret Stargate on Earth, the TV program SG-1 would provide plausible deniability for the government to dismiss the investigative exposé as a crackpot who watches too much television! The same is true of Close Encounters (1976).

<sup>11</sup> **Commentary:** I saw a video on YouTube in mid-2019 whose title seemed to indicate that some civilian group is still trying to ‘develop’ remote viewing as a psychic ability. Or maybe it is a secret U.S. government program pretending to be civilians and posting on YouTube to create plausible deniability. Big money if it ever works!

3 Information – Perception

## **SHARD: VII. The Next Season**

\*\*\*

### The Man, the Horse, the Ox, and the Dog

A HORSE, Ox, and Dog, driven to great straits by the cold, sought shelter and protection from Man. He received them kindly, lighted a fire, and warmed them. He let the Horse make free with his oats, gave the Ox an abundance of hay, and fed the Dog with meat from his own table. Grateful for these favors, the animals determined to repay him to the best of their ability. For this purpose, they divided the term of his life between them, and each endowed one portion of it with the qualities which chiefly characterized himself. The Horse chose his earliest years and gave them his own attributes: hence every man is in his youth impetuous, headstrong, and obstinate in maintaining his own opinion. The Ox took under his patronage the next term of life, and therefore man in his middle age is fond of work, devoted to labor, and resolute to amass wealth and to husband his resources. The end of life was reserved for the Dog, wherefore the old man is often snappish, irritable, hard to please, and selfish, tolerant only of his own household, but averse to strangers and to all who do not administer to his comfort or to his necessities.

Translated by George Fyler Townsend. Aesop's Fables (pp. 58-59). Amazon Digital Services, Inc.<sup>1</sup>

---

<sup>1</sup> Aesop is probably still telling fables somewhere. Like Swedish meatballs, every sapient species must have an Aesop to point out their laughable fallacies.

**Excerpt from Closing Arguments by Clarence Darrow for the Defendants  
PEOPLE V. HENRY SWEET, Detroit, MI, May 11, 1926**

Now, let me ask you whether you are not prejudiced. I want to put this square to you, gentlemen. I haven't any doubt but that everyone of you are prejudiced against colored people. I want you to guard against it. I want you to do all you can to be fair in this case, and I believe you will. A number of you people have answered the question that you are acquainted with colored people. One juror I have in mind, who is sitting here, said there were two or three families living on the street in the block where he lives, and he had lived there for a year or more, but he didn't know their names and had never met them. Some of the rest of you said that you had employed colored people to work for you, are even employing them now. All right.

You have seen some of the colored people in this case. They have been so far above the white people that live at the corner of Garland and Charlevoix that they can't be compared, intellectually, morally and physically, and you know it. How many of you jurors, gentlemen, have ever had a colored person visit you in your home? How many of you have ever visited in their homes? How many of you have invited them to dinner at your house? Probably not one of you. Now, why, gentlemen?

There isn't one of you men but what know just from the witnesses you have seen in this case that there are colored people who are intellectually the equal of all of you. Am I right? Colored people living right here in the City of Detroit are intellectually the equals and some of them superior to most of us. Is that true? Some of them are people of more character and learning than most of us. I have a picture in my mind of the first witness we put on the stand – Mrs. Spalding. Modest, intelligent, beautiful; the beauty in her face doesn't come from powder or paint, or any artificial means, but has to come from within; kindly, human feeling. You couldn't forget her. I couldn't forget her. You seldom have seen anybody of her beauty and her appearance. She has some colored blood in her veins. Compare her with the teacher who for ten years has taught high school on what she called the corner of Garland and "Gote" Street. Compare the two.

Now, why don't you individually, and why don't I, and why doesn't every white person whose chances have been greater and whose wealth is larger, associate with them? There is only one reason, and that is prejudice. Can you give any other reason for it? They would be intellectual companions. They have good manners. They are clean. They are all of them clean enough to wait on us, but not clean enough to associate with. Is there any reason in the world why we don't associate with them excepting prejudice? Still none of us want to be prejudiced. I think not one man of this jury wants to be prejudiced. It is forced into us almost from our youth until somehow or other we feel we are superior to these people who have black faces.

\*\*\*

But who was Breiner, anyway? I will tell you who he was. I am going to measure my words when I state it, and I am going to make good before I am through in what I say. Who was he? He was a conspirator in as foul a conspiracy as was ever hatched in a community; in a conspiracy to drive from their homes a little family of black people and not only that, but to destroy these blacks and their home. Now, let me see whether I am right. What do we know of Breiner? He lived two blocks from the Sweet home. On the 14th day of July, seven hundred people met at the schoolhouse and the schoolhouse was too small, and they went out into the yard. This schoolhouse was across the street from the Sweet house.

Every man, in that community knew all about it. Every man in that community understood it. And in that schoolhouse a man rose and told what they had done in his community; that by main force they had driven Negro families from their homes, and that when a Negro moved to Garland Street, their people would be present to help. That is why Mr. Breiner came early to the circus on the 9th. He went past that house, back and forth, two or three times that night. Any question about that? Two or, three times that night he wandered past that house.

What was he doing? “Smoking his pipe.” What were the rest of them doing? They were a part of a mob and they had no rights, and the Court will tell you so, I think. And, if he does, gentlemen, it is your duty to accept it.

Was Breiner innocent? If he was every other man there was innocent. He left his home. He had gone two or three times down to the corner and back. He had come to Dove’s steps where a crowd had collected and peacefully pulled out his pipe and begun to smoke until the curtain should be raised. You know it. Why was he there? He was there just the same as the Roman populace were wont to gather at the Colosseum where they brought out the slaves and the gladiators and waited for the lions to be unloosed. That is why he was there. He was there waiting to see these black men driven from their homes, and you know it; peacefully smoking his pipe, and as innocent a man as ever scuttled a ship. No innocent people were there. What else did Breiner do? He sat there while boys came and stood in front of him not five feet away, and stoned these black people’s homes, didn’t he? Did he raise his hand? Did he try to protect any of them? No, no. He was not there for that. He was there waiting for the circus to begin.

Gentlemen, it is a reflection upon anybody’s intelligence to say that everyone did not know why this mob was there. You know! Everyone of you know why. They came early to take their seats at the ringside. Didn’t they? And Breiner sat at one point where the stones were thrown, didn’t he? Was he a member of that mob? Gentlemen, that mob was bent not only on making an assault upon the rights of the owners of that house, not only making an assault upon their persons and their property, but they were making an assault on the constitution and the laws of the nation, and the state under which they live. They were like Samson in the temple, seeking to tear down the pillars of the structure. So that blind prejudices and their bitter hate would rule supreme in the City of Detroit. Now, that was the case.

\*\*\*

Now, you know that the mob met there for that purpose. They violated the constitution and the law, they violated every human feeling, and threw justice and mercy and humanity to the winds, and they made a murderous attack upon their neighbor because his face was black. Which is the worse, to do that or lie about it? In describing this mob, I heard the word “few” from the State’s witnesses so many times that I could hear it in my sleep, and I presume that when I am dying I will hear that “few”, “few”, “few” stuff that I heard in Detroit from people who lied and lied and lied. What was this “few?” And who were they, or how did they come there? I can’t tell you about everyone of these witnesses, but I can tell you about some of them. Too many. I can’t even carry all of their names in my mind and I don’t want to. There are other things more interesting; bugs, for instance. Anything is more interesting to carry in your mind, than the names of that bunch, and yet I am going to say something for them, too, because I know something about human nature and life; and I want to be fair, and if I did not want to, I think perhaps it would pay me to be.

Are the people who live around the corner of Charlevoix and Garland worse than other people? There isn’t one of you who doesn’t know that they lied. There isn’t one of you who does not know that they tried to drive those people out and now are trying to send them to the penitentiary so that they can’t move back; all in violation of the law, and are trying to get you to do the job. Are they worse than other people? I don’t know as they are. How much do you know about prejudice? Race prejudice. Religious prejudice. These feelings that have divided men and caused them to do the most terrible things. Prejudices have burned men at the stake, broken them on the rack, torn every joint apart, destroyed people by the million. Men have done this on account of some terrible prejudice which even now is reaching out to undermine this republic of ours and to destroy the freedom that has been the most cherished part of our institutions.

These witnesses honestly believe that they are better than blacks. I do not. They honestly believe that it is their duty to keep colored people out. They honestly believe that the blacks are an inferior race and yet they look at themselves, I don’t know how they can.

\*\*\*

Gentlemen, lawyers are very intemperate in their statements. My friend, Moll, said that my client here was a coward. A coward, gentlemen. Here, he says, were a gang of gunmen, and cowards – shot Breiner through the back. Nobody saw Breiner, of course. If he had his face turned toward the house, while he was smoking there, waiting for the shooting to begin, it wasn't our fault. It wouldn't make any difference which way he turned. I suppose the bullet would have killed him just the same, if he had been in the way of it. If he had been at home, it would not have happened.

Who are the cowards in this case? Cowards, gentlemen! Eleven people with black skins, eleven people, gentlemen, whose ancestors did not come to America because they wanted to, but were brought here in slave ships, to toil for nothing, for the whites – whose lives have been taken in nearly every state in the Union – they have been victims of riots all over this land of the free. They have had to take what is left after everybody else has grabbed what he wanted. The only place where he has been put in front is on the battlefield. When we are fighting we give him a chance to die, and the best chance. But, everywhere else, he has been food for the flames, and the ropes, and the knives, and the guns and hate of the white, regardless of law and liberty, and the common sentiments of justice that should move men. Were they cowards? No, gentlemen, they may have been gunmen. They may have tried to murder, but they were not cowards.

\*\*\*

The cowardly curs were in the mob gathered there with the backing of the law. A lot of children went in front and threw the stones. They stayed for two days and two nights in front of this home and by their threats and assault were trying to drive the Negroes out. Those were the cowardly curs, and you know it. I suppose there isn't any ten of them that would come out in the open daylight against those ten. Oh, no, gentlemen, their blood is too pure for that. They can only act like a band of coyotes baying some victim who has no chance.

\*\*\*

Now, let us return to the house. Why were the policemen there that night? You know why they were there. Were they there to protect these Holy people from the Negroes? Oh, no. Were they there to protect the people who hate 'Eye-talians' from the Negroes? No. Were they there to protect the residents of Goethe Street? No, no, not that. Was an army to be let loose on Charlevoix and Garland? No. They were there, gentlemen, to protect the rights of a colored family who occupied the premises that they had bought. Protect them against what? Against people who would drive them out in violation of law. Is there any doubt about that?

No, perhaps some of you gentlemen do not believe in colored men moving into white neighborhoods. Let me talk about that a minute, gentlemen. I don't want to leave any question untouched that might be important in this case, and I fancy that some of you do not believe as I believe on this question.

Let us be honest about it. There are people who buy themselves a little home and think the value of it would go down if colored people come. Perhaps it would. I don't know. I am not going to testify in this case. It may go down and it may go up. It will probably go down for some purposes and go up for others. I don't know. Suppose it does? What of it? I am sorry for anybody whose home depreciates in value. Still, you cannot keep up a government for the purpose of making people's homes valuable. Noise will depreciate the value of a house, and sometimes a street car line will do it. A public school will do it. People do not like a lot of children around their house. That is one reason why they send them to school. You cannot get as much for your property. Livery stables used to do it; garages do it now. Any kind of noise will do it. No man can buy a house and be sure that somebody will not depreciate its value. Something may enhance its value, of course. We are always willing to take the profit, but not willing to take the loss. Those are incidents of civilization. We get that because we refuse to live with our fellow man, that is all.

Look at the Negro's side of it. You remember Dancy. Did you ever see a brighter man than he? Compare him with Miller. Compare him with Miss S-t-o-w-e -l-l. Compare him with Andrews. Compare him with anybody on their side of this case. There isn't any comparison. Dancy is colored. He is the head of the Urban League, branch of the association of charities. His business is to look after the poor black, the ones who need it.

He told you how hard it was for colored people to find homes. Do I need to say anything about it? You, gentlemen, are here and you want to do right. Are any of you going to invite colored people to live next door to you? No. Would it hurt you? Not at all. Prejudice is so deep that it might affect the value of your property for sale purposes. Let me ask you, would not any of you like to meet Dancy? Who would you rather meet for companionship and association and fellowship, Dancy or some of the gophers up around "Goffee" Street as some call it? I know who you would rather meet.

Who would you rather meet, their white witnesses or Spalding? Now, I would put Spalding down as a real gentleman. He has some colored blood in him, but what of it? He was a student at Ann Arbor University. He has a good mind, hasn't he? Wouldn't any of you be willing to invite him into your home? I think you would. What is he doing? He is a mail carrier, because he is a black gentleman, otherwise he would have as important a position as the white man would have, with his attainments and his courtesy and his manner. He is black, partly black.

\*\*\*

They sent four policemen in the morning to help this little family move in. They had a bedstead, a stove and some bedding, ten guns and some ammunition, and they had food to last them through a siege. I feel that they should have taken less furniture and more food and guns.

Gentlemen, nature works in a queer way. I don't know how this question of color will ever be solved, or whether it will be solved. Nature has a way of doing things. There is one thing about nature, she has plenty of time. She would make broad prairies so that we can raise wheat and corn to feed men. How does she do it? She sends a glacier plowing across a continent, and takes fifty-thousand years to harrow it and make it fit to till and support human life. She makes a man. She tries endless experiments before the man is done.

She wants to make a race and it takes an infinite mixture to make it. She wants to give us some conception of human rights, and some kindness and charity and she makes pain and suffering and sorrow and death. It all counts. That is a rough way, but it is the only way. It all counts in the great, long broad scheme of things. I look on a trial like this with a feeling of disgust and shame. I can't help it now. It will be after we have learned in the terrible and expensive school of human experience that we will be willing to find each other and understand each other.

\*\*\*

Gentlemen, do we need anything else? If we need anything else, it is this: If we need anything else to show the hostility of the crowd that was there, it is this: A policeman swore that one window that we claim was broken at the time was really broken afterwards. Why? Who would take a "pebble" to break the windows out of these poor peoples' home after they were safely lodged in jail? And the policemen were in charge. This shooting was on the 9th of September; six or seven months have passed away since then; all these defendants were in jail two or three months, and since that they have been out on bail, but a policeman still stands guard on that vacant home to protect it from being destroyed by the people who want to have an American community where they can raise their families "in peace and amity."

Gentlemen, supposing you return a verdict of not guilty in this case, which you will; I would be ashamed to think you would not; what would happen if this man and his wife and his child, moved into that house? They

have the same right to go to that house that you have to your home, after your services are done. What will happen? Don't you know? What did Schuknecht say? Eight or ten policemen were standing around that house for two days and two nights. A menacing crowd was around them, wasn't there? The police were protecting them. Did one policeman ever go to one person in that crowd and say: "What are you here for?"

There was a mob assembled there. The Court will tell you what a mob is. I don't need to tell you. He will tell you that three or more people gathered together with a hostile intent is a mob; there were five hundred; they were plotting against the persons of these people and their lives, perhaps, as well. Did any policeman try to disperse it? Did they raise their hands or their voices, or do one single thing? Did they step up to any man and say: "Why are you here?" Never. They stood around there or sat around there like bumps on a log, while the mob was violating the Constitution and the laws of the State, and offending every instinct of justice and mercy and humanity.

Schuknecht was standing there; five or six others were standing there, weren't they, gentlemen? Let us see how closely they were guarding the house. They did nothing. They heard no stones thrown against that house; not one of them; and yet they were not twenty feet away. The State brought here some twenty stones gathered next morning from the house and yard, and nobody knows how many more there were. Gentlemen, a roof slopes at an incline of forty-five degrees, or about that. You can get the exact figures if you want them. Imagine someone throwing stones against the roof. How many of them would stay there, or how many of them would stay in the immediate yard, and how many of them would be left there after the mob had finished and sought to protect itself, and the police and crowd had gathered them up, the police force which was responsible for this tragedy? None of them heard a stone, and yet they were there to protect that home. None of them heard the broken glass, but they were there to protect that home. None of them saw two men come in a taxi, except one who hesitated and finally admitted that it seemed as if he did; but none of the rest. Gentlemen, you could have looted that house and moved it away and the police would never have known it. That is the way these people were protected.

\*\*\*

Oh, they say, there is nothing to justify this shooting; it was an orderly, neighborly crowd; an orderly, neighborly crowd. They came there for a purpose and intended to carry it out. How long, pray, would these men wait penned up in that house? How long would you wait? The very presence of the crowd was a mob, as I believe the Court will tell you.

Suppose a crowd gathers around your house; a crowd which doesn't want you there; a hostile crowd, for a part of two days and two nights, until the police force of the city is called in to protect you. How long, tell me, are you going to live in that condition with a mob surrounding your house and the police-force standing in front of it? How long should these men have waited? I can imagine why they waited as long as they did. You wouldn't have waited. Counsel say they had just as good reason to shoot on the 8th as on the 9th. Concede it. They did not shoot. They waited and hoped and prayed that in some way this crowd would pass them by and grant them the right to live.

The mob came back the next night and the colored people waited while they were gathering; they waited while they were coming from every street and every corner, and while the officers were supine and helpless and doing nothing. And they waited until dozens of stones were thrown against the house on the roof, probably – don't know how many. Nobody knows how many. They waited until the windows were broken before they shot. Why did they wait so long? I think I know. How much chance had these people for their life after they shot; surrounded by a crowd, as they were? They would never take a chance unless they thought it was necessary to take the chance. Eleven black people penned up in the face of a mob. What chance did they have?

\*\*\*

Now, let us go back a little. What happened before this? I don't need to go over the history of the case. Everybody who wants to understand knows it, and many who don't want to understand it. As soon as Dr. Sweet bought this house, the neighbors organized the "Water Works Park Improvement Association." They made a constitution and by-laws. You may read the constitution and by-laws of every club, whether it is the Rotary Club or the – I was trying to think of some other club, but I can't. Whatever the club, it must always have a constitution and by-laws. These are all about the same. You cannot tell anything about a man by the church he belongs to. You can't tell anything about him by the kind of clothes he wears. You can't tell anything about him by any of these extraneous matters, and you can't tell anything about an association from the by-laws. Not a thing. I belonged to associations in my time. As far as I can remember, they all had by-laws.

\*\*\*

Yes, all have the same. They are all of them engaged in the work of uplifting humanity, and humanity still wants to stay down. All engaged in the same work, according to their by-laws, gentlemen. So, the "Water Works Park Improvement Club" had by-laws. They were going to aid the police. They didn't get a chance to try to aid them until that night. They were going to regulate automobile traffic. They didn't get any chance to regulate automobile traffic until that night. They were going to protect the homes and make them safe for children.

The purpose was clear, and every single member reluctantly said that they joined it to keep colored people out of the district. They might have said it first as well as last. People, even in a wealthy and aristocratic neighborhood like Garland and Charlevoix, don't give up a dollar without expecting some profit; not a whole dollar. Sometimes two in one family, the husband and wife, joined.

They got in quick. The woods were on fire. Something had to be done, as quick as they heard that Dr. Sweet was coming; Dr. Sweet, who had been a bellhop on a boat, and a bellhop in hotels, and fired furnaces and sold popcorn and has worked his way with his great handicap through school and through college, and graduated as a doctor, and gone to Europe and taken another degree; Dr. Sweet, who knew more than any man in the neighborhood ever would know or ever want to know. He deserved more for all he had done. When they heard he was coming, then it was time to act, and act together, for the sake of their homes, their families and their fire-sides, and so they got together. They didn't wait. A meeting was called in the neighborhood; we haven't a record of that, but we have a record of another one.

\*\*\*

Gentlemen, these black men shot. Whether any bullets from their guns hit Breiner, I do not care. I will not discuss it. It is passing strange that the bullet that went through him, went directly through, not as if it was shot from some higher place. It was not the bullet that came from Henry Sweet's rifle; that is plain. It might have come from the house; I do not know, gentlemen, and I do not care. There are bigger issues in this case than that. The right to defend your home, the right to defend your person, is as sacred a right as any human being could fight for, and as sacred a cause as any jury could sustain.

That issue not only involves the defendants in this case, but it involves every man who wants to live, every man who wants freedom to work and to breathe; it is an issue worth fighting for, and worth dying for, it is an issue worth the attention of this jury, who have a chance that is given to few juries to pass upon a real case that will mean something in the history of a race.

(Re-paragraphed and corrected by Prof. Bruce W. Frier, Law School, The University of Michigan. For the original, see book, Attorney for the Damned (1957), ed. by Arthur Weinberg, which contains a transcript from the court transcript preserved by the NAACP).

**Excerpts From: Luther vs. Erasmus: When Populism First Eclipsed the Liberal Elite**

Michael Massing, The New York Review of Books (NYR Daily), February 20, 2018

Desiderius Erasmus ... the leading figure of the Northern Renaissance, is widely considered the greatest of early humanists. Five hundred years ago, he faced a populist uprising led by a powerful provocateur, Martin Luther, that resulted in divisions no less explosive than those we see in America and Europe today.

Between 1500 and 1515, Erasmus produced a small library of tracts, textbooks, essays, and dialogues that together offered a blueprint for a new Europe. The old Europe had been dominated by the Roman Church. It emphasized hierarchy, authority, tradition, and the performance of rituals like confession and taking communion. But a new order was emerging, marked by spreading literacy, expanding trade, growing cities, the birth of printing, and the rise of a new middle class intent on becoming not only prosperous but learned, too.

Erasmus became the most articulate spokesman for this class. Moving from city to city in search of good libraries, fine wine, sparkling conversation, and skilled printers, he produced a new ‘design for living’ based on the principles of tolerance, pluralism, concord, and virtuous conduct. In his 1515 essay *Dulce bellum inexpertis* ... he denounced the ceaseless wars waged by rash princes. In *The Education of a Christian Prince* (1516), he offered a guide to good governance, urging sovereigns to pursue not their own interests but those of the people. In *The Praise of Folly* (1511), he mocked the pretensions and delusions of kings and courtiers, popes and theologians – part of his campaign to discredit the ruling class and open the way for renewal.

\*\*\*

The term ‘Erasmian’ came into use to describe those who shared his vision. But those Erasmians represented only a small sliver of society. Erasmus wrote exclusively in Latin, for the highly educated, Latin-speaking elite.

\*\*\*

Around the same time that the Erasmians were celebrating the dawn of a new enlightened era, a very different movement was gathering in support of Martin Luther. An Augustinian friar then in his early thirties, Luther had developed his own, unique gospel, founded on the principle of faith. Man, he thought, can win divine grace not through doing good works, as the Latin Church taught, but through belief in Christ. No matter how sincerely one confessed, no matter how many alms one gave, without faith in the Savior, he reasoned, no one can be saved. When Luther made this “discovery,” in around 1515, he felt that he had become “altogether born again and had entered paradise itself through open gates.”

With this new conviction, Luther became disturbed by the Church’s use of indulgences. These dispensations, by remitting the penalties imposed on sinners for their transgressions, reduced the amount of time they had to spend in purgatory before being admitted to heaven. In return, the Church expected a financial contribution. To Luther, this seemed to turn repentance into a form of barter. In protest, he prepared (in Latin) a set of theses for debate that challenged the pope’s authority to grant indulgences. On October 31, 1517, he posted them on the door of the Castle Church in Wittenberg....

Soon appearing in print (in both Latin and a German translation), the *Ninety-Five Theses* quickly spread across Germany. Indulgences were but one of many instruments Rome used to extract money from the German people, and Luther’s protest fanned their resentment. Initially, the Vatican ignored him, assuming the matter would blow over, but the friar – driven, blunt, fearless – spoke out ever more forcefully against what he considered Rome’s arrogance, greed, and corruption. In addition to writing thick theological tracts in Latin, he produced sharp popular pamphlets in German. In them, Luther used an earthy, folksy, and sometimes scatological idiom that helped carry his ideas far beyond the educated elites who were drawn to Erasmus and his high-minded program of social and scriptural renewal.

In his famous 1520 tract *To the Christian Nobility of the German Nation*, Luther (writing in the vernacular) offered his own reform program. Along with a piercing attack on Rome's oppressive practices, he proposed twenty-seven measures to protect both the souls and pocketbooks of the German people. He also rejected the idea that the clergy make up a separate spiritual class superior to the laity. All Christians, he declared, are priests of equal standing, free to read and interpret the Bible for themselves. Such attacks on privileged elites endeared him to *Herr Omnes*, "Mr. Everyman."

\*\*\*

Initially, Luther admired Erasmus and his efforts to reform the Church, but over time Luther's inflammatory language and his stress on faith instead of good works led to a painful separation. The flashpoint was the debate over whether man has free will. In dueling tracts, Erasmus suggested that he does, while Luther vehemently objected; after that, the two men considered each other mortal enemies.

Beyond that immediate matter of dispute, however, their conflict represented the clash of two contrasting world views – those of the Renaissance and the Reformation. Erasmus was an internationalist who sought to establish a borderless Christian union; Luther was a nationalist who appealed to the patriotism of the German people. Where Erasmus wrote exclusively in Latin, Luther often used the vernacular, the better to reach the common man. Erasmus wanted to educate a learned caste; Luther, to evangelize the masses. For years, they waged a battle of ideas, with each seeking to win over Europe to his side, but Erasmus's reformist and universalist creed could not match Luther's more emotional and nationalistic one; even some of Erasmus's closest disciples eventually defected to Luther's camp. Erasmus became an increasingly marginal figure, scorned by both Catholics, for being too critical of the Church, and Lutherans, for being too timid. In a turbulent and polarized age, he was the archetypal reasonable liberal.

As his end approached, Erasmus sought to warn his fellow Christians of the catastrophe he saw looming – in vain. After his death, in 1536, Europe descended into a century of religious-fueled violence, culminating in the Thirty Years' War (1618–1648) – the continent's most destructive conflict before World War I. Erasmus's ideas about tolerance, peace, and clemency were ruthlessly suppressed. Both Catholics and Protestants dismissed him as a weak, vacillating man who lacked ardor and conviction, and whose commitment to an irenic form of Christianity founded on the Gospels was as objectionable as it was obsolete. Yet Erasmus's vision of a united Europe in which people of differing beliefs share a common citizenship would live on, providing an intellectual haven amid the eruptions of nationalism, xenophobia, racism, and nihilistic violence that periodically ravaged the continent. Despite its snobbism and elitism, Erasmian humanism offered an alternative to the apocalypse.

Luther underwent his own reverses. When, in 1524–1525, the German peasants – inspired in part by his writings – rose up against their spiritual and secular overlords, Luther, fearing anarchy, denounced them as mad dogs who deserved to be stabbed, smitten, and slayed. With that, the common man turned irrevocably against Luther. A wrenching dispute over whether the body of Christ is present in the bread of communion led to an irreparable breach with the Swiss branch of the Reformation. And Luther's uncompromising insistence on the rectitude of his own beliefs alienated many moderates, and not just Catholic ones.

By the time of his death, in 1546, Luther had become an isolated reactionary, his work eclipsed by a younger and more dynamic reformer, John Calvin. Even so, Luther would go down in history as the founder of Protestantism, the man who broke the spiritual stranglehold of the Roman Church. Luther's brand of Bible-based ardor founded on pure faith would exercise a profound influence on Western culture, not least in America.

*See Appendix REF – A Reformation Example*

*“The priesthood have, in all ancient nations, nearly monopolized learning. Read over again all the accounts we have of Hindoos, Chaldeans, Persians, Greeks, Romans, Celts, Teutons, we shall find that priests had all the knowledge, and really governed all mankind. Examine Mahometanism, trace Christianity from its first promulgation; knowledge has been almost exclusively confined to the clergy. And, even since the Reformation, when or where has existed a Protestant or dissenting sect who would tolerate a free inquiry? The blackest billingsgate, the most ungentlemanly insolence, the most yahooish brutality is patiently endured, countenanced, propagated, and applauded. But touch a solemn truth in collision with a dogma of a sect, though capable of the clearest proof, and you will soon find you have disturbed a nest, and the hornets will swarm about your legs and hands, and fly into your face and eyes.”*

– John Adams, The Letters of John and Abigail Adams  
[Letters to John Taylor, 1814, XVIII, p. 484]

**Monopoly on Learning:** Mr. Adams letter suggests an intellectual view in his time that the progress of his age was a long-term process of wresting the monopoly on knowledge away from the clergy – noting also that the Church provided legitimacy to the Crown and the elite. I believe he shared this belief with Denis Diderot, who was born 30 years before Thomas Jefferson.

GGDM makes the standard science-fiction assumption that knowledge is empirical, secular, and widely available – when I was in 11<sup>th</sup> grade, before the internet, my astronomy teacher taught us how to build an atomic bomb and worked through the equations as an extension of the lesson about the Sun – that is, mirroring the conditions of our time, and that something amounting to societal collapse would be required to restrict knowledge to a chosen group, such as the clergy, shamans, mystics, or such (e.g., Alfred Coppel, “The Rebel of Valkyr” (1950)). However, participants are welcome to explore situations where knowledge and education are restricted.

**The World Turned Upside Down:** *Listen to me and you shall hear, news hath not been this thousand year...* You have reached a milestone in gaming; no other game has ever attempted to model Reformations or Kairotic Moments. I play civilization games, I have played games about The Reformation (e.g., GMT’s Here I Stand), but I have never seen a civilization game, no matter the scale, that addressed reformations. Most do not even think of reformations as a process, but instead, limit the term to a specific historical period and geography called The Reformation.

A game design is bounded by the mechanics imagination of the designer; Reformation as a social process is a direct result of the game mechanics designed to answer the original question asked in GGDM (see The Problem of Immersion, 1 Culture, p. 352, *supra*). Unfortunately, attempts to model a Reformation in GGDM will be required to conform to the game, to make the story emergent, and will only vaguely resemble a historical reformation-like process. Like Culture in GGDM, Reformations will seem mechanical; they are, after all, a set of game mechanics designed to bridge the gap between Fundamental Realities and the current game milieu, to simulate macro- and systemic-level changes that eventually roll into the next civilization’s Fundamental Realities. They are the echoes of the footfall in a large empty hallway, not the footfall itself; this is also true of Kairotic Moments in GGDM. It is up to the participants to provide whatever color and quirk is necessary to make a good story.

- ✓ In the original vision of Reformations and Kairotic Moments, probably before 2015, I had some vague idea that Reformation would transition a Major Race in the game

into an ‘Elder Race’ (probably in conjunction with 3<sup>rd</sup> Era technology). However, there was never a mechanic written for it, and I had no specific idea of what Elder Race would mean in the game. Like ‘prophecies’ as a mechanic for Kairotic Moments, and ages and epochs as measures in the game, the idea of Elder Races as a position status went by the wayside, but still might be useful for creative participants.

- General Systems Collapse: *Warning, at any point after this, GGDM may begin general systems collapse.* Revisiting the discussion in Diminishing Returns, 2 Disruption, p. 269, *supra*, regarding problem solving, complexity and diminishing returns (e.g., Tainter) in GGDM game design, it is the game mechanical complexity of the GGDM simulation (e.g., Thorn-gate) and the imagination of the designer that enables the GGDM to model Reformations and Kairotic Moments. Is the problem solving a return that validates the complexity of GGDM?<sup>1</sup>
- ✓ The phenomenology of GGDM to the designer: Every time I work on GGDM, it gets bigger, every time I open a file, something gets added, modified, or moved, rarely is anything subtracted. GGDM consumes time, space, and worlds, even Galactus trembles before the onslaught. The phenomenology of GGDM to potential players... ?

---

*“We have always watched the stars and mused about whether there are other beings who think and wonder. In a cosmic setting vast and old beyond ordinary human understanding, we are a little lonely. In the deepest sense, the search for extraterrestrial intelligence is a search for who we are.”*

– Carl Sagan, *Cosmos*, Episode 12

---

**Enculturation of GGDM**: Throughout GGDM, I have stressed repeatedly the idea of scale. I believe that one of the main impediments to humanity is the lack of appreciation of scale based on our limited point of view – and I don’t mean merely taking the long view of things, which is the subject of macro-history and macrosociology and the various studies in evolution – but instead, to *grok* as a species what we know scientifically and mathematically about the universe. How do we get there? I do not know; it might be a physiological change in the state of humanity, or it might be a long slow sociocultural development. It took most of the 20<sup>th</sup> Century for the main pre-WWII quantum physics discoveries to trickle down to the consciousness of Western civilization. Considering the enculturation of Protestant ideas over the last 500 years, what appreciation might our descendants have around 2300 A.D.? And only well after the year 2000 have we begun to make engineering use of quantum entanglement in communications.

- ✓ “A doctrine or philosophy insinuates itself into culture by means of rumor as much as by persuasion occasioned by reading its founding, or even subsequent, texts.” – Theodore Dalrymple, Admirable Evasions: How Psychology Undermines Morality (2015), discussing enculturation of Freudianism.

I am aiming for nothing less than enculturation of the ideas of GGDM over the next century or two; GGDM would be easy to plagiarize, if there is anything worth stealing – few will have read it, and it won’t be in plagiarism software check databases editors use now – see Truman quote. 😊 Surprised? Aside from being completely absurd – as James Baldwin said, “Action is a lack of balance. In order to act you must be somewhat insane. A reasonably sensible man is satisfied with thinking.” – it should not be: As a practical extension of Kant’s Categorical Imperatives or universal legislator (I am sure this was said long before Kant), why would one present a serious

philosophical or intellectual work if the author didn't desire to see the ideas contained therein en-cultured? Faith in one's own ideas, perhaps, even if they cannot now be proven empirically?

- ✓ Sometimes I feel like Kenny Rogers' song "She Believes in Me" (1978).

In other words, one who presents ideas they don't actually believe, as if serious, is a charlatan (see discussion of Leibniz' 'Best of All Possible Worlds,' PANGLOSS DOESN'T VISIT OFTEN, 1 Fallen to Earth, p. 1495, *infra*). And how many people go to that much effort for falsehoods (e.g., Adolf Hitler, the Big Lie, see Propaganda and Cartoonworld with feature quote, 1 Diplomacy, pp. 1091, 1106 respectively, *supra*)? As a corollary, we must believe that the Nazis and others who have put forth ideas *that we find abhorrent* or that have been subsequently rejected, did so with sincere internal belief in their ideas, no matter how horrific they seem to us now (and who is to blame for that?); sometimes it is difficult for us to accept that those people really believed those things when history (see Encomienda and Pragmatic Ethics discussions, 3 Order, pp. 549-551, *supra*), empiricism and logic have shot them so full of holes. Not all *fourth order facts* are happy social phenomenon.

---

*"There is nothing new in the world except the history you do not know."*

– Harry S. Truman, 33<sup>rd</sup> President of the United States of America

---

*"The Reformer is always right about what's wrong. However, he's often wrong about what is right."* – G.K. Chesterton

---

**The Human Thing:** To the extent that I might be considered ever a 'reformer' of anything (e.g., macrosociology), I believe that G.K. Chesterton was spot on correct, I know more about what is wrong than what is right. It's the human thing, we can more easily list what is not than what is, we most often decide truth by what is not true than by what is true, we are not inherently *a priori* beings. See discussion of (T) or (F) Conflict Checks, 4 Government Titles, pp. 628, 633, *supra*.

**A Reformation of History:** The Reformation, as commonly taught, is a specific period of European history describing the violent Protestant revolt against the Catholic Church-legitimized imperial rulers that began in 1529, when German cities and princes protested an edict of the Diet of Spires that was intended to destroy the Lutheran movement and 'ended' in 1648 at the conclusion of the Thirty Years War. The Reformation 'followed' the Renaissance, was followed by the Wars of Religion and preceded the Enlightenment (1648-1815<sup>2</sup>) as taught in Western history.

- ✓ The seeds of the Reformation may have already formed as early as the Cadaver Synod in 897, where the charges against the *cadaver* of Pope Formosus amounted to a declaration that the people have been corrupted if they express a preference to have a particular bishop rule them and second, that no one not approved by the church could practice ecclesiastical office. Yet, it was acceptable for political and ecclesiastical factions *in Italy* to determine by bribery, struggle, murder, theft, adultery, and deceit, the next Pope of all Roman Catholics in the world, which still tentatively included the Eastern Church since the Great Schism didn't occur until 1054.

Although there is a specific period of time, that was recognized and named in hindsight, as The Reformation, there is no basis to hold that this was the only 'reformation' of Western civilization

of that magnitude. Thus, when there are at least two widely separated periods *in Western history* that could equally be called ‘Reformations’ with a capital “R,” a ‘Reformation’ becomes a recognizable historical cycle rather than the singular historical period which it has been presented for the last several hundred years.

Because the result of a reformation is the shift of the most fundamental widespread views of reality, the reformation usually involves conflict on many levels (political, economic, religions, etc., the old saying “may you live in interesting times” was not intended to be a blessing), and is only generally recognized for what it is in historical hindsight. The catalyst for the reformation is the perceived ‘collapse’ or decay or revolt against the preceding order of the world (but should not be confused with a mere revolution, most revolutions don’t really change anything, only destroy, and then fade before they can fully replace the old order). For example, the time period known as The Reformation was, in large part, a result of the collapse or decay of the feudal system, a class struggle between the established nobility and royalty and the new aristocracy and up and coming powers, and ultimately, a social and political revolt against the deeply corrupted Church which upheld and legitimized the old order:

- ✓ “There are monasteries where there is no discipline, and which are worse than brothels – *ut prae his lupanaria sint et magis sobria et magis pudica*. There are others where religion is nothing but ritual; and these are worse than the first, for the Spirit of God is not in them, and they are inflated with self-righteousness. There are those, again, where the brethren are so sick of the imposture that they keep it up only to deceive the vulgar. The houses are rare indeed where the rule is seriously observed, and even in these few, if you look to the bottom, you will find small sincerity. But there is craft, and plenty of it – craft enough to impose on mature men, not to say innocent boys; and this is called profession. Suppose a house where all is as it ought to be, you have no security that it will continue so. A good superior may be followed by a fool or a tyrant, or an infected brother may introduce a moral plague. True, in extreme cases a monk may change his house, or even may change his order, but leave is rarely given. There is always a suspicion of something wrong, and on the least complaint such a person is sent back.” – Desiderius Erasmus, Letter to Lambertus Grunnius (August 1516) (discussing the rule of celibacy in monastic orders).
- ✓ “There is no doubt about Martin Luther’s marriage, but the rumour about his wife’s early confinement is false; she is said however to be pregnant now. If there is truth in the popular legend that Antichrist will be born from a monk and a nun (which is the story these people keep putting about), how many thousands of Antichrists the world must have already!” – Desiderius Erasmus, Letter to François Dubois (13 March 1526).
  - If there is one case where we ought to be happy that the bell cannot be un-rung, it is that we have the critical writings of Desiderius Erasmus. The Church has not been able to un-ring Erasmus for 400 years. It is quite surprising that he was not rung up on some heresy charge and dismissed or muzzled during his lifetime. Notably, though loyal to Rome, and awarded with permanent dispensations, he always stayed a safe distance from Rome in his travels. In his travels through Holland, Belgium, southern England and northern France, he also, perhaps intentionally, avoided the hotbed of Protestant controversy, the German city-states and principalities.

The Reformation was not the only, there probably have been many, smaller, more localized processes, however, the one other event in Western history that reaches and perhaps surpasses the scale of The Reformation (deserving of a capital “R”) are the two centuries preceding and following the ‘fall’ of the Roman Empire, which signaled the final ‘passing’ of classical civilization. This I call the First Reformation; the Church, contrary to some belief, was not the cause of this collapse, the symptoms were already present, but the phenomenal (and unprecedented) spread of the Church, far transcending the time and place of the events giving rise, through the areas of the late Roman Empire, the conversion of the Germanic and Goth invaders, made the Church the major defining force of the new worldview following the First Reformation.

Interesting to compare circumstances.

- ✓ The Reformation associated with the fall of the Roman Empire was a result of a combination of centuries of internal power struggles in the Empire coupled with massive invading human waves from the East.
- ✓ The Reformation of Martin Luther was an internal religious matter stemming from centuries of Church corruption and abuse of clerical legitimacy amid European poverty, although Europe also faced the threat of Ottoman military invasion up to 1683.

Working definition of a Reformation, stripped of historical context: A cyclic process of protracted struggle between the significant minority and those who hold political and military power for certain very fundamental changes that will eventually alter society (or the system) at all levels through future generations. A Reformation is more than just a struggle for political power or legitimacy, or economics, in civilization, though all play a significant part.

- ✓ See further discussion, *The Core of Christianity*, 1 Kairotic Moments, p. 1423, *infra*.
- Fracture and Complexity: A Reformation should not be confused with a general systems collapse or societal collapse (e.g., the Samnites’, Aztecs’ collapse were not reformations!). A Reformation is instead a struggle in problem solving that usually leads to both fracturing of the society and new layers of complexity to solve the problems. A Reformation is not a rewrite. The reformation of the West did not end with the historical period called the Reformation, and neither did the Church end, but is much diminished now that other problem solvers have taken bits of its role over the centuries, e.g., what we now call Family Law and Orphans Court was wrested from the Ecclesiastical Courts through the 16<sup>th</sup> to 18<sup>th</sup> Centuries.
  - ✓ Reformations and Kairotic Moments in GGDM were significantly reformed late in 2018 based on better intellectual tools and deeper knowledge of the subject matter. I am now entering the middle ages.
- Understanding the Question: One of my professors – and I am sorry that I do not recall with certainty which one, but it could have been Dr. Paul T. Mason, opined that in the Reformation, the Catholics simply did not understand the question asked by the Protestants: How do I know I will be saved? To the Catholics of that milieu, one did not have a personal relationship with God, one had a relationship with the Church, which was God’s intermediary, the House of God on Earth, and one was assured of ascension in the afterlife by being faithful to, adhering to, and practicing Catholicism and being properly interned as a Catholic.

The Protestants, on the other hand, were asking about their personal relationship with God (because the Church was corrupt and mortal, *how could it be a part of one’s relationship with God?*). Now, it may seem silly to us, with over half a millennia of historical hindsight that

the Catholics did not understand the question, but this simply attests to the cultural and intellectual impact of Protestantism, and to the enculturation of ideas over time – the essential process of civilization at all levels. It also demonstrates, as Prof. Oswald (University of Warwick) stated, that “It is hard for a human being to absorb ideas that are of first-order originality; such ideas, by definition, barely compute.”

- ✓ This is perhaps the same sort of question that the Rabbinic asked the Sadducees before the destruction of the Second Temple. A theme of the Reformation was a return to *early* Christian forms, mainly communalism and a Rabbinic relationship with God.
- ✓ Though we like to think of our worldview as broader than that of the pre-Reformation world (and if that is true, then the Reformation has succeeded... we have been Enlightened), many of the questions I have asked in GGDM may be as incomprehensible now, in the same way, as the Protestant Question was then.

It seems to me, with 500 years of historical hindsight, that the Protestants ‘won’ the Reformation; ultimately, the Catholic Church adopted many of the reforms sought or moved away from certain objectionable practices. Much of the Protestant victory is also caught up in various macro-historical trends, for example, the Protestant Historical Coincidence, rejection of scholasticism, rise of empiricism and science (see, Loren Eiseley, The Modern Dilemma, 1973), and the whole bundle of what is now called modernity (see *Modernity*, 3 Constructural Elements, p. 207, *supra*).

Had the Reformation not occurred, had there been no great wars of religion, had the New World not been discovered, how would history have unfolded in the world of Catholic Europe? Would they have looked, would they have tinkered, would the European obsession with tinkering have developed, or would the path to knowledge have been shut away as an encroachment on the realm of God, the path to the end of times, divine wrath?

- ✓ It is amazing, after all that has happened, that the Roman Catholic Church continues to embrace the concept of Papal Infallibility when Popes have proven so fallible! There are people who will say that I have misunderstood the concept. In another, satirical sense, one might say that Papal Infallibility is the essence of faith – the human preoccupation that ignores the lessons of history and other inconvenient facts to maintain a waking dream state against the Existential Void.
- Heavens Apart: Heaven (i.e. eternal afterlife) is rather relative, and that should be the first and only clue you need to understand that it is a completely subjective human cultural construct; humans across cultures don’t even envision the same heaven or afterlife (but is still a ‘fact’ within the *fourth order of natural phenomenon* and thus cannot be simply dismissed).

What would be heaven to a cat? A painless place with other cats (but not too many) and birds singing, no dogs allowed, where the mice and birds run free, plentiful and are easy to catch, there is running water and streams of milk nearby, endless canned cat food, no upset tummies, every day is sunny, it’s never too cold, and there are lots of great places to lay, dens to have kittens, and maybe some toys, cat tunnels, cardboard boxes, crinkly paper and plastic, strings, stuffed furniture, carpet, and catnip and flying bugs to chase for amusement. Maybe even a kind human caregiver (a sort of ‘benevolent god’ I guess), if the cat ever knew one.

- ✓ A man looks out for women, children and small animals. If a man cannot look out for small animals, he has no business with women and children.

Like a perfect cat Earth. But their vision of such a place, if they had it, would not include eternal life in the hereafter, because, as Roger Caras points out (and also common observation), they have no concept of their own mortality (or that of their human caretaker) or of greater good, and such a vision *would not* include harps, wings, greater cosmic struggles, blessings, morality, the possibility of punishment, or any other such abstractions or nonsense. A cat's heaven would be just the purrfect continuation of their life on Earth and they might not even know the difference.

- ✓ What would be heaven to an elephant, who mourn their dead? No mice or big cats?

---

*“But if we’re willing to live with the growing likelihood of nuclear war shouldn’t we also be willing to explore vigorously every possible means to prevent nuclear war? Shouldn’t we consider, in every nation major changes in the traditional ways of doing things? A fundamental restructuring of economic, political, social and religious institutions? We’ve reached a point where there can be no more special interests or cases. Nuclear arms threaten every person on Earth.” – Carl Sagan, Cosmos, Episode 13*

---

**Transformations:** Domestication of the horse was a major transformation of human civilization (quite aside from general domestication of animals and advent of agriculture); it changed space and time for humans on Earth, bringing into contact groups that would have never met, tilling our fields, and pulling the heavy loads building the architecture of civilization. Two or three days of walking became a day ride on horseback, a day ride on horseback is now an hour or two in a car on the highways between population blots on the land.<sup>3</sup> River-going and coast-hugging boats (and later navigation on open waters) accomplished the same effect. A similar effect has occurred through the late 19<sup>th</sup> Century to the present with mechanical travel (trains, planes and automobiles, ‘fly over country’), it is the root of what we now (and what some derisively) call globalization (see discussion, Spheres in Six Degrees, 3 Commerce, p. 1220, *supra*). It is the root of World War II. According to Joseph Tainter, however:

- ✓ “Complex feedback relations emerged among agricultural production, conflict, and complexity. Productivity fluctuations made military adventures tempting, even essential, while in turn military strategy came to influence agriculture. Dispersed, shifting swidden plots were essentially indefensible (at least at any reasonable cost), and yet were highly vulnerable and essential to subsistence. Concentrated, intensive systems, such as raised fields and terraces, were at the same time more easily defended (being compact, concentrated, and stationary) and productive enough to be worthwhile defending. The same consideration applies to centralized storage facilities. While it would be simplistic to suggest that warfare was the sole reason for agricultural intensification, it certainly made intensification that much more attractive.” (The Collapse of Complex Societies (1988), see 2 Government Titles, EN 9, p. 604, *supra*, for full quote).

Thus, transformation and conflict play together through human history (this is hardly news to anyone who understands history), whether called Reformation or not. The fullness of the space expanding transformation of horses and wagon wheels is expressed first in the Great Migrations, and later in the conquests of nomadic steppe peoples from the Turkic Cumans to the Mongols.

Although all of these space-expanding transformations (i.e. horses, chariots, wagons, boats) have been appropriated in warfare and other struggles and perhaps caused them via contact and competition, and certainly enabled them (e.g., Alfred Thayer Mahan feature quote, top 1 Commerce, p. 1181, *supra*), none of them were, as far as we know, the direct result of struggle.

- ✓ One could, of course, invent a mythopoeic origin heroic story set in the Neolithic age in the Pontic Steppes where the hero domesticates a horse to rescue his female companion and children who have been kidnapped by warriors of another tribe. Perhaps he first thinks that he can overcome their lead by riding the horse, but then discovers that the horse is also a weapon against which the opposing warriors on foot will not stand. The same sort of story could be written for the invention of the boat. Not saying it didn't happen that way, but we have no record.

From this perspective then ('space expanding transformations'), the invention of space travel (and perhaps FTL or Stardrive in the future) does two things: It not only expands the space we can cover, but also expands the available space to be covered. This is different than all of previous human history: Human ability to travel distance has improved vastly, to the point that any place on the globe is just a day or two travel by air (taking into account waiting in the airport bar time), but the Earth is not now larger than it was in prehistoric times. But as the primary yardstick of human travel is time, we haven't really conceptualized space as distance yet.

- Reformation or Transformation?: These fundamental transformations challenge the 'working definition' of Reformation above (lacking fundamental change related to struggle), in the sense that GGDM Reformations are about more than the classic Reformation (with a big r or little R), Reformations are a subcategory of transformations. But for GGDM purposes, Reformation is a sexier term, at least in the West, and for game purposes, and thus the mechanics in GGDM are referred to throughout as Reformation.
  - ✓ In the Merriam-Webster online thesaurus, at *transformation*, reformation is considered a related word.

Thus, Reformation in GGDM whether reformation or transformation, is merged into this Reformation section. This has two practical implications. First, the participants need not assume or believe that a Reformation in GGDM necessarily or automatically involves violent conflict or struggle, it might be possible to shape Reformations or parts of in non-violent transformation terms. Second, the result of a Reformation process in GGDM, in part, is an expansion of the Public Space which is arguably similar to both the domestication of the horse (a transformation) and the Age of Discovery (or Age of Exploration, late 15<sup>th</sup> Century into the mid-16<sup>th</sup> Century) during the late Renaissance and into the Reformation period.

- Duo Decei Millenii: Arguably, the Age of Discovery influenced the course of the Reformation; e.g., it provided an outlet for population to emigrate to the New World (colonization in GGDM, an outlet factor that should not be ignored), and New World resources certainly financed Spain's and to some extent, the Habsburg's wars against the Protestants (and everyone else) in central and western Europe.

But it was much more than that. It was, and still is, a transformation in GGDM terms that equals the Neolithic revolution. It was perhaps a once in a 20,000 year event (or 20 *chiliad* – yes, it's in the dictionary!). The 'transformation' wasn't a reformation-like fight between

Protestant rebels and imperial Catholics, it was the sailing ship, which transported people and horses over the watery majority of the Earth's surface.

There is no provision in GGDM for losing Monads on the Public Space. It might be possible, perhaps through a complete collapse of civilization, to construct such a scenario, but overall, GGDM follows the macro-trend of human history of expanding perceptions.

- ✓ See also Science Daily feature quote regarding Neolithic horse domestication and Battle of the Tollense River, 2 Reformation, p. 1396, *infra*.

While regression and stagnation may occur on a local level and has oftentimes not expanded much; it seems *overall* the 'reality' of humanity (i.e. the Public Space in GGDM) has never receded, has never regressed. Perhaps this is a function of sapience and the arrow or flow of time. European oceangoing sailing ships had the same magnitude of effect as the Neolithic revolution and the domestication of the horse. The disparity of realities is as good an explanation as any other of the half-millennia of European colonial domination and a much more interesting, perhaps Soja-Diamond-esque, angle on history, offering an explanation of why the current world feels orders of magnitude different than just a millennia ago.

- ✓ Of course, as every writer knows, increased space reality for humans has carried over to the same for wild and domesticated animal and plant life, including microbes that follow humans: "A large factor in the worldwide occurrence of this flu was increased travel. Modern transportation systems made it easier for soldiers, sailors, and civilian travelers to spread the disease." – from Wikipedia article, "Spanish flu."
- Post-Apocalyptic Reality: Stark reduction in the macro-reality of humanity to the stone ages or to some sort of neo-medieval agrarian setting is a common feature of post-apocalyptic fiction. While not often explicitly stated – usually presented as a return to barbarism, superstition and ignorance – it is what you feel most strongly in those settings – nascent global civilization smashed like a pumpkin; the pieces of our current world laying on the ground. The difference from a character in historical fiction is that the post-apocalyptic characters know on some level that human reality has receded, shrunk, and in most cases, that we did it to ourselves (i.e. we effectively gave ourselves a lobotomy).
  - ✓ "This you know: the years travel fast, and time after time I done the tell. But this ain't onebody's tell. It's the tell of us all, and you've gotta listen and to 'member, 'cause what you hears today you gotta tell the newborn tomorrow. I's lookin' behind us now into history back. I sees those of us who got the luck and started the haul for home, and I 'members how it led us here and how we was heartfelt 'cause we seen what there once was. One look and we knewed we'd got it straight. Those what had gone before had the knowin' and the doin' of things beyond our reckonin' – even beyond our dreamin.' Time counts and keeps countin,' and we knows now: finding the trick of what's been and lost ain't no easy ride, but that's our track. We gotta travel it, and there ain't nobody knows where it's gonna lead. Still in all, every night we does the tell so that we 'member who we was and where we came from. But most of all we 'members the man who finded us, him that came to salvage. And we lights the city, not just for him, but for all of him that are still out there. 'Cause we knows there'll come a night when they sees the distant light and they'll be comin' home." – Savannah Nix, ending narration, *Mad Max: Beyond the Thunderdome* (1985).

- **Reformulation of Existentialism:** You are free to think you can do whatever you want until you don't agree, then you find out there are barriers bounding your existence. The universe is rather petty on this point, if I think I should be able to swim with the fishes and breathe water, I will soon be struggling to the surface gasping for air, my body will fight to survive regardless of my wishes. Existentialism seems to be more an observation than a philosophy, Viktor Frankl was a psychologist observing humans under the most horrific conditions.
- ✓ Time is the ultimate existential tyrant and boundary as we are trapped in it, moving in a direction against our will simply because we exist. We are 'punished' for existing.

*“One of the things that I find interesting about Dwarf Fortress is that (to use programming jargon) it's sort of a declarative game rather than an imperative game. In e.g. StarCraft you select an individual unit and demand that it move to a specific point on the map; in Dwarf Fortress you configure which dwarves are allowed to perform certain tasks, then you place a task in a queue, and some dwarf somewhere will (eventually (hopefully)) take care of it (until they get distracted by a party, or decide to go fishing, or get hungry and wander off to the dining hall, or fall asleep in a stockpile, or drop anything they're carrying and run screaming from the forgotten beast hurtling down the hallway at them). It's a fascinating difference in paradigm, and I wish more games would explore the idea of actors in the world being chaotic/free agents which will only somewhat prioritize your wishes.”*

– By kibwen, “The Brilliance of Dwarf Fortress (2011) (nytimes.com),” found on forums at <https://news.ycombinator.com/item?id=13754307>

**Imperative Game:** GGDM has been the classic, standard imperative game: Positions give orders to or demand actions from far flung ships, units, and colonies and – no matter how distant – the unit immediately does as directed (or tries), even if it means certain or near certain destruction. This is the essence of military command and discipline. As discussed in Communications Breakdown, *et seq.*, 1 The Streams of Time, p. 76, *supra*, this is not realistic, but GGDM tapdances on a high wire over the problem, with tools such as Constructural Elements, Entropy (see 1 Entropy, p. 228, *supra*), participatory group-fiction ideas, and mumbled vagaries about time, distance, and unknowable future technology (e.g., the *Uber Alles*, see 2 Eras, p. 767, *supra*).

- ✓ Merriam-Webster online dictionary at *imperative* (adj.): **1:b** expressive of a command, entreaty, or exhortation, **c:** having power to restrain, control, and direct, **2:** not to be avoided or evaded: necessary; *imperative* (n): **2:** something that is imperative (see imperative entry 1): such as a: command, order, **b:** rule, guide, **c:** an obligatory act or duty.

There are some elements of GGDM, for example, the operation of Corporations and MegaCorporations, that were written back around 2000-2002, that operate in vaguely similar ways to Dwarf Fortress-type games except that they are really automated imperative routines that replace Power Activations.

- ✓ Mars rovers are 'driven' from Earth ground control, the communications lag is between 4 and 24 minutes. Thus, control must be declarative, local intelligence a must.
- **Declarative Game (sort of):** Reformations (and Kairotic Moments, *infra*) in GGDM are treated differently, they are treated in a declarative fashion. The declarative game is one in

which the units are free agents and have a certain amount of free will, in a declarative game, the player puts tasks into a queue and the free agents perform the task whenever they get to it. In GGDM, Reformations great and small (i.e. ‘reformations’) are going to happen, but when and how they happen will be a bit chaotic and they will happen whenever they happen.

- **Queue Ball:** In GGDM, Reformations and Kairotic Moments are always in the queue for each position theoretically, but players cannot declare them, though it is possible, though highly unlikely, that players could conspire broadly to prevent a Reformations in the game.
- **Hangovers:** GGDM could be redesigned along declarative game lines, but that would be equally problematic in that, for example, it is desired that some ships move to system X, and maybe a couple of ships go this turn, but others don’t feel like moving this turn, so maybe they go the next turn, or the turn after, whenever they finish their Pac Man tournament. This is a situation that is not realistic for combat movement, exploration, and such (except perhaps in a Confederation) where the ships belong to a centralized military command. Further, Taxation is not in the least declarative, it must be imperative, whereas Census is a species imperative of the highest order, and the activation of the Census power is only a matter of Looking to see the resultant population growth.
  - ✓ The possibility that units (i.e. Ships and Colonies) will fail to obey Power Activations, including Taxation – for whatever reason – due to inactive Constructural Elements (see Power Off, 2 Constructural Elements, p. 193, *supra*), tends to blur the line a little between GGDM as an imperative game and GGDM as a declarative game – who knows, perhaps the Power Activation actually failed because the crew and captain had a hangover from a great party the night before and wanted to sleep a few more hours, and they’ll get ready to move whenever they feel up to it? That is, next turn. But they love their jobs and are sworn patriots. Think this hasn’t happened?

---

*“Once your faith, sir, persuades you to believe what your intelligence declares to be absurd, beware lest you likewise sacrifice your reason in the conduct of your life. In days gone by, there were people who said to us: ‘You believe in incomprehensible, contradictory and impossible things because we have commanded you to; now then, commit unjust acts because we likewise order you to do so.’ Nothing could be more convincing. Certainly anyone who has the power to make you believe absurdities has the power to make you commit injustices. If you do not use the intelligence with which God endowed your mind to resist believing impossibilities, you will not be able to use the sense of injustice which God planted in your heart to resist a command to do evil. Once a single faculty of your soul has been tyrannized, all the other faculties will submit to the same fate. This has been the cause of all the religious crimes that have flooded the earth.”*

– Voltaire (Translation from Norman Lewis Torrey: [Les Philosophes. The Philosophers of the Enlightenment and Modern Democracy](#). Capricorn Books, 1961, pp. 277-278)

---

**Subsequent History:** Alternatively, this is frequently quoted as, “Those who can make you believe absurdities can make you commit atrocities.”

Injustice and atrocities being related terms, separated only by scale and severity, it is not likely that Voltaire would object to either translation, especially in light of subsequent European history. It is not too difficult to imagine what Voltaire would have said of the Bolsheviks, the Nazi

party, the Khmer Rouge, or the Islamic State. Voltaire, fortunately perhaps, died a few years before the French Revolution to which he contributed greatly.

- ✓ There are certain people in the world upon whom one should not inflict a good Voltaire quote, as it would be a complete waste of intellect to do so.

**Invoking God:** The addition of God to any argument does not improve the argument because, to add God to an argument, the speaker must necessarily make statements about something (God) that they cannot possibly know anything about. Consider Hitchens' Razor: "What can be asserted without evidence can be dismissed without evidence."<sup>4</sup>

- ✓ This is not to say that one cannot *speculate* about a supreme being – speculation is not either an assertion or dogma – but in religion, *it is never presented as speculation*. Admission that it is all speculation and visions would be deleterious to religion.

To the extent that the addition of God to an argument is an appeal to authority, that is a fallacy. And the witness oath in Court certainly doesn't scare anyone into telling the truth!

- ✓ "I think God is as much a basic ingredient in the universe as neutrons and positrons... God is, for lack of a better term, clout. This is the prime force, when we look around the universe." – Gene Roddenberry quoted in Karen Anijar, Teaching Toward the 24<sup>th</sup> Century: Star Trek as Social Curriculum (2004), p. 38; also quoted in Terrence A. Sweeney, 1995:8.

That said, however, there is a complex emotional package attached to the concept of God in our culture, and the addition of God to an argument provides (parental) emotive force that regular reason cannot in our current state; it is the thing that is more likely to motivate some or many listeners to the desired result than reason can (the source of clerical rule). This is an example in the ways that Aspects must be considered and recognized as part of our culture. Appeals to God are an adult continuation of the way children appeal to parental authority in childish disputes.

- ✓ It seems that perhaps one of the origins of religion lie in the time when intellectuals discovered the emotive power of a supreme being, superstitions (and mythopoeic concepts) and the mysteries and rituals. It became the tool of emotive force that their reasoned arguments could not provide, and they in turn, became its tool in a self-perpetuating process and worldview, the institution of organized religion.

Appealing to God in arguments simply became a linguistic habit that has finally slowly faded in the last two centuries. When I was growing up, there were people who said 'man' or 'fuck' in every sentence, and of course, valleyspeak became famous for repetition of words, punctuating every other sentence with 'like' (e.g., the movie *Clueless* (1995): "Duh, it's, like, a famous quote."). When I was in the Marines, I listened to a conversation between two Marines one afternoon and counted the number of times one of the speaker said 'man' in two minutes (as in, "Man, that sucked!" etc.). When he finished speaking, I informed him that he had just said the word 'man' at least ten times in two minutes of speaking; they just gave me blank looks. I am surprised they didn't respond with the typical exaggerated, 'Ahhhh, man!'

- ✓ The best line in *Clueless* (and, like, the only one I actually remember, dude!): "So, okay. I don't wanna be a traitor to my generation and all, but I don't get how guys dress today. I mean, c'mon, it looks like they just fell out of bed and put on some baggy pants, and take their greasy hair – ew! – and cover it up with a backwards cap and, like, we're expected to swoon? I don't think so!" Amen, dudette!

**Lucifer:** *Theology is never any help; it is searching in a dark cellar at midnight for a black cat that isn't there. Theologians can persuade themselves of anything. Oh, my church, too – but at least mine is honestly pantheistic. Anyone who can worship a trinity and insist that his religion is a monotheism can believe anything just give him time to rationalize it. Forgive me for being blunt.* – Robert Heinlein, Job: A Comedy of Justice (1984)

**How Many Angels:** The pointless question, “How many angels can dance on the head of a pin,” describes how I feel when reading about certain intellectual debates in history, for example, the topics debated at the Marburg Castle Colloquy in 1529. Were I in the place of Phillip of Hesse, I would have been tempted to hang Luther and Zwingli upside down by their ankles from the castle’s parapets until freshly oxygenated blood replaced hot air and ill will in their heads and they sufficiently appreciated a new upside-down view of the countryside. Their pointless debate over the Eucharist completely defeated Hesse’s attempt to prevent rifts in the Protestant movement and create a unified front in the face of threats of Imperial aggression. Had they actually tried to debate the question, “How many angels can dance on the head of a pin,” they probably would have resorted to personal violence. Throughout GGDM, I have tried to stick to the practical, profound, and keep the commentary grounded in rules and real world examples.

While reading, I saw a comment to the effect that most people don’t understand what is at stake in Christology arguments, and wholeheartedly agree: I am one of them. Christology arguments – Nestorians, Luther and Zwingli arguing at the Marburg Colloquy and Diet of Augsburg over the Eucharist, Arianism/Semi-Arianism, Trinitarians, hypostatic union, dyophysitism – and the various Synods, Councils, Church suppressions and Christian on Christian persecutions – make my head spin and my eyes roll up into my head. Prof. Michael Kulikowski comments in “Christians were Strangers...” (Aeon, January 30, 2017) that, “...theologians have always been able to render Christianity subtle to the point of incomprehensibility...” All other factors aside, I just can’t see what is the practical difference, what difference does it make in our daily lives, or our civilization whether we believe in a Trinitarian or non-Trinitarian Jesus or God?

- ✓ And for the comfort of numbers, Robert Heinlein seemed to be aware of this argument – being careful not to impute on the author the words of his characters.

Whether Jesus was of one nature or two, whether Jesus was God actually, or not actually God? All are seemingly *pointless mythopoeic philosophical debates*, like in the movie Conan the Destroyer (1984) when they are arguing over whether the god of the sky or god of the earth is supreme (i.e. something like the god of the sky is over your head, above you and the earth, but you stand on the god of the earth, are born on and buried in the earth). What if Jesus was just a charming schizophrenic and all of those other guys were just ambitious fervent sycophants? Wouldn’t be the first time in history or the last. What I see, rather, is the practical and long term effect of exiles, executions, displacement of populations, suppression of ideas, and conflict between powerbrokers.

And that, of course, is the crux of the matter. Is what is offered in GGDM more or less abstruse to the majority of the population than the debates of Christology? I have always held that what Luther and Zwingli debated didn’t matter a damn to the common people and the soldiers (mostly mercenaries) fighting in the conflicts of the Reformation – noting for example, that the mercenaries who looted the Vatican in 1527 were both Catholic and Lutheran. Despite the populism

triumph of Luther, the majority of the population was uneducated and there were certain debates that were not widely publicized.

Are Christology debates abstruse to me because the world has moved on, our time is different, or because I simply don't personally embrace that worldview? Is what is offered here more relevant and accessible to the now and the future, or just a product of a late Cold War-millennial intellect? Have I offered sufficient argument for the importance of meanings?

*“In an interview with Independent Investigations Group member John Rael, Minchin explains that what upsets him most about paranormal beliefs is ‘special pleading’ by people who say vague things such as ‘there is no harm in it.’ Minchin states that there is very little harm in something like reiki, but asks ‘where do you draw the line?’ when it comes to needing real evidence if a therapy works or not. He states that he is an atheist as well as a skeptic, and cannot understand how someone can be a skeptic and still be religious. ‘If you apply doubt to anything...the whole religion thing is obviously a fantasy.’”*

– from Wikipedia article, “Tim Minchin,” citing July 10, 2011 interview (<https://www.youtube.com/watch?v=YGbsQkeMsA>)<sup>5</sup>

## Endnotes.

<sup>1</sup> Commentary & Citation: Humans have 46 chromosome pairs, less than that of a dog (70) or a potato (48). Scientist caution that there is *no correlation* between chromosome counts and complexity, e.g., “So the number of chromosomes has nothing to do with what or how complicated something is. And neither does the number of genes or the number of base pairs of DNA. What matters is what those genes are and how the cells and the organism use its set of genes. This is what makes a dog a dog and a dove a dove even though they both have 78 chromosomes. Which of course is way more than we do!” – Dr. D. Barry Starr, Stanford University, May 25, 2017, in response to question on The Tech Interactive. Humans... dogs... potatoes ... don't even go there!©

<sup>2</sup> Commentary: However, as Dr. Paul T. Mason, History Professor at Duquesne University commented to my graduate History of the Enlightenment class, “Historians cheat.” I too, for example, have a slightly difficult time accepting that the Enlightenment ‘ended’ at the Battle of Waterloo in 1815; though I do generally understand the concept of the relationship of the Enlightenment to the French Revolution, why not say the Enlightenment ended in 1804 when Napoleon (a product of the Enlightenment to be sure) crowned himself Emperor of France (literally, took the crown right out of the Pope’s hands), and became the last ‘enlightened despot’ and ended the French Revolution?

<sup>3</sup> Citation: “But how far could a fit, trained person walk in eight hours? Many trained walkers finish a 26.2-mile walker-friendly marathon in about seven hours, with no breaks. If a walker is well-trained and is taking breaks and a meal stop, then 20 miles a day is reasonable. If you take no breaks and are going fast, you may be able to cover 30 miles if you have steadily built your mileage over the course of three to six months. Walkers on the month-long Camino de Santiago trek typically walk 12 to 20 miles per day on terrain that includes many hills. ... The Western pioneers usually covered 20 miles a day with the wagon trains, most of them walking rather than riding.” – Wendy Bumgardner, “How Far Can a Healthy Person Walk?” Very Well Fit ([www.verywellfit.com](http://www.verywellfit.com)), October 21, 2018.

- ✓ Personal experience, I walked five days a week down the hill and up the hill from my house to my employment in center city Pittsburgh. The walk was about 45 minutes down and 50-55 minutes up, year round, sometimes longer when it snowed and was cold and blowing, frequently it was very hot and sunny, and often I was carrying loads, many of them heavy. According to my Fitbit, I averaged regularly over 100,000 steps (and sometimes up to 125-130,000 steps) per week, because this was in addition to walking for groceries and haircut, running a business, selling games on Saturdays, and walking around center city on errands. I also was getting about 80 floors per day during the week I think, a trip up the hill to my house on the walk home was equal to 60+ floors. It took its toll after 20 years on knees, feet, and tiredness.
- ✓ “All horses move naturally with four basic gaits: the four-beat walk, which averages 6.4 kilometres per hour (4.0 mph); the two-beat trot or jog, which averages 13 to 19 kilometres per hour (8.1 to 12 mph)

(faster for harness racing horses); and the leaping gaits known as the canter or lope (a three-beat gait that is 19 to 24 kilometres per hour (12 to 15 mph), and the gallop. The gallop averages 40 to 48 kilometres per hour (25 to 30 mph). The world record for a horse galloping over a short, sprint distance is 88 kilometres per hour (55 mph). Besides these basic gaits, some horses perform a two-beat pace, instead of the trot. In addition, there are several four-beat ‘ambling’ gaits that are approximately the speed of a trot or pace, though smoother to ride. These include the lateral slow gait, rack, running walk, and tölt as well as the diagonal fox trot. Ambling gaits are often genetic traits in specific breeds, known collectively as gaited horses. In most cases, gaited horses replace the standard trot with one of the ambling gaits.” – from speedofanimals.com, “Horse *Equus ferus caballus*” captured February 26, 2019.

- The maximum speed for an unencumbered human walking on good pavement is about 3 mph. The U.S. Marines expected an average six minute mile (10 mph) running over flat ground (hard dirt or pavement) over three miles distance; that is, finishing three miles in 18 minutes was the perfect score of 100 on that part of the Physical Fitness Test (I never did it, my best time at 20 years old was 18:45 over three miles in Okinawa, Japan, but we had a couple of Marines who did it in under 16 minutes). Encumbered vs. unencumbered movement (as in hauling bags of loot and food supplies) over various terrain discussions were a regular fixture of Dungeons & Dragons articles in the 1970s and 1980s (an extension of military advance rates in wargaming, e.g., it took Braddock’s column from May 29 to July 9, 1775, 41 days, to carve a road 110 miles (‘Braddock’s Road’) through the Allegheny Mountains wilderness moving heavy cannons, supply wagons, tents, ammunition, equipment, about 2100 men total, a rate of 2.68 miles per day).
- “Usain Bolt has apparently never run a mile. The Jamaican sprinter’s agent Ricky Simms broke the news in an email to the New Yorker, which attempted to guess how quickly the world’s fastest man would be able to go the distance. Most agree Bolt wouldn’t be able to break the world record set by Morocco’s Hicham El Guerrouj. He ran the mile in 3:43.13 in 1999. Bolt, meanwhile, who holds the world records in both the 100- and 200-meter dashes (9.58 and 19.19, respectively), takes 2:10 to run 800 meters. That’s a snail’s pace relative to Guerrouj. That comparison has many thinking Bolt would be lucky to break the five-minute barrier – a feat many high school-level runners can achieve. Here’s the thing, though. Bolt is a sprinter, so the way he’s trained his muscles isn’t meant for running the mile.” – Marissa Payne, “Usain Bolt has apparently never run a mile,” Washington Post, August 3, 2016.
- ✓ “I found this answer by googling ‘how far can horses travel.’ Essentially, it depends on the horse. Horses are athletes, and well-conditioned horses that are used to travelling long distances can travel much further than horses that are not used to such activity. If your horses don’t get out and do this particularly often, then 20-30 miles (30-50 km) per day is probably a good estimate. Wikipedia supports this, with a claim of 30 miles (50 km) per day for a small mounted company. This involves the horse walking for most of the duration of the day, with short breaks. Of course, a fit horse can travel further than this. Mounted soldiers would ride their horses 50-60 miles (80-100 km) in a day. This is more taxing on both the horses and the riders. Over the course of 6 weeks of travel, it’s possible that good riding horses would get into better travel shape, and be able to go further, perhaps in the 40 mile (65 km) per day range. This would involve spending much of the day at a pace faster than a walk, such as a trot, though not at a canter or gallop. Trotting would be interspersed with periods of walking to allow the horses to rest while still moving forwards. ... Note that, at the upper end of this, the riders may have more trouble than the horses. During the middle ages, long rides were usually taken on horses referred to as palfreys, which possessed a smooth, ambling gait rather than a trot. This made them much more comfortable to ride for long distances, since a trot is quite bouncy. This isn’t something that the horses are trained to do or learn to do over the course of a ride. Rather, it is a breed characteristic of certain horses. If your riders are not on such horses, they will probably be travelling more around the 20-30 mile per day range, and as such their total distance will be more around 1200 miles for 6 weeks.” – User ckersch, <https://worldbuilding.stackexchange.com/questions/6411/possible-distance-travelled-by-horse-over-6-weeks>, December 12, 2014.

<sup>4</sup> **Commentary:** If GGDM were making a macrosocial argument, *would the totality of the simulation itself serve as self-referential evidence in support?* As a demonstration? Thus, is GGDM being offered without evidence?

<sup>5</sup> **Commentary:** Voltaire in the 18<sup>th</sup> Century and the experience of World War II in the 20<sup>th</sup> Century, has already shown us ‘what is the harm.’ World War II made Voltaire prescient; it is odd that Voltaire invokes God in the argument... I think the cognitive point of separation for Voltaire was that he didn’t have a problem with God exactly (but I do), but with the abuse and distortion by human Abrahamic religions and legitimized royal authority.

*See Appendix REF – A Reformation Example*

*“The question is: which image of God are we talking about? Many Muslims assume that their God wants to be glorified, that he dispatches orders and makes sure these orders are obeyed. Those who obey are rewarded, and those who don’t are punished. But this is a perception of God similar to that of a tribal leader who cannot be challenged. This is why many Muslims view the Koran as a rulebook.... Contemporary Islamic theology is at least unilateral. It is based on a master-servant relationship. Reformers who interpret the Koran differently, who say Islam is more than just a religion of rules and regulations, have so far not succeeded in asserting themselves.... Change can only come from within. We don’t need an enlightenment of the kind we know from European history, but perhaps a reform that focuses on the maturity and reason of humankind. The Koran does exactly this, incidentally.”*

– Mouhanad Khorchide interview by Arnfrid Schenk und Martin Spiewak, “God is not a dictator,” Quantara.de, October 2012 (English translation by Nina Koon)

**Root Problem:** That is, Mr. Khorchide – living and teaching in modern Germany – rejects the ‘products’ of the Enlightenment in the West: empiricism, critical thinking, secular knowledge and secular authority. This neatly encapsulates what many would regard as the central quandary of modern Islam: great wealth from oil production, a desire for Western standards of living, medicine and technology, materialism, while rejecting ‘western ways’ – scientific empiricism, secular authority, and demystification of the universe. This is demonstrated by the prohibition in areas controlled by radical Islamist groups, of the teaching of science, non-Islamic history, technological subjects, evolution, and social science.

- ✓ “Norwegian anti-terrorism analyst Thomas Hegghammer observed ‘If there was going to be an Islamic reformation in the 20<sup>th</sup> century, the Saudis probably prevented it by pumping out literalism.’” – Doug Bandow, “Economic War Against Qatar Backfires Against Saudi Arabia,” Huffington Post, July 31, 2017.<sup>1</sup>

At the root, Islam is having the same singular problem that led to the Meiji Restoration in Japan, the same problem that Western hegemony has imposed on the rest of the world for centuries. The particulars are different, of course, Japan is an island, they had no relationship to the West while Islam is an Abrahamic religion with 1,500 years of historic interactions with the West, Islam was ahead of the West mathematically and scientifically until the Renaissance, and so on. Japan *consciously* chose in the mid-19<sup>th</sup> Century to fuse Western science and empiricism with Eastern ways; Islam has added toward the same in an uneasy, begrudging, uneven, confused manner, compounded by their sudden immense wealth from the plot fuel of the 20<sup>th</sup> Century.

To the root problem then was added tribalism and the ailment of sudden vast wealth disparity and a sudden strategic position. Having not approached the problem under a singular unified authority as did the Meiji regime in Japan, what is the answer for Islam?

- ✓ Reformation should not be confused with Enlightenment, though the two form a historical continuum in the West. Mr. Khorchide used the term ‘enlightenment’ in the top feature quote, which may be unfortunate because it suggests a condition of being unenlightened; I read his use of the term as probably intended to mean ‘reformation,’ which is the term used by others, e.g., Mr. Hitchens, *ut infra*. I could be wrong. In

addition to the use of Enlightenment as a game term already (in situations where ‘un-enlightened’ may actually apply!), Reformation is used here as a more neutral term which does not imply or denote ignorance, but rather change.

- Martin Lutero: As these sorts of things usually go, the issuance of death threats against Mr. Khorchide and the refusal of other Islam scholars to be on stage with him, rather serves to prove his point about reformation. Although a reform originating from Muslims working at European universities will never be accepted anywhere from the Maghreb to the Mashriq to Greater Khorasan, reform frequently originates from ‘outsiders’ who are in the best position and least conflicted situation, to see what needs reform. For example, what if Martin Luther (*Martin Lutero*<sup>2</sup>) had been raised in Italy instead of in the Germanic States?<sup>3</sup>

---

*“You notice how liberals keep saying, ‘If only Islam would have a Reformation’ – it can’t have one. It says it can’t. It’s extremely dangerous in that way.” – Christopher Hitchens*

---

**Islamic Reformation:** Many years ago, I asked myself the question of whether Reformations were universal to human societies or whether it was a concept or phenomenon peculiar to Western civilization? The answer sidesteps the question really; that is, we must assume that all human culture and civilizations are susceptible to the same processes and conditions until proven otherwise (“By its definition, an anomaly is unlikely and shouldn’t be assumed...” – Magellan (2018)), because absent that assumption, we can make no progress in our studies (this is linked to the discovery of natural laws operating behind what seemed like cosmic chaos). This has become especially true as global contact has somewhat homogenized humanity. Thus, it is probable that all societies undergo periodic Reformations, which is admittedly a Western term that might eventually be better replaced with a more universal word.

- ✓ For example, Ibn Rushd (known in the west as Averroes) lived in Spain and Morocco between 1126 and 1198 A.D. Translations of his discussions of Aristotle contributed to the Western reawakening of interest in Ancient Philosophy. Thomas Aquinas was born in 1225, a generation after Ibn Rushd died, and the two are linked: Thomas Aquinas roundly criticized the philosophies of Ibn Rushd that had been adopted by the Latin Averroes, and the Church condemned and banned his works in 1270 and 1277, around the time that Thomas Aquinas died. Scholars and intellectuals spend much of their time arguing with corpses.

Yet arguably, the two men from opposing civilizations were caught up in the same process or phenomenon, the increasing struggle between religion, dogmatism, extremism, and fundamentalist on one side, and the encroachment of new knowledge, both from newly-rediscovered ancient works and acceleration of new discoveries and new inquiries, new political economies, and new ideas on the other side. In short, the argument between *rationality and reason*, and *religion and emotion*.

The results however, could not have been more opposite: Ibn Rushd was eventually capitulated by conservative Islamic traditionalist and fundamentalist, he was charged, tried, convicted, his works burned and he was banished; he was largely forgotten in Islam *until modern times*. Thomas Aquinas, who like Ibn Rushd sought to reconcile Aristotle with his religion, was canonized, never strayed too close to the line, and the

thoughts of generations afterward were very frequently in reaction to – whether supporting or opposing – his ideas; he is considered the pinnacle of scholasticism.<sup>4</sup>

Echoing Professor Frank Elwell's comment about the macro- and micro-divisions of the social sciences (see feature quote, 3 Fallen to Earth, pp. 1539-1540, *infra*), rationality vs. religion is the single most important argument and dividing line in human civilizations for at least the last 500 years. In every current socio political argument can be heard faint echoes of previous centuries' debates, a faint glow of the line, like a highway dividing line racing past at night.

- ✓ I am not Muslim and there are those who will then say that I don't know what I am talking about, there is no Islamic Reformation, that it cannot be, or that it is the wrong term. Except for two points: There is a man, who is Muslim, who is quoted here talking about Islamic Reformation (he uses the term 'enlightenment' presumably referring to the European Age of Enlightenment period but seems to have meant Reformation as well), and second, that my argument at this point – as shown in the example above – is not really about Reformations, but rather, that we must assume that all societies share similar processes, and that a process identified in the West probably also applies, with shades of difference, but more similarly than differently, elsewhere. Further, I have identified the root problem that connects Meiji Japan and the problems of current Islam, and two different historical outcomes from the same root.
  - Perhaps it is telling that I do not speak of a second Reformation of Christianity, of which I might at least be qualified to ponder? Frankly, the subject is of little or no interest to me because I think secularization has made it largely irrelevant and in any case, what Mr. Khorchide says about Islam could also apply to Christianity (just as what Voltaire said about Islam and Jews applied equally to Christianity, in a backhanded criticism). But then those who wish to reject my arguments above will say that I speak of something which I cannot know because I am not a Muslim, but don't speak of something of which I might know, having grown up in a nominally Christian civilization.

---

*“[Sir Edward] Coke, like every man, was necessarily a product of the age in which he lived. His faults were the faults of his time, his excellencies those of all time. He was diffuse; he loved metaphor, literary quibbles and verbal conceits; so did Bacon, and so did Shakespeare. So did all the writers of his day. They were creative, not critical. But Coke as a law writer was as far superior in importance and merit to his predecessors, at least if we except Bracton, as the Elizabethan writers in general were superior to those whom they succeeded, and, as the great Elizabethans fixed the standard of our English tongue, so Coke established the common law on its firm foundation. A modern lawyer who heaps his abuse on Coke and his writings seems as ungrateful as a man who climbs a high wall by the aid of the sturdy shoulders of another and then gives his friend a parting kick in the face as he makes the final leap.”*

– John Marshall Grest, “The Writings of Sir Edward Coke,” *The Yale Law Journal*, May 1909

---

**Giants on the Stage:** The ripple power of reformations makes some men giants of posterity. Three giants strode across the Elizabethan stage, leaving the echoes of their footfalls to our day. Everyone knows about William Shakespeare, the great Bard, who is the founder of English literature *and the only one who is required high school reading*. Less know about Sir Francis Bacon, whose philosophical writings (in contradiction to his own life) rippled outward through the centuries to become the scientific revolution. Finally, less known still is Bacon’s political and personal rival, Sir Edward Coke (they vied for the hand of the same widow, Coke won) whose books and legal summaries became the basis of English common law (as opposed to Roman-style civil law jurisprudence) via *stare decisis* and a repudiation of the ecclesiastical courts. Consider that much of our impression of Sir Edward Coke lies in his rivalry with Sir Francis Bacon and the puerile insults he wrote in his gift copy of Bacon’s *Novum Organum* (1620).

- ✓ “If I have seen further it is by standing on the shoulders of Giants.” – Sir Isaac Newton, “Letter from Sir Isaac Newton to Robert Hook,” 1675.

**Disputation:** The entry point for a Reformation in GGDM is the Thesis Statement (go figure, eh?). Each position may issue a Thesis Statement during Regular Turns *in lieu of one Power Activation* during that Regular Turn, if all conditions precedent are met. The Thesis Statement must be in the proper form, and must be submitted with the position’s Regular Turn actions.

- ✓ This is, however, not a Power Activation, but uses one. Thesis Statements thus cannot fail due to inactive Constructural Elements (and are not targeted at units in any case), and there is no opportunity to apply Enlightenment to Thesis Statement as there are no die rolls involved.
- **Not 95:** Even though the loss of a Power Activation presents a cost to issuing a Thesis Statement, in practice, there will be Regular Turns when a position does not need or want to use, or cannot use, all available Power Activations. These are turns when Thesis Statements may be issued; probably in an attempt to advance an agenda. This is expected game behavior.
  - ✓ A specific limit has not been placed on the number of Thesis Statements that can be issued because the process should be self-policing. Given all of the possible uses of a Power Activation and all of the competing interests within a position (e.g., Government Title Conflict Checks), Thesis Statements should be naturally limited.
- **Dialectic Diplomacy:** A Thesis Statement may only be directed toward another position with whom they have established Diplomatic Space (i.e. after First Contact). Each Thesis statement may target only one position and should be tailored to what the issuer knows about the target position. Thus positions cannot just randomly start lobbing bombs in the first turns. The *conditions precedent* for issuance of a Thesis Statement are that a Diplomatic Space exists between the two positions (see Diplomatic Spaces, *et seq.*, 2 Diplomacy, p. 1116, *supra*) *at the time of issuance*. Once issued, a Thesis Statement cannot be withdrawn or altered by the issuing position, so Thesis Statements should be issued with care, and not in retaliation for current events. A Thesis Statement may or may not ever Coalesce into a Reformation, and it may happen quickly or take a long time.
- **Conspiracies & Counter-Reformations:** Generally, Thesis Statements are issued secretly (i.e. even the Concierge might not know the issuer if handled by a computer assistant) and the queue of Thesis Statements targeted to each position are kept secret *from other positions*, but can be seen by the target position who are naturally aware of their own dissident factions.

Some forms of Special Operations (i.e. Reconnaissance or Black-ops) seeking to identify dissent in a civilization may discover ‘dissent’ represented by queued Thesis Statements.

- ✓ If the Concierge is unable to see the identity of the issuing position of a Thesis Statement it may be difficult to determine if it is blatant retaliation for current in-game events. Whether or not this is important depends upon how the no-retaliation rule (*ut supra*) is observed and enforced in the game by the participants.

Because of private diplomatic communications, there is no way for the Concierge to determine or prevent collaborative efforts at lodging Thesis Statements. There is no enforceable requirement that the Thesis Statement be authored by one position or even be authored by the position that lodged it, and it is not really a concern to the game in any event. While players may be irked by the lodging of Thesis Statements against their positions, what one can do, all can do; but it should not play that way.

- ✓ Because the recipient or target position does not know the origin of the Thesis Statement (and should consider them, like a News Event, to not originate from other players), it is possible for the Concierge to issue Thesis Statements as well, using Intervention Potentials, hastening the coming Reformation. Intervention Potentials are the Concierge’s position in GGDM. In the end, the effect is the same regardless of the source.

Positions may engage in a counter-Reformation effort by lodging ‘favorable’ Thesis Statements against their own position, but only *after* a Thesis Statement has been lodged against them (no shadow boxing!). As with the historical Counter Reformation (1545 to 1648 A.D.), these homegrown Thesis Statements may be somewhat effective in keeping the dragon insanity (e.g., Cordwainer Smith, “Game of Rat and Dragon” (1954)) at bay.

- ✓ *A priori*, any ‘counter-x’ requires an ‘x’ to exist first. Counter-Reformation Thesis Statements should not be issued before there is a Disputation. The Concierge may choose to ‘ignore’ preemptive Counter-Reformation Thesis Statements.
- **Dissonance:** Thesis Statements should be assumed to represent the desires and arguments of *dissenting forces* within the target position’s civilization. Like News Events, Thesis Statements are not ‘caused’ by the issuing position (see The Nature of News Events, 2 Dreamtime, p. 146, *supra*). Unlike News Events, the target position is not informed of the source, but to the extent that they might figure it out or learn afterward, the target position should not retaliate against the issuer (e.g., see The Story of V and Keep the Sand in the Sandbox, 2 Dreamtime, pp. 146-147, *supra*), but instead, consider the Thesis Statement and any Coalesced Reformations, as the internal dissident’s part of the story.

Thesis Statements create – by speaking – within the game position a dissident, dissonant element to what would otherwise be a mostly harmonious, monolithic whole of a position controlled by a small group of human players (see The Singleton, 1 Government Titles, p. 579, *supra*). Although Thesis Statements are mechanically different than News Events, they can be given similar weight, importance, in the game.

- ✓ There is some conceptual overlap; some Thesis Statements could have been an adverse News Event instead. There are pros and cons; a News Event can be blocked or modified, a Thesis Statement may have no effect and costs a Power Activation, but cannot be ‘blocked’ directly or modified.

Alternatively, or additionally, Thesis Statements can be thought of in the context of ‘galactic socialization’ (since they actually originate from other positions in GGDM) preventing cultures from being isolated (see discussion of the ‘human galactic isolation’ problem, 1 Diplomacy, p. 1094, *supra*). Or that the ideas expressed by the dissidents might actually come from contact with alien cultures (e.g., the communist revolution in China, communism originated in Europe, Saloth Sâr, aka Pol Pot was educated in Paris and adopted Maoism, while the youthful Mao Zedong voraciously read foreign books).

- ✓ For those who believe that humanity is being surreptitiously guided in development by extraterrestrial or extradimensional intelligences (e.g., the fifth dimensional creatures or future humans in *Interstellar* (2014), the heptapods in *Arrival* (2016), or the Overmind in *Childhood’s End* (1953)) possibly using a sort of Asimovian ‘psychohistory’ technique, the GGDM mechanic of Thesis Statements and Reformations might approximate the process, without addressing any of the larger questions, such as why would they bother, what do they gain, or what is their ultimate purpose?
- **Dog-Ma:** Because there is *no Power Activation* associated with the issuance of a Thesis Statement, *no News Event should be provided*. Further, Thesis Statements *are not considered official Interpretations in the game*; that is, wishful thinking is not Coalesced into Universal Legislation (see Official Interpretation, 1 Dreamtime, p. 130, *supra*) by issuance of a Thesis Statement. Further, the Concierge cannot decline a Thesis Statement if it is in proper form, thus there is no acceptance requirement by the Concierge as there is with an ‘official interpretation,’ see Flavors of Fact, 1 Dreamtime, p. 134, *supra*.

As part of the emergent play of the game, the Concierge may, with discretion, issue a Special Bulletin for Thesis Statements (for story purposes, this is not construed as ‘acceptance’). This is a decision that should be made from the beginning of a game, whether or not to issue Special Bulletins for Thesis Statements; there is a risk that the target or other positions may easily determine the Thesis Statement’s author from the Bulletin, but also, it does serve to engage the players in the story of the game and may propagate ideas.

---

*“Science and religion ask different questions about different things. **Where religion addresses ontology, science is concerned with ontic description.** Indeed, it is what Orthodox theologian David Bentley Hart calls their ‘austere abdication of metaphysical pretensions’ that enables the sciences to do their work. So when, for instance, evolutionary biologist Jerry Coyne and pop-cosmologist Lawrence Krauss dismiss the (metaphysical) problem of how something could emerge from nothing by pointing to the Big Bang or quantum fluctuation, it is difficult to be kind: Quantum fluctuations, the uncertainty principle, the laws of quantum physics themselves – these are something. Nothing is not quantum anything. It is nothing. Nonbeing. This, not empty space, is what ‘nothing’ signifies for Plato and Aquinas and Heidegger, no matter what Krauss believes. No particles, no fluctuation, no laws, no principles, no potentialities, no states, no space, no time. No thing at all.”*

– Michael Robbins, “Atheists Used to Take the Idea of God Seriously. That’s Why They Mattered.” *Slate Magazine*, July 8, 2014 (emphasis added)

---

**Ontic Numbers:** “‘Ontic’ describes what is there, as opposed to the nature or properties of that being.” – from Wikipedia article, “Ontic,” February 15, 2019.

- ✓ Merriam-Webster online dictionary at *ontic*: of, relating to, or having real being.
- ✓ Thus, in phenomenology terms, appearance can be non-ontic, e.g., “By an ‘appearance’ is meant any existent which impinges on consciousness, anything cognized, irrespective of any judgment as to whether it *be ‘real’ or ‘illusory.’*” – Avi Sion, from abstract for his book Phenomenology (2005)(emphasis added).

When each Thesis Statement is accepted (meets the conditions precedent), the Concierge must *secretly* assign a ‘weight’ to the Thesis Statement based on judgment of how likely, accurate, relevant it is as a dissident element in the target position’s current civilization (i.e., not whether it accords or agrees with the target position’s current civilization). This is a complex judgment that is expressed in a number value attached by the Concierge to the Thesis Statement. It is not merely a matter of opposition, but a measure of how widespread is the opposition expressed by the Thesis Statement, how much strength/depth does the dissident movement possess.

The target position will see the Thesis Statement text (the opposition voices their displeasure) but will not see either the source (as indicated previously) or the weight assigned by the Concierge.

- ✓ For example, if the current Earth civilization (as a whole unified GGDM position) were the subject of a Thesis Statement that declared “The Earth is Flat,” the value assigned would be ‘0’ because, while arguably some people still insist that they believe it is, it is not an issue that is either important to our current civilization or likely to gain widespread support, become a sociopolitical movement. Most people first, believe or know (take your pick) that the Earth is spherical, and second, are indifferent to the issue in their daily lives (while enjoying the benefits of satellite-enhanced communications and broadcasting). Conversely, if a Thesis Statement read, “The proletarians have nothing to lose but their chains!” (Karl Marx, The Communist Manifesto (1848)), it might receive a greater weight in the post-Cold War world, but much less than it would have if the position were on 19<sup>th</sup> and early-20<sup>th</sup> Century Earth.

This is not intended to encourage positions to randomly throw out quotes from historical figures as Thesis Statements (or for the Concierge to give such greater weight just because), hopefully participants will be attuned to and engaged in the game enough to be spot-on creative. But history is never a bad place to start for inspiration.

- ✓ 70% of history is the story of human mistakes – starting with coming down from the trees – and the other 45% is a story of human brilliance.
- Ontic Scale: The scale used is up to the Concierge, but should be decided before the game and applied consistently to all positions. The base assumption might be a scale of 1 to 10 or 0 to 9, but there is room for other scaling schemes, e.g., 0-3, 1-3, or 1-6, 1-20, etc., and each could be developed into a well-defined criterion for each increment. There are arguments for larger or smaller scales, so it’s a matter of taste.

“Counter-Reformation” Thesis Statements issued by a position targeting itself *might* be assigned negative numbers in the scale used, if the Concierge interprets them as counter-argument to the dissidents, or they may simply receive a regular positive number on the scale if the Concierge interprets the Counter-Reformation Thesis as representing an opposing dissident group or the whole process as a widespread conflict. This is not historically inaccurate,

and serves to represent the bumbling of authorities that often results in actions that seem on one hand to target the issue, *but actually produce a different result*, showing that those in charge don't understand or didn't anticipate properly, e.g., the ATF “gunwalking scandal” aka Operation Fast and Furious.

This is an integrity point for the Concierge, since the weights assigned to the Thesis Statements are secret, there is no external judgment of consistency of application or the scale used (e.g., I have experienced ‘editing standards drift’ working on GGDM and have had to circle back to the beginning to keep it all consistent). If GGDM is assisted by a computer program, the scale should be entered when the game is set up and cannot be changed even by the Concierge during the game, so that all calculations are made from the same scale.

- Pontic Event: At the end the Regular Turn processing for each position that has Thesis Statements previously lodged against it, there is a chance that a Reformation will Coalesce. The chance is the value of all Thesis Statements lodged against the position as a percentage of the top number of the Ontic Scale used by the Concierge.
  - ✓ For example, the total value of all Thesis Statements against a position is 7 and the scale used by the Concierge is 1-20, so as 7 is 35% of 20, the chance of Coalescing a Reformation is 35% *each Regular Turn*. Thus, the frequency of Reformations is controlled by the top number of the Ontic Scale used; the lower the top number the more frequently Reformations will occur in the game; e.g., if the top number in the example above were 10, the chance would be 70% each Regular Turn, if it were 30, it would be 23% (fractions truncated) chance of Coalescing each turn. And the Concierge doesn't get Enlightenment rerolls...☺

It is important to remember that this roll is happening every Regular Turn and thus may Coalesce on the first roll or require many Regular Turns. The number will also change over time as additional Thesis Statements are added; the Concierge may also change previous values based on changes in the position and events, enhancing or destroying dissident points.

- ✓ ‘Pontic’ here refers to the Pontic Steppe or Pontic Basin important in much history, not to a false tooth, though getting a false tooth is quite an ‘event’ in your day!
- ✓ There is much math in die rolling, to wit: “The experiment is: roll a die until you get a six. The median is 3.8: That means that half the time when you perform this experiment you will get your six in under 3.8 rolls and half the time you won't. The expected value is 6. This means that if you performed the experiment a hundred times and added all the rolls from each experiment together you should get around 600 total rolls. So one could get the same total by assuming we had 6 rolls in each experiment. Think of it like this: although you have a 50% chance of it taking less than 3.8 rolls there are still gonna be a lot of times where it takes 8, 9, 10 or more. Those high numbers are going to skew your expected values and leave you with an average of 6.” – answer by user Stephen O’Sullivan on math.stackexchange.com, August 12, 2015 (edited May 16, 2016 by user “Dragonemperor42”).<sup>5</sup>

*“Wild horses were domesticated in the Ponto-Caspian steppe region (today Russia, Kazakhstan, Ukraine, Romania) in the 3<sup>rd</sup> millennium B.C. Despite the pivotal role horses have played in the history of human societies, the process of their domestication is not well understood. ...*

*Based on ancient DNA spanning the time between the Late Pleistocene and the Middle Ages, targeting nuclear genes responsible for coat colorations allows [us] to shed light on the timing and place of horse domestication. Furthermore the study demonstrates how rapid the number of colorations increased as one result of the domestication. As well, it shows very clearly that the huge variability of coloration in domestic horses which can be observed today is a result of selective breeding by ancient farmers. Our modern human societies were founded on the Neolithic revolution, which was the transformation of wild plants and animals into domestic ones available for human nutrition. Within all domestic animals, no other species has had such a significant impact on the warfare, transportation and communication capabilities of human societies as the horse. For many millennia, horses were linked to human history changing societies on a continent-wide scale...”*

– Science Daily, “Mystery Of Horse Domestication Solved?” from Forschungsbund Berlin e.V. (FVB), April 24, 2009

**Battle at the Tollense River:** About 1200 B.C. (the time of the Trojan War of Homer’s *Iliad*) there was an extraordinary Bronze Age battle on a flood plain near a bridge crossing the Tollense River in northern Germany. The battle, along a trade road, involved about 4,000 combatants, a large portion of whom appear to have been professional soldiers (i.e. mercenaries and adventurers), some rode to battle on horses and came from distant lands. Most were armed with spears, many of the dead discovered on the site were killed by flint-tipped arrows, and though no swords have been discovered, some of the wounds are of the slashing type that may result from swords.<sup>6</sup> Some combatants were killed while fleeing, evident by wounds inflicted from behind, and not unusual for such battles. The battle demonstrates a hereto unexpected level of organization, military and political leadership, economics and logistics for the Bronze Age in *northern Europe*.<sup>7</sup>

There is a great fictional saga waiting for the right pen: Why were the armies here, what were they fighting for, who were they, did it involve the kidnapping of a princess, a flirtatious wife, or traitorous thane, was the son of a local king or chieftain killed in the battle, ending the future hopes of a nascent empire and keeping the area in a ‘backward’ state? What was won or lost?

*“This division is not one by religious affiliation, rather it separates the extremists and the peace-loving people. Therefore I’m optimistic: now a humanistic Islam is getting shaken awake. Moderate Islam needs now to finally break cover and explain how to deal with the violence-glorifying parts of the Quran. The (psychological) repression that this has nothing to do with our belief doesn’t work anymore. We have to face this challenge.” – Mouhanad Khorchide*

## Endnotes.

<sup>1</sup> Citation: “In 1920 conservative Baptist editor Curtis Lee Laws coined the term ‘Fundamentalist’ to describe ‘those who were ready to do battle royal for the Fundamentals.’ The Fundamentals series marked the beginning of a culture of biblical literalism. Biblical literalism does not mean that the Bible can be interpreted only in a literal sense.

As John Bunyan pointed out, the Bible clearly contains parables, metaphors, and poetic expression. Rather biblical literalism is the position that the Bible is inerrant. James Barr described biblical literalism as the position that the Bible contains ‘no error of any kind’ and that ‘not only theological error, but error in any sort of historical, geographical or scientific fact is completely absent from the Bible.’ As with the writings of Cotton Mather and Ezra Styles, *there was a concession hidden in fundamentalism*. By ‘doing battle’ to prove the inerrancy of the Bible, *fundamentalist confirmed that if the scripture is not true in an empirical sense, then it is without value*. For this reason, some scholars have noted that fundamentalism is a mirror image of the post-Enlightenment outlook that it opposes. By valuing only literal truth, it bleaches out the multifaceted ways in which sacred stories appeal to different aspects of human experience.” – Joseph P. Laycock, Dangerous Games: What the Moral Panic over Role-Playing Games Says about Play, Religion, and Imagined Worlds (2015), p. 230 (available on Google Books)(emphasis added).

- ✓ Cotton Mather was a prominent Reverend involved in the Salem Witch trials (1692-1693) as advisor to the Panel of Judges. He appears to have been reluctant about accepting “spectral evidence” at trial, but failed to either outright embrace it or reject it, which caused some consternation and resignations in the court.

<sup>2</sup> Citation: This is the title of the Italiano Wikipedia article about Martin Luther.

<sup>3</sup> Commentary: cf. Christoph Bernhard von Galen, Prince-bishop of Münster, in the early 17<sup>th</sup> Century was allegedly anxious for Church Reform, however, as Prince-bishop of one of the largest ecclesiastical principalities, he was rather the *ultimate insider*. Thus, instead, he sought to increase his power and prestige by forcing the Dutch to return to Roman Catholicism via military campaigns; like Offa of Mercia, his campaigns were not about his legacy or real reform, but instead, about personal power and prestige for which many thousands died or suffered.

<sup>4</sup> Commentary: Aquinas and Averroes provide one of the two main circumstances for intellectual historians: Averroes was long deceased and thus Aquinas was effectively arguing with Averroes via his published and translated works. Conversely, Erasmus and Martin Luther were contemporaries, and their ‘debate,’ though they never met in person (which is really sad), was carried out by letters and publication of works and responses.

- ✓ “Marjorie O’Rourke Boyle, in her work *Rhetoric and Reform: Erasmus’ Civil Dispute with Luther*, captures Erasmus and Luther’s interaction in its proper context: ‘The common assumption that their controversy was an exchange of differing ideas is erroneous. There was no exchange, no dialogue.’ While each humanist said much about the other, few ideas were ever actually ‘exchanged’ between the two giants. They were, in essence, two loud voices of their age ringing in opposition to one another. However, Luther owed much to Erasmus. For instance, **Erasmus’ 1516 Greek New Testament** aided Luther in his Romans lectures and again at Wartburg as the basis for his German translation of the Bible.” – Obbie Todd, “Luther and Erasmus: Friends or Foes?” themajestysmen.com, February 26, 2016 (emphasis in original).
- ✓ However: “The information and the delay allowed Erasmus to request a ‘Publication Privilege’ of four years for the Greek New Testament to ensure that his work would be published first. He obtained it in 1516 from both Pope Leo X, to whom he’d dedicate his work, and Emperor Maximilian I. [sic] Erasmus’ Greek New Testament to be published first, in 1516, forcing the Spanish team of Cisneros to wait until 1520 to publish their Complutensian Polyglot. It is hard to say if Erasmus’ actions had an effect on delaying the publication of Complutensian Polyglot, causing the Spanish team to take more time, or if it made no difference in their perfectionism. The Spanish copy was approved for publication by the Pope in 1520, however, it wasn’t released until 1522 due to the team’s insistence on reviewing and editing. Only fifteen errors have been found in the entire six volumes and four languages of Cisneros’ bible. [sic] A ridiculously low number for the time. The fear of them publishing though affected Erasmus’ work, rushing him to printing and caused him to forego editing. The result was a large number of translation mistakes, transcription errors and typos that required further editions to be printed.” – from Wikipedia article, “Erasmus,” September 22, 2018 (with numerous typographical corrections only, especially possessives).
- ✓ Erasmus died in 1536, age 69, Martin Luther outlived him by a decade, died in 1546, age 62.

<sup>5</sup> Commentary: This is incredibly useful d6 information for board gamers and RPGers.

<sup>6</sup> Commentary & Citation: A March 11, 2020 video posted by Pete Kelly “BREAKING NEWS – ‘Oldest Sword In The World’S Discovered // Aslantepe // Bronze Age Weaponry,” announced the discovery of a Bronze Age sword made about 3,000 B.C., possibly at Aslantepe, housed in a collection of medieval swords at a monastery in Venice.

<sup>7</sup> Citation: See Wikipedia article, “Tollense valley battlefield” and Andrew Curry, “Slaughter at the bridge: Uncovering a colossal Bronze Age battle,” Science Magazine, March 24, 2016 (available free online).

*“What the feminists want of me is something they haven’t examined because it comes from religion. They want me to bear witness. What they would really like me to say is, ‘Ha, sisters, I stand with you side by side in your struggle toward the golden dawn where all those beastly men are no more.’ Do they really want people to make oversimplified statements about men and women? In fact, they do. I’ve come with great regret to this conclusion.”*

– Doris Lessing, *The New York Times*, July 25, 1982

**Golden Dawn:** ‘Golden Dawn’ has been used in many political contexts, both feminist and non-feminist. Perhaps Ms. Lessing was subtly referencing 19<sup>th</sup> Century women’s participation in The Hermetic Order of the Golden Dawn which is seen by historians to be part of a Victorian feminist movement (e.g., Dion Fortune, and later Wicca authors like Starhawk, discussed in *Down the Rabbit Hole*, 3 Kairotic Moments, p. 1443, *infra*)? However, I also have memory from my youth of “the golden dawn” as a feminist ideal and goal and thus her reference to that term immediately struck me in that meaning. An example of non-feminist uses of the phrase is the ultra-nationalist, far right Greek political party of that name who would certainly never be accused of harboring feminist sympathies (one of their members punched a female opponent on television).

- ✓ There is a distinction to be made in Ms. Lessing’s statement. It is not anti-feminist; rather, Ms. Lessing is complaining about the unexamined way in which radical feminist go about their cause. Note that the date coincides with the ERA era of feminism.

*“As soon as a coin in the coffer rings / the soul from purgatory springs.”*

– attributed to John Tetzels (but probably is older)

**A Coin in the Coffer Rings:** When a Reformation Coalesces, the target position will not be informed, no position will be informed, but the Concierge will know. The Concierge may resolve the Reformation at their discretion, but it should be resolved as quickly as possible before conditions change too much. As no position is informed of the Coalescence, Thesis Statements may be added by other positions during the process of resolving the Reformation.

It should not be assumed that external threats will derail a reformation, that the elements inside a civilization will stop fighting and turn to face an external threat. History does not support such an assumption; the entire process of the European Reformation occurred while Europe was under threat from the Ottoman Empire and fighting along the frontiers through Hungary and modern-day Romania (a country formed from Moldavia, Wallachia and Transylvania). The Ottoman Army reached Vienna, Austria, and besieged the city in 1529 (shortly after the German Peasant’s War) and again in 1683, between this time, the Habsburg-Holy Roman Empire was left devastated by the Thirty Years War (1618-1648) and had to be rescued by the Holy League.

- ✓ “...and others who happily use the recipes in the quantum cookbook appreciate that the rules that prove so reliable in the design of lasers and computers, or studies of genetic material, depend explicitly on the assumption that myriad ghost particles interfere with each other all the time, and only *coalesce* into a single real particle as the wave function collapses during an observation. What’s worse, as soon as we stop looking at the electron, or whatever we are looking at, it immediately splits up into a

new array of ghost particles, each pursuing their own path of probabilities through the quantum world. Nothing is real unless we look at it, and it ceases to be real as soon as we stop looking.” – John Gribbin, In Search of Schrödinger’s Cat (1984), p.173 (emphasis added to highlight game term).

- See full quote, 2 Expansion, EN 6, p. 904, *supra*.

- Here I Sit: *E pluribus unum*. The first step in resolving a Coalesced Reformation is to make a *collage* out of the Thesis Statements. The Concierge must look at the Thesis Statements, look at the civilization and try to find a theme into which they all fit, that can be expressed in one or two simple sentences. Not everything must be included, not every issue must be addressed, just try to find something central that fits the target position’s civilization in particular, and the game story in general. The resulting Collage does not need to be positive, happy, or fruitful in our sense of things (not all emergences or transformations are positive results to all viewers nor will all dissenters be pleased), but should be sweeping insofar as the target position’s civilization and contribute something to the game story arc.

This is possibly the most difficult single process in the game for the Concierge, but will be much easier if the Concierge is immersed and engaged in the game (not everyone can be a Concierge, just as not everyone is suited to GM a RPG, I was a terrible GM). This is art, this is an ‘interpretation,’ the Concierge must just do the best with the material (i.e. the Thesis Statements) provided by the participants and try to find something emergent from it.

- ✓ There are people who still believe that all questions of the Reformation have not been resolved, e.g., “The Reformation did not directly touch the question of the true character of God’s church.” – John Nelson Darby. Martin Luther was certainly questioning the ‘character’ of the Church (which may not be the same meaning as “God’s church” to John Nelson Darby, 300 years later) at least.
  - GGDM is a collage of quotes by really smart (usually dead) people with gibberish in between.
- The Ink Had Scarcely Dried: A Reformation is resolved in GGDM through a series of Interventions by the Concierge on the target position related to the Thesis Statements that make up the Reformation. To resolve the Reformation, the Concierge should create a ‘program’ of events that happen rapidly to the target position in one or two Regular Turns, through Interventions, that reflect the Thesis Statements of the Reformation and lead to the Collage formed by the Concierge previously. The Concierge does not need to inform the position that a Reformation is being resolved, until the end when the Collage is presented.
  - ✓ The resolution of a Coalesced Reformation should use a number of Interventions equal to *at least* the number of Thesis Statements including counter-reformation Thesis Statements (see 2 Reformation, p. 1391, *supra*), thus, counter-Thesis may increase the chaos later (the Ontic Numbers are irrelevant for this purpose). Intervention Potentials Plus (IP+) against the target position should be used first, and are considered two Interventions for this purpose. After that, the Concierge can draw from the pool of regular Interventions in the game (plus those attached by Black-ops and Pollution Potentials). The Concierge should use as many Interventions as necessary to make the Reformation story work out correctly, noting that these events will be occurring while the game is still moving and positions are still posting News Events.

- “But the ink had scarcely dried on Machiavelli’s pages before the theories of the *Principe* hardened into acts.” – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), p. 205.

*“Before the plantation, Ulster had been the most Gaelic province of Ireland, as it was the least anglicized and the most independent of English control.”*

– from Wikipedia article, “Plantation of Ulster,” February 17, 2019

**Beyond the Pale:** The “Irish Question” dates from the late 19<sup>th</sup> Century, but the ‘troubles’ began in the late Middle Ages. The Normans invaded Ireland in 1169 A.D. (because that’s what Normans do, they were getting bored) but were assimilated in the following centuries, became semi-independent of England, and the English holdings shrank to an area of land around Dublin. The colloquial “beyond the Pale” (or “beyond Pale”) survives from this period, the Pale was the lowland area controlled by the English around Dublin and became also the name of the line of burrows and hedges formed by the English to keep out raiders from the West. The term Pale (area of jurisdiction) was not new to English in the 19<sup>th</sup> Century, it had, for example, been used in the Pale of Calis from the 14<sup>th</sup> Century to the mid-16<sup>th</sup> Century.

- ✓ The real troubles began when the Tudors reconquered Ireland from 1529 to 1603 (during The Reformation and before the Thirty Years War), re-imposed English language, laws, taxation, nobility and aristocracy on Ireland, and emigrated by force and coercion English, Scot and Welsh settlers to form new colonies (“plantations”<sup>1</sup>) at Laois and Offaly in the 1550s, Ulster in the 1570s, Munster in the 1580s (in GGDM terms, forced Balkanization). Ulster in particular became a sore point, because it was the center of Gaelic culture. Thus, English colonization of Ulster has been interpreted as a direct assault on Gaelic culture by the English (i.e. cultural imperialism, similar to Charlemagne’s destruction of the sacred groves in Saxony), and six of the nine counties of Ulster became modern-day Northern Ireland, Anglican and under English control.<sup>2</sup>

Thus, when peace finally came to Northern Ireland (the 1994 ceasefire, the 1998 Good Friday Agreement, the 1999 admission of Sinn Féin to the power-sharing arrangement, the 2001 disarmament and the 2004 Comprehensive Agreement), it occurred to me that Northern Ireland was the last conflict of the Reformation, ‘resolved’ 350 years after the end of the Thirty Years War.

- ✓ If you were alive then and remember those events, you witnessed the end of a historical cycle probably without realizing the implications. I generally remember news coverage of the IRA, and attacks, but my most specific memory is of an evening news report video where, in Northern Ireland, a group of Catholic schoolchildren had to be escorted to school each day by armed soldiers. And the children dressed in their finest school clothes went up a street or walkway with mobs of angry Protestants on both sides screaming at them, throwing things; the children were walking on broken glass. And this happened every day. And I thought, what (the hell) is wrong with these people? These are just primary school children, just like in Birmingham, Alabama. What are you teaching these soon-to-be juveniles and adults? I don’t remember the date of the report, but I assume it was in the early 1990s.

*Oh if you could see how  
How small everything seems from  
here  
So trivial, so shallow  
The meaningless drama so precious  
on Earth  
Seen from the timeless stardust*

Xandria, “Stardust” (2014)

*Far away in a distant memory  
There is lush  
There is green  
There’s you and me  
Now all blood in our hollow hearts is  
stardust, stardust*

Delain, “Stardust” (2014)

**A Soul from Purgatory Springs:** Upon completion of the Reformation resolution, the Collage becomes a new ‘rule’ for the target position. The position should henceforth operate within the parameters of the Collage resulting from the Reformation. The Collage is not a rule in a game mechanical sense that the position will be prevented from violating the rule – for example, like a position will be prevented from moving at twice its current maximum ship speed without any special enhancements or new Ship Speed technology (unless the Concierge uses an Intervention ☺) – but rather, the Collage (not to be confused with Colleges) is like a Fundamental Reality, only much closer, much, much closer, to the current reality, and thus, the Concierge may assess an Intervention Potential Plus (IP+) against the position for apparent or continued violation of the Collage. That means the Concierge must be paying attention to the game...

- ✓ Adverse News Events posted by the position should not be considered violations of the Collage (or even Fundamental Realities) because, as stated in *The Nature of News Events*, 2 Dreamtime, p. 146, *supra*, the source of the adverse News Event is not the ‘cause’ of the event.

When the Collage is presented, the Reformation is ‘resolved’ and the Coalesced Thesis Statements are set aside (but not forgotten). Their Ontic Numbers are no longer counted, and thus do not count toward the next Reformation (see Pontic Event, 2 Reformation, p. 1395), the resolution is a reset. But the same issues may come up again later, previous Thesis Statements may be considered in future resolution of Coalesced Reformations, because history is never really over...

- **Built Spaces:** The Reformation process, an Expose’ News Event (see *Edge of Reality*, 4 Writs, p. 452, *supra*), hegemony (see *In Spite of Ourselves*, 4 Order, p. 554, *supra*), and Era progression (see *All Things are in Motion*, 1 Eras, p. 760, *supra*) are the only means in the game to expand the Public Space *directly*; the Diplomatic Space (see *Fourth Direction*, 2 Diplomacy, p. 1117, *supra*) is also an expansion, but is shared with another and traces to the Public Space only through the Capital Colony. After the Reformation is resolved, in addition to the new restrictions of the Collage, the target position may receive additional Monads on the Public Space determined by a yes/no die roll (i.e. 50%) for each Intervention used in the Reformation resolution. Thus, the more Interventions used, the more Monads that can be gained (small consolation...). Enlightenment cannot be applied to this roll because there is no Power Activation involved.

- ✓ “Base space, also known as reality space, presents the interlocutors’ shared knowledge of the real world. Space builders are elements within a sentence that establish spaces distinct from, yet related to the base space constructed. Space builders can be

expressions like prepositional phrases, adverbs, connectives, and subject-verb combinations that are followed by an embedded sentence. They require hearers to establish scenarios beyond the present point of time. A built space depicts a situation that only holds true for that space itself, *but may or may not be true in reality*. *The base space and built spaces are occupied by elements that map onto each other*. These elements include categories that may refer to specific entities in those categories.

According to Fauconnier’s Access Principle, *specific entities of a category in a space can be described by its counterpart category in another space even if it differs from the specific entity in the other space*. An example of a built space can be seen in the example ‘Mary wants to buy a book.’ In this case, the built space is not that of reality, but Mary’s desire space. Though the book in reality space refers to any book in general, it can still be used to describe the book in Mary’s desire space, which may or may not be a specific book...” – from Wikipedia article, “Mental Space,” captured February 19, 2019 (emphasis added).

- In GGDM, the Public Space contains some parts of Galactic Space (what most people call objective reality) and the holders of the Public Space (i.e. population) exist in Galactic Space but operate in both spaces, based on what is in their Public Space. Simple, right?
- Mental Space: Because random insertion of new Monads into an active and full Public Space could destroy adjacencies and formations, and distances of colonies from Government Titles, it should/might/will probably be done manually by the Concierge; however, Reformations (Era Progressions and Expose’) do tend to upset existing arrangements and connections, therefore, random insertion by the computer assistant would not be entirely improper. The Concierge should decide initially how this will be handled and be consistent through the game, but knowing human predilections, it is likely that insertions will be done randomly by the computer assistant. As with Diplomatic Spaces (see Shared Spaces, 2 Diplomacy, p. 1118, *supra*), insertion of Monads will simply displace everything a space because the edges of the Public Space are considered to wrap around, such that things on the edge may be considered adjacent to things on the other edge.
  - ✓ “The mental space is a theoretical construct proposed by Gilles Fauconnier corresponding to possible worlds in truth-conditional semantics. The main difference between a mental space and a possible world is that a mental space does not contain a faithful representation of reality, but an idealized cognitive model. Building of mental spaces and establishment of mappings between those mental spaces are the two main processes involved in construction of meaning. It is one of the basic components in Gilles Fauconnier and Mark Turner’s blending theory, a theory within Cognitive semantics.” – from Wikipedia article, “Mental Space,” captured February 19, 2019. [i.e., philosophy’s *is* and *ought*]
- Talking Past Each Other: This is part of the historical process by which our perceptions of reality are expanded and changed. For example, Buddha, Christianity and the Fall of the Western Roman Empire, and Sir Francis Bacon’s empiricism and the early Scientific Age. Make no mistake, our perception of what is real, and our public discourse, is vastly different than our distant ancestors due to science and empiricism, and the Abrahamic Traditions. A face to face conversation with our ancestors (for example, Roman citizens or people from the

Middle Ages) would be very difficult; in many areas, we'd be talking past each other because of our differing perceptions of reality. Television fiction never does this justice because it would be too difficult for the audience to grasp.

- ✓ “The idiomatic expression is an allusion to the interaction between Thrasymachus and Socrates over the question of ‘justice’ in Plato’s *Republic I*. In their dialogue, neither man addressed any of the issues raised by the other and two different concepts which need not have been disputed are somehow confused.” – from Wikipedia article, “Talking Past Each Other,” captured August 20, 2019 (emphasis in original).

The discussion of ‘Understanding the Question’ in 1 Reformation, p. 1377, *supra*, can be thought of as the Catholics and Protestants ‘talking past each other’ – somewhat deliberately it seems, a form of Willful Ignorance, discussed in 2 Information, p. 1353, *supra*.

- ✓ “And how many words have I got to say, And how many times will it be this way, With your arms around the future, And your back up against the past.” – Moody Blues, “The Voice” (1981).

---

*“Time, among all concepts in the world of physics, puts up the greatest resistance to being dethroned from ideal continuum to the world of the discrete, of information, of bits. ... Of all obstacles to a thoroughly penetrating account of existence, none looms up more dismayingly than ‘time.’ Explain time? Not without explaining existence. Explain existence? Not without explaining time. To uncover the deep and hidden connection between time and existence ... is a task for the future.”*

– John Archibald Wheeler, “Herman Wyle and the Unity of Knowledge,” (1986)

---

**Just Don’t Call Me Late for Dinner:** In the spring of 1990, Dr. Stan Wilk at Lycoming College was my instructor for Anthropology 101. I remember he started the first class by saying, you can call me professor, doctor, or Stan, just don’t call me late for dinner!

In a later class, he told this revealing story. At some point in the 1960s, he was in Yucatan, Mexico working in a field expedition at Mayan ruins. He befriended a local farmer and they would meet for lunch every day under a certain tree. Stan would arrive around noon or shortly before and sit until the farmer arrived; which sometimes was also around noon, sometimes closer to 1 p.m. and sometimes even 1:30 p.m. The farmer would do his morning work, and when the sun was high in the sky and he was tired and hungry and felt he had done enough, he would take his lunch break. It does not appear the farmer had a watch, he simply went by the sun and how long he felt he had worked that morning.

His concept of time was much different than ours, in our world, we all have clocks, in the mid-20<sup>th</sup> Century, there were analog clocks on the walls in homes, buildings (I had teachers who put the clocks in the back of the room because only *they* needed to know what time it was), and on the streets even (e.g., the historical Kauffman Clock on Smithfield Street in Pittsburgh), and now few wear watches, but everyone has phones, Fitbit trackers, and computers that constantly keep digital time in front of us. From the 17<sup>th</sup> Century onward, a watch was a sign of wealth, successful merchants and business owners had watches. Ship captains had watches, army officers had watches.

- ✓ The discussion of time-sense is in the same category with other equally-profound subjects that have affected human civilization, for example, how clothes changed civilization (and the development of ‘style’ and personal hygiene) – for example, by looking at cultures that never developed clothing until European arrival, or whom the authorities attempted to force the introduction of clothing. I would highly recommend reading Loren Eiseley’s essay, “How Flowers Changed the World” (1957).

The modern time sense developed during the Enlightenment and afterwards. If we say we will meet for lunch at noon, and someone arrives 15 minutes late, we might get annoyed. For example, I called the pet memorial service at 12:25 p.m. and spoke to the fellow there for a few minutes. He said that he had a 2:30 p.m. euthanasia at the vet clinic down the hill and that he would be at my house in about an hour. What does that mean? He arrived at my house almost three hours later, offering excuses which showed clearly that he had no reasonable expectation that he would be at my house in about an hour at the time he said it. That is, of course, considered very rude and/or very poor customer service to waste someone’s afternoon waiting.

- ✓ A big timid semi-feral orange tom cat comes around late at night looking for food on my front porch. Over time, we have become friends: He likes to have his head scratched, but he’s still semi-feral and probably no one has ever treated him well; he gets a little excited when I pet him and I have to watch closely that he doesn’t nip or scratch me in his happiness. He is not an existential threat to me, as I am to him. But, he’s a cat, I cannot say, be here at 11:00 p.m. for food because I want to go to bed. He shows up whenever and I look for him.

We measure our lives, tasks, sleep, in hours and minutes, and this has spread to most of the world through urban and industrialized populations. The revolution was felt during the 18<sup>th</sup> Century industrialization as farmers, losing their lands to enclosure,<sup>3</sup> flocked to the cities to work in factories, where one punched in and out of a clock at a specific time. Mom and pop small businesses lost out to big business and industrial manufacturing and they too had to work in factories and offices on the clock, instead of whenever they wanted or needed to work in their home businesses. Children had to be to school at a certain time, finish tasks in an allotted time. A significant loss of freedom was felt in the transition, there was an elevation of stress (e.g., expressed in Charles Dickens’ stories, see *Gradgrind*, 1 *Colleges*, p. 463, *supra*) which is still felt today. The world has seemed to move faster than ever, events that took years previously now happen in months or weeks, we become impatient with waiting, *we live both faster and longer, multiplying the effects of each life, each cohort, each generation.*

- ✓ “Time is perhaps our prime yardstick. The distance to a friend’s home is generally calculated by how long it takes to get there rather than by the number of actual miles it is, for time is the reality given varying road, traffic and weather conditions, and alternate routes, and distance isn’t, not really.... we surround ourselves with realities that depend on one other dominant reality, the inexorable passage of time, a precisely measurable phenomenon.” – Roger Caras, *A Cat is Watching* (1989), p. 194.

Time is perhaps the single most important phenomenon to humanity; think of the amount of time we spend obsessing over it (and how many time travel movies?). The reformation of humanity’s time sense from agrarian to industrial, urban modernity (precision timekeeping is part of the modernity worldview, Olympic gold medals are measured in hundredths of seconds) – like a time-less child moving into the adult world now – changed us in ways and at a depth that we have not

fully understood yet (sort of an *Uber Alles* effect). It separated us by yet another order of magnitude from our pets and the animals, whose time sense is more akin to that of a human child (e.g., longer, shorter, and the march of the seasons and whenever they get hungry).

- ✓ “Ours is increasingly a world in which spacetime between individuals is generally measured in how long it takes for a message to fly between mobile devices, short-circuiting the 3D spacetime of the mere physical world. As such, linear time seems to be fading out, increasingly replaced by virtual sites on the Internet which update and mutate in webs in relation to each other. And while the web does seem to tend towards something like consistency, it still allows quite a few paradoxes to exist in powerfully entangled states.

Either way, this new spatiotemporal reality is increasingly moving from the realm of fantasy to everyday. And so, a film like *Looper* then is likely to resonate with a wide many who’ve never encountered quantum physics, but simply feel what it’s like to live everyday in our hypermodernity. And as our everyday life increasingly begins to take on quantum aspects, with micro and macro levels of our worlds echoing each other as in fractal images, perhaps films like this can help us intuit some new ways to navigate the challenges of our age.” – Christopher Vitale, “Collapsing the Fuzzy Wave: Rian Johnson’s ‘Looper’ (2012), Quantum Logics, and the Structures of Time Travel Films,” networkologies (blog), written in 2012, updated and reposted, October 31, 2014.

On the other side of that reformation, technology has allowed us to be somewhat freer in some respect than our industrial ancestors – sort of like we passed the narrow neck of an hour glass – for example, recordings and watch-on-demand (we can now watch and listen anywhere on phones and tablets), flex schedules, telecommute and it has also eased time-zone difficulties allowing more globalization of culture (Buckminster Fuller used to wear three watches...).

- Violating Mortality: Recording and playback technology might be as important and revolutionary as the printing press. It allows us to violate mortality in the same way as the invention of writing, except that the voice we hear is outside our heads and not inside. Some people find this is a fundamental problem with modern civilization, *always longing for the next distraction*:

- ✓ “Why are you so petrified of silence? Here can you handle this? [music stops, moment of silence] Did you think about your bills, your ex, your deadlines? Or when you think you’re going to die? Or did you long for the next distraction?” – Alanis Morissette, “All I Really Want” (1995).

Ironically, Alanis Morissette, when *Jagged Little Pill* (1995) was new and receiving regular play, *was the next distraction*.<sup>4</sup> It was her high-pitched, overdoes-it inner voice you heard caterwauling outside your head, instead of the voice *inside* your head. Moving on...

Historically, we know of famous urban theatre performers and singers of the late 19<sup>th</sup> Century who were said to be the greatest of their time, the best ever and other puffery, but we do not have any recordings of them to compare or enjoy. The only recording of Scott Joplin are seven (error-filled) piano rolls from 1916 when he was ill. So we are now *about five generations into building a storage of recorded performances* and the new literary format, movies. We have been digitizing, remastering and recoloring older recordings of earlier technology.

- ✓ Recording technology has allowed Natalie Coal to sing a striking, ‘timeless’ duet with her deceased father, Nat King Cole in 1991. While it gave some listeners pause for a moment and passed by, some others may have seen the deeper implications.
  - ✓ Holograms have allowed us to ‘resurrect’ Tupac Shakur and Michael Jackson (with live choreographed dancers), and the news has hinted at holograms of deceased performers Selena and Ronnie James Dio and Amy Winehouse. This was enough to give people some pause (and chills), and it is still new enough to be an event. We don’t even know where this is going yet, but a video on YouTube by Popsugar points out that a hologram of an anime character (Hatsune Miku) is selling out stadiums performing with live musicians on stage.
  - ✓ The Dr. Who TV series has long been on the trail of this idea, inserting clips of older doctors (some of them whose actors are deceased) into specials where multiple incarnations of the Doctor come together (e.g., the Day of the Doctor (2013)) or when they need history (such as “The Magicians Apprentice” episode (2015)).
- Time Sense: Merriam-Webster online dictionary does not define “*time sense*” in the way it is used here but I believe that my use is that of anthropology. There are two qualities in which time sense can be used, first, “an ability to feel the lapse of time and to estimate and compare intervals especially of short duration” (Merriam-Webster definition) which is what Roger Caras discusses regarding cats and a second quality in which a civilization measures with precision and awareness the passage of time in daily lives and in history, and by some extension, the rate at which events happen.
- ✓ This latter quality is probably a function of “the ‘extended’ self-conception of humans, requiring *autobiographical memory*.” – Prof. Antonio Damasio quoted by Jason Pontin, “The Importance of Feelings,” MIT Technology Review, June 17, 2014 See full feature quote in 3 The Big Bang, p. 9, *supra*.
  - ✓ Roger Caras points out: “...I have never been able to accept time judgment as an actual sense independent of other stimulation, but some people still claim it is just that.” – Roger Caras, A Cat is Watching (1989), p. 93.<sup>5[Full Quote]</sup>

When they teach the five senses to young schoolchildren, time is not included. To have time as a sense rather than as a perception-judgment based on external stimuli, we would need to experience time like we feel wind on our face, smell flatulence, or taste butter-pecan ice cream. No one has made such a claim, but it would be an epochal development of humanity, to feel the wind of time. Yet, the Merriam-Webster online dictionary (*Id.*) might imply that time sense is an actual sense, e.g., “the ability to *feel* the lapse of time”; it is unclear from the dictionary definition whether the feeling is innate or whether it is perception of external stimuli. I am betting the wording is designed to avoid taking a position on this issue.

The time sense discussion in the above commentary clearly expresses as a perception of the speed at which the world moves (or history progresses) on a macrosocial (technology + SQ) level regardless of how it is perceived in a sensory capacity. But the phenomenon of increase doesn’t suggest that time is somehow moving faster now than it was in the past; we have no evidence that the flow of time has changed (wouldn’t that be interesting!) on a cosmic scale or local scale through human history, but rather, that human perception of time has changed (as a child growing to adulthood), our cognitive world has changed.

- ✓ “It is the way cats seem to expect things to happen. They wait and they watch and things come full circle. The minor glitches pass (if they don’t kill you first) and the important things happen in their own good time. That is probably why it pays for cats to sleep so much. It makes the waiting time pass more quickly for them.” – Roger Caras, *A Cat is Watching* (1989), p. 198.
  - This may be the way our ancestors experienced time: Dr. Mason (Duchesne University) opined in one lecture on the History of the Enlightenment that our ancestors didn’t talk more than we do now, but slept more.
- Humanity in a Box: It is common or has been in my youth for people to think of time as the ‘fourth dimension.’ I am not sure now that this is correct. The fourth dimension is the direction of a hypercube or tesseract to which we cannot point, but which casts a shadow in the third dimension. Is that the same as time? If not, then what is time and why does it only seem to go in one direction? Dimensions as we know them spatially, are two directional, up-down, left-right, back-forward, pitch, yaw, roll. It has been theorized that time can flow backward (which is not the same as us going back in time, clarity), but not demonstrated, and there is no impediment to movement in both directions in the other three dimensions, so if time is a dimension, why the impediment?
  - ✓ “Viewing time as the fourth dimension is appealing for a number of reasons. The first is that we naturally have experience with time coordinates. ... So, establishing the meeting uniquely requires three spatial coordinates and one time coordinate. ... Of course, it is possible for time to change independently of the spatial coordinates – all you have to do is sit relatively still and your time coordinate will change while your position will not. ...

There are a couple of problems with considering time the fourth dimension, however. The first is that you aren’t entirely free to ‘move around’ in the time dimension. In fact, you are pretty much stuck moving forward at a rate that you cannot control (but that, according to Einstein, is not necessarily the same for everybody). So, time allows only a partial degree of freedom. The second problem is that, while you can change your time coordinate without changing your spatial coordinates, the reverse is not true: how could you move from point A to point B without a passage (i.e., change in ‘position’) of time? So, time’s role as a fourth dimension may be debatable on some philosophical level, but for practical purposes, it works quite well.

In fact, Einstein treated time as inseparable from the three dimensions of space and gave us the concept of ‘spacetime,’ which is the four-dimensional equivalent of a surface, something that we discuss in some depth in other units. This spacetime, however, is curved by massive objects, which suggests that there might be a fifth dimension that allows this curvature to take place.” – “5.3 Journey into the Fourth Dimension,” Annenberg Learner, *Mathematics Illuminated*, captured February 15, 2019.

  - ✓ “Philosophers have debated the nature of time long before Einstein and modern physics. But in the 106 years since Einstein, the prevailing view in physics has been that time serves as the fourth dimension of space, an arena represented mathematically as 4D Minkowski spacetime. However, some scientists, including Amrit Sorli and Davide Fiscaletti, founders of the Space Life Institute in Slovenia, argue that time exists completely independent from space. In a new study, Sorli and Fiscaletti have shown

that two phenomena of special relativity – time dilation and length contraction – can be better described within the framework of a 3D space with time as the quantity used to measure change (i.e., photon motion) in this space. The scientists have published their article in a recent issue of *Physics Essays*. The work builds on their previous articles, in which they have investigated the definition of time as a ‘numerical order of material change.’” – Lisa Zyga, “Physicists continue work to abolish time as fourth dimension of space,” *phys.org*, April 14, 2012.

- ✓ “When we think about how we can move through the Universe, we immediately think of three different directions. Left-or-right, forwards-or-backwards, and upwards-or-downwards: the three independent directions of a Cartesian grid. All three of those count as dimensions, and specifically, as spatial dimensions. But we commonly talk about a fourth dimension of a very different type: time. But what makes time a dimension at all? ...

But spacetime is even more complicated than space, and it’s easy to see why. The chair you’re sitting in right now can have its location described by those three coordinates:  $x$ ,  $y$  and  $z$ . But it’s also occupied by you right now, as opposed to an hour ago, yesterday or ten years from now. In order to describe an event, knowing where it occurs isn’t enough; you also need to know when, which means you need to know the time coordinate,  $t$ . This played a big deal for the first time in relativity, when we were thinking about the issue of simultaneity. Start by thinking of two separate locations connected by a path, with two people walking from each location to the other one. You can visualize their paths by putting two fingers, one from each hand, at the two starting locations and ‘walking’ them towards their destinations. At some point, they’re going to need to pass by one another, meaning your two fingers are going to have to be in the same spot at the same time.

In relativity, this is what’s known as a simultaneous event, and it can only occur when all the space components and all the time components of two different physical objects align. This is supremely non-controversial, and explains why time needs to be considered as a dimension that we ‘move’ through, the same as any of the spatial dimensions. But it was Einstein’s special theory of relativity that led his former professor, Hermann Minkowski, to devise a formulation that put the three space dimensions and the one time dimension together. We all realize that to move through space requires motion through time; if you’re here, now, you cannot be somewhere else now as well, you can only get there later.

In 1905, Einstein’s special relativity taught us that the speed of light is a universal speed limit, and that as you approach it you experience the strange phenomena of time dilation and length contraction. But perhaps the biggest breakthrough came in 1907, when Minkowski realized that Einstein’s relativity had an extraordinary implication: mathematically, time behaves exactly the same as space does, except with a factor of  $c$ , the speed of light in vacuum, and a factor of  $i$ , the imaginary number  $\sqrt{-1}$ .” – Ethan Siegel, “Ask Ethan: Why Must Time Be A Dimension?” *Forbes.com*, November 26, 2016.

*“As the story is usually told, one of the main arch villains of the Protestant Reformation was Johann Tetzel, papal seller of indulgences. It was he who played a key role in provoking Luther in regard to the 95 Theses. ... It is usually taken as absolute fact that Tetzel often used this jingle while preaching his indulgence sermons. It may be surprising to find out that attributing this exact jingle to Tetzel isn't as easy as one may think. Roman Catholics have a valid gripe if they question if Tetzel was the originator of the jingle 'As soon as the coin in the coffer rings, the soul out of purgatory springs' (Sobald der Pfennig im Kasten klingt, die Seele aus dem Fegfeuer springt).*

*Sometimes Protestants think this phrase was unique to Tetzel, sort of like the way the phrase 'your best life now' is attached to Joel Osteen. There is no evidence I know of that Tetzel came up with this jingle. The main reason why there's a dispute over whether or not Tetzel actually used the jingle is because it does not appear in his extant written sermons. Heinrich Boehmer points out the news of Tetzel's indulgence sermons being preached in the district of Magdeburg provoked Luther, but there are no precise records of what Tetzel preached in that area. That is, no one wrote his sermons down. ... I've never read anything suggesting Luther simply made the phrase up.*

*No, the jingle certainly had a life of its own, and provoked the Augustinian monk to write against it. Luther appears to have come across it by those who reported back indulgence sermons they had heard. ... This phrase may actually be traced back to a much earlier date. Martin Brecht notes the University of Paris complained about this popular jingle as early as 1482 ... but doesn't provide any helpful documentation. Heinrich Boehmer notes the idea behind this phrase wasn't anything new when Tetzel came on the scene... But while Tetzel may not have coined the phrase, he certainly taught its sentiment. Even Roman Catholic historian Hartmann Grisar (who defends Tetzel) reluctantly admits it...”*

– James Swan, “Did Tetzel Really Say ‘As soon as the coin in the coffer rings, the soul from purgatory springs?’” [beggarsallreformation.blogspot](http://beggarsallreformation.blogspot), January 7, 2012

**Comedy, Not Funny:** Criticism of the practice – where the rich could do whatever they wanted, which led to the 95 Thesis in 1517 was not new; Dante had complained in “Inferno” (the first part of The Divine Comedy (1320)) two centuries earlier of the grant of absolution of sin by priests as a recruiting tactic for the Crusades. He explicitly rejected the notion that a man could absolve another of sins, whether a clergyman or not. Dante had personal enmity toward certain members of the Magisterium, most notably, Pope Boniface VIII, which then extended to challenges of Papal authority and certain Church practices in general (this issue was still not resolved five centuries later, e.g., Italian Freemasons such as Giuseppe Garibaldi and the Carboneria).

The difference between the two is this: The Black Death and the discovery of the New World in the two intervening centuries. Dante's acrimony and criticism was bound up with his involvement in Florentine politics and exile. But he was still an Italian and was not a clergyman and thus was revered for his innovative use of Italian (instead of Latin) in his works. Martin Luther was an ordained clergyman (Augustan Friar) and a Doctor of Theology, and lived on the troublesome northern frontiers of the Holy Roman Empire in Germany. He translated the Bible into vernacular German, which was followed by translations into other languages over the next 50 years.

Thus, in the two centuries intervening, criticism of the Church in all respects had moved from the political outside into the heart of the local clergy. And that is the Reformation.<sup>6</sup>

**Insurance Agent:** Johann Tetzel was a sort of licensed insurance agent. He had a product to sell and if you could afford it and thought it was for you, he was the guy. *Results are not guaranteed!* He was just trying to make a living and move up the company ladder. On the flip side of this, because he was an agent of the Archbishop of Mainz (and a Dominican friar), his word on doctrine was taken as both learned and official, just like a modern insurance agent and his agency can be held legally responsible for misrepresenting what is being sold.

- ✓ “Fresh scope was given to his activity in 1517 by archbishop Albrecht of Mainz. Albrecht had been elected at the age of twenty-four to a see already impoverished by frequent successions and payments of annates to Rome. He had agreed with Pope Leo X to pay his first-fruits in cash, on condition that he were allowed to recoup himself by the sale of indulgences. Half the proceeds in his province were to go to him, half to Leo X for building the basilica of St Peter’s at Rome.

Tetzel was selected as the most efficient salesman; he was appointed general sub-commissioner for indulgences, and was accompanied by a clerk of the Fuggers from whom Albrecht had borrowed the money to pay his first-fruits. Tetzel’s efforts irretrievably damaged the complicated and abstruse Catholic doctrine on the subject of indulgences; as soon as the coin clinks in the chest, he cried, the soul is freed from purgatory. In June he was at Magdeburg, Halle and Naumburg; the elector of Saxony excluded him from his dominions, but Albrecht’s brother, the elector Joachim of Brandenburg, encouraged him at Berlin in the hope of sharing the spoils, and by the connivance of Duke George of Saxony he was permitted to pursue his operations within a few miles of the electoral territory at Wittenberg.

Luther was thus roused to publish his momentous ninety-five theses on the subject of indulgences on October 31, 1517. Even Albrecht was shamed by Luther’s attack, but he could not afford to relinquish his profits already pledged for the repayment of his debts; and Tetzel was encouraged to defend himself and indulgences. Through the influence of Conrad Wimpina, rector of Frankfurt, Tetzel was created D.D. of that university, and with Wimpina’s assistance he drew up, in January 1518, a hundred and six theses in answer to Luther’s.

But the storm overwhelmed him: sober Catholics felt that his vulgar extravagances had prejudiced Catholic doctrine, and Miltitz, who was sent from Rome to deal with the situation, administered to him a severe castigation. He hid himself in the Dominican convent at Leipzig in fear of popular violence, and died there on the 4<sup>th</sup> of July 1519, just as Luther was beginning his famous disputation with Eck.” – Albert Frederick Pollard, 1911 Encyclopædia Britannica (now in the public domain).

*There’s an image to behold:* A Dominican friar accompanied by a clerk from Fuggers<sup>7</sup> as he travelled through Germany selling indulgences under questionable doctrine while conniving local hereditary rulers sought to get a piece of the action. There is not much an apologist can do with that, except to cite to the milieu.

I am not here to suggest that Johann Tetzel in any way ‘caused’ the Reformation or the Protestant revolt. Rather, I think he thought he was being quite clever, exploiting cracks in Church doctrine and human social and psychological needs to make a few coins and maybe move up the ladder. Like Pharma-bro and Michael Milken, he failed to anticipate the public blowback, how his technical exploitation would be seen, that he would be the catalyst for dissent.

According to H. Ganss, in The Catholic Encyclopedia (1912):

- ✓ “...Tetzel, deserted by the public, broken in spirit, wrecked in health, retired to his monastery at Leipzig in 1518. Here in the middle of January, 1519, he had to face the bitter reproaches and unjust incriminations of Carl von Meltitz. It was at this time that Luther magnanimously penned a letter [to Tetzel] in which he tries to console him by declaring ‘that the agitation was not that of his [Tetzel’s] creation, but that the child had an entirely different father.’ Tetzel died soon after, received an honourable burial, and was interred before the high altar of the Dominican church at Leipzig.”
  - The Catholic Encyclopedia article on Johann Tetzel is in the public domain and was transcribed into the online encyclopedia of New Advent (at <http://www.newadvent.org/cathen/14539a.htm>) by Bob Elder.
  - Many, from the comments I heard in conversations with people I know, believe that the same sort of effect happened to Head Coach Joe Paterno (aka “JoePa”) after the Sandusky scandal; his health deteriorated rapidly after dismissal from the University and he died before the criminal trials, his long life and career legacy destroyed by willful ignorance of criminality on his staff. Prior, JoePa was admired for his vibrant energy at an advanced age, still coaching when other men would have long-ago retired.
- ✓ “Bonhoeffer argues that as Christianity spread, the Church became more ‘secularised,’ accommodating the demands of obedience to Jesus to the requirements of society. In this way, ‘the world was Christianised, and grace became its common property.’ But the hazard of this was that the gospel was cheapened, and obedience to the living Christ was gradually lost beneath formula and ritual, so that in the end, *grace could literally be sold for monetary gain*. But all the time, within the church, there had been a living protest against this process: the monastic movement. This served as a ‘place where the older vision was kept alive.’ Unfortunately, ‘monasticism was represented as an individual achievement which the mass of the laity could not be expected to emulate’; the commandments of Jesus were limited to ‘a restricted group of specialists’ and a double standard arose: ‘a maximum and a minimum standard of church obedience.’

This was dangerous, Bonhoeffer says, because whenever the church was accused of being too worldly, it could always point to monasticism as ‘the opportunity of a higher standard within the fold – and thus justify the other possibility of a lower standard for others.’ So the monastic movement, instead of serving as a pointer for all Christians, became a justification for the status quo. *Bonhoeffer remarks how this was rectified by Luther at the Reformation, when he brought Christianity ‘out of the cloister.’ However, he thinks that subsequent generations have again cheapened the preaching of the forgiveness of sins, and this has seriously weakened the church: ‘The price we are having to pay today in the shape of the collapse of the organised church is only the inevitable consequence of our policy of making grace available to all at too low a cost. We gave away the word and sacraments wholesale, we baptised, confirmed, and absolved a whole nation without condition. Our humanitarian sentiment made us give that which was holy to the scornful and unbelieving... But the*

call to follow Jesus in the narrow way was hardly ever heard.” – from Wikipedia article, “Cost of Discipleship” (summary), quoting Dietrich Bonhoeffer throughout, captured May 26, 2019 (emphasis added).

- See previous discussions of Anabaptist regarding reduction of baptism to religious magic ritual and critical quotes from Desiderius Erasmus about Roman Catholic monastic culture.<sup>8</sup>

**Rhetorical Question:** Can Dietrich Bonhoeffer’s argument in *The Cost of Discipleship* (1937) be made without reference to God or to the alleged divinity of Jesus? Can Jesus, in this case, be treated and questioned, as Dr. Stephen Griffith (Lycoming College) suggested in one of my philosophy courses (and as the secularized French do of *any* religious figure – as I recall was commented on after the Charlie Hebdo massacre), as any other philosopher? Can Bonhoeffer’s argument proceed from that basis? Without reference to an ‘objective truth’ in the form of God (or some other supreme being)? See discussion about adding God to any argument, *Invoking God*, 1 Reformation, p. 1384, *supra*.

- ✓ “For me, [Nagarjuna] is just a philosopher like any other; his interest in Buddhism is incidental (as is his saintly status in the eyes of many).” – Avi Sion, *Paradoxes and Their Resolutions: A Thematic Compilation*, p. 209.

*“We are also thankful for our critics, detractors, and slanderers, who provided us with an important sounding board and reality check as well as new material for our show.”*

– Rev. Craig Donofrio and Rev. Bill Cwirla (“The Manly Doctors of Divinity”), from [godwhisperers.org](http://godwhisperers.org)

## Endnotes.

<sup>1</sup> **Citation & Commentary:** According to Merriam-Webster online dictionary, “plantation” – a word that Americans associate with slavery, the Civil War, Cuba and the Caribbean Islands – originated in the English language in the 15<sup>th</sup> Century, meaning “a large group of plants, usually trees, under cultivation.” *Id.* Sometime in the following century, it must have developed into a meaning of “a settlement in a new country or region” (*Id.*, Merriam-Webster online dictionary gives the example, Plymouth Plantation), being subsequently used for the Tudor conquest and resettlement of Ireland. Later, at least in the United States, it meant a large labor-intensive farm growing cash crops (e.g., cotton and tobacco).

- ✓ Some articles I read a few years ago suggested that the original Celtic population of the British Isles and Ireland had a genetic lactose intolerance until late Neolithic migrations reached them, changing their genetics (e.g., Zara Zhuang, “Ancient Europeans lactose intolerant for 5,000 years,” *Irish Times*, October 23, 2014). As indicated in the previous discussion, *Immoral History*, 2 Disruption, p. 277, *supra*, **invasion and resettlement** are the history of humanity, regardless of morals and ethics. And standing in our present time, it is difficult to repudiate the results – which is us. Just as it would be difficult for any crowd-funded game to repudiate the invention of the internet, the concept of Kickstarter or bemoan how crowd funding has destroyed the traditional game company control over the game publishing industry.

<sup>2</sup> **Commentary:** I heard about this all while I was growing up, it was a favorite subject of my mother who knew much about Queen Elizabeth I. Clearly that was her interpretation and she blamed Queen Elizabeth I for The Troubles. This countered the historical glow of Queen Elizabeth in other aspects (historical, romantic and feminist). But certainly, I don’t think my mother was the only one who interprets events in this fashion.

<sup>3</sup> **Citation:** “The decision by English landlords to opt for intensification, greater yields, and rational stockbreeding, placed pressure on the traditional social structures of rural life. Landowners saw the need to increase the size of

their holdings through the consolidation of several farms into one. This procedure was called *engrossing*. Landowners also wished to consolidate into compact holdings the scattered strips tilled in the time-honored ways by lease-holding village peasants. This was known as *enclosing*. Neither engrossing nor enclosing was new. Since the sixteenth century landowners had tried to secure the advantages that might accrue from assuming common village rights over arable and pasturelands. Following acquisition of the property, the landowner would surround his holdings with fences or hedges, plant crops in one area, and raise cattle in another. However, common sense had prevailed against transforming peasant leaseholders into mere renters, agricultural laborers or vagrants. The social menace produced by the dispossession of large numbers of people was a very real fear. Still, during the second half of the seventeenth century fewer voices were heard against enclosing and engrossing, and it has been estimated that during this period more enclosing took place than at any comparable period before or after.

By 1700 around half of England's arable land was enclosed. Cultivation was extended and estates were enlarged. Landlords replaced traditional tenure arrangements with higher rent charges. To finance improvements, they borrowed heavily. In order to better their social status as they invested in modernizing agriculture, wealthy city merchants purchased rural property and became country squires. They, and others like them, showed tenants and renters alike the material benefits of improved farming techniques, higher yields of traditional crops, and experimentation with new ones. Elegant manor houses filled with tapestries, French furniture, marble, and mirrors sprouted throughout the English countryside. Fine gardens, grottos, and parks embraced the new structures. Improving agriculture became fashionable as well as profitable." – Raymond Birn, *Crisis, Absolutism, Revolution: Europe 1648 to 1789* (2<sup>nd</sup> Ed., 1992), pp. 50-51.

<sup>4</sup> Commentary: I didn't really notice Jagged Little Pill or know about Alanis Morissette until early 1997. I remember hearing her song on the radio while riding in the firm van over to the warehouse and that would have been in early 1997. The driver of the van that day, a 30something guy who was also in a part-time local rock band, commented that she was 'one seriously pissed off female.'

<sup>5</sup> Citation: "Cats do have ways of judging time, not as time elapsed, but as time arrived. I doubt that any cat ever had the means of telling three hours, three days, or even three weeks have elapsed since such-and-such happened, but they certainly have ways of knowing from their own body's signals that the time has come to raise cain over there being no food in their dish. You don't need a clock to tell you that you are hungry and neither does a cat. That is one reason why I have never been able to accept time judgment as an actual sense independent of other stimulation, but some people still claim it is just that." – Roger Caras, *A Cat is Watching* (1989), p. 93.

- ✓ Or as the sign on my veterinarian's wall read: "There is no snooze button on a cat who wants breakfast."
- ✓ "Time is actually an event for a cat, not a sequence, and too many people, I think, make rather too much of that fact." – Roger Caras, *A Cat is Watching* (1989), p. 95.
  - Working backwards, this is interesting. It suggests that human perception of time as infants is in terms of events (and that seems likely based on the child psychology experiments I recall) and as we grow into adults, it becomes increasingly a sequence (e.g., memory, pattern perception, cyclic). Mr. Caras states (paraphrasing) that the relationship between humans and our pets is always infantile, cats like to be petted because it reminds them of their mother bathing them while they nursed.
- ✓ "Two years is a human concept based on some rather refined astronomical measurements and it seems clear enough that a cat couldn't grasp any of it, not as a precise calculation. But *long time*, as we have indicated elsewhere, could be a reality. For Xnard, what had it been, and could he have anticipated it would come to an end? ... We have discussed how cats take seasonal clues and other elapsed time measurements not as time, but as triggers and alarms when there are things they have to do. But when Xnard closed his eyes, did he know it had been a long time and what did he feel because of it? As far as I can tell, and judging from conversations I have had with other people who know animal behavior, those are questions we are not likely ever to be able to answer, though *ever* remains a very troublesome word for me. Unless, though, there is some incredible breakthrough that allows us to discuss abstract concepts with animals as bright as cats and dogs (and that just doesn't seem likely at the moment), how could we ever know?" – Roger Caras, *A Cat is Watching* (1989), pp. 193-194 (emphasis in original).

<sup>6</sup> Citation: "The book's concept of God, in fact, is what makes [Philip] Pullman's work so threatening. His trilogy is not filled with attacks on Christianity, but with attacks on authorities who claim access to one true interpretation

of a religion. Pullman's work is filled with the feminist and liberation strands of Catholic theology that have sustained my own faith, and which threaten the power structure of the church. Pullman's work is not anti-Christian, but anti-orthodox.

This emerging controversy, then, is deeply unusual. It features an artist who claims atheism, but whose work is unabashedly theistic. And it features a series of books that are at once charming and thrilling children's literature, and a story that explores some of the most divisive and fascinating issues in Catholic theology today.

\*\*\*

This view of Dust echoes many of the theological ideas that the Catholic Church finds threatening today. The most obvious thread is liberation theology, the Marxist and socially progressive rereading of the Gospels born among Catholic theologians in Latin America in the 1960s. Liberation theology teaches that Jesus is a political revolutionary who loves all that God has created and wants all creation to flourish on this earth, not just in heaven. Liberation theology also holds that believers should disregard doctrine that leads to oppression.

This is not an idea in favor with the current leadership of the church. In placing the common welfare above the dictates of church authorities, this movement has sparked a long running battle with the Catholic hierarchy." – Donna Freitas, "God in the dust – What Catholics attacking 'The Golden Compass' are really afraid of," The Boston Globe (boston.com), November 25, 2007.

<sup>7</sup> Citation: "Fugger is a German family that was historically a prominent group of European bankers, members of the fifteenth- and sixteenth-century mercantile patriciate of Augsburg, international mercantile bankers, and venture capitalists. Alongside the Welser family, the Fugger family controlled much of the European economy in the sixteenth century and accumulated enormous wealth. The Fuggers held a near monopoly on the European copper market. This banking family replaced the de' Medici family, who influenced all of Europe during the Renaissance. The Fuggers took over many of the Medicis' assets and their political power and influence. They were closely affiliated with the House of Habsburg whose rise to world power they financed. Unlike the citizenry of their hometown, they never converted to Lutheranism as presented in the Augsburg Confession but rather remained with the Roman Catholic Church. Jakob Fugger 'the Rich' was elevated to the nobility of the Holy Roman Empire in May 1511 and assumed the title Imperial Count of Kirchberg and Weissenhorn in 1514. Today he is considered to be one of the wealthiest people ever to have lived. The company was dissolved in 1657, however the Fuggers remained wealthy landowners and ruled the County of Kirchberg and Weissenhorn. The Babenhausen branch became Princes of the Holy Roman Empire in 1803, the Glött branch princes in the Kingdom of Bavaria in 1914." – from Wikipedia article, "Fugger," captured February 15, 2019.

✓ Thus, 'you old Fugger!' wasn't exactly an insult.☺

<sup>8</sup> Commentary: Anabaptists backed the revolutionaries in the German Peasant's War (1524-1525 A.D.), which ended in a great slaughter, both of which have been mentioned previously in GGDM. The Roman Catholics and the Habsburg rulers of the Holy Roman Empire *were having their own problems*, e.g., the Sack of Rome in 1527 by Habsburg mercenaries, the Siege of Vienna in 1529 by the Ottoman Turks and Henry VIII's break from the Church in 1532, and those are just the highlights of a tumultuous period. The Anabaptist movement radicalized and turned apocalyptic very quickly, seized the city of Münster, the largest bishopric see in Germany, in the Münster Rebellion of 1534-1535. There they installed a prophetic apocalyptic theocratic government, burned all books except the Bible and instituted polygamy and proto-socialism, gospel commune systems using redistributed stolen wealth until the city was recaptured by the deposed Prince-bishop leading an allied Catholic army in the summer of 1535. After the fall of Münster, and public torture and execution of leaders, the movement flamed out and fragmented with much of the movement declaring non-resistant pacifist intent (e.g., the Mennonites, followers of Menno Simon).

✓ As mentioned previously, Martin Luther opposed the German Peasant's War and backed the magnates and electors; so naturally, he considered Anabaptists as heretics who should be executed. So the Lutherans didn't like the Anabaptists either and the Lutherans either fled or were expelled from the messianic communist theocracy of Münster. The Global Anabaptist Mennonite Encyclopedia Online (gameo.org) admits in the article on Martin Luther that Luther did not understand the Anabaptists, and the Anabaptists did not try hard to understand Luther. These are the surest signs of ideological radicalization.

✓ A century later, the ambitious Christoph Bernhard von Galen, Prince-bishop of Münster launched expeditions into the Netherlands where the Anabaptists had fled, attempting to forcibly reconvert the Netherlands to Roman Catholicism, extending his ecclesiastical and temporal authority.

## **Anti-intellectualism & Public Intellectuals**

**Excerpt from Column by Isaac Asimov  
Newsweek, January 21, 1980**

“There is a cult of ignorance in the United States, and there always has been. The strain of anti-intellectualism has been a constant thread winding its way through our political and cultural life, nurtured by the false notion that democracy means that ‘my ignorance is just as good as your knowledge.’”

**Excerpt from John Searle, The Campus Wars (1971)**

“The two most salient traits of the radical movement are its anti-intellectualism and its hostility to the university as an institution. [...] Intellectuals by definition are people who take ideas seriously for their own sake. Whether or not a theory is true or false is important to them independently of any practical applications it may have. [Intellectuals] have, as Richard Hofstadter has pointed out, an attitude to ideas that is at once playful and pious. But in the radical movement, the intellectual ideal of knowledge for its own sake is rejected. Knowledge is seen as valuable only as a basis for action, and it is not even very valuable there. Far more important than what one knows is how one feels.”

**Excerpt from Gene Wolf, “From a house on the Borderland” (1987)**

“This, then, is the new illiteracy, the illiteracy of those who can read but don’t. [...] This new illiteracy is more pernicious than the old, because unlike the old illiteracy it does not debar its victims from power and influence, although like the old illiteracy it disqualifies them for it. Those long-dead men and women who learned to read so that they might read the Bible and John Bunyan would tell us that pride is the greatest of all sins, the father of sin. And the victims of the new illiteracy are proud of it. If you don’t believe me, talk to them and see with what pride they trumpet their utter ignorance of any book you care to name.”

**Excerpt from Steven Poole, “Pretentiousness by Dan Fox review – why anti-intellectualism is the real snobbery,” The Guardian, February 11, 2016**

“Writing and other arts are criticised as pretentious when they seem to aim at the highfalutin aesthetic or intellectual stratosphere while lacking the chops to see it through. But that, of course, is an inevitable risk of any ambitious creative work. To employ the word ‘pretentious’ against it is empty as criticism, because all it means is ‘not good’; but it is disgustingly full as moral injunction: it means that it is better not to try at all than to try and fail.... Some writers complain about the pretentious use of words, as though the very act of writing down words and hoping that others will read them and approve of one’s ideas is not itself fantastically pretentious in the first place.”

**Excerpt from Christopher Hitchens, “How to be a Public Intellectual,”  
Prospect Magazine, May 24, 2008**

“One might do worse than to say that an intellectual is someone who does not attempt to soar on the thermals of public opinion. There ought to be a word for those men and women who do their own thinking; who are willing to stand the accusation of ‘elitism’ (or at least to prefer it to the idea of populism); who care for language above all and guess its subtle relationship to truth; and who are willing and able to nail a lie. If such a person should also have a sense of irony and a feeling for history, then, as the French say, *tant mieux*. An intellectual need not be one who, in a well-known but essentially meaningless phrase, ‘speaks truth to power.’ (Chomsky has dryly reminded us that power often knows the truth well enough.) However, the attitude towards authority should probably be sceptical, as should the attitude towards utopia, let alone to heaven or hell. Other aims should include the ability to survey the present through the optic of a historian, the past with the perspective of the living, and the culture and language of others with the equipment of an internationalist. In other words, the higher one comes in any ‘approval’ rating of this calling, the more uneasily one must doubt one’s claim to the title in the first place.”

**Excerpt from Benjamin Aldes Wurgraft, “Thinking, Public and Private: Intellectuals in the Time of the Public,” Los Angeles Review of Books, July 15, 2016**

“Greif and Robin’s briefs on behalf of a modified version of the public intellectual are stirring. However, they do leave us with substantial questions about the fate of the life of the mind in the age of the public. After all, they still insist on the consequences of ideas. In our focus on the immediate interventions that public intellectuals can make in the public sphere, is there room for private contemplation, and the glacial tempo at which ideas must sometimes develop? For ‘useless’ knowledge? For ideas that don’t spread, or whose spread may not take place until decades, or centuries, after our deaths? What may be missing in this age of public intellectualism is respect for the unpredictable half-lives of ideas themselves, and for the fact that public life could be enriched by an appreciation of ideas on their own terms.”

**Excerpt from Russell Jacoby, “Christopher Hitchens: The Last Public Intellectual?” The Chronicle of Higher Education, December 18, 2011**

“In the age of insufferable pundits and bland English professors, Hitchens summoned up a different possibility – the public intellectual as literate, lucid, and committed. Was he the last of the nonacademic intellectuals? Or was he something else, a very talented journalist? He resented the put-down that someone’s writing was “journalistic” and saw himself as working the vein that ran from Thomas Paine to George Orwell. At least some of his work ranks with that company’s. But he may have been *sui generis*, neither scribbler nor pedant. To whom can he be compared? Hitchens contained multitudes. Perhaps the absence of a cohort of public intellectuals meant that he carried that much more weight. Perhaps he was a public intellectual after its decline.”

**Excerpt from John Issitt and Duncan Jackson, “What does it mean to be a public intellectual?” University of York, March 2013**

“We live in a different world now (or at least those of us in the ‘West’ do); a world of social media, where anyone can have a view and disseminate it for anyone else to see relatively cheaply and with relatively little technical proficiency. Potentially everyone could be an expert on anything, or at least have a view on everything for anybody else to see. There is no longer a strict division between the controllers of communication and the consumers of communication, nor necessarily such a formalised relationship between the producers of knowledge and disseminators of knowledge. Does this have the potential to mean that everyone in the West can be a public intellectual? And further could one’s success on Facebook and Twitter indicate your status as a public intellectual?”

**Excerpt from Barry Gewen, “Who Is a Public Intellectual?” New York Times, June 11, 2008**

“[Daniel W.] Drezner’s impulse is to be inclusive: if you’ve written a serious book that has attracted a modicum of general attention, you seem to qualify as a public intellectual. I would be more restrictive, and I’d go back to the original New York Intellectuals for guidance. Broadly, they viewed the public intellectual as someone deeply committed to the life of the mind and to its impact on the society at large. Irving Howe refers to the pursuit of ‘the idea of centrality’ among the writers he knew, and the yearning ‘to embrace . . . the spirit of the age.’ That is, public intellectuals were free-floating and unattached generalists speaking out on every topic that came their way (though most important for the New York Intellectuals was the intersection of literature and politics). They might be journalists or academics, but only because they had to eat. At the most fundamental level, ideas for them were not building blocks to a career. Rather, careers were the material foundation that allowed them to define and express their ideas. It hardly needs to be said that this stance produced an inevitable tension between academic life, with its occupational demands for specialization, and opinionated public intellectuals refusing to be pigeon-holed. What do you specialize in?, Daniel Bell was once asked. Generalizations, he replied.”<sup>1</sup>

---

<sup>1</sup> Commentary: Not to flatter myself, but based on the present evidence (i.e. GGDM), I might be considered a retro-New York Intellectual: I work as a paralegal because I have to eat (and so my cats don’t eat me), but I comment on generally everything, live a different life in my mind, embrace ideas for their own sake, and am assuredly a creature of my age.

**Hallowed Round:** Sacred, at least in GGDM terms, refers to an emergent moment in a civilization that is preserved (frozen in time, in the racial memory) and amplified through emergent ripple effects and historical retrospection. It is something not merely remembered, but civilization shaping at the core, defining of a vast track of the civilization’s history.

That Kairotic Moment is not ordinary history, it is earthshaking and profound, mostly in hindsight. It is more than merely saying that history would be vastly altered if the Ottoman Turks had won at Vienna in 1683, if the Franks had lost the Battle of Tours, if the Soviets had captured Warsaw in 1920, or if the Axis had won WWII. No, those are big obvious things. Kairotic Moments are little, profound, often philosophical moments, involving small events, insignificant people, who become the avalanche by which time it is too late for the pebbles to vote (Babylon 5, “Believers” (1994)). This is an important distinction to understand about Kairotic Moments and is borne out by the history of what we think is sacred.

- ✓ With Kairotic Moments, participants have reached the epic emergent storytelling finale of the GGDM simulation game. “...for he is the Kwisatz Haderach!” – Dune.

It is hard to tell if the concept of sacred as I describe it here has been shaped and created by the events in Roman Palestine that gave rise to the current milieu. But I think that is probably the case; e.g., the Native Americans had sacred places and so did the Celts, Saxons and others. Maybe we call them sacred places and so attach to them a meaning they did not have to the original peoples ... but clearly history records that the Saxons, for example, had sacred groves (and so did the ancient Greeks, possibly the Academy might have originated as a sacred grove of Athena) which must have acted as focal points of worship, ritual, veneration, and mystical thought, and that Charlemagne targeted Saxon sacred grove destruction in his conquest of Saxony so that the Saxons would convert to Christianity, by which they could be controlled.

Thus we arrive at the last element of a Kairotic Moment, the Kairotic Moment must have mystical meaning, must be sublime (even in rhetorical theory), which gives it the power that transcends the philosophical arguments and/or propels those arguments to the core reshaping of civilization (despite the cynical power-seeking pettiness, self-aggrandizing that always follows – and the damage they do – of the following generations) into a form of cultural hegemony.

GGDM is able to address this concept at least perfunctorily due to the time periods potentially represented by Regular Turns.

- ✓ Everyone has self-aggrandizing motives, both internal and external. It is only when either become extreme, involved in the processes of civilization and/or affect others that we give them names; this is the normal way that human language handles such

third- and fourth-order of nature phenomenon. John DeLorean, the American automotive industry executive and engineer (e.g., the Pontiac GTO in opposition to Lee Iacocca's Ford Mustang) was widely accused of the peculiar form of modern self-aggrandizement called 'self-promotion' at the expense of others who contributed.

- Kairotic Hindsight: Kairotic Moments in human history are usually marked by death, destruction, loss and sacrifice, and are rather relative. In only one known and notable instance, is a moment of birth arguably a 'kairotic moment' and that was probably *completely constructed in hindsight*; that is, the birth became a kairotic moment to some because of what occurred subsequently and was embellished to that point by additions. The concept of mortal women bearing children of gods or deities or other supernatural beings predates the birth of Jesus by at least a millennia. The cultures around Mare Nostrum, at the latest, would have received these stories by way of the Romans, but probably the concepts circulated much earlier (e.g., see the retro-Hellenization of the story of David and Goliath). In many if not most cases, such stories ended tragically and served as moral lessons, for example, the story of Phaethon who tried to drive his father's chariot that pulls the sun across the sky. It is not surprising then, in this context, that the story of Jesus had to end 'tragically' and that his followers interpreted his death in a 'divinely good' way.
  - ✓ As noted in *Civis Sum*, 3 Order, p. 559, *supra*, had Jesus been a Roman Citizen the entire thing might have turned out much differently. And then there would be no Christianity. If you want a Kairotic Moment in the birth of Jesus, it is that he was not born a Roman. Supernovas, little drummer boys, and wise men from the East have nothing to do with it. Unless Arthur C. Clarke's 1955 short story, "The Star" turns out to be prescient, prophetic.

Do you think the entire story of Christ's miracles cannot have been invented afterward? Collective group storytelling? Most of what is commonly known about King Arthur was invented in the last few centuries by *Christian writers*. It is a Kairotic Moment constructed out of whole cloth in hindsight. There is a distinct and well-studied literary development of the Arthurian legend, things were added, stuck, and were built upon by others later. There is little historical evidence of a King Arthur, and there is just about as much evidence of the existence of Jesus Christ, but unsurprisingly, few Christians asked that question until the Age of Reason. I am surprised that this was not mentioned in the movie *Man from Earth* (2007) in the arguments with the Christian literalist Edith, though what was said about God not being able to get it right the first time was pretty cutting too.

Incidentally, the Christians got their 'second coming' in *Man from Earth* – the man called Jesus in history was allegedly standing right before them – but it was only a disappointing deflation of their 'blood and fables that built churches' and a curt dismissal of millennia of Roman Catholic 'pompous grandstanding' (*Id.*, terms used in the movie dialogue).

- ✓ Blood and Fables that Built Churches: "A Christian exclusivity that was also status-blind could look suspicious – so there were occasional pogroms, though surprisingly few: *the pornographic violence of martyrologies, the tormented saints of a million works of Catholic art, were the loving harvest of later centuries, not any ancient reality*. Like all empires, the Roman state hated disorder more than anything, and violence that disturbed the public peace was not encouraged. Technically, for a time, Christianity was illegal (its god had been nailed to a cross like a common bandit after

all). But a ‘don’t ask, don’t tell’ policy was easier on everyone, not least the emperors. As the letters of the emperor Trajan make crystal clear, Christians were not to be sought out or persecuted unless they made themselves a conspicuous nuisance, at which point they had no one but themselves to blame for their fates.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” *Aeon*, January 30, 2017 (emphasis added).

*“Kairos, the opportune moment in rhetoric, is often an elusive element. Very seldom do the circumstances of a situation coincide perfectly; however, certain times are certainly better suited for particular rhetorical arguments than others.”*

– from <https://sites.psu.edu/mgeitnerrcl/tag/kairotic-moment/>, (blog), no date or authorship attribution, captured January 26, 2019

**An Instant:** An instant is the time it takes to die. An instant is the time it takes to destroy a city in a huge flash of light. Instant is a word applied to coffee, hot chocolate, conception and gratification.

Nobody knows what an ‘instant’ is exactly. It’s a philosophical question. Terms like, ‘moment’ and ‘instant,’ seem simple, but are amazingly complicated to explain or pin down, for example, we say, ‘the moment of death.’ What is a moment? What amount of time constitutes a moment of death? Explain that to a jury. Some people think information can travel ‘instantaneously’ to any part of the universe, what is an instant exactly? Some inexact measure less than what a human can comprehend?

- **Instantly Relatable:** Kairotic Moment is a redundancy, like saying “RPG game” (that is “Role-Playing Game game”) or “damned blasted blasting!” near a mining site (the ‘other’ RPG doesn’t have that problem because it is usually followed by a hyphenated number, e.g., RPG-7). Because Kairos is not a common word in English, it is paired with another very common English word to make it instantly relatable to the listener so that the listener doesn’t stumble and lose the thought.
  - ✓ Merriam-Webster online dictionary at *Kairos*: a time when conditions are right for the accomplishment of a crucial action: the opportune and decisive moment.
  - ✓ I did not invent the term ‘Kairotic Moment,’ a Google search shows a couple of websites that use the term, for example, a Word Hippo page that provides seven example sentences using “Kairotic Moment” or a Yahoo answers page that asks, “What is a Kairotic Moment?” to which user MONK responded in 2010, “A kairotic moment is a crucial juncture, a moment of truth, the turning point.”
- **Ekstasis:** Kairotic Moment began when I started thinking about what makes things sacred. The GGDM section is, at best, *a cursory treatment of the subject*. The catalyst for this thought may have been in two parts:
  - ✓ I remember a news report (possibly ABC Evening News) where a reporter (and I don’t remember which one) commented on how the rest of the world regards (at least at that time) the U.S. Supreme Court as an august body and that the U.S. Constitution has become venerable and taken on some sacred document qualities.<sup>1</sup> By extension

then, I thought that the same is becoming true more generally of the American Revolution and particularly, those studiously studied and documented weeks of the Constitutional Convention in Philadelphia. This linkage is perhaps a small demonstration of ‘emergent’ qualities; from a news report over 30 years ago comes the Kairotic Moment section of GGDM.<sup>2</sup>

- ✓ Kairotic Moments have been in GGDM at least since the early 2000s; it is not a later invention of the final 2017-2019 edit. I had never heard the term before graduate Rhetorical Theory class at Duquesne University, so the section can be dated the turn of the millennia. It has been difficult to grasp however, because I have never been quite satisfied with the mechanics, and in early 2019, it was rewritten completely along with Reformations into the current (omega) form.

---

*“A developmental task is a task which is learned at a specific point and which makes achievement of succeeding tasks possible. When the timing is right, the ability to learn a particular task will be possible. This is referred to as a ‘teachable moment.’ It is important to keep in mind that unless the time is right, learning will not occur. Hence, it is important to repeat important points whenever possible so that when a student’s teachable moment occurs, s/he can benefit from the knowledge.”*

– Robert James Havighurst, Human Development and Education (1952)

---

**Teachable Moment:** The modern form of the Kairotic Moment is the ‘teachable moment’; the term was used for example, in relation to the Charlottesville, Virginia riots in August 2017.

- ✓ Merriam-Webster online dictionary at *teachable moment*: a time that is favorable for teaching something, such as proper behavior.
- ✓ Cf. Merriam-Webster online dictionary at *Kairos*: a time when conditions are right for the accomplishment of a crucial action: the opportune and decisive moment.
- ✓ See also Joseph Tainter feature quote, 3 Culture, p. 386, *supra*.

Rhetoric has always been associated with education, e.g., Plato’s Gorgias (380 B.C.). Propaganda is about teaching the enemy to think what you want them to think; much the same can be said of political spin and public relations. To ‘rule the minds of men’ one must teach them what you want they should know and prevent them from learning otherwise; tyranny in the nursery, it’s a dirty business (not to mention the diapers). But there is also a feel to ‘teachable moment’ in the modern sense that is shallow compared to rhetoric.

This GGDM does both by accident and by design. Like most literary projects, I found years ago that GGDM goes in circles, covering the same ground, touching the same ideas, many times, but in different contexts and resultantly, from different angles. GGDM might accidentally be a teaching tool. But only for those who want to learn, to those for whom it *matters*.

- ✓ There are two things you must be convinced of in order to read GGDM: That I actually wrote it (i.e. didn’t plagiarize it, but even if I did, it might not matter as I am not selling anything or promoting myself) and second that it is worth reading (i.e. that it matters to you). I have no idea how to convincingly reach either of those goals, but if you are reading this now, I must have succeeded somehow.

*“So much has been lost, so much forgotten. So much pain, so much blood. And for what, I wonder? The past tempts us, the present confuses us, and the future frightens us. And our lives slip away, moment by moment, lost in that vast terrible in-between. But there is still time to seize that one last, fragile moment. To choose something better, to make a difference, as you say. And I intend to do just that.”*

– Centauri Emperor Turhan (played by Turhan Bey), *Babylon 5*, “Coming of the Shadows” (1995)<sup>3</sup>

**What Happened in the 1960s?**: A Kairotic Moment is whatever a moment is – you know what a moment is, but you don’t know what a moment *is* – as in the ‘I know it when I see it’ (feel it, hear it, experience it, *look when it matters*) colloquial expression. But a Kairotic Moment is in any case or sense, a moment. The GGDM sections about the Kairotic Moment have little to do with the moment – the details of which must be provided by the Concierge and participants (like the TV movie, *Lost Room* (2006))<sup>4</sup> – but are instead about the before and after the moment. So in this way, GGDM cheats a little on the design, it is not a ‘Role Playing Game game’ (p. 1417, *ut supra*) and due to the turn structure, GGDM does not dwell on ‘moments.’

- ✓ I had a history professor, and this may be a memory of Dr. Paul Mason in one of his ‘historians cheat’ discussions, who commented that nobody really knows what happened in the 1960s, they talk about what happened in the 1950s and the 1970s and they impute the discussion upon the 1960s to create what they think happened. I am not sure I agree, but I get it, in the sense of how we talk about history.
  - ✓ As a game mechanic in the simulation, Kairotic Moments in GGDM are like the read-aloud function on the PC, which I have used hundreds of times in editing GGDM: Flat, emotionless with no hint of breath, and occasionally pronouncing words differently than native English speakers (e.g., ‘retconning’ as ‘re’ instead of ‘ret’ or read vs. read, live vs. live).
  - ✓ The most famous use of the “I know it when I see it” expression comes from a U.S. Supreme Court viewing of the obscene film in the case of *Jacobellis v. Ohio*, 378 U.S. 184 (1964), in which Justice Potter Stewart wrote, “I shall not today attempt further to define the kinds of material I understand to be embraced within that shorthand description [obscenity]; and perhaps I could never succeed in intelligibly doing so. But I know it when I see it, and the motion picture involved in this case is not that.”
- **Old News Reels**: News Events have a limited ability or role in relation to Kairotic Moments because of the time periods probably represented by GGDM Regular Turns, see previous discussion of literary characters in GGDM, *A Story Without Characters*, 4 *The Streams of Time*, p. 102, *supra*. A Prose Intervention Special Bulletin may be useful instead.
- ✓ Kairotic Moments are strongly related to Aspects in GGDM. The extent to which Aspects are not congruent with emotion, feeling (see *Affliction of Aspects*, 2 *Culture*, p. 369, *supra*) is the extent to which Kairotic Moments are also not solely descriptive of an emotion, feeling. This is important to remember when participants add color to the game-mechanical outlines of the Kairotic Moment in GGDM.

*“King Abdullah had a vested interest in saying such things – more than half his citizens are themselves Palestinians, and he wouldn’t mind if many of them returned to the other side of the Jordan River. Obama was not necessarily naive. The king told him what he wanted to hear, and he left the region as he arrived, a believer that peace and war in the Middle East form a matrix whose epicenter is the holy land.”*

– Zev Chafets, “In Trump’s Middle East, Israel Is No Longer the Problem,”  
Bloomberg, December 21, 2017

**Terra Sancta:** A Kairotic Moment in GGDM must occur at a specific place, that is, a colony. While it is possible that it could occur at an uncolonized planet or ship (e.g., Arthur C. Clarke’s “The Star” (1955)), Kairotic Moments are about population and especially, those who are looking for meaning, and that suggests very strongly that a colony (or homeworld) is involved.

Some positions might prefer especially that it occur at their Capital Colony – for purely selfish reasons – possibly making their current government sacred; but the events forming the basis of Christianity (not the later books of the New Testament) did not occur in Rome and thus the idea comes down to us that Kairotic Moments are caused by *oppressed outsiders far from the capital* (in the same way that my college Intro Lit teacher pointed out that poets are outsiders).<sup>5</sup> However, the *inside-outsider narrative* of Moses does occur in some part at the seat of the Pharaoh of Egypt and while the history of Medina and Mecca may be disputed, the story of Mohammed clearly features emigration and war between two walled tribal trading posts that became cities. Both stories feature movement from the *inside to the outside* of local civilization’s power centers instead of from the *outside to the center*.

A Kairotic Moment is not a Power Activation, and thus cannot fail on a colony or ship due to inactive Constructural Elements. No effect of a Kairotic Moment described in this and following sections can fail due to inactive Constructural Elements.

➤ **Blasphemy:** “Is this the cradle of the disease, That man alone must answer for?” – Apocalypse Orchestra, “The Garden of Earthly Delights” (2017). A poster on YouTube liked the music but wanted the lyrics to be ‘less blasphemous.’ The only thing blasphemous is the use of the word: It is blasphemy against your own intelligence and against all human thought.

It is laughable the idea that players in GGDM – representing the government and society of civilizations – should be able to create or determine when Kairotic Moments occur, but GGDM also has in it the modern gaming premise of players as godlike beings guiding a civilization and GGDM’s Public Space, Matrix, etc. represent a ‘god view’ of the civilization.

- ✓ Most certainly the Romans didn’t intentionally set out to create Christianity! Rather, the forces in play at the time each played their part, did what they would naturally do given their position, powers, abilities, duties, beliefs and *willingness to act on them*. The resulting transformative echo is the emergence.
  - Just as the Byzantine Empire wasn’t there to protect Europe from invasion across the Bosphorus for 800 years, it was just there, and whatever ‘benefit’ of isolation chaotic and impoverished Europe received from it was incidental, for which the West is still thankful to the extent that we understand it matters.

- ✓ Dune is an attempt to recreate the Kairotic Moment (through an ‘Emperor of Everything’ story, Norman Spinrad), the Padishah Emperor, the Harkonnens, and the Bene Gesserit did not intend the end result of Dune (which is the point of it!).
- ✓ The Babylon 5 station, through the events of the series, became a special fictional place to the viewers and, as shown in “The Deconstruction of Falling Stars” (1997) a holy place to following generations.

Kairotic Moments are not a ‘tool’ of the players but instead, a storytelling ‘tool’ of the game. The Concierge initiates and creates the Kairotic Moment at *opportune times* and the players deal with the consequences, and perhaps try to exploit them (because players will try to exploit anything), during the game.

- ✓ **Merlin to Arthur at Camelot:** I can tell you nothing more. My days are ending. The gods of once are gone forever. It’s a time for men, it is your time Arthur. ... No, this is the moment you must face at last, to be king alone. ... There are other worlds. This one is done with me. – Excalibur (1981).<sup>6</sup>
  - **Arthur to Guinevere at the Convent:** I was not born to live a man’s life, but to be the stuff of future memory. The fellowship was a brief beginning, a fair time that cannot be forgotten, and because it will not be forgotten, that fair time may come again. Now once more, I must ride with my knights to defend what was and the dream of what could be. ... I have often thought that in the hereafter of our lives, when I owe no more to the future, and can be just a man, that we may meet, you’ll come to me and claim me yours, and know that I am your husband. It is a dream I have.<sup>7</sup>
  - Cf. **Beowulf:** We men are the monsters now. The time of heroes is dead, Wiglaf – the Christ God has killed it, leaving humankind with nothing but weeping martyrs, fear, and shame. – Beowulf (2007).
- **Biblical Blurbs:** It would be considered good form if the Concierge would issue a Special Bulletin (Intervention) when the Kairotic Moment is officially triggered (see Critical Mass, 3 Kairotic Moment, p. 1438, *infra*). The Special Bulletin should include the key Aspect that is associated with the Kairotic Moment and perhaps something to give it context; the game mechanics of the Kairotic Moment need something to give them context in the story. It is possible that the Concierge could also use a Prose Intervention (see 2 Entropy, p. 236, *supra*), but in whatever form it is given, it is not an official ‘interpretation’ in that it does not create or govern any game mechanic in the game, i.e. the statement by the Concierge did not create the Kairotic Moment. The statement is merely to provide the Aspects for the Kairotic Moment and something of a story for the players to work off of as the Moment runs its course.
- **Equilibrium Epiphany:** Although the concept of a ‘teachable moment’ might be characterized as the modern cousin to the ancient rhetorical concept of the kairotic moment (*ut supra*), participants should not be fooled into thinking that kairotic (or even emergent) moments are always positive. A kairotic moment is just an opportune moment in a conflict, argument, debate where something important may occur. But opportune for whom? Even teachable moments are rather neutral despite their association with positive pedagogy; the teachable moment depends on what you are trying to teach, e.g., racism or anti-racism, nationalism or anarchy? The terms in which James Havinghurst (feature quote, p. 1418, *ut supra*) described

the teachable moment can (and does) also apply equally to advertising, propaganda, politics and public relations, not just pedagogy (see Pedagogy of Propaganda, p. 1424, *ut infra*).

Thus kairotic moments should not be assumed to be *positive* (in our sense): In the previous discussion of the assassination of Julius Caesar and political murder (see Bitterness & Murder, 6 Government Titles, p. 657, *supra*), *the moment was one in which the political leadership of the Roman civilization could either repudiate political murder or allow it to become the norm* and the Second Triumvirate decided to embrace it, legitimize it by their state authority (by reviving the discarded practice of *proscription*), to consolidate their power and eliminate political opposition. If you construe kairotic moments as ‘teachable moments’ in the positive, wisdom-building sense, then that moment in 36 B.C. was an opportunity missed. But *something* happened during that moment whichever way you construe it, whether you think it was an opportunity missed or not, and that is the Kairotic Moment in GGDM.

- ✓ In this sense of *something happened*, Kairotic Moments in GGDM are similar to the famous answer of “42” in the Hitchhiker’s Guide to the Galaxy: The answer to everything is 42 but what is the question? The question is what the story fills in ... or not.

In the story of a GGDM game, a Kairotic Moment does not need to be religious, but does need to be a core experience, opportune moment for *something* to happen to *or* in a civilization. The story is what that is.

- ✓ Back to our favorite agent of analogies: baseball. There are two outs in a half-inning and the bases are loaded. There are opportunities for both teams – for the at-bat team, a grand slam, or even a base hit; for the pitcher, a chance to escape a bases-loaded jam with no damage (other than an elevated pitch count). *Something* is going to happen. What is great for one team – a grand slam or a final out – is a disaster or at least a failure of opportunity for the other. Even if it suddenly rains like Noah’s flood and the game is called, or the players all just leave and go home (or maybe the recess bell rings), or the Supreme Being rolls up the map (as in Time Bandits (1981)), *something* will have happened in relation to that instance – even if outside the context of the system where the opportune moment exists. Humans (and life), by accident or design, create those instances where something must happen.

---

*“Any man’s death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee.”*

– John Donne, *Devotions upon Emergent Occasions* (1624)

---

**Opportune for Whom?:** Uh-oh, there’s that word ‘emergent’ again! In the 17<sup>th</sup> Century! When constructing or resolving a Kairotic Moment, one question might be ‘opportune for whom?’ That is, who is the actor? Some considerations include:

- ✓ What opportunity exists or what is opportune about that moment in that place?
- ✓ What is the issue?
- ✓ Who is this moment *opportune for* and what are they trying to accomplish?
- ✓ What situation created the opportunity?

The example most familiar to those of Western civilization (which is why I am using it, I and my probable audience are not familiar enough with anything else) is Roman-occupied Palestine, so let's ask those questions of Christianity. For whom was the moment opportune and in what way? And was the opportunity they saw realized or sidetracked? Certainly, the Romans didn't see anything opportune in it, or if they did, it was the ability to gain favor with certain elements in the occupied territory by executing a wild heretic peasant preacher. How did it result in such a complete change of worldview of Western civilization? Page | 1423

➤ The Core of Christianity: The mystic core of Christianity is in fact, answering those questions, because it is really difficult if you understand the history and the sociopolitical milieu of the time and place to see how the moment was opportune for anything but being run through by a Roman sword or crucified. Yet clearly, something emergent came from it, and this seems to be the core issue: Palestine Judaism was being forcefully Hellenized by the Romans (there had been internecine strife over that issue previously, e.g., the Maccabean Revolt) and the early Christians were considered to be a Hellenized Jewish sect or cult.

- ✓ But Palestine appears to be the cultural crossroads of the time, being between Egypt and Syria, between Rome and the East. This is what made it Terra Sancta to two offshoot Abrahamic religions and strategically vital to the Roman Empire. In modern times, early Christianity has been characterized as an obscure 'oriental cult' (e.g., Prof. Michael Kulikowski, and the movie *The Man from Earth* (2007)) acknowledging finally its relationship to Buddhism which spread along the Silk Road.<sup>8</sup>

It is from this Hellenization in fact, that the early Christians got the sense of the Kairotic Moment in history and built it into a separate religion based on questionable opportunities in Palestine and penetrated all the way to the center of the Roman Empire.

Separated entirely from the religion, *this phenomenon alone is a stunning historical turn that demands explanation, the macro-process – and not the religion – is sublime.*<sup>9</sup>

- ✓ “Christianity itself can be seen as originating in a millenarian movement among Jewish people living under Roman rule, *although its characteristics as a social movement quickly changed* as it spread through the Roman Empire.” – from Wikipedia article, “Millenarianism in colonial societies,” captured June 14, 2019 (emphasis added).
- ✓ “Apart from the small and ethnically circumscribed exception of the Jews, the ancient world had never known an exclusivist faith, so the rapid success of early Christianity is *a historical anomaly*. Moreover, because some form of Christianity is a foundational part of so many peoples' lives and identities, the Christianisation of the Roman empire feels perennially relevant – something that is 'about us' in a way a lot of ancient history simply is not. Of course, this apparent relevance also obscures as much as it reveals, especially just how *strange* Rome's Christianisation really was.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” Aeon, January 30, 2017 (emphasis added).<sup>10</sup>
- ✓ “The Roman Empire became Christian during the fourth century CE. At the century's start, Christians were – at most – a substantial minority of the population. By its end, Christians (or nominal Christians) indisputably constituted a majority in the empire. Tellingly, at the beginning of the century, the imperial government launched

the only sustained and concerted effort to suppress Christianity in ancient history – and yet by the century’s end, the emperors themselves were Christians, Christianity enjoyed exclusive support from the state and was, in principle, the only religion the state permitted.” *Id.*

By 395 A.D., Emperor Theodosius I dissolved the Vestal Virgins, allowed the final destruction of the remainder of the Library of Alexandria and established Christianity as the official state religion of Rome (if you like, this is an example consistent with the gradual change in worldview discussed in *Artifice*, 2 Constructural Elements, pp. 191-192, *supra*).

- ✓ The Vestal Virgins were the strangest of Roman creatures, difficult for modern Westerners to conceptualize. I suppose that some argument has been made that the Virgin Mary story was inspired by the Vestal Virgins (it would kind of make sense), but the importance of their dissolution in 395 A.D. cannot be understated. In order to have been dissolved, the entire underlying worldview must have changed, such that they appeared a quaint, odd appendage to the Roman State. Virgin Mary defeated the Vestal Virgins by birthing upon the world a sublime movement the like of which the Vestal priestesses had never imagined, the Virgin Mary had done one thing the Vestal Virgins were impliedly never allowed to do: give birth.<sup>11</sup>

The Western Roman Empire was gone in three generations, a receding shadow in the fourth.

- ✓ The trick, device, quality of Christianity in particular and of the Abrahamic religions in general, that separates them from all preceding (polytheistic) religions is the Kairotic Moment which must have developed over a millennia time in the north and western Mediterranean and the Israelites received it from contact with the Hittites, Phoenicians, and possibly even Greek traders. Monotheism focused the many and diverse into the one, singular, powerful, the moment in eternity.
- It Tolls for Thee: In the *Cosmos* television series, Carl Sagan shrewdly goes about the task of *sanctifying* certain scientific historical figures of ancient times, the Enlightenment and modern scientific age in the process of putting forth his own belief system; he recognizes, without saying so, *the power of sanctification of constructed memories* of early Church figures that was the foundation of the Church’s authority for a millennia.

His Kairotic Moment for *Cosmos* was the *existential threat* of the Cold War – existential threats are considered very good teachable moments! Just like the existential threat to traditional Jewish culture and religion in Roman occupied Palestine (as opposed to how the Romans allowed the Egyptians to continue mostly unaffected).

---

*“Our soldiers learned to think the way the enemy wanted them to think.”*

– Adolf Hitler, *Mein Kampf* (1925)

---

**Pedagogy of Propaganda:** That propaganda, psychological warfare and advertising (discussed in various places through GGDM) can all be likened to learning and share similar principles – including teachable moments – with pedagogy should not be surprising, they are all seeking to have the target audience ‘learn’ something favorable to the sender.

There are always kairotic moments in any conflict, whether armed or not, in which opponents can be trained or taught to think they are wrong, they are going to lose, or whatever suits the sender's purpose.

- ✓ Allied propaganda in WWI promoted the idea that Germans were Huns. They didn't invent it. Guess the source? On July 27, 1900, Kaiser Wilhelm II made a fiery, chauvinistic, poorly-received speech to German troops departing for a European expeditionary force to China in which he implored them to be merciless like the Huns.

Consider the following:

- ✓ “In the sphere of leaflet propaganda the enemy has defeated us ... The enemy has defeated us, not as man against man in the field of battle, bayonet against bayonet; no, bad contents poorly printed on poor paper have paralyzed our strength.” – German Army report, WWI.
- ✓ “We were as hypnotized by the enemy's propaganda as a rabbit is by a snake.” – General Eric Von Ludendorf, German General Staff, 1918.
  - The German military leadership in the aftermath of WWI, convinced themselves that they had been defeated by propaganda, not man to man. They and the political leadership used political propaganda to *teach the nation* – especially the generation then coming of age – that this was the cause of their defeat, cushioning the blow to national psychology and deflecting blame. Fascist ideology added allegations of racial or ethnic treason to the story. On this basis then, groups such as White Rose, could be arrested, tried, and executed for distributing leaflets on the allegation that they were spreading ‘defeatist’ propaganda during WWII, making them a ‘danger’ to the state. The students involved in White Rose did not understand the extent to which their parents had voted away their civil liberties.
- ✓ “To seduce the enemy's soldiers from their allegiance and encourage them to surrender is of special service, for an adversary is more hurt by desertion than by slaughter.” – Flavius Vegetius Renuatus, about 378 A.D.
  - Note that this may refer more specifically to Rome's interminable civil wars of succession where legions were political power for the aspiring usurper. This is a case of taking context.
- ✓ “Psychological Warfare has always rested as an uneasy activity in democracies, even in wartime. It is partly to do with the suspicion that using the mind to influence the mind is somehow unacceptable. But is it more unacceptable to shoot someone's brains out rather than to persuade that brain to drop down their weapon and live?” – Prof. Phillip M. Taylor (University of Leeds).
- ✓ “If you give a man the correct information for seven years, he may believe the incorrect information on the first day of the eighth year when it is necessary, from your point of view, that he should do so. Your first job is to build the credibility and the authenticity of your propaganda, and persuade the enemy to trust you although you are his enemy.” – Psychological Warfare Casebook, Operations Research Office, Johns Hopkins University Baltimore (1958).<sup>12</sup>

*“The mark of the immature man is that he wants to die nobly for a cause, while the mark of a mature man is that he wants to live humbly for one.”*

– Wilhelm Stekel

*“The tyrant dies and his rule is over; the martyr dies and his rule begins.”*

– Søren Kierkegaard, Journals, 1848

## Endnotes.

<sup>1</sup> Commentary & Citation: I have heard since I was young that the U.S. Government had some plan to preserve the U.S. Constitution and Declaration of Independence in case of nuclear attack (for national government continuity).

- ✓ “Despite [David] Ferriero’s best efforts to conceal the government’s plan from America’s citizens ... we do have a pretty good idea of how the Charters would be protected.... Line of defense No. 1: the ‘Charters Vault.’ In 1953, during the Cold War, a ‘Charters Vault’ was built and installed at the National Archives. ‘At the closing of the building each night, the documents and their protective display cases were lowered into the vault,’ according to Atomic Audit: The Costs and Consequences of U.S. Nuclear Weapons Since 1940. ‘This was also done in the event of a nuclear attack.’” – Dan Amira, “How the Government Would Protect the Constitution and the Declaration of Independence During a Zombie Apocalypse,” *Intelligencer*, June 25, 2013.
  - Although this article was written in relation to the release of the movie *World War Z* (as the tongue-in-cheek title suggests) it is clearly talking about a Nuclear Holocaust. I had heard there was a subterranean vault when I was young. I was an intensely strange youth, things that others would hear and immediately forget, stuck in my mind, national continuity was important to me.
- ✓ “As *Time* reported in 1992: ‘One of the most difficult challenges facing doomsday planners was deciding what cultural treasures should be saved ... Between 1979 and 1981, a government task force called the Cultural Heritage Preservation Group met to draw up priority lists. The Library of Congress’s ‘Top Treasures Inventory’ includes a Gutenberg Bible, the Gettysburg Address and various papers of James Madison, Thomas Jefferson and George Mason. For the National Archives, which is seven blocks from the White House, the single most precious item would be the Declaration of Independence, followed by the Constitution and the Bill of Rights. Though the National Archives building has a 55-ton steel-and-concrete vault on the premises, the scenario calls for the evacuation of these and other documents, probably by helicopter, to an underground facility, if there is adequate warning time.’ According to *Time*, the art, at least – and presumably the Charters as well – would be sent to Mount Weather, a Virginia complex known to include a bunker that would serve as one of the sites the government would retreat to in the case of a nuclear strike. Whether this is still the plan, we can’t say for sure. ‘When I was at the Archives in the eighties and first half of the nineties, we had a list of the highest-priority items (including the ‘Charters’) that would be protected in case of a national emergency,’ Trudy Huskamp, a former Archivist of the United States from 1993 to 1995, e-mailed from the Marshall Islands. ‘I assume there is still such a list; however, I don’t know where the items would be relocated.’” *Id.* – citing Ted Gup, “Grab that Leonardo!” *Time*, August 10, 1992.

<sup>2</sup> Citation: “The Church of Jesus Christ of Latter-day Saints (LDS) has a deep and doctrinal devotion to the U.S. Constitution, which it considers to be divinely inspired.” – Max Perry Mueller, “Mitt Romney’s Mormon Mission,” *Slate*, February 20, 2018 (see 3 Government Titles, EN 5, p. 622, *supra*, for full quote).

<sup>3</sup> Commentary & Citation: In the *Babylon 5* episode, “The Long Night,” (1997), future Centauri Emperor Vir Cotto muses, “What was it all for, I wonder? What was any of it for?” as the Centauri evacuate Narn, ending their destructive occupation. This comment ideologically links Vir Cotto to Emperor Turhan and separates him from his predecessors Emperor Cartagia and future Emperor Londo.

<sup>4</sup> Citation: “The Event is a shorthand term given to the moment in time that the Lost Room was created. It occurred at 1:20:44 p.m. on May 4, 1961, and erased the room and all of its contents from history. The reason behind this and the ultimate purpose of the Objects is unknown, though two primary hypotheses have been postulated. Even the

man occupying the room at the time of the event doesn't seem to know what happened, so the truth remains a mystery. Both hypotheses essentially lead to the same conclusion, but attribute the event to different causes.” – from Wikipedia article, “The Lost Room,” February 5, 2019.

✓ Would like to see a movie about the man who was in the room when the Event happened, *is he lying?*

<sup>5</sup> Commentary: This line of thought also relates to something I read that alleged that change comes from the desert; possibly relating to either the story of Moses or that Jesus hailed from semi-arid lands, or that the cultural accumulation of ancient invaders of Mesopotamia, Mexico, and the Indus, Nile and Yellow River valleys came from the deserts and mountains.

<sup>6</sup> Commentary: In the movie *Excalibur* (1981), Arthur pulled the sword from the stone without anyone noticing. When he was required to demonstrate it again, the hurried official blessing of the priest made no difference, because he had already done it once! Thus, at the beginning of the story, Christianity had little power (or perhaps this was just a general comment on ritual religion by the writers) but by the end of the story, it was all powerful.

✓ In fact, the entire jousting to ‘win’ the right to try to draw the sword from the stone turned out to be an amusing farce (but it gave the warriors something to do and cleverly kept anyone from claiming to be king as long as that was the sole measure of legitimacy in that place); like modern quantum physics, they were perhaps asking questions in the wrong framework of understanding (i.e. physical strength vs. destiny).

<sup>7</sup> Commentary: Guinevere had no children by Arthur, perhaps she was barren, she also did not become pregnant by her tryst with Lancelot (that would have complicated matters!). Arthur, like Napoleon, had children – an heir, Mordred – by another woman, Morgana, his half-sister. Or perhaps it was because an age of the world was ending – as the film told us several times – and everyone had to die at the end, Arthur and his son killed each other, Morgana was killed by her son, all the knights were dead, Lancelot forgiven and reinstated for his eternal salvation, Guinevere forgiven and queened again, Merlin was imprisoned but escaped in dreams, and the sword was returned to the water spirit. Only the widow Guinevere survived in a convent and Perceval, the last, most faithful knight, rode away.

<sup>8</sup> Commentary: One does wonder what might have happened if early cult-like commune Christianity, especially monastic Christianity, had been held to the same standards as NXIVM? Do you think there aren't similarities?

✓ “That a world religion should have emerged from an oriental cult in a tiny and peculiar corner of Roman Palestine is nothing short of extraordinary. Jesus of Nazareth was a Jew, though an eccentric one, and here the concern is not what the historical Jesus did or did not believe. We know that he was executed for disturbing the Roman peace during the reign of the emperor Tiberius, and that some of his followers then decided that Jesus was not merely another regular prophet, common in the region. Rather, he was the son of the one true god, and he had died to bring salvation to those who would follow him.

Jesus's disciples began to preach the virtues of their wonderworker. Quite a few people believed them, including Saul of Tarsus, who took the message on the road, changing his name to Paul as a token of his conversion. Paul ignored the hardscrabble villages of the Galilee region, looking instead to the cities full of Greeks and Greek-speaking Jews all around the eastern Mediterranean littoral. He travelled to the Levant, Asia Minor and mainland Greece, where he delivered his famous address to the Corinthians.” – Prof. Michael Kulikowski (Pennsylvania State University), “Christians were Strangers: How an obscure oriental cult in a corner of Roman Palestine grew to become the dominant religion of the Western world,” *Aeon*, January 30, 2017.

- Characterization of Christianity's origin as an ‘oriental cult’ seems to have gained acceptance in the late 20<sup>th</sup> Century (e.g., Jerome Bixby's *The Man from the Earth* (2007) but the script was begun in the late-1960s and finished in 1998 just before he died) – which first required the West to accept that a major part of their cultural heritage originated in the East. *East is East and West is West and the twain did meet*, when East slipped in through the side door and changed costumes!

<sup>9</sup> Citation & Commentary: The 2017 crowd-funded, faith-based movie *Testament* (dir. Tom Ritter – not to be confused with the 1983 nuclear holocaust mini-series) attempts to recreate the post-Crucifixion slow ascent of Christianity in a near-future dystopian setting. I watched the entire movie in several tries over two days. I am not sure the writers and directors understood what they were trying to emulate; they may not have seen the movie in the same lens through which I viewed it. The movie implies that the ‘Second Coming’ has occurred recently (he was killed again, by a rival gang), but spends most of the screen time on the main character's faith, doubts, and tribulations, it never really explains why ‘The Movement’ might succeed (the movie did not have any miracles or wonders) or why

everyone opposes it. The writers seem to assume that the martyrdom of the main character at the end was both divinely required/orchestrated and important to the success of ‘The Movement.’ But the movie ended there because they had no clue and were out of screen time.

- ✓ I think this is probably symptomatic of the larger problem: For those who know the New Testament and have the faith, the meaning of the main character’s death in the end and the expected wondrous results stemming therefrom are obvious. And do not need to be stated or shown, which is fortunate for the movie writers. *It has the symptoms of magical thinking.* But for the rest of us, there is no connect. This is why Christianity is treading water and slowly drowning in the West; their attempts at spreading the faith are trite (give the filmmaker credit for trying something-sort-of new) and increasingly disconnected from the worldview of the population. They are either engaging in magical thinking or ‘faith’ in some unseeable dynamic process through a lens we cannot see (i.e. Albert Camus’ ‘philosophical suicide’).

<sup>10</sup> Citation: “Paul was a Christian, perhaps indeed the first Christian, but he was also a Roman. That was new. Even if the occasional Jew gained Roman citizenship, Jews weren’t Romans. As a religion, Judaism was ethnic, which gave Jews some privileged exemptions unavailable to any other Roman subjects, but it also meant they were perpetually aliens. In contrast, Christianity was not ethnic. Although Christian leaders were intent on separating themselves physically and ideologically from the Jewish communities out of which they’d grown, they also accepted newcomers to their congregations without regard for ethnic origin or social class. In the socially stratified world of antiquity, the egalitarianism of Christianity was unusual and, to many, appealing.” *Id.*

- ✓ “The promise of salvation, vouchsafed in the miracles of Jesus and/or his divine father also drew in followers. Miracles and the immanence of the supernatural abounded in the Roman world. Powerful miracles were powerfully persuasive. Stories circulated about the Christian god (or the son of god – theology was a work in progress for a very long time), far more stories than today’s canon acknowledges. It used to be said that women, slaves and the working classes took to Christianity first but, in fact, the miracle stories and the promises of salvation attracted a wide cross-section of society. Christianity offered eternal life in exchange for belief – no complex initiation rituals, no hieratic pyramid of occult revelation.” *Id.*
- ✓ “By the third century, Christian communities had grown. One would have been hard-pressed to find even a modest town without a Christian household or three. From a fringe movement, Christianity had become a central fact of urban life. Yet the religion’s normalisation made it suddenly vulnerable in the middle of the third century, when – thanks to dynastic instability, epidemic disease and military incompetence – imperial government went into a potentially terminal decline.” *Id.*
- ✓ “His son and successor Gallienus immediately ended persecution and restored the legal rights of Christian churches. That legal measure demonstrates something significant. Churches had become prosperous, socially integrated corporate entities, able to possess and dispose of property. Christianity was no longer a clandestine and minority religion.” *Id.*
  - As commented previously in GGDM, generally, knowledge of the Roman Empire and classical and ancient history has declined in the West with the decline of Christianity or secularization – which indicates, in agreement with Prof. Kulikowski’s opinion above, that it has lost relevance. Not much is taught in public schools because at first they assumed that what was needed would be learned through youthful religious attendance; now not much is taught because it is not important.

<sup>11</sup> Commentary & Citation: As usual, Rome had the last laugh, long after the last vestiges of the Western Empire were erased: Medieval Christianity developed an Anchorite tradition that mimicked the Vestal Virgins. According to Merriam-Webster online dictionary, the first use of the word *Anchorite* in English is in the 15<sup>th</sup> Century but the word ‘anchor’ for a religious hermit was being used almost 450 years before then. Several articles on the subject place the first *Anchorites* in the 11<sup>th</sup> or 12<sup>th</sup> Centuries, so the tradition may have developed over time in stages before being officially recognized and defined. And although the records are incomplete, it appears that female Anchorites vastly outnumbered male Anchorites, especially during the peak period of the practice. Probably the term wasn’t genderized in English (e.g., anchoress/anchorite) until modern times, and that may explain why the gender of many anchorites is unknown. Within 700 years, the Vestal Virgins had returned in a Christian-acceptable guise.

<sup>12</sup> Commentary: This is why it is a problem when the enemy’s propaganda is more truthful than the information the troops are receiving from their own command or politicians. It is taught in contact sports that the ‘low man wins,’ that is, the one who can go lower to the ground can out-leverage their opponent; in propaganda, this can be analogized to the ground being the truth, he who stays closer to the truth can out-leverage his opponent.

*See Appendix DE&A – Disruption Events, Inactive Constructural Elements & Apostasy*

*See Appendix KM – Kairotic Moment Example*

*“As the water tumbles and foams, the world’s most famous chimpanzees sway rhythmically in a state of high arousal. First hurling rocks into the spray, the apes then quiet themselves and sit calmly, gazing at the waterfall before them. Jane Goodall, who knows these apes from 55 years of observation at Gombe, Tanzania, interprets these compelling images of our closest living relatives in a spiritual framework. The chimpanzees’ behavior, she says, are ‘perhaps triggered by feelings of awe, wonder’ for magnificent natural features or events. Chimpanzees are so similar to us, she asks, ‘Why wouldn’t they also have feelings of some kind of spirituality?’ That question – rooted in Goodall’s definition of spirituality as the experience of appreciating magnificent, unknowable powers at work in the world beyond ourselves – has taken on a new urgency.”*

– Barbara J. King, “Seeing Spirituality in Chimpanzees,” The Atlantic, March 29, 2016

*“For me, when I say spiritual, I’m referring to a feeling you would have that connects you to the universe in a way that it may defy simple vocabulary. We think about the universe as an intellectual playground, which it surely is, but the moment you learn something that touches an emotion rather than just something intellectual, I would call that a spiritual encounter with the universe.”*

– Neil deGrasse Tyson on The Paul Mecurio Show <sup>1</sup>

**There are Three Paths You Will Go By:** When a Kairotic Moment is triggered in a game of GGDM – how it is triggered will be discussed later – a set of game processes is launched which positions can resist or ride. A Kairotic Moment always has a specific location (i.e. colony, see Terra Sancta, 1 Kairotic Moments, p. 1420, *supra*) and a specific point in time (i.e. Regular Turn of the originating position) where it begins.

- **Sojourn:** On the Regular Turn that the KM is triggered, a blue marker appears on the *Terra Sancta* chosen by the Concierge and a red dot appears on the position’s current Capital Colony. The color dots have no game effect and no meaning that the position players do not assign to them. Each time the position’s Regular Turn is processed afterwards, the dots will move along the Pathways connecting each of the colonies to a Government Title (see All Roads Lead To..., *et seq.*, 2 Government Titles, p. 595, *supra*) until they reach the opposite colony. When a color dot reaches the Government Title via Pathway, it will pass through the Title as if it were one Monad, and proceed up the Pathway from the Government Title to the opposite colony.
  - ✓ Each color dot will move 1-3 Monads per Regular Turn, equaling the current Intensity Level of the Kairotic Moment.
  - ✓ There is no non-interpretative effect from the color dots passing through the Government Titles, it is merely as symbolic as the participants think it is.
  - ✓ If the Terra Sancta colony and the Capital Colony share the same Pathway, the dots will simply move along the Pathway toward each other, passing at some point, and reaching their opposite colonies directly.
- **Intensiteit:** At the time the Kairotic Moment is triggered, an ‘intensity level’ of either 1 or 3 is randomly determined, with three being very intense, and one being somewhat anemic; some movements start small and languish in the corner then grow big and explode, some

movements explode onto the scene and run their course with a short shelf-life. At specific points determined by the Concierge – possibly based on the progress of the dots – the intensity level will move up one notch if it started at 1 or down one notch if it began at 3, until it reaches the opposite end, where it will remain at its final intensity level for 0-2 Turn Cycles (Turn Cycle is not the same as Regular Turn, see definition in *Buzzing Lightyears*, 4 The Streams of Time, p. 101, *supra*). Afterward, the Kairotic Moment has passed.

- ✓ The Turn Cycle distinction being made here is that the colored dot only moves on the KM position's Regular Turns, not on the next or subsequent positions' Regular Turns.
- **Convictions:** When both moving color dots have reached their destinations, they disappear and are replaced by a single dot (of whatever color, it doesn't *matter* unless participants think it does), on the Capital Colony. On the next Regular Turn processed by the position, the dot will pass onto the First Space of each Diplomatic Space (even if the Capital's status is suspended, see *Waving the Flag*, 2 Constructural Elements, p. 190, *supra*) and thereafter, proceed in the same way across each Diplomatic Space to the opposite First Space, and then on the next Regular Turn, end on the alien position's Capital Colony where it will remain until the end of the alien position's next Regular Turn. There is no direct effect on the alien Capital Colony from this except perhaps timing of Intensity changes in the Kairotic Moment which should be in its final stage at that point (but timing is always up to the Concierge).
  - ✓ It is up to the participants to decide if the color dot can cross Diplomatic Spaces where there is no connection between the First Spaces, i.e. the positions have had First Contact but have not developed any Diplomatic Space. But it seems unlikely to occur unless some valid reason can be given for bridging such a gulf (that is, something emergent). A color dot that cannot move due to no connection between First Spaces will remain on the First Space until the phenomenon has run its course.

So basically, at this point, you think you have read a bunch of nothing, about color dots moving across the Public and Diplomatic Spaces. Intensity numbers might be more interesting, because at least there is a concrete seeming value to latch onto the mind.

---

[Minbari Rathenn, carrying an ornate ancient chest, chases down Ambassador Jeffrey Sinclair and confronts him]

*"I was sent to find you. The ancient books told us on this day, no sooner or later, we were to enter the sanctuary and open this. We did not know what was inside; it has waited, locked and sealed, for over 900 years. We do not understand how or why, we know only that it is."*

[The box contains an envelope addressed to Jeffrey David Sinclair]

*"How did he know that you would be here? How did he know your name?"*

– Babylon 5, "War Without End, Part 1" (1996) opening scene

---

**Undecidabilities:** Beginning on the position's Regular Turn after the Kairotic Moment is triggered, at the end of each turn processing, one of three Constructural Elements (Epistemological, Symbolic, or Ideological, see 1 Constructural Elements, *supra*) will be randomly chosen.

Every active Constructural Element of the type chosen on sovereign colonies or ships will be ‘tested’ to see if it becomes inactive. This is not a Disruption Event nor is it considered an *apostasy* (see GGDM Disruption Event in Stewed, Brewed, Boiled, Baked & Fried, *et seq.*, 1 Disruption, pp. 258-259, and *apostasy* in Alieny Apostasy, 3 Disruption, p. 283, *supra*).

- ✓ “Deconstruction is a mode of reading that can be useful to point out the undecidabilities of any text, including the literary text. Undecidabilities are the moments of a text when it is impossible to crystallize one single meaning precisely because a multitude of meanings emerge in a single time.” – Aparecido Donizete Rossi, São Paulo State University, 2012.
  - ✓ “Such being the case, there might be a time when it is impossible to decipher by the grammatical structure of this sentence which meaning is intended by the speaker. Undecidability or indeterminacy characterizes the linguistic system.” – Jacques Derrida, “Deconstruction and Literary Interpretation,” article posted by C Vairavan, Anna University, Chennai, 2012. *Id.*
  - ✓ “In computability theory and computational complexity theory, an undecidable problem is a decision problem for which it is proved to be impossible to construct an algorithm that always leads to a correct yes-or-no answer. The halting problem is an example: there is no algorithm that correctly determines whether arbitrary programs eventually halt when run.” – from Wikipedia article, “Undecidable problem.”<sup>2</sup>
- What’s in the box?: There is a 5% chance *times the current Intensity Level* for each active Constructural Element of the type chosen to become inactive. Inactive Constructural may be returned to active status normally by activations of the Culture Power for the purpose of Cohering (see 5 Culture, p. 421, *supra*), or on ships by being located at colonies at the end of the Regular Turn (see Mutiny on the Bounty, 3 Disruption, p. 282, *supra*). These checks continue each Regular Turn until the Kairotic Moment has run its full course.
- ✓ If the Symbolic Constructural Element of the Capital Colony becomes inactive, it loses its Capital Status (see Waving the Flag, 2 Constructural Elements, p. 190, *supra*). This will not prevent passage of the colored dot through the Capital into Diplomatic Space (*ut supra*). If the Epistemological Constructural Element is inactive, the colony or ship may not receive the benefits of Enlightenment (see Skool Tyme, 2 Constructural Elements, p. 190, *supra*).
- Gom Jabbar: When 25% or less of any Constructural Element remains active after being ‘tested’ on the turn it is chosen (not if the condition exists on a turn it is not chosen), *all Constructural Elements of that type will become active and may not become inactive* (by any means, including testing) for one to three Regular Turns afterward (an immunity period). This process ends when all three Constructural Elements – Epistemological, Symbolic, and Ideological, have passed through to immunity (or the Kairotic Moment expires, *ut supra*, previous pages), however, it is possible for one Constructural Element to pass through twice (after the first immunity period) if the process lasts long enough.
- ✓ Positions can fight this process by Cohering or they can surrender and let it run its course. It’s hard to say which is right, because it depends on circumstances turn by turn, having only 25% of a Constructural Element active can cause massive Power Activation failure problems, government Conflict Check failures, etc. Some positions may begin with a lot of inactive Constructural Elements and it may be beneficial and

quick to let the percentages go down and come back up. There are *many moving parts* in any GGDM Turn Cycle, e.g., News Events, Disruption Events, Patents, Writs, wars, colonization, Corporations expiring.

What is being represented here is a complete change in worldview of a civilization, *without specifying what changed*. Whether this is religious, secular, epochal, and what changed, is for the participants to decide, if they choose to look.

**Joe:** *What happened in that motel room? Wally?*

**Wally:** *Something terrible. Look... Detective Miller, do you ever feel that there's something wrong with the universe?*

**Joe:** *Yeah, sure.*

**Wally:** *Well, you're right. Things like this shouldn't happen. But in that motel room, they did.*

\*\*\*

**Wally Jabrowski:** *Sometimes when you start getting Objects together weird things happen. New things. New properties. Totally unpredictable. Take the Watch. Useless right? ... Wristwatch Cooks eggs. Nothing else just eggs. Put an egg in the middle – hardboils it. I don't know how somebody figured that out but they did. Anyway nobody used to care much about the Watch until one day somebody found out that if you put the Watch and the Knife together you get a kind of telepathy.*

– The Lost Room (TV miniseries, 2006)

**Heteropathic Effects:** “Homopathic effects arise where causes acting together are identical to the sum of the effects of those causes acting in isolation. For example, forces acting on an object can have the same effect when applied in combination or separately. In contrast, heteropathic effects describe emergent properties seen in complex biological and chemical systems. These conjoint actions cannot be characterised by the sum of any individual causes. For example, the addition of sodium hydroxide to hydrochloric acid produces sodium chloride and water. It is unclear how such a reaction could be characterised as the sum of individual components.” – Christopher W. Johnson (University of Glasgow), summarizing J.S. Mill (1844), “What are Emergent Properties and How Do They Affect the Engineering of Complex Systems?” 2005.

- ✓ “At the other end of the spectrum is a more prosaic view in which emergence means little more than properties that are possessed by a ‘whole’ and not by its parts. In this view, almost every non-trivial object possesses emergent properties, including filing cabinets and chairs.” *Id.*

**Wave Motion:** During the time that the Kairotic Moment is in progress, any alien ship “that Unloads, Loads or Transfers Cargo, Population, Supplies or any Enhancements (including Looting and Trucking)” (quoting Aliency Apostasy, 3 Disruption, p. 283, *supra*) at a Friendly or Naturalized colony (not just the Terra Sancta) owned by the position undergoing the Kairotic Moment has the normal chance of *apostasy plus* the current intensity level expressed in a percentage.

This effect cannot occur if the Power Activation failed due to already inactive Constructural Elements because the Load, Unload or Transfer never occurred (you know it already, Power Off, 2 Constructural Elements, p. 193, *supra*). In this case, you may be saved by incompetence.

- ✓ For example, a One and Only True Earth Cargo Ship Unloading at a Aliency Aliens Friendly Colony who are undergoing a Kairotic Moment at Intensity Level 3, will

- have a 13% chance of each active Constructural Element on the Cargo Ship becoming *inactive* and the resulting inactive Constructural Elements (*apostasy*) cannot be made active until after a Census Power activation by the One and Only True Earth.
- Brash Youth vs. Self-Doubt: One of the defining differences between the Roman Republic and Empire and European global domination of four centuries; the version of the Romans that comes to us is one of brash youth, no-doubt confidence, and a willingness to go all in to win. Conversely, self-doubt is a feature of Abrahamic religions and especially, Christianity (e.g., G.K. Chesterton furious opposites feature quote, 4 Government Titles, p. 629, *supra*).
    - ✓ “Not only did the Jesuits bring Christianity to China, but they also brought China to Europe. In doing so, they impelled an intellectual mutation that had been taking root since the Thirty Years War. To the troubled European society of the late seventeenth century, the Jesuit image of a near utopian civilization governed by moral sages uncorrupted by intolerance, passion, or material desire, offered a refreshing contrast. Kangxi was viewed as a philosopher king whose sense of justice and virtue made Leopold I or Louis XIV seem like moral pygmies. Europe swallowed fact and fancy about China. For the first time, a significant body of Western intellectuals cast doubts on the ethical superiority of their own civilization. Paradoxically enough, this was occurring at the moment when the very same thinkers were producing rational explanations about the physical universe that Eastern sages could not hope to match.” – Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648 to 1789, 2<sup>nd</sup> Ed., p. 169.
  - A ‘Total Gurgler’: A ship belonging to a position that is undergoing a Kairotic Moment, may affect Constructural Elements of Friendly or Naturalized **alien colonies** with which they interact – as if the colony were a ship – as described above. That is, a ship from a position undergoing a Kairotic Moment can inflict *apostasy* on an **alien colony**; this is the only time this can happen (e.g., Christians in shōgunshoku era Japan). If the **alien colony** is the same Native Population Type as the Kairotic Moment position, the Intensity Level is squared before being added.
    - ✓ Continuing the Previous Example: An Alieneity Aliens Log Ship makes a delivery of the goods paid for by delivery of RPs by Cargo Ship in the previous example. During the Transfer from the Alieneity Aliens Log Ship to the One and Only True Earth colony, there is a chance that active Constructural Elements on the One and Only True Earth colony will become inactive as if the colony were the ship at an Alieneity Alien colony (in the previous example).
    - ✓ If the **alien colony** was the same Native Population Type as the ship’s position, and the Intensity Level was 3, the 3 would be squared before being added to the base chance, i.e. 9% would be added to the chance of each active Epistemological, Symbolic or Ideological Constructural Element at the colony becoming *inactive*. Inactivation is still not a sure thing because the best possible chance would be 19% that each active Constructural Element will become inactive (see Alieneity Apostasy, 3 Disruption, p. 283, *supra*).
    - ✓ Constructural Elements made inactive in this way cannot be activated by any means until a Census Power activation has occurred in their owning position.

- Pseudo-Physics of the KM: Normally, alien ships interacting with colonies do not affect the colonies based on the pseudo-physics idea of the difference in population masses (like Earth and the Sun), even the smallest colony has many times the population and closer local government control than the alien ship with which they are interacting. Thus, it is the alien ship that normally might be affected (see *Alieny Apostasy*, 3 Disruption, p. 283, *supra*). These rules give the Kairotic Moment transcendent power, like the alpha particle that finds itself ‘instantly’ outside a gravity well that it could not normally escape (see similarly, Lynn Montross quote regarding “explosions of human energy,” 6 Diplomacy, p. 1177, *supra*).<sup>3</sup>
  - ✓ Pseudo-physics is often employed in political and sociological imagery, e.g., political or social ‘inertia,’ ‘critical mass,’ ‘decay’ or the ‘body politic’ or even ‘organs of state,’ equating the state to a living body, or the ‘collective id’ or ‘narcissistic Romanicism’ of a society, describing *fourth order natural phenomenon* in familiar *first-second-third order terms*.
  - ✓ Physics and biological sciences terms are available to analogize third and fourth order phenomenon precisely because first- and second-order facts are still facts (sort of) in the third and fourth orders of natural phenomenon, but the reverse is not true. The arrow of facts/truth in natural phenomenon flows in one direction, like time, suggesting the successive ‘fracturing’ of the universe as discussed in *Order of Genesis*, 1 Order, p. 522, *supra*; *Fourth Frame*, 1 Entropy, p. 226, *supra*. Because the reverse is not true, fourth-order facts need fourth-order language/terminology to describe them.
  - ✓ Even Joseph Tainter’s *The Collapse of Complex Societies* (1988), quoted much throughout GGDM, is pseudo-physics, it describes the movement of civilizations/societies between lower and higher entropic states; the high entropic state of human civilization would be *no civilization*, which is the favorite subject of post-apocalyptic fiction. A word search of an electronic copy of Prof. Tainter’s book shows that neither ‘entropy’ nor ‘entropic’ are used in the book, though certainly they could have been, suggesting a conscious effort to avoid first- and second-order terminology.

GGDM attempts to describe *fourth order phenomenon* in *fourth order terms*, and thus invents or appropriates a few terms along the way, *à la* Edward Soja, Nick Bostrom, but largely fails. See discussions 1 Constructural Elements generally, *Aspects of Sociology*, 2 Culture, p. 371, and *Order of Genesis*, *et seq.*, and *Frame It*, 1 Order, pp. 522, 526 respectively, *supra*, as opposed to others such as Prof. Kenneth Bailey’s (UCLA) Social Entropy Theory (SET) who uses *first order natural phenomenon terms* to describe macrosocial processes – not saying this isn’t useful, but it is limited. We need, like our scientific ancestors, to invent or adapt terms to describe fourth order phenomenon *ipso facto* and *eo ipso*.

- ✓ See FOURTH ORDER LANGUAGE discussion, 3 Fallen to Earth, p. 1544, *infra*.
- Tsunami: It is possible that all Constructural Elements on a ship or colony might become inactive by the preceding exposure to the Kairotic Moment either because the ship or colony had only one active Constructural Element or because more than one active Constructural Element was ... converted ... to an inactive Constructural Element that cannot be made active. What to do, what to do? These situations are more aligned with emergent storytelling than firm GGDM game mechanics, there are several possible paths the story could follow:
  - ✓ The most obvious (and Norman Spinrad ‘Emperor of Everything’ pulp fiction) result is that the ship or colony completely goes over to the other side, the likelihood of this

- being measured by how many inactive Constructural Elements (1, 2 or 3) are unable to be reactivated and the current Intensity Level of the Kairotic Moment (1, 2, or 3). This is akin to the classic (unforced) religious conversion.
- ✓ Kairotic Moments in GGDM, however, despite the religious undertones due to our Western milieu, are not strictly cast in religious terms and do not need to be religious, but are likely at least philosophical/spiritual on some level. For example, practices that were considered religious by Westerners were considered civil customs by the Chinese (supported by their philosophy, worldview), e.g.:
    - “In 1707 Pope Clement XI declared the Chinese rites idolatrous and ordered the Jesuits to repudiate them. Kangxi was infuriated that Europeans who could not even read Chinese characters were condemning practices the he himself considered to be civil, not religious, customs.... By now, however, the Chinese themselves were questioning the compatibility of Catholic orthodoxy with their traditions. ... Moreover, the dualism of Christian theology was unintelligible to them; the exclusiveness of Western religion was repugnant; its glorification of poverty presented a danger to society.” – Raymond Birn, Crisis, Absolutism, Revolution: Europe 1648 to 1789 (2<sup>nd</sup> Ed., 1992), p. 170.
  - ✓ Thus, between truly alien cultures, even of the same species, much may be lost in the translation (and some odd things might occur).
    - Although science-fiction literature loves a little ‘jihad’ here and there to kick over some applecarts, e.g., Dune or the Word of Blake in the Battle-Tech Universe, these are almost always between populations of the *same species*, i.e. humans in 99.999% of cases. Thus, the alien-owned colonies and ships most susceptible to the Kairotic Moment are those whose population matches that of the position undergoing the Kairotic Moment (i.e. non-Friendly alien sovereign colonies). Rarely are we shown true cross-cultural exchange of important ideas with non-humanoid (‘Americans in rubber suits’) aliens, which is what makes the movie Arrival (2016) so remarkable – truly alien aliens communicating something important to us instead of shooting at us (cf the Arachnids in Starship Troopers or the Formics in Ender’s Game).
    - Even Lost Colonist Positions (see 6 Beginnings, p. 63, *supra*), having the same Native Population type as the position undergoing the Kairotic Moment may not fully understand, e.g., Catholicism in China, *ut supra*.

---

*“IN THE MINDS of the mortals of Urantia – that being the name of your world – there exists great confusion respecting the meaning of such terms as God, divinity, and deity. Human beings are still more confused and uncertain about the relationships of the divine personalities designated by these numerous appellations. Because of this conceptual poverty associated with so much ideational confusion, I have been directed to formulate this introductory statement in explanation of the meanings which should be attached to certain word symbols as they may be hereinafter used in those papers which the Orvonton corps of truth revealers have been authorized to translate into the English language of Urantia.”*

---

\*\*\*

*“It is exceedingly difficult to present enlarged concepts and advanced truth, in our endeavor to expand cosmic consciousness and enhance spiritual perception, when we are restricted to the use of a circumscribed language of the realm. But our mandate admonishes us to make every effort to convey our meanings by using the word symbols of the English tongue. We have been instructed to introduce new terms only when the concept to be portrayed finds no terminology in English which can be employed to convey such a new concept partially or even with more or less distortion of meaning.*

*In the hope of facilitating comprehension and of preventing confusion on the part of every mortal who may peruse these papers, we deem it wise to present in this initial statement an outline of the meanings to be attached to numerous English words which are to be employed in designation of Deity and certain associated concepts of the things, meanings, and values of universal reality.” – Forward to the Urantia Book*

**Lost in Ludibriums:** The Urantia Book was discussed in 2 Dreamtime, p. 154, *supra*, as an amazing example of prolonged group storytelling and collective religious writing.

The foregoing quotes were copied from Wikiquote, however, I recognize them as I did read several pages of the Forward and sampled around various sections of the book. That was all I could handle; I found the book’s tone condescending and the writing tedious, repetitive and confusing, it is not something of such interest to me that I would take the effort to figure it out. But clearly the massive work had an effect of showing later generations how UFOs and alien spirits could become new religions. And how the Bible was probably written.

*If* humanity has been externally guided toward maturity and technology as some believe – the classic Abrahamic and modern Western ludibriums, whether couched in religion or UFO theories, and always immune to testing – this is the reason why it has been done from a great distance: The ideas need to be translated into human terms by humans (human agents) and accepted as valid or at least, unable to be disproven by humans.

- ✓ If I think I am being directed or coached by aliens, you would be hard pressed to prove me wrong and I would be equally hard pressed to prove it. It is neither provable nor falsifiable. It also wouldn’t be a criminal defense unless some psychiatrist testified that I was so nuts that I didn’t know my actions were wrong. But this is nothing really different than people who claim the same of God (including in criminal trials), except that such claims receive slightly more sympathy because “God” is accepted as real (and as the ultimate objective reality) by most of the world whether they know it or not, and there is a religious tradition, broadly accepted, of God speaking to chosen people in history. So what if you claimed your helpful communicative aliens were spirits or were God or agents of God? It has been done. Already.
- ✓ Consider the issue this way: If we were to try to do the same for our pets, the challenge would be made near impossible due to both their short lifespan and limited cognitive ability (and our limited cognitive ability and patience). We would need to resort to some sort of technology or biological enhancement. We have tried, with marginal success, to provide technology for apes to communicate with humans. But, even within the game of GGDM, there may be considered to be vast differences between Native Population Types that are the Major Races of the game, even though they occupy the same ‘shelf’ of galactic intelligence (see 5 Beginnings, p. 51, *supra*).

- “I don’t practice what I preach because I’m not the kind of person I’m preaching to.” – quote attributed to J.R. “Bob” Dobbs on Goodreads, the probably fictional founder of the parody Church of the Subgenius.

*“Last month, a team of 80 scientists led by Hjalmar S. Kuhl and Ammie K. Kalan ... published a paper in Scientific Reports raising the possibility that chimpanzees at four field sites in West Africa may perform a ritual when they repeatedly throw stones at trees in the forest. The apes take aim at the trees with stones they have accumulated (or cached). This behavior, with its striking patterns of re-use of the same stones and trees, has never been observed at Gombe or the other best-known chimpanzee study sites. ...*

*Given his broad view of religiosity, I asked [Donovan] Schaefer if he sees the West African chimpanzees’ stone-caching and throwing behaviors as religious. He replied this way: ‘People will always debate what is and isn’t sacred, what counts and what doesn’t count as religious. But if we encountered a group of humans who returned to the same trees over and over and performed the same inexplicable action near them and didn’t seem to have any practical reason to do so, there would be lots of people who would interpret it through the prism of religion.’ ...*

*For now though, I’m still a firm skeptic when it comes to invoking spirituality or religion in these close kin of ours. I’m uneasy with making 1:1 comparisons between the meaning of human behaviors performed at trees in the forest and similar chimpanzee behaviors performed there. After all, even if we unbind religion from language, texts, and beliefs – as I think we should – isn’t it incredibly anthropocentric of us to expect other species to think and feel the way we do?”*

– Barbara J. King, “Seeing Spirituality in Chimpanzees,” The Atlantic, March 29, 2016

## Endnotes.

<sup>1</sup> Commentary: Note that Mr. Tyson does not define any specific emotion, therefore, it may be a ‘good’ or ‘bad’ emotion (are there neutral emotions?). For me, this ‘spiritual’ is usually frustration, annoyance, and sometimes, sublime. However, as I can describe it in simple vocabulary, it must not be what Tyson is talking about. I’m shallow.

<sup>2</sup> Commentary: I was possibly involved in a halting problem once, but might also be completely wrong because I am the ignorant sort: Back in 1998-1999, our firm IT person who was a former TV broadcast engineer, and also a MSCE, tried to write a MS server file-manager program that the firm was attempting to develop internally as proprietary software. It had a problem – it would freeze, apparently randomly.

- ✓ This sort of problem is infuriating in IT, medicine or anywhere else because it is non-repeatable in any predictable way and is thus difficult to solve (sort of the same problem experienced in investigations of UFOs, telepathy and occult phenomenon, and also sociology and psychology studies).

I was sat down in the law library at a computer and ran 200 manual tests on the proto-file manager and recorded the results of each test until crash, I never made it to 200 execution tests without a crash. I did this several times over six months, the crash seemed to be random, sometimes it would crash after five tries, sometimes it would be after 90 tries, with no consistency, I must have done the process about eight to ten times. Our IT person travelled (at firm expense) to a MS IT research facility and met with top-level people there. No one could solve the issue, eventually the project was dropped and the firm purchased a file manager system from a vendor, which I helped install on all of the workstations (about 80+) over one weekend in several steps.

<sup>3</sup> Commentary: Compare Lynn Montross quote cited to Martin Luther who witnessed the German Peasant’s War and the Münster Rebellion which were unleashed by his rhetoric. Martin Luther also released a transcendent human explosion, but of a different character; the early Protestant revolts were easily defeated by conventional military force but also wouldn’t just go away. The Protestant movement I think changed the nature of modern revolutions, possibly first exemplified by the way the American Revolution was not crushed by conventional military defeats.

*See Appendix DE&A – Disruption Events, Inactive Constructural Elements & Apostasy*  
*See Appendix KM – Kairotic Moment Example*

*“History in its day to day is not a morality play. But sometimes there is a clear chastisement, a moment when the judgments of providence seem stark.... They may find out soon enough that all this bargain bought them was an even harsher reckoning, and that all they will inherit is the wind.”*

– Ross Douthat, *New York Times*, October 12, 2016

**Critical Mass:** All Aspects from the Aspect List of all positions are collected into a master list for the purposes of Kairotic Moments (the list could be called ‘The Fall’ or the ‘Tome of Doom,’ etc.) It is important to remember for Kairotic Moment purposes that several positions may have the same Aspects on their List, though no two Aspect Lists should be identical.

The ‘percolation point’ that triggers a Kairotic Moment in GGDM is determined by Exposed Aspects. At the beginning of the game, a critical mass number is determined. At the end of each Turn Cycle (see *Buzzing Lightyears*, 4 *The Streams of Time*, p. 101, *supra*), all current Aspects are counted (a snapshot) and the Aspect that has the greatest total presence on *all* Public Spaces, ‘wins’ the Turn Cycle (a sort of zeitgeist).

- ✓ In addition to the normal cycle of Exposing Aspects, Aspects from Trucking Transactions also increase the number of Aspects on Public Spaces. See *Fairies Wear Boots*, 4 *Commerce*, pp. 122-1228, *supra*.

If two or more Aspects are tied, both ‘win.’ When one Aspect has been dominant a number of times in the game equal to the critical mass number, a Kairotic Moment is triggered for *all* positions that have that Aspect currently on their Aspect List.<sup>1</sup>

- ✓ This is *not the same as counting the number of times an Aspect has been Exposed in the game*, which was another possible mechanic for Critical Mass that was rejected because it aligns less with the idea of zeitgeist.

The Critical Mass number is effectively, the minimum number of Turn Cycles the game will run before a possible trigger of a Kairotic Moment (assuming the same Aspect wins every cycle, which is not likely). Each Turn Cycle won by a different Aspect will stretch the time before the occurrence of a Kairotic Moment. It is suggested, therefore, that Kairotic Moments are better in the mid- to late-game than the beginning (unless part of a big story plan by the Concierge), and thus the Critical Mass number should be greater than or equal to ten (or six), with the bottom parameter adjustable to participants’ tastes. It could also be set so high as to be unlikely to occur in the game, see shelf-life discussion, *It was the End of History*, 1 *Resolution*, p. 1456, *infra*.

- Meditations of the Overmind: If the game is being run manually, the Concierge will have to generate the Critical Mass number and track Aspects ‘wins’; if, as I assume, the game is being run with computer assistance, there is no need for the Concierge to either know the Critical Mass number or count Aspects at the end of each cycle and track wins. Let it be a surprise! Additionally, when a Kairotic Moment is triggered and the Concierge becomes aware of it, the Concierge is not required to allow it to occur or proceed, Kairotic Moments are at the discretion of the Concierge and should be used as a storytelling tool or maybe just to shake up a dull game position. However, if a computer assistant is used to run the game and track the data, a Kairotic Moment cannot be triggered until the requirement is fulfilled, thus the Concierge would not be able to create one that doesn’t exist.

- ✓ Since the Concierge is the gatekeeper – like a Judge is the gatekeeper of evidence and instructions presented to a Jury at trial – it is possible that a triggered Kairotic Moment may never occur in the game (and there is no appellant court!). This is a waste of a good storytelling potential; a good overmind is a terrible thing to waste!

As noted in Aspects A to Z, 2 Culture, p. 324, *supra*, each position has its own secret list of Aspects that are available to the position; this helps to reduce the effectively infinite list of possible Aspects to a manageable number (dominant in that species) for the game. It is possible that the same Aspects may appear on two or more lists and because of that, those Aspects may dominate the game and trigger the Kairotic Moment. It is also possible that a position that Exposes (not to be confused with the Expose' News Event, 4 Writs generally, *supra*) the same Aspects repeatedly (an unrealistic mechanic, but necessary for the game) could somewhat manipulate the Kairotic Moment.

Page | 1439

- ✓ The possibility of player manipulation is considered negligible, as during the game, other concerns and circumstances – not the least of which are Conflict Checks for Government Titles, will push and pull at Power Activations and resources. It would require an extreme effort with results of questionable value to manipulate a Kairotic Moment trigger. Since the Aspect lists are secret (unless shared privately), participants may also be surprised by the sudden trigger of a Kairotic Moment if two positions share the same Aspect.
- ✓ If the term 'Kairotic Moment' reminded you of 'erotic moment,' well, I wouldn't bet the Ancient Greeks weren't thinking of that too, since *eros* is a Greek word and the root of erotic (and used in psychiatry). And if 'critical mass' makes you think of something else related to the sexual encounter, you need to stop reading now!

---

*“In social dynamics, critical mass is a sufficient number of adopters of an innovation in a social system so that the rate of adoption becomes self-sustaining and creates further growth. The term is borrowed from nuclear physics and in that field it refers to the amount of a substance needed to sustain a chain reaction. Social factors influencing critical mass may involve the size, interrelatedness and level of communication in a society or one of its subcultures. Another is social stigma, or the possibility of public advocacy due to such a factor.*

*Critical mass may be closer to majority consensus in political circles, where the most effective position is more often that held by the majority of people in society. In this sense, small changes in public consensus can bring about swift changes in political consensus, due to the majority-dependent effectiveness of certain ideas as tools of political debate. Critical mass is a concept used in a variety of contexts, including physics, group dynamics, politics, public opinion, and technology.”*

– from Wikipedia article, “Critical Mass (sociodynamics),” January 29, 2019

---

**Unpublished Book:** Assuming for the sake of argument that GGDM is an ‘innovation,’ what is its critical mass? How many readers, how many players, how many mentions on social media? Fifty players is probably not sufficient, but does that depend on the social position and education level of those players? A game with fifty professors? Is critical mass synonymous with ‘success’ of my little project? See also RELIGION SUBLIME discussion, 1 Fallen to Earth, p. 1504, *infra*.

- ✓ My accounting instructor, Ms. Mary Oliver Weaver, always reminded her classes that ‘assume’ makes an ASS of U and ME. That’s good advice for accounting students, accounting is based on actual records and math.
- ✓ Most people (and I mean 99.9999%) won’t spend half an hour reading any part of GGDM (that leaves just 3 people in America out of 300M who will read it). We are not interested in our civilization unless threatened with extinction.

As Oliver Emberton reminds us (see *The Universe Doesn’t Care About Your Purpose* excerpts, *Dreamtime*, *supra*):

- ✓ “Write an unpublished book, you’re nobody. Write Harry Potter and the world wants to know you. ... You may hate this. It may make you sick. Reality doesn’t care. You’re judged by what you have the ability to do, and the volume of people you can impact.” (oliveremberton.com, 2014)

GGDM will be little more than an unpublished book when I am finished and upload it to my web domain. Whatever delusions I may have had 20 years ago, and whatever you may think of my particular neurosis, work in the legal profession has provided me with a very realistic (if sickening<sup>2</sup>) appraisal of reality – and I have evolved an understanding over the decades of the meaningless of my life project to anyone but me. But, from religion, and history, we have come slowly to understand that the things that make the smallest initial impact have the greater chance of long term effect, whereas the momentary, shallow things, are viewed by millions of people, make tons of money, but will pass like a surface ripple:

- ✓ “Unfortunately, the same rule applies to all talents, even unsavory ones: get naked for one person and you might just make them smile, get naked for fifty million people and you might just be Kim Kardashian.” *Id.*

The ‘critical mass’ for GGDM is therefore, temporal, not spatial. And in the millennial tradition of Western philosophy, this is the real deal: The sacrifice of fame, fortune, and happy life (or our illusion of it) for post-mortem effect.<sup>3</sup>

I have tried to imagine what sort of emergent end might arise from GGDM. I cannot, I never get far in that. I just have no imagination anymore. I am more prone to accept that nothing at all will happen, that my life work is worthless and pointless. Whatever result I might fancy is meaningless because I have no evidence, no reason to believe that it could happen. What reason or cause would you assign to that? That I am curmudgeonly and that the legal, military, and business world has made me cynical, shortsighted, angry, has crushed my childhood imagination (*à la* the Lancasterian reflected in Charles Dickens *Hard Times* (1854) and Pink Floyd’s *The Wall* (1979), see Gradgrind discussion, 1 Colleges, p. 463, *supra*). Or is it the Absurdity.

Or is it the problem and nature of emergence, that by the very concept it is unpredictable, beyond human imagination? Did Jesus or Buddha anticipate the emergent effects of their acts? To assert that they did, to assert that Christianity was the intent of Jesus or that Buddhism was the intent of Buddha or that Buddha intended both,<sup>4</sup> is to suggest either that they could predict emergences or that such things were pre-destined, had already happened before they happened and the Legislators knew it.

- ✓ See also *The Core of Christianity*, 1 Kairotic Moments, p. 1423, *supra*.

And no, I don’t think I’m Jesus or Buddha. Don’t be ridiculous.

- ✓ “One big question is: what percentage of a population is necessary to create a critical mass? According to researchers at Rensselaer Polytechnic Institute, the answer is a mere 10%. Computational analysis was used to establish where the shift from minority to majority lies. According to director of research Boleslaw Szymanski: ‘When the number of committed opinion holders is below 10 percent, there is no visible progress in the spread of ideas. It would literally take the amount of time comparable to the age of the universe for this size group to reach the majority. Once that number grows above 10 percent, the idea spreads like flame.’ The research has shown that the 10% can comprise literally anyone in a given society. What matters is that those people are set in their beliefs and do not respond to pressure to change them. Instead, they pass their ideas on to others.” – Shane Perry, “Critical Mass and Tipping Points: How To Identify Inflection Points Before They Happen,” Farnham Street (blog), July 2017.<sup>5</sup>

Thirty million players/followers of GGDM? As Noah (Bill Cosby) said: “Riigggh! Who is this really!?”

---

*“The average man may be capable of benefiting by initiation, or he may not; it also depends upon his capacity; but each individual should have the opportunity of advancing to the highest development of which he is capable.”*

– Dion Fortune, The Esoteric Orders and Their Work (1928)

---

*“You know after any truly initiating experience that you are part of a much bigger whole. Life is not about you henceforward, but you are about life.”*

– Richard Rohr, Adam’s Return: The Five Promises of Male Initiation (2004)

---

**Wells of Initiation:** Down the spiral stairs... When the Kairotic Moment process is loosed upon the game by the Concierge, *a place must be chosen* as the location (see Terra Sancta, 1 Kairotic Moments, p. 1420, *supra*). There are many possible criteria for choosing a location, but the default might be the sovereign colony which is adjacent to the most pieces on the Public Space of the Aspect that triggered the Kairotic Moment. So much the better it is if the colony also fits other criteria or if it fits the story arc best (and if the Concierge has a great idea...).

It is possible that if two or more positions share the key Aspect of the Kairotic Moment on their Aspect List, that the game might experience simultaneous Kairotic Moments in two or more positions. This *might require separate target planets* for each position (lending perhaps a ‘Mormon-like’ mystery to the game) or if a single Balkanized or other suitable location is available on both Public Spaces, perhaps this is even better! It is also possible for the game to experience rapid fire consecutive Kairotic Moments featuring different key Aspects if several are near the Critical Mass and continue to be Exposed. That could be an interesting twist in the story.

- ✓ The Wells of Initiation are located at Quinta da Regaleira, Portugal, and are a UNESCO World Heritage site. Fortunately, Portugal has not involved itself in a European war since WWI and has otherwise escaped widespread destruction.

- Nine Landings: When the Kairotic Moment is triggered, all Aspects of the triggering position are immediately checked for ‘conversion’ to the Aspect that triggered the Kairotic Moment. There is a 25% chance that each Aspect currently on the Public Space will immediately change to the key Aspect of the Kairotic Moment. If converted, they will be replaced on their Monad by the key Aspect as if they were newly Exposed Aspects (see *A Bustle in Your Hedgerow*, 2 Culture, p. 365, *supra*) and will thereafter ‘age-out’ normally.

As this is not part of a Power Activation, and due to the nature of the event, it is not likely that Enlightenment should be applied to reroll Aspect conversions.

- ✓ While not ‘destroying’ Fuzzy Groups, the sudden change in Aspects might cause the Fuzzy Group to become unusable for the purpose for which it was formed. Likely, changes in Aspects will destroy a Zeitrice formation. During the time of the Kairotic Moment, Writs that use the key Aspect will be easiest to activate and most powerful.
- Winded: It is vaguely possible that no pieces of the key Aspect will be on the Public Space when the Kairotic Moment is triggered; this could occur if two or more positions share the same Aspect on their Aspect Lists (blame this mess on the other guy!). The more positions that share the same Aspect, the more likely and the sooner it will trigger the Kairotic Moment. If the Concierge allows the Kairotic Moment to trigger, *it is irrelevant if any pieces of the key Aspect are currently on the Public Space* of the target position(s), the ‘conversion’ process will still happen (which kind of solves the problem...).
- Rose of the Winds: During the course of the Kairotic Moment effect, there is a chance that each Aspect that is Exposed by the position will instead of the chosen Aspect become the key Aspect of the Kairotic Moment. The chance for each is equal to the current intensity level times 10%.<sup>6</sup>

This may constitute a ‘failed die roll’ that can trigger the use of Enlightenment if it has been dedicated to this Power Activation.

- ✓ If the key Aspect of the Kairotic Moment is Exposed by activation of the Culture Power for the purpose of Exposing Aspects, the chance of Exposing the Aspect is enhanced by the addition of the current Intensity Level times 10%, thus, at Intensity Level 3, the chance of Exposing the key Aspect is 80%.

---

*“Beyond a certain point, the whole universe becomes a continuous process of initiation.” – Robert Anton Wilson*

---

---

*“Bereavement is the deepest initiation into the mysteries of human life, an initiation more searching and profound than even happy love.”*

– Dean William Ralph Inge

---

---

*“...spirituality alone will not take a man far in the Mysteries; he must have intellectual powers as well.” – Dion Fortune, What Is Occultism?<sup>7</sup>*

---

**Down the Rabbit Hole:** Dion Fortune (d. 1946) was a prominent female occultist in England in the early 20<sup>th</sup> Century. Richard Rohr is an American Franciscan Friar and ordained Roman Catholic priest. Robert Anton Wilson was a self-described ‘agnostic mystic.’ William Ralph Inge was an Anglican priest, Professor of Divinity and Dean of St. Paul’s Cathedral in London.

Rhetorical Questions: When you read above that Dion Fortune was an early 20<sup>th</sup> Century female occultist, did her words suddenly have less impact? When you read that Richard Rohr and Dean William Ralph Inge were ordained Roman Catholic and Anglican priests, were you relieved? When you read that Robert Wilson Anton was a ‘self-described agnostic mystic,’ did your eyes roll? Do any of the feature quotes above intuitively strike you as ‘wrong’? You didn’t think this was going to be easy, did you?

Spirituality without intellect becomes superstition:

- ✓ “When you believe in things that you don’t understand, Then you suffer, Superstition ain’t the way” – Stevie Wonder, “Superstition” (1972).

Yet it will always persist, because much of what humans believe is unfalsifiable (“This isn’t right. It’s not even wrong.” – Wolfgang Pauli, see also FOURTH DEGREE OF SEPARATION, 3 Fallen to Earth, p. 1543, *infra*). Can you ‘prove’ or ‘disprove’ that you had seven years of bad luck because the 13-month old baby broke the mirror, no matter how farfetched? This is no different than religion and no different than the Minbari belief about human souls in Babylon 5.

Rhetorical Question: Is death a Kairotic Moment? How opportune and teachable is death?

**Unfinished Well:** There are four opportunities for a Kairotic Moment to affect (or infect) the Aspect pieces of another position (this does not apply to Constructural Elements, *ut supra*):

- 1) Balkanized colony planets,
- 2) Sharing the same colony system,
- 3) Ships returning with inactive Constructural Elements that cannot be reactivated (as described in Wave Motion, *et seq.*, 2 Kairotic Moments, p. 1433, *supra*), i.e. **apostasy** due to contact with another position’s Kairotic Moment, and
- 4) Shared Meanings and MegaCorporations (see 2 Corporations generally, *supra*).

As discussed in Tsunami, 2 Kairotic Moments, pp. 1434-1435, *supra*, it is quite debatable if a Kairotic moment for one species translates to another, but there are *possible emergent effects* on the subsequent recipients, and thus, it is possible, but limited in the game and serves mostly game-story purposes.

- ✓ “You’ll have some fun now with me and all the gang, Learning from each other while we do our thing...” – Fat Albert television show (1972-1985) theme song (performed by Michael Gray, Kim Carnes and Edward Fournier).<sup>8</sup>
- Frontier Outpost of Syene: Aspects adjacent on their owner’s Public Spaces to any **alien colonies** on a Balkanized colony planet or in the same starsystem with a Friendly or Naturalized colony of the position affected (afflicted) with a Kairotic Moment may be affected.
  - ✓ During the initial trigger of the Kairotic Moment described in Nine Landings, above, there is a 15% chance that each Aspect *adjacent to* **alien colonies** on their owner’s Public Space, may either be converted to the key Aspect of the Kairotic Moment (if it is on the alien’s Aspect List), or to a random Aspect (present on the alien’s Aspect

- List) or simply eliminated. Ten percent is subtracted if the **alien colony** is on a different planet in the same system, making the chances of effect negligible (5%).
- ✓ During the time that the Kairotic Moment is in progress, there is a chance equal to the current Intensity Level times 5% that an Exposed Aspect placed next to the **alien colony** will change to another Aspect or fail before being placed, if the **alien colony** is on a Balkanized planet with a Friendly or Naturalized Colony of the Kairotic Moment position. If the **alien colony** is in the same system, but not on the same planet, the chance is reduced to a percentage equal to the current Intensity Level of the Kairotic Moment (i.e. 1%, 2%, or 3%).
  - ✓ However, 20% is added to either of the preceding chances (after other adjustments) if the Kairotic Moment position's colony is also Terra Sancta for that Kairotic Moment.
    - For example, the M.A.N. position is undergoing a Kairotic Moment at **Intensity Level 3**: 1) during the initial trigger, **alien colonies** on the same planet as a Friendly or Naturalized M.A.N. colony have a 15% chance (this is not affected by Intensity Level) of each adjacent Aspect either changing to another Aspect or being eliminated, the chance is reduced to 5% if the **alien colony** is on a different planet; 2) during the alien's Regular Turn, there is a 15% chance that newly Exposed Aspects placed adjacent to the colony planet on the alien's Public Space will change to another Aspect or fail before being placed (this occurs after a successful roll to expose the Aspect) if the colony is on the same planet as a Friendly or Naturalized colony of the position undergoing the Kairotic Moment, or a 3% chance if on a different planet in the same system.
    - If the colony owned by the position undergoing the Kairotic (cathartic) Moment (e.g., "weeping martyrs" – Beowulf (2007)) is also the Terra Sancta of the event, 20% is added to each of the chances described above, so that the chances become 35%, 25% and 23%, respectively.

Players of alien positions probably should not get angry at players of another position due to the spreading effects of a Kairotic Moment. A Kairotic Moment, more so than a News Event even, is not caused by the position that is experiencing it. But historically, there have almost always been foreign repercussions in such situations, e.g., the Jewish-Roman Wars and the War of the First Coalition (these examples are offered in the loosest sense of major sociopolitical change combined with other factors drawing major foreign reactions).

- ✓ The ancient trading city of Syene (previously Swenett, now Aswan) is the "frontier outpost" mentioned in Carl Sagan's story of Eratosthenes at the Library of Alexandria in *Cosmos*, Episode 1. Syene was at the 'head of the Nile,' the southernmost reach of Egyptian civilization (generally), the southern gateway to Egypt just north of the Tropic of Cancer. It is now at the head of Lake Nasser to the south, one of the largest manmade lakes in the world, created by the Aswan Dams constructed in the 1960s.
- Ship of Fools: Each ship:
- 1) With an inactive Constructural Element that is blocked from reactivation due to **apostasy** from interaction with an **alien colony** experiencing a Kairotic Moment (see Wave Motion, 2 Kairotic Moments, p. 1433 *supra*),

- 2) That “Unloads, Loads or Transfers Cargo, Population, Supplies or any Enhancements (including Looting and Trucking)” at any Friendly or Naturalized colony owned by its position, (*Id.*)
- 3) Has a 25% chance, at the end of the Regular Turn, of causing any *Aspect* adjacent to the colony to either change to something else or be eliminated (this occurs after elimination due to aging).

This effect does not occur if the Power Activation fails, and may be subject to Enlightenment if Enlightenment was dedicated in the Power Activation and some rerolls remain unused.

This is different from the effects on colony Constructural Elements from interaction with Kairotic Moment position’s ships described in A Total Gurgler, 2 Kairotic Moments, p. 1433, *supra*. The effects described above come from *friendly ships* that have interacted with colonies currently undergoing a Kairotic Moment, then return to colonies owned by their position. The effects are also different because they effect Aspects on the Public Space, not Constructural Elements on a ship or colony.

- ✓ “Mad is the captain of Alpha Centauri, We must be out of our minds, Still we are shipmates bound for tomorrow, And everyone here’s flying blind ... Mad is the crew bound for Alpha Centauri, Dreamers and poets and clowns, Bold is the ship bound for Alpha Centauri, Nothing can turn it around!” – Crystal Gayle, “We Must Believe in Magic” (1977).
  - This performance is a Muppet Show classic, available on YouTube.
  - Sir Edward Coke (1532 – 1634) famously wrote something puerile about a ‘ship of fools’ in the front cover of his copy of Sir Francis Bacon’s *Novum Organum* (1620) for which he has been roundly ridiculed since.
- Diplomacy in the Hive of Scum & Villainy: Ten percent is added to all of the preceding chances (i.e. as described in *both* of the preceding sections) of changing or eliminating adjacent Aspects if the **alien colony** in question is located on a planet that is Hosting a MegaCorporation, regardless of the current ownership or Native Population Type of the colony that is Hosting. Additionally, five percent is added to all of the preceding chances if the alien position and the position experiencing the Kairotic Moment have a Shared Meaning.

---

*“Can’t stop falling  
Heartaches calling  
Finds you after the fall  
Saints or sinners  
Take no prisoners  
What’s left after you fall  
No not much no!”*

– Journey, “After the Fall” (1983)

---

**After the Fall:** When the Kairotic Moment has completed, run its course, passed – see Intenseit, 2 Kairotic Moments, p. 1430, *supra* – the Aspects Lists of all positions that had the Key Aspect on their List may change.

- ✓ As has been noted throughout GGDM, words and concepts such as smile, technology, emotion, are new to our culture and date from the 16<sup>th</sup> and 17<sup>th</sup> Centuries and later. The modern concept of divinity may have been shaped by sailing the vastness of the oceans. Even the modern concept of ‘evil’ is much different than it was before emotion entered our worldview (see discussion, *Modernity Machines*, 1 Technology, p. 696, *supra*). Similarly, the expectation of romantic love crept into marriage and reproduction during the Renaissance, which had before been the province of family alliances, business and practical utility. Other ideas have deflated, such as the ‘majesty’ attached to royalty. The process of pragmatic ethics has applied to our sense of right and wrong, evolution has affected religion, the Moon and Mars have become part of our Public Spaces. Ground Zero means now something much different than it did when I grew up in the Cold War. And if it weren’t for science-fiction imagination, the word ‘temporal’ would still mean now, and not reference time travel, and so on.

When the Kairotic Moment has passed, there is a 3% chance per Regular Turn Cycle elapsed since the trigger, that each Aspect on the Aspect Lists of the positions that had the Key Aspect – including the Key Aspect – may change to another Aspect. Any pieces of that Aspect on the Public Space at the time will simply change to the new Aspect. It’s messy, but necessary.

Thus, Aspect Lists may change throughout the game, and this may affect Writs, Fuzzy Groups and even Government Titles. Changes in Aspects should be also reflected on the master list for the next Kairotic Moment.

- ✓ It is possible that the Concierge may do this manually, with or without die rolls, plugging in new Aspects that fit the story.

---

*“So what is a ‘cosmopolitan’? It’s a cousin to ‘elitist,’ but with a more sinister undertone. It’s a way of branding people or movements that are unmoored to the traditions and beliefs of a nation, and identify more with like-minded people regardless of their nationality. ... In the eyes of their foes, ‘cosmopolitans’ tend to cluster in the universities, the arts and in urban centers, where familiarity with diversity makes for a high comfort level with ‘untraditional’ ideas and lives.”*

– Jeff Greenfield, “The Ugly History of Stephen Miller’s Cosmopolitan Epithet,” *Politico Magazine*, August 3, 2017

---

*“Alexandria was the greatest city the Western world had ever seen. People from all nations came here to live, to trade, to learn. On a given day these harbors were thronged with merchants and scholars, tourists. It’s probably here that the word ‘cosmopolitan’ realized its true meaning of a citizen, not just of a nation but of the cosmos. To be a citizen of the cosmos.”*

– Carl Sagan, *Cosmos*, Episode 13

---

**Hitting the Bottom Well:** Kairotic Moments in GGDM are disappointing;<sup>9</sup> they are neither moments nor particularly kairotic. They are like the picture of the guy diving into an Olympic sized pool that has no water; they are like a hotdog with no bun or anything to put on it – unless you are starving, a hot dog is about the bun, cheese, chili and condiments for a quick guilty lunch or good times in the park with someone! Can you hear the music in your head?

- ✓ “Saturday in the park, I think it was the Fourth of July,” Chicago, “Saturday in the park” (1972).

Hot dogs by themselves aren’t very appetizing, and neither are Kairotic Moments in GGDM.

In an attempt to simulate deep social change, the game mechanics of the Kairotic Moment create extended chaos that has some power to spill over to other positions. But it does not create long-term change, only simulates that it might have happened through ‘conversion’ of Aspects and Constructural Elements. This is true generally of GGDM throughout, while much is said, little is accomplished, the parts and structure of civilizations are named and presented deductively, but mechanically, the game is an exercise in strangely named parts and numbers, pushing pieces around the Public and Galactic Spaces; without interaction and emergent storytelling, it is like a clown-car sized boiled hotdog.

- **Silence of Science Fiction:** Rarely does science fiction literature – at least the mid-20<sup>th</sup> Century stuff I read in my youth – dip into the (potentially explosive) discussion of organized religion; other than Canticle for Leibowitz, Dune and Battlestar Galactica – the latter skirted around organized religion, only showing a vague polytheistic religion and the priestess – Dr. Who’s Church of the Papal Mainframe (aka Church of the Silence) is definitely one of the oddest entries on the subject of spacefaring churches. Of course, nothing is as it appears in Dr. Who and further development of the Church’s back history would be interesting.

I am apparently not the only one who has noticed this:

- ✓ “Science fiction will sometimes address the topic of religion. Often religious themes are used to convey a broader message, but others confront the subject head-on – contemplating, for example, how attitudes towards faith might shift in the wake of ever-advancing technological progress, or offering creative scientific explanations for the apparently mystical events related in religious texts (gods as aliens, prophets as time travelers, etc.)....

Some science fiction works portray invented religions, either placed into a contemporary Earth society (such as the Earthseed religion in Octavia Butler’s Parable of the Sower), or in the far future (as seen in Dune by Frank Herbert, with its Orange Catholic Bible). Other works examine the role of existing religions in a futuristic or alternate society. The classic Canticle for Leibowitz explores a world in which Catholicism is one of the few institutions to survive an apocalypse, and chronicles its slow re-achievement of prominence as civilisation returns....

Orson Scott Card has criticized the genre for oversimplifying religion, which he claims is always shown as ‘ridiculous and false.’” – Wikipedia article, “List of Religious Ideas in Science Fiction,” captured August 9, 2018.

I really don’t see the point of science-fiction’s aversion to the issue. If science-fiction writers want to be literary – that is, talk about themes and issues universal to humanity – it cannot shy from religion. If science-fiction writers are afraid of offending someone’s religion – or

even their own – they should probably pursue another vocation. If science-fiction editors and publishers are afraid of offending the market – well most people who read sci-fi works are not religious fundamentalist, and science-fiction is notably not popular outside the West.

- ✓ Star Trek: The Next Generation occasionally wandered into Absurdity; Dr. Crusher and Data awaken a 20<sup>th</sup> Century ‘rock star’ Stan who is one of three people found cryogenically frozen in an old Earth ship:
  - **Dr. Crusher:** There was ... deterioration in every system of his body, probably from chemical abuse. Unbelievable! **Capt. Picard:** Sounds like he hated life. But he had himself frozen, presumably to go through it all again. **Dr. Crusher:** Too afraid to live, too scared to die. – ST:TNG “The Neutral Zone” (1988).<sup>10</sup>
  - In this episode at the end of the first season, the writers and producers tried hard to demonstrate how much the mental daily lives of 24<sup>th</sup> Century humans were different from those of the Cold War 20<sup>th</sup> Century. As usual, it was easier to say *what is not* in the 24<sup>th</sup> Century as compared to the 20<sup>th</sup> Century than *what is*; that is, exactly how people live day to day in the 24<sup>th</sup> Century existence. To do that would require answers to the Void.

---

*“The sacrifice of the intellect ... is a concept associated with Christian devotion, particularly with the Jesuit order. It was the ‘third sacrifice’ demanded by the founder of the Jesuits, St. Ignatius Loyola ...*

*The concept was taken up in a more individualistic sense by the Jansenist thinker Blaise Pascal, and particularly by the existentialist thinker Søren Kierkegaard, who thought that the act of faith requires a leap into the void, which amounts to a sacrifice of the intellect and reason. This was quintessentially expressed in the traditional dictum, **credo quia absurdum**, ‘I believe because it is absurd.’ This view of faith is rejected by the Catholic church, which regards reason as a path towards direct knowledge of God.*

*The phrase is often used in a pejorative sense in writings on the psychology and sociology of religion – e.g.: Max Weber states: ‘There is absolutely no ‘unbroken’ religion working as a vital force, which is not compelled at some point to demand the credo non quod, sed credo quia absurdum – the ‘sacrifice of the intellect.’ According to Paul Pruyser, ‘Sacrifice of the intellect, demanded by a good many religious movements and blithely if not joyously made by a good many religious persons, is surely one of the ominous features of neurotic religion.’”*

– from Wikipedia article, “Sacrifice of the intellect,” captured February 23, 2019  
(emphasis in original)

---

**Leap Into the Void:** One of the color fillers that an astute observer might feel is missing is ‘faith.’ GGDM does not attempt to simulate ‘faith’ beyond the general function of loyalty (or perhaps disloyalty when the existing civilization or powers violate one’s faith).

It should be clear by now that the writer of this simulation has little faith (in a religious sense) and none to share (and is not here to dispense Peter Pan advice), and neither does much of science-fiction literature or empirical positivist science: Faith is a thing we use to voluntarily blind ourselves to the Existential Void.<sup>11</sup> How does one simulate faith?

- ✓ For example, character stats in many role-playing games include such attributes as intelligence and wisdom (or some other combination) reduced to numbers (reduced to the ontic) on whatever scale the game uses. Back when I was a player, there was endless debate about what is meant by the wisdom stat, which usually devolved into judgment-from-experience-type arguments – even though most D&D starting characters are teenagers (as opposed to Traveller RPG). But what character stat (or in GGDM, civilization stat) is going to indicate whether the player character is prone to *sacrificium intellectus*? Do most D&D players even know what that means? Is this the point then of the attempts at ‘Christian Dungeons & Dragons’ games?

One might assume that the group’s cleric and paladin must have faith of some sort, but then there is magic and spells they receive every day just for being ... whatever they are (from apparently low-hanging gods & divine petsitters), and that is rather empirical (factual, demonstrable, repeatable), even if fickle and not a matter of faith. Faith is not something that is clearly necessary for even clerics in D&D, it is more of a Roman-style *quid pro quo* religious transaction or *a divine grant of arms*, than religion. No, the players themselves, through the logic of their character (such as it is) must decide whether faith exists.

*Sacrificium intellectus* is related to anti-intellectualism, they are at least close cousins; one says we cannot know, the other that knowing and understanding are contemptable, both call it pretentious. Compare *sacrificium intellectus* to Voltaire’s “Those who can make you believe absurdities can make you commit atrocities.” See full feature quote in 1 Reformation, p. 1383, *supra*. Voltaire had absurdities long before Camus was born!

- ✓ “Now, from the point of view generally accepted in the sciences, that of an unbiased striving for truth, it is not clear why one should bring oneself to a *sacrificium intellectus*, to an abandonment of *critical* method, simply because traditional articles of belief might have to be jettisoned, even though they have grown dear to our hearts. Any scientist who is prepared to sacrifice the rules of the game when one of his pet convictions is at stake voluntarily excludes himself from the scientific enterprise, even if he is institutionally defined by it.” – Hans Albert, Treatise on Critical Reason (1985), p. 145 (emphasis in original) (found on Google Books).
- ✓ “No thank you. A God that would demand the sacrifice of the intellect or even the crucifixion of the intellect is not a God worthy of worship. Imagine moving at death from the shadow lands of this life into the divine presence only to find that God is nothing but irrational power personified, the apotheosis of arbitrariness. What could be more horrible? Far, far better would be to be annihilated at death.” – Bill Vallicella, “Sacrificium Intellectus,” Maverick Philosopher (blog), March 14, 2010.
- Simulating Faith: I have not really put my mind to the task, but it cannot be properly said that faith cannot be simulated because it is irrational, when we also consider *war* to be *irrational* and there are tens of thousands of war simulation games (as is GGDM), both commercial and official military training programs (e.g., ARTBASS in which I have participated) and computer modeling and projection (e.g., as in those used for nuclear war projections, as seen in movies such as *By Dawn’s Early Light* (1990) or *Wargames* (1983)). Whether, when, and where ‘faith’ enters into the game is color that is left for the participants to fill between the lines.

- ✓ “Faith is the belief in something for which there is no conclusive evidence. To demand concrete proof of God’s existence contradicts the very notion of faith, which requires a person to examine their interior world rather than anything on the outside. But faith does not preclude logic. Choosing to demonstrate faith in humanity’s ultimate goodness, despite all the evidence to the contrary, allows us to embrace certain religious teachings. But it does not relieve us of the responsibility of choosing which teachings express that faith and dismissing those that do not.” – Kareem Abdul-Jabbar, *New York Times*, January 11, 2017.
- Faith Aspects: Faith is probably part of supra-legitimacy and happiness meta-aspect. ‘Faith’ could appear as an Aspect in GGDM. Recall that Aspects are not, strictly speaking, emotions, but are more like (in one sense) glimpses of a civilization that appear under certain circumstances and at certain times. However, because Aspects can be Exposed regularly, they may also be considered part of the underlying ‘zeitgeist’ of the civilization. Thus, ‘faith’ as an Aspect could be regarded as either or both if the participants want to allow it in the game.
- Philosophical Suicide: Can one have ‘faith’ without *sacrificium intellectus*? Five centuries ago, the answer would probably have been in the negative, or at least a qualified negative. However, the term ‘faith’ has been secularized and disarmed, such that one can now express rational faith in something (even if ironically) like a friend, or an old reliable vehicle, without resort to religious meanings. In the view of some (a shrinking minority), ‘faith’ has been cheapened thus and I am certain Dietrich Bonhoeffer would have been one of those.
  - ✓ Thus if ‘Faith’ is an Aspect on the Aspect List of one or more positions, participants may eventually need to address whether it is taken in a current secular sense or in the sense of *sacrificium intellectus*?

Overlapping the life and times of Bonhoeffer was Albert Camus, who considered *sacrificium intellectus* a form of ‘philosophical suicide’ in which one gives up their reason, their volition, becoming – in the words of Yahweh in Robert Heinlein’s *Job: A Comedy of Justice* (1984) – “golems.” That places Camus in the Voltaire tradition, but a slightly different problem:

- ✓ “From this point of departure he proceeds to his critique of the different ways of ‘philosophical suicide,’ which he characterizes as so many ways of speculative evasion. All existential thinkers quoted by Camus have realized the futility of reason, all them are seen to have recourse to some transcendent entity as *raison d’être*: Husserl to his ‘extratemporal essences’ of innumerable phenomena, Chestov and Kierkegaard to a deity whose loftiness consists precisely of His incomprehensibility, indeed in His inconsistency, arbitrariness, inhumanity. Chestov is quoted as saying: ‘We address ourselves to God only to obtain the impossible; as to the possible, humans suffice.’ Such deity, to Camus, shows all the features of the absurd; He demands, in the old way, the *sacrificium intellectus*. In point of fact, it could be said that Tertullian’s *credo quia absurdum* has arrived, in the modern situation, at a *vivo quia absurdum*. ... Camus rejects the ‘philosophical suicide’; he refuses to accept any transcendent ... but seeks to remain within the pale of this world and to maintain himself on his scarce certitudes. He likewise discards ... physical suicide, because this also, in its ultimate consequence, resolves, dissolves the absurd, implying acceptance. ‘The point is, to die irreconciled and not of one’s own accord.’” – Erich Kahler, *The Tower and the Abyss* (1957) (emphasis in original) (available free on Google Books).<sup>12</sup>

- “Chestov” is Lev Shestov (1866-1938), Russian existentialist philosopher, b. Kiev (Russian Empire), d. in Paris, France.
- Compare, “...a deity whose loftiness consists precisely of His incomprehensibility, indeed in His inconsistency, arbitrariness, inhumanity.” (*ut supra*) to The Urantia Book:
  - “God is not hiding from any of his creatures. He is unapproachable to so many orders of beings only because he ‘dwells in a light which no material creature can approach.’ The immensity and grandeur of the divine personality is beyond the grasp of the unperfected mind of evolutionary mortals.” (Part 1, Paper 5 from Wikiquotes, but the book is free online).
  - Cf. to Robert Heinlein, Job: A Comedy of Justice (1984).

*“The ending finally reveals the motive behind Ken Park’s suicide: he has impregnated his girlfriend who responds to his question asking if she wanted to keep it by asking if he wishes he’d been aborted himself. Realizing that he’d rather never have been born, he sets out to the skate park to kill himself.”*

– from Wikipedia article, “Ken Park,” captured July 29, 2019

**The Modern Spectre-rum**: Absurdism is considered to be in a spectrum with existentialism and nihilism (Camus denied being an existentialist), anti-natalism is probably considered nihilistic. Most people think of nihilism as irrational, a teenaged attitude toward life, but anti-natalism has many rational arguments (e.g., Kantian imperative). The film ending of Ken Park (2002) is anti-natalist, but demonstrates a divergence from Camus’ absurdism: He commits suicide. Camus might ask, once you have been born – without consent and against your will – what is the point of committing suicide? The probably-not-accidental social implications of Ken Park is another teen pregnancy with the father dead – just like in any war. On the other side, the three remaining teens in the story have a threesome encounter – possibly a symbolic hedonistic act related to Camus’ early writings, demonstrating the opposites of anti-natalism and absurdism.

- ✓ The film was banned by the Australian government before it could be screened at the Sydney Film Festival. That’s always good publicity for a film. While the issue is explained in legalese, a maze of regulations, (<https://www.artslaw.com.au/article/the-banning-of-ken-park-a-brief-review-of-the-facts-and-issues/>) one is left to wonder if all of this is cover for any range of visceral objections to unsimulated sex (pornography), anti-natalism, hedonism, absurdism, or a general dislike of the entire disturbing, artistic subject treatment in the film.

**Sebastian:** *The city was drowning in decay .. chaos, immorality. A message needed to be sent, etched in blood, for all the world to see: a warning. In the pursuit of my .. holy cause, I .. did things, terrible things, unspeakable things. The world condemned me, but it didn’t matter, because I believed I was right and the world was wrong. I believed I was the divine messenger. I believed I was—*

**Sheridan:** *Chosen?*

**Sebastian:** .. I was .. found by the Vorlons. They showed me the terrible depth of my mistake, .. my crimes, my .. presumption. I have done 400 years of penance in their service. A job, for which they said I was ideally suited. Now, perhaps, they will finally let me die.

**Sheridan:** I think that might be wise.

**Sebastian:** Good luck to you in your holy cause, Captain Sheridan. May your choices have better results than mine. Remembered, not as a messenger, remembered not as a reformer, not as a prophet, not as a hero, not even as Sebastian. Remembered only .. as Jack.

– Babylon 5, “Comes the Inquisitor” (1995) (final scene)<sup>13</sup>

## Endnotes.

<sup>1</sup> Citation: “Critical mass, which is sometimes referred to as tipping points, is one of the most effective mental models you can use to understand the world. The concept can explain everything from viral cat videos to why changing habits is so hard. Sometimes it can seem as if drastic changes happen at random. One moment a country is stable; the next, a revolution begins and the government is overthrown. One day a new piece of technology is a novelty; the next, everyone has it and we cannot imagine life without it. Or an idea lingers at the fringes of society before it suddenly becomes mainstream.

As erratic and unpredictable as these occurrences are, there is a logic to them, which can be explained by the concept of critical mass. A collaboration between Thomas Schelling (a game theorist) and Mark Granovetter (a sociologist) led to the concept’s being identified in 1971. Also known as the boiling point, the percolation threshold, the tipping point ... critical mass is the point at which something (an idea, belief, trend, virus, behavior, etc.) is prevalent enough to grow, or sustain, a process, reaction, or technology. As a mental model, critical mass can help us to understand the world around us by letting us spot changes before they occur, make sense of tumultuous times, and even gain insight into our own behaviors. ... In sociology, a critical mass is a term for a group of people who make a drastic change, altering their behavior, opinions or actions. In some societies (e.g., a small Amazonian tribe), just a handful of people can change prevailing views. In larger societies ... the figure must usually be higher for a change to occur.

The concept of a sociological critical mass was first used in the 1960s by Morton Grodzins, a political science professor at the University of Chicago. Grodzins studied racial segregation – in particular, examining why people seemed to separate themselves by race even when that separation was not enforced by law. His hypothesis was that white families had different levels of tolerance for the number of people of racial minorities in their neighborhoods. Some white families were completely racist; others were not concerned with the race of their neighbors. As increasing numbers of racial minorities moved into neighborhoods, the most racist people would soon leave. Then a tipping point would occur – a critical mass of white people would leave until the area was populated by racial minorities. This phenomenon became known as ‘white flight.’” – Shane Perry, “Critical Mass and Tipping Points: How To Identify Inflection Points Before They Happen,” Farnham Street (blog), July 2017.

✓ See also Excerpt of Sweet Trial – Closing Arguments in Tribes in the Night Sky, *supra*.

<sup>2</sup> Commentary: It’s like wearing a military uniform – it’s not ‘supposed’ to be comfortable, your happiness and comfort are not the military’s first concern. Nor is it a concern of the universe or even the rest of humanity.

✓ A co-worker at the law firm once commented that our negative view of social media (and of the stupid things people say on social media) is due to the fact that we work in a law firm and handle employment cases.

<sup>3</sup> Commentary: One of the very first points that I taught young attorneys who worked on our FINRA cases is that *in order to work in the financial industry, you must be obsessed with money*. If I were obsessed with money, I would have become a stock broker or CFA instead of a paralegal. This is the reason they are heavily regulated and the reason why FINRA is a corrupt, incompetent, and untrustworthy (or at least inherently suspicious, think about it) arbitrator of financial industry disputes.

✓ For example, the real reason why pre-hearing depositions are not allowed in FINRA arbitration is not cost or expediency, it is so that industry witnesses can lie, fudge, and change their story while testifying at the arbitration hearings, as long as there are not documents or other ways to catch them lying. This is also a

reason why regulations have made the documentation requirement heavy in the industry. Plaintiff attorneys in FINRA cases become good at catching the little lies and combing voluminous documents.

It is also the reason that employee forgivable loans (EFLs) are common recruiting tools and are the way in which the industry controls newly-hired brokers and financial advisors. To understand the financial industry, and FINRA cases, one must understand the industry's massive rewards, the heavy regulation, and neurotic obsession with money. People who work in the financial industry are not smarter than or do not work harder than people who work in a law office, and they are certainly not 'better people' because they make money out of other's money, but they earn (and spend) vastly more income because of where they work.

<sup>4</sup> Commentary & Citation: And how about this: Some people have asserted that Jesus was influenced in his preaching by contact with Buddhist monks. This is reflected in the dialogue of the movie *The Man from Earth* (2007), though I had heard the idea previously, since we know little of Jesus life for the first 30 years and much of what we know might have been made up afterward by people who never knew him. It's almost like the second Big Bang.

<sup>5</sup> Citation: "With exceptions so rare they are regarded as miracles of nature, successful democratic politicians are insecure and intimidated men. They advance politically only as they placate, appease, bribe, seduce, bamboozle, or otherwise manage to manipulate the demanding and threatening elements in their constituencies. The decisive consideration is not whether the proposition is good but whether it is popular – not whether it will work well and prove itself but whether the active talking constituents like it immediately. Politicians rationalize this servitude by saying that in a democracy public men are the servants of the people." – Walter Lippmann, *Essays in the Public Philosophy* (1955).

<sup>6</sup> Citation: "The Rosicrucian manifestos heralded a 'universal reformation of mankind,' through a science allegedly kept secret for decades until the intellectual climate might receive it. Controversies have arisen on whether they were a hoax, whether the 'Order of the Rosy Cross' existed as described in the manifestos, or whether the whole thing was a metaphor disguising a movement that really existed, but in a different form. In 1616, Johann Valentin Andreae famously designated it as a 'ludibrium.' Some esoteric scholars suggest that this statement was later made by Andreae in order to shield himself from the wrath of the religious and political institutions of the day, which were intolerant of free speech and the idea of a 'universal reformation,' which the manifestos called for. ... By promising a spiritual transformation at a time of great turmoil, the manifestos influenced many figures to seek esoteric knowledge. Seventeenth-century occult philosophers such as Michael Maier, Robert Fludd, and Thomas Vaughan interested themselves in the Rosicrucian world view. According to historian David Stevenson, it was influential on Freemasonry as it was emerging in Scotland." – from Wikipedia article, "Rosicrucianism," January 31, 2019.

- ✓ The 'esoteric scholars' above may have seen parallels to The Grand Inquisitor by Dostoyevsky.
- ✓ The 'Rosy Cross' is part of the design of the Rose of the Winds at the bottom of the Wells of Initiation at Quinta da Regaleira, Portugal.
- ✓ Rosicrucianism is an example of "an intellectual mutation that had been taking root since the Thirty Years War" and the doubts sown by "the Jesuit image of a near utopian civilization governed by moral sages uncorrupted by intolerance, passion, or material desire" described by Prof. Raymond Birn in the quote in 2 Kairotic Moments, p. 1433, *supra*.

<sup>7</sup> Commentary: What is Occultism appears to be a later book of collected writings by Dion Fortune that was gathered and edited by Garth Knight in the 1990s, approximately 50 years after her death.

<sup>8</sup> Commentary & Citation: As discussed previously in *More Than a Feeling*, 1 Temporal Technology, pp. 808-809, *supra*, unless you are Peter Pan, you cannot refuse to grow up, it will just happen. *There is but one chance at parenting and educating children and it must be done right, there are no do-overs, and the consequences are profound for most of the next century.* It is thus a crime against our society when children are warming seats and being passed along in school, but it's also an inevitability because they cannot be held back for long and will eventually graduate or drop out, into adulthood. This very same reason is the only reason that might justify interference in the development or affairs of another alien sapient species (see discussion of Minor Races in *Mathó Thípila* 4 Diplomacy, p. 1140, and *Metalaw* in 3 Diplomacy, *supra*), because it *seems* inevitable that short of extinction (or because of impending extinction on Earth, as in the 2014 movie *Interstellar*), humanity will eventually break out into space colonization and possibly interstellar travel. But, if our history has taught us anything, we must be very careful, very suspicious of our intentions and hold sacrosanct the existential space of other species; there is simply *no way to retroactively construct European conquest and colonialism as anything intended to be beneficial to the natives or their civilizations or humanity* – and Christian missionary activities, conversion and evangelism makes the farce malodor.

- ✓ "If you would lift me up, you must be on higher ground." – Ralph Waldo Emerson.

<sup>9</sup> Commentary: Kairotic Moments, even rewritten during the final edit, are disappointing to me as the designer. GGDM doesn't have the tools to explain in any meaningful way – without players to make an emergent story from game mechanics – the problem set out in the beginning: The emergent effect of early Christianity on the entire Western worldview coming down to the present day, was the early Church part of the mechanism of change, or did it just happen along when Classic Antiquity was collapsing of its own absurdities, when the Great Migrations were reaching Europe, when the European-Mediterranean world was changing? It has no ability to explain the ripple changes of Buddhism spreading out from the mountain tops of Nepal, or the transition from Brahmanism to Hinduism, or the effect of Confucianism (a non-religious example) along the coasts of China. There is obviously something missing or mismatched in this process, like having a lug wrench when you need a hex key. GGDM, without human players, has failed to turn one into the other, to take the outside in, and turn the inside out.

<sup>10</sup> Commentary & Citation: Later Stan tries to get Dr. Crusher to give him recreational drugs, tries to get Data to have a party ... because he can't stand silence, being alone with himself and not doing anything. Stan is the type of 20<sup>th</sup> Century stock character Alanis Morissette sang about seven years later:

- ✓ “Why are you so petrified of silence? Here can you handle this? [music stops, moment of silence] Did you think about your bills, your ex, your deadlines, Or when you think you're going to die? Or did you long for the next distraction?” – Alanis Morissette, “All I Really Want” (1995).

<sup>11</sup> Commentary: Whatever ‘faith’ I have might be called negative or pessimistic faith: I am sure that somehow something stupid and annoying, and totally pointless except for the foregoing, will happen whenever I try to do anything (whether important or not), including GGDM. Except that, is it faith if it is based on living experience and repeated observation? I believe this is true for all of humanity, but we go about pretending it isn't so. How many times does *the* stupid thing have to happen before it is no longer random or coincidence or just bad luck? I would not be surprised if something inexplicably asinine occurred in relation to GGDM. Do I think the universe is malevolent toward us? It makes as much sense as any other explanation and is consistent with a lifetime of observation, especially those who claim oppositely that the universe is benevolent toward us because we exist, because life evolved on the Earth, because abiogenesis happened.

- ✓ The Existential Void is not Camus' “philosophical suicide”; it is not a benevolent deity or a substitute for one, it is not even a malevolent form, it is nothing, nothingness, the inherent meaninglessness of the universe against which emergent humans build meaning. If this makes it a benevolent thing to you, then so be it, but if you happen to be on an EVA in orbit, take off your helmet and see how benevolent the universe really is to humanity.
- ✓ Nor should Mr. Case's four orders of natural phenomenon (and my trumpeting of it) be taken as a case of “philosophical suicide” in the Camus' sense. Mr. Case's four orders are simply a matter of observation, the same as that of Tyco Brahe and Johannes Kepler, and appear to have been derived from Comte with adjustments for the updated knowledge of his time. If you believe they demonstrate a higher benevolence or the hand of a deity, so be it, that's your faith. I renew the invitation for you to take in the freshness of space helmetless while on an EVA to test the benevolence of your faith.

<sup>12</sup> Commentary: News media highlights suicides and unintentional-intentional suicide by drug abuse and prescription drug overdosing by ‘celebrities’ and there seems to be a special sense of *schadenfreude* when the victim is a pornographic performer or hated criminal (in the 80s, it was Fundamentalist playing up suicides allegedly related to Dungeons & Dragons). Studies have shown that certain professions – most notably, ambulance drivers and paramedics – have higher than average rates of suicide. The correct sociological question to ask with celebrity, porn performer and famous criminal suicides is whether the rate of suicide in that group is greater than the population average, and whether we perhaps feel some satisfaction as a society when famous people die by suicide or overdosing?

<sup>13</sup> Commentary: Sebastian in Babylon 5 is Jack the Ripper, sent to test Captain Sheridan who is about to turn history. Babylon 5 explains the sudden disappearance or end of his murder spree in November 1888. Among the seven police suspects, six others identified by the press, and sixteen others listed as suspects identified by later authors, none are named Sebastian (from Wikipedia article, “Jack the Ripper suspects,” January 29, 2019). Thus, either J. Michael Straczynski was being careful to avoid historical figures or was saying everyone, all the theories, were wrong.

- ✓ From this scene, “you don't know Jack” acquired a special meaning for Babylon 5 fans.

## Day Million

### Excerpts from Short Story by Frederik Pohl

On this day I want to tell you about, which will be about a thousand years from now, there were a boy, a girl and a love story.

Now although I haven't said much so far, none of it is true. The boy was not what you and I would normally think of as a boy, because he was a hundred and eighty-seven years old. Nor was the girl a girl, for other reasons; and the love story did not entail that sublimation of the urge to rape and concurrent postponement of the instinct to submit which we at present understand in such matters. You won't care much for this story if you don't grasp these facts at once. If, however, you will make the effort, you'll likely enough find it jam-packed, chockfull and tiptop-crammed with laughter, tears and poignant sentiment which may, or may not, be worthwhile. The reason the girl was not a girl was that she was a boy.

How angrily you recoil from the page! You say, who the hell wants to read about a pair of queers? Calm yourself. Here are no hot-breathing secrets of perversion for the coterie trade. In fact, if you were to see this girl, you would not guess that she was in any sense a boy. Breasts, two; vagina, one. Hips, Callipygian; face, hairless; supra-orbital lobes, non-existent. You would term her female at once, although it is true that you might wonder just what species she was a female of, being confused by the tail, the silky pelt or the gill slits behind each ear.

Now you recoil again. Cripes, man, take my word for it. This is a sweet kid, and if you, as a normal male, spent as much as an hour in a room with her, you would bend heaven and earth to get her in the sack. Dora (we will call her that; her "name" was omicron-Dibase seven-group-totter-oot S. Doradus 5314, the last part of which is a color specification corresponding to a shade of green)—Dora, I say, was feminine, charming and cute. I admit she doesn't sound that way. She was, as you might put it, a dancer. Her art involved qualities of intellection and expertise of a very high order, requiring both tremendous natural capacities and endless practice; it was performed in null-gravity and I can best describe it by saying that it was something like the performance of a contortionist and something like classical ballet, maybe resembling Danilova's dying swan. It was also pretty damned sexy. In a symbolic way, to be sure; but face it, most of the things we call "sexy" are symbolic, you know, except perhaps an exhibitionist's open fly. On Day Million when Dora danced, the people who saw her panted; and you would too.

About this business of her being a boy. It didn't matter to her audiences that genetically she was male. It wouldn't matter to you, if you were among them, because you wouldn't know it—not unless you took a biopsy cutting of her flesh and put it under an electron-microscope to find the XY chromosome—and it didn't matter to them because they didn't care. Through techniques which are not only complex but haven't yet been discovered, these people were able to determine a great deal about the aptitudes and easements of babies quite a long time before they were born—at about the second horizon of cell-division, to be exact, when the segmenting egg is becoming a free blastocyst—and then they naturally helped those aptitudes along. Wouldn't we? If we find a child with an aptitude for music we give him a scholarship to Juilliard. If they found a child whose aptitudes were for being a woman, they made him one. As sex had long been dissociated from reproduction this was relatively easy to do and caused no trouble and no, or at least very little, comment.

How much is "very little"? Oh, about as much as would be caused by our own tampering with Divine Will by filling a tooth. Less than would be caused by wearing a hearing aid. Does it still sound awful? Then look closely at the next busty babe you meet and reflect that she may be a Dora, for adults who are genetically male but somatically female are far from unknown even in our own time. An accident of environment in the womb overwhelms the blueprints of heredity. The difference is that with us it happens only by accident and we don't know about it except rarely, after close study; whereas the people of Day Million did it often, on purpose, because they wanted to.

Well, that's enough to tell you about Dora. It would only confuse you to add that she was seven feet tall and smelled of peanut butter. Let us begin our story.

On Day Million Dora swam out of her house, entered a transportation tube, was sucked briskly to the surface in its flow of water and ejected in its plume of spray to an elastic platform in front of her—ah—call it her rehearsal hall. "Oh, shit!" she cried in pretty confusion, reaching out to catch her balance and find herself tumbled against a total stranger, whom we will call Don.

They met cute. Don was on his way to have his legs renewed. Love was the farthest thing from his mind; but when, absent-mindedly taking a short cut across the landing platform for submarinites and finding himself drenched, he discovered his arms full of the loveliest girl he had ever seen, he knew at once they were meant for each other. "Will you marry me?" he asked. She said softly, "Wednesday," and the promise was like a caress.

Don was tall, muscular, bronze and exciting. His name was no more Don than Dora's was Dora, but the personal part of it was Adonis in tribute to his vibrant maleness, and so we will call him Don for short. His personality color-code, in Angstrom units, was 5290, or only a few degrees bluer than Dora's 5314, a measure of what they had intuitively discovered at first sight, that they possessed many affinities of taste and interest.

\*\*\*

I despair of telling you exactly what it was that Don did for a living—I don't mean for the sake of making money, I mean for the sake of giving purpose and meaning to his life, to keep him from going off his nut with boredom—except to say that it involved a lot of traveling. He traveled in interstellar spaceships. In order to make a spaceship go really fast about thirty-one male and seven genetically female human beings had to do certain things, and Don was one of the thirty-one. Actually he contemplated options. This involved a lot of exposure to radiation flux—not so much from his own station in the propulsive system as in the spillover from the next stage, where a genetic female preferred selections and the subnuclear particles making the selections she preferred demolished themselves in a shower of quanta. Well, you don't give a rat's ass for that, but it meant that Don had to be clad at all times in a skin of light, resilient, extremely strong copper-colored metal. I have already mentioned this, but you probably thought I meant he was sunburned.

More than that, he was a cybernetic man. Most of his ruder parts had been long since replaced with mechanisms of vastly more permanence and use. A cadmium centrifuge, not a heart, pumped his blood. His lungs moved only when he wanted to speak out loud, for a cascade of osmotic filters re-breathed oxygen out of his own wastes. In a way, he probably would have looked peculiar to a man from the twentieth century, with his glowing eyes and seven-fingered hands; but to himself, and of course to Dora, he looked mighty manly and grand.

\*\*\*

He had, in fact, been traveling the starlanes with only brief leaves on Earth for pushing two centuries. But you don't care about; that, either. It is people that make stories, not the circumstances they find themselves in, and you want to hear about these two people. Well, they made it. The great thing they had for each other grew and; flowered and burst into fruition on Wednesday, just as Dora had promised. They met at the encoding room, with a couple of well-wishing friends apiece to cheer them on, and while their identities were being taped and stored they smiled and whispered to each other and bore the jokes of their friends with blushing repartee. Then they exchanged their mathematical analogues and went away, Dora to her dwelling beneath the surface of the sea and Don to his ship.

It was an idyll, really. They lived happily ever after—or anyway, until they decided not to bother anymore and died. Of course, they never set eyes on each other again.

*“Oh very young  
 What will you leave us this time  
 There’ll never be a better chance to change your mind  
 And if you want this world to see a better day  
 Will you carry the words of love with you  
 Will you ride the great white bird into heaven  
 And though you want to last forever  
 You know you never will  
 You know you never will  
 And the goodbye makes the journey harder still!”*  
 – Cat Stevens, “Oh Very Young” (1974)

**The Million Year Panic:** The Universe will probably end, but we mere mortals don’t have that long. And we probably wouldn’t want to be there to see it anyway. Gestalt Genesis-Day Million is a science-fiction sandbox, a vision of civilization, a model of historical and cultural process, but it is also a game and to be a game, there must be an objective end, a form of victory determination. Ideally, Gestalt Genesis-Day Million should continue until the players have ‘completed the story arc’ or, alternatively, until the players mutually agree that the game has been played to a satisfactory conclusion and/or the civilizations developed to a suitable end (or until the players have exhausted their collective creativity). As likely, the game will end because (this being the internet) players simply disappear or quit playing or quit responding or submitting Actions.

I would guess the attrition rate will approximate or exceed the attrition rate for law schools. The classic law school orientation adage goes: “Look to your left. Look to your right. One of these two people will not be graduating with you.” There is no career waiting for you when you graduate from GGDM. And no student loan bills either. Or Bar Exams.

- **What is a Game:** A game can be usefully defined as ‘a contest between two or more forces, within a set of rules and bounds, for a prize that only one can win.’ This definition I learned 30 years ago (while doing a college paper) adequately covers most things called a game.<sup>1</sup>

Compare this with the concept of a puzzle, the terms puzzle and game are casually, carelessly used interchangeably; my favorite pastimes, FreeCell and Mahjongg on my computer are actually puzzles and likely not games. I do not know where I found this *probably academic* definition of a game, but I used it in a school paper long ago (around 1990). I memorized it then and it has been my framework definition of a game for the last 30 years. I have found it to be precisely on point in every instance where I have thought about games, even cooperative board games fit the definition as there is no requirement that the ‘forces’ be sapient or sentient or living, they can be game mechanical or even computer.

Cooperative board games have become popular because they seem to reflect our relationship to the universe; who can say that the universe is not a set of game mechanics designed to insure our individual (life) and collective (group) failure if we don’t timely solve the problem (or even if we do, actually)? But is the *game board or layout a ‘force’* within the definition, like game mechanics in a cooperative board game? If it is, then FreeCell and Mahjongg may be games, and all similar board deconstruction puzzles (but not construction puzzles, e.g. jigsaw puzzles) may be games.

A good test of this definition of a game is the 1990s fad POGs; is POGs a game under this definition? For a thin slice of humanity, POGs is a fond childhood or adolescent memory from 1993-1994; it was such a fad in the U.S. that game store owners reluctantly bought cases of POGs to cash in, only to be stuck with thousands of worthless cardboard bits when the fad dissipated in a flash. The question of whether POGs is a game will not be answered here, but many concerned adults characterized it as a form of gambling that required no skill (like a slot machine or the state lottery), and it was banned in many schools for that reason. This then leads to the question, when is gambling a game under this definition?

- **Teleological Exercises:** Stories, especially time travel stories, but any sort of fiction or historical dramatization as well, are a teleological exercise, the purpose of every event, every character, every object, every piece of dialogue, is the end of the story. Every event in a story can be described by the goal, objective, end purpose of the story – teleologically. This had to happen so that the end of the story could be thus, the purpose of this event is so that the story can end this way. It is hard to imagine a story otherwise; the author knows the end of the story at some point during its creation. Odysseus had to offend the gods...

I think it is difficult to be a pacifist and truly study history, because at some point you realize this is the way of history that the fate of nations and cultures hangs in the balance on the battlefield. For example, few Western people watching the movie about the Siege of Vienna in 1683 (the “Day of the Siege,” 2012) or listening to Sabaton’s “When the Winged Hussars Arrive” are rooting for Europe of our ancestors to be subjugated to the Ottoman Turks.

- ✓ If you were an Islamic time-traveler, you might go back and assassinate Polish King Jan III Sobieski in 1682? All time-travel stories are culturally subjective; like heaven.

This gives the historical student a vested interest in the known outcome of the engagement, as it led directly to their world and the world of their time, and it would be hard to imagine anything otherwise. So the pacifist studying history is forced to accept and embrace war as the way of human history, while being repulsed by this realization, and has sparse examples to look to about how it could have been different or otherwise without war.

- ✓ There is a very old theatre saying, nothing should be on the stage in the first act that is not used by the end of the third act. The Man in the High Castle series does this very effectively, I have not seen anything said, introduced, or done that did not have some later part in the story, did not resurface again, sometimes unexpectedly.

---

**Londo Mollari:** *It was a new age.*

**Stephen Franklin:** *It was the end of history.*

**Susan Ivanova:** *It was the year everything changed.*

– Part of the opening monologue to Babylon 5, Season 4

---

**It was the End of History:** When the game ends is mostly determined by the players. The game ends when one of the following events occur:

- ✓ There is only one position left in the game (for whatever reason).
- ✓ The majority of positions inform the Concierge that they wish to end the game.
- ✓ The Concierge ends the game for lack of player participation.

- ✓ The Concierge may also end the game due to extraordinary events, such as massive data loss, illness, and other entropy, like an alien invasion, disrupting the game.

The maximum shelf-life of a GGDM game is about 40-60 turns. I have played in free turn-based, strategic PBEM games that lasted over a year, about 30+ turns processing a turn every two weeks (e.g., Darkness of Silverfall, Empire Forge, Diplomacy, etc.). Epic wars were fought in those games; many wanted them to end after mid-game when they could no longer win.

- ✓ In life there are few opportunities to reset and start over; and most of those come at a high price. Most people want a reset and start over at or before halfway through life, feeling they can no longer win.

After 40 to 60 turns, various flaws in the simulation may assert themselves,<sup>2</sup> the participants may be fatigued, positions may have become too large or the Major Races may have drifted apart, out of contact as they expand outward from the initial Galactic Space, Government Title configurations may have become too stable, undisruptable, and/or the participants may want a reset, just want it to end (like too many Star Wars movies). Many PBEM players just dropped, vanished.

- ✓ Classically, any story can be told in three acts: Act 1 introduction, Act 2 crisis, Act 3 resolution. This is true of even extended television series as long as they have a story arc: Babylon 5 and Battlestar Galactica Season 1 was the Act 1 introduction, Seasons 2 and 3 in both series were Act 2, the growing crisis, and Season 4 in both series was Act 3, the resolution, the final conflict, the final confrontation. Season 5 of Babylon 5 (which Battlestar Galactica declined, and Earth the Final Conflict unwisely attempted) served as an extended final resolution and a good-bye as characters left.
- ✓ If participants think that a game of GGDM will probably last 45-60 turns, the game could be structured in the classical three-act format still used by television series and moviemakers, with the first and last 15-20 turns serving as Acts 1 and 3.
- Closure: Ideally, the game should end at the completion of a Turn Cycle – that is, the first position that submitted Regular Turn actions has processed a turn, and all other positions afterward have processed turns, until it is time for the first position to submit Regular Turn actions again. This closure may be important in any measure of victory that counts ship building or Colleges for example. This provides full closure of the game instead of foreclosure.
  - ✓ Free Play-by-email (PBEM) games and I suppose any sort of anonymous play online game, even free ones, is subject to inbuilt human imbalances. The game begins full, or with the minimum threshold of ‘enthusiastic’ players, but within the first few turns, many stop responding, stop submitting orders; they drop quietly because they don’t like the game, or there is too much drama in their lives, they don’t have time to play and enjoy it, or they get mad at someone else in the game. Experienced players know to look for dropped positions early in the game, exploiting their lack of activity and this certainly may happen in GGDM. Dropped positions thus provide uneven opportunities for other positions to grow unnaturally large and powerful early in the game. Short of locking all the players in a jail cell and only giving them food and water when they submit turns – an amusing, appealing idea that occurs to every game designer – there is nothing that can be done about this internet-created phenomenon.
- Historical Cycles: A possible play variation of GGDM: The participants could see how many civilizations they can buildup to collapse in the course of say, 40 Turn Cycles. Or who

can complete the biggest interstellar civilization collapse of ENRON, Roman Empire, global thermonuclear war apocalyptic proportions. Sadistic I know, but true.

- ✓ I think I intended to run games of GGDM back in the beginning. In fact I am sure of it, because much of the early ‘behind the screen’ parts of the rules, I intended to work out while actually running the game. Much of the final edit was a process of writing out the rules *so that a programmer, participants and any future Concierge could understand the concepts and what was intended in the game rules (even if I doubt that anyone will ever actually play GGDM).*

- In the language of writers, I had to sense my own mortality, I had to learn legacy. That happens when you are about 50. I had to write with the idea that I will not be here to modify, clarify, explain, expound, answer questions. There will be no Dragon magazine for GGDM, in endless need of articles to publish.

That is, GGDM divorced me. Thinking that I was going to run GGDM games and work out details (e.g., the flow of “Entropy Points” back when they were part of the game) was a huge conceptual error (like getting married), similar to when the monks in *A Canticle for Leibowitz* (1959) discovered how much ink and effort they had wasted for a millennia in slavishly manually reproducing the irrelevant and incidental blue background on old blueprints they had preserved. And I was a terrible GM when I was young, as well. As the years have passed and I have changed, I think now that I should not be the one to run this game, I no longer have the temperament for it. I know now that I would not hire me to do that job, I would not marry me.

- If a programmer is reading this, I suggest consulting the copious Appendices.

---

*“The chapter has ended, swept away by the whirlwind. One door has closed, but another has opened and on the other side, our future.”*

– Ghanima Atreides, *Children of Dune* (miniseries, 2004)

---

**Training Ground for the Faithful:** There are three types or criterion of victory: subjective victory, objective victory, and group victory. Objective victory is determined by the process described in the Lords Temporal section; and group victory is determined by the process described in the Lords Spiritual section.

- ✓ As mentioned in *Macrosocial Simulation*, 3 The Big Bang, p. 17, *supra*, GGDM is more of a simulation than a game, and thus, winning is not the point of playing GGDM exactly. Still, there must be an end point and a satisfactory conclusion.
- **Victory in the Desert:** The first criteria of victory, however, is subjective.<sup>3</sup> Within three days of the end of the game, each position must send a message to the Concierge indicating whether the position desires to win the game. In the vast majority of cases, it is expected that players of the position will indicate that the position desires to win the game. However, there may be some instances where a position decides, for whatever reason, that it should not or does not desire to win the game, and if so, this criteria gives the position players the opportunity to so indicate to the Concierge. The information provided to the Concierge regarding the first criterion will be kept secret until the final determination of victory is completed, and then will only be revealed *if necessary* to explain the final results.

In other games, when players feel that they should not win the game or do not desire to win the game, such players will usually subordinate their interests to their allies or to whomever they think should win the game, and oftentimes, such games will witness strange ‘give away’ and ‘cave in’ behaviors and unrealistic endgame strategies. Such endings do not act well, and in them no honor lies. With subjective victory as the first criterion here (and a game ending not determined by artificial rules or Victory Point ceilings), such odd behaviors and endgame moves are not necessary, as the position can simply indicate in the end that they do not desire to win the game. Positions can act with honor to the end of the story.

- ✓ Here is my vote: There should be no rejoicing or mourning; in the end, I am a half-educated jackass – with head in space and feet shackled to my house – who made it his life purpose to write a game that turned into a philosophical work that no one will either read, play or care about; that is destined to settle to the sludge bottom of the ocean of media washing over our planetary civilization and be forgotten. Not even the prawn will be interested.<sup>4</sup>
- Victory in Space: Positions win victory in this game, victory does not go to individual players, but rather to ‘teams’ represented by the positions. A position that wins either the objective victory (Lords Temporal) **or** group victory (Lords Spiritual) *and* also has indicated to the Concierge that they desire to win the game, ‘wins’ the game.
  - ✓ It is possible in this system, if different positions win each of the criterion, for there to be co-winners of the game, if both positions have indicated to the Concierge that they desire to win the game.
  - ✓ It is also possible, though probably rare, for a position that indicated that they do not desire to win the game, to win the game anyway, by virtue of winning both the objective victory and group victory criterion.

So it is possible to win the game when the group votes against you (subjective victory plus objective victory) and it is possible to win the game even if you choose not to (win group victory and objective victory). It is possible to not win the game even if you have the biggest, baddest interstellar empire in the universe and Palpatine is your emperor and Darth Vader your loyal servant.<sup>5</sup> It is also possible to be extinct (or nearly so) and win the game if the group votes for you (win group victory plus subjective victory) in which case, the story arc of the game is the story of your race’s extinction.

- ✓ This system does not directly violate the previous definition of a game and does not void the argument that GGDM is a game. But I sure made it complicated. 😊

---

*“Germany’s army officers, with their aristocratic pretensions, were the victims during the late 1930s of a delusion that they could control the former corporal after he had served their purposes as a rabble-rouser. France could have cooked his goose when he took responsibility for occupying the Rhineland. But the bluff succeeded. And as success followed success, the officers of the General Staff found themselves under Hitler’s thumb. They dared not overthrow a leader whose seeming ability to win bloodless victories by sheer intuition made him adored by the German people.”*

– Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 784

---

**Night at the Kroll Opera House:** Nazi Germany is a good historical example of various complex criterions of victory.

Bloodless victories are the weak spot of any military establishment, they gain the most glory when military victories are relatively bloodless (on their side at least), and can offer nothing comparable in promise (especially in view of the horrendous German losses in WWI) if those victories are gained politically and by clever economic aggression and propaganda manipulation instead. In this view, Hitler had retrieved German honor and gained far more than Germany had ever hoped in August 1914:

- ✓ “In less than three years, without firing a shot, Hitler had expanded the area of Germany from 181,500 square miles to 259,000, and increased the population from 60,000,000 to 80,000,000. Only one great hope, guided by wishful thinking, remained to comfort the radio listeners of democratic nations. They reassured themselves that the Third Reich and Soviet Russia must inevitably collide in the near future and fight it out to mutual destruction. This pleasing prospect was dashed on August 23, 1939, by the stunning announcement that Hitler and Stalin had signed a treaty of nonaggression! The shock would have been even more sickening had it been known that the two dictators also signed a secret protocol dividing Poland between them.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 787.

France surrendered on June 22, 1940:

- ✓ “As Hitler glanced at the rows of stiffly seated middle-aged men in dress uniforms, their chests blazing with decorations, he had no illusions about the opinion these military aristocrats had once held of the ‘Austrian guttersnipe.’ They had scarcely concealed their disdain for the World War I corporal when they thought they could use him as a rabble-rouser and cast him aside after he had served their purposes. Even as late as the Polish triumph they still retained enough authority to block his first plans for an attack on France and Britain. But now, less than a year later, it was another story. Hitler’s cheaply bought victories in Norway and France had established him with Germany’s industrial leaders and people beyond any prospect of the Wehrmacht officers daring to oppose him. ... Although Hitler had already acquired a retinue of sycophants, there were still Prussian officers of the old school who resented his debasing of military rank. They could do nothing but hide their feelings, for the servant of 1936 had become the master of 1940. The German officer corps had lost its honor in Poland, and it lost its pride on that July night in the Kroll Opera House.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 816-817.<sup>6</sup>

These sections do not appear in the 2<sup>nd</sup> Edition of War Through the Ages (1946), but were added to the 3<sup>rd</sup> Edition (1960) demonstrating the level of understanding that had evolved in the previous decades of prosecutions at Nuremberg and intense study of the Nazi rise to power in Germany. People wondered, how did this happen, can it happen again, to us? Many books had been published in the 1950s, including Hitler’s Table Talk (1951) and it is notable that Shirer’s The Rise and Fall of the Third Reich was also published in 1960, the same year as the final edition of War Through the Ages with its extensively rewritten and extended chapters on World War II.

I was however, generally acquainted with this theory of Hitler’s rise to power prior to reading Lynn Montross’ *opus* because my mother discussed it with me several times in my youth in the 1970s and early 80s, stressing particularly how certain people in Germany thought they could

*control Hitler* and use him (like the time in 3<sup>rd</sup> Grade that I thought I could take the St. Bernard for a walk, she walked me wherever she wanted to go, and I could only try to hang onto the leash). The Nazi rise was one of my mother's favorite historical subjects and its grave importance for the future of the world was imprinted on my youthful mind.

I do not think this is the version of Hitler's rise that is taught in public schools, I don't recall hearing it in school, but instead, only from conversations with my mother. This version of Hitler is problematic – it means that he was dangerously clever and outsmarted many men more educated and powerful than he was – it doesn't fit well with the cartoonish insane image of Hitler (see discussion, *Cartoon World*, 1 Diplomacy, p. 1106, *supra*) held by most of the population educated in public schools.

This is a dangerous educational omission. A false sense of security.

---

**General Lefcourt:** *We've heard that certain elements of their government want a meeting to discuss finding a way out of this war that doesn't involve the annihilation of Earth.*

**G'Kar:** *Most progressive of them.*

– *Babylon 5, "In The Beginning" (1998)*

---

**The Unicorn Song:** Extinction of humanity in the universe is one of the few conditions that would render Ludwig von Mises' axiom of human action refutable, as humans then would be like unicorns. And thanks to "The Unicorn Song" (1968), we know what happened to unicorns!

- ✓ "In his book *Reasons and Persons*, philosopher Derek Parfit posed the following question: Compare three outcomes: (1) Peace. (2) A nuclear war that kills 99% of the world's existing population. (3) A nuclear war that kills 100%. (2) would be worse than (1), and (3) would be worse than (2). Which is the greater of these two differences? He continues that 'Most people believe that the greater difference is between (1) and (2). I believe that the difference between (2) and (3) is very much greater.' Thus, he argues, even if it would be bad if massive numbers of humans died, human extinction would itself be much worse because it prevents the existence of all future generations. And given the magnitude of the calamity were the human race to become extinct, Nick Bostrom argues that there is an overwhelming moral imperative to reduce even small risks of human extinction." – from Wikipedia article, "Nuclear Holocaust," captured January 26, 2019.

I am not sure about the calamity part. Nick Bostrom, a professor at Oxford University, appears elsewhere in GGDM, on the subject of whether we live in a holographic simulation. In short, he publishes lots of work and was named a top global thinker by *Foreign Policy Magazine*.

- ✓ It seems that sci-fi shorts on YouTube have been more willing to directly imagine the total extinction of humanity (e.g., "Welcome to Earth," and "The Last Day of War"), whereas the television I watched growing up in the Cold War only addressed significant catastrophic reduction of humanity, and sometimes near extinction (e.g., *Battlestar Galactica* (1976), *Ark II* (1976), *Twilight Zone*, "The Old Man in the Cave" (1963), "Two" (1961), or "Time Enough at Last" (1959)).

*“Are we on? This is... this is the President. I have just been informed that the midrange military bases at Beta Durani and Proxima 3 have fallen to the Minbari advance. We’ve lost contact with Io and must conclude that they too have fallen to an advance force. Our Military Intelligence believes that the Minbari intend to bypass Mars and hit Earth directly and the attack could come at any time. We have continued to broadcast our surrender and a plea for mercy and they have not responded.*

*Therefore we can only conclude that we stand at the twilight of the human race. In order to buy time for our evacuation transports to leave Earth, we ask for the support of every ship capable of fighting to take part in a last defense of our home world. We will not lie to you, we do not believe that survival is a possibility. We believe that anyone who joins this battle will never come home. But for every ten minutes we can delay the military advance, several hundred more civilians may have a chance to escape to neutral territory.*

*Though Earth may fall, the human race must have a chance to continue elsewhere. No greater sacrifice has ever been asked of a people. But I ask you now to step forward one last time, one last battle to hold the line against the night. May God go with you all.”*

– Babylon 5, In The Beginning (1998)

**Countdown to Extinction:** Extinction occurs whenever a position 1) no longer controls any colonies, or 2) when there are no remaining population factors of the position’s native population type and that position controls no colonies in the Galactic Space (i.e. 99% or 100%, *ut supra*). The former condition – when a position no longer controls any colonies or Homeworlds, is called *Political Extinction* (or more properly, Polity Extinction). The latter condition – when there are no remaining factors of the position’s native population type in the game<sup>7</sup> (i.e. the Galactic Space) and the position controls no colonies or Homeworlds, is called *Total Extinction*. It is possible for a position to have no remaining population factors of its Native Population Type left in the game – even under the control of other positions – and still control colonies and/or Homeworlds filled with native populations of other positions; this would not be considered an extinction condition.

- ✓ “Most states, however badly the fortunes of war may turn against them, manage at least to retain their national existence.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 203.
  - This would be an interesting area for modern study and refinement. How many states have survived no matter what? Much would depend upon whether a polity is a state or when the former becomes the latter, because the great migration is filled with polities that were assimilated (e.g., the Huns, the Avars, the Pechenegs, the Cumans and vanished from history).
  - It would also be a tricky question because all states end eventually (including the United States of America) and it usually involves war, so the criteria would need to be established very carefully.
  - It is however, fairly certain from history that the original states (polities?) based on the personality of a local king, warlord, chieftain, likely did perish upon the death of that person. There was then, in prehistory, likely a constant churning of tribes and identities based on the rise, success, charisma and wealth of certain leaders and migrations, e.g., the Late Bronze Age collapse in

the Middle East and Eastern Mediterranean. Sovereignty, discussed much throughout GGDM, must be a matter of legacy, it must have become independent of the legitimacy and lifetime of individual rulers, it must have had a basis established beyond the sovereign person of the local ruler, and that basis was either the people (and their culture) or divine sanction, which was controlled by the priests and could be made to suit whatever current purposes were necessary.

- ✓ “As week after week passed without an allied blow to end the war, Frederick [the Great] realized that foes who could not profit from a Kunersdorf would never be able to defeat a resolute opponent.... Frederick had learned from despair that craft is a substitute for numbers, and endurance the strength of the weak.” – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), pp. 401-402.
- Into The Wastebasket of History: A position that is Totally Extinct has no vote in determination of the Lords Temporal and Lords Spiritual victory criterion, but may still inform the Concierge whether or not that position desires to win the game. A totally extinct position could still win the game.
  - ✓ “In one of the countless billions of galaxies in the universe, lies a medium-sized star, and one of its satellites, a green and insignificant planet, is now dead.” – Ending Narration, *Beneath the Planet of the Apes* (1970).
- Captive Honor: A position that is politically extinct from the game obviously will not be able to either vote for or compete in the Lords Temporal victory criterion, but may still vote for determination of the Lord Spiritual criterion. And, of course, the politically extinct position must still inform the Concierge whether they desire to win the game.
  - ✓ “Never bear more than one kind of trouble at a time. Some people bear three kinds; all they have had, all they have now, and all they expect to have.” – Edward Everett Hale.<sup>8</sup>
- Passive Extinction: It is possible, and unfortunate, that some positions may choose not to participate in the endgame/postgame voting (for example, the players of the position cannot agree on anything). An existing position which fails to timely send an email to the Concierge indicating that they either desire to win the game, or desire to not win the game, will be assumed to desire to win the game. An eligible position which fails to 🗳️ in the Lords Temporal or Lords Spiritual criteria of victory will be ignored and assumed to have ‘passed.’ An extinct position which fails to vote will simply be ignored and will not be able to win the game, though they may still win laurels and honors. In order for an extinct position to win the game or have any chance of winning the game, the position must at least ‘raise a hand’ and let the Concierge know that at least one player in the position is still interested in the outcome of the game.
  - ✓ “If we are superior, why are we extinct?” – Dalek Leader, *Dr. Who*.
- Da Vinci Cycle: It is possible, especially if it serves the overall purpose of the game’s story arc, and if players are still enthusiastic about the game, that some players from extinct or nearly extinct positions could find another role in the game, or could start a ‘new’ position, perhaps from a Minor Race, beginning the next generation of the game. This was the basis of the excellent and out-of-print game called *Vinci* (1999), where empires and civilizations

lasted only a couple of turns each, and thus play of the game was a progression of civilizations and players changing positions as new civilizations arose and old ones stagnated and faded. Vinci (and Union Pacific/Imperial) is the only game I have ever seen that approaches the “cline gaming” concept described in the next rules section.

- ✓ “Only a handful of sequels in cinema history have managed to live up to, let alone surpass, the quality of the first film in a prospective franchise. We all know the parameters of this debate – and also the examples – very well: *The Empire Strikes Back* (1980), *Aliens* (1986), *The Godfather Part II* (1972), and perhaps *The Road Warrior* (1982).” – John Kenneth Muir, “Cult Movie Review: Beneath the Planet of the Apes (1970),” July 27, 2011.
- ✓ History came full circle for the Romans when the Vandals captured Carthage in 439 C.E. (becoming *Vandalus Regnum*); the Vandals crossed the water and sacked Rome just 15 years later. Likewise, the Earth First Empire teetered on the brink of collapse in 2439 after the MAC (Modified Accessorized Cat) Fleet captured the RAD (Romanticized Aromatic Dogs) colony at Alpha Centauri. Thereafter, *Felis Boxes Regnum* (“Kingdom of Cat Boxes”) reigned supreme.

---

*“The most dangerous creation of any society is the man who has nothing to lose.”*

– James Baldwin, *The Fire Next Time* (1963) <sup>9</sup>

---

*“The point is, to die irreconciled and not of one’s own accord.”*

– Albert Camus

---

**Checking Out of Hotel Earth:** Most of us are too stupid or cowardly to just take ourselves out of here (personal extinction). Life scientists talk about ‘survival instinct,’ and literaries talk about romance, adventure, life and procreation. But only humans commit suicide. So we make up minimalist excuses to either keep going year to year, putting it off until we can die and blame someone else for our death, or find reasons to die for a noble cause. And we have this thing called culture to provide meanings against which those excuses work. My made-up excuses for still being here are that it is somehow important that I finish this project, about which no one but me will care – that is, even my excuses are pointless – but it’s the only thing I will leave behind, and I must take care of my cats (a proxy for children), for whom I am solely responsible for bringing into my home, during their entire lives or for as long as I live. And that will do. <sup>10</sup>

- ✓ “So you are asking me as a psychologist. ... Then as a psychologist, I’d say you are confusing suicide with self-destruction. Almost none of us commit suicide, and almost all of us self-destruct. In some way, in some part of our lives. We drink, or we smoke. We destabilize the good job or the happy marriage. But these aren’t decisions, they’re ... They’re impulses. In fact, you are probably better equipped to explain this than I am. ... You are a biologist. Isn’t self-destruction coded into us? Programmed into each cell?” – Dr. Ventress, *Annihilation* (2018).

- “So, when the day comes to settle down, Who’s to blame if you’re not around? You took the long way home.” – Supertramp, “Take the Long Way Home” (1979).
- Soto & Diego: The original animated movie Ice Age (2002) had a bit of an edge to it that was toned down in the second film in favor of slapstick comedy:
  - ✓ **Soto**: Aw, look at the cute little baby, Diego. Isn’t it nice that he’ll be joining us for breakfast? **Diego**: It wouldn’t be breakfast without him. **Soto**: Especially after his daddy wiped out half our pack. And wears our skin to keep warm. An eye for an eye, don’t you think? **Diego**: We’ll show that human what happens when he messes with sabers. **Soto**: Alert the troops. We attack at dawn. And Diego: bring me the baby, alive. If I’m going to enjoy my revenge, I want it to be fresh. *Id.*
  - ✓ **Diego**: Maybe we shouldn’t do this. **Sid**: Why not? **Diego**: If we save it he will grow up to be a hunter and who do you think he will hunt? **Sid**: Maybe because we saved him he won’t hunt us? **Diego**: And maybe it will grow fur and a long skinny neck and call you mommy! *Id.*

Now, what if the situation were reversed? Who’s the bad guy here? Can you blame Soto? Did you notice that all of the members of Soto’s pack of sabre-tooth tigers are adult males? That is not natural. The Neanderthal tribe may have killed all of the females and cubs; Soto certainly suggests this is true. Sand through the hourglass, countdown to extinction.

---

*“What, Sir, would the people of the earth be without woman? They would be scarce, sir, almighty scarce!” – Mark Twain, Speech, January 11, 1868 <sup>11</sup>*

---

*“After all these years, I see that I was mistaken about Eve in the beginning; it is better to live outside the Garden with her than inside it without her.”*

– Mark Twain, “Adam’s Diary” (1904) <sup>12</sup>

---

**Lords Temporal**: Many years ago when describing my nascent game design to an attorney for whom I worked, he said to me, “So, it’s a science-fiction wargame?” I replied, “Well...no, I don’t quite think of it that way.” The attorney said, “Well, what is the object of the game?” I replied, “To build the biggest and best interstellar civilization, I guess.” The attorney replied, “So, it is a science-fiction wargame.” Well, I suppose he had a point there. So, that being established as at least one truth of this game, the objective criterion of victory determination is a calculation of who has the “biggest and best interstellar civilization.”

Temporal power is secular power, the power in the here and now. Not to be confused with time travel. This distinction is necessary only because this is a science-fiction game. Pre-20<sup>th</sup> Century people would not be confused by the term, which dates from the late medieval period.

- 13: The Lords Temporal, objective criterion of victory is determined by ‘measures’ of the objective quantifiable power, qualities and achievements of each position. There are thirteen Measures of Victory, detailed in the following section, of which some, most, or all might be used in determining objective victory in this game.

- 7: At the same time that each position indicates to the Concierge whether or not they desire to win the game, each position should also secretly vote for one of the thirteen Measures of Victory detailed below. A position might vote for a Measure of Victory which they think they can win, or they might vote for a Measure of Victory which they think their ally might win. *Each position, excluding extinct positions, gets one vote only.* Of the thirteen Measures, seven will be used initially. Duplicate votes for the same Measure will be disregarded; alliances of positions might consider coordinating their votes.

If there are more than seven different measures voted for (as might occur in a game where more than seven positions finish the game), the first seven received by the Concierge will be counted. If, through duplicate vote elimination and/or less than seven positions finishing the game, there are initially less than seven Measures chosen, the Concierge will choose the remaining Measures by a random means, until seven Measures have been chosen from the list.

- 1: The position which wins the majority of the first seven Measures, wins the objective victory. If no position wins the majority of the first seven Measures, the Concierge will randomly add one Measure at a time and determine who wins the Measure, until such a time as a position has won the majority of the Measures. The position that wins the majority of the Measures, wins the Lord Temporal criterion of victory.

*“Of the Avars, there’s not much to find:  
One more empire that ravished mankind.  
Then the Bulgars and Franks  
Led attacks on their flanks  
And they vanished – left little behind.”*

By Atticus Vere <sup>13</sup>

---

**Of Huns and Avars:** The Huns suffered the same fate a few centuries earlier in essentially the same area of Europe (the Pannonian Basin aka the Hungarian Plains); after the 𐌆 of Attila on his wedding night in 453 A.D., revolts and infighting wiped the Hun polity off the map in two years. We know little about the Huns’ language and culture, history, genetics, traditions, ethnicity; they ‘vanished’ and were absorbed. No one knows what Attila looked like or where he is buried. They landed in the “wastebasket of history” – favorite line of military historian, Lynn Montross.

It appears that among contemporaries, the Avars were associated with (or confused with) the Huns, or at least, that the two may represent only a modern distinction:

- ✓ “Each year, the Huns [Avars] came to the Slavs, to spend the winter with them; then they took the wives and daughters of the Slavs and slept with them, and among the other mistreatments [already mentioned] the Slavs were also forced to pay levies to the Huns. But the sons of the Huns, who were [then] raised with the wives and daughters of these Wends could not finally endure this oppression anymore and refused obedience to the Huns and began, as already mentioned, a rebellion. When now the Wendish army went against the Huns, the [aforementioned] merchant Samo accompanied the same. And so the Samo’s bravery proved itself in wonderful ways and a huge mass of Huns fell to the sword of the Wends.” – Chronicle of Fredegar, Book IV, Section 48, written circa 642, quoted in Wikipedia article, “Pannonian Avars.” [Samo is the founder of Samo’s Empire, the first Slavic polity, 631-658]

But the Avars left behind them the legend of the Ring:

- ✓ “Charlemagne’s last expeditions brought about the annihilation of the Avars who had terrorized eastern Europe for two centuries. An Asiatic people, probably of Turkish origin, they had settled along the Danube in ‘rings,’ or great enclosures defended by earthworks, the largest of which has been described as 38 miles in circumference. Nevertheless, the Avars were a spent power at this time, having suffered severe defeats from the armies of Constantinople. The Franks merely completed the work of destruction, and after the capture of their chief ring the mounted raiders disappeared so dramatically that ‘to vanish like the Avars’ is still a Slavic proverb.” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), pp. 97-98.
- ✓ “The gradual decline of Avar power accelerated to a rapid fall within a decade. A series of Frankish campaigns in the 790s, beginning in 791, ended with the conquest of the Avar realm after eight years. The 791 campaign ended successfully, although no pitched battle was fought. Avars had fled before the Carolingian army arriving by the Danube, while disease left most of the Avar horses dead. Tribal infighting began, showing the weakness of the khaganate. The Franks had been supported by Slavs, who established polities on former Avar territory. One of Charlemagne’s sons captured a large, fortified encampment known as ‘the Ring,’ which contained much of the spoils from earlier Avar campaigns. The campaign against the Avars again gathered momentum. It would take two massive hammer-blows, two major musters of the host, drawing upon levies from every part of the now great kingdom, before the robbers’ nest was exterminated. And at last, in the year 796, five years after the war began, the Avars cracked and lay utterly at the king’s mercy.” – from Wikipedia article, “Pannonian Avars.”
- ✓ “Although we know of no grave inventory from the Avar Empire of the 8<sup>th</sup> Century that, in terms of the quantity and quality, can compare to that of Kunbáony, we do know definitely that – at least in the Avar centre of power – there were fabulous treasures. In 791, Charlemagne began a large-scale pagan crusade against the Avars, whose primary goal was probably the reconquest of the former Roman Pannonia. But the mighty army was apparently quite cumbersome. It was supposedly Dux Eric of Friuli who had the idea, in 795, of using a raiding party under the leadership of ‘the Slaves’ of Woynimir to penetrate and plunder the Avars’ centre of power, the ‘Hring.’ He captured gold, silver, silken robes and weapons which, according to the Northumbrian Annals, were transported to Aachen in 15 waggons, each drawn by four oxen.

A second coup was achieved the very next year, this time under the leadership of Charlemagne’s son, Pippen and Eric of Friuli. The valuables taken from the ‘Avar Ring’ also came to the palace at Aachen. Einhard, the biographer of Charlemagne, regarded the Avar wars as the most successful ever waged by the mighty Franks. ‘All the money and treasure that had been years amassing was seized, and no war in which the brave Franks ever engaged within the memory of man brought them such riches and such booty. Up to that time the Huns had passed for poor people, but so much gold and silver was found in the Khan’s palace, and so much valuable spoil taken in battle, the one may well think that the Franks took justly from the Huns what the Huns had formerly taken unjustly from other nations.’ – Falko Daim, “The Gold of

the Avars. Three Case Studies,” trans. by Carola Murray-Seevert, Dalle Steppe Al Mediterraneo Popoli, Culture, Integrazione (2017), pp. 416-417.<sup>14</sup>

- Again, in the preceding quote by Einhard (b. 775 A.D., d. 840 A.D.), it appears that the Avars were considered Huns and had thus inherited the Western kingdoms’ revulsion against the Huns.
- As discussed in 2 Taxation & Census, p. 303, *supra*, position Treasuries are not location specific and thus cannot be captured or looted. Treasuries in GGDM are the opposite of the great Avar Ring.

Page | 1468

The demise of the Avars in the 790s precedes the first recorded Viking raid in 799 A.D. Historical whac-a-mole. But only for the ones who survived, in this case, the Franks. For the Avars, the first Slavish-Frankish raid on the main Ring from a lightly guarded frontier was the historical accident (*à la Tainter*) from which they could not recover.

- ✓ “Byzantine records, including the ‘*Notitia episcopatumû*,’ the ‘*Additio patriarchorum thronorumû*’ by Neilos Doxopatres, the ‘*Chronica*’ by Petrus Alexandrinus and the ‘*Notitia patriarchatum*’ mention the 9th century Avars as an existing Christian population. The Avars had already been mixing with the more numerous Slavs for generations, and they later came under the rule of external polities, such as the Franks, Bulgaria, and Great Moravia. The Avars in the region known as *solitudo avarorum* – currently called the Alföld – vanished in an arc of three generations. They slowly merged with the Slavs to create a bilingual Turkic-Slavic-speaking people who were subjected to Frankish domination; the invading Magyars found this composite people in the late 9th century. The *De Administrando Imperio*, written around 950, clearly states the presence of an Avar population in the region of modern-day Croatia.” – from Wikipedia article, “Pannonian Avars.”

---

*“Our first glimpse of the legendary Vedrans answers a few questions and poses a lot more. Now we know for sure that the Vedrans made a choice to remove their world from the slipstream – and from contact with the rest of the Commonwealth – thus protecting their own people, but allowing the Nietzscheans and the Magog to kill millions elsewhere. On the positive side, they’ve been able to advance as a culture and their tesseract technology may ultimately enable the new Commonwealth to defend itself against a possible invasion. On the negative side, they seem to care more about a nature preserve than all the member worlds they chose not to cloak from the slipstream and the ravages of the post-Commonwealth galaxy. I assume there’s more going on at Ral Parthia than strip-mining – and I like the implications that the Kalderans are a more dangerous threat – but I still think the Vedrans have a lot of explaining to do, and probably some apologizing.”*

– Michelle Erica Green, review of Andromeda episode, “The Fair Unknown,”  
 littlereview.com, April 14, 2002

---

Endnotes.

<sup>1</sup> Citation: “The English Oxford Dictionary defines a game as ‘an activity that one engages in for amusement or fun; a form of competitive activity or sport played according to rules.’ While often depicting epic battles and legendary military campaigns, block wargames do so without foregoing a basic tenet of gaming: they should be fun. But since block games are also great representations of historic conflicts, there is still a necessary level of complexity inherent in any simulation of war.” – “How Block Games Get the Balance Right,” Wargame Blockhead (blog), February 11, 2020.

<sup>2</sup> Commentary & Citation: As noted in 3 Taxation & Census, EN 6, p. 324, *supra*, about 20 years ago, I played in a PBEM game called World of Kaomaris whose flawed over-simplicity was becoming apparent to the participants (in fairness, this was 20 years ago, and as noted, the game evolved and changed, it is still running). In WOK and other games, thus, I have seen situations where the flaws of the game (or shortcomings, perhaps) become apparent with play (it can happen to any game). The flaws of GGDM will not be that it is over-simplistic and boring.

<sup>3</sup> Commentary: Happy endings are relative and come in different flavors.

<sup>4</sup> Commentary & Citation: When it takes too long to solve a FreeCell board – and I have a very good idea by now how long it should take to finish a FreeCell game – I do not take that as a sign of my problem solving prowess, having just solved a difficult board, that yay, I solved the problem; rather, I take it as a sign of my stupidity and human inadequacy that I was not smart enough, fast enough, or good enough to solve the problem within an acceptable time (see Mediocrity for Most, 3 Colleges, p. 498, *supra*).

<sup>5</sup> Commentary: Oddly, I have personal memory of the approximate time period in which I thought of this three part system – I remember sitting at my mother’s dining room table in summertime, probably 1993 or 1994, talking to her about subjective and objective victory as she moved around the kitchen and dining room doing tasks (she probably didn’t really know what I was talking about though) – but I don’t know the historical or background inspiration or precise reason I thought of this system, only that I was trying to create a system to defeat certain short term, unrealistic endgame behaviors I had observed in board games.

<sup>6</sup> Commentary: In other words ... moving parts alert ... what would have happened if the invasion of Norway had bogged down in ice, snow and allied resistance? No 1940 invasion of Belgium and France? Perhaps a coup d’état?

<sup>7</sup> Citation: “The secrets of evolution are time and death. Time for the slow accumulation of favorable mutations and death to make room for new species.” – Carl Sagan, Cosmos, Episode 2.

<sup>8</sup> Commentary: *Inge Process*: Like most men, he wrote things in his time that would be distasteful to moderns; according to Wikipedia, he wrote in 1852 that Irish immigrants should be welcome because they are inferior and will raise Americans up by taking over menial labor. He was also a dichotomy (like most men): While writing this about immigrants, he also campaigned to abolish slavery! Thus, quotes of his writings are cherry-picked.

<sup>9</sup> Citation: [Narrator] “A wanted man labelled as a rebel, with no Chieftaincy to defend and without the backing of [King] Dinuzulu, Bhambatha has only one option... To launch the impi alone.” – from Bhambatha: War Of The Heads (documentary, 2009).

<sup>10</sup> Commentary: Before you go indignant, I am inviting you to a sort of dialectic. What in the preceding section is not factually true or is demonstratively false? It is possible that other animals (e.g., whales) commit suicide, but we don’t know. Without factual dispute, you are left with disputing my interpretation – opinion if you like. Opinions are facts in the third and fourth order of natural phenomenon. Am I to be blamed for expressing angst in a literary simulation game about human civilizations? Is not angst pretty much synonymous with literary?

<sup>11</sup> Citation: “God’s great cosmic joke on the human race was requiring that men and women live together in marriage.” – Mark Twain.

<sup>12</sup> Commentary: “Women” by Def Leppard is the late 20<sup>th</sup> Century musical successor to Mark Twain. Of course, it is not politically correct now, and YouTube music won’t play the song – it will play all of the other Def Leppard songs – *unless you specifically search for it*. Do you think that the algorithm isn’t engaged in some censorship?

<sup>13</sup> Citation: “Vanished like the Avars” (an old Balkan proverb) by Atticus Vere (Larry Landsman), The Omnificent English Dictionary In Limerick Form (oedilf.com), May 27, 2011.

<sup>14</sup> Citation: Previous German-language version of this article was published in 2016.

*“A true victory is to make your enemy see they were wrong to oppose you in the first place. To force them to acknowledge your greatness.”*

– Gul Dukat, Cardassian Hero who resisted the imperialist Federation, ST DS9

*“Institutions get the behaviors they reward.”*

– Gen. Jim Mattis (USMC Ret.) op-ed, “Jim Mattis: Duty, Democracy and the Threat of Tribalism,” Wall Street Journal, August 28, 2019

**Objective Measures of Victory:** The question in designing victory conditions for GGDM or for any other game, is what behaviors does the game reward? In the objective criterion of victory in GGDM, the reward is for the biggest, bestest position in objectively measurable terms. So, who has the biggest and best interstellar civilizations? And how many worlds were destroyed getting there?

- ✓ “What was it all for, I wonder? What was any of it for?” – Vir Cotto, Babylon 5, “The Long Night” (1997) as the Narn celebrate the Centauri withdrawal.

The following are the thirteen Measures of Victory used in determining the objective victory criterion described in the Lords Temporal section (see Lords Temporal, *et seq.*, 1 Resolution, pp. 1465-1466, *supra*). Two or more positions can be tied for a Measure of Victory, in case of a tie, both are considered to win that Measure. The first seven measures chosen by the position votes and Concierge will be checked to see if any position wins the majority (even if tied) of Measures. For example, if two positions were tied at two wins each and three other positions had each won one, the next Measure of Victory will be randomly selected and checked until either a position wins the majority of Lords Temporal Measures of Victory or they are exhausted.

- **Population Measure:** It all starts with the people, your population. The Population Measure of Victory counts the *total population* on all colonies controlled by the position.
  - ✓ The value of Native Population factors of the position counts as double.
  - ✓ Naturalized alien population factors count as base value.
  - ✓ Population factors on Converted and Conquered colonies count as half value.
  - ✓ Population on Colony Ships at the end of the game counts as their political status.

Whichever position has the greatest total ‘population value,’ wins this “**Alien Hoarding**” Measure of Victory. Note that this measure does not address population density or distance.

- **Resource Production Measure:** The position (i.e. industrial power) with the greatest income (in RPs), if the Taxation Power were activated right now (without the use of any Writs or Enlightenment) and all sovereign colonies obeyed the Taxation Power Activation (regardless of the colony’s current state of Constructural Elements), is the winner of this “Scrooge McDuck” Measure of Victory.
  - ✓ This measures theoretical output, meaning that a position which has poor Cohering (significant inactive Constructural Elements, see When the Lights Are On, 2 Constructural Elements, p. 190 and Interesting Times, 2 Disruption, p. 272, *supra*) can still win in ‘measure of wealth.’

- ✓ This Measure does not count RPs in the Treasury currently. Those will age out (see Aging Resources, 2 Taxation & Census, p. 304, *supra*) and will likely not be inherited by the next generation.
  - ✓ Note that Conquered Colonies do not produce RPs (and do not have GDP for Construction Power activations), see The Taxman Cometh, 2 Taxation & Census, p. 306, *infra*. Thus, endgame conquest may not be helpful for this Measure.
- **Technology Measure:** The Measure of Victory in technology is calculated as the number of the position's current Era (i.e. 1<sup>st</sup> Era, 2<sup>nd</sup> Era, 3<sup>rd</sup> Era, etc.) *times* the total number of Patents of any operational type, *including Existential Patents*, held by the position. The position with the greatest technology value, or 'tech level' wins this 'geeky' Measure of Victory.
- ✓ Population, resources ... and technology. Technology is what sets the interstellar setting apart from medieval fantasy, population and resources are found in just about any pre-technological or fantasy setting.
  - ✓ This Measure tends to emphasize Era progression due to the multiplier effect, but having lots of Patents isn't a bad thing either. There is a dynamic between the two, see The Progress of Eras, 1 Eras, p. 759, *supra*).
  - ✓ This Measure also tends to favor COT Patents (see 2 Patents, p. 739, *supra*) as they are the easiest and cheapest. However, Era Progression requires that new Enhancement (EP) and Physical Item Patents (PIT) will be required each in the 2<sup>nd</sup> and 3<sup>rd</sup> Eras, e.g., 2<sup>nd</sup> Era Warship, 2<sup>nd</sup> Era Carriers, Fighter and Ship Missiles (see Era Warships, 2 Combat, p. 951, and Next Generation Fighters and Carriers, 1 Carriers & Fighters, pp. 1048-1049, and Torpedoes at Trafalgar, 4 Carriers & Fighters, p. 1079, *supra*). Thus, the utility of most COT Patents fades outside of their Era.
  - ✓ Research Pieces, Research Groups and Applications on the Matrix count for naught.
- **Faculty Check Measure:** The current Classes of all of the Colleges (whether active or not) are totaled and *multiplied* by the total number of Institutes currently on planets controlled by the position. The position with the greatest 'Faculty value' wisely wins this Measure of Victory.
- ✓ Note that a game should always end after a completed Turn Cycle if possible, so all positions with operating Colleges will have an equal chance.
  - ✓ The operation of Institutes using Faculties (see 3 Colleges, p. 487, *supra*) or ongoing combat(s) using Enlightenment for rerolls will adversely affect the position's chances of winning this Measure. Institutes thus are both good and bad for this Measure. Still, Faculties may be lost to aging if not used during the Regular Turn (see Tuition & Tenure, 2 Colleges, p. 474, *supra*) so ongoing use in Institutes and Enlightenment rerolls is expected.
  - ✓ Non-Specific Faculties (NSFs, see The First is Last, 3 Colleges, p. 493, *supra*) do not count for this Measure.
- **Fleet Size Measure:** The construction value in RPs of *all starships* plus *all Supplies*, enhancements (including Fighters and Ship Missiles) and cargo currently on ships is calculated, and the position with the greatest fleet value wins this "Big Stick" Measure of Victory. An interstellar culture without starships is not much of an interstellar culture.

- ✓ The value of System Boats (see 3 Construction, p. 677, *supra*) and anything on them does not count unless they are currently attached to a Tender Starship.
  - ✓ Ships that *might perish* for being beyond their supply limit if the game went one more Regular Turn (see Death Ship and The Cold Equations, 3 Movement, pp. 856, 864, *supra*) will be counted (their swan song).
  - ✓ Population currently on Colony Ships has no effect on this Measure, nor does population in Orbital Cities.
  - ✓ Obsolete ships which have not been Scrapped (see Junkyard Blues, 3 Construction, p. 682, *supra*) have value in this Measure of Victory. This might be a game strategy.
- Exploration Measure: The Exploration Measure of Victory counts the number of starsystems explored by each position (see Then Never Comes and Dead Before the Opening Credits, 3 Expansion, pp. 907, 910, *supra*) and the number of new stars ‘discovered’ (via the Looking Rules, see Horkeimer’s Rule, *et seq.*, 2 Expansion, p. 899, *supra*) by each position.
- ✓ Exploration means that the position has visited the system (regardless of the circumstances) and has full orbital information for the system, including maximum habitability and habitability class for the planets; only one visit during the game is required.
  - ✓ Discovering a new star via Looking and then exploring that star counts for both.

The two are added together, and the position with the greatest ‘exploration value’ wins this “Cartographer” Measure of Victory. The Truly Alien position has a head-start on this measure.

- Vitality Measure: The vitality of a position is measured by *multiplying* the number of undisrupted Government Titles currently held by a position:
- ✓ Times the current number of unexpired (i.e. current) Corporations operated by the position and MegaCorporations of which the position is a member (see 1 and 2 Corporations generally, *supra*),
  - ✓ Times the number of all possible Fuzzy Groups and Zeitrice formations (see Fuzzy Groups, 4 Culture, p. 404, and 4 Writs, p. 447, *supra*) currently on the position’s Public Space at the end of the game. Fuzzy Groups can overlap and share some of the same pieces, which may make counting tricky (like a picture where they ask how many triangles are in this picture).

The position with the greatest final ‘vitality value’ wins “The Roar” Measure of Victory.

- ✓ Fuzzy Groups on the Public Space suggests a position is ready to activate a number of Writs each Regular Turn, but this Measure does not count the number of currently active Writs or Special Writs of a position.
- Diplomatic Prowess Measure: The total number of Monads in Diplomatic Spaces currently between the position and all other positions is counted (see First Space, 2 Diplomacy, p. 1116, *supra*) and then *multiplied* by the number of First Contacts (see Bump in the Night, 1 Diplomacy, p. 1099, *supra*) the position has had during the game. The position with the greatest total ‘diplomatic value’ wins this “Mister Rogers Neighborhood” Measure.
- ✓ This Measure counts the position’s own First Spaces (see 2 Diplomacy, *Id.*), *but not First Spaces of other positions* in the Diplomatic Spaces. The maximum possible

- number of First Spaces a position can have equals the number of other positions in the game (plus possibly some Minor Races).
- ✓ Consistent with the ‘joint venture’ concept of diplomacy in GGDM, two positions are both scoring equally off of their shared Diplomatic Spaces.
  - ✓ A position which has only a couple of First Contacts, and one really good ally with a large Diplomatic Space is probably at a disadvantage in this Measure of Victory unless all positions have cloistered with one or two allies and not made many First Contacts or cultivated many relationships.
- Meanings Measure: The total number of Meanings and Shared Meanings (see *Between Mars and Venus and The Commonality, 3 Diplomacy*, pp. 1126, 1131, *supra*) held by each position is counted and *multiplied* by one plus the number of Expose’ News Events (see *Diary of a Madman, 4 Writs*, p. 449, *supra*) a position issued during the game. The position with the greatest ‘meaning value’ wins this “Babylon 5” Measure of Victory, as having done the most to (probably non-violently) shape the meanings of the relationships in the game.
- ✓ Regular News Events and Diplomatic Protests (see *No Noose is Good News and Diplomatic Protest, 2 Dreamtime*, pp. 143, 148 respectively, *supra*) do not count for any objective Measure of Victory. They are just the regular part of the game, News is the default Interpretation for Power Activations.
  - ✓ It is important to remember that Expose’ News Events are approved by the Concierge, and that Shared Meanings take two to tango. Meanings are unitary, but can be easily destroyed by unknowing violation. All three do take significant effort and risk by the position to create; so with all else going on in the game, it is unlikely that a position will abuse them just to win this objective Measure of Victory.
  - ✓ For an isolated or warlike position this will be a ‘meaningless measure.’ 😊
- State of Readiness Measure: For each position, the number of Acts currently on the Power Strip and the number of Scenes currently on their Public Space are counted and totaled. The position with the greatest number of total Acts and Scenes at the end of the game wins this “DefCON1” Measure of Victory when invoked.
- ✓ This Measure demonstrates ability to act, readiness to spring into action, and also strategic planning in terms of marshaling Acts and placing Scenes.
  - ✓ Positions in higher Eras may receive more Acts and Scenes, but not Power Activations, and thus Era progression is important to this optional measure (see *Player Pivano, et seq., 2 Eras*, p. 770, *supra*).
  - ✓ Note that a Scene can appear on more than one Public Space (thus allowing Scene Snitching), so can be counted multiple times for different positions. This could be slightly manipulated on the final turns of the game.
- Technological Devices Measure: The construction value in RPs of all currently owned by the position Technological Devices is tabulated and the position with the greatest RP value in Technological Devices wins this “Dr. Watchstop” Measure of Victory.
- ✓ Technological Device Patents are described in *2 Patents*, p. 741, *supra*.
  - ✓ This Measure does not count the number of Technological Device Patents a position holds, but rather, actual Technological Device enhancements and units controlled by

the position (i.e. on their colonies or ships) *whether or not they built it*. Thus, the ability to operate the Technological Device is irrelevant.

- Seeding Space Measure: The total number of *colonies* of the position's Native Population Type (see 5 Beginnings, p. 51, *supra*) currently in the Galactic Space. Sovereignty and Bal-kanization are irrelevant as is the *size* of the colonies for this purpose.

This is about presence, thus, populations in Orbital Cities (“one colony rule,” Lebensraum, 3 Taxation & Census, p. 321, *supra*) over **alien colonies** would be considered a colony at that location. The position with the largest number of colonies of their Native Population Type wins this “Genesis Mandate” Measure of Victory.

- ✓ Because this Measure specifies colonies (i.e. colony units), population on Colony Ships at the end of the game does not count as a colony.
  - ✓ This is an odd Measure of Victory that a *Politically Extinct* position could win (see Countdown to Extinction, 1 Resolution, p. 1462, *supra*).
- Cohering Measure: Checking the rust on the underside of the bridge. Will your Reich last a thousand Regular Turn Cycles? This Measure of Victory multiplies the number of active Epistemological, Symbolic and Ideological Constructural Elements on sovereign colonies, ships, boats, and Ground Units *by* the number of currently *passing* Conflict Checks (see Starch & Parchment, *et seq.*, 3 Government Titles, p. 613, *supra*) in the position's current Government Titles to arrive at a ‘stability’ value or Cohering Value. The position with the highest wins this “Don’t Rock the Boat” Measure of Victory.
    - ✓ Temporal Constructural Elements are not counted.
    - ✓ This Measure may favor big positions that have more ships, system boats and colonies meaning more potential active Constructural Elements. A large position may actually be in poor condition in terms of inactive Constructural Elements, but passing most of its Conflict Checks, and still win this Measure.
    - ✓ This Measure does not favor the ‘sit-n-spin’ strategy (see 2 Taxation & Census, p. 309, *supra*), unless the position has a lot of ships and system boats, but the sit-n-spin position could do well in other Measures. Sit-n-spin positions can be the ‘bestest’ at many things, but very rarely will be the biggest.
    - ✓ End game conquest may saddle a big position with Conquered Colonies that have inactive Constructural Elements as result, which is not helpful for this Measure, unless doing so helps pass Conflict Checks.

---

*“The Islamic State was soon described by U.S. officials as being more dangerous than al-Qaeda. Yet despite being named caliph of an actual territory, Baghdadi never reached bin Laden’s status within the global jihadist movement, and is unlikely ever to do so. Baghdadi’s greatest achievement was the capture of physical territory he dubbed the Islamic State, but with that mostly gone, so goes his legacy. Bin Laden, on the other hand, will always be known as the man who took violent radical Islam and spread it across the world.”*

– Rick Noack, “Osama bin Laden still matters. Islamic State leader Baghdadi not so much,” Washington Post, November 2, 2017

---

**Lords Spiritual:** In the same email where each *position* indicates to the Concierge whether they desire to win (subjective victory criterion) and their vote for the Measure to be used in the objective victory criterion (Lords Temporal), the position should also *vote for which position they think should win the Lords Spiritual* (group victory criterion) in this game.

The position receiving the most votes will win this criterion. Sort of like the Hugo Award and Nebula Award:

- ✓ “They are by nature determined by an electoral process. All electoral processes have a political component, and the outcome is determined by some form of numerical tabulation. So even in the best of worlds, the Hugos and Nebulas cannot be other than literal popularity contests, measurements of the numerical popularity of works among the paying members of a science fiction convention on the one hand, and the creators of those works on the other. Not surprising then that both of them are indiscriminately awarded to masterpieces and trivia, pace-setting works and cult-objects, as popular trends come and go.” – Norman Spinrad, Science Fiction in the Real World, p. 17.

This vote will be taken before the players are informed which position won the Objective or Lords Temporal victory in the game. Players may have an idea who probably will win the Lords Temporal, but will not know for certain when voting for Lords Spiritual, so the two are not necessarily linked. It is not impossible that the Lords Temporal position was also the best in whatever the Lords Spiritual vote measures, but it’s not guaranteed or necessarily so.

- ✓ Each position gets one vote; thus it is a vote of the positions and not a direct polling of the players.
- ✓ Every position (except the Concierge) must vote. This burden is imposed on the participants for completeness of the endgame resolution, representing the voices of all.
  - Unfortunately, it is possible that some positions may not respond, even if they won the Lords Temporal criterion; they may have stopped responding, don’t care who won anything, and not sent in the email with their votes and choices. They could still win if the group votes for them in Lords Spiritual and they won the Lords Temporal.
  - Political and Total Extinction positions can still vote, and should still vote because they could win the game if they desired to win, and the group voted for them in Lords Spiritual.
- ✓ Positions may vote for themselves. They may in fact be schizophrenic about it, voting for themselves in Lord Spiritual while declaring that they do not desire to win the subjective criterion. The two are not related except by interpretation.

Because there are three victory criterion, participants should endeavor to determine a winner for Lords Spiritual. If two or more positions are tied in votes, the first tiebreaker will be the position controlling the greatest number of planets that have been *Terra Sancta* to a Kairotic Moment (see 1 Kairotic Moments, p. 1420 *supra*). The second tiebreaker will be the position with currently the least number of un-Coalesced Thesis Statements lodged against the position (see Disputation, 2 Reformation, p. 1391 and A Soul from Purgatory Springs, 3 Reformation, p. 1401, *supra*), which makes endgame Reformations favorable.

- ✓ It is irrelevant whether the colony on the *Terra Sancta* planet was subsequently destroyed or whether it relates to any Kairotic Moment experienced by the position during the game. In short, having someone else's 'holy place' – even if just the ruins – is useful (e.g., the Dome of the Rock and the Al-Aqsa Mosque).
- ✓ The relative lack of Thesis Statements lodged against a position may be attributable to either a position that has been lucky to avoid Thesis Statements, or a game that has not featured a lot of barb trading (i.e. everything is peachy!) or that the position may have undergone a Reformation near the end of the game. It is somewhat a matter of luck and is thus the second tiebreaker after something that is more controllable.
- ✓ Only the number of un-Coalesced Thesis Statements is counted, not their assigned Ontic Number.

If after two tiebreakers the winner of this criterion cannot be determined (a very rare event) the Concierge may either call for a new vote, after a period of discussion on the forums, or may determine the winner by a die roll, depending on the Concierge's sense of how much the players actually care about who wins. Any position, *excepting extinct positions who fail to participate in the end game voting*, may win this criterion and this criterion is the only opportunity for an extinct position to win the game.

- ✓ From a design perspective in creating a holistic victory determination, there should be some way in which the Reformations and Kairotic Moments – the true inheritance of the next generation – play a part in the process, and Lords Spiritual was the most appropriate venue.
- Peer-to-Peer Learning: In this sense, GGDM is like a peer-to-peer learning experience or program, like the one operated by Xavier Neil's "42 program," except that GGDM is peer-to-peer learning in humanity. In this, everyone who participates wins!
- ✓ "You're missing the point. Enlightenment was not the diamond. Enlightenment was the choice." – Dr. Who, "Enlightenment, Part 4" (1983).

I have from time to time vaguely considered how GGDM might be used in a peer-to-peer learning program, but I have no specific ideas. A project-based learning system like the "42 program" would not work because GGDM is not objective, task-oriented like computer programming, additionally, playing GGDM will not contribute directly to getting a job or career in anything. And there would need to be enough interest to justify it, which goes back to the whole working-to-get-a-job angle of the "42 program" which GGDM cannot offer. Further, the "42 program" has no instructors or professors, whereas, in a peer-to-peer GGDM based program, it is likely that the Concierge would become an instructor *de facto*. So, it would have to be something different.

- ✓ See also discussion of GGDM as andragogy, 3 The Big Bang, p. 12, *supra*.

But if there were a Lords Spiritual victory for GGDM as a literary game, it might be measured in some sort of permanent peer-to-peer learning community.

- ✓ "Learning by doing, peer-to-peer teaching, and computer simulation are all part of the same equation." – Nicholas Negroponte.

- **Pure Postgame Politics:** Unlike the Objective or Lords Temporal criterion, the game does not predefine elements or criteria for voting for any position in the Lords Spiritual. That is up to the position players to determine what they will vote for and why.

There are many basis on which a position might decide who to vote for the Lord Spiritual criterion. Of course, each position might simply vote for themselves – resulting in a tiebreaker process – but it is hoped that some intellectual honesty will prevail upon the players of each position to vote for the team that really deserves to win this group victory criterion.

Some of the basis upon which players and positions might decide to vote in this group history criterion might be, for example, which position ‘played the best game,’ which position ‘role-played the best,’ which position’s play exemplified the spirit of the game (this may or may not be the same as the ‘biggest, bestest’), which position’s play was central to the story arc of the game, which position’s play controlled the ‘reality’ of the game, or even, which position ‘went down fighting’ the hardest, resisting heroically ‘to the end.’

It might also be possible that players of a position might decide to rally 🏆 for a particular player in the game by voting for that player’s position. To the extent that this occurs, players should be aware that following the game, there is ample opportunity to give individual player honors separate from the positional victory criterion.

- **Postgame Wrap-up:** Ideally, the final determination of victory and honor should be completed within a week of the end of the game. The final determination will not be unduly delayed waiting for player responses, unless it becomes utterly impossible to proceed due to lack of player participation. In that case, the Concierge may eventually determine that there is no game winner and/or no honors, due to lack of interest, after a reasonable time has passed for player responses.

---

*“Act well your part; there all the honour lies.”*

– Alexander Pope, “An Essay on Man” (1732)

---

**All Honor Lies:** Honor is an estranged word, a tangled mass of social-linguistic history that now often comes out sounding rather hollow. Honor in some senses, refers to admirable character traits and internal aspects of personality which either no one can give you, or which society intentionally or unintentionally teaches the young through circumstance and education (it is notable that in many cases, literary characters have honor when no one around them does, and that they maintain such honor even when punished for it). Honor in other senses, refers to social praise and esteem, and fame or reverence which is earned and bestowed upon persons possessing and displaying honor in the first sense.

The third sense of the word “honor” refers to the dignity of office which flows from the sovereign office giver to the office holder, which reflects the respect or honor given to the sovereign power (in the second sense) which is conferred on the officers of the sovereign (typically now used to refer to judges). Theoretically, it should also reflect the honor of the office holder in the first and second senses, but not always; as military personnel quickly learn, there is a difference between respect for the rank or position and respect for the person holding the rank or position. Finally, in the fourth sense, honor can mean honor (in the second sense) which belongs to the

group, and which flows from the family or group to the individual members of the group independent of whether they are worthy of such honor.

In the fourth sense, such honor is usually tied to hereditary titles and feudal systems of nobility (and especially primogenitor – one of the most catastrophic ideas in human history, which is filled with bad ideas), and socio-centric societies in general (including tribal honor, clan honor), which sense has slowly disappeared in the transition of Western society to an egocentric society empowered by technological advances and industrialization, where individuality and individual empowerment are esteemed.

---

*“Squint against the grandeur!” – from the movie Hail Caesar (2016)*

---

**Honors, Laurels, and Victory Points:** Players like to keep running scores, and it is likely at some point after the first game finishes that there will be a ‘scores page’ on the game website, which will be kept current by the Concierge. All of the players who belong to a position that wins either the Lords Temporal or Lords Spiritual criterion of victory will receive one Laurel.

All of the players in a position that wins the game (even if they are co-winners) receives one Victory Point in the standings. Finally, each player that receives a postgame honor, in the following section, will receive one Honor.

- **Players of a Position:** As indicated back in the beginning of the rules, this game is based on positions and not on players, and it is encouraged that players form teams to play positions in the game. Some players may belong to more than one position during the course of the game (“defectors?”) and position-teams are subject to all of the shifts, turns, and vagaries of human relations. That being said, the Concierge will award laurels and victory points to the players of record for the position at the end of the game. Of course, the Concierge will know the players who regularly submit Patents, Writs, Regular Turn Actions, or otherwise send emails and post to the forums. However, it is not necessary for all players of each position to constantly communicate with the Concierge, so the participation level of some players and the extent of their contribution to their positions will be unknown to the Concierge.

At any point in the game, players of a position may inform the Concierge that some other player of the position is no longer playing or no longer responding. The Concierge will send that player an email and if the email is undeliverable, or that player does not respond in a reasonable period of time, the player may be removed from the team list. But generally, the task of managing which players are listed as members of each position-team is up to the players. The Concierge will not engage in micromanaging players or positions or refereeing player disputes or intra-position politics unless absolutely necessary to insure the game continues for the remaining players who still want to play.

---

*“You are what your record says you are.” – Bill Parcells*

---

**Player Honors:** After the winner of the game is determined, the Concierge will solicit player votes for the three Player Honors in the postgame.

The Player Honors process requires **individual players** to submit votes, it is not counted by position votes. Votes for Player Honors *should not be submitted with* the position’s votes for the victory criterion above. And it follows that the Player Honors are for individual players and not for

positions or teams. The player receiving the most votes for each of the three Player Honors wins the Honor and receives an Honor on the standings or scores page. If two or more players are tied for an Honor, the players share the Honor, and each receives the full Honor on the standings or scores page. It is the intent of the game designer and Concierge that this process not turn into a bitter, protracted argument. If no one can agree on the winner of an Honor or no one votes, then no one will win the Honor.

- Creator/NewsMaker: The Creator/NewsMaker Player Honor should go to the player who has shown the greatest or best creativity in the Interpretations during the game. Remember that the *player-generated* Interpretations are News Events, Writs, Patents, Meanings and Shared Meanings. Therefore, the player who wins this Honor might be the ‘propaganda master’ or the ‘patent king’ or the ‘writ lawyer’ of the game. As most of the Interpretations are kept secret during the game (at least by the Concierge), the overall impression of players as to the winner of this Honor relies heavily on News Events, and postgame show & tell time.

- ✓ “These preliminary moves were as much a part of the blitzkrieg as the final climactic dash of the tanks across the frontier. After the economic phase the Germans made their appeal to the prejudices which men esteem only second to their purses. With democracy weathering a crisis, every nation had its factions of malcontents who found relief from personal frustrations in such doctrines as Anglophobia, anti-Semitism and totalitarianism. By means of rewards and subsidies the invaders made allies out of the leaders – the Quislings, Henleins and De la Rocques who were to be used as local *Gauleiters*. Once the political breakthrough had been accomplished, Nazi propagandists attacked from the flanks and rear in an effort to create a minority large enough to call for ‘protection.’” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 785 (emphasis in original).

- Leader/Commander: The Player Honor for Leader/Commander should be awarded to the player who was the best overall leader in the game in the sense of being the best ‘team leader,’ ‘position politician,’ ‘military commander,’ and/or ‘position manager.’ A brilliant military victory might be the key, or building a good alliance might garner the votes. Perhaps foresight of exploration outside the main area, which leads to the survival of the position’s native population type against all odds might be considered the ultimate in leadership. Winning makes (almost) everyone happy, and it is likely (though not necessary) that the winner of this Player Honor (or any player honor) will be tied to the positions that won the game.

- ✓ “The leaders of the democratic nations, to be sure, did not have the advantage of hindsight, which constitutes the wisdom of historians. Nor did they appear to be any better endowed with foresight...” – Lynn Montross, War Through the Ages (3<sup>rd</sup> Ed., 1960), p. 786.

- Hero/Bad Guy: The Hero/Bad Guy Player Honor reflects mostly the best and most consistent role-playing effort of the game, or perhaps the ‘best actor’ award.

This may be awarded both for individual role-playing and also for a player whose vision and leadership in the position-team helps to create a unique and consistent racial or species identity for the position’s Native Population Type. Or it might be awarded to the ‘best low-life’ of the game; as for every hero there must be a bad guy or evil empire. A large portion of this award then, will be related to communications and diplomacy, the player who wins this award might be considered the ‘master diplomat’ of the game.

- ✓ “But the Nazi propagandist had not been idle even in these last strongholds of parliamentary rule. Each had its surly little factions which took advantage of free speech to avow Fascist principles. Each had its larger groups of isolationists who could be taught to parrot such slogans as ‘England is ready to fight to the last Frenchman!’ or ‘England expects that every American will do his duty!’ Each had it still more numerous elements of the population which were honestly bewildered.” – Lynn Montross, *War Through the Ages* (3<sup>rd</sup> Ed., 1960), p. 787.

---

*“You’re not happy with the way things turned out, I’m sorry to hear that... Personally, I like things the way they are. No more saving the world, just a nice pond with no pesky fish in it. And the single most pressing issue in my life is whether or not to get a dog... There’re a lot of pros and cons to consider...”*

– Col. Jack O’Neill, Stargate SG-1 television series

---

**Went to a Garden Party:** Someone always complains about an ending, no matter what. Players complained about how the Traveller RPG civil war ended with no winner, the virus taking over known space; I thought it was a fitting and perfect ending, the story was about how Lucan and Dulinor destroyed the Imperium with their ambitions (instead, my criticism is of the beginning: Dulinor’s assassination plan never made any sense, was this to prove he was a madman?).<sup>1</sup>

People complained about the ending of the reimagined Battlestar Galactica series, whereas others applauded it for a series that actually had an ending (many never do, they are dropped mid- or end-of-a-season, or are just trying to set up a spin-off to keep going). Sometimes, it is difficult to separate criticism of the ending from other issues, were the Battlestar Galactica fans mad that there was not going to be a fifth season? Were the Traveller RPG fans upset more about the new post-civil war, virus infested, long night setting?

Babylon 5 did some different things with the ending of the series in the fifth season, instead of a dramatic ending, the main characters all slowly wandered off to new lives, new adventures, with the final episode jumping 20 years into the future for the final departure of the main character, John Sheridan. The ending of Babylon 5 was a soft landing. How will yours end?

- ✓ There was a Stargate before SG-1. When I was in about 9<sup>th</sup> or 10<sup>th</sup> grade, I read Pauline Gedge’s novel, *Stargate* (1982) – you know, instead of what I was supposed to be reading for school – liked it very much and remembered it to this day. The two are nothing alike, of course, except that Pauline Gedge might be happy with all of the ancient Egyptian stuff in SG-1. Ms. Gedge’s book was republished in 2016 as a “rediscovered classic.” Similarly, in the winter of 2017, there is a box office movie Geostorm about a weather control satellite system that becomes a weapon. It reminded me of Ingo Swann’s book, *Star Fire* (1978) that I read about the same time I read *Star Gate*. I had no idea in 1983 who Ingo Swann was, but his novel would probably have made a much more interesting movie with the same general idea as Geostorm.

---

*“But I have never been custodian of my legacy. When I’m dead and gone, I’ll either be sublimely happy or terribly unhappy.”*

– U.S. Supreme Court Justice Anthony Scalia in 2013

---

**Constitutional Originalism:** Constitutional Originalism is at its root, a distinct distrust of youth and future generations to maintain a narrow vision of Federalism and exercise good judgment.

Certain brands of Constitutional Originalism approach judicial Salafism, assigning to our founders a divinely-inspired level of wisdom that is not to be disturbed by the lesser generations that follow, no matter how tempting. This is a similar ailment to Scholasticism as described by Loren Eiseley in *A Modern Dilemma* (1957) (see discussion *WHEN THE WORLD WAS NEW, WHEN THE WORLD WAS OLD*, 1 Fallen to Earth, p. 1497, *infra*).

- ✓ Revisiting this issue a couple of years later, *Star Trek 2009*, of which I have criticized in various parts of GGDM, might be an example of why founding intellectuals distrust later generations with their legacy. As pointed out by Roger Ebert in his review of *Star Trek 2009*, the movie has little to do with Roddenberry's vision and a lot to do with the way franchise movies are made and sold now (see quote, 3 Expansion, EN 1, pp. 918-919, *supra*). *Still, what choice do we have?* Someone might make GGDM into something I would not approve or envision (as the Nazis cherry-picked Friedrich Nietzsche, see *Cartoon World* discussion at the end of 1 Diplomacy, p. 1106, *supra* or how religious groups, like ISIL, cherry-pick their holy books) but I have to trust that some redeeming value will eventually emerge, even if just a lesson in what not to do. That is as close as I come to faith in humanity or anything in this asinine universe.

---

*“As with all creative ventures, there comes a time to pull the plug before things get stale. All great shows – Mash, Seinfeld, Boston Legal, Game of Thrones, Big Bang Theory, Prairie Home Companion – come to their appointed end, hopefully before they run out of steam and descend into self-absorbed tedium.”*

– Rev. Craig Donofrio and Rev. Bill Cwirla (“The Manly Doctors of Divinity”), from [godwhisperers.org](http://godwhisperers.org)

---

\*GGDM is long past that road marker: GGDM is a self-absorbed tedium and my self-indulgent fantasy that a game design can have redeeming intellectual value\*

#### Endnotes.

---

<sup>1</sup> Commentary: Dulinor and Lucan, the main antagonists in the Imperium Civil War (Traveller RPG) were essentially Roman characters; historians have identified as central to early Roman success (and virtue) in the Punic Wars and Gallic Wars, an unusual willingness by Roman commanders and politicians to gamble all for victory. This set Rome apart from its opponents in a time when Rome was not the massive power it became later, when Rome did not yet have great material advantages over the opposition. A corrupted continuation of this Roman ‘virtue’ can be seen in the constant and spiraling internal strife and power struggles in the Empire as generals and politicians gambled all to wear the purple (and usually died in battle, were executed, or assassinated). Dulinor in particular, but also Lucan, gambled all to become the Emperor of the Third Imperium and the Imperium was destroyed as a result.

## Cosmic Cycles

**Excerpt from Paul Halpern, “When the End is Just the Beginning: Exploring Cosmic Cycles,” NOVA Newsletter, August 12, 2014**

This is how it all could end: heat death, the moment when the universe expends its last drop of usable energy and settles into lifelessness. Like the ultimate junkyard, only relics of once-burning stars and their planetary companions remain. Wait long enough and even black holes vanish through the slow trickle of Hawking radiation.

That is a bleak and humbling thought. But might nature enjoy an encore or even a revival? A second act for the universe, even if it were many billions of years from now, would offer a source of comfort. We’d know that even if our own civilization – and indeed all possible living worlds in space – blew out like a flame in the wind, flickers of new life could eventually relight.

In the olden days of cosmology – that is, before the 1998 discovery that the universe’s expansion is accelerating – there was hope that the universe might bounce back from a “Big Crunch.” In that scenario, the universe’s sheer heft would eventually cause it to stop expanding, switch gears and shift into reverse. Like a film of the Big Bang played backward, all of space would collapse to a single point. Cosmologist Stephen Hawking once speculated that time itself would switch directions during the contraction phase. (Later, after discussions with his assistant Raymond Laflamme, he changed his mind.) Today, with no end in sight for cosmic expansion, the “Big Crunch” is out of fashion. But new theories are offering some hope that the heat death may not be terminal.

Cosmic cycles have a long tradition in philosophy and religion. From the ancient Chinese to the Mayans, numerous cultures embraced the idea of time as an ever-turning wheel. Many ancient peoples imagined that a cosmic “spring” would follow each cosmic “winter” in a perpetual sequence of phases, just like the seasons on Earth. Scientific cosmology followed suit. Shortly after Edwin Hubble discovered that galaxies were receding from each other – an observation that beautifully matched Belgian scientist and cleric Georges Lemaître’s hypothesis that the universe is expanding – physicist Richard Tolman began to investigate the possibility that the cosmos was eternally oscillating through cycles of creation and destruction. The idea was that each Big Crunch would be followed by a new Big Bang, tracing an endless accordion of expansions and contractions. Unfortunately, Tolman later realized that the second law of thermodynamics, which states that entropy in a closed process can’t decrease, would force each cycle to be longer with less usable energy, a scenario that seems less like renewal and more like modulated decay.

But it’s not all bad news for cosmic cycles. Believers in eternal renewal can take heart that researchers have advanced several cyclic cosmologies that are consistent with the latest discoveries about cosmic acceleration and dark energy.

**Excerpt from Neil Turok, “The Cyclic Universe,” Edge (edge.org), May 16, 2007**

For the last ten years I have mainly been working on the question of how the universe began — or didn’t begin. What happened at the Big Bang? To me this seems like one of the most fundamental questions in science, because everything we know of emerged from the Big Bang. Whether it’s particles or planets or stars or, ultimately, even life itself.

In recent years, the search for the fundamental laws of nature has forced us to think about the Big Bang much more deeply. According to our best theories – string theory and M theory – all of the details of the laws of physics are actually determined by the structure of the universe; specifically, by the ar-

rangement of tiny, curled-up extra dimensions of space. This is a very beautiful picture: particle physics itself is now just another aspect of cosmology. But if you want to understand why the extra dimensions are arranged as they are, you have to understand the Big Bang because that's where everything came from.

Somehow, until quite recently, fundamental physics had gotten along without really tackling that problem. Even back in the 1920's, Einstein, Friedmann and Lemaitre – the founders of modern cosmology – realized there was a singularity at the Big Bang. That somehow, when you trace the universe back, everything went wrong about 14 billion years ago. By go wrong, I mean all the laws of physics break down: they give infinities and meaningless results. Einstein himself didn't interpret this as the beginning of time; he just said, well, my theory fails. Most theories fail in some regime, and then you need a better theory. Isaac Newton's theory fails when particles go very fast; it fails to describe that. You need relativity. Likewise, Einstein said, we need a better theory of gravity than mine.

But in the 1960's, when the observational evidence for the Big Bang became very strong, physicists somehow leapt to the conclusion that it must have been the beginning of time. I am not sure why they did so, but perhaps it was due to Fred Hoyle – the main proponent of the rival steady-state theory – who seems to have successfully ridiculed the Big Bang theory by saying it did not make sense because it implied a beginning of time and that sounded nonsensical.

Then the Big Bang was confirmed by observation. And I think everyone just bought Hoyle's argument and said, oh well, the Big Bang is true, okay, so time must have begun. So we slipped into this way of thinking: that somehow time began and that the process, or event, whereby it began is not describable by physics. That's very sad. Everything we see around us rests completely on that event, and yet that is the event we can't describe. That's basically where things stood in cosmology, and people just worried about other questions for the next 20 years.

**Excerpt from Charles Choi, “In the Beginning,” NOVA Newsletter, June 13, 2012**

Did the universe have a beginning? What, if anything, came before the Big Bang?

Today, we see galaxies rushing away from us in every direction, suggesting that, if you could press the rewind button on the entire universe, the whole thing would screech to a halt at a moment about 13.7 billion years in the past, when the entire cosmos was apparently compressed into a singularity – an infinitely small, dense point.

“How does the universe begin from such a state?” asks Alexander Vilenkin, a theoretical physicist at Tufts University. Indeed, the laws of physics as we know them break down around singularities, so physicists have devised a number of ways to sidestep the singularity problem.

One possibility is that the universe is cyclic: Every Big Bang expansion is followed by a contraction, ending in a “Big Crunch” from which a new Big Bang emerges, and so on and so on in an infinite series that extends eternally into the past and future. The idea was first proposed centuries ago, but received a fresh take from the physicists Paul Steinhardt and Neil Turok in 2002. There is a problem with this elegant idea, though: the second law of thermodynamics, which states that the total amount of disorder or entropy in a system increases over time – the party-pooper law that prevents the existence of perpetual motion machines. A universe that experienced repeated cycles of expansion and contraction would have get more and more disordered over time until it began completely disordered, something we do not see in our universe. One way to avoid such increasing entropy would be for the volume of the cosmos to increase with each cycle. However, if one ran this scenario backward in time, one would still be forced to conclude the universe began with a singularity.

If our Big Bang wasn't preceded by a Big Crunch, perhaps our universe instead existed as kind of dormant seed – “like a cosmic egg,” says Vilenkin – before suddenly breaking open in the Big Bang. But here, too, there is a problem: In the uncertain world of quantum physics, the “egg” couldn't stay stable forever. It would have expanded and contracted and could have even collapsed into nothingness. “This means it couldn't have existed forever in the past,” Vilenkin said, findings he and his student Audrey Mithani detailed in the January issue of the *Journal of Cosmology and Astroparticle Physics*.

But the same quantum fluctuations that could have cracked the cosmic egg could be birthing new universes as you read this, says Vilenkin. This idea, called eternal inflation, suggests that our universe is just one bubble within a larger multiverse which is perpetually popping out new bubble universes. Although inflation may have stopped in bubbles such as ours, new instances of inflation occur in the multiverse forever into the future, keeping the idea of eternal inflation true to its name. But what about the past? If one assumes that the multiverse is expanding and not contracting, then it had to have expanded from a certain point in time, Vilenkin explains. Even eternal inflation must have a beginning.

Even if the universe did have a beginning, it likely occurred so very far in the past that the cosmos might as well appear as if began an eternity ago, says theoretical physicist Leonard Susskind at Stanford University in California. “We're talking about the beginning potentially occurring at time scales vastly, vastly larger than the age of our universe, longer than any time that you can name,” Susskind explains. “Statistically, given this extremely long amount of time, we probably occurred very, very late in history, making us very far from the beginning, so most of the information about the beginning would be lost to us. I think we're really in the dark about what it would've been like.”

**Excerpt from Suraj Radhakrishnan, “4D World: Light Moving In Fourth Dimension Observed During Quantum Hall Experiment,” *International Business Times*, January 8, 2018**

But two recent quantum experiments have for the first time shown the existence of a fourth spatial dimension.

The teams of scientists from the U.S. and Europe have shown that, in addition to the conventional three-axis where an object can move up-down, left-right or forward-backward to an observer, there exists a fourth spatial dimension which could introduce new directions of motion.

The discovery was made by studying the results of two quantum hall experiments. “The quantum Hall effect” occurs when the motion of an electron in a material is restricted to only 2D. When electrons are confined to two dimensions, and a magnetic field passes through perpendicularly, some of the system's electrical properties become restricted to multiples of exact number values.

During this effect, it is observed that electrons can only move in well-defined topological pathways that are predetermined. For particular strengths of the magnetic field, the electric current can only flow along the edges of the material. This effect, which was observed 20 years ago, was said to be similar to what would happen to particles in the fourth-dimension.

Oded Zilberberg, ETH researcher, and a professor at the Institute for Theoretical Physics overlooked the two experiments that provided the data for the discovery. By placing together two specially designed 2D setups to study the quantum Hall effect, they were able to catch a glimpse of this fourth spatial dimension.

*“Wheel in the sky keeps on turning  
Where will I be tomorrow?  
Wheel in the sky keeps me yearning”*  
– Journey, “Wheel in the Sky” (1978)

**Imagine:** A group of players sitting around a table playing Stellar Conquest (or you can substitute your favorite two-player or multi-player Napoleonic, WWI, WWII, WWIII, Railroad, Economic, Civilization or Space Wargame, or even just imagine a Chess game...); however – rather than each player playing, ‘owning,’ and exercising exclusive control over a single position in the game – each player on their turn is allowed to move the pieces of whichever side they like, and resolve battles, and discuss options with other players, such that the course and outcome of the game becomes a group effort at – for example – playing out the ‘perfect game,’ or perhaps playing an alternative history or non-traditional strategy, or testing a hypothesis, or creating the best story, rather than the traditional game where players exclusively control and play individual positions for victory or defeat.

There is another way to play...the sideways view of gaming.

**Cline Gaming:** The word “cline” (n.) primarily means a gradual change in the appearance and physiological characteristics of a species over a geographical area in response to environmental changes; the word has also been adapted to meteorology. Cline gaming changes the ‘appearance’ of a traditional board game (or computer game, online or PBEM game that plays like a traditional board game) by subtly shifting the player’s perspective of the game, thus changing the playing environment. It is in part, what you do when you play a multi-player game solitaire.

In ‘cline gaming,’ each player does not exclusively play a position in the game, as is traditional, and victory or loss for each player is not determined by how well the player plays their position. Rather, the players in a ‘cline game’ are position-less, and may on their turn play or be called upon, to play any position in the game. The rules of the traditional game being used for the ‘cline game’ and victory or defeat for the positions within the game, remain unchanged, i.e. it is still the same species of game, it just looks and plays different when played as a ‘cline game.’

- ✓ Cline gaming is about group problem solving in gaming, but it is not the same as cooperative games in that the group does not work together against a game-mechanically created opposition that is designed to eventually overwhelm the group if they do not solve the problem. Rather, ‘cline gaming’ is a form of competitive gaming where the group decision making plays each position based on a neutral decision making process. Dice rolls and card draws insure that enough randomness remains to keep it interesting; so it is not like using group decision making to play the perfect chess game.
- ✓ Board games such as Union Pacific (1999) instituted an idea similar to cline gaming in that the current majority shareholder of each railroad controls play of the railroad during its turn; shareholder control can change turn to turn as players jostle to control and promote their most profitable railroad investments. The board game Imperial (2006) strangely re-implemented this system into late 19<sup>th</sup> century international relations in Europe in sort of a capitalist/industrialist illuminati mechanic. Such games are not truly ‘position-less’ however; they have instead divorced the god-view player-

position from the game-board positions to simulate the manipulative relationship between wealthy business magnates and the lives of companies they control.

It is probably possible to ‘cline’ any game format that has players and positions. For example, it is possible to ‘cline’ a RPG if, rather than each player playing a Player Character (PC), the players take turns playing different characters (including NPCs who make ‘cameo’ appearances in the adventure or campaign) at different points in the game. A GM would still be needed to control the flow of the action, but in the ‘cline’ RPG setting the distinctions of PC and NPC blur and/or disappear and there is possibly less stress on the GM. At least, it should be fun to try.
